Introduction to IUPUI

History

Founded in 1969, IUPUI is an urban campus with the dynamic flavor of a metropolitan city of 1.4 million. The campus is just west of downtown Indianapolis, within walking distance of the state capitol and other governmental offices, and the site of numerous businesses, art, sports, education, and health facilities.

IUPUI is one of eight campuses of Indiana University and includes two Purdue University schools. The campus offers 180 degrees provided by 20 different schools. Its over 27,000 students represent 49 states and 122 countries. Approximately 20,000 of these students are undergraduates, with about an equal mix of traditional and adult students. Undergraduate students annually use more than \$61 million dollars in financial assistance as they juggle jobs, families, community service, and academic pursuits. Each year some 4,000 students earn IU or PU degrees.

IUPUI includes the only medical and dental schools in the state, the nation's largest nursing school, and the country's oldest school of physical education. IUPUI is among the nation's ten largest sites for graduate professional education. With strong traditions in professional education, IUPUI is simultaneously developing new strengths in interdisciplinary inquiry, linking disciplines with professions in ways that advance research, professional service, and learning. With external support of about \$130 million in the past fiscal year, IUPUI is the second largest site for research in Indiana. With more than 3,000 full-time, tenured, or tenure-track faculty and 800 associate faculty, IUPUI is proud of its teaching record and works to improve its teaching with on-going assessment and professional development. The creation of the state-wide community college system will redefine IUPUI's undergraduate mission. One result will be that IUPUI will offer little or no remedial work. Rather, building on its prior partnerships and articulations with Ivy Tech State College and Vincennes University, IUPUI will continue to expand its strategies for ensuring smooth transitions between the two-year institutions and IUPUI. IUPUI aspires to be a model for urban universities nationally as well as internationally.

IUPUI is accredited by the Higher Learning Commission of the North Central Association. Individual school and academic programs are also accredited. For example, the Kelley School of Business and the School of Engineering and Technology programs are accredited by the American Assembly of Collegiate Schools of Business (AACSB) and the Accreditation Board for Engineering and Technology (ABET), respectively.

IUPUI has over 105,000 alumni living worldwide and an expanding and active alumni relations program to serve the growing IUPUI campus. Over 70,000 alumni live in Indiana, with two-thirds of that number in the Indianapolis area. The rest are spread around the

world with strong contingents in far-flung places such as Malaysia.

Indiana University—Purdue University Columbus, created in 1970 (one year after the creation of IUPUI), is located one hour south of Indianapolis in the sophisticated, yet rural, town of Columbus, Indiana. This well-known town has been called an “architectural mecca,” boasting the exciting works of numerous internationally known architects. IUPUI Columbus is administratively and academically linked with IUPUI. All IUPUI Columbus faculty are part of their related departments in Indianapolis. There are 35 full-time faculty, who are highly regarded both nationally and internationally, and 162 adjunct faculty. Both full-time and adjunct faculty teach at the Columbus campus and at its off-campus locations, including Batesville, Franklin, Greensburg, Madison, Seymour, Shelbyville, and St. Leon. These sites are located in the 12-county service area of IUPUI Columbus, including the counties of Bartholomew, Brown, Dearborn, Decatur, Jackson, Jennings, Johnson, Ohio, Ripley, Scott, Shelby, and Switzerland.

Nearly 1,900 students are enrolled at IUPUI Columbus. Fifty-five percent of the student body is traditional, and 69 percent attend part time. IUPUI Columbus offers the advantage of affordability and small class size (average student-instructor ratio of 18:1), along with the high quality students would expect at any IU or Purdue campus.

For Columbus-specific information relating to admission, registration, financial aid, scholarships, placement testing, academic advising, orientation, and student activities, see the IUPUI Columbus section later in this bulletin.

IUPUI Mission Statement

The MISSION of IUPUI is to provide for its constituents' excellence in

- **Teaching and Learning**
- **Research, Scholarship, and Creative Activity**
- **Civic Engagement: Locally, Nationally, and Globally**

with each of these core activities characterized by

- **Collaboration** within and across disciplines and with the community,
- A commitment to ensuring **diversity**, and
- Pursuit of **best practices**

A Brief Overview of IUPUI

In order to use this bulletin, it is critical that the reader understand IUPUI's structure, policies, rules, and procedures and how these factors affect specific students at different points in their career at IUPUI.

The IU and Purdue Systems

IUPUI is a part of two great public university systems—Indiana University and Purdue University—and offers approximately 180 degree programs, the greatest number and widest range of degrees in the

state of Indiana. They range from two-year associate's degrees and certificates to Ph.D.s and professional degrees. All degrees bear either the IU or Purdue designation. Students are, therefore, affected by policies of Indiana University, Purdue University, or both. Such university-wide policies and procedures are set by either the trustees or the faculty with trustee approval.

IUPUI

In many areas, especially at the undergraduate level, IUPUI sets its own policies and procedures, which are known as campus policies and procedures. Both university and campus policies and procedures appear in the opening sections of this bulletin.

University College

Undergraduates are admitted to IUPUI through University College, which was created to help students make a successful transition to college life and select an area of study. University College provides orientation, first-year seminars, and advising for entering students. Students who meet entry-level requirements, and who have indicated their desire to enter a school that accepts first-year students, are simultaneously admitted to a school (dual admission). Once dual admission students complete the first six weeks successfully, they are certified to the appropriate schools. Other students remain in University College until they meet the admission requirements for their field of study or complete 56 credit hours of course work.

The Schools

Fields of study or disciplines are housed in schools at IUPUI. School policies and procedures govern all the students within each school. Most fields of study are housed in departments within the schools, but in some schools they may be called other things, such as divisions. The departments and schools themselves determine degree requirements and whether students are eligible to receive a degree. Students must be in a school and take a specific number of courses (residence requirements) to be eligible for a degree. A current list of degree programs appears online at www.iupui.edu/academic/schooldegrees.htm.

Sections later in this bulletin cover each school in alphabetical order. The material includes general school policies and procedures, followed by school and then specific degree requirements for all the degrees offered by the school including associate's, bachelor's (or baccalaureate), master's, and doctoral degrees. Special teacher certification and honors information is also included where relevant. This material is followed by course descriptions. There is also a list of full-time faculty in the department or program. More information on individual faculty is available in a comprehensive listing of full-time faculty at the end of each school section.

The Columbus Campus

For Columbus-specific information relating to admission, registration, financial aid, scholarships, placement testing, academic advising, orientation, and student activities, see the IUPUI Columbus section later in this bulletin.

Types of Programs Available at IUPUI (Degree and Noncredit)

Undergraduate Certificate Programs

Certificate programs resemble minors but generally require more credit hours. Some certificate programs are stand-alone programs, which means that a student does not have to be working toward a two- or four-year degree to complete a certificate program. Specific requirements can be found in the section for the school offering the certificate.

Associate's Degree Programs

Some schools award an associate's degree after the completion of two years of full-time college course work. IUPUI offers a wide variety of associate's degree programs, some in technical fields. Usually the course work completed for the associate's degree will count toward the bachelor's degree in the same discipline.

Bachelor's Degree (Baccalaureate) Programs

The typical undergraduate degree program is either a bachelor of science or a bachelor of arts degree. The degree takes four years for full-time students, and substantially longer for part-time students. IUPUI's bachelor's degrees are awarded in the professional schools and within the arts and sciences.

Postbaccalaureate Degree Programs

IUPUI has two types of postbaccalaureate degree programs: graduate and professional. Many of the professional schools have separate bulletins as well as brief sections in this bulletin.

Master's Degree Programs

Outstanding students wishing to continue their education may begin graduate work after the completion of their bachelor's degrees. Most master's degree programs require applicants to take standardized national examinations such as the Graduate Record Examination (www.gre.org) and apply for the program the spring prior to admission. The graduate program in business requires students to take the GMAT (www.gmat.org) as part of the admission process. Most students continue to study in their undergraduate major field. Students wishing to switch fields may be required to take undergraduate course work as preparation for admission to a

master's program, which presumes prior preparation in the area of study. Generally master's work is more narrowly focused, and degrees require one to two years of full-time study. Some graduate programs may be taken on a part-time basis.

Doctor of Philosophy and Education

The doctorate is the highest degree awarded and requires course work, comprehensive examinations, original research, and a dissertation. Three years of study beyond the master's is minimal, and most students require more time to complete the course work and research.

Professional Degrees: D.D.S., J.D., M.D.

IUPUI offers professional degrees in dentistry, law, and medicine. All these degrees require prior study at the bachelor's level as a condition for admission to the program.

- A). The Doctor of Dental Surgery (D.D.S.) requires four years of professional study beyond a minimum of 90 semester credit hours of undergraduate study, which includes pre-dental courses, or the equivalent of 90 semester credit hours.
- B). The Doctor of Jurisprudence (J.D.) requires three years of full-time study or four years of part-time study following a bachelor's degree. Those wishing to practice law must also successfully sit for the Indiana Bar Examination. LSAT (Law School Admission Test) results are required as part of the application process. Visit www.lsatsat.org for more information.
- C). The Doctor of Medicine requires four years of professional study following a bachelor's degree, which includes the pre-medicine courses. Medical College Admission Test (MCAT) (www.aamc.org) results are required prior to admission into the program.

Graduate-Level Certificate Programs

Graduate-level certificate programs, often in professional areas of specialization, resemble minors but generally require more credit hours. Some certificate programs are stand-alone programs, which means that a student does not have to be working toward a graduate degree to complete a certificate program. Only courses in which students receive a C (2.0) or better can be applied to the certificate program. Specific requirements can be found in the section for the school offering the certificate.

Noncredit Courses

The Community Learning Network (CLN) offers hundreds of continuing education (noncredit) classes and serves over 16,000 learners annually. With more than 25 noncredit certificate programs in areas as diverse as photography and stress management, CLN's noncredit program helps learners to take the first step in career development. These courses provide educational opportunities for a lifetime of learning. Visit the Community Learning Network Web site (www.cln.iupui.edu) to find out more about noncredit offerings.

Undergraduate Degree Programs

Admission

The best and most complete information on admission standards and procedures is the *IUPUI Beginning Freshman Admissions Guide and Financial Aid Information* booklet or the *Transfer and Visiting Student Admissions Guide and Financial Aid Information* booklet, which are published annually and contain an application form, fee schedules, detailed instructions, numbers to call, and the relevant deadlines. The Enrollment Center's Web site also provides information about admission for undergraduates and graduates, financial aid information, and links to other key offices' Web sites. Applicants may complete an application for admission online (www.enroll.iupui.edu).

Zachary's Law

The state of Indiana maintains a registry of individuals who have been convicted of sex offenses committed against minors. As a number of degree programs and specific courses either prepare students to work with minors or place them in contact with minors as a part of the course, enrollment in those courses or programs is not available to anyone who appears on the Sex Offender Registry. Consult individual school sections to see if appearance on the registry will be a barrier to enrollment.

Criminal Activity Disclosure

IUPUI is committed to maintaining a safe environment for all members of the university community. As part of this commitment, the university requires applicants who have been convicted of any felony or a misdemeanor such as simple battery or other convictions for behavior that resulted in injury to a person(s) or personal property to disclose this information as a mandatory step in the application process. A previous conviction or previous conduct does not automatically bar admission to the university, but does require review. For more information contact the Office of Admissions.

When to Apply

You may apply as early as one year in advance of your proposed enrollment.

If you file an application with all required credentials and the application fee by the priority date, you will receive full consideration for the semester requested. If admitted, you will be invited to an early orientation program during which you will register for classes. If you file an application after the priority date, you will be considered on a space-available basis and if admitted, you will likely attend a later orientation session and register for classes during the last days of registration.

Priority date	Term
June 1	Fall
November 1	Spring
March 15	Summer I
May 1	Summer II

Letters of Admission With the admission letter, students receive information about testing, transfer of credits, and temporary parking permits. All beginning students are admitted to University College, where they attend the University College Orientation program, enroll in a learning community, work with an advisor, and learn about the University College support services such as the Learning Center. The Learning Center ensures a successful transition to IUPUI and to the school offering the desired or yet-to-be-determined major. By indicating a preference on their applications, some students with outstanding high school records will be granted dual admission to the University College and the school offering their desired major. Most transfer students are also admitted to University College and remain there until they complete the necessary prerequisites for their program of study.

Students with Education Outside the United States

If you are a U.S. citizen or a non-citizen with permanent resident, refugee, or asylum status and the last two years of your education were in the United States, you will apply through the Undergraduate Admissions Office. All other prospective students (including U.S. citizens educated outside of the United States) will apply through the office of International Affairs. That office evaluates international educational documents and advises international students on visa matters and cultural adjustment issues. You may contact that office by email at intlaff@iupui.edu, by phone at (317) 274-7000, or you may visit the Web site at www.iupui.edu/oia.

Types of Freshman Admission and Qualifications

IUPUI offers beginning freshmen enrollment as degree-seeking or visiting students. Visiting student status is for only the June term after graduation from high school.

Degree-Seeking Students

If you wish to enter an undergraduate certificate, associate's, or bachelor's degree program, apply as a degree-seeking student (even if you are unsure of which degree program). As a beginning freshman, you must not have not enrolled in any college, business, or vocational school after high school graduation.

For a beginning student, we will examine your high school record including courses completed, grades earned, and standardized test results. The trend in your grades and the difficulty of your courses are also important. The most important factor in our decision will be the courses you attempted and the grades you earned.

High School Graduates Admission Requirements—Regular admission

- Graduated from high school or will graduate before enrolling at IUPUI.

- Provide the results of your SAT or ACT**.
- Indiana high school graduates are expected to complete Core 40. (Academic Honors diploma highly encouraged).

For students who have completed Core 40 with a C average or higher in all Core 40 courses, SAT scores should be 900 or higher or ACT composite of 19 or higher.

For students who have earned an Academic Honors diploma, the applicant will be considered fully qualified regardless of test scores; however, scores must be provided.

- We recommend that all high school students complete the following:
4 years of English
3 years of Math (including second-year Algebra)
3 years of Social Sciences
3 years of lab science
4 years of additional college preparatory courses selected from English, mathematics, social sciences, lab sciences or foreign language.
- Returning adult students should note that SAT or ACT scores are not required and although a high school transcript is required, the admissions committee also considers such things as military experience, life experiences, and job responsibilities when reviewing the application.

Conditional Admission

If you do not meet the above criteria, you will be considered for conditional acceptance based on other factors that will indicate your potential for success at IUPUI: overall quality of your high school course work, work experience, maturity, and military service.

If you have significant deficiencies in either academic preparation or performance, we will defer your acceptance until you complete designated courses at the Community College of Indiana or another two-year college. A deferral contract outlining the courses to complete will be sent to you. Our program with the Community College of Indiana (Ivy Tech State College/Vincennes) at Indianapolis is called *Partners*, and admissions counselors at both schools are prepared to assist you with a program of study leading to transfer to IUPUI.

GED Admission Requirements

Students enrolling at IUPUI who have not attended college after earning a GED are considered beginning freshmen students. The following are the admission requirements:

- Earned the GED.
- If you are under 19 years of age, you must provide the results of an ACT or SAT I test.

Depending on your GED score, you will either be granted conditional admission or deferred to the Community College of Indiana. (See above section on conditional admission.) If you have completed the SAT or ACT and the results are at or above the average for the state of Indiana (990 SAT or 21 ACT), you will be given regular admission.

** (Seniors in high school must take one of these tests.) If your class has graduated and a fall semester has passed since you graduated, you do not need to take the SAT or ACT. (However, if you did take the test, we would like to see the results.)

Visiting students during summer after graduation

Students graduating from high school may enroll at IUPUI as a visiting student for the June summer session. As a student applying under this status, you must do the following:

- Verify with the Admissions Office of the institution you will attend in the fall that they will accept the course credits.
- Submit an IUPUI application as a visiting student.
- Submit a copy of your high school transcript and test scores. (Students admitted to IU Bloomington or Purdue West Lafayette are excused from this requirement.)
- Submit a copy of your letter of acceptance.
- Submit the application fee. You do not need to pay this fee if you previously applied to an IU campus; simply attach a note saying when and where you previously paid the fee.
- Note:
 1. You are not eligible for financial aid as a visiting student. (federal regulations)
 2. If admitted, you must complete IUPUI placement tests in reading, writing, and mathematics. These must be done before you can register for classes.
 3. You may apply only for the June semester and you are encouraged to do this no later than the end of May.

Qualifications

1. If you will attend IU Bloomington or Purdue West Lafayette in the fall, provide a photocopy of your letter of acceptance. A high school transcript is not necessary. You will be offered acceptance based upon proof of your acceptance to either campus.
2. If you are attending any other college in the fall, provide a high school transcript and SAT/ACT scores. Also provide a copy of your letter of acceptance. You must have completed Core 40 with a 2.0 grade point average and have an SAT total score of 900 or ACT composite of 19. If you will earn the Academic Honors diploma, you will be accepted regardless of SAT or ACT scores but you are required to provide the scores.

Adult Special Students

You may apply as an adult special student if you are sponsored by your employer to enroll in a specific IUPUI course or you wish to take a course for self-enrichment. You are strongly encouraged to discuss your plans and previous education with an admissions counselor before filing an application. Permission to enroll is usually for one term.

You are not eligible for financial aid as an adult special student.

If you wish to enroll in mathematics or English courses, you must either have completed a transferable (non-remedial) college course in that academic area or complete the IUPUI placement tests.

Required Credentials and Qualifications

- You must be 21 or older.
- You must provide a photocopy of your diploma, high school transcript, or GED results.
- If you previously attended college, you must not have enrolled anywhere for the past three years and you must provide photocopies of grade reports or a college transcript.
- If you are being sponsored by an employer and you are not able to obtain the above documents, you may submit a letter of sponsorship from your employer.
- Provide a brief statement about your purpose for becoming an adult special student and the course(s) you plan to take.

SPAN Program

High school students who are academically motivated and wish to attend college are invited to investigate the Special Programs for Academic Nurturing (SPAN), a division of the IUPUI Honors Program.

SPAN allows qualifying pre-college age students to take actual college courses alongside college students. Unlike "Advanced Placement" programs that are taught at the high school by high school teachers, SPAN students attend classes taught by university faculty on the IUPUI campus.

Developed in 1984, the SPAN program is designed to help motivated students either get a head start on their college education or take courses that are not offered at their high schools. Qualifying students are eligible to take any 100- or 200-level course (ranging from anthropology to zoology). For more information, contact the IUPUI Honors Program, SPAN Division, (317) 274-2660.

Types of Transfer Admission and Qualifications

Transfers from Other IU Campuses Students who are eligible to transfer to IUPUI as degree candidates from another campus of Indiana University must meet the degree requirements of the IUPUI school from which they expect to graduate. Students who plan to obtain a degree from another campus should contact and remain in contact with the dean of their prospective school for specific information on course, degree, and residency requirements.

A student at another Indiana University campus, whether coming to IUPUI on a temporary or permanent basis, should contact the IUPUI Enrollment Center for help in beginning the intercampus transfer process.

If a student has earned college credits after leaving the IU campus, the student must provide an official transcript and contact the IUPUI Admissions Office, requesting that the new courses be evaluated for transfer credit.

If a student at another Indiana University campus is not in good standing and wishes to attend IUPUI, he or she should contact the IUPUI Enrollment Center for an explanation of the procedures.

Transfers from Other Purdue Campuses A Purdue University student from another campus must complete an official undergraduate application through the IUPUI Office of Admissions. If credits have been earned outside of Purdue, an official transcript from the non-Purdue schools must be provided. An application fee does not need to be paid.

Note: Courses with grades from C– to D– from other Purdue campuses appear on the IUPUI transcript. The grades are not calculated in a student's IUPUI GPA; however, individual schools and programs may choose to use the courses to satisfy degree requirements.

Transfers from Other Universities A student from any other college or university must complete an official undergraduate application through the IUPUI Office of Admissions. Applicants are required to provide official transcripts from all post-secondary institutions they have attended.

IUPUI has increasing numbers of articulation agreements with Ivy Tech—Community College of Indiana that permit Indianapolis Ivy Tech and Vincennes courses to transfer to IUPUI and IUPU Columbus if completed with a grade of C or better. Effective dates for each course are listed, but no courses completed prior to the fall 1990 semester will transfer. Students who have completed course work at Ivy Tech campuses other than Indianapolis should check with the nearest IU or Purdue campus for information regarding course transfers, or visit the transfer student portion of enroll.iupui.edu.

Transfers from Universities with Articulation Agreements IUPUI has increasing numbers of special agreements or articulations with other institutions of higher education to assist students in completing their education.

IUPUI has special transfer agreements with the Ivy Tech—Vincennes Community College of Indiana (Indianapolis campus) through a program called **Passport**. Currently, there are 24 associate-to-bachelor degree options and more than 180 transferable courses between Ivy Tech and IUPUI. There are associate-to-bachelor degree articulations for the eight concentrations that Vincennes offers at the Community College and more than 70 transferable courses. The number of transfer courses and programs is increasing yearly. For the latest lists, visit the **Passport** Web site: www.iupui.edu/~ivy.

In addition, students who have completed a Vincennes associate degree in American Sign Language may transfer as juniors to the IUPUI B.S. in American Sign Language/English Interpreting. Ivy Tech graduates with an associate degree in Respiratory Care from any Ivy Tech statewide may transfer as juniors into the B.S. in Respiratory Therapy program. The Purdue School of Engineering and Technology also has agreements for 15 program articulations with Vincennes.

IUPUI offers transfer students two categories of undergraduate admission: degree-seeking and visitor.

Degree-Seeking Students

If you wish to enter an undergraduate certificate, associate's, or bachelor's degree program, you will apply as a degree-seeking student (even if you are unsure of which degree program).

Admissions Standards General Policy — For regular admissions you must have a cumulative grade point average of 2.0 on a 4.0 scale and be eligible to return to your previous college. *If you do not have a 2.0 or you are not eligible to return to your former school, you must sit out for one regular semester**.* Summer sessions do not count. If you have been dismissed twice, you must be out of school for two full semesters. Please mail a statement with your application explaining what caused the low grades and how you will approach your studies at IUPUI.

Admission on Probation If your grade point average is below 2.0, you will be considered for admission on probation provided you have met or are meeting the required time out of school. In some cases students below a 2.0 will be required to file a petition and perhaps an interview. After reviewing your application, the Undergraduate Admissions Office will advise you if you must take these steps. We encourage you to apply at least three months in advance of your proposed starting date.

Credentials needed:

- Official** college transcript from every college attended.
An official copy is one that has the embossed or raised seal of the school. Fax copies, photocopies, and grade reports are not considered official.
- High school transcript or GED if you have fewer than 26 hours of transferable work. (We will accept a faxed high school transcript provided it is sent directly from the high school with the school fax number on the faxed pages.)

Please note that you are responsible for mailing the request to your former colleges and paying whatever fee is charged. Purdue students and Ivy Tech Indianapolis students do not have to order transcripts; however, if you have attended other colleges, you must request those transcripts.

Transfer Credit The grades from all course work previously completed are considered in the admission process.

Most schools require a minimum GPA of 2.0 to be considered for admission; some schools have a higher GPA requirement. Other factors may also be considered, including space available in the program, the specific course work completed, recent grades, and disciplinary standing.

However, whether those courses are counted in a student's IUPUI GPA depends on where the courses were taken. Course work taken at another Indiana University campus will be counted in a student's IUPUI GPA. IUPUI students in Purdue University programs who have previously taken course work at

**Purdue students are exempt from this policy unless they are on drop status or are required to sit out one semester.

another PU campus may have those grades counted toward their IUPUI GPA. Contact specific schools or look at their material in this bulletin for more information.

If the work was completed elsewhere, only courses with grades of C (2.0) or better are transferred for possible use toward an IUPUI degree. No courses with grades of C– or lower will transfer to IUPUI. None of the grades transferred from other colleges or universities count in the IUPUI grade point average. Some schools, however, may consider such grades for admission purposes and other academic matters.

Acceptance of credit from other accredited institutions, including Purdue University, is performed by the IUPUI Office of Admissions, Cavanaugh Hall, Indianapolis, IN 46202-5143, (317) 274-4591.

How accepted credit is applied to program requirements is determined by the school and/or department that offer the course(s). Courses that were completed 10 years ago or even more recently may not be accepted in some programs and must be approved by the individual school and department awarding the degree.

Course work taken at another institution for which there is an equivalent Indiana or Purdue University course (in terms of course description, level, and prerequisites) will generally be transferred as credit in the equivalent courses. Other course work will be transferred as undistributed and reviewed by the appropriate department or school to determine how it will be counted toward degree requirements. In addition, the university does not accept the transference of special credit by examination awarded by another college or university.

Courses taken at another institution on a quarter system rather than a semester system will be evaluated as carrying fewer credit hours (e.g., a 3 credit hour course taken on a quarter system will transfer as 2 credit hours). Many course equivalences for most Indiana colleges may be found on the IUPUI admissions Web site at enroll.iupui.edu.

Courses taken at foreign institutions will be transferred into IUPUI as undistributed credit rather than as specific courses. In general, the international admissions evaluator will designate the credit as either lower-division course work with a 100 number or upper-division with a 300 number, though if it is clear that the course work warrants a 200 or 400 number, such designations will be used. If students want courses to count for specific classes, they must obtain an official translation of the course description and any other material, such as a syllabus, that explains the course content. With that material, the department offering the course can determine whether there is an equivalent IUPUI course. An individual within each department or school will be responsible for making the determination and informing the Office of International Affairs, using the Undistributed Transfer Credit Departmental Evaluation Form. Subsequently, the appropriate changes will be made on the student's official transcript.

Visiting Students

If you are working on a degree from another institution and wish to take courses at IUPUI, apply as a visiting student. You are responsible for verifying that your home institution will accept the course credits. Your permission to enroll is for one term; however, an admissions counselor can authorize enrollment for additional terms if you are completing your final courses for a degree or if you are in the area on an internship or co-op program. *You are not eligible for financial aid as a visiting student.*

If you wish to enroll in mathematics or English courses, you must either have completed a transferable (non-remedial) college course in that academic area or you must complete the IUPUI placement tests.

Special Note to Students at Other IU Campuses

Students working on degrees at other IU campuses who wish to register for courses at IUPUI should call the IUPUI Office of the Registrar, 317-274-1512, to schedule a registration time.

Required Credentials and Qualifications

- Must be a current college student (enrolled within the last 12 months). If you have not enrolled within the past 12 months, provide a letter from either the dean or your academic advisor at your home institution stating that you have permission to transfer credits from IUPUI to the degree program.
- Provide a photocopy of your most recent grade report or transcript.
- Have a cumulative grade point average of at least 2.0 on a 4.0 scale. (Purdue students are eligible regardless of grade point average provided they are not on drop status.)

International Students

The best guide to international admission standards and procedures is the "International Undergraduate Application for Admission." This pamphlet is revised annually and contains an application form, financial support agreement form, estimated tuition and living expenses, English language proficiency requirements, detailed instructions, numbers to call, and relevant deadlines. The Office of International Affairs' admissions Web site (www.iupui.edu/oia) provides information on admissions for international undergraduates and graduates, links to the online applications, downloadable and printable application and financial support agreement forms, and links to Web sites of other offices.

The admission requirements for students hoping to enter an associate's, a bachelor's, or a certificate program as either a beginning or a transfer student are described below. Depending upon the admission requirements of their desired majors, students will be considered either for admission to University College or for dual admission to University College and the school of their intended major. Regardless of the admission category, beginning undergraduate students and most undergraduate transfer students will have the benefit of the University College Orientation program, advising, and support services as part of a comprehensive orientation program

coordinated for international students by the Office of International Affairs. The goal of these programs is to ensure a successful transition to IUPUI and to the school offering their desired or yet-to-be determined major.

Beginning undergraduate applicants should have completed the primary and secondary education system of their own country. The U.S. primary and secondary education system consists of 12 years of study. IUPUI expects that applicants from other countries will have studied for a similar number of years in primary and secondary school to be eligible for university admission. Pre-primary education is not included in this total number of years. However, applicants from countries with at least 11 standard years in the primary and secondary system may be considered if they have achieved a strong academic record and can submit the final, official school-leaving certificate. Applicants applying from abroad are expected to have reached their 18th birthdays no later than the end of their first semester of study here. Applicants from countries with more than 12 years of primary and secondary study may qualify for advanced standing.

Secondary school programs should have included study of a student's native language, English or other foreign languages, mathematics, natural and/or physical science, humanities, and social sciences. Applicants from British-style systems must have earned at least six GCSE (General Certificate of Secondary Education)—or their equivalents—0-level passes, including passes in English and mathematics. GCE (General Certificate of Education) Advanced A-level results may be considered to yield credit for advanced standing where the grade earned is D or better. Students with 0-level certificates who do not meet the minimum age requirements are encouraged to continue their studies to earn A-level certificates prior to applying to IUPUI.

Financial Aid

Types of Financial Aid

Financial aid at IUPUI is based on financial need, enrollment status, and academic progress. The Office of Student Financial Aid Services (OSFAS) administers federal, state, university, and private funds. Funds are available in the form of scholarships, grants, fee remission, loans, and part-time employment.

Eligibility

To be considered for most types of aid, students must be accepted for at least half-time enrollment at IUPUI in a degree-granting program or University College. If a student enrolls and later drops classes, the financial aid awards may be changed to the level appropriate to the new enrollment. Students should always check with a financial aid counselor before dropping classes.

Federal regulations require IUPUI to establish and apply reasonable standards of Satisfactory Academic Progress for the purpose of receiving financial assistance. To receive financial aid, a student must maintain a minimum grade point average as outlined below:

<i>Class level</i>	<i>Credit hours completed</i>	<i>Minimum cumulative GPA</i>
Freshman	0-25	1.6
Sophomore	26-55	1.8
Junior	56-85	2.0
Senior	86 +	2.0

In addition to GPA standards, there are policies regarding course enrollment and completion rates, duration of eligibility, repeating classes, and unofficial withdrawals. Special rules apply to transfer and second-degree students regarding the duration of eligibility. Students failing to meet standards of satisfactory academic progress will be placed on financial aid probation and will be required to submit and comply with an Academic Progress Agreement. Students on contract will be eligible only for limited amounts of student loans. If students fail to meet the terms of their contract, they will be denied financial aid until satisfactory progress is achieved. Students may, within 10 days of notification of denial of aid, submit an appeal with documented mitigating circumstances.

Course Enrollment and Completion In addition to GPA standards, students must complete a minimum of 75 percent of the credit hours for which they receive a grade each semester. Example: if students enroll in 12 or more credit hours (full time) they must complete 9 credit hours. Completion of a course for credit requires a grade that indicates students have finished all work for the course during the semester for which assistance was received. Course work grades of A, B, C, D, P (pass), or S (satisfactory) are indicators that meet Satisfactory Academic Progress (SAP). Grades that do not indicate course completion are W (withdrawal), F (failing), and I (incomplete).

Financial Aid Probation Each academic year, the OSFAS will review academic transcripts to confirm that the standards of SAP are being met. Students who have not met the requirements above will be placed on financial aid probation and will be required to complete an Academic Progress Agreement. Once the completed agreement has been returned to the office, financial aid funds will be credited to the students' accounts, if all other eligibility requirements have been met. Students on probationary status will also be limited in the amount of student loan funding they may receive in one semester. Students who have not met the terms of the agreement will be denied financial aid until satisfactory academic progress is achieved.

Duration of Eligibility In addition to meeting the minimum GPA and course completion requirements, a student must also meet the duration of eligibility requirements. Undergraduate students may not exceed 150 percent of the published length of the educational program. All courses in which students receive a grade will be counted toward the duration of eligibility. Grades will include W, F, I, U, S, A, B, C, D, and other grades not listed. Once students have exceeded the 150 percent level of their program, they will no longer be eligible for financial assistance as undergraduate students.

The duration of eligibility is divided into yearly increments. The maximum number of credit hours for which students can receive assistance is as follows:

Freshman	47 credit hours
Sophomore	93 credit hours
Junior	140 credit hours
Senior	186 credit hours

Failure to meet this schedule will result in denial of financial assistance until students complete enough credit hours to advance to the next grade level. Also, failure to meet any of the other SAP requirements may result in loss of financial aid eligibility.

Transfer and Second-Degree Students All transfer credit hours that appear on the academic transcript will be counted towards the duration of eligibility. For second undergraduate degree students, only credit hours that apply toward that degree are counted toward the duration of eligibility.

Repetition of Classes Students who enroll in a class and receive a grade for it more than two times will not receive aid for that class if they enroll a third time. In addition, that course will not be counted in determining the level of enrollment for financial assistance, i.e., full time, three-quarter time, half time.

Unofficial Withdrawals If students receive all grades of F or a combination of all F and W grades, the financial aid office will determine the last date of attendance by a review of the Registrar's records. Financial aid for that term will be re-calculated based upon the date of the unofficial withdrawal and may result in repayment of all grants and loans by students.

Mitigating Circumstances and Appeals If mitigating circumstances affect students' ability to meet the SAP policy, those students are required to submit a detailed explanation of the reasons for poor academic performance. In addition, an academic advisor's recommendation is required. Possible mitigating circumstances are the death of a relative, an injury to or illness of the student, and other special circumstances that can be documented on a case-by-case basis. Appeal forms may be printed from the financial aid Web site (www.iupui.edu/finaid). The form may also be picked up at the OSFAS. **Note:** Being unable to continue attendance without financial assistance is not recognized as mitigating circumstances. Also, appeals must be submitted within 10 working days of being notified that financial aid has been denied.

How to Apply for Financial Aid

To apply for financial aid, students must file the Free Application for Federal Student Aid (FAFSA) or a renewal FAFSA. These forms are available at high schools or at the IUPUI Office of Student Financial Aid Services. A FAFSA is mailed to all Indiana high school seniors and continuing financial aid students should receive a renewal FAFSA in the mail as well. Students are encouraged to submit FAFSA data electronically using FAFSA on the Web (www.fafsa.ed.gov). Computers are available in the Office of Student Financial Aid Services, the Enrollment Center, and

computer clusters on campus. THE PRIORITY DATE FOR FILING THE FAFSA IS MARCH 1. Students should expect to receive a Student Aid Report approximately four weeks after filing the FAFSA.

Students or parents applying for student loans will need to complete a Loan Information Form in addition to the FAFSA. This form should be submitted to the Office of Student Financial Aid Services.

Financial aid award notifications are mailed during the months of April and May.

Checking on Status of Financial Aid

The Financial Aid System Touchtone (FAST) enables students to get information about their financial aid file through the same interactive voice response system used for telephone registration. Students can call (317) 278-FAST (3278) to learn more about the features of the system. One very helpful feature is the Question & Answer track that allows students to leave a voice mail question for a financial aid advisor and call back the following day for the answer. To leave a message, press 1-SSN-3-PIN#-5-1.

Financial aid information and award status also may be obtained online through Insite at insite.indiana.edu.

Financial aid advisors are available on a walk-in basis Monday through Thursday, 8 a.m. to 6 p.m.; Friday, noon to 5 p.m., and 9 a.m. to noon on Saturday.

Students may contact the Office of Student Financial Aid Services by:

Web site: www.iupui.edu/finaid
 Telephone: (317) 274-4162
 FAST: (317) 278-FAST (3278)
 Fax: (317) 274-5930
 Location: 425 University Blvd., Cavanaugh Hall,
 CA 103, Indianapolis, IN 46202

Aid for Graduate and Professional Students

Graduate and professional students must file the Free Application for Federal Student Aid (FAFSA) or a renewal FAFSA to apply for financial aid. These forms are available at IUPUI. Continuing financial aid students should receive a personal identification number (PIN) to allow filing of the renewal FAFSA on the Web. Students are encouraged to submit FAFSA data electronically using FAFSA ON THE WEB (www.fafsa.ed.gov). Computers are available in the Office of Student Financial Aid Services.

Students applying for student loans will need to complete a separate loan information form and other forms available from the Office of Student Financial Aid Services or online at www.iupui.edu/finaid.

The main source of financial assistance to graduate and professional students is through the various loan and part-time employment programs. Students are encouraged to check with their school or program for information concerning scholarships, fellowships, and assistantships available for their particular area of study.

Students are encouraged to contact the Office of Student Financial Aid Services for more information:

Web site: www.iupui.edu/finaid
 Telephone: (317) 274-4162
 Fax: (317) 274-5930

Financial aid counselors are available on a walk-in basis Monday through Thursday, 8:00 a.m. to 6:00 p.m.; Friday, noon to 5:00 p.m.; and 9:00 a.m. to noon on Saturday.

Scholarship Information

General Information

IUPUI offers many unique scholarship opportunities for undergraduate students. These can be categorized as scholarships for beginners and scholarships for continuing students. In addition, individual academic units sponsor separate scholarship opportunities for students in specific programs. We recommend directly contacting the school with your intended major to research other scholarship opportunities. A comprehensive list of scholarships, as well as downloadable applications, are available on the Scholarship Central Web site (www.iupui.edu/~scentral). The Office of Student Scholarships also maintains a scholarship bulletin board in the basement of Cavanaugh Hall across from the IUPUI bookstore. The board is updated weekly with news of private sector scholarships, awards, and grant competitions. For additional information and applications, call the Office of Student Scholarships at (317) 274-5516.

Students receiving scholarships are strongly encouraged to participate in the Honors Program. Participation is only a requirement for the University College Honors, the IUPUI Honors, and the IUPUI Honors Upper-class Scholars scholarships.

Freshman Scholarship Opportunities

Most scholarships for freshmen are based on academic merit, eligibility often being determined by previous academic performance, high school rank, and date of admission to IUPUI. There are a few exceptions. See the comprehensive listings on the Web site for more on these opportunities. Students may qualify for more than one scholarship. Competitive scholarships require applications. Applications are available online from the Scholarship Central Web site (www.iupui.edu/~scentral).

Admission-based Scholarships

IUPUI Academic Excellence Scholarships

\$1,500 annually (Renewable—4 years) Students admitted by April 1, who rank in the top 15 percent of their high school class and have scored 1200 on the SAT or 26 on the ACT (merit qualifications) may qualify for this scholarship. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 3.0 each semester. No application required.

IUPUI Dean's Recognition Scholarships \$1,250 annually (Renewable—4 years) Students admitted by March 1, who rank in the top 25 percent of their high school class with an 1100 SAT or 24 ACT score, may qualify for this scholarship. Students must attend full time (minimum 12 credit hours) and maintain a minimum 2.75 GPA. No application required.

IUPUI Dean of the Faculties Scholarships

\$1,000 annually (Renewable—4 years) Students admitted by March 1, who graduate in the top 40 percent of their high school class with an Indiana Academic Honors Diploma and score 1000 or higher on the SAT or 21 on the ACT, may be eligible for this scholarship. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 2.5 each semester. No application required.

Valedictorian/Salutatorian Scholarship \$3,500 annually (Renewable—4 years) Students admitted by February 1, who are ranked first and second in their high school graduating class and score 1000 or higher on the SAT or 21 ACT, may qualify for this scholarship. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 3.3 each semester. No application required.

Competitive Scholarships

University College Honors Scholars \$1,250 annually (Renewable—2 years) Students who score either 1180 SAT/26 ACT and/or who are in the top 15 percent of their high school class may compete for an honors scholarship. See the application for more information. Applications are available in the Scholarship Office or the Honors Program Office. Honors scholarship recipients may choose to receive a laptop computer rather than a monetary award in the first year. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 3.3 each semester. Admission and scholarship application deadline: March 1.

IUPUI Honors Scholars \$1,250 annually (Renewable—4 years) Students meeting the merit criteria (see above) may compete for an honors scholarship. Applications are available in the Scholarship Office or the Honors Program Office. Honors scholarship recipients may choose to receive a laptop computer rather than a monetary award in the first year. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 3.3 each semester. Admission and scholarship application deadline: March 1.

IUPUI Outstanding Freshman Scholars \$2,500 annually (Renewable—4 years) Students admitted by Feb 1 who meet the merit criteria are invited to apply for this competitive scholarship. Emphasis will be placed on well-rounded students, excelling not only in academics but also in extracurricular activities, leadership abilities and/or community service. See the application for more information. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 3.3 each semester. Admission and scholarship application deadline: Feb 1.

IUPUI Distinguished Scholars \$3,000 annually (Renewable—4 years) Students admitted by Feb 1 who rank in the top 10 percent of their high school class with a minimum 1300 SAT /29 ACT score may compete for this scholarship. Emphasis will be placed on academic excellence but extracurricular activities and community service will also be considered. See the application for more information. Students must attend full time (minimum 12 credit hours) and maintain a minimum GPA of 3.5 each semester. Admission and scholarship application deadline: Feb 1.

New Generation Scholarships \$1,000—Incoming freshmen admitted to IUPUI University College, science, technology, or engineering programs whose immediate family includes no member who has earned a college degree (associate's or bachelor's) can apply. Admission and application deadline: March 1.

Hughes Scholarships \$500-\$750—Students admitted by March 1 with financial need may qualify if they have at least 1100 SAT/ 24 ACT score and are ranked in the top 40 percent of their class. This scholarship is for Indiana residents only. The submission of the FAFSA is required. Application deadline: March 1.

Richard Rapala Scholarship \$500-\$1,000—New beginning students majoring in chemistry, cytotechnology, or nursing are encouraged to apply. Emphasis placed on both academic merit and financial need. Admission and application deadline: March 1.

Mary E. Burns Scholarship \$500-\$2,000—Students from Washington County high schools are encouraged to apply for this scholarship provided from Mary E. Burns' estate. Application deadline: April 1.

Norman Brown Minority Achievers Program \$2,000—Students from racial and ethnic populations who have been historically underrepresented in institutions of higher education in Indiana are encouraged to apply. Eligible applicants must be admitted to IUPUI as a full time student with 1040 SAT / 22 ACT and 3.0 GPA. Admission and application deadline: March 1.

Minority Research Scholars Program Stipends of tuition and \$1,000 for books and supplies are provided to successful candidates who are competitively selected to engage in research in one of seven research fields. Renewals are possible for up to four years if minimum 3.0 GPA is maintained. Contact Professor Marchusa Huff at (317) 274-8049 for more information. U.S. citizens and/or permanent residents only.

Freshman Service Scholarships \$2,000—These scholarships recognize students for exemplary community service, especially while in high school. Entering students meeting regular admission standards are encouraged to apply. Service scholars must be enrolled in at least 9 credit hours per semester and enroll in one service learning class. Call 317-278-2662 for more information.

Zora Neale Hurston—Mari Evans Scholarships \$2,000—In honor of two leading women, this scholarship was created to encourage the study of subjects that transcend gender, race, age, culture, and economic status (such as creative arts including composing and music performance, liberal arts, or social sciences). Deadline April 1.

School of Engineering and Technology Freshman Scholarships \$500-\$3,000—Freshman engineering majors with a strong record of academic achievement, extracurricular activities, and a strong science background with a minimum 1150 SAT are considered for this scholarship. Deadline: March 1.

Dean of Science Scholarships \$2,000—Beginning science majors with strong academic records are encouraged to apply for this competitive scholarship. Students must enroll full time and maintain a 3.5 GPA. Call the School of Science at (317) 274-0625 for more information.

Shared Heritage \$1,000—High school students with a minimum 3.0 GPA applying full-time to Herron School of Art are eligible to apply. Minorities are encouraged to apply. Application and portfolio required. Deadline: March 1.

School of Nursing Scholarships \$1,000-\$1,500—Beginning pre-nursing majors who rank in the top 20% of their high school class are encouraged to apply. Application deadline: March 1.

Sam Masarachia Scholars Program Full tuition and fees (in-state rate only)—New beginning full-time students in liberal arts who are interested in studies related to labor, senior citizens and/or community activism are encouraged to apply. Recipients will participate in Masarachia seminars, internships, and related activities. All finalists will be interviewed and scholars will be selected based on academic merit, financial need, and evidence of commitment to and familiarity with one or more of the above program areas. Deadline: March 1.

Jeff and Susan Vessely Scholarship \$2,000—Incoming physical education majors. Must maintain a 2.5 GPA for renewal. Deadline: March 1.

Bo L. Hagood Scholarship \$500—Incoming freshman majoring in tourism, conventions, and event management. The recipient must be working in the industry (i.e., hotels, tourism, restaurants, or other hospitality and tourism fields) with preference given to a minority student. Deadline: March 1.

Peter J. George Scholarship \$500—Beginning or transfer students admitted to the Department of Tourism, Conventions, and Event Management are encouraged to apply. Deadline: March 1.

Other scholarships are available through various schools and programs to beginning students. Students should check their school or program sections for a list of these scholarships.

Continuing Student Scholarships

Many opportunities exist campus-wide for continuing student scholarships and awards. Below are a few of the continuing student scholarships available. See the Scholarship Central Web site for a more detailed listing with points of contact for various academic unit scholarships and awards.

Challenger Scholarships up to \$2,000—Established in memory of the Challenger crew, this scholarship supports students majoring in sciences, engineering, education, or social sciences, who intend to pursue a teaching career at any level. Call (317) 274-6842 for information. Deadline: Near the end of January.

Assist Scholarships \$500-\$1,000—Created to assist single, custodial parents at IUPUI pursuing their first undergraduate degree to help meet their educational goals. Must have financial need as determined by the FAFSA. U.S. citizens and/or

permanent residents who are also Indiana residents. Other requirements, contact the Office of Student Scholarship for more details. Deadline: Sept. 15.

Robert E. Cavanaugh Memorial Scholarships \$750-\$1,500—Upper-class students of all majors who have graduated from an Indiana high school, who demonstrate leadership abilities, and have some demonstrated financial need are encouraged to apply. Must have at least 26 credits at IUPUI and be currently enrolled. Deadline: Sept. 15.

Frances McCracken Scholarships \$500—Foreign language and single parent students are invited to apply for this award. Essay and interview. Contact the Scholarship Office for more information. Deadline: Sept. 15.

Adult Outstanding Scholarships \$1,000—Motivated adult (30+) returning students with at least 12 credit hours, GPA 3.5 in all courses since returning. Contact the Honors Office at 274-2660 for more information. Deadline: May 1.

Service Learning Scholarship \$3,000—The scholarship recognizes students who have records of exemplary community and university service. Criteria also include completion of at least 15 credit hours at IUPUI and a minimum GPA of 2.75. Students receiving the scholarship enroll in a service learning class and donate six hours of community service each week. Contact the Office of Service Learning at (317) 278-2662.

IUPUI Honors Upper-class Scholars \$1,250 for one year (full time), \$625 for one year (part time)—Talented and motivated students who have demonstrated their academic abilities either by distinguishing themselves in honors courses or by completing at least 12 credit hours with a 3.0 GPA or higher are eligible to apply for this scholarship. Applications are available in the Honors Program Office.

Charles McGaughey Leadership Award \$2,500—Established by Charles McGaughey for upper-class students in the Schools of Business, Liberal Arts, and Science who demonstrate leadership abilities and an appreciation of basic American values. A minimum 3.0 GPA is required. Application deadline: Sept. 15.

Norman Brown Minority Achievers Program Up to \$2,000—Students from racial and ethnic populations who have been historically underrepresented in institutions of higher education in Indiana are encouraged to apply. Eligible continuing students with minimum GPAs of 3.0, enrolled full time may apply for this scholarship. Deadline: March 1.

Staff of Life Scholarship \$2,000—This scholarship is available to full-time professional students in the School of Allied Health Sciences, School of Dentistry, or School of Nursing undergraduate degree programs (either A.S. or B.S.). Available to seniors anticipating graduation the following May or students entering these programs in the fall, who are single custodial parents, eligible for financial aid (FAFSA application required), and are U.S. citizens or permanent residents, and who are Indiana residents. Deadline May 15.

Carnegie Fellowships \$15,000—Six awards made each year to students with bachelor's degrees studying philanthropy, but not in a degree program. Call the Center on Philanthropy at (317) 278-2858.

Friends of Women's Studies Scholarships Amounts vary—For students with a strong interest in women's issues who have completed at least 6 credit hours in the program. Amounts vary from year to year. Contact Women's Studies for more information at (317) 274-7611.

Arminda B. And Jean C. Bepko Scholarship \$500—Students enrolled at IUPUI with a minor in women's studies who have completed their freshman year and have a minimum 2.8 GPA are encouraged to apply. Contact Women's Studies for more information at (317) 274-7611.

Women's Rotary Club of Indianapolis \$1,500—Nontraditional females returning after three years or more, enrolled at IUPUI for the academic year for education and preparation for reentry into the job market, starting a new career; must be 25 or older. Contact Women's Studies for more information at (317) 274-7611.

Helen Mowery Scholarships \$500-\$1,000—This art scholarship is open to currently enrolled students who graduated from Warren or Lawrence Township high schools applying to Herron School of Art. Contact Herron School of Art for more information (317) 920-2416.

Zora Neale Hurston-Mari Evans Scholarships Up to \$2,000—Graduate and undergraduate students. In honor of two leading women, this scholarship was created to encourage the study of subjects that transcend gender, race, age, culture, and economic status (such as creative arts including composing and music performance, liberal arts, or social sciences). Deadline Sept. 15.

IUPUI Undergraduate Research Opportunities Program Amount varies—UROP offers undergraduate research grants and travel funds to encourage and recognize undergraduates who participate in research and other creative projects with faculty in all disciplines, including music and art. Formal research credits may be earned toward graduation. Contact the UROP Program Director, (317) 274-1028 for more information.

Other scholarships are available for continuing students. These are awarded by schools and various programs. Students should check the material and Web sites for their school or program for these scholarships.

Graduate students should contact their department for information about financial support.

One Million Dollars in Scholarships from External Sources

In recent years, IUPUI students (graduates and undergraduates) have brought approximately \$1 million in private sector scholarships and awards with them to help pay for their education. Students can find information on such opportunities from high school guidance offices, from scholarship source books, and from the online scholarship search

databases available for free to the public. These free connections are available from the Scholarship Central Web site. Search services have different information, so students should consult several of them. Many IUPUI students have had luck with the larger search services such as FastWeb and Expan, which have efficient filters in place that eliminate scholarship entries for which students are not eligible. FastWeb even has applications for many of its scholarships available online.

STUDENTS SHOULD NEVER PAY FOR SCHOLARSHIP OR FINANCIAL AID INFORMATION!

This information is available for free from hundreds of sources. Persistence pays off. Persistent students have better chances of getting a scholarship. Many students take themselves out of the running by failing to follow through and apply. Many local scholarship providers in Indianapolis only receive a few applicants for their awards, and that makes the few who apply more competitive.

Placement Testing

All beginning undergraduate students who have not yet successfully completed one college-level English composition course (W131), or whose programs require math are required to take placement tests in reading, writing, and mathematics prior to enrolling for the first semester at IUPUI. Some applicants may be directed by the Office of Admissions to complete placement tests before the office will finalize an admission decision. The placement test results indicate the students' level of preparedness and the proper or recommended course placement in writing and mathematics.

Placement tests (English, reading, mathematics, and foreign language) are administered by the Testing Center from 8 a.m. to 8 p.m., Monday through Friday, and 8 a.m. to 5 p.m. on Saturday. Students are responsible for scheduling the tests by calling the Office of Orientation Services at (317) 274-4240 between 8 a.m. and 5 p.m., Monday through Friday. Ideally, placement tests should be scheduled at least two weeks prior to Orientation and Registration to ensure that the students' placement test results will be available for advising purposes.

The three placement tests take approximately two and a half hours to complete. (For more information on placement testing, see the placement testing brochures issued by the Testing Center.) Placement test results are given to the students at Orientation. If students have not taken the placement tests or their results are not available, they are limited to a restricted list of courses that do not require placement tests. The UC student manual lists those courses.

Students who have successfully completed college-level work in English (with a grade of C or above in W131) and mathematics (a grade of C or above in MATH 111 or equivalent courses) are exempt from taking placement tests. Students may call the Orientation Office at (317) 274-4240 to determine whether they are exempt from any or all of the placement tests. English test scores are good for two

years, and mathematics placement scores are good for one year from the test date.

In addition, there are placement tests for foreign languages (French, Spanish, and German) and chemistry. Students who plan to take these subjects in their first semester should be tested prior to registration. The foreign language placement test, currently given to students who want to continue in a language previously studied, is scheduled through the Office of Orientation Services at (317) 274-4240. The chemistry placement test is scheduled and administered through the Department of Chemistry. Call (317) 274-6872 for more information about the chemistry placement test.

Testing for Students Whose Native Language Is Not English/English as a Second Language (ESL) Placement Testing

All new students—graduate and undergraduate—whose native language is not English are required to take the ESL placement test prior to registration. This test is administered by the English as a Second Language Program. All international students from non-English speaking countries as well as U.S. permanent residents and others referred by the Admissions Office take the ESL test in lieu of the English writing test that native speakers of English are required to take.

Those who need to further develop their English skills will be assigned to appropriate ESL classes. These courses are required and should be completed as soon as possible. This requirement has been established in recognition of the vital importance of language competency to the academic success of students.

The intermediate courses—ENG G009 and G010—and the advanced courses—G011 and G012—focus on fundamental language skills. This sequence is designed to improve reading and grammar skills as well as listening comprehension and speaking proficiency. Credits from these courses do not count toward IUPUI degrees; however, grades awarded will be included in the student's grade point average.

Undergraduate ESL students are also placed in an appropriate ESL section of the IUPUI writing courses, ENG W001 or W131. These courses carry the same credit and the same requirements as the regular Department of English sections. ESL W131 fulfills part of the communication core requirement focusing on writing skills for undergraduate students. The credit from this course counts toward IUPUI undergraduate degrees, providing that students receive a grade of C or better. A few undergraduate programs accept a grade of C-.

Graduate ESL students who need to improve writing skills are placed in G013, which focuses on the special writing demands of graduate-level classes. Those who need to improve listening and speaking skills are placed in G020, which focuses on the verbal and aural skills required in professional settings.

All new international students should contact the Office of International Affairs at (317) 274-7294 to register for the ESL placement test. For more

information about the ESL Program, call (317) 274-2188 or visit the Web site (www.iupui.edu/~esl).

Accommodations for Placement Testing

Students who because of disabilities need special equipment, extended time, or tests taken in separate rooms—whether for placement testing, orientation, or for actual classes—must contact Adaptive Educational Services (AES) before or at the same time they schedule placement tests. Since registering with AES and providing them with documentation takes time, as does the arrangement of services, students must contact AES [(317) 274-3241] or go to Cavanaugh Hall, CA 001E, as soon as possible before classes start.

Cost for Placement Testing and External Tests

The IUPUI Testing Center administers tests and psychometric instruments for counseling and student development. The IUPUI placement tests (English, reading, and mathematics) are free. However, students who change their placement test reservations less than 24 hours in advance or who fail to attend their scheduled test dates will be assessed \$5 for each rescheduling. The foreign language placement test costs \$12.00.

In addition to the tests mentioned above, the Testing Center administers the (institutional) SAT, ACT, CLEP, DANTES, MAT, LSAT, PRAXIS, interest inventories (e.g., Strong Interest Inventory, Myers-Briggs Type Indicator), learning style indicators (e.g., Merkle Style Preference Indicator), and diagnostic academic skills tests. For more information on external tests (including examination fees), contact: Testing Center, Union Building, Suite G003, 620 Union Drive, Indianapolis, IN 46202-5168; (317) 274-2620; Web site: assessment.iupui.edu/testing.

Orientation—New Student Connections

University College, in conjunction with all the undergraduate schools, requires all new students to attend an orientation, advising, and registration program called Connections. During Connections, students receive an overview of campus resources, review their placement score results, receive information about the school/program in which they are interested, receive survival hints for the first six weeks, and meet with an advisor. Usually, students register immediately following their advising session, provided that their placement scores are available.

E-mail accounts are set up during orientation sessions. Students can also go to computer centers and obtain e-mail accounts online.

In addition to tuition, students pay a new student enrollment fee. All orientation sessions—offered days, evenings, or Saturdays—require a reservation. Especially since some sessions are restricted to students interested in a particular school or program, students should contact (317) 274-4240 to make a reservation prior to orientation.

Advising

New and transfer students receive their initial academic advising during orientation. Other students meet with University College advisors, who help them

chart their first few semesters and prepare them to transfer to their degree-granting schools. The advisors for students with dual admission will probably be advisors or faculty from their intended schools or programs.

Once students transfer to degree-granting schools, they should meet with their school's advisors to chart the completion of required courses, to discuss post-graduation careers or further educational options, or to get help with academic difficulties. Students may be assigned an advisor, but if not, they should ask for one.

Preparing for Advising Sessions

Although advisors are here to help, students are ultimately responsible for their own success. They need to prepare themselves by learning what is required to earn their degrees and to use the tools provided by University College and the campus that aid students in making wise choices in the types and numbers of classes to take.

Elements of an Undergraduate Degree

Basic to planning a college education, rather than just semester-by-semester picking of classes, is an understanding of what components make up a college degree. Most four-year college degrees are made up of about 40 courses. These courses generally are 3 credit hour courses, though some are 1, 2, 4, 5, and even 6 credit hour courses. Each hour of credit generally means 15 hours in class (i.e., one hour per week), though in some programs, especially in the sciences, there are additional credit hours for laboratory or recitation work.

Courses fall into three categories: general-education requirements, major or concentration requirements, and electives. The exact courses that may be used in each of these areas vary according to the program of study.

First-year students generally begin with a learning community, general-education courses, and introductory courses in their majors. Courses required for college degrees are often sequential, that is they build on the content, concepts, and skills learned in lower-level courses. As a result, most schools number their courses 100, 200, 300, and 400 to indicate the order in which students should take the courses. First-year students should generally take courses in which the first number in the course number is either a 0 or 1; occasionally, first-year students might take a 200-level course.

Some courses require students to take prerequisites or lower-level courses before enrolling in the higher-level courses. Prerequisites are listed in the course descriptions in this bulletin. General-education requirements and the specific major requirements are listed in school sections of this bulletin. University College advisors also have checklists of requirements for the different degree programs. Electives, generally five to ten courses depending on a student's program, are usually taken during junior or senior year.

Scheduling Tools and Information

A significant tool in advising is IUCARE/Student Advising System available within Insite via the IUPUI Web site. This online system was designed to help

students and their advisors review degree requirements and student progress towards any intended IUPUI degree or a degree at any IU campus. The online system is not intended to replace regular meetings with an academic advisor. Students, however, may wish to review and print an "audit" in preparation for an advising session. The IUCARE system allows students to investigate what would happen if they changed majors or schools. This student advising system provides students with online access to transcripts and degree requirements (IUCARE), and various special purpose Web sites. For information on IUCARE, visit the Web site (registrar.iupui.edu/iucare.html).

Students planning their schedules should also consult the degree requirements in this bulletin or the appropriate checklists provided by University College advisors. The *Schedule of Classes* is published every March for summer and fall classes and in October for spring classes. It is mailed to all currently enrolled students. An earlier online version of the bulletin is available on February 1 for summer and fall classes and late September for spring classes at insite.indiana.edu. Potential students may request a copy of the schedule by calling the Enrollment Center or visiting any Indianapolis area public library.

Developmental or Refresher Course Work

If placement test results indicate that a student needs more work or a refresher in reading, writing, or mathematics, the student will be required to take these classes first. The basic skills of reading, writing, and calculating are building blocks to most other college classes. Advisors will assist students in selecting a balanced schedule with refresher courses as well as regular college classes when appropriate. In general, students will not be certified to move into their schools until they have successfully addressed any skill deficiencies they may have.

First-Year Seminars or Learning Communities

National studies have shown that successful first-year students need five elements: an introduction to campus resources and support services, the creation of a support network (which is especially important on a commuter campus), on-going personal interaction with faculty and staff, the development of skills and habits basic to academic achievement, and a realization of the high expectation that the campus has for each of its learners. IUPUI has developed learning communities which include First-Year Success courses, dedicated to achieving the objectives spelled out above. Often these First-Year Success Seminars are linked with another course so that the students in the seminar can work together across classes to learn the material and otherwise support one another. The team approach in these seminars of faculty members, librarians, advisors, and student mentors provide students with in-depth knowledge and contacts for key elements of the campus. Some students such as the honors students take special First-Year Seminars and may be required to take more than one semester of these courses.

General-Education Requirements/Introduction to Majors

Beginning students will also be advised to start on the general-education requirements for the program(s) in which they are interested. These classes may include communication skills, science, social and behavioral sciences, arts, and humanities, depending on the school or program. Either in the first or second semester, especially if students are attending full time, they will be encouraged to enroll in the introductory course in their major or program. These are usually 100-level courses.

Undecided and Exploratory Options

Many students come to IUPUI uncertain of what they want to study, in part because they do not know all their options, and because they are unsure of their own strengths. They want to remain undecided until they explore all their options and feel more certain about their direction. "Undecided" and "exploratory" students receive special counseling to allow them to explore possible programs of study. Taking introductory courses in different fields often helps students make up their minds or determine their aptitude or interest. The advisors may urge students to go to the Career Center to investigate career options or take tests that will reflect the students' areas of interest. There also are a number of courses specifically focused on helping students make career choices. This is a healthy process. Exploring possible options early in a college career is common and far better than changing direction in the junior or senior year.

The Merkle Style Preference Inventory Test, which helps students identify areas of interest, may be taken at any computer lab. For interpretation of the results and how the results might influence a career choice, contact University College.

Registration

Registration for first-time students takes place in conjunction with orientation. In subsequent semesters, students have the option of registering by touchtone phone or by computer. Information about registration is available in the *Schedule of Classes*, online, and in the Office of the Registrar. Information on distance education, Weekend College, and off-campus classes is also available on the CLN Web site and in *Give Yourself Credit*.

Schedules of classes and other university communications are mailed to all current students at their current addresses. For these and many other reasons, it is vital that students keep both current and permanent addresses and phone numbers up to date with the university. In some cases, current and permanent addresses are identical, though some use their parents' address as their permanent address especially if they are living in student housing. Students can change their addresses online through insite.indiana.edu. Addresses may also be changed by completing an address change form, available in the Office of the Registrar or at the Web site registrar.iupui.edu.

All students are issued university e-mail addresses. Should students choose to use a different e-mail provider, they should forward their university e-mail to their preferred service provider in order to be sure

to receive important university announcements. Information on forwarding university e-mail is available online at kb.iupui.edu.

Waitlisting

Occasionally, students will be turned away from a class section because it is filled to capacity. Seats may open up, however, if registered students drop the class during the registration period. Through an automated waitlisting system, the first person to make a waitlist request for a class is placed at the top of the waiting list. When a seat opens up, that person is registered automatically for the course. For more information, check the *Schedule of Classes* or visit the Web site registrar.iupui.edu.

Enrollment Authorizations and the Checklist

School authorization does not guarantee enrollment in a class; it only authorizes that the student is eligible for enrollment. Schools may restrict enrollment, so students should review the course description in this bulletin or the *Schedule of Classes* to see if they fit the requirements. For instance, some courses such as upper-division courses in business or courses in allied health are open only to students officially enrolled in those schools. Other courses may be restricted to students with sophomore, junior, senior, or graduate student status. Otherwise ineligible students who believe their personal preparation overrides the restrictions may seek the instructor's permission to enter the class.

When students are checklisted, they cannot register for courses because they have failed to meet some requirement of the university or school and cannot proceed until the problem is resolved. Problems that result in a student being checklisted are a grade point average below the required level or failure to pay tuition or other fees. Students with unpaid library fines or outstanding parking tickets may be placed on the checklist. Students can review their status on Insite, and if they find they are checklisted, they should contact the office(s) listed to resolve the problem. For more information about the checklist procedure, students may contact the department or school involved or the Office of the Registrar.

Schedule Adjustments (Dropping and Adding Classes)

To drop a course and make a successful transition into another class, students are encouraged to drop and add before classes begin or no later than the first week of classes. During summer school, students should drop and add during the first two days of classes. Students are allowed to drop classes, subject to the approval of their academic advisor and school restrictions, through most of the semester. Specific deadlines and procedures appear in the *Schedule of Classes* or on the Web at registrar.iupui.edu. Students wishing to add a course should do so as close to the start of the semester as possible, as instructors may refuse students admission into classes if they believe that students have already missed too much work in the new class.

During the first four weeks of regular semesters, partial refunds are given for dropped courses. Initially, students may drop classes with no signatures; then they need their advisors' and later

their instructors' signatures. To drop a class in the final part of the semester, students who have a serious and documented reason, such as a serious medical problem, need all of the previous signatures plus the dean's signature. Instructors have the authority to assign the grade of F if a student's work has been unsatisfactory even if permission to withdraw has been obtained.

Students who choose to withdraw must officially drop classes. Failing to attend class does not mean a student has dropped a class but rather will result in an F in the course. Failing to pay for the course once registered, having received a deferment of payment, will result in both an F and a bill for the course. For more information on dropping and adding classes, students should see a later section in this bulletin, "Academic Policies and Procedures," the *Schedule of Classes*, or the Web site registrar.iupui.edu.

Nontraditional Scheduling Options

IUPUI offers numerous educational options outside the traditional classroom. These Distance Learning Delivery Systems are found at convenient locations, at times stretching over seven days and nights, and, in addition to regular course formats, are offered online, by TV, and through the U.S. mail. For more information on course and credit program options, see the *Schedule of Classes*, *Give Yourself Credit*, or the IUPUI Community Learning Network at the Web site www.cln.iupui.edu.

See also information about CUE, a consortium of Indianapolis colleges and universities that augments IUPUI's traditional on-campus courses. Students in some programs may be registered on more than one campus simultaneously. Check with either the school involved or the Office of the Registrar.

Distance Learning IUPUI's Community Learning Network (CLN) offers classes off campus year-round and on the weekends. Through television, CLN connects college-bound learners in metropolitan Indianapolis and central Indiana with the academic and technical resources at IUPUI. Lectures are delivered over public television, WFYI TV Channel 20, Time Warner Channel 19, Comcast Cablevision Channel 39, or by videotapes purchased from the IUPUI Bookstore. Syllabi are offered online. Students interact with peers and faculty through computers, fax, telephone conferencing, and voice messaging systems. Students may complete all requirements for the School of Liberal Arts Associate of Arts and the School of General Studies Associate of General Studies degrees through CLN. Each semester, new courses are offered over the Internet. Visit www.cln.iupui.edu for more information.

Internet and Online Courses Increasingly, Internet programs are part of the way IUPUI offers classes. Internet programs use e-mail, the World Wide Web, computer conferencing, and other Internet-based applications. Students often can complete program requirements without going to a learning center. Currently, course descriptions are online, and over 600 courses have their syllabi and, in some cases, all class materials online via Oncourse.

Off-Campus Sites Starting in 1979, the nation's first major off-campus Learn and Shop College Credit

Program offered classes in the training rooms of major department stores in three suburban Indianapolis shopping centers and in area high schools. The university now teaches at two permanent sites at Glendale Mall and the Carmel Community Life and Learning Center. Students may satisfy the requirements for the School of Liberal Arts Associate of Arts degree and the School of General Studies Associate of General Studies by taking courses exclusively in off-campus locations. The Weekend College Office is located in the Enrollment Center, open Saturdays and Sundays during the Fall and Spring semesters.

Correspondence Courses IU's Independent Study Program offers numerous credit courses through home study. Instructors and students communicate in writing, by phone, or by e-mail. Students start these courses any time and complete them at their own pace. This is especially valuable to adult learners or people with swing shift jobs for whom regular classes are virtually impossible to attend. These courses, however, do not count towards a full- or part-time load for the purpose of financial aid. Students need to check with their academic units to determine which, if any, correspondence courses can be used to meet requirements for their degree programs. The Independent Study Program booklet is available in most school offices and by calling 1-800-334-1011. For additional information, see Independent Study Program in the School of Continuing Studies section of this bulletin or the Web site scs.indiana.edu.

Indiana College Network (ICN) This system delivers classes from seven Indiana universities and several independent colleges over satellite, intercampus television networks, the Internet, CD-ROM, or through correspondence. The ICN evolved from the earlier Indiana Higher Education Telecommunication System (IHETS), which delivered programs by satellite to 300 receiving sites. For information, visit www.icn.org.

Western Governors University Through a collaborative effort among the governors of ten western states, a competency-based virtual university was established in 1998. Dozens of universities and corporate partners originate and deliver courses, degrees, and programs. Courses are offered by paper and pencil correspondence, by videotape, satellite TV, or the Internet. Students may enroll in courses online through WGU at various learning centers on campus and throughout Indiana. For more information, visit the Web site (www.wgu.edu).

Fees

IUPUI tuition is set annually by the Trustees of Indiana University. Current fees appear in the *Schedule of Classes*, and the rules that determine whether students are residents or nonresidents for fee purposes appear at the end of this bulletin. Undergraduate programs and most graduate/professional programs charge by the credit hour, while the Schools of Medicine and Dentistry charge a yearly flat fee.

In addition to tuition, there are some special course fees for equipment or supplies; all undergraduates are assessed technology, athletics, and student activities fees. New students are charged for

orientation. The one-semester parking fee is optional, and books and supplies are additional. Various payment options are described in the *Schedule of Classes* and in materials distributed with bills. See bursar.iupui.edu for more information, including current fees.

Students whose financial aid or loans have not yet arrived may qualify for automatic aid deferments through the Financial Aid Office. Students should find out from Financial Aid whether they have received deferments since such deferments cover fees, partially or totally. This means students are actually enrolled and must attend classes or officially withdraw. If they withdraw, their bills will be adjusted accordingly. It is, therefore, critical that students check with the Financial Aid Office or monitor their accounts via Insite (insite.indiana.edu) to determine whether they received deferments.

University College: Gateway to IUPUI in the First Semester

When undergraduates enroll at IUPUI, they enter the University College, a student-centered community focused on helping undergraduate students adjust to college life and achieve their goals. The UC is a team committed to addressing student concerns. Its faculty members are IUPUI's academic leaders, its advisors are professionals who assist students in developing a plan of study based on student abilities and desires, and its student mentors are peers who help students understand how to study effectively and efficiently.

Partnership for Academic Excellence

All University College students sign the Partnership for Academic Excellence to ensure that students understand and commit to those elements that the staff and faculty of IUPUI and universities around the country see as vital to success. The faculty, advisors, and staff of University College identify the services and other forms of assistance that IUPUI provides to help students.

The Partnership for Academic Excellence stresses the importance of always attending class, completing assignments on time, giving adequate time to out-of-class learning experiences, including reading, review time, and researching and rewriting written assignments. In addition, students are urged to maintain contact with their University College advisor and other staff on a regular basis to review, discuss, modify, and plan their academic program, and to work to achieve at least a grade of C (2.00 GPA) in all courses. The full text of this agreement is in the University College section of this bulletin.

Time on Task (Absence Policies)

Regardless of whether an explicit absence policy appears on the syllabus, students are expected to attend all classes and are responsible for completing all course work required. Unless the instructor has a different procedure for absences, when students are unable to attend class, they should contact the instructor prior to or immediately following the absence. Students should identify someone in class

who is willing to share notes or discuss what was missed. Some instructors may provide videotapes of missed classes, but it is not the instructor's job to repeat a class for a student who is unable to attend class. Exams or other work missed during absences can only be made up with the approval of the instructor. Instructors may choose to count a student absent who comes late or leaves early. As always, discontinuing class attendance without officially dropping the class will result in the student receiving a grade of F.

The Early Warning System

National research shows how important it is for students to get early feedback on their work. IUPUI faculty, therefore, send informal assessments to students' advisors through the Early Warning System. Advisors then contact the students who are having trouble and encourage them to rethink their study habits and seek academic assistance.

The Learning Center/Academic Assistance

The Learning Center, devoted to students helping students, includes the Resource Center and the Student Mentoring Program. It is on the second floor of the University College (UC), which is located in the old library building.

Supplemental Instruction Program

The Supplemental Instruction Program provides a collaborative environment, one that builds community and strengthens academic skills. Mentors—students who have successfully completed a course and are now helping others—work with groups free of charge to improve students' understanding of difficult material in courses such as psychology, math, economics, chemistry, and biology. In addition, mentors share study skills and test-taking techniques. For more information, contact the Learning Center at (317) 274-4818.

Tutoring

The Department of Mathematical Sciences and the University Writing Center provide students with free, one-on-one tutoring. Math tutoring is available for MATH 163, 164, 221, and 222 through the Math department. Other departments will help students identify tutors who charge for their services. The Resource Center can provide additional information on the availability of tutors.

Resource Center

The Resource Center is a student-staffed referral service where IUPUI students can find tutors and campus resource information for courses not covered by the Student Mentor Program. Help is also available with studying and time management, techniques for taking exams, and information about the Supplemental Instruction Program.

The Ideals Underlying an IUPUI Undergraduate Education

Principles of Undergraduate Learning

The Principles of Undergraduate Learning are the essential ingredients of the undergraduate educational experience at Indiana University–Purdue University Indianapolis. These principles form a conceptual framework for all students' general education but necessarily permeate the curriculum in the major field of study as well. Other specific expectations for IUPUI's graduates are determined by the faculty in a student's major field of study. Together, these expectations speak to what graduates of IUPUI will know and what they will be able to do upon completion of their degree.

Core Communication and Quantitative Skills

[Definition:] The ability of students to write, read, speak and listen, perform quantitative analysis, and use information resources and technology—the foundation skills necessary for all IUPUI students to succeed.

[Outcomes:] This set of skills is demonstrated, respectively, by the ability to: (a) express ideas and facts to others effectively in a variety of written formats, (b) comprehend, interpret, and analyze texts, (c) communicate orally in one-on-one and group settings, (d) solve problems that are quantitative in nature, and (e) to make efficient use of information resources and technology for personal and professional needs.

Critical Thinking

[Definition:] The ability of students to analyze carefully and logically information and ideas from multiple perspectives.

[Outcomes:] This skill is demonstrated by the ability of students to (a) analyze complex issues and make informed decisions, (b) synthesize information in order to arrive at reasoned conclusions, (c) evaluate the logic, validity, and relevance of data, (d) solve challenging problems, and (e) use knowledge and understanding to generate and explore new questions.

Integration and Application of Knowledge

[Definition:] The ability of students to use information and concepts from studies in multiple disciplines in their intellectual, professional, and community lives.

[Outcomes:] This skill is demonstrated by the ability of students to apply knowledge to: (a) enhance their personal lives, (b) meet professional standards and competencies, and (c) further the goals of society.

Intellectual Depth, Breadth, and Adaptiveness

[Definition:] The ability of students to examine and organize disciplinary ways of knowing and to apply them to specific issues and problems.

[Outcomes:] (a) Intellectual depth describes the demonstration of substantial knowledge and understanding of at least one field of study, (b) intellectual breadth is demonstrated by the ability to compare and contrast approaches to knowledge in different disciplines, and (c) adaptiveness is demonstrated by the ability to modify one's approach to an issue or problem based on the contexts and requirements of particular situations.

Understanding Society and Culture

[Definition:] The ability of students to recognize their own cultural traditions and to understand and appreciate the diversity of the human experience, both within the United States and internationally.

[Outcomes:] This skill is demonstrated by the ability to: (a) compare and contrast the range of diversity and universality in human history, societies, and ways of life, (b) analyze and understand the interconnectedness of global and local concerns, and (c) operate with civility in a complex social world.

Values and Ethics

[Definition:] The ability of students to make judgments with respect to individual conduct, citizenship, and aesthetics.

[Outcomes:] A sense of values and ethics is demonstrated by the ability of students to: (a) make informed and principled choices regarding conflicting situations in their personal and public lives and to foresee the consequences of these choices, and (b) recognize the importance of aesthetics in their personal lives and in society.

Active Learning: Research and Apprenticeships

IUPUI, like older universities, is a repository for theoretical or pure knowledge, a focal point for its transmission, a place for generating and critiquing new knowledge. And IUPUI, like other new urban universities, simultaneously has a special interest in applied knowledge because of its intimate ties with its community. This interest in applied knowledge is strengthened at IUPUI by the presence of its numerous and outstanding professional schools as well as the land grant tradition stemming from IUPUI's Purdue schools. Land grant universities were created to assist the citizens of the state with their day-to-day problems. IUPUI has already achieved a strong record in generating new theoretical knowledge and an equally impressive record in addressing issues of an applied nature; that is, taking knowledge from the classroom, the library, and the laboratory into the world of business, into health facilities, into governmental offices and neighborhoods, to the zoo, and to K through 12 schools.

At IUPUI, these dual missions touch the lives of all undergraduate students. In a sense, IUPUI is reversing a pattern in higher education. In the nineteenth century, when universities moved from primarily transmitting knowledge to actively pursuing and creating knowledge, undergraduates regularly worked alongside faculty. However, with the development of graduate and professional programs and the explosion of knowledge, undergraduates increasingly were excluded from the front lines of

research to more restricted roles as receivers of existing knowledge.

IUPUI, for most of its history, has reversed this pattern by re-involving undergraduates in research and first-hand experiential learning. Perhaps this happened because of the large number of adult undergraduate students with professional-level skills, if not degrees, that were so much a part of the early IU and PU extension centers that formed the heart of IUPUI's undergraduate programs. Perhaps it was because the professional schools retained their concepts of apprenticeships, although they rarely use that term. Regardless of the origins of the concept, however, IUPUI believes that undergraduates should participate in research and apply classroom knowledge in the real world as a test of its validity.

Most undergraduate programs include research or internship/co-op/practicum components or both. Also, the campus has for over 15 years funded opportunities for research work, which is open to all undergraduates and described elsewhere in this bulletin.

Linkages

Research shows that students who are involved in and informed about their college tend to be more successful in greater numbers than students who don't develop ties to the larger community. Orientation is the first way that IUPUI shows students how their academic and private lives link with their lives as campus citizens. Orientation describes the numerous clubs and student service organizations in place to help students and explains the business of IUPUI, which is to teach, research, and serve. The discussions begun in orientation are taken up in the first-year seminars. These credit classes for beginning students, also referred to as learning communities, are small classes with a team of facilitators including a full-time faculty member, an advisor, a librarian, and a student mentor. A major focus of these courses is to link students to the campus in a variety of ways.

At IUPUI, students encounter the pervasive theme of service to society. This emphasis in part reflects the presence of the Center on Philanthropy, which includes a world-renowned fund-raising school that trains nonprofit organizations. The center's presence has focused the campus on service and led to the development of undergraduate and graduate courses on numerous aspects of philanthropy. Service learning components are part of a wide array of classes (See "Service Learning" elsewhere in this bulletin), and the campus conducts a strong annual United Way campaign, a Day of Caring that involves volunteer work by students, faculty, and staff, as well as growing volunteer efforts by student groups on the graduate and undergraduate levels. Such efforts include projects such as tutoring elementary school children, blood drives, gathering supplies for the victims of earthquakes, clean-up projects, and staffing clinics.

Civility

Chancellor Gerald Bepko best defined "civility" when he stated in a letter to the campus the following message:

"We often speak of IUPUI as being a family. Like members of a family, we have dedicated ourselves to creating an environment where individuals can succeed because each person is important. When any one of our members is prevented from doing her or his best, the entire community is diminished. We are also an institution of higher learning. Our institutional ethic compels us to foster the best possible environment for doing our work as educators, learners, and supporters of the educational process. Periodically, we must reaffirm these fundamental ethics and values that form the framework of our university family.

"Among those values is fostering a climate of civility and mutual respect regardless of race, gender, age, or status in this institution. IUPUI has achieved much of its promise as an urban university because we work together towards common ends. Because the university is so complex and diverse, however, we will not always agree with one another. When we disagree it must be done with civility. We encourage everyone to speak and act judiciously and with respect for one another.

"Also among our values is academic freedom and an open exchange of ideas and opinions. However, when there are messages displayed that promote divisiveness in our academic community, we have an obligation to condemn those messages as being antithetical to our university's ideals and sense of shared responsibility for each other's welfare. If we are to be true to our commitment to diversity and be welcoming to all, everyone must do his or her part. We know the terrible legacy of unopposed statements; they become insidiously acceptable and poison the climate of trust and respect we strive to maintain. When apathy leads us to permit discrimination or harassment because we ourselves are not objects of such behavior, we have failed our community.

"No set of rules or policies can wholly govern human conduct. Civility is a fragile construct that each of us must cherish and preserve. We do have policies designed to eliminate discrimination and to prevent harassment. Our Office of Affirmative Action enforces these policies and assists in educating the campus community about acceptable and unacceptable behaviors."

The Code of Student Rights, Responsibilities, and Conduct also addresses the issues of civility and other conduct appropriate to being part of a university community.

Certification from University College to Degree-Granting Schools

Selecting a Major

Students who meet the regular admission criteria for IUPUI, who meet additional school admission criteria, and who indicate the major/program that they wish to study when they apply, may move into their schools after the first six weeks of the first semester. This dual admission is offered on the conditions that (1) students are not required to take

refresher courses following their placement tests; (2) they are enrolled in a first-year seminar; (3) they have attended orientation and have been advised; and (4) their midterm performance is satisfactory.

Other students will move to their schools during their first 56 credit hours of study, during which time students should be completing general-education requirements and other courses necessary for admission into their chosen school or program. Since these courses vary widely from one program to the next, students should refer to the University College checklists and this bulletin to ensure that courses count towards their degree.

Additional Options Available

Double Majors

While most students complete only one major within their program of study, some schools permit students to complete two majors within a school. To do so, the student must complete the requirements for each of the two majors as well as all other school requirements for a degree. Students seeking a double major must consult advisors from each of the departments in which they propose to study. Usually, the student must receive the approval of the school advisor or school dean of students to do so.

Dual Degrees

While most students work on a single degree at a time, a student may work on what is essentially two degrees in two different schools at IUPUI simultaneously (e.g., B.A. from Indiana University in English and a B.S. in Psychology from Purdue University). Such dual degrees can be obtained by completing all requirements in the two schools for the two different degrees. Some, but not all the same, courses can be used to satisfy requirements in both schools. Working on dual degrees must be approved by the appropriate deans and advisors in both schools.

Minors

Students in many schools may take one or more minors along with their majors. Minors will not appear on the student's transcript until graduation. Students majoring in one school often can elect to complete minors in other schools.

Minors are structured programs generally of 15 to 18 credit hours, though they may require more. They are of three types: (1) departmental or single-discipline minors, (2) interdisciplinary or cross-discipline minors, and (3) thematic minors.

In most schools, only courses in which students receive at least a C (2.0) can be applied to the minor. Listings of minors available and the specific requirements for minors are described in each school's bulletin section.

Certificates

Certificate programs resemble minors but generally require more credit hours. Some certificate programs are stand-alone programs, which means that a student does not have to be working towards a two- or four-year degree to complete a certificate program. In most schools, only courses in which students receive at least a C (2.0) can be applied to the certificate program, while in some schools

students may be permitted to average all grades required in the certificate program. Specific requirements and grade policies can be found in the section for the school offering the certificate.

Second Undergraduate Degrees

Normally, holders of bachelor's degrees seeking further education are encouraged to enter graduate programs; in certain cases, however, students may prefer to work toward a second bachelor's degree. IUPUI strongly recommends that students discuss current requirements with an advisor prior to starting work on a second undergraduate degree. If admitted by a school to candidacy for a second degree, students may count credits earned in their first bachelor's degree. However, they must meet the school's requirements, including residence requirements, distribution course work, work in the major, and other requirements not fulfilled by earlier work. Some schools may specify the number of credit hours that must be taken above and beyond the credit hours from the first degree.

Changing Units

University College's goal is to launch students on a successful college career. Once the transition from high school to college, or from workplace to college has occurred, University College focuses on moving students into their degree-granting programs and schools. The faculty require that, at minimum, students must successfully complete a learning community course, be enrolled in or eligible to enroll in W131, be enrolled in or be eligible to enroll in MATH 111, complete the reading requirements, attain a minimum GPA of 2.0, and complete 11 credit hours (12 credit hours at Columbus) in order to certify to a degree-granting school. Many schools have more requirements. Refresher courses will not count toward students' degrees but will count toward the students' standing as full- or part-time degree-seeking students for financial aid and insurance purposes.

Students on probation must fulfill their contractual agreements and achieve a minimum cumulative GPA of 2.0 to be removed from probationary status. When students meet their school's requirements, they are eligible for certification to those schools. Otherwise, students remain in University College until they (1) meet the conditions for admission into their desired school; (2) change career objectives and find another school at IUPUI willing to accept them; or (3) earn too many credit hours to remain in University College. (See the section below entitled "The 56 Credit Hour Rule.")

Admission into Degree-Granting Programs from University College

Some schools accept all students with a minimum GPA of 2.0 or other specified GPA. In such schools, students can change schools or programs using an Office of the Registrar IUPUI School Record Change Form. To be sure that they are eligible to transfer, students should consult the school recorder.

Other schools require both a set GPA and the completion of a set of specific courses with a specific GPA. In such schools, it is more difficult to determine a student's eligibility. Such schools often have a formal application.

Admission into Capped (Limited Enrollment) Programs

Admission to IUPUI schools is often competitive. Schools may limit their applicant pool to students with a specified minimum GPA, and if selected for application, students may be asked to take part in an interview as part of the admission process. It is important for students to fully understand the entrance requirements of the school or program in which they hope to enroll. Students who are not accepted after one or two tries should work with an advisor to select an alternate program of study.

The 56 Credit Hour Rule

IUPUI encourages students to explore a variety of majors, but after accumulating about 26 credit hours, students should select a degree program. In order to remain in the university after accumulating 56 credit hours, undecided students must be accepted into their degree program or apply to the General Studies degree program. Transfer students with more than 56 transfer credit hours may remain in University College one semester before they must be accepted into their degree program. If, at the end of that semester, they still have deficiencies or unmet prerequisites, these transfer students may petition for additional time in University College.

Procedures for Changing Schools/Programs at IUPUI

To transfer from one IUPUI school to another, students should contact the recorder of the school to which they wish to transfer to find out if they have met the necessary requirements. University College students should contact the UC recorder. Acceptance by the new school requires the approval of the appropriate school dean.

Students may also wish to change majors within a school, say changing from criminal justice to urban affairs in the School of Public and Environmental Affairs (SPEA) or from chemistry to biology in the School of Science. Again, students should contact their school's recorder to determine their eligibility and consider the consequences of such a change.

A Temporary Change of Campus

If IUPUI students want to enroll at another Indiana University campus on a temporary or permanent basis, they should contact the Office of Admissions at the appropriate campus. More information on transferring to another Indiana University campus may be found on the Web at enroll.iupui.edu. Likewise, to enroll at another Purdue University campus, students should contact the Office of Admissions at the appropriate Purdue campus.

STUDENTS CONSIDERING PERMANENT TRANSFERS SHOULD REMEMBER THAT DEGREE REQUIREMENTS VARY ON DIFFERENT CAMPUSES, WHETHER AT IU OR PURDUE. TRANSFERRING MAY REQUIRE A YEAR OR MORE OF ADDITIONAL FULL-TIME STUDY, ESPECIALLY IF THE TRANSFER IS MADE IN THE JUNIOR OR SENIOR YEAR.

Student Responsibilities

The faculty and Trustees of Indiana (and Purdue) University vote to confer the degree on students at the end of their course of study, and if requirements are not met, they may withhold the degree. Students are

responsible for understanding all requirements and completing them by the time they graduate. Advisors, directors, deans, and faculty gladly help students understand school requirements; however, each student is responsible for fulfilling the requirements. Students may refer to this bulletin, Insite (insite.indiana.edu), and school advisors and recorders to find out about their personal progress toward a degree.

Similarly, students are responsible for informing IUPUI of any changes in their name, address, phone number, and other relevant data. Students may use Insite (insite.indiana.edu) to change information online, or provide it directly to the Office of the Registrar. Likewise, students are responsible for securing the necessary form and signatures to drop classes and for turning the forms in on time. Failure to properly drop a course could result in an F in that course. Similarly, all registration or add procedures must be followed or students risk not receiving credit for a course that was improperly added.

Students should also be familiar with the rules of appropriate academic behavior which are based on three major premises: (1) The free exchange of ideas is critical to university life, and therefore civility within the academic community must be ensured; (2) ideas are as much property as are houses, cars, CDs, and wallets, and therefore, another person's ideas cannot be used without permission and acknowledgment of the idea's true owner; and finally, (3) knowledge and wisdom are truly the result of contributions of individuals and societies past and present from around the world, and therefore, diversity is seen as a desired, even crucial, component of any intellectual community. These concepts lead to rules and regulations that are found in the *Code of Student Rights, Responsibilities, and Conduct*. A brief summary of some key elements of the Code appear in a later section of this bulletin. Students are expected to be familiar with the basics of the Code.

Graduation Requirements

Applying for Graduation

Candidates for graduation initiate the certification process by filing an Intent to Graduate form with the recorder of their school at least one year prior to their expected graduation date. Purdue degree candidates must register for CAND 991 as noted in the *Schedule of Classes*. Details concerning the application deadlines of specific schools and any additional requirements related to graduation are available from the recorder or the school sections of this bulletin.

Completion of Degree Requirements

When students contact the recorder about graduation, they should double-check that they in fact will have completed graduation requirements. The IUCARE/Student Advising System shows what courses students still need to take and whether all transfer work has been entered. Some schools do audits either when students file for graduation or at the

beginning of their senior year. Students should go over audits with their advisors to make sure they are accurate, and if they should contact the school recorder with questions. Common mistakes that result in students' failure to graduate are unacceptable grades and not registering for necessary courses, dropping them during the last semester, or otherwise failing to complete required courses. Students may graduate with incompletes on their record, provided they are not for required courses. Residency requirements also affect graduation eligibility. For more information visit registrar.iupui.edu/iucare.html.

Required Grade Point Average

In addition to completing all the required course work, students must have a specific overall grade point average and a specific GPA in their major to graduate. Most schools also require grades of C or better in major courses. Students should familiarize themselves with the policies of their program.

Academic Policies and Procedures

Grading System

A+ Through F

Faculty have the responsibility for evaluating a student's performance and assigning a grade for the course. They select grades from the list below and have the discretion of using plus and minus grades. The registrar will use the following numerical equivalencies in computing a grade point average (GPA):

Grade	Points
A+ =	4.0 Highest Passing Grade
A =	4.0
A- =	3.7
B+ =	3.3
B =	3.0
B- =	2.7
C+ =	2.3
C =	2.0
C- =	1.7
D+ =	1.3
D =	1.0
D- =	0.7 Lowest Passing Grade
F =	0.0 Failing Grade
P =	Pass
S =	Satisfactory
I =	Incomplete
R =	Deferred Grade
NC =	Course taken as Audit (No Credit)
NR =	Grade not yet received in Office of Registrar
NY =	Special program enrollment for which credit earned will be recorded when completed. Typically used for Study Abroad
W =	Withdrew after the first week of classes. Grade will appear on transcript
WX =	Withdrew through the first week of class. Grade will not appear on transcript.
WZ =	Changed sections of the same course. Grade will not appear on transcript.

Grades of I and IX (Incompletes)

A grade of I (incomplete) may be assigned by an instructor when exceptional circumstances, such as illness, prevent students from finishing all work required in a course. The grade of I will be awarded only if the work is mostly complete, and of passing quality.

The faculty member will set a specific date (up to one year) by which all unfinished work must be completed. Upon submission of the completed work, the faculty member files a Removal of Incomplete form with the Office of the Registrar, and students receive notification by mail of the new grade and the updated cumulative GPA. A grade of I that has not been removed within one calendar year of the time it is recorded will automatically be converted to a grade of F. The student will receive notification of this pending change and should take immediate steps to resolve the Incomplete. In rare cases, the instructor may agree to extend the deadline for resolving the Incomplete beyond the initial one-year period and in turn will submit a grade of IX on the Removal of Incomplete Form.

The faculty member is not required to give the student a year to finish the work. The instructor has the right to set an earlier deadline if deemed appropriate.

If students have to re-take the course in order to remove the Incomplete, they should not re-enroll in the course. Instead, they should make arrangements with the original instructor and any new instructor to sit in on a portion of or the entire course as required by the instructor(s). In all cases, the original instructor is responsible for assigning the final grade. If he or she is unavailable or no longer with the university, the student should consult with the chair of the department in which the course is offered. If after receiving an Incomplete, students wish to withdraw from the course, they must follow the official IUPUI procedures for withdrawal.

Students should understand that sitting in on a course or otherwise making up the Incomplete does not count as part of the full- or part-time course load for financial aid purposes or for loan deferments.

Grades of P/F (Pass/Fail) at the Undergraduate Level

During an undergraduate program, a student in good standing (not on probation) may enroll in up to a maximum of eight elective courses to be taken with a grade of P (pass) or F (fail). Each school's regulations vary on the Pass/Fail option. Most schools restrict students to two Pass/Fail courses during an academic year. In some schools, Pass/Fail courses cannot be used to satisfy general-education requirements or requirements in the major or minor. In rare cases, a student may be able to use the Pass/Fail option for part of the general-education requirement. Other programs may permit some limited use of the Pass/Fail option for departmental electives required for the major. The school recorders can explain the Pass/Fail procedure for each school/program.

Instructors are not involved in the decision to use the Pass/Fail option and are not informed that the student

is taking a course on a Pass/Fail basis. All instructors report the traditional letter grades to the Office of the Registrar where all grades of D– or above will be converted to grades of P.

A grade of P does not affect the grade point average, but a grade of F does. Once a student requests that a course be taken Pass/Fail, the student cannot request that the Pass/Fail option be reversed. A course in which a student earns a P will count towards graduation.

Courses taken on a Pass/Fail basis count toward full- or part-time standing for purposes of financial aid or loan deferments.

The student must turn in the signed Pass/Fail forms to the Office of Registrar by the deadline specified in the *Schedule of Classes*.

Grades of S/F (Satisfactory/Fail)

Certain courses are taught on an S (Satisfactory) or F (Fail) basis. Everyone in the course receives either S or F grades, and individuals do not have the option of receiving A+ through D– grades. Courses graded on an S/F basis usually carry a footnote to that effect in the *Schedule of Classes*.

A grade of S does not affect the GPA; a grade of F does. Most other universities will not accept S grades for credit.

Grades of R (Deferred)

The grade of R (Deferred Grade) will be applied when the student's work only can be evaluated after two or more semesters. The grade of R is appropriate in thesis and research courses in which the student's work is evaluated only when the thesis or research is done. It may also be used at the end of the first of a two-term course or a course that overlaps two terms if the course is approved as a Deferred Grade course.

Grade Appeals

Each degree-granting unit has policies and procedures for handling student appeals regarding academic decisions such as grades. If students believe they were given an incorrect grade, they should contact the instructor first and then the director or chair of the unit offering the course. If that proves unsatisfactory, the student should contact the unit regarding the process for appealing the grade in question. See school sections for additional information or see the registrar's Web site.

Semester and Cumulative Grade Point Average (GPA)

Only courses with grades of A+ through D– and F are used in calculating grade point averages (GPA). P and S grades are passing grades in completed courses, but they are not used in calculation of a GPA.

To calculate a semester GPA, take the value (or quality points) for each grade and multiply it by the number of credits. For example, a 3 credit course with the grade of A equals 12 GPA points. (The grade of A equals 4 quality points multiplied by 3 credit hours.) Add all GPA points together and then divide by the total number of GPA credit hours completed.

Example:

3 credit A	3 credits x 4.0 pts	= 12.0 pts.
3 credit B	3 credits x 2.7 pts.	= 8.1 pts.
2 credit C	2 credits x 2.0 pts.	= 4.0 pts.
2 credit F	2 credits x 0.0 pts.	= 0.0 pts.
2 credit S	not used in calculation	
2 credit I	not used in calculation	
3 credit W	not used in calculation	

10 credits = 24.1 pts.

24.1 points ÷ 10 cr. = 2.41 GPA

The cumulative GPA is calculated by combining the credits for all the semesters taken at IUPUI or an IU campus and dividing that number into the total number of credits earned in courses with grades of A+ through F. Courses taken at other non-IU institutions are not used in calculating the IU GPA.

Credit hours passed is the number of IU course credit hours completed with a passing grade (A+ through D–, S, P) at the level indicated (undergraduate, graduate, or cumulative). Any credit hours earned as a transfer student from outside the IU system are recorded on the transcript as transfer credit hours. IU credit hours passed and transfer credit hours are added together to determine a student's class standing.

In some cases, schools calculate a degree GPA, which may vary slightly from the cumulative GPA as it appears in the summary portion of a student's transcript or IUCARE audit. This is due to differences in program requirements, especially when students are earning Purdue degrees.

The degree GPA for IUPUI students pursuing Purdue degrees offered by the Schools of Engineering and Technology; Science; and the Tourism, Convention, and Event Management programs will be calculated using the Purdue University grading policy. Courses taken at any IU or Purdue campus and included in the student's program of study will be used in calculating the final GPA at the time the degree is awarded.

Class Standing

0-25 credit hours	= Freshman
26-55 credit hours	= Sophomore
56-85 credit hours	= Junior
86 or more credit hours	= Senior

In some schools, a student's class standing is determined by where the student is in his or her program and not by the simple total of all credit hours. This is especially true if the student has changed majors and moved into a program where a significant number of credit hours previously taken will not apply toward the new major.

Semester Credit Hour Load

To be considered a full-time undergraduate student by the university for the fall and spring semesters, a student must register for a minimum of 12 credit hours each semester. In summer sessions, full-time status is considered at least 6 credit hours in each session. These numbers are the university's definition

of full-time status for undergraduates seeking financial aid. Some degree programs require more than 12 credits per semester.

In general, undergraduate students may take no more than 18 credits in the fall or spring semesters and no more than 7 credits in a summer session. Superior students may exceed these limits with written permission from the dean addressed to the Office of the Registrar. Some academic programs require more credits as a matter of course, but schools may further limit the number of credits for students who have performed poorly in past semesters.

Graduate students must take at least 8 credit hours to be full time in the fall and spring semesters, and 4 credit hours during the summer sessions.

Course Loads and Work

The following guidelines may assist a student in determining the appropriate number of credit hours to take in combination with work and other obligations. Financial aid regulations also affect course load.

Hours Employed Per Week	Semester Load	Summer Load	Status
31-40+	6 credits	3 credits	half-time status
21-30	9 credits	4-5 credits	three-quarter status
0-20	12-17 credits	6 credits	full-time status

University College probationary students will be limited to a maximum of 12 credit hours per regular semester and urged not to take more than 3 credit hours per summer session. Other schools limit probationary or re-admitted students until they have established good academic records.

Academic Probation

Students are placed on probation any time their cumulative GPA falls below their school's or program's GPA of good standing. Individual schools and programs vary in their policies. See the sections in individual programs for further information on probation.

Dismissal

Students may be dismissed from their school or program if they fail to meet academic or professional standards. The student will be informed of the dismissal in writing by the school's dean or the dean's campus representative.

Some factors considered when students are dismissed are failure to maintain a minimum GPA of 2.0 (IUPUI's GPA of good standing) or the school's GPA of good standing after being placed on probation, a lack of progress toward the degree requirements in the judgment of the faculty, or a lack of acceptable ethical or professional behavior. Dismissed students are required to sit out for at least one semester following their first dismissal, and at least one full year following their second dismissal in most schools. See individual programs for more information about dismissal and readmission. Individual departments/schools may refuse to readmit students on the basis of their academic records.

Students already enrolled in and even attending classes will be administratively dropped from those

classes and their money returned if they are dismissed.

Readmission

Any student who has been dismissed from an IUPUI school or its equivalent on another IU campus (or Purdue campus for students in the Schools of Science and Engineering and Technology) must petition for readmission. Some schools also require students dismissed from other institutions to petition for admission. Each petition is considered individually, and a decision is made based on the student's academic history and personal circumstances. Students must explain why they were dismissed and how they expect to deal with potential problems. A Petition for Readmission form may be obtained in school offices or the Office of the Registrar.

Schools will notify students of their readmission status. Students may be approved for readmission, approved for a conditional readmission (e.g., for part-time but not full-time study), or denied readmission.

Students who have been dismissed but can show compelling evidence that they have corrected the problem may be allowed to return to school without delay. Petitioning for readmission between the fall and spring semesters may not be possible, however, if the school requires that the petition go to a faculty committee. Check with the recorder of individual schools to determine the school's policy.

Grade Replacement Policy

The IUPUI Grade Replacement Policy (formerly known as the FX policy) was revised effective fall 1996. This policy allows approved undergraduate students seeking their first degree to repeat courses—a maximum of 15 credit hours subject to school/division approval—in order to improve poor grades, including grades of F. If a student earns the same or a higher grade after repeating the course, only the second grade will be counted in the cumulative GPA. Replacement does not happen automatically, so students must notify the school recorder that the course has been taken a second time and that they wish to exercise this option. Certain restrictions apply, and the grade replacement policy may not be honored by some schools when considering admission to the school or in computing graduation honors. For more information, students should contact their school/division.

The 15 credit hours limit includes any course(s) previously replaced using the FX policy. A student may exercise the Grade Replacement Policy no more than two times for a single course, and once invoked, a student may not reverse the grade replacement granted in a particular course. The replaced grade will be excluded from the cumulative GPA, but the course and the replaced grade will remain on the student's academic record with a notation indicating that the grade exists but is excluded from the cumulative GPA. The use of the forgiveness policy does not preclude a student from using grade replacement for course work taken subsequent to re-enrollment as defined by the forgiveness policy.

If the original course was taken on another IU campus, that campus must be willing to place the replacement flag on the course at IUPUI's request.

Not all IUPUI units accept the general policy as stated above. If a student changes programs, schools, or campuses to a program that does not recognize the Grade Replacement Policy, the original grades will once again be averaged into the student's GPA.

This policy is not available for graduate students or students seeking any second undergraduate degree. For a copy of this policy, contact the Office of the Registrar, or the registrar's Web site (registrar.iupui.edu/replace.html).

Auditing a Course

Students may audit a course, which means they can sit in on the course for no credit. The audited course will appear on the student's transcript with a grade of NC (no credit). The student must discuss course work expectations with the instructor, and it is up to the instructor to approve the student's request to audit the course.

Audited courses do not apply toward any academic degree and do not count as part of a student's full- or part-time load for purposes of financial aid or for loan deferments.

The tuition for an audited course is the same as that for a credit course.

Students considering this option should discuss it carefully with their academic advisor to see if this is the best choice or if another grading option, such as the Pass/Fail option, may be more appropriate.

In some cases, schools do not allow students to register for a class for credit after taking it on an audit basis. Students should consult their school recorder about this, especially before auditing a required course.

Students must pick up the audit forms from their school or division, secure the appropriate signatures, and submit the form to the Office of the Registrar by the deadline specified in the *Schedule of Classes* or visit registrar.iupui.edu/auditcrs.html.

Once invoked, the student may not reverse the credit status for the course.

Forgiveness Policy

IUPUI's Forgiveness Policy has established an effective way to encourage capable, mature undergraduate students to return to college even though they may have done poorly during earlier attempts at Indiana University. This policy does not cover graduate students or students seeking a second undergraduate degree.

The Forgiveness Policy is not available to students in all schools. A student granted forgiveness in one unit might have that forgiveness revoked upon transferring to another IUPUI school. This option only exists at the IUPUI campus and not at any other campus of Indiana or Purdue universities.

The general campus policy appears below. Students should contact school recorders to determine whether or not this option is available and

appropriate for them. Please note that the university computer system has not yet been modified to reflect changes made to the student's official record as a result of this policy.

IUPUI Forgiveness Policy (abbreviated version)

The spirit of the Forgiveness Policy provides the same fresh start to former IU students accorded to students transferring from other universities. The policy only applies to former IU students who have worked on a first undergraduate degree but who have not attended any college for a minimum of three years. Each IUPUI school can grant forgiveness, but other schools may refuse to accept the forgiveness policy when students change schools. Schools do not have to consider forgiveness for purposes of admission, granting of honors, or meeting the minimum GPA required for conferral of degrees.

Students must invoke this policy upon application for admission to a degree-granting school or submit a notification of intent to petition for academic forgiveness if not yet accepted by a school.

If the forgiveness petition is accepted, all courses previously taken will remain on the transcript, but only courses with grades of A+, A, A–, B+, B, B–, C+, C, P, and S may be counted toward degree requirements, though these grades will not count in the student's GPA. In effect, the student will start with a cumulative GPA of 0.0, after which all the rules of academic probation and dismissal will apply. Forgiveness may be invoked only once, and it does not preclude a student from using other grade replacement options available for course work taken after forgiveness is granted. Forgiveness is only available for courses taken at Indiana University.

Visit the registrar's Web site registrar.iupui.edu/forgive.html to see the entire policy.

Dropping or Adding Classes (Schedule Adjustments)

Students can make changes in their schedule (commonly known as add and drop) from the time of their initial registration up through the last day of the first week of the semester either by computer or with a Schedule Adjustment form. Drops after the first week of class require a student's advisor's signature and adds require that both the advisor and the instructor of the class be added. Students receiving financial aid should be aware that dropping from a full-load of 12 hours to six or less during the first week(s) of the semester may change the amount of aid a student is eligible for and require the student to repay some of the money already received.

Students must drop classes officially; stopping attending a class or even never attending the class does not cause the student to be dropped from the class. After the middle of the semester, students need the advisor's and instructor's signatures. In the final quarter of the semester, classes can only be dropped with the approval of the dean of the student's school. Such late withdrawals are usually approved only if illness or emergencies are involved.

Dropping classes is done using the Schedule Adjustment forms, which are available at University College and the offices of most schools. The forms must be filled out, signed, and returned to the Office of the Registrar, Cavanaugh, CA133.

While Ws do not change a student's GPA, more than ten withdrawals without well documented medical or other serious reasons will trigger the federal government's definition of "not making academic progress" and may result in the loss of eligibility for certain types of aid.

Refunds for Dropped Courses

Refunds are determined by the date the drop activity is processed by the IUPUI Office of the Registrar.

Refunds are based on the following schedule:

Courses Scheduled for 9-16 Weeks

For Withdrawal during:

1st week of classes	100% of course fees
2nd week of classes	75% of course fees
3rd week of classes	50% of course fees
4th week of classes	25% of course fees
5th week of classes and after	NO REFUND

For courses scheduled for fewer than nine weeks, see the Bursar's refund section of the *Schedule of Classes* for the specific semester.

Check the *Schedule of Classes* for exact refund dates. After the 4th week, if you decide not to attend a class, don't just walk away from the class without officially withdrawing from the class or from the university since you will receive F's in undropped classes.

The Office of the Bursar does not usually withdraw students from classes if they fail to pay their fees. Every student must officially withdraw from a class before the class is dropped from the student's record. If students do not withdraw, they will be awarded a grade of F and they will be required to pay for the course before they can register for additional courses in future semesters. Neither faculty nor advisors are authorized to withdraw students from classes.

Petition for Change of Grade

Students who believe their grades were recorded incorrectly or unfairly should contact their instructors, who can correct any errors in grading. If the faculty member is not available, students may speak to the chair of the department or the dean of the school.

If students follow the above procedure and are still dissatisfied with the grade recorded, they may obtain a Change of Grade form from www.registrar.iupui.edu/gradechg.html or in student affairs offices in all the schools. The form should be submitted to the school offering the course with documented reasons—reasons as serious as medical problems or military obligations—for altering the grade. Schools have special procedures and committees to consider petitions. The Office of the Bursar will not consider requests for refunds until a grade of W appears on a student's record.

Repeating Courses

If a student repeats a course, it will only be counted once towards graduation or electives in the major, though the grades will be calculated in the GPA.

Exceptions are variable topics courses, internships, or some other courses that can be taken more than once for credit. Courses repeated under the grade replacement policy may be excluded from the GPA. See the individual school's section of this bulletin to determine any restrictions on use of grade replacement.

Confidentiality and Access to Student Records

IUPUI, in compliance with the Family Educational Rights and Privacy Act (FERPA), provides that, with the exception of directory information, all student records are confidential and available only to the student.

The Family Educational Rights and Privacy Act affords students certain rights with respect to their education records. These rights include:

Access

Students have the right to inspect and review their education records within 45 days of the day the university receives a request for access. Students should submit to the registrar, dean, head of the academic department, or other appropriate official written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

Students also have the right to request the amendment of their education records that they believe are inaccurate or misleading. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate or misleading. If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

Right to File a Complaint

Students have the right to file a complaint with the U.S. Department of Education concerning alleged failures by Indiana University to comply with the requirements of FERPA.

Confidentiality and Disclosure

Students have the right to consent to disclosures of personally identifiable information contained in their education records, except to the extent that FERPA authorizes disclosure without consent. One exception that permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney,

auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility. Upon request, the university may disclose education records without consent to officials of another school in which a student seeks or intends to enroll. Finally, "public information" may be released freely unless the student files the appropriate form requesting that certain public information not be released. This form is available online at registrar.iupui.edu/confiden.html or from the Office of the Registrar.

Public information at IUPUI is limited to:

Name	School or Division
University E-mail Address	Class Standing
Major Field of Study	Degrees and Awards
Dates of Attendance	Activities
Admission or Enrollment Status	Sports and Athletic Information Campus

Parental Access to Student Records

Under the Family Educational Rights and Privacy Act, parental access to student records may be granted if the student is under 21 years of age and the parent certifies in writing that the student is a dependent as defined by the Internal Revenue Service (IRS). In the case of divorce either parent (custodial or non-custodial) has access to the record of a dependent student. Dependent students may prohibit parental access by filing a Restraint of Release of Student Information form with the Office of the Registrar. Information then will only be released to a third party by written permission of the student. This form is available in the Office of the Registrar.

Availability of Public Information

Certain student information maintained in the Office of the Registrar is considered public. The complete list appears above. The university maintains an online address book that allows a user to find a limited set of information for an individual student by searching on a student's name or university network id. The address book displays the student's school, major, class standing, and, if available, the student's e-mail address.

The university makes limited public information for a student available through the "Public Services" option of Insite. This screen displays a student's name, school, major, class standing, current and future semesters for which the student has registered, any semesters completed, and any degrees awarded to the student. The screen does not show the student's address, phone number, or any specific courses for which the student has enrolled or has completed.

IUPUI uses a course management system called Oncourse. Through Oncourse, all students enrolled in a course section will see the names of their

classmates unless a student has filed a Restraint of Release of Student Information form in the Office of the Registrar (see below). The list of names is only available to the instructor and those enrolled in the specific class and does not provide a student's complete course schedule. A student's course enrollment is available only to students enrolled in that course section and not to anyone outside of the university. Only the name will appear unless the individual student releases additional information to fellow classmates through use of the Oncourse profile system. See the Oncourse Student's Guide for additional information.

Restraint of Release of Student Information Form

If you do not want all or some of the information released to any person other than IUPUI faculty or staff, complete a Restraint of Release of Student Information form and return it to the IUPUI Office of the Registrar. A confidentiality flag will be added to your record by the Office of the Registrar. The restrainer will also block all information from appearing in the online address book, to classmates in Oncourse, or in the Public Services option of Insite.

To remove the restrainer, complete a Removal of the Restraint of Release of Student Information form and return it to the IUPUI Office of the Registrar.

These forms are available on the Web at registrar.iupui.edu/confiden.html or may be obtained in the Office of the Registrar.

Disclosures

From time to time, the university is served with a subpoena for portions of a student's record. In these cases, we will write to the student or the student's attorney (if known) and inform them that unless we receive written notification that the student will attempt to quash the subpoena, we will provide the information requested, even if the student has placed a restriction on his or her record.

A number of IUPUI degree programs prohibit enrollment to anyone listed on the Indiana Sex Offender Registry. The Office of the Registrar will notify the school dean of any student on the registry attempting to enroll in such programs.

Records of arrests and/or convictions and traffic accident information are public information and may be released to anyone making inquiry of the University Police.

For additional questions regarding the policy on the release of student information, contact the Office of the Registrar. For a full copy of the university policy on student records, see Appendix 4 in the *Code of Student Rights, Responsibilities, and Conduct*.

IUPUI does not provide lists of students or an individual student's address or phone number to outside businesses, agencies, students, or other parties. We will provide phone numbers in emergency situations and only following consultation with university police. However, because IUPUI participates in federal programs, we are required by federal law to make available to military recruiters

the name, address, age, and prior military service status of all students at IUPUI.

The university sponsors an Affinity credit card to IU students and alumni. A small portion of each charge is paid to the university while students and alumni have the opportunity to demonstrate their support of the university. A list of students is provided to the vendor each year for purposes of solicitation for this credit card only. Under the terms of the contract, the vendor may not share the list of students or alumni with other vendors. Students who have filed a Restraint of Release of Student Information form will not appear on this list.

Zachary's Law

The state of Indiana maintains a registry of individuals who have been convicted of sex offenses committed against minors. As a number of degree programs and specific courses either prepare students to work with minors or place them in contact with minors as a part of the course, enrollment in those courses or programs is not available to anyone who appears on the Sex Offender Registry. Consult individual school sections to see if appearance on the registry will be a barrier to enrollment. For more information, visit the Web site (registrar.iupui.edu/zachary.html).

Technology Access, Security, and Use

Indiana University has a rich information technology environment, and while some personal use of computers, networks, and telecommunications systems is permitted, access to these resources is provided primarily in support of academics, research, administration, and other University activities. Access to such an environment comes with responsibilities.

Use for personal commercial gain is not permitted under any circumstances, so students may not use IU resources to support a private business.

Chain mail and music and movie sharing programs (among other things) can cause a large amount of network traffic. Overuse of modems means that someone else may get a busy signal. Because all members of the campus community share technology resources, students must ensure that they are using only their fair share.

Students are responsible for ensuring that their personal computers are secure, and free from viruses and other malicious programs. Information about security and related issues can be found at the Web site of the University Information Technology Security Office (www.itso.iu.edu).

Illegal acts will be reported to the appropriate law enforcement agency. Such acts include harassment, threats, pyramid schemes, trafficking in child pornography, and computer trespass or tampering.

Many common uses of computers, photocopiers, and other technologies can result in violation of copyright law. Those who commit an infringement may be held personally liable under the law; those who commit the infringement with university-owned resources also violate university policy, and could face disciplinary actions. Students must make the effort to understand the copyright law that protects books, computer

software, Web sites, multimedia files such as movies and music, and other works. Remember that a work need not include any copyright notice or other indication of copyright to have automatic legal protection. Copying short excerpts of works for limited distribution and access may be "fair use" and not an infringement. Students are responsible for learning about fair use and its application to their projects. Information about copyright and fair use can be found at the Copyright Management Center site (www.iupui.edu/~copyinfo).

If the university receives any report of violations of law or policy perpetrated by any member of the IU community using IU resources, that report will be investigated and reported to the appropriate law enforcement and/or university office for possible action. Students should visit the Web pages of the University Information Technology Policy Office (www.itpo.iu.edu) to learn more about Indiana University information technology appropriate use policies, and the services of the Policy Office.

IU Policies on Equal Opportunity/Affirmative Action

Indiana University–Purdue University Indianapolis pledges to continue its commitment to achieving equal opportunity within the university and throughout American society. Specifically, our policy at IUPUI prohibits discrimination based on arbitrary considerations such as race, color, religion, national origin, sex, sexual orientation, marital status, age, disability, or veteran status. IUPUI will make every effort to recruit, hire, promote, educate, and provide services to persons based solely on their individual qualifications. Further, we will take affirmative action to overcome the discriminatory effects of traditional practices with regard to people with disabilities, minorities, women, and Vietnam-era veterans.

Our institutional ethic demands that we foster the best possible environment for doing our work as educators, learners, and supporters of the educational process. Therefore, IUPUI does not tolerate discriminatory harassment or intimidation of students, employees, or guests of the university, and responds to complaints of such treatment, providing proper remediation when harassment is determined to have occurred.

No qualified individual with a disability shall, by reason of such disability, be excluded from participation in or denied the benefits of university services, programs, or activities. Reasonable accommodations shall be afforded to the known physical or mental limitations of otherwise qualified individuals.

Questions, concerns, or complaints regarding IUPUI policy and practice with respect to discrimination or harassment may be directed to Lillian Charleston, Affirmative Action Officer, Administration Building, AO 127. Voice: (317) 274-2306, TDD: (317) 278-2200, e-mail: lcharles@iupui.edu.

Special Academic Opportunities

Special Credit Opportunities (Waivers and Credit)

Special credit policies and procedures vary with individual schools.

Special credit may be awarded to degree-seeking IUPUI students who possess, by previous education or experience, a background in a discipline represented by an IUPUI program. The categories under which students are awarded credit are (1) credit by credentials, (2) credit by experience, and (3) credit by examination. Each school and many disciplines have different policies that define how these mechanisms apply to students seeking credit.

Not all schools accept special credit, and special credit does not transfer to IUPUI from other universities. Changing schools at IUPUI may result in special credit awards not being used to meet degree requirements of the new school.

Students who establish eligibility for special credit must apply for the credit in the Office of the Registrar. The credit will be awarded at the following fee rate: (a) no credit hour fee for freshmen who apply for special credit during the first two consecutive semesters after entering the university, and (b) a nominal fee per credit hour for undergraduate transfer students if they apply during the first semester after entering the university. The nominal fee per credit hour also applies to students receiving special language credit for lower-level language courses, following the satisfactory completion of a higher-level course. Students who do not qualify for the above will pay the standard fee per credit hour at the appropriate resident or nonresident rate currently in place. Visit registrar.iupui.edu/speccred.html for more information.

Special Credit for Military Service

Some IUPUI schools grant college credit for military course work. Eligible students should submit a copy of their DD214 or DD295 form or military transcripts to the Office of Admissions, Cavanaugh Hall, CA 129. Students should check with their schools for more information.

Advanced Placement (AP) Credit

The College Board Advanced Placement (AP) tests are offered by participating high schools. IUPUI encourages high schools and their students to participate in the AP program and awards college credit at no charge in certain subjects to students who receive scores of 4 or 5. Some departments will give credit for scores of 3 as well. Contact the Office of Admissions to receive an informational brochure or visit enroll.iupui.edu.

CLEP Credit

The College Board College-Level Examination Program (CLEP) is also recognized by IUPUI, and it is available to both current high school students and to students who have already graduated from high school. The same brochure mentioned above shows how CLEP credit is handled. Information is also available at enroll.iupui.edu.

DANTES Credit

The Defense Activity for Non-Traditional Education Support (DANTES) Subject Standardized Test (DSST) is a subject-matter examination in college and technical subjects. Contact the Office of Admissions for information on the IUPUI policy for acceptance of DANTES credit. Information is also available at enroll.iupui.edu.

Departmental or School Proficiency Examinations

Many departments/programs award special credit to students who have demonstrated skills and/or knowledge equivalent to that taught in a given course. Some departments will allow students to take a comprehensive final to show such competencies. Such special credit is normally indicated with a grade of S, although some departments may award a grade of A if a student's performance on a departmental examination clearly merits it. In some cases, students will be charged a fee for the special credit. Consult the departments and programs about such tests, and see the *Schedule of Classes* for more information on the fees.

Special Credit for English W131

Some students are eligible to apply for special credit for English W131, *Elementary Composition I*. This option is open to students who have taken the IUPUI English placement test and placed into honors (English W140), and to transfer students whose previous institutions waived composition requirements without awarding credit. Eligible students can get more information about the special credit portfolio requirements from the English Department's Writing Program office, CA 343. Students who are eligible to submit special credit portfolios should be aware that credit is not always awarded; portfolios are evaluated by a faculty committee that determines whether credit should be awarded based on the essays submitted in the portfolio.

Special Credit for Foreign Languages

Students who have previously studied a foreign language may receive special credit by taking a placement examination and completing the course into which they were placed with a grade of C or better. The student may then apply for credit for the lower-division courses that they skipped. Students seeking such special language credit through the credentialing process described above must file an application for special credit and pay a nominal fee per credit hour for the additional credits. See the

Department of Foreign Languages and Cultures in Cavanaugh Hall, CA 408, and your home school for additional information.

There are restrictions for international students who are taking courses in their native language. They may earn credit at the 300 level but not at a lesser level.

Self-Acquired Competency Credit (Experiential Learning)

Credit may be granted in some schools for experience acquired outside of normal college courses. Credit may be available for course-specific learning or for non-course-specific learning within a discipline. Faculty will evaluate the experience and determine whether and how much credit should be awarded. Students may be asked to prepare a portfolio, take examinations, or document their learning in other suitable ways so that the faculty can make a judgment. While General Studies accepts up to 15 credit hours for the Associate and up to 30 for the Bachelor of General Studies, most schools either do not accept such credit or limit the number of acceptable credits to 12 credit hours towards a degree. If a student changes schools within IUPUI, self-acquired competency credit awarded by one school may not count in the new school.

Consortium for Urban Education (CUE)

IUPUI is a member of the Consortium for Urban Education (CUE), Indianapolis. Through CUE, an IUPUI student can enroll in and receive credit for courses not offered by IUPUI but available at another member college. An IUPUI student registered in such courses is subject to IUPUI's fees and payment procedures. Visit registrar.iupui.edu/cue.html for more information.

Honors Program

The IUPUI Undergraduate Honors Program: Philosophy and Requirements

The IUPUI Undergraduate Honors Program, housed in University College, challenges students to strengthen and enrich their university education. The program raises student academic achievement and increases intellectual vitality throughout the campus, the Indianapolis community, the state, and beyond. The Honors Program accomplishes this by being highly inclusive and offering students a number of different access points. Unlike most traditional honors programs, IUPUI's accommodates the educational needs of beginning traditional and nontraditional students, returning students, and part-time students, while consistently maintaining an emphasis upon academic excellence.

Participation in Honors

The Honors Program is available to students at all levels of university study. All qualified undergraduates, including entering freshmen, may take courses offered through the Honors Program. Students receive permission to register for honors work based

on merit criteria, which stress aptitude, motivation, and past attainment.

Freshmen

Entering freshmen are automatically invited to participate in the Honors Program when they have a minimum combined SAT score of 1180 or ACT of 26 or have graduated in the upper 15 percent of their high school class. Entering students who have been unconditionally admitted to University College are eligible to participate in honors courses. To be considered for participation, all entering students must complete an application and an interview with an Honors Program counselor. All full-time entering students are required to participate in a learning community. Those qualifying as honors students will, insofar as is possible, be placed in honors learning communities that are designed to attract and retain incoming honors candidates.

Continuing Students

Continuing students automatically qualify for participation in honors courses if they have earned a minimum of 12 credit hours with a GPA of at least 3.0. This makes them eligible to enroll in honors classes, earn honors credits by completing H-options, specially tailored work attached to a non-honors course, and participate in honors activities. Students who do not meet the criteria for automatic participation in honors courses, but who are seriously interested in the Honors Program, are encouraged to speak directly with one of the Honors Program's advisors. The Honors Program recognizes that motivation, enthusiasm, and interest are often much more accurate indicators of success than simple numerical criteria. This flexibility assures that honors opportunities are available to all those students who wish to benefit from them or to contribute to them.

Honors Students and Bachelor's Degrees

It is important to note that while all qualified students may participate in the Honors Program, not all will qualify to earn honors degrees. The Honors Program offers students the opportunity to earn honors credit that can lead to completing their degree "with honors." Those students enrolled in honors courses who maintain a minimum overall GPA of 3.3 and at least a 3.3 in honors courses are eligible to earn "honors" degrees. Additionally, students must complete one 3 credit hour "Honors Integrative Experience" course. Honors students are distinguished by having completed their degree "with honors," signifying not only that they have performed at a very distinguished level of academic achievement but also that they have been exposed to the principles of undergraduate learning and to interdisciplinary course work.

In order to complete a bachelor's degree with honors, students must fulfill their degree requirements and specific honors requirements in either of the tracks below.

1. Honors First-Year Seminar or the Equivalent (1-3 cr.)
2. Honors Undergraduate Research Project or Equivalent (3 cr.)

3. Honors Integrative Experience (3 cr.)
4. Honors Senior Thesis/Project (3-6 cr.)
5. At least two additional honors courses, selected in consultation with an honors advisor (6 cr.)

TOTAL CREDIT HOURS—With Senior Thesis, 21 credit hour minimum.

Students who decide against doing the Senior Thesis/Project must replace number 4 above with three other approved honors courses or H-options. They need 24 credit hours in all.

Of the 21-24 credit hours of Honors work required to earn the Honors notation, at least nine of those hours must be taken in courses approved by the Honors Council for Honors credit. Graduate level courses, that is courses numbered 500 or higher, will automatically qualify as honors courses. The remainder of the credit hours may be taken as H-options, H399 Honors Independent Research, or H499 Honors Thesis. At least six of these nine hours must be completed at IUPUI.

Honors Associate's Degrees

Candidates for the honors associate's degree must complete the Honors Undergraduate Research Project (3 cr.), the Honors Integrator Experience (3 cr.), and two additional honors courses (6 cr.), in addition to completing all regular associate's degree requirements with a minimum overall GPA of 3.3 and at least a 3.3 GPA in honors courses.

Departmental or School Honors Programs

In addition to the general Honors Program that is open to all qualified students, there are now honors programs in ten departments, each with its own requirements: Departments of Biology, Chemistry, Communication Studies, French, Geology, German, Occupational Therapy, Philosophy, Political Science, and Psychology. Honors degrees also are offered by the Kelley School of Business, the School of Nursing, and the School of Public and Environmental Affairs. For information on the requirements for these programs, see each school's section in this bulletin.

Honors Scholarships

The honors programs provide scholarships for highly qualified individuals who participate in the Honors Program.

University College Honors Scholars \$1,250 renewable for one year. Students who meet one of the qualifications for the IUPUI Academic Excellence Scholarships may compete for an honors scholarship. Applications are available in the Scholarship Office or in the Honors Program Office. An essay is required. Honors scholarship recipients may choose a laptop computer rather than a monetary award in the first year. Students must attend full time (minimum of 12 credit hours) and maintain at least a 3.0 GPA each semester. March 1 is the admission and application deadline.

IUPUI Honors Scholars \$1,250 renewable for three years. Students who qualify for the IUPUI Academic Excellence Scholarship may compete for a four-year honors scholarship. Applications are available in the Scholarship Office or in the Honors

Program Office. An essay is required. Honors scholarship recipients may choose a laptop computer rather than a monetary award in the first year. Students must attend full time (minimum of 12 credit hours) and maintain at least a 3.0 GPA each semester. March 1 is the admission and application deadline.

IUPUI Honors Upperclass Scholars \$1,250 for one year full time; \$625 for one year part time. Recipients may reapply and receive this scholarship for a maximum of three years. Talented and motivated students who have demonstrated their academic abilities either by distinguishing themselves in honors courses or by completing at least 12 credit hours with a 3.0 GPA or higher are eligible for this scholarship. Applications are available in the Scholarship Office or in the Honors Program Office. An essay is required. Students must maintain at least a 3.0 GPA each semester. This scholarship is available to both full- and part-time students.

Check with the Honors Program Office for forms, application deadlines, and additional information about these scholarships.

Honors Club

The Honors Club is dedicated to uniting people interested in maximizing their educational opportunities. The club provides social, educational, and community service opportunities for the student body and faculty that enhance the learning environment at IUPUI and in the community. Membership is open to all university students, faculty, and staff. Monthly meetings, along with specially planned activities, offer students, faculty, and staff numerous opportunities for enhancing their educational endeavors. For more information, contact the Honors Program Office at (317) 274-2660.

School Honors

Dean's Lists

All schools recognize outstanding academic achievement through the undergraduate Dean's Lists. Each school's requirements may vary for full- and part-time students but are based on students' work for one regular semester. Students should check their own school's materials in this bulletin for more information.

Graduation with Distinction

In the Indiana University schools, students in the top 10 percent of their class are awarded bachelor's degrees with three levels of distinction: distinction; high distinction; and highest distinction. The level of distinction is determined by the overall Indiana University GPA, and the specific minimum GPA requirements are determined each year by the individual schools. Students must have taken 60 graded credit hours at Indiana University. The level of distinction is printed on both the final transcript and the diploma. At commencement ceremonies, these graduates wear cream and/or crimson cords, depending on the level of distinction.

In the Purdue schools, students receiving Purdue degrees receive high and highest distinction, while geology students who receive IU degrees may be awarded distinction, high distinction, and highest distinction. To be eligible, candidates must complete

all their degree programs' requirements and meet the following conditions: (1) a minimum of 65 credit hours of course work from Purdue University or Indiana University applicable to the graduation index (degree grade point average) must be on record; (2) the minimum graduation index for distinction (Purdue and IU degrees) shall be no less than the 90th percentile of the graduation indexes of all the graduates in the school for the spring semester, provided that the index is at least 3.30. The minimum graduation indexes determined for the spring semester for graduation with distinction, high distinction, and highest distinction shall be applied for graduation with those respective levels of distinction for the subsequent summer sessions and fall semester. At Commencement ceremonies, these graduates wear black and/or gold cords.

Consult the sections for the Schools of Engineering and Technology and Science for more information.

University College Honoraries

University College sponsors two freshman honoraries, Alpha Lambda Delta and Phi Eta Sigma. Students from any unit of the university are eligible for membership in these honoraries if they earn a minimum GPA of 3.5 in their first semester or first year of college, are registered as full-time students, and are pursuing a four-year degree. University College also sponsors Alpha Sigma Lambda, a national honorary for part-time adult students.

Discipline-Based Honoraries

Many professions and disciplines at IUPUI have chapters of the undergraduate national honoraries associated with their field of study and regularly induct outstanding students majoring in their fields into these organizations.

Undergraduate Research Programs

IUPUI has established the campus-wide Undergraduate Research Opportunities Program (UROP) to encourage and recognize undergraduates who participate in research and other creative projects with faculty in all disciplines, including music and art. This program provides students connections to faculty research projects across campus and urges undergraduates to participate in research as early as possible. An annual Undergraduate Research Symposium is held each year to showcase student work. Students may apply for grant support for their projects and travel money to facilitate their participation in professional meetings within their discipline. Formal research credits may be earned toward graduation. Further information may be obtained from the UROP director, Kathryn Wilson, Ph.D., Science Building, LD 222; e-mail kjwilson@iupui.edu; telephone (317) 278-1028.

Service Learning Classes

Service learning involves students in community service as part of a specific course. For example, students in a writing course may complete a writing

project for a not-for-profit agency as part of their course work, or students in environmental science may participate in a wetlands planting project. Students in an introductory psychology course may read with children in a local elementary school, or business majors in a learning community course may team teach an economics unit for third graders. Service learning, however, is more than just doing something in the community; students also relate the service experience to course objectives through structured reflection and learning activities. The service component can be an integral part of the entire course or an option to replace another class assignment. Service learning is designed to give students further understanding of course content, a greater appreciation of the discipline, and an enhanced sense of civic responsibility.

Service learning provides an opportunity for students to be actively involved in the learning process. Service experiences help to clarify career goals and develop personal competencies and leadership skills. A variety of service learning courses are offered at IUPUI, and a list can be found in the *Schedule of Classes* under "Service Learning" or by contacting the Office of Service Learning in the Center for Service and Learning, University College, UC3116, (317) 278-2662.

Reserve Officers' Training Corps (ROTC)

Army ROTC

A very active Army ROTC Program is available to all qualified students. Four-, three-, and two-year scholarships are awarded on a merit basis. Scholarships will pay 100 percent of tuition, as well as \$600 annually toward books, lab, graduation, and educational fees. A \$2,000-\$4,000 tax-free stipend is paid each year the scholarship is in effect, based upon the student's class standing.

Students may enroll in the ROTC program on a voluntary or exploratory basis during the first two years. Books, tuition, and supplies are provided free of charge. Elective credit hours are awarded for the freshman and sophomore classes. Students do not incur any military obligation until enrollment in the third-year course, or upon accepting an ROTC scholarship.

Advanced placement is available to veterans and members of the Army Reserve or National Guard. Non-scholarship third-year students also receive a \$3,000-\$4,000 tax-free stipend per year. In most cases, active reservists and veterans receiving the GI Bill may participate in the ROTC program with no loss of benefits. Army ROTC is also offered to transfer and graduate students. Completion of the program may lead to a commission as a second lieutenant in the Regular Army, Army Reserve, or Army National Guard. For more information about the Army ROTC, call (317) 274-2691, send e-mail to armyrotc@iupui.edu, or visit the Web site (www.iupui.edu/it/iupurotc/iupurotc1.html).

Air Force ROTC

Eligible and qualified men and women may elect to earn credits leading to a commission as a second

lieutenant in the United States Air Force through a program located on the Bloomington campus. Credits earned in the Air Force ROTC may be applied toward the required number of credit hours for graduation. For more information on the Air Force ROTC, call (812) 855-0917.

IUPUI Internship Program

The IUPUI Internship Program is a self-directed program designed to help students obtain professional work experience related to their field of study. The Internship Program teaches students how to conduct effective internship job searches, monitors certain credit-earning internships, and assists students throughout the internship experience.

Internship positions may be full or part time, paid or unpaid, credit earning or non-credit. Academic credit may be offered at the discretion of the participating school or department. Credit-earning internships are similar to traditional courses in that documentation such as term papers will be required prior to receiving credit on a student's transcript.

In order to participate in the IUPUI Internship Program, students must meet the following eligibility requirements: 1) Current enrollment in a degree or certificate program at IUPUI. 2) Sophomore status. 3) Cumulative GPA of 2.5 or higher. 4) Complete one full semester at IUPUI prior to the start of the internship. In addition, credit-earning internships are subject to the eligibility requirements of their academic department.

For more information regarding the IUPUI Internship Program, stop by the IUPUI Career Center at BS 2010 or call 274-2554. Information is also provided on the IUPUI Career Center's Web site at www.iupui.edu/~career. It is expected that interested students attend one of the frequently scheduled Internship Workshops for specific information regarding internships.

Study Abroad Programs

IUPUI Study Abroad Opportunities

IUPUI offers a variety of study abroad opportunities administered either by the IUPUI Office of International Affairs or by individual schools and departments. Students may also participate in programs run through Indiana University or Purdue University. International Affairs coordinates programs with partner universities in Germany, Russia, and Costa Rica. The office also verifies the applicability of overseas transfer credits from other institutions and provides information on scholarships and financial aid.

The Herron School of Art offers programs in China, Vietnam, Belgium and the Netherlands, England, and France. These programs are open to non-Herron majors as well. The Department of Communication Studies offers short-term summer programs in Poland and London. The Department of Geology is offering new programs in Cuba and the Galapagos Islands. Journalism students travel to Croatia. The

Department of English offers a tour of the literary landscapes of England. Nursing, Social Work, Law, and Medicine also administer international programs. Please refer to individual departments for specific information.

For study abroad advising, please contact the Office of International Affairs, Union Building, UN 203, (317) 274-2081, www.international.iupui.edu.

Indiana University Study Abroad Programs

IUPUI students are eligible to participate in foreign study programs run by Indiana University. These programs offer qualified students the opportunity to do part of their academic work abroad. Both IU and Purdue majors may apply for IU summer programs overseas. For semester programs students must apply to either Purdue or IU, depending on their major.

The IU programs include full academic year programs in Canterbury, England; Aix-en-Provence, France; Legon, Ghana; Freiburg, Germany; Jerusalem, Israel; Bologna, Italy; Nagoya, Japan; and Madrid, Spain. Semester programs include exchange programs with Australia as well as programs for future Spanish teachers in Seville, Spain. There are also summer programs for students wishing to study foreign languages abroad, short-term study trips, and internships. At present, there are over 60 opportunities for study abroad.

IU's programs are not only intensive educational experiences but include cross-cultural learning. Groups are often accompanied by IU faculty, and year-long programs are usually preceded by intensive language/culture work to prepare the students for enrollment in regular university courses.

Participants receive regular Indiana University credit, not transfer credit. Six (6) credit hours are customary for summer programs, 15-16 credit hours in semester programs, and 30-32 in the academic year programs. Students may apply for financial aid or a number of attractive scholarships.

Detailed information can be found on the Web site of IU Overseas Study (www.indiana.edu/~overseas) or by contacting the Office of International Affairs, (317) 274-2081, or the Department of Foreign Languages and Cultures, Cavanaugh Hall, CA 405.

Purdue University Study Abroad Opportunities

Purdue University currently has about 40 study abroad opportunities, some of which are summer programs while others are semester or academic year courses. Programs in Japan, Sweden, Switzerland, Martinique, and Brazil are a few of the locations. Students in Purdue programs at IUPUI will receive regular credit for these programs, while students in IU degree programs will receive transfer credit. Contact Purdue University's Programs for Study Abroad at (765) 494-2383, e-mail studyabroad@ippu.purdue.edu, or visit www.ippu.purdue.edu/sa/welcome.cfm.

Requirements for Admission to the Undergraduate Program—School of Education

New students indicating education as their choice among academic programs and education majors transferring to IUPUI from other colleges and universities are admitted to the University College or are dually admitted to the University College and the School of Education. Students must have a 2.5 overall GPA to be admitted to the School of Education.

Note: Admission to the school does not guarantee admission to Teacher Education. Admission to the School of Education, admission to Teacher Education, and graduation require a minimum overall GPA of 2.5.

Admission to the Teacher Education Program

Students wishing to obtain a teaching certificate must be admitted to the Teacher Education Program. Education majors should note that admission to the School of Education is separate from admission to the Teacher Education Program. The standards for admission to the Teacher Education Program apply both to education and non-education majors. The standards must be met before the student may enroll in advanced professional education courses.

Note: Admission to the Teacher Education program does not guarantee licensure by the state of Indiana.

See the "School of Education" section of this Bulletin for more information.

Teacher Certification

With careful planning, students may earn a standard junior high/middle school/secondary teacher's certification while working for a bachelor's degree in the Schools of Liberal Arts, Herron, Science, and Physical Education. Such candidates must meet both the degree-granting school's graduation requirements and the certification requirements for the School of Education. Students earning certification must meet the general education, professional education, and subject matter course requirements in the area in which they wish to be certified, as outlined in this bulletin. They must also complete a minimum of 124 credit hours.

Alternative programs for post-baccalaureate students may be available for selected majors. Contact an advisor in the School of Education for further information.

Pre-Professional Programs

Pre-Medical Program

Students planning to apply to medical school must choose a degree program in addition to taking

courses that fulfill the admission requirements for their chosen medical school. While many opt to complete their degrees with science majors, other fields of specialization are acceptable and even desirable. Freshmen should declare their chosen major and seek advising for their degree requirements from the advisor in their major department. IUPUI also offers health professions advising in the School of Science (Biology and Chemistry) and the School of Liberal Arts. Pre-medical students should consult the health professions advisor in their school once they have completed the 10 credit hours of biology and 10 credit hours of inorganic chemistry required for medical school in order to plan the timing for the MCAT test and the admission process to medical school.

Pre-Dental, Pre-Veterinary, Pre-Optometry Programs

Admission to professional schools is highly competitive. The pre-professional student is therefore urged to elect a degree program rather than fulfilling the minimum requirements of these schools. Students who choose pre-dental, pre-veterinary medicine, and pre-optometry are usually placed in the Department of Biology where pre-professional advising is available. Pre-dental students are also encouraged to meet with the health professions advisor in the School of Science to plan for the testing and admission process required by dental schools. Refer to the Department of Biology section of this bulletin for the required courses for Indiana University School of Optometry and Purdue University School of Veterinary Medicine. A list of required courses for the IU School of Dentistry is available in the Department of Biology section.

Graduate students holding non-science degrees who are electing courses in the School of Science to prepare for medical or dental school are also invited to use the health professions advising service for help with the admission process.

Pre-Pharmacy Program

The pre-pharmacy program at IUPUI consists of approximately 70-90 credit hours of course work required to apply to pharmacy school. Students declaring pre-pharmacy upon admission to IUPUI are assigned to the Department of Biology where pre-pharmacy advising is available. After completion of the required courses for admission, students apply to the pharmacy school of their choice. Refer to the Department of Biology section of this bulletin for required courses to apply to the pharmacy program at the Purdue School of Pharmacy and Pharmacal Sciences.

Pre-Law Program

While law schools do not require a specific undergraduate major or a specific set of undergraduate courses as prerequisites for admission, they do urge students to take additional writing and public speaking, as well as courses involving research and analysis. The Department of Political Science in the School of Liberal Arts and SPEA provide pre-law advising and a series of courses

related to the law and government that are attractive to students interested in the study of the law. Other schools also offer courses of relevance to students considering the study of the law.

Commitment to Writing

Writing Across the Curriculum/Office of Campus Writing

Writing is so central to learning and communicating information, knowledge, and understanding to others that it is a part of the curriculum in all undergraduate schools at IUPUI. In addition to the core writing program situated in the Department of English and the University Writing Center located in Cavanaugh Hall, IUPUI has an Office of Campus Writing located in the Office of Professional Development in the University Library. It provides support for courses that require a significant writing component, assesses the overall quality and quantity of writing done by students at IUPUI, and correlates the expectations of faculty, the accomplishments of students, and the needs of employers in the community with respect to written communication. The Director of Campus Writing offers workshops throughout the year for faculty who wish to integrate writing more effectively into their courses. For more information, call (317) 278-1846.

University Writing Center

The University Writing Center provides tutoring for students, staff, and faculty on all kinds of writing assignments and projects. A tutoring staff consisting of faculty and peer tutors work with their clients to understand assignments; brainstorm ideas; relate purpose and audience; develop, organize, revise, and edit pieces of writing.

The University Writing Center also offers essay exam workshops, a reference library on writing concerns, and a national Hotline for answers to brief questions. The University Writing Center Hotline can be reached online (writctr@iupui.edu) or by telephone at (317) 274-3000.

The University Writing Center is located in Cavanaugh Hall, CA 427. For more information or an appointment, call (317) 274-2049.

The University Writing Center also has a branch in University College. Call (317) 274-3288 for more information.

Technical Writing Center

In the Technical Writing Center, ET 314A, tutors are available several hours weekly to help students with their writing assignments. Tutors focus on writing assignments from faculty members in the School of Engineering and Technology; however, they can assist students with other writing tasks, as well. Students should sign up for an appointment on the board outside of ET 314.

Graduate and Professional Programs

Students can earn an Indiana University graduate or professional degree, an Indiana University Graduate School graduate degree, or a Purdue University graduate degree on the IUPUI campus. A few of the degrees offered at IUPUI are offered in conjunction with either the Bloomington or West Lafayette campus and may require work on one of these two campuses. For specific information about a degree program on the IUPUI campus, please contact the school or department offering the degree or see www.iupui.edu/~resgrad/grad/academics_content2.htm.

The following bulletin pages provide general information about various programs on the IUPUI campus. Please see the "IUPUI Graduate Office" section of this bulletin or the above URL for additional information and resources. Students may apply to almost all graduate and professional programs online; students should navigate to the online application through the informational materials provided on each department's Web site.

Purdue Graduate Programs in Engineering

The Purdue School of Engineering and Technology offers six graduate degrees: the Doctor of Philosophy in Biomedical Engineering (Ph.D.), the Master of Science in Biomedical Engineering (M.S.Bm.E.), the Master of Science in Electrical Engineering (M.S.E.E.), the Master of Science in Mechanical Engineering (M.S.M.E.), the Master of Science in Engineering (M.S.E.), and the Master of Science (M.S.).

Another degree program, leading to the Master of Science in Industrial Engineering (M.S.I.E.), is administered with approval of the School of Industrial Engineering at Purdue University, West Lafayette. Qualified students may be authorized to pursue the Ph.D. degree in electrical engineering or mechanical engineering at IUPUI; these programs are administered with the respective approval of the School of Electrical Engineering and the School of Mechanical Engineering at Purdue University, West Lafayette. Students are usually expected to complete the M.S.E.E. or M.S.M.E. before pursuing the Ph.D. degree.

Graduate courses are usually offered in the evenings to meet the needs of part-time students employed in the Indianapolis area, as well as traditional students who are preparing for careers in research-directed areas.

For more information, call (317) 274-9740, e-mail grad@engr.iupui.edu, or visit the Web site (www.engr.iupui.edu).

Admission Policies and Procedures

To be considered for admission into the graduate engineering programs mentioned above, an applicant

ideally should have graduated from an engineering program accredited by ABET, the Accreditation Board for Engineering and Technology, Inc. The final undergraduate grade point average should be at least 3.0 (out of 4.0) or equivalent as shown on the official transcript.

All applicants are encouraged to take the General Aptitude Test of the Graduate Record Examination (GRE), but all international applicants are required to take the GRE. Students whose native language is not English are required to have a score of 550 or higher on the TOEFL (Test of English as a Foreign Language). Information on testing dates and locations can be obtained from the IUPUI Graduate Office, Union Building, UN A203; telephone (317) 274-4023.

Graduates from non-ABET-accredited programs and others who do not meet the above requirements may be considered for admission to the Master of Science degree program or for admission to the Master of Science in Engineering program. Candidates must be graduates of fully accredited (e.g., by the North Central Association of Colleges and Secondary Schools, or comparable accrediting agency) four-year programs, including four-year technology programs. Formal admission to either the M.S. or the M.S.E. programs requires departmental approval as well as the completion of the following requirements:

1. Graduating grade point average (GPA) of at least 3.0 (on a scale of 4.0) or equivalent from an accredited bachelor's degree program with a strong emphasis in engineering, mathematics, or the physical sciences.
2. Completion of the engineering calculus sequence: MATH 163 and MATH 164 Integrated Calculus and Analytic Geometry I and II (10 cr.) MATH 261 Multivariate Calculus (4 cr.) MATH 262 Linear Algebra and Differential Equations (4 cr.)
3. Completion of a number of undergraduate courses in electrical or mechanical engineering, or equivalent course work, depending on the specialty of the student. Equivalence of courses is determined by the graduate committees of the respective engineering programs. For more information, see the graduate program handbooks of the respective programs.

Admission as a Regular Graduate Student

Applications for admission may be obtained by writing to either the Department of Electrical Engineering or the Department of Mechanical Engineering at the Purdue School of Engineering and Technology, 723 W. Michigan St., IUPUI, Indianapolis, IN 46202-5132; telephone (317) 274-9726 or (317) 274-9717. Electronic application is available on the school's Web site (www.engr.iupui.edu).

International students should allow six months for the processing of their applications. Students residing in the United States should apply at least three months before the beginning of the semester in which they wish to enroll. Applicants will be formally advised of the final admission decision by the dean of the Graduate School, Purdue University, West Lafayette.

Admission as a Graduate Nondegree Student

This classification is intended for those who want to pursue study beyond the bachelor's degree but who do not have specific degree objectives. It is not intended to be a form of probationary admission to a regular degree program.

It is possible for a student registered in this classification to apply for admission to the Graduate School as a regular graduate student. However, if admitted as a regular graduate student, an individual may apply no more than 12 credit hours earned as a temporary graduate student to an advanced degree program. The grade for each course involved must be at least a B.

Students who have already earned 12 credit hours under the temporary classification will not be able to count toward their degree programs the credit earned during the semester in which acceptance as a regular graduate student is pending, unless admission is approved before the end of that semester. Furthermore, credit earned in courses taken while admission is pending may be applied to the advanced degree only if those courses are appropriate to the degree program and acceptable to both the School of Engineering and Technology and the Graduate School. No more than 12 hours of credit resulting from a combination of excess undergraduate credit and credit earned in postbaccalaureate status may be applied toward an advanced degree. Students should consult their advisors for further guidance.

Students interested in the temporary graduate student classification, which is also referred to as "postbaccalaureate nondegree enrollment," should contact the IUPUI Graduate Office, Union Building, UN 518; telephone (317) 274-1577.

Undergraduate and Transfer Credit

Course credits earned while an undergraduate at IUPUI or other accredited institutions of higher learning may be applied toward an advanced degree if these credits are in excess of any requirements for the bachelor's degree. Such credits must be certified as available for graduate credit by the institution from which the student received the bachelor's degree, and they will be accepted only if all of the following conditions are met: (1) the student had senior standing when taking the course, (2) the student received a grade of B or better, (3) the course was designated as a graduate course, and (4) the course was taken at the graduate level.

No more than 12 hours of credit resulting from a combination of excess undergraduate credit and credit earned in postbaccalaureate status may be applied toward any advanced degree. Any additional conditions under which excess undergraduate credit may be used for graduate credit will be determined by the School of Engineering and Technology.

Credits earned for graduate study at other universities may be applied toward an advanced degree as transfer credit, subject to the following restrictions: (1) A student must have earned a grade of B or better in any graduate course whose credit hours are to be transferred; (2) course work used to satisfy the requirements of one master's degree may not be used

on the plan of study for another master's degree; and (3) course work from one (and only one) master's degree may be used on the plan of study for a doctoral degree. Any additional conditions under which credit transfers may be made will be determined by the School of Engineering and Technology.

Graduate Degree Requirements

To earn a master's degree, students must satisfy the following requirements:

1. Students must maintain regular graduate student standing.
2. All regular students are required to demonstrate acceptable proficiency in English composition before a plan of study may be filed or an advanced degree obtained. If the necessary substantiation of English proficiency as outlined below is contained in the application, English clearance will be given automatically upon acceptance into a degree program. If substantiation is lacking on the application, the student is expected to satisfy this requirement during the first term of enrollment.

A student whose first language is English may meet the English requirement in any of three ways:

- a. by receiving a grade of B or better in all undergraduate courses in English composition;
- b. by submitting an official record from the Educational Testing Service, showing a scaled score of 600 or higher on the verbal portion of the GRE aptitude test;
- c. by passing the English proficiency examination administered by the English department at IUPUI. Students may call (317) 274-9740 to arrange for the examination. Those students with deficiencies are required to take an English composition or communications course within the first year of graduate study.

A student whose first language is not English—and who has scored higher than 550 on the TOEFL—may meet the English proficiency requirement by successfully passing the English proficiency examination administered by IUPUI's Department of English. Those students with deficiencies are required to take an English composition or communications course within the first year of graduate study (ENG W131, TCM 360, or equivalent).

Nonnative speakers of English who are U.S. citizens or who hold permanent visas may satisfy the written English proficiency requirement by any of the methods described above.

3. Students must file a plan of study appropriate to meet their needs in their chosen field of study. A tentative plan should be drawn up by the student and the graduate advisor in advance of registration for the first semester of graduate work. The formal plan of study must be filed as soon as possible thereafter but before the completion of 15 credit hours toward graduation. Students who have not filed a plan of study before the completion of 15 credit hours may not be allowed to register for the following term. The

plan of study must be approved by the advisory committee and the Graduate School. The English requirement must be fulfilled before the plan of study can be filed.

4. Students must meet credit, grade, and index requirements. The number of required credit hours varies between 30 and 33 among the master's degree programs offered at IUPUI. Only grades of A, B, or C are acceptable in fulfilling Graduate School requirements for any plan of study. An advisory committee may require a grade of B or better in certain courses. Pass/Fail grades are not acceptable in fulfilling degree requirements. Incomplete course grades must be cleared by the twelfth week of the second semester after the session in which the Incomplete was awarded. All graduate students are expected to maintain a minimum cumulative grade point average of 3.0 out of a possible 4.0. Students who do not have a cumulative GPA of 3.0 are considered under probation. Those students who are on probation are required to take additional graduate courses, as required by their respective graduate committees, before they are permitted to graduate.
5. Students must pass the required oral and written examinations. A final examining committee, usually the advisory committee, is appointed for each master's degree candidate. The committee must certify to the Graduate School either that the student has passed the required examination or that the committee is satisfied with the accomplishment of the student as based on a committee conference.

This bulletin lists the admission requirements, curricula, graduation requirements, and course descriptions for each program that were in effect at the time of printing. Course content and curricula may be changed to reflect the needs of business, industry, and government. Students are responsible for obtaining the latest course and curriculum information from their academic advisors.

Graduate Programs in the School of Science

Purdue Master of Science degrees are offered in biology, chemistry, computer science, mathematics, physics, and psychology. An Indiana University Master of Science degree is offered in geology. Departments in the School of Science strive to provide programs that serve the state and surrounding community, and students should consult their departments for any new programs or program emphases. Master's programs are at least 30 credit hours (some programs require more) and may be either non-thesis or thesis degrees. A Purdue Ph.D. is offered in clinical rehabilitation psychology. Purdue Ph.D. degrees, with all the work completed at IUPUI, are offered through West Lafayette in all departments except computer science and geology. Indiana University Ph.D. degrees are offered through the IU School of Medicine in biology, physics, and chemistry. For further information on Ph.D. programs, consult the School of Science section of this bulletin.

General Admission Requirements

Students seeking graduate degrees in the School of Science will be admitted as degree-seeking graduate students if they meet the following general qualifications:

1. They ordinarily will be expected to hold a baccalaureate degree from a college or university of recognized standing.
2. They must submit an official transcript from each college or university attended. Other evidence of academic accomplishment and aspirations may be required by some departments. Three letters of recommendation are required.
3. For unconditional admission to a degree program, a B or better average in prior study is required. Individual departments may set higher grade requirements and may require the submission of additional evidence of academic performance.
4. A minimal score of 550 in the Test of English as a Foreign Language (TOEFL) is required for all international applicants whose native language is not English. Some departments may have higher standards. Applicants may substitute the IUPUI English as a Second Language (ESL) Placement Examination for the TOEFL. A brochure about this test is available from the Office of International Affairs, Union Building, UN 207. All graduate students who are nonnative speakers of English who are being offered positions that involve direct student contact are required to take the Speaking Proficiency English Assessment Kit (SPEAK) Test administered by the English as a Second Language Program (ESL). Students must receive a score of at least 40 to be approved for direct student contact. Departments can provide further information about this test.

Graduate Record Exam

All degree-seeking applicants are encouraged to take the Graduate Record Examination (GRE). Most programs in the School of Science require this examination. Specific GRE score requirements are specified by each department.

General Requirements for Degree Completion

Once a student is admitted to a graduate degree program in the School of Science, there are several general requirements to complete a degree.

1. Each student must file a plan of study that includes a primary area and may include a related area or areas that are chosen on the basis of the student's interests and needs. A tentative plan of study should be drawn up in advance of registration for the first semester of graduate work. The student and the individual graduate advisor should prepare this plan. The formal plan of study should be submitted as soon as possible and before the final semester.
2. Only grades of A+ to C are acceptable in fulfilling Graduate School requirements in any plan of study. An advisory committee or department may require higher performance than C in certain courses. A grade of "Pass" is not acceptable. Specific cumulative grade point average requirements, if any, are up to the individual departments.

3. Students must complete the credit hours of work required, which may vary by department. Students must meet the Graduate School's resident study requirements.
4. Students must fulfill departmental requirements regarding oral and written examinations. The Graduate School has no general requirement for oral and written examinations for the non-thesis master's degree. In any department, a final examination may be waived if the student meets the minimum requirements of the department. In any event, a final examining committee is appointed for each candidate for the master's degree. The committee must certify to the Graduate School either that the student has passed the required examinations of the department in which the major graduate study has been taken or that the committee is satisfied with the accomplishment of the student as based on a committee conference. Ph.D. programs all require qualifying examinations early in the course of study. After the student has completed most of the formal study to the satisfaction of the advisory committee, the student becomes eligible to take the preliminary examination. The results of these written and oral examinations are reported to the Graduate School by the examining committee with an appropriate recommendation for the student's admission to candidacy, continued preparatory study, or discontinuation. All Ph.D. programs require a Ph.D. thesis.

Other regulations or requirements may be found in the Purdue and Indiana University Graduate School bulletins and in the section of this bulletin for the School of Science.

Graduate Nondegree Status

A student who has previously earned a bachelor's degree may enroll in graduate courses without submitting a formal application as a degree-seeking student. Application as a graduate nondegree student is, however, required and may be accomplished through the IUPUI Graduate Office, Union Building, UN 518; telephone (317) 274-1577. A maximum of 12 credit hours of courses completed as a graduate nondegree student may be used in completing the requirements of a degree upon acceptance as a degree-seeking student and upon departmental approval.

Financial Support

All departments in the School of Science offer some financial support available in the form of tuition-refund assistantships, associate faculty positions, fellowships, and stipends from local industry.

Industrial and Business Co-op Programs

Several departments in the School of Science have co-op programs associated with their degrees. In co-op programs, research is conducted at the university and at a local industrial laboratory or business. The project is usually the result of a collaborative arrangement between a faculty member and an industrial scientist or a business firm. These programs provide workplace experience and an opportunity to participate in research applied to special industry and business needs.

Geology Graduate Program

Consult the Indiana University Graduate School and the Department of Geology within the School of Science section of this bulletin for information about this IU program. A maximum of 9 credit hours of course work completed as a graduate nondegree student may be used in completing the requirements of a degree upon acceptance as a degree-seeking student and upon departmental approval.

Indiana University Graduate Programs

The Indiana University Graduate School is represented on the IUPUI campus by the IUPUI Graduate Office. There are two categories of admission to the IU Graduate School:

1. admission to pursue a degree
2. admission to take courses in a specific school, department, or program as a special student

Undergraduate Requirements (All Admission Categories)

The Indiana University Graduate School will consider applications from students holding bachelor's degrees from Indiana University or from other accredited four-year collegiate institutions whose requirements are similar to those of Indiana University. Students may be admitted with deficiencies as graduate nondegree students (GND) or as special students (see below). Students from unaccredited institutions may be admitted as special students for one semester; if their records are satisfactory and their department, program, or school recommends them, they will be given full standing. Ordinarily, a minimum grade point average of 3.0 in an undergraduate major is required for admission to the Indiana University Graduate School.

Indiana University Bachelor's Degree Candidates

Candidates for bachelor's degrees at Indiana University may apply for conditional admission to the Indiana University Graduate School and may enroll for graduate credit for that portion of their program not required for completion of the bachelor's degree, provided:

1. they are within one semester of meeting bachelor's degree requirements. If the bachelor's degree is not completed within that semester, graduate credit earned may not be counted toward an advanced degree.
2. the total course load does not exceed that ordinarily taken by a full-time graduate student.
3. the courses taken for graduate credit are authorized to carry such credit. (In certain instances, graduate credit is allowed for undergraduate courses.)

Special Students

Students who have applied but have not been admitted to a degree program but who intend to study primarily in one department may be admitted by that department with the approval of the dean of the Indiana University Graduate School as special students. They must apply to a department just as degree students do and should indicate their desired

status. After 12 credit hours in a single department, special students must either be accepted into a degree program or change to nondegree status.

Visiting/Transient Students

Visiting students in good standing in any accredited graduate school who wish to enroll for one semester or summer session and who plan to return thereafter to their former institution may be admitted as visiting/transient students if their enrollment can be accommodated. Visiting/transient students should register as graduate nondegree students. Information and IU Graduate School bulletins may be obtained from the IUPUI Graduate Office, Union Building, UN 518; (317) 274-1577. Material restricted to the programs offered on the IUPUI campus can be found in this bulletin. Nondegree applications are available from the Enrollment Center or the Graduate Office. Nondegree students are advised by the graduate nondegree counselor in the IUPUI Graduate Office.

Application to Indiana University Graduate Degree Programs

Prospective graduate students, including graduates of Indiana University, must make formal application to a department, which will forward its recommendation to the dean. It is recommended that applications be made before the following dates:

Semester of Matriculation Deadline

Fall	February 15
Spring	September 1
Summer	January 1

All applications must be accompanied by two complete transcripts of previous college and university course work and should be submitted directly to the department in which the student wishes to work. Indiana University graduates should ask the registrar to send unofficial copies of their transcripts to that department.

Admission (except for visiting and continuing graduate nondegree students) is made to a particular department for a specific degree, and no student shall be permitted to work toward a degree without first having been admitted. Students who want to change departments should fill out Transfer of Department forms, which may be obtained in the Graduate Office, Union Building, UN 518. Requests for change of degree status must be approved by the department and approved by the dean of the Indiana University Graduate School.

Following the notice of admission to the Indiana University Graduate School, an applicant normally has two calendar years in which to enroll. Supplementary transcripts of any additional academic course work undertaken during that period are required, and a department may request additional letters of recommendation. Should the updated material prove unsatisfactory, the admission may be cancelled. If the applicant fails to enroll within two years, a completely new application is required.

Graduate Record Examinations

Applicants may be required to take the Graduate Record Examination General Test, Subject Test, or both (see the department or school sections of this

bulletin). Information concerning these examinations may be obtained from the Graduate Record Examinations Educational Testing Service, P.O. Box 6000, Princeton, NJ 08541-6000. Applications are available in the IUPUI Graduate Office.

For additional information about the IU Graduate School programs, financial support, academic regulations, and specific courses, consult the specific departments and the IU Graduate School section in this bulletin and its separate bulletin.

Graduate Non-Degree Students

Students who already hold bachelor's degrees frequently want to take courses without being admitted to one of the university's degree programs. These are students who are not currently enrolled in a degree program but are working towards admission, are working on a stand-alone graduate certificate program, or taking classes for personal or professional enrichment with no plans to work toward a degree. Such students must apply to the Graduate Non-Degree (GND) program. As GND students, they can take both undergraduate and graduate courses. However, many graduate courses will require GND students to obtain preregistration permission from either the instructor or the department. GND students may not accumulate more than 18 credit hours in a single subject area. For further information on admission requirements, academic program advising, and preregistration counseling, contact the Graduate Non-Degree advisor in the Graduate Office, Union Building, UN 518.

Students who are initially admitted as nondegree students, but who later wish to obtain a graduate degree, must make formal application for admission to a departmental degree program. Once admitted, the department may recommend to the dean of the Indiana University Graduate School that credit earned as a nondegree student be applied to degree requirements. Students should be aware that certain departments and schools specifically prohibit course work taken under nondegree status from counting towards a degree after a student has been admitted to a degree program.

Housing

Residential Housing is managed by the Office of Campus Housing. Options for on-campus living include Ball Residence, a traditional residence hall; International House, a cross-cultural living environment with shared apartments furnished in the style of residence halls; and the Graduate Townhomes, offering furnished living units.

Admission to the university does not guarantee campus housing accommodations. Students must file a separate application for housing in order to reserve space and should apply as soon as they decide to attend IUPUI. Assignments are made based on the date of receipt of the application and the \$15 application fee. Applications for housing may be made even before admission to the university. Accommodations are available for students with disabilities.

The IUPUI Office of Campus Housing also functions as a resource for off-campus accommodations, providing students, faculty, and staff current rental information on commercial and private housing opportunities available near campus, as well as in the greater Indianapolis area.

In addition, short-term/conference housing is available during the months of June and July, offering a variety of room types at competitive prices.

For additional information, contact the IUPUI Office of Campus Housing at (317) 274-7200 or 1-800-631-3974 or check the Web site www.housing.iupui.edu.

Parking and Transportation

There are four types of parking available at IUPUI. Faculty and staff can purchase "A" and "B" stickers and use lots designated "A" and "B." Students park in "E" lots, while visitors use the garages, attended lots, and metered spaces. Students may elect to pay a higher fee and park in a garage if space is available. Students may purchase "E" parking permits during registration for classes and receive the permit in the mail. Parking fees are published each semester in the *Schedule of Classes*.

People who park in the wrong lot will be ticketed. If they continue to park illegally, their cars will be towed at their expense. Students who fail to pay parking fines will not be allowed to register for classes.

People with a physical disability should contact the Office of Parking and Transportation Services to request a special parking permit. The staff can authorize special permits for short-term disabilities, but people must get state certification before receiving a special long-term parking permit.

Special parking spaces for RVs and campers are available on campus. Contact Parking Services at least two days in advance to be sure that space is available.

IUPUI runs shuttle buses continuously between the parking lots to the center of campus from 7 a.m. to 9 p.m., as well as a shuttle from the Herron School of Art to the Michigan Street campus. Clarian Security runs a Medical Shuttle from 6:30 a.m. to midnight. Several Metro bus routes (#3—W. Michigan Street, #13—W. Tenth Street, and #37—Park Street) also serve the campus. Schedules for both campus and Metro lines are available in University Library and Cavanaugh Hall, and on the Web by visiting registrar.iupui.edu/maps.html.

For more information on parking and campus shuttles, visit www.parking.iupui.edu.

There is a special "brag" license plate with the IUPUI emblem issued in place of regular state plates. Application is free to students, and \$10 is payable to the Bureau of Motor Vehicles at the time of purchase. Others pay \$25 which goes into scholarships for IUPUI students. Contact the Alumni Office at (317) 274-8828 for more information. For an online application, click on "merchandise" on the Alumni Relations Web site (www.iupui.edu/~alumrels).

Center for Young Children

After many years of planning, the IUPUI Center for Young Children moved into its new building at 321 Limestone Street in the fall of 2000. The Center's focus is on preschool children from age 2 through kindergarten, with full-day and half-day programs. It is also available for school aged children through age 12 during the summer. The Center is licensed by the state of Indiana and is accredited by the National Association for the Education of Young Children (NAEYC). It is known throughout the state for its excellent care and developmentally appropriate curriculum in a warm and attentive environment. Classrooms are clustered into neighborhoods around indoor play parks to give the feeling of several smaller centers. It serves the children of faculty, staff, and students on a year-round basis, closing for the major holidays and Spring Break. There is a waiting list. For more information visit the Center or call (317) 274-3508. Additional information can be found at www.childcare.iupui.edu.

Counseling and Psychological Services (CAPS)

The professionally trained counselors of the IUPUI Counseling and Psychological Services provide services to students, faculty, and staff who may be experiencing emotional, psychological, and/or cognitive difficulties that have an impact upon academic or work performance. Counseling is free to students. Private and confidential appointments are available in individual, couples, or group formats. Evening appointments are available Monday through Thursday with appointment only. Assessments are also available for learning disabilities and attention deficit disorder by licensed psychologists on a fee-per-service basis. For information, call (317) 274-2548; e-mail caps@iupui.edu, or visit the Web site at life.iupui.edu/caps.

Career Exploration and Job Placement (IUPUI Career Center)

IUPUI Career Center

Faculty and advisors in your area of study can be helpful resources when considering career options. Another key resource, particularly for exploratory students, is the Career Center. The center's primary purpose is to aid students in developing, evaluating, and effectively implementing a sound career planning strategy. Tools provided to assist in this process are occupational information and employment trends, workshops on choosing a major and on career decision making, as well as career counseling.

In addition, the center provides a computerized career guidance program and various self-assessment inventories to aid students with career planning and selection. These instruments are available to all interested students, alumni, staff, and faculty.

JagJobs, the Career Center's job/internship posting Web site, provides the latest technology to IUPUI students and alumni for locating internships, non-degreed jobs through the Student Employment Program, and senior/alumni employment opportunities. On-campus interview schedules are posted via JagJobs. The Career Center sponsors several large job fairs throughout the fall and spring semesters, including the Indiana Multicultural Job Fair and the Indiana Collegiate Job Fair.

For additional information about Career Center programs and services, see the Web site: www.iupui.edu/~career, or visit the Career Center, Business/SPEA Building, BS 2010, (317) 274-2554.

Career Resource Library

This specialized library in the IUPUI Career Center is open to anyone who wants to explore hundreds of career options through print and online materials. Resources include a large assortment of books, pamphlets, periodicals, and audio-visual materials all containing career and occupational information for both traditional and nontraditional careers. While materials are not circulated, the library can be used whenever the center is open.

IUPUI Student Employment: JOBS Program

The Student JOBS Program offers students access to non-degreed job opportunities to help offset the expenses of education.

Job opportunities are listed in JagJobs (www.iupui.edu/~career), our online job-board, which is available to students 24 hours a day. Employers also frequently visit campus to do on-campus recruiting for their job opportunities.

In JagJobs, there are on-campus and off-campus job opportunities listed. These jobs range from administrative positions to retail sales representatives to package handlers to lab assistants.

Students can receive assistance with their job search by stopping by the Student Employment Office in the IUPUI Career Center. Student employment representatives are available to assist students in the Bus/SPEA Building, Room 2010, or by phone (317) 274-0857.

IUPUI Student Employment: Work-Study Program

This is a federally funded financial aid program administered through the Student Employment Office. To obtain Work-Study jobs, students need to have received a Work-Study award as part of their financial aid package. Eligible students can access on- and off-campus Work-Study job opportunities listed on JagJobs, a Web-based system available 24 hours a day. Recipients of Work-Study awards must obtain Authorization/Payroll paperwork from the Student Employment Office before applying for positions. Students can receive assistance with their Work-Study job search by contacting the Student Employment Office in the Business/SPEA Building, BS 2010, (317) 274-4577.

IUPUI Student Health Center

The IUPUI Student Health Center provides primary medical care services to all students enrolled at IUPUI. The medical staff includes an internal medicine physician with training in pulmonary (lung) disease and a primary care physician with extensive experience in student health care. Services are provided at a low cost fee-for-service basis. Services include acute care visits, travel immunizations, sexually transmitted disease testing and counseling, allergy injections, physical exams, vaccinations, pregnancy testing, treatment for asthma, birth control, gynecological exams, HIV testing, etc. The IUPUI Student Health Center is located on the first floor of Coleman Hall. For appointments call 274-5887.

Other Health Services

Health insurance is required of graduate students. For answers to insurance questions, call (317) 278-1159.

There are 100 medical clinics on campus, and Wishard Emergency Room is available during hours that clinics are closed.

For psychological assistance, see "Counseling and Psychological Services (CAPS)" elsewhere in this bulletin.

There is a Smoking Cessation Program, the IU Nicotine Dependence Program, that treats nicotine-addicted individuals, combining behavioral, pharmacologic, and chemical dependence therapies. For more information, call the School of Dentistry, (317) 274-3859.

A Wellness Program also exists. Call (317) 274-0610 for additional information.

Health Insurance Programs

All undergraduates taking 6 or more credit hours and graduate students enrolled in 3 or more credit hours are eligible to participate in a voluntary student health insurance program. Health insurance is mandatory for all international students in F or J visa status, who are automatically enrolled and billed for the insurance premium.

Health insurance is required and automatically provided for graduate students who are fellowship recipients with semester funding over \$2,233 and all student academic appointees (SAAs) at .375 FTE or higher. Students will be provided with insurance brochures by their academic departments.

For more information about the insurance policy and coverages, call (317) 278-1159 or 1-800-767-0700. International students with questions about the mandatory policy for international students should call the Office of International Affairs, (317) 274-7294. Graduate students should direct any insurance concerns to the Graduate Office, (317) 274-4023.

Adaptive Educational Services (AES)

IUPUI is committed to helping students with disabilities achieve their goals by augmenting their existing strengths and abilities. Adaptive Educational Services (AES) provides a range of services based on the documented needs of qualified students with disabilities that meet the requirements of the Americans With Disabilities Act (ADA) and the Rehabilitation Act of 1973. AES facilitates tests that require extended time, provides interpreters, maintains special equipment in the library, provides online software, coordinates financial support and service through Indiana Vocational Rehabilitation, assists in registration, provides note takers, works with faculty to make reasonable modifications of programs and courses for students with disabilities, upholds academic standards, and maintains legally appropriate confidentiality for students with disabilities. AES supports the Disability Awareness Council (DAC) and provides informational workshops around campus to increase the awareness of the ADA and the university's responsibilities toward students with disabilities. Visit the Web site (life.iupui.edu/aes/) or call (317) 274-3241 or TTY/TDD (317) 278-2050.

There are TTY/TDD phones available on campus as well as Relay Indiana:

Request for TDD information, (317) 274-9400

Campus TDD operator, (317) 274-4644

Affirmative Action Office, (317) 278-2200

Campus Police, (317) 274-1387

Riley Hospital Emergency Service, (317) 278-3323

American Sign Language and English Interpreting Program, (317) 274-1410

Associate Faculty Office, Cavanaugh Hall, CA 313, (317) 274-2072

Public TTYs are in place in several banks of public phones, including those in Cavanaugh Hall across from the bookstore.

Veterans Affairs

Individuals wishing to use veterans benefits should notify the veterans affairs (VA) representative in the Office of the Registrar, Cavanaugh Hall, CA 133, (317) 274-1521, after filing a DD214 form with the Office of Admissions. Visit the VA Web site (registrar.iupui.edu/va.html).

Office of International Affairs

Many international students come to IUPUI to study, and the campus offers numerous opportunities for resident students to involve themselves in clubs, housing, and programs with an international focus. The Office of International Affairs is responsible for many of these activities and serves as the office responsible for international students, faculty, and scholars coming to IUPUI.

The Office of International Affairs, located in the south wing of the Union Building, UN 207, provides the following services to IUPUI students:

- Admission processing for all international applicants and permanent resident applicants with fewer than two years of study in a U.S. high school (a special international application is required for undergraduate students) and refugees and recipients of political asylum who have completed their secondary and/or post-secondary studies outside the United States
- Advising for IUPUI students about opportunities to study abroad, including scholarship and financial aid information and provision of student ID cards for international travel
- Nonimmigrant visa documentation for foreign students; orientation activities for all incoming international students and interested permanent residents
- Advising for international students on nonimmigrant visa regulations, employment authorization, university procedures, housing, and adjustment to life in Indiana
- Cross-cultural living/learning experience at the International House

To obtain information about international admission to IUPUI or other services provided by the Office of International Affairs, visit or contact the office at the Union Building, UN 207; (317) 274-7000; fax: (317) 278-2213; e-mail: intlaff@iupui.edu; Web site: www.international.iupui.edu.

Student Services

Office of the Dean of Students

Dean of Students

The dean of students is charged with working with students, faculty, staff, and administrators to promote ethical behavior and civility. The dean of students is the chief judicial officer for issues related to the *Code of Student Rights, Responsibilities, and Conduct*. Every student should be familiar with the code and can obtain a copy from their department, school, or the Office of the Dean of Students. Brochures addressing specific and limited areas of the code can be obtained in the Office of the Dean of Students and the Office of Admissions. For more information, contact the Office of the Dean of Students in the Administration Building, AO 112; call (317) 274-4431; or check the Web site (life.iupui.edu/dos).

The Ombudsperson

The ombudsperson provides impartial, objective, and confidential assistance to students, faculty/staff, and parents with specific complaints, questions, or conflicts involving students. For more information, contact Ombudsperson in University College, UC 006D; call (317) 274-3931; or visit the Web site life.iupui.edu/stuombud.

Office of Student Life and Diversity Programs

IUPUI students, staff, and faculty are as diverse as the city around them, coming from many walks of life, a wide range of ages, and varied ethnic and religious cultures. Such diversity is a healthy sign that a university is preparing its students for the twenty-first century. The Office of Student Life and Diversity Programs provides a variety of cultural, leadership, social, and educational programs to enrich student life at IUPUI. Also mindful of IUPUI's main educational mission, the office is committed to student learning as its first priority, emphasizing two basic themes: (1) student learning occurs beyond academic classroom learning, (2) the best strategy for encouraging both in-class and out-of-class learning is cooperation with the academic units and the development of co-curricular activities alongside more traditional campus activities. For more information, contact the Office of Student Life and Diversity Programs at UC 002; (317) 274-3931; or visit the Web site (life.iupui.edu/sldp).

Co-Curricular Opportunities and Activities

Undergraduate Student Assembly (USA)

Undergraduate students are represented by the Undergraduate Student Assembly, which is composed of the Senate and the House of Organizations. The body gives students leadership experience and provides a communication network to channel the concerns and ideas of students to the most appropriate offices and individuals for action. Each school is represented by a senator, while both campus and school/program organizations may send a representative to the House of Organizations. Each spring, the USA conducts elections to select seven officers. Four—president, vice president, secretary, and comptroller—are elected by undergraduate students at large. The other three—speaker of the House, co-secretary, and co-comptroller—are elected by the House.

School Councils

Each undergraduate school has some form of student group, usually a student council, that represents the students in the school and determines how student activity funds are spent and plans student activities in the school.

Sagamore and Literary Publications

The *Sagamore* is the free, award-winning IUPUI weekly student newspaper, published each Monday during the school year. It features club events and campus activities, as well as advertising. The paper is available in Cavanaugh Hall, the University Library, the Union Building, and other main locations. For more information, contact the *Sagamore* at (317) 274-2954.

Genesis and *Fine Print* are two publications devoted to the creative work produced by IUPUI students. For more information, contact the Department of English at (317) 274-3824 or consult its Web site at www.iupui.edu/~english.

IUPUI Clubs and Organizations

IUPUI has over 120 student clubs and organizations representing a broad range of student interests and academic majors. Many of these groups are related to a career or field of study, while others are focused on diversity, recreation, service, or special interest. Being involved in a club or organization allows students opportunities to meet other students and faculty members, to put classroom skills into practice, to serve in leadership positions, and to prepare for life experiences in a global society. Members of IUPUI clubs gather socially, engage in activities related to their fields of study, and participate in service projects, either for the campus or for the outlying community. Students have the opportunity to present programming for other students, such as hosting speakers, showing films, producing newsletters and videos, or planning events just for fun, such as dances or outings. Becoming involved in a club or organization is a great way for students to connect to the campus. A complete listing of currently active clubs and organizations may be obtained from the Student Life and Diversity Programs office, UC 002, or online at life.iupui.edu/sldp/orgs.

Greek Life

IUPUI is home to social fraternities and sororities, each affiliated with a national organization. These respective chapters provide a unique experience in campus life that embraces many aspects of student development. At IUPUI, fraternities and sororities emphasize scholarship, leadership, philanthropic service, and social development.

In addition to those organizations chartered on campus, a number of IUPUI students belong to city-wide chapters of National Pan-Hellenic Council (NPHC) organizations. Area representatives for these groups can be contacted through Student Life and Diversity Programs.

Religious Activities and Groups

Numerous religious groups have clubs or activities on campus. The Interfaith Alliance coordinates and has contact with all student religious organizations and presents ecumenical programs. Students also have the opportunity to participate in informal religious study and discussion groups that meet on campus.

Intramural and Recreational Sports

Recreational sports are open to both women and men and include aerobics, aquatics, cross country, swimming, and golf. Intramural sports include badminton, basketball, flag football, racquetball, softball, tennis, and volleyball. The School of Physical Education facility provides space for both informal recreation and league play. Lockers are assigned in the Natatorium with sport passes and an additional minimal fee. The sports pass allows students to use the swimming pools (three Olympic-sized pools), the world-class track stadium, the handball and racquet courts, the outdoor basketball courts, the weight room, aerobics rooms, the Polaris room. Students also may check out equipment. Passes can be purchased by students, staff, and faculty at the Natatorium (NT) Service Desk, lower level, (317) 274-3518.

The department supports Max*Well, a comprehensive wellness program. Students may obtain general wellness information as well as fee-based services such as body fat testing, health risk appraisals, and diet analysis. For more information about Max*Well, call (317) 274-0610. Intramural and Recreational Sports is in the Physical Education Building, PE 043; (317) 274-2824.

Multicultural Clubs and Activities

IUPUI students celebrate diversity and heritage that highlight the multicultural fabric of our society. This is accomplished, largely, through the programming activities of many multicultural student clubs, including the Black Student Union, Chinese Culture Club, International Club, and student associations representing African, Arab, Asian Pacific-American, Iranian, Latino, Pakistani, and Turkish students. These groups address academic and social needs of students, develop positive racial identity, encourage participation and leadership, and promote civility. Through thematic program months such as Latin American Heritage Month, Native American History Month, Black History Month, and Women's History Month, the multicultural student groups have encouraged the IUPUI community to celebrate our differences and establish new traditions.

Graduate Student Organization

The Graduate Student Organization (GSO) provides the graduate and professional students of IUPUI with an official and representative student government. It gives these students a voice in matters pertaining to the affairs and planning of the university, thereby enhancing their involvement with the campus. GSO works to improve the quality of graduate and professional student life. Members of GSO are elected or appointed from each academic school with a graduate or professional degree program and from the continuing nondegree students registered in the Graduate School. GSO meets monthly and sponsors the Educational Enhancement Grant to support graduate and professional students in research, training, and participation in professional conferences.

Student Photo Identification Cards (IUPUI OneCard)

ID cards are provided year-round on the first floor of University College, UC 127, and in Union Building 115. For current hours, see the *Schedule of Classes*. There is no charge for the first card, but students pay to replace lost or stolen cards. ID cards are used as library cards, to access physical education facilities, and to receive tax exemption in cafeterias. ID cards may be needed for international travel discounts and general proof of student status, and they are also used at the Learning Center Cluster. The current ID card is a "OneCard" and allows students to put money on the card and then use it to purchase food and drink from Campus Vending, most food services on campus, and campus bookstores. For more information, call (317) 274-5177 or visit www.onecard.iupui.edu.

Campus Resources

IUPUI Libraries

There are five separate libraries on the IUPUI campus. The University Library is located in the center of the campus. The dental, art, law, and medical libraries contain specialized collections reflecting their respective curricula and are located at the School of Dentistry, Herron School of Art, School of Law, and School of Medicine. Although all libraries are open to every student, undergraduates tend to use the resources available at the University Library. The IU Catalog system (IUCAT) is available at all campus libraries. An interlibrary loan service connects the IUPUI libraries with the university libraries at Bloomington and West Lafayette, as well as other libraries throughout the country.

The University Library collection supports undergraduate courses and covers a wide range of academic disciplines, from liberal arts to science, engineering, and technology. This collection contains over 600,000 volumes and 4,500 subscriptions to current periodicals. The Library has more than 600 general and graduate study carrels, 30 group-study rooms, class and meeting rooms, including a 100-seat auditorium.

The University Library information system hosts more than 200 computer workstations permitting patrons to search for information through one of the most extensive and sophisticated online research systems in the country. The system provides access to resources such as library catalogs from around the world, bibliographic databases, full-text and numeric databases, cable television, and the Internet. Word processing and other electronic applications are also available on these machines, combined with file storage on the university main system for use by students. Access to many of these resources is provided from computer stations campuswide, plus a newly established wireless laptop service.

The hours for the campus libraries are subject to change, particularly during the summer sessions and when classes are not in session. Because lending policies and procedures vary slightly among the different libraries, students should consult with personnel at the main desk of each library before checking out books and other materials.

Computers on Campus

University Information Technology Services (UTS)

University Information Technology Services (UTS) at Indiana University, with offices on the Bloomington and Indianapolis campuses, is responsible for the continued development of a modern information technology environment throughout the university in support of IU's vision of excellence in research, teaching, outreach, and lifelong learning.

The environment that UITS provides consists of tools and services that support the academic and administrative work of the university. Computing tools include central computing services and hundreds of Internet-connected workstations, all equipped with current software and accessible to members of the IUPUI community. Connecting these resources is a high-speed network that links computers of many types and sizes in a complex, interactive web.

The Support Center

More than a help desk, the Support Center is the central location for accessing the myriad of services offered by UITS. Support is available via the Web, telephone, e-mail, and on a walk-in basis. The Support Center's home page (support.iupui.edu) links to other resources:

- information about creating accounts, choosing good passwords, setting mail-forwarding, and more
- online request forms for many of the services administered by UITS, such as making media equipment reservations and adding privileges to a network account
- student guides, such as the UITS Computer Guide, which contains information for students who are thinking of buying a personal computer

- information about educational computing opportunities, such as the hands-on classes offered by the UITS Education Program
- documentation, such as the IU Knowledge Base (KB), an award-winning, searchable database with thousands of entries on a wide range of topics related to computing at Indiana University
- the Computing Question Form for asking your questions via the Web

Students who can't find answers in the Support Center Web pages should visit the Support Center on the second floor of the Education/Social Work Building, ES 2126, or call (317) 274-HELP (4357). When classes are in session, the Support Center is open Monday through Thursday, 8 a.m. to 10 p.m.; Friday, 8 a.m. to 5 p.m.; and Saturday, 9 a.m. to 5 p.m.

Student Technology Centers and Consulting

Student Technology Centers (STCs) are located in several buildings on campus. These facilities, which support both Intel- and Macintosh-based platforms, are open and staffed with consultants many hours each week, including a 24-hour STC. A wide variety of software and media equipment is available in the STCs, giving students convenient access to popular computer applications, the Internet, and audiovisual technologies. Many STCs are funded and managed cooperatively with individual schools. Several schools and departments have private learning centers for their students' use. For more information about the Student Technology Centers and consulting, visit www.iupui.edu/~stc/.

UTS IT Training & Education

Each semester, the UITS IT Training & Education program offers hands-on classes on topics such as electronic mail, word processing, databases, spreadsheets, Web development, and more. STEPS noncredit classes are free for students. These classes provide beginning and in-depth instruction on subjects of special interest and importance to students in their academic work. Students do not need to register, but they must show their student ID to the STEPS class instructor. Visit the online *Schedule of Classes* at itraining.iu.edu. Paper copies of the schedule are available at the UITS Support Center (ES 2126) and the Student Technology Centers. Students may also call the IT Training & Education program at (317) 274-7383 or e-mail itraining@iupui.edu.

Student Network ID and ADS Domain Account

The Network ID gives students access to the computer systems maintained by UITS at IUPUI. With a Network ID, students can create various computer accounts, change the passwords for their accounts, dial into the IUPUI network from off campus, choose their preferred e-mail address (the address that corresponds to the account where they want to receive their messages), and more. With an ADS Domain account, students can log into Student Technology Center computers, as well as use Oncourse, IU's online course environment (oncourse.iu.edu).

Students who don't have a Network ID should see the IUPUI Student Network ID Services Web page at <https://iupui-accts.iupui.edu/students/student.html>. Select the option "Activating an IUPUI Student Network ID." Note that students must know their student ID number and registration PIN to get through the account-generation process. To receive the student ID number and PIN, students should contact the Office of the Registrar in Cavanaugh Hall. For other information about the Network ID, students should call the Support Center at (317) 274-HELP (4357).

IUware and MSELA CDs

The IUware CD provides a convenient way for students to get essential software on their personal computers. This CD includes communications programs, Web browsers, virus protection, and other useful applications, such as a new PPP Wizard for Windows, which simplifies the process of setting up a modem to dial into the UITS modem pools. The IUware CD is available at campus bookstores. For more information or a list of the contents for Windows and Macintosh, visit www.indiana.edu/~dsl/software/iuwarecd/. See IUware online at iuware.iu.edu.

Due to their large size, Microsoft Office, Windows operating systems, FrontPage, and Visual Studio are not included on the IUware CD. However, they are available through the IU-Microsoft Enterprise License Agreement (MSELA) and may be purchased separately.

The IUware and MSELA CDs are available at the IUPUI Bookstores (the Cavanaugh Hall and Union Building locations), the University Library, the Ruth Lilly Medical Library, and the MERP Learning Resource Center (Medical Science B10). Most of the CDs are \$5 each. Please note that purchase requires proof of affiliation with the university, as well as concordance to abide by the terms and conditions of the license agreement. For more about the IUware CD and the IU-Microsoft Enterprise License Agreement (MSELA), visit www.indiana.edu/~msela.

Bookstores

Four bookstores handle textbooks for the IUPUI academic community; a schedule of operating hours is published in the *Schedule of Classes*.

Cavanaugh Hall Bookstore
Basement, CA 008B
(317) 278-BOOK (2665)
(Textbooks needed by undergraduate and graduate students)

Herron School of Art Bookstore
Main Building, HM 009
(317) 920-2442
(Art textbooks and art supplies)

Union Medical/Law Bookstore
Union Building, First Floor
(317) 274-7167
(Textbooks for medical, law, nursing, and allied health sciences students, and for classes held at the Union Building)

IUPUI Columbus Bookstore
CO 156A, 4601 Central Avenue
(812) 348-7225
(Textbooks for all courses at the Columbus campus.)

Textbook information can be obtained and ordered from the bookstores' Web site: www.bookstore.iupui.edu.

The bookstore at Cavanaugh Hall sells Apple and Compaq computers and academically priced computer software. For more information, call (317) 278-2099 or visit the bookstore.

Emblematic apparel and gifts for the IUPUI Jaguars are sold at the Cavanaugh Hall Bookstore.

Office of the Bursar

The Office of the Bursar collects payments for student fees; orders refund checks; and applies financial aid credits. The Office of the Bursar also accepts authorizations for sponsor billings from qualifying governmental and corporate agencies. For more information visit bursar.iupui.edu.

Art Galleries and Museums

The campus itself contains the Herron Gallery, the Cultural Arts Gallery located in University College, and the National Art Museum of Sports.

The Herron Gallery

The Herron Gallery is a nonprofit visual art gallery that provides the community, local high school students, and IUPUI students, faculty, and staff with daily first-hand exposure to contemporary works of art created by regional, national, and international artists. The 3,200-square-foot gallery is committed to a program of eight to ten exhibits each year that explore all areas of visual artistic expression. The gallery also holds annual student, senior, and faculty exhibits. Each year's exhibit schedule is coordinated with the school's lecture series to provide a broader understanding of the works. In addition, workshops are conducted by visiting/exhibiting artists to give students the opportunity to work directly with recognized professionals. Call for current gallery hours and an exhibition schedule at (317) 920-2420.

The IUPUI Cultural Arts Gallery

Created in 1997, the IUPUI Cultural Arts Gallery showcases art produced by, or of interest to, students of IUPUI while contributing significantly to the cultural vitality of the university. Through education, exhibits, and events, the gallery supports a community of learning that encourages appreciation and respect for all forms of the arts and the total range of cultures that produce them.

The gallery operates within the Office of Student Life and Diversity Programs and is located in the Student Activities Center in the University College Building on the IUPUI main campus. Offering six to seven

exhibitions a year, the gallery showcases contemporary artists, as well as student artists working in a variety of formats. Annual events include the Student Spotlight Show and the Annual Campus Interrelations Student Art Competition. In addition to exhibits, the gallery also holds lectures and other performing arts events to create additional opportunities to expand the educational experience for all IUPUI students.

The National Art Museum of Sports

The National Art Museum of Sports contains nearly 200 paintings, sculptures, and works on paper from the nation's largest collection of fine art devoted to sports and is located at the University Place Conference Center and Hotel, (317) 274-2339.

Other Community Resources

In addition, Indianapolis has numerous museums, historical homes, and sites including the State Museum, the Eiteljorg Museum of American Indians and Western Art, the Indianapolis Museum of Art, Conner Prairie (a living history museum), the Indiana Historical Society, and the Indianapolis Children's Museum. A number of these institutions border the IUPUI campus as part of the White River State Park.

The Center for Service and Learning

The mission of the Center for Service and Learning (CSL) is to make service an integral and distinctive aspect of the educational culture of IUPUI. As a metropolitan campus, IUPUI is well-positioned to involve students, faculty, and staff in service to the local community. Fostering an ethic of service and civic participation in students who will be today's and tomorrow's leaders and volunteers makes the center and its programs one of IUPUI's important bridges into the community.

The CSL includes three offices: the Office of Service Learning, the Office of Community Service, and the Office of Neighborhood Resources.

Office of Service Learning

The Office of Service Learning (OSL) promotes both curricular and co-curricular service opportunities. Service learning involves students in community service as part of a specific course; students reflect on their experiences in order to gain further understanding of course content, a greater appreciation of the discipline, and an enhanced sense of civic responsibility. For listings of classes with a service learning component, check the *Schedule of Classes* under "Service Learning" or view the center's Web site at csl.iupui.edu.

The OSL assists faculty with the design and implementation of service learning components, as well as the formal documentation of professional service, to include service learning components. In

addition, the OSL coordinates the Community Service Scholarship Program to recognize incoming and continuing students for their outstanding involvement in community/campus service and academic achievement. Freshman Service Scholars and Community Service Scholars enroll in a service learning class, participate in campus-wide community service activities, and become leaders who engage other students in community service. For additional information, call (317) 278-2662.

Office of Community Service

The Office of Community Service (OCS) encourages students, faculty, and staff to volunteer in the local community. This office organizes campus-wide service days, including the United Way Day of Caring in September, family sponsorship during the holiday season, the Dr. Martin Luther King Jr. Day of Service project in January, and Into the Parks each spring. The OCS also coordinates the Volunteer Fair where community agencies come to campus to recruit volunteers, maintains an updated list of volunteer opportunities with community agencies, and hosts a spring recognition event for all campus volunteers including the Jaguar athletes. In addition, the staff works with student groups interested in one-time service projects and students seeking mini-grants to support specific service projects.

Office of Neighborhood Resources

The Office of Neighborhood Resources (ONR) plays a vital role in building campus-community partnerships. The Center through ONR links community service with student employment by coordinating two community tutoring programs, the "America Reads/Work-Study Program" and the "Indiana Reading Corps/Work-Study Program." Both programs support IUPUI students who tutor K-6 students in reading at tutoring sites near campus. ONR also collaborates with the near Westside communities (WESCO) to support ongoing campus connections to strengthen education, neighborhood associations, and economic development through the Community Outreach Partnership Center (COPC). Lastly, ONR acts as a clearinghouse by inventorying campus involvement in communities and providing community access to campus resources.

The Center for Service and Learning is located in the University College Building. For more information, call (317) 278-2662.

Indiana Campus Compact (ICC)

The Indiana Campus Compact (ICC) is a consortium of 28 colleges and universities, both public and private, throughout the state, working to cultivate in students a lifelong commitment to community service and to strengthen the positive role institutions of higher education can take in their communities and in the state. Starting as a loose confederation of six institutions, ICC is one of the strongest state compacts in the nation and works closely with the national Campus Compact, a consortium of more than 600

colleges and universities. ICC provides mini-grants to students to design and implement service projects, coordinates a state-wide "Indiana Reading Corps/Work-Study Program," and seeks to embed service learning into teacher education programs. Students interested in service leadership opportunities can become involved with a variety of committees and programs. ICC is located on the IUPUI campus, at University Conference Center, Suite 200, (317) 274-6500.

IUPUI Alumni Association(s) and Student Organization for Alumni Relations (SOAR)

Graduates from the Indianapolis campus become alumni of Indiana or Purdue University and are invited to become dues-paying members of the respective Alumni Associations of those institutions. Members receive a variety of benefits, which range from the alumni magazine to travel opportunities. In addition, members can participate in a variety of social or service programs. For more information on these programs and the associations, contact the Office of Alumni Relations at (317) 274-8828 or visit www.iupui.edu/~alumrels/.

The Student Organization for Alumni Relations (SOAR) is open to all students and is coordinated through the Office of Alumni Relations. Members of this organization serve as the official student ambassadors for the campus and they stage activities such as the Career Exploration program, and the Big Growl Spirit Week and banner contest.

Special Campus Events: IUPUI's Traditions

Intercollegiate Athletics—Division I

IUPUI, in the fall of 1998, moved into Division I of the National Collegiate Athletic Association. The Jaguars men's and women's programs joined the Mid-Continent Conference. Our Jaguar mascot retains the school colors of red and gold with the complementary colors of black and white. Prior to moving to Division I, IUPUI was a member of the National Collegiate Athletic Association's (NCAA) Division II. Even before that, IUPUI was a member of the National Association of Intercollegiate Athletics (NAIA) and won 32 state and regional championships, reaching the Sweet Sixteen in men's basketball (1989-90) and the Final Four in women's basketball (1990-91), and finished second nationally in women's volleyball (1991-92). Beginning in 1983, the women's softball team made nine consecutive appearances in the NAIA National Tournament, finishing as high as third on three occasions.

IUPUI's student athletes are proud of two well-established traditions: their above average academic records and their record of service. Members of the basketball teams served as mentors and tutors for elementary schoolchildren in two Indianapolis elementary schools, while members of the women's tennis team conducted clinics for inner city youth, introducing them to the game of tennis. In addition, women's basketball and softball players serve as mentors at the Indianapolis Hawthorne Center.

Team IUPUI

Every fall and spring semester in the first week of classes, students come to campus to find information booths strategically located on campus and in key buildings. Volunteers from across the campus make up Team IUPUI. They're onhand to tell new students how to get to class buildings and answer questions. Besides dispensing information, the group offers a hearty welcome to new and old members of the IUPUI community.

Student Activities Fair, Volunteer Fair, and Ice Cream Social

The annual Student Activities Fair is held at the beginning of each fall semester in the Student Activities Center court yard. Approximately 70 student organizations use this fair to distribute information, advertise programs, and meet students interested in becoming involved in campus life. A second part of the fair is the annual Ice Cream Social. Over 90 distinguished dippers serve ice cream to the IUPUI campus community for a mere 10 cents a scoop. This event has become a long-lasting and favorite tradition on campus. In conjunction, the Center for Service and Learning hosts a Volunteer Fair for students, faculty, and staff to learn more about volunteer activities in the local community. A variety of agency representatives provide program information and a list of ways that volunteers can become involved.

Career Fairs

IUPUI was an early leader in the development of job fairs as a way for students to meet with employers who rarely recruited on this campus. The first efforts date back to the mid 1970s and focused on graduating seniors in the School of Education. The Career Center now sponsors several job fairs during the academic year, including Career Focus and the Indiana Multicultural Job Fair. Participation in job and career fairs is an excellent way to enhance career awareness and the job search process.

These events are unique in that they bring together a large number of recruiters representing a variety of firms to meet with students and alumni in order to fill current or anticipated employment opportunities. Information about the various fairs is available in the Career Center's Career Resource Library as well as on the Web site (www.iupui.edu/~career). For more information about each fair, check with the Career Center, Business/SPEA Building, BS 2010, (317) 274-2554.

Explore IUPUI and Campus Day

Students, parents, family members, and friends are invited to visit IUPUI twice a year, in the fall and spring. These events feature booths hosted by various schools, centers, programs, and facilities at IUPUI available to students who enroll. Special mini-information sessions on various programs, on financial aid, and on how to select a major are also offered. One-on-one advising, tours of IUPUI's nationally renowned University Library, and tours of the facilities are available. More information about Explore IUPUI and Campus Day, and other special events, such as open houses geared specifically to graduate programs, may be found at enroll.iupui.edu.

Chancellor's Honors Convocation

Since 1989 the Chancellor's Honors Convocation has been held each April to recognize excellence in teaching and scholarship by IUPUI students and faculty. One sophomore, junior, or senior student, chosen from each school because he or she has the highest GPA, is the Chancellor's Scholar. Students receive notification from their academic units and may invite guests to attend this special ceremony. All faculty members are invited to participate in the ceremony and are asked to wear full academic regalia.

Getting News and Information

To improve communications—an issue for any large and complex organization but especially critical for a commuter campus—the chancellor, many deans, and the president of the Undergraduate Student Assembly annually present a status report for their constituents. They describe what happened in the previous year along with goals for the upcoming year. The campus also has dozens of print publications from schools, offices, centers, and programs, as well as the weekly student paper, the *Sagamore*, which includes an extensive listing of student activities. Other timely information sources are *JagNews*, a daily news release distributed by e-mail, and periodic town meetings to discuss campus issues of importance to students, faculty, and staff. Information about the university is also available on the Web at www.iupui.edu.

United Way Day of Caring

In the fall, IUPUI joins a community-wide effort to provide United Way agencies with teams of students, faculty, and staff to complete one-day service projects. Service projects vary from year to year, depending upon the needs of the agencies. Typical projects include painting and general cleanup, mailings and special events, and hosting youth groups. In 2000, more than 200 people from IUPUI participated, and each year, more and more students turn out for this fun and satisfying day of community service. Jaguar athletic teams, student organizations, departments, and individuals can sign up by calling the Center for Service and Learning at (317) 278-2662 by September 1.

Graduation

IUPUI's schools assemble at the RCA Dome for graduation ceremonies. Present on the stage are many of Indiana and Purdue Universities' trustees, the presidents of both universities, and the chancellor of IUPUI. Honorary degrees are awarded to distinguished individuals during the ceremony and degrees are conferred ranging from associate to professional degrees. The IU and PU Alumni groups induct the graduates and provide them with a free first-year membership in the alumni groups. In addition, the schools hold separate ceremonies before and after the official ceremony.

IUPUI Spring Celebration Dance

Since 1987, IUPUI has held an annual spring dance sponsored by the Student Activities Programming Board. This dance, often held in the famous Indiana Ballroom, brings together students, staff, faculty, and alumni for an evening of fun and dancing.

Martin Luther King Jr. Day

IUPUI faculty, students, and staff have shared a tradition with the Indianapolis community since 1970, honoring the memory of slain civil rights leader Martin Luther King Jr. with a day of activities. The day, an official campus holiday, includes a number of events throughout the day, capped by the annual Martin Luther King dinner, the longest-running celebration honoring King in Indianapolis. The dinner attracts sell-out crowds to commemorate King's goals and dreams and to hear nationally renowned speakers. Past speakers include the famed American poet Maya Angelou; Benjamin Hooks, former director of the NAACP; former Congresswoman Shirley Chisholm; Hollywood actor and director Bill Duke; nationally syndicated columnist William Raspberry; and the scholar Henry Louis Gates. The Black Student Union presents awards to outstanding faculty and students at the dinner.

IUPUI joins a national effort to honor Dr. Martin Luther King Jr. by making this national holiday a "Day-On" rather than a day off. Since classes are not in session, students, faculty, and staff participate in a half-day service project in the local community. A kick-off breakfast is followed by team service projects that may include painting and general clean-up, assisting with a youth basketball clinic, or preparing a low-income home for rehab construction. Students and student groups may also apply for mini-grants to fund special service projects to honor Dr. Martin Luther King Jr.

Bookmarks

Since 1991, IUPUI's Bookmarks program has brought together students, faculty, staff, and even community readers to discuss a series of books including nonfiction, fiction, poetry, and plays. Titles are chosen each year through ballots available campuswide and a community that ensures that the books are available in paperback. From September through April, the five to six Bookmarks titles are the focus of a variety of talks, films (if the books have been made into movies), and panel discussions. All the programs are free to the public. Recently, programs have been held

at IUPUI's Service Center at Glendale Mall to make the discussions more accessible to the community.

Student Activities Honors Reception

The Undergraduate Student Assembly, in cooperation with the Student Life and Diversity Programs, sponsors the Student Activities Honors Reception each year in April. This event, originating in 1973, recognizes students, faculty, administrators, and staff members who have had an outstanding year as leaders, or who have given of themselves on behalf of the students. Many of the awards given commemorate previous IUPUI administrators such as William L. Garrett, a former assistant dean for student services; Lola L. Lohse, a former dean of the School of Physical Education; and Howard G. Schaller, former executive dean and dean of the faculties, who were themselves committed to students and student activities.

International Holiday Celebration and Related Events

For over a decade, students, faculty, staff, community members, and family members have attended the "Holiday Celebration," sponsored by student foreign language clubs and the Department of Foreign Languages and Cultures. At the Holiday Celebration students and their families enjoy foods from over thirty cultures, sing carols and traditional songs in at least ten languages, and break a piñata. Early in the spring, a combined Mardi Gras/Fasching/Carnaval party brings together European, Creole, and South American traditions in an evening of costumes, music, food, and fun. Throughout the year, students participate in events such as international movie nights, lecture series, field trips to art museums, festivals, concerts, restaurants, and dances. The "International Dinner" series hosted by the Department of Tourism, Conventions, and Event Management, the weekly "Culture Hour" hosted by the IUPUI International House and International Club, "Foreign Language Awareness Week" activities, the Model United Nations and Model European Union conferences, and "Great Decisions" discussion groups are some of the other internationally focused events. Students may also choose to participate in international activities through community organizations such as the Max Kade German-American Center and Turners Atheneum, El Centro Hispano and Le Tertulia, the Alliance Francaise, and the International Center of Indianapolis, whose activities are frequently announced in classes and posted on bulletin boards.

The Moving Company at IUPUI

The Moving Company, IUPUI's dance company, has been performing for 18 years. Currently, the company gives an informal concert on campus in the fall and a formal performance in the spring at the Madame C. J. Walker Theater. In addition, students perform at a regional American Dance Festival once a year and give as many other performances as time and funding permit. Any enrolled graduate, professional, or undergraduate IUPUI student with experience in dance can audition in the first week of each semester.

Code of Student Rights, Responsibilities, and Conduct

Indiana University has adopted a code that applies, with only minor differences, to students on all Indiana University campuses. The code, which is available in the Office of the Dean of Students and in all school offices, spells out what constitutes unacceptable behavior and the procedures to be followed when there are alleged cases of misconduct. The dean of students also has some very brief pamphlets on key areas of the code. What follows is not the code but rather abbreviated and paraphrased statements on key elements of the code: academic and personal misconduct as well as a section on what students should do if they believe that other students, faculty, or staff have violated their rights. The code also explains the procedures employed and how students may appeal decisions. For more information, consult the *Code of Student Rights, Responsibilities, and Conduct* as well as brochures located in the Office of the Dean of Students. For an online copy of the code, visit hoosiers.iupui.edu/studcode/stucode.htm.

A. Academic Misconduct

The university may discipline a student for academic misconduct, which is defined as any activity that tends to compromise the academic integrity of the institution and undermine the educational process. Academic misconduct includes, but is not limited to, the following:

1. Cheating
 - a. A student must not use external assistance on any "in-class" or "take-home" examination, unless the instructor specifically has authorized such assistance. This prohibition includes, but is not limited to, the use of tutors, books, notes, and calculators.
 - b. A student must not use another person as a substitute in the taking of an examination or quiz.
 - c. A student must not steal examinations or other course materials.
 - d. A student must not allow others to conduct research or to prepare any work for him or her without advance authorization from the instructor to whom the work is being submitted. Under this prohibition, a student must not make any unauthorized use of materials obtained from commercial term paper companies or from files of papers prepared by other persons.
 - e. A student must not collaborate with other persons on a particular project and submit a copy of a written report which is represented explicitly or implicitly as the student's own individual work.
 - f. A student must not use any unauthorized assistance in a laboratory, at a computer terminal, or on fieldwork.

- g. A student must not submit substantial portions of the same academic work for credit or honors more than once without permission of the instructor to whom the work is being submitted.
 - h. A student must not alter a grade or score in any way.
2. Fabrication
A student must not falsify or invent any information or data in an academic exercise including, but not limited to, records or reports, laboratory results, and citations to the sources of information.
 3. Plagiarism
A student must not adopt or reproduce ideas, words, or statements of another person without an appropriate acknowledgment. A student must give due credit to the originality of others and acknowledge an indebtedness whenever he or she does any of the following:
 - a. Quotes another person's actual words, either oral or written;
 - b. Paraphrases another person's words, either oral or written;
 - c. Uses another person's idea, opinion, or theory; or
 - d. Borrows facts, statistics, or other material, unless the information is common knowledge.
 4. Interference
 - a. A student must not steal, change, destroy, or impede another student's work. Impeding another student's work includes, but is not limited to, the theft, defacement, or mutilation of resources so as to deprive others of the information they contain.
 - b. A student must not give or offer a bribe, promise favors, or make threats with the intention of affecting a grade or the evaluation of academic performance.
 5. Violation of Course Rules
A student must not violate course rules as contained in a course syllabus or other information provided to the student.
 6. Facilitating Academic Dishonesty
A student must not intentionally or knowingly help or attempt to help another student to commit an act of academic misconduct.

B. Personal Misconduct

The university may discipline a student for acts of personal misconduct on or off university property. Acts of personal misconduct that are not committed on university property but arise from university activities that are being conducted off the university campus, or if the misconduct undermines the security of the university community or the integrity of the education process are also subject to disciplinary action. Examples of this kind of personal misconduct are:

1. Altering academic transcripts
2. Arson
3. Battery
4. Drug trafficking
5. Forgery
6. Fraud
7. Harassment of a student
8. Hazing
9. Rape
10. Sexual Assault
11. Trafficking in term papers
12. Unauthorized use of a computer off the campus to obtain access to information on campus
13. Participation in group violence

C. Complaints Against Faculty, Staff, and Students

When a student believes that any of his or her rights, as defined in Part I of the *Code of Student Rights, Responsibilities, and Conduct*, have been violated by another student or by a member of the university faculty, administration, staff, or a student organization, the student should ordinarily attempt to resolve the matter by making an informal complaint to the person or organization involved.

If the problem is not resolved to the complainant's satisfaction by contacting the person(s) involved, personnel in the Dean of Students Office or other appropriate persons can be consulted about options for resolution of the problem.

D. Disruptive Conduct

IUPUI strives to maintain a spirit of civility in a community in which diversity is welcomed. Every student, staff, and faculty member plays a significant role in promoting an environment that is conducive to academic excellence by fostering a climate of civility and mutual respect. In all circumstances it is expected that everyone will act with respect for one another. Difference of opinion and dissent are ordinarily thought of as disagreement or debate. They are not "disruptive conduct" as long as they do not impinge upon the rights of others or interfere with the teaching/learning process in an academic setting. As a community which values the uniqueness of people, behavior which is thought of as "different" or "unusual" is not "disruptive behavior" unless it infringes upon the rights of others or seriously interferes with the teaching/learning process in an academic setting.

The IUPUI instructional program is based on the premise that students enrolled at IUPUI are entitled to receive instruction free from interference by other students. When students are admitted to IUPUI, they accept the responsibility to conform to all IUPUI rules and regulations. Students are expected to comply by conducting themselves in an orderly and cooperative manner.

Further information can be obtained in the *Code of Student Rights, Responsibilities, and Conduct*.

Safety

IUPUI employs 34 full-time sworn police officers. The full-time and student police officers are certified as law enforcement officers by the Indiana Law Enforcement Training Board and meet the same standards as other law enforcement officers in Indiana. In compliance with the Federal Campus Security Act, IUPUI produces a pamphlet entitled "Safety at IUPUI." It contains information, policies, and statistics regarding safety, security, crime, law enforcement, sexual assault, and drug and alcohol programs at IUPUI. The pamphlet is available on the Web (police.iupui.edu/safety.html). Hard copies are available from the IUPUI Police, 430 N. University Blvd., Indianapolis, IN 46202; (317) 274-2058.

Contact the police in emergencies at (317) 274-7911; for nonemergencies, call (317) 274-7971.

Escort Service

Students may obtain an IUPUI Campus Police escort to their car or another building on campus by calling (317) 274-SAFE (7233) 24 hours a day. If students run out of gas or discover they are out of gas, have a dead battery or a flat tire, they may call for assistance at the same number.

Safety Hazards

For all health and safety hazards, including chemical, biological, physical, and environmental hazards, contact the Department of Environmental Health and Safety, Union Building, UN 043, (317) 274-2005.

For public safety hazards such as traffic, security, or criminal activity, call the IUPUI Police, (317) 274-7911.

For further information, consult the *Emergency Procedures Handbook*, which should be available at all reference desks and is available from the Department of Environmental Health and Safety. Topics include medical emergencies, chemical spills, hazardous gas leaks, weather emergencies, earthquakes, bomb threats, fire, and evacuation of persons with disabilities.

Emergency phones are available in parking garages and outside on campus; the latter are yellow boxes with blue lights. Some emergency phones also are found in the hallways of some buildings. All emergency phones are identified by the word *EMERGENCY* and connect directly to the IUPUI Public Safety Dispatch Center, (317) 274-7911.

Drug-Free Environment

IUPUI supports a drug-free university, which means that persons on campus are expected to be free of the influence of controlled substances or alcohol. Persons on campus must not use, manufacture, distribute, dispense, or possess such substances on university property or in the course of university activities.

IUPUI Police Cadet Program

The IUPUI Police Department has a comprehensive and unique law enforcement training program that has produced highly qualified and educated law enforcement professionals. The program allows cadets to attend school full time and work in paid positions in a law enforcement agency. Students graduate with their college degree, their police officer certification from the Indiana Law Enforcement Training Board, and field experience. For information about qualifications and specific elements of the program, either call (317) 274-8031 or visit the Web site (www.police.iupui.edu).

Indiana University

Founded in 1820, Indiana University is one of the 15 largest universities in the nation. With a faculty of nearly 4,000, the university is internationally known for the excellence and diversity of its programs, which meet the needs of more than 90,000 students. The university attracts students from all 50 states and around the world.

Indiana University consists of eight campuses: Indiana University–Purdue University Indianapolis, Indiana University Kokomo, Indiana University–Purdue University Fort Wayne, Indiana University Northwest (Gary), Indiana University South Bend, Indiana University Bloomington, University Southeast (New Albany), and Indiana University East (Richmond). IU also offers courses through facilities at Columbus, Elkhart, and many other sites. More than 80 percent of Indiana's population lives within a 50-mile radius of an IU campus.

The regional campuses offer students and other individuals the educational and informational resources of a large university, with the additional advantages of being able to pursue academic studies in their home communities or nearby, to attend college classes while working full time, to upgrade professional and technical skills, and to pursue intellectual and cultural interests.

The School of Allied Health Sciences offers educational programs on the following five of the university's eight campuses:

Indiana University–Purdue University Indianapolis
Indiana University Kokomo
Indiana University–Purdue University Fort Wayne
Indiana University Northwest (Gary)
Indiana University South Bend
Indiana University Southeast (New Albany)

Indiana University–Purdue University Indianapolis

Indiana University–Purdue University Indianapolis is an innovative urban campus offering 182 degree programs in more than 200 study fields to more than 27,000 students. Indiana University and Purdue University programs and facilities merged at Indianapolis in 1969. The campus continues to experience growth in both the range of its academic offerings and its physical facilities. IUPUI also offers courses at the Columbus Center at Columbus, Indiana.

IUPUI is the home of the IU School of Medicine, the second largest medical school in the United States. There are more than 800,000 patient visits annually to the Medical Center's five teaching hospitals and more than 150 clinics.

The IUPUI library system consists of seven libraries serving the special interests of individual schools. In addition, the entire Indiana University system library is readily available through the interlibrary loan system.

As an urban university, IUPUI has taken advantage of flexible scheduling of classes. Classes are offered days, evenings, and weekends both on the campus and in shopping centers around the city. More than 1,500 faculty plus hundreds of professionals from the metropolitan area bring a rich blend of scholarly demands and practicality to the courses they teach.

Indianapolis, in addition to being the capital city and cultural center of the state of Indiana, is one of the major economic, cultural, and sports centers of the Midwest. With a population of more than 800,000, the city offers numerous museums, cultural and entertainment events, and national and international athletic competitions.

Indiana University Kokomo

Since its establishment in 1945, Indiana University Kokomo has developed as a regional university for commuter students that serves an 11-county area in north central Indiana. IUK offers programs leading to associate, baccalaureate, and master's degrees and a wide variety of continuing education activities.

IUK's heterogeneous student group numbers approximately 3,000 full-time and part-time students. Two-thirds of the classes at IUK have fewer than 30 students, which ensures significant individual attention. The Kokomo campus also offers a broad range of student support services, including career

development and placement assistance, interest testing, tutoring, and child care. In addition, concerts, lectures, and athletic events enhance student life at IUK. Course schedules and student services are designed to meet the needs of both traditional and nontraditional students.

The campus is located on a 54-acre site in the southern part of the city of Kokomo. IUK facilities include classroom buildings, faculty research areas, the Havens Auditorium, and an observatory. The Kellogg Student Center contains student services offices, lounge and cafeteria facilities, a child care center, and a bookstore. The Purdue University Technology Wing includes classrooms, laboratories, faculty and administrative offices of the Purdue School of Technology. A modern 55,000-square-foot library includes an exhibition gallery and the Kresge Auditorium, as well as eight study rooms, space for 50 study carrels, a community conference room, and two classrooms for library-related instruction. A new state-of-the-art 42,000-square-foot science building which will house biology, chemistry, mathematics, physics, information systems, and allied health programs will open in fall 2001.

Indiana University–Purdue University Fort Wayne

Because Indiana University–Purdue University Fort Wayne combines two universities in one, it provides an unusually comprehensive range of undergraduate programs. IPFW's urban location allows university programs to offer many opportunities for practical experience and projects that tap community resources.

Since classes are relatively small, faculty have time for their students, in and out of class. Faculty members at IPFW are known for their dedication to teaching as well as for their professional expertise.

At IPFW, recent high school graduates mingle with older students who want to enrich their lives or take new career paths. This diverse group of students participate together in campus activities that include lecture and film series, concerts and plays, intramural and intercollegiate sports, fraternal organizations, and special interest groups.

IPFW prizes its rich mix of personalities and cultures and organizes special services for minority, international, and physically handicapped students. Other services include financial aid; individualized academic advising; well-equipped modern classrooms, laboratories, and libraries; career and placement counseling; and child care.

Information and Applications

For an application to Indiana University–Purdue University Fort Wayne and other information about the campus, contact:

Indiana University Northwest

Indiana University Northwest in Gary serves the highly diverse area of northwest Indiana, which includes urban, rural, industrial, and metropolitan characteristics. To meet the educational needs of this complex region, IUN offers a range of degree programs at the associate, baccalaureate, and master's levels as well as certificate and postbaccalaureate programs. IUN's broadly conceived educational and cultural events enrich the quality of life in northwest Indiana.

The rich economic, cultural, and racial diversity of northwestern Indiana is found on the campus. The

student body is composed of both traditional students and students who have been away from school for a number of years, many of whom are working on a degree while continuing to earn a living. This mixture enhances the educational experience for all students at IUN. The campus offers a full range of student support services and flexible scheduling to meet the needs of its diverse student body. In addition, many cultural, social, and special interest activities on campus contribute to student life at IU Northwest.

Indiana University South Bend

Centrally located in the Michiana area, Indiana University South Bend offers 91 degree programs for its almost 7,100 students. IUSB responds to today's college students by designing its academic programs, schedules, and support services to meet the needs of a diverse student body that includes many adult and part-time students as well as traditional students.

The campus lists teaching as its highest priority, and a student/faculty ratio of 20 to 1 ensures that students receive individual attention. More than 90 percent of the campus's full-time faculty have earned the highest degrees in their disciplines. IUSB offers a full range of student support services, from career and placement services to child care and a preschool. The many campus activities include lectures, films, plays, special interest groups, and athletics. IUSB's music and theater programs are important contributors to the cultural life of the Michiana region.

Facilities at IUSB house a full university program: laboratories, lecture halls, study areas, theaters, a cafeteria, lounges, and recreational centers.

Computer facilities are available to all students. The academic heart of the campus is the Franklin D. Schurz Library, which contains more than 370,000 volumes and several special collections.

Indiana University Bloomington

Indiana University Bloomington is the university's primary residential campus, with nearly 35,000 students pursuing academic degrees. An outstanding faculty that numbers more than 1,500 has developed a reputation for research discoveries that have broadened knowledge in many areas.

Located in the rolling hills of southern Indiana, IU Bloomington is known for the wooded beauty of its campus. The city of Bloomington, with a population of 60,000, has been selected by Rand McNally as one of the eight most desirable places to live in the nation based on economy, personal safety, climate, housing, services, and leisure activities.

Students from all 50 states and 108 foreign countries study on the Bloomington campus. More than 5,000 course offerings provide a wealth of academic opportunity, and a wide array of lectures and seminars complement classroom, laboratory, and studio activity. The University Theatre, the Art Museum, and the Musical Arts Center serve as major resources for university programs in the performing and fine arts.

The resources of the University Libraries, with 7 million bound volumes and 17 million other holdings, are available to students on all campuses of the university and to all citizens of Indiana.

Information and Applications

While professional programs in allied health are not offered on the Bloomington campus, prerequisite courses are available. Students who want to take prerequisites toward an allied health degree on the Bloomington campus should contact:

John Simpson
Director, Health Professions and Pre-law Information Center

Indiana University Bloomington
Maxwell Hall 021
Bloomington, IN 47405-4601
(812) 855-9766

Indiana University Southeast

Indiana University Southeast is a modern commuter campus at New Albany in the metropolitan Louisville area. Its location permits students to benefit from many cultural, recreational, and employment opportunities.

IU Southeast offers 46 degree programs, including associate, bachelor's, and master's degrees, for its student body of 5,500. Approximately half of the IU Southeast students attend full time, while others take advantage of the convenience and flexibility of IUS programs to take courses related to their jobs, to combine work or family responsibilities with part-time study for a degree, or to take special courses of personal interest.

More than 85 percent of the full-time faculty at IU Southeast hold the highest degrees attainable in their fields. The average class size is 23 students.

Students can participate in more than 40 organizations, including fraternities and sororities and intercollegiate and intramural sports programs. With concerts, lectures, films, and theatrical productions, IUS offers students a rich cultural life. An extensive range of student support services includes the Career Services and Placement Office and the Student Development Center.

Information and Applications

While most professional programs in allied health are not offered on the Southeast campus, prerequisite courses are available in cytotechnology, health information administration, health sciences education, occupational therapy, paramedic science, radiation therapy, radiologic sciences, and respiratory therapy. Students are able to obtain certificates in Medical Transcription and in Coding Specialist. Baccalaureate degrees are also available that will prepare a student for entry into the physical therapy master's degree program. Students who want to take prerequisites toward an allied health degree on the Southeast (New Albany) campus should contact:

Dr. Teresa Forsyth
Division of Natural Sciences, LS 202
Indiana University Southeast
4201 Grant Line Road
New Albany, IN 47150-6405
(812) 941-2657

Indiana University East

Indiana University East provides educational opportunities for east central Indiana, stressing accessible education, so area residents can achieve their personal and professional goals while living at home. The campus offers flexible schedules with day, evening, and weekend classes to allow students to take courses while maintaining family and job responsibilities. Ninety percent of the students at IU East work full or part time, and 72 percent attend the university part time.

The faculty at IU East is recognized for distinguished teaching, and an average class size of 19 makes frequent student-faculty interaction possible. Sixty-five percent of the full-time faculty members hold the highest degrees in their fields.

IU East stresses the importance of liberal education, career education, and lifelong learning in its varied offerings, which include 26 degree programs. The campus offers a full range of student support services for its more than 2,400 students. Career and academic counseling as well as academic support services are available through the IU East Academic Advising Center.

Information and Applications

While professional programs in allied health are not offered on the IU East campus, prerequisite courses are available. Students who want to take prerequisites toward an allied health degree on the East (Richmond) campus should contact:

Dr. Joan Lafuze
Professor
Department of Biology
Indiana University East
Whitewater Hall 268
2325 Chester Boulevard
Richmond, IN 47374-1289
(317) 631-0941 or (317) 278-0616

School of Allied Health Sciences

Dean's Remarks

Thank you for your interest in the Indiana University School of Allied Health Sciences. Allied health degrees were first offered through Indiana University in 1940 with the implementation of the Bachelor of Science degree in Medical Technology. Over the years we have grown to 28 certificate and degree programs offered on five of the eight campuses of Indiana University. This remarkable growth has resulted in the School of Allied Health Sciences being the largest allied health unit in the state of Indiana and one of the largest in the country.

Perhaps our most cherished asset is the quality of our students. The GPA of students selected for our professional programs routinely ranks among the highest on the university campus. Our students' commitment to excellence is expressed in many ways: honors programs, undergraduate research initiatives, national service awards, and pass rates on

certification/licensure exams that exceed national averages, to name a few. Over 90 percent of our students come from Indiana, and upon completion of their studies they seek careers in a wide variety of settings to promote the health and well being of Indiana residents. It is estimated that six of every 10 health care workers come from an allied health discipline. They may be clinical laboratory personnel using sophisticated medical technology to detect abnormalities in blood and tissue, health care administrators collecting information for patient records and insurance reimbursement, or professionals providing specialized patient care.

The school's faculty members are recognized nationally and internationally for their contributions. They serve on national licensure boards and are leaders of national professional societies, reviewers for federal granting agencies, and invited speakers. Their research is published in the best journals in their disciplines, and they routinely serve as consultants to community agencies, state and national health care facilities, and corporations. But their principal goal is to educate the next generation of practitioners to effectively function in the health care environment of the future.

The services offered by the school facilitate our student-centered approach to learning. Student advising starts immediately when an individual indicates a desire to study in one of our educational programs. Our Office of Academic and Student Affairs sponsors important student organizations in combination with its statewide advising network. The Office of Research and Graduate Studies is the entry point for learning more about our outstanding opportunities in graduate education.

To promote excellence in education, research, and service, the School of Allied Health Sciences maintains strong relationships with a variety of critical constituent groups. Our alumni activities keep our graduates involved. We improve facilities and offer scholarships through generous donations by alumni and friends of the school. The school's collaboration with other academic units promotes creative opportunities, and our affiliation with over 500 health care facilities gives students unique educational experiences. Moreover, the involvement of associated faculty is essential to fully implement the school's curriculum. We are proud of these relationships and continue to seek other collaborative opportunities.

Health care delivery in this country is undergoing dramatic change, but it remains one of the most personally fulfilling professions, and we know that most of our students pursue it with a sense of mission. The School of Allied Health Sciences strives to provide a comprehensive educational experience that helps students realize their goals and ambitions.

Purpose

The Indiana University School of Allied Health Sciences is charged with providing allied health education within Indiana University. The school prepares allied health professionals to provide management skills for health services or diagnostic, therapeutic, and rehabilitative patient care. As part of a major university, the school accepts and fulfills four major responsibilities by providing (1) opportunities

to acquire a sound basic education in allied health sciences and to foster the development of lifelong habits of scholarship and service; (2) advancement of knowledge through research; (3) continuing education programs aimed at maintaining and improving the competence of those allied health professionals engaged in patient care or supportive health services; and (4) multiple services to the people of the state of Indiana in all areas of allied health sciences, patient care, and administrative supportive health services.

Philosophy

The School of Allied Health Sciences of Indiana University is committed to quality preparation of allied health personnel who have a concern for the well-being and welfare of the people they serve. The school integrates teaching, research, and service through the efforts of its faculty and students. This integration results in quality programs that have a significant, positive impact on health care.

Each program offered in the school provides the allied health student with an opportunity to develop expertise, scientific knowledge, and professional attitudes that will enable the student to contribute to the health of society and obtain career satisfaction. The programs adhere to specific professional guidelines or standards and are designed in collaboration with the appropriate accrediting bodies. All curricula are based upon a foundation in the liberal arts and sciences, which is essential for an informed and productive life.

The faculty believes that the education of allied health personnel follows a coordinated and logical interdisciplinary process based on a core body of knowledge germane to allied health practice. By sharing experiences related to a variety of activities, the student is introduced to others who have common, yet unique, educational interests. Appreciation of the contribution of each health discipline and interaction with peers and scholars in different health professions encourage the coordination of health planning, health services, disease prevention, and health promotion.

Education is perceived by the faculty as an evolving and continuing process toward an increased ability to think, reason, and judge that leads to a satisfying and self-disciplined life. Effective education allows for individual difference and is provided in a participative atmosphere. It is believed that freedom of choice and meaningful assimilation of facts nurture the development of the students, enhance their understanding of patients' and clients' problems, and promote a dedication to lifelong self-evaluation and self-education.

Faculty of the School of Allied Health Sciences are fully qualified in their fields of expertise and hold appropriate degrees and certification or licensure. In implementing the objectives of the school, they strive to keep their professional and teaching competencies current. The faculty are committed to preparing uniquely qualified personnel who must meet the challenges of the complex and ever-changing health care needs of society.

The graduates of the school should be prepared to apply the knowledge they have attained in their selected discipline. Graduates have a responsibility to maintain competency through formal and informal continuing education and to contribute to new knowledge in their discipline. Graduates have legal, moral, and ethical responsibilities to their employers, clients, patients, and the public and are expected to participate in community and professional activities.

This statement of philosophy forms the core of values from which the school's vision, mission, objectives, policies, and procedures are derived.

Vision

The vision of the School of Allied Health Sciences is to be a nationally and internationally recognized leader in allied health education, research, and service, while providing a comprehensive array of high-quality health care professionals in Indiana.

Mission

The School of Allied Health Sciences has a long tradition of academic excellence. The school's major purpose is to provide quality degree programs in the allied health sciences to meet the needs of the people of the state of Indiana. In fulfilling its fundamental purpose, the school seeks to develop and maintain a scholarly and competent faculty capable of achieving the following goals:

- To build upon sound principles of general education by preparing students to communicate effectively, exhibit quantitative skills, think critically, integrate and apply knowledge, exhibit intellectual depth and breadth, be intellectually adaptive, appreciate societal and cultural diversity, and apply ethical standards and values to professional practice.
- To provide undergraduate and graduate degree programs that offer education related to the provision and management of health services by the various allied health professions.
- To contribute to the advancement of knowledge through research.
- To provide continuing education for allied health practitioners wishing to further their career development.
- To foster the development of lifelong habits for scholarship and service among faculty and students.

In addition to the mission of the school, each program has its own mission statement which can be found on the school Web site or in the brochures produced by individual programs. Please see the Web site or contact individual programs for further information.

History of Current Degree Programs

The School of Allied Health Sciences is the prebaccalaureate and postbaccalaureate academic, administrative, and fiscal unit of the School of Medicine. Allied Health Sciences was first established as a division in 1959 by action of the Trustees of Indiana University. In 1960, the Trustees conferred upon the faculty of the School of Medicine the responsibility and authority to qualify for the Bachelor of Science degree those students

successfully completing the prescribed curriculum in four allied health programs that had been offered long before the establishment of the division. Since that time, additional baccalaureate programs and new programs at the associate and master's levels have been approved and initiated.

At the April 1991 meeting of the Trustees of Indiana University, the Division of Allied Health Sciences was approved as a university-wide school. The School of Allied Health Sciences encompasses allied health programming on five of the eight campuses of Indiana University.

The School of Allied Health Sciences is composed of 25 distinct allied health academic degree programs. The school is one of the oldest allied health academic units in the country and has provided leadership in allied health services, as well as research and education, to the citizens of Indiana, the region, and the nation for 37 years. In 1967, the school was one of 13 allied health units from across the country to participate in the planning and formation of the national professional society—the Association of Schools of Allied Health Programs.

Accreditation

The School of Allied Health Sciences shares with the other schools of the university the accreditation accorded Indiana University as a member of the North Central Association of Colleges and Schools.

In addition, the professional programs are individually accredited by appropriate governing agencies within the discipline. See program-specific sections.

Preadmission Status

Enrollment at Indiana University does not guarantee admission to the professional programs offered through the School of Allied Health Sciences. To be eligible for admission to the programs offered by the school, students must adhere to the academic regulations of the academic unit in which they are enrolled and meet school and program preadmission requirements as stipulated in the general-education and program sections of this bulletin. Admission to many programs is competitive; therefore, completion of the prerequisites does not guarantee admission to the program. On some campuses a student may be admitted to the School of Allied Health Sciences as a preprofessional student; however, this status is for academic advising purposes only and in no way influences admittance into a professional program.

Change of Educational Objective for Preprofessional Students

Changing one's educational objective to an allied health program does not guarantee admission to the school or the program. Students thinking of changing their educational objective should consult with the allied health counselor on their respective campuses prior to initiating the change. Pre-allied health students in University College, the School of Allied Health Sciences, or other Indiana University schools or divisions must follow that academic unit's procedures for changing the educational objective. All students must meet school and program

admission requirements in order to be admitted to a professional program offered through the School of Allied Health Sciences.

Admission Policies

The admission policies of individual programs within the School of Allied Health Sciences on all campuses comply with the following standards:

Prerequisite Course Work Applicants must complete prerequisite courses at an accredited high school (or by GED equivalent), college, or university. Individual programs determine the specific courses and the minimum grade that must be achieved in any course (see specific program information); therefore, program-specific requirements may differ. The completion of a prerequisite course with a Pass/Fail grade must be approved by each program. Students are eligible to apply for admission to an associate or baccalaureate program when their academic progress shows reasonable probability that entry-level requirements can be completed prior to the beginning date of the professional program. Applicants should read the “Admission Policies” and “Program Descriptions” sections of this bulletin for specific entry-level requirements.

Grade Requirements Without exception, applicants must have a cumulative grade point average of at least 2.00 on a 4.00 scale for *all* course work completed at Indiana University and/or any other college or university. Some programs have established a minimum grade point average higher than 2.00 on a 4.00 scale. Some programs also use a component of the overall grade point average (for example, math/science grade point average). See specific program information. Only completed course work and the resultant grade point average are evaluated. In evaluating the high school record of applicants to an associate degree program, only academic course work will be used in calculating the admission grade point average. Students may not be admitted to, hold a position in, or begin a program if they would be on probation as defined by the School of Allied Health Sciences. Students are placed on probation within the School of Allied Health Sciences when the cumulative and/or most recently completed semester grade point average falls below 2.00 on a 4.00 scale. The applicant must also maintain the minimum grade point average as established by the program. The applicant’s grade point average will be the major consideration (51 percent or greater) for admission. (See specific program information.)

Repeated Courses Applicants whose cumulative grade point average is at least 2.00 on a 4.00 scale and who have repeated courses may petition to have their *admission* grade point average recalculated. The recalculation will use the most recent grade of the repeated course. This repeat option includes the use of the Indiana University FX option and is applied with the following restrictions: it can be used for a total of no more than 15 credits; the grade will be deleted not more than twice for a given course; each attempt will count toward the 15 credit hour limit; and W’s cannot be used to replace a grade and will not count toward the 15 credit hours. If more than 15 credit hours are repeated, the applicant will determine which of the repeated courses are to be

deleted. The petition must be attached to the application. The effective date is the beginning of the 1996 fall semester. Any course being used to replace an earlier taking of the course must be taken in the fall of 1996 or later.

Academic Bankruptcy Applicants whose grade point average is at least 2.00 on a 4.00 scale may petition the program for up to one year (fall, spring, and summer) of academic bankruptcy based on compelling nonacademic reasons. The bankrupted semesters must be consecutive. Academic bankruptcy is for admission purposes only and in no way affects the university’s official grade point average. Course work completed in a semester that has been bankrupted for admission purposes cannot be used for the fulfillment of program prerequisites or counted as credit hours toward the degree. The petition must be attached to the application.

Fresh Start The Indiana University School of Allied Health Sciences, for the purposes of selecting candidates for its various undergraduate programs, will allow an applicant to appeal to the program’s admissions committee for “academic forgiveness.” Students must request academic forgiveness at the time of program application.

Academic forgiveness will eliminate, during the forgiveness period, all courses and grades earned by the applicant for the purpose of calculating the admission grade point average. Only grades from courses completed after the forgiveness period will be considered in admission calculations. No course taken during this forgiveness period may be used for the fulfillment of any prerequisite or graduation requirement.

The forgiveness period begins with the applicant’s first academic enrollment period (at any college/university) and ends on a date designated by the applicant but no less than four calendar years for baccalaureate degree programs (two calendar years for associate degree programs) prior to the program’s starting date. To invoke this policy, the student must meet the following conditions:

1. have a 2.00 grade point average (on a 4.00 scale), including all course work taken during the requested forgiveness period,
2. complete a minimum of 24 credit hours for bachelor’s degree programs (12 credit hours for associate degree programs) of graded course work after the forgiveness period, and
3. meet all other program-specific admission requirements.

The granting of academic forgiveness by a program does not alter the student’s official academic record. Students must meet all minimum degree requirements and may invoke this policy only one time. The petition for academic forgiveness must be attached to the application.

Credit by Examination Applicants to any of the Indiana University School of Allied Health Sciences programs who have received “credit by examination” in a course that meets a program prerequisite will be viewed as meeting this specified requirement. Application of this policy for math/science prerequisites will be determined at the program level.

Any “credit by examination” hours received by the student must be transferred onto the student’s university transcript before it can be considered as meeting a program’s admissions prerequisite.

At IUPUI, “credit by examination” can be earned from the following sources: Advance Placement (AP), the College Level Examination Program (CLEP), the Defense Activity for Non-Traditional Education Support (DANTES), and Indiana University departmental examinations. Students on other campuses should contact the School of Allied Health Sciences Administrative Office on their campus.

Testing Applicants may be required to complete testing as designated by the program. Testing results may be used as a component of the admissions decision unless their use would violate state or federal law.

Interview Applicants may be required to complete a personal interview. The interview may be a component of the admission decision.

Technical Standards for Admission and Retention

Since a degree in one of the allied health sciences disciplines attests to the mastery of knowledge and skills, graduates must possess the essential knowledge and skills to function in a broad variety of clinical situations and render a wide spectrum of patient care in a safe and effective manner.

The School of Allied Health Sciences faculty has therefore specified nonacademic criteria, Technical Standards for Admission and Retention, which all applicants/students are expected to meet in order to participate in the allied health programs. These criteria include the following five categories: (1) observation; (2) communication; (3) motor function; (4) intellectual-conceptual, integrative, and quantitative abilities; and (5) behavioral and social attributes. All accepted students will be required to sign a statement certifying that they can meet the technical standards that apply to the program to which they have been admitted.

A copy of the technical standards will be sent to each applicant with an offer of admission. Additionally, a copy may be obtained from the program of interest or the Office of Academic and Student Affairs in the School of Allied Health Sciences.

Preference to In-State Residents Preference is given to applicants who are Indiana residents. Preference is also given to applicants who complete the majority of applicable course work at a public college or university in Indiana. This policy is applicable only to undergraduate programs, and is applied at the time of program application.

Equal Opportunity/Affirmative Action Policy Indiana University pledges to continue its commitment to the achievement of equal opportunity within the university and throughout American society. In this regard, Indiana University will recruit, hire, promote, educate, and provide services to persons based upon their individual qualifications. Indiana University prohibits discrimination based on arbitrary consideration of such characteristics as age, color, disability, ethnicity, gender, marital status, national origin, race, religion, sexual orientation, or

veteran status. Indiana University shall take affirmative action, positive and extraordinary, to overcome the discriminatory effects of traditional policies and procedures with regard to the disabled, minorities, women, and Vietnam-era veterans. An office on each campus monitors the university's policies and assists individuals who have questions or problems related to discrimination.

Policy Changes Policies concerning the minimum grade point average for admission consideration are subject to change. Changes for beginning freshmen become effective the semester following the announcement of the decision to the university counselors and other constituencies. Changes in prerequisite courses or the minimum grade required in a prerequisite course will be applied as follows for continuing students:

1. Applicants who have taken the course prior to the change and who meet the old requirement will have satisfactorily completed the requirement.
2. Applicants who have taken the course prior to the change and who do not meet the old requirement must complete the course under the new requirements.
3. Applicants enrolled in the course at the time of the change will be permitted to meet the old requirements.
4. Applicants who have not taken the course prior to the change will have to meet the new requirements.

Admission Procedures

1. In addition to the general admission requirements stated above, the program-specific sections in this bulletin must be read for admission requirements and deadlines.
2. Individuals seeking admission to a professional program must submit a complete school/division application prior to the program's application deadline. See the campus information section of this bulletin for names, addresses, and telephone numbers of persons to contact for applications. When applying to more than one program or campus, separate applications must be completed. Admission to the professional program is competitive; application for admission to the school does not constitute automatic admission to a program.
3. Applicants who are not Indiana University students must also file an Indiana University application and pay the application fee prior to the program application deadline. Applications for admission to Indiana University can be obtained from the Office of Admissions on the campus of interest. Some campuses may have application deadlines.
4. All complete applications are reviewed by the program's admission committee. The selection of a class is based on school and program admission criteria. All applicants receive written notification of their admission status.
5. Applicants may appeal any admission decision except the requirement of a cumulative grade point average of 2.00 on a 4.00 scale. Copies of the policies and procedures governing the

appeals process are available on request from any of the allied health administrative offices.

6. Individuals interested in being admitted to one of the school's programs should contact the program of interest annually for an update of admission criteria.
7. The school/division application is revised each summer. Applicants must obtain an application for the year in which they wish to apply.
8. Applicants should check the current school application for submission deadlines.
9. Students who have been convicted of a felony may be unable to obtain appropriate credentials to practice in some disciplines. Contact the program director for further information.
10. Individuals whose names appear on the Sex Offenders List will not be allowed to pursue admission to any program in the School of Allied Health Science.
11. Grades earned in remedial courses may be utilized differently by different programs to calculate the competitive grade point average. See the program-specific section.

Transfer Credit

Acceptance of credit from a regionally accredited college or university for transfer to Indiana University will be determined by the campus office of admissions.

While the grades from course work completed at Indiana University and all other colleges and universities are used to calculate the admission grade point average, only grades of C (2.00) or above will be considered for transfer. The university does not accept the transference of special credit by examination awarded by another college or university. The transfer of credit earned through a regionally accredited junior college or a community college is normally limited to the equivalent of two years of academic work toward a baccalaureate degree and one year of academic work toward an associate degree.

Correspondence Courses All credit to be applied to an allied health degree earned through IU's Independent Study Program, correspondence study, or other nontraditional methods must be validated and approved by the faculty of the program to which the student is applying. The School of Allied Health Sciences retains the right to determine the acceptability of transfer credit to meet degree requirements.

UNDERGRADUATE Degree Requirements

The faculty of the School of Allied Health Sciences, Indiana University School of Medicine, will recommend for degrees only those students who have been admitted to Indiana University and are students in good standing in the School of Allied Health Sciences. Candidates for degrees are eligible for graduation upon completion of all program requirements in effect when the student first enrolls in professional course work, provided requirements are met within five years. (Exception: State rules require students in paramedic science to complete the professional program in two years.)

The program faculty reserve the right to require students whose program course of study is interrupted for any reason to meet requirements as specified by the director of the program and the dean of the School of Allied Health Sciences or the dean's campus designee. Changes in the student's original program may be necessary when, for example, a curriculum has been revised, offerings are no longer available, significant changes in curriculum content have occurred, or repetition of material is deemed essential to assure continuity of clinical competency.

Academic counseling and guidance are available for students. Students are responsible for seeking such counseling and guidance and for planning courses of study to meet degree requirements.

General Undergraduate Requirements

Minimum Degree Requirements

1. Based upon earned Indiana University credits, a minimum cumulative grade point average of 2.00 must be maintained.
2. A minimum of 30 credit hours of program or program-related course work must be completed in residence on the Indiana University campus at which the degree is awarded.
3. Additional general requirements must be completed for the bachelor's degree or associate degree as listed below:

Bachelor's Degree

- a. Minimum of 122 credit hours.
- b. School baccalaureate degree general-education requirements.
- c. Minimum of 30 credit hours in courses at the 300-400 (junior-senior) level.

Associate Degree

- a. Minimum of 60 credit hours.
- b. School associate degree general-education requirements.

Students must complete the prescribed course of study, meeting program academic, professional, and technical standards requirements, which may exceed the requirements stated above. Program professional standards consist of ethics and proper health care practices to which students must adhere. Program faculty will distribute these standards when appropriate.

During the fall semester prior to the graduation year, the student is responsible for submitting an intent-to-graduate form, which indicates that the student plans to complete all requirements for the appropriate degree.

Work for a degree must be completed within five years from the time the student first enrolls in the professional program. (Exception: State rules require students in paramedic science to complete the professional program in two years.) Under unusual circumstances, the program director may recommend granting a waiver of this requirement.

Degrees are granted in May, June, August, and December; however, Commencement exercises are held only in May.

General-Education Requirements

Each candidate for an undergraduate allied health degree must complete course work in the following categories:

Basic General-Education Areas

A.S. Degree

Written Communication, one course

Verbal Communication, one course

At least one course from any two of the following categories:

College-level Mathematics

Social-Behavioral Sciences

Basic Life-Physical Sciences

Humanities

(classical studies, literature, English, folklore, foreign language, history, journalism, philosophy, religion, speech communication, minority studies, visual and performing arts)

B.S. Degree

Written Communication, three courses

(two prerequisites: one in professional curriculum. See program section for specific content emphasis.)

Verbal Communication, one course

Humanities, one course

(classical studies, literature, English, folklore, foreign language, history, journalism, philosophy, religion, speech communication, minority studies, visual and performing arts)

College-level Mathematics, one course

Social-Behavioral Sciences, two courses

Basic Life-Physical Sciences, two courses

In addition to the above general-education requirements, students are strongly encouraged to learn to do word processing, use e-mail, and navigate the internet prior to the beginning of the professional program. See program-specific sections for program requirements.

Program Prerequisites

Each program has additional specific course requirements. Refer to the program of interest in this bulletin for specific information.

Professional Program Requirements

An outline of the professional program is contained in the program-specific information in this bulletin.

Academic Regulations

All students admitted to the School of Allied Health Sciences are governed by the following academic regulations.

Grades All students admitted to the School of Allied Health Sciences are governed by the grade definitions and minimum grade requirements as established by their professional program. Instructors are responsible for establishing and publishing the grading scale applicable to their courses.

Points are assigned to determine the cumulative grade point average as follows:

A+ or A	= 4.00	C	= 2.00
A-	= 3.70	C-	= 1.70
B+	= 3.30	D+	= 1.30
B	= 3.00	D	= 1.00
B-	= 2.70	D-	= 0.70
C+	= 2.30	F	= 0.00

No points are assigned for I (Incomplete); S (Satisfactory); P (Passing); R (Deferred); W (Withdrawn); or FX, DX, CX, or BX (Course Repeated) grades.

Grade Point Average Courses transferred from other institutions are not used to calculate the cumulative grade point average for graduation. Regardless of the number of times they are taken, all courses that are repeated are evaluated by averaging the grades received. Courses for which the grades of I, S, P, R, W, or FX are assigned are not used to calculate the cumulative grade point average since there are no points assigned to these grades.

R Grade, Deferred The R grade (deferred grade) is applicable only to courses approved for that purpose. The grade R used on the final report indicates that the nature of the course is such that the work of the student can be evaluated only after more than one term. Upon completion of the course, the instructor will submit paperwork to replace the R grade on the transcript with the earned grade.

Pass/Fail Pass/Fail grading is a student option in elective courses. Any student in good standing may enroll in elective courses for which the grade assigned is P (Pass) or F (Failure). Such courses, if passed, are credited toward the degree but do not affect the grade point average. A failing grade adversely affects the grade point average. Students may not use the Pass/Fail option for a stated prerequisite or a professional course. No more than one Pass/Fail course may be taken in any one semester. Students are limited to a maximum of 24 Pass/Fail credit hours for the baccalaureate degree and a maximum of 12 Pass/Fail credit hours for the associate degree.

Satisfactory/Fail A grade of S (Satisfactory Performance) or F (Failure) is used for approved courses. In such courses, the only grades permitted are S and F, and students are notified during the first class session of the S/F grading policy for the course. The credit hours earned with a grade of S count toward graduation, but the S grade will not be calculated in the grade point average. However, an F grade is computed in the grade point average. The number of courses taken on an S/F basis does not affect the number of courses permissible on a P/F basis.

Incompletes A grade of I (Incomplete) indicates that a student made successful progress in a course and completed a majority of the course work satisfactorily but, because of a compelling nonacademic reason, did not complete all of the course work by the end of the grading period. The course instructor establishes the criteria, procedure, and time limit for the removal of the I grade. The time limit, however, may not exceed one calendar year, after which time the I grade, if not changed by the instructor, automatically becomes an F.

Special Credit Policy The School of Allied Health Sciences may award special credit to students who are enrolled at Indiana University seeking a degree and who possess, by previous education or experience, a background in an allied health discipline represented in the school. The mechanisms by which a student may be awarded credit include credit by credentials, credit by experience, and credit by examination. Each discipline has policies that define how these mechanisms apply to a student seeking credit from that discipline. Students may obtain a copy of the school's Special Credit Policy and Procedure by contacting any of the allied health administrative offices.

Withdrawal from a Course With appropriate approval of the faculty, withdrawal is permitted at or before midsemester with an automatic grade of W. A student withdrawing during the third quarter of each semester will receive a W or an F depending upon the student's performance in the course. In the last quarter of each semester, students may withdraw with a grade of either W or F at the instructor's discretion with the approval of the instructor and the dean or campus designee and dependent upon student performance at the time withdrawal is requested. Petitions for withdrawal in the last quarter of the semester will only be considered if the student provides a compelling nonacademic reason. The desire to avoid a low grade is not an acceptable reason for withdrawal from a course.

Students who alter their original class schedule, whether by personal incentive or university directive, must do so officially by filing the appropriate forms with the registrar. Students who do not assume this responsibility are jeopardizing their records with the possibility of incurring an F in a course not properly dropped and/or not receiving credit in a course improperly added.

Double Major A double major does not exist in the School of Allied Health Sciences, and second major options have not been established between the school and any other academic unit. Each degree in the School of Allied Health Sciences is a separate academic curriculum, and students may not pursue a double major.

Multiple Degrees Students earning more than one degree at the same level are required to meet the academic requirements for the degree in each school and must be recommended for the degree by the faculty of each school. Students receiving a degree from the School of Allied Health Sciences are required to complete the professional component in sequence with their class of admission.

Grade Replacement Policy (For IUPUI students only) The purpose of this policy is to allow students who have done poorly in a course to repeat the course and remove the weight of the earlier grade from the student's cumulative grade point average when the student is applying for admission into a School of Allied Health Sciences program. This policy expands the FX policy by extending the replacement option to courses in which students receive any grade rather than just grades of F. Schools retain the right to consider the student's complete academic record for

purposes of admission to the school, granting of honors, or meeting the minimum grade point average required for conferral of the degree. Use of the grade replacement policy is for admissions purposes only and in no way affects the student's official university grade point average.

1. The effective date is the beginning of the fall 1996 semester. Any course being used to replace an earlier taking of the course must be taken in the fall of 1996 or later.
2. The provisions apply to students pursuing an undergraduate degree only.
3. A student may exercise the grade replacement policy for a maximum of 15 credit hours. The 15 credit hour limit includes any course previously replaced using the FX policy.
4. Grade replacement replaces the use of the FX option. Grades previously granted FX will be honored subject to statement 3 above.
5. A student may exercise the grade replacement policy no more than two times for a single course. Each attempted replacement will count toward the 15 credit hour limit.
6. Once it is invoked, a student may not subsequently request reversal of the grade replacement granted to a particular course.
7. Any grade may be replaced. The replaced grade will then be excluded from the cumulative grade point average. However, the course listing and the replaced grade will remain on the student's academic record with an "X" denoting that the grade is excluded from the cumulative grade point average.
8. Invocation of the forgiveness option does not preclude a student from using grade replacement for work taken subsequent to re-enrollment as defined by the Forgiveness Policy.

Grade replacement is available for courses taken at Indiana University. Schools retain the right to consider records of performance from other universities in determining admission to the school and granting of honors. This assumes that if the student's initial course was taken on another IU campus, that campus is willing to place the replacement flag on the course at the request of the IUPUI registrar.

Remedial Courses Generally, remedial and refresher courses will not satisfy any course requirement for any allied health sciences degree. Contact the program for further information.

Academic Policies

Students in Good Standing Students must maintain a minimum cumulative grade point average of 2.00 (C) and a minimum grade point average of 2.00 for the most recent academic session and meet additional program, academic, and professional standards in order to be considered in good standing. Students are informed of program, academic, and professional standards during program orientation.

Class Standing Within Indiana University, class standing is based on the total number of credit hours a student has earned. However, within the school, class standing is assigned according to a student's progress in the professional curriculum.

Semester Load To be considered a full-time student by the university for each session, the student

must register for a minimum of 12 credit hours each fall and spring semester and 6 credit hours each summer I and II. The maximum load is 18 credit hours. The number of credit hours determining full-time student status may vary with the nature of the program. For any enrollment period required by a program, the student is considered to be full time regardless of the number of credit hours taken during that period. Students who want to carry more than 18 credits must obtain permission of the program director and the dean or the dean's campus representative. In addition, students should have a cumulative 3.00 (B) average or have earned a 3.00 (B) average in their last full semester.

Probation Upon the recommendation of the faculty in the student's program, a student is placed on probation. Probationary recommendations are made when the student does not meet standards of academic performance or professional behavior. A student will be placed on academic probation for the academic session following the one in which the student fails to attain a minimum 2.00 (C) cumulative and/or semester grade point average. Individual programs may have additional academic and/or professional standards. A student who fails to meet these program-specific standards may also be placed on probation. Students are informed of program-specific standards upon entering the program. A student will be removed from probation after satisfactorily completing the program's specified requirements. Students are notified in writing of probationary actions by the school's dean or the dean's campus representative.

Dismissal Upon the recommendation of the faculty in the student's program, a student may be dismissed from the school. Dismissal is based on the failure to meet academic or professional standards. The student will be informed of the dismissal in writing by the school's dean or the dean's campus representative. A student who has been dismissed from the school may not apply for readmission to the program in which the student was enrolled at the time of dismissal. Under special circumstances, a waiver may be requested by the program and forwarded to the school's appeals committee for action.

Academic Standards A student may be dismissed from the School of Allied Health Sciences when, in the judgment of the faculty, the student has ceased to make satisfactory progress toward a degree. When an undergraduate student fails to attain a 2.00 (C) grade point average in any two consecutive academic sessions, has a cumulative grade point average below 2.00 (C) for two consecutive semesters, or fails to earn higher than a 1.00 (D) grade point average in any one semester, the student is automatically considered to be making unsatisfactory progress toward a degree and is thereby eligible for dismissal.

In addition, a student who fails to meet program-specific academic requirements is considered not to be making satisfactory academic progress toward a degree and may be dismissed. At the time of program orientation, each student receives a copy of the program-specific academic requirements.

Professional Standards A student failing to meet the standards of professional and personal conduct may be recommended for dismissal.

Withdrawal and Readmission A student may be readmitted to the school after withdrawal as follows:

Temporary Withdrawal Students in good standing who voluntarily and temporarily withdraw from a program assume temporary inactive status with the School of Allied Health Sciences. At the time of departure, it is the student's responsibility to arrange in writing a continuation agreement with the individual program director. The student is allowed to re-enroll as specified in the continuation agreement. The student must meet any specific academic/clinical requirements associated with re-enrollment under the continuation agreement. Students failing to re-enroll as specified in the continuation agreement are subject to dismissal from the School of Allied Health Sciences.

Other Withdrawal A student who withdraws without arranging in writing for a continuation agreement with the program director, or fails to enroll in any semester, will not be allowed further enrollments in the school and will be considered as not making satisfactory progress toward a degree. Such students who want to re-enroll must file an application for admission and will be considered as new applicants. New prerequisites and standards must be met. These students may be considered for advanced standing in the program provided the completed work meets the current standards of the program.

Honors

The School of Allied Health Sciences offers the following honors to recognize superior student performances.

Degrees Awarded with Distinction The university recognizes a student's superior performance in course work by awarding the associate or bachelor's degree with one of three levels of distinction: distinction, high distinction, or highest distinction. A student must meet the following criteria to receive a degree awarded with distinction.

1. Baccalaureate and associate degree candidates must rank within the highest 10 percent of their graduating class. The determination of eligibility for graduation with academic distinction will be made by the School of Allied Health Sciences so that candidates will be ranked with classmates who received the same type of degrees (e.g., B.S. in Occupational Therapy, B.S. in Radiologic Science).
2. If the 10 percent determination of any class results in a fractional value, the number will be rounded upward (e.g., a graduating class of 11 would have two individuals eligible for distinction).
3. Calculation of the grade point average for graduation with distinction will be based upon the total number of credit hours completed at Indiana University. A candidate for a baccalaureate degree must have completed a minimum of 60 credit hours at Indiana University; associate degree candidates must have completed at least half of the credit hours required for their degree at Indiana University.
4. No more than 10 percent of the Indiana University credit hours may be eliminated from the grade point average determination by utilization of the mechanisms of Pass/Fail or special credit.

5. A minimum cumulative grade point average of 3.50 must have been achieved.
6. Three levels of distinction will be recognized and determined as follows: 3.50 through 3.74—Distinction; 3.75 through 3.89—High Distinction; 3.90 through 4.00—Highest Distinction.
7. The determination of candidates who will wear honor cords at the May graduation ceremonies should include all academic credit earned at IU including the spring semester prior to commencement.
8. Unique cases and appeals should be forwarded to the dean of the School of Allied Health Sciences or the dean's campus designee for consideration.

Dean's List Each semester, students who excel academically have the privilege of being listed on the School of Allied Health Sciences Dean's List. To be eligible, students must carry 9 or more credit hours. Additionally, associate degree students must earn a semester grade point average of 3.50; baccalaureate degree students must earn a grade point average of 3.70.

Program Awards School of Allied Health Sciences programs offer awards recognizing academic excellence, leadership, career potential, and service. Students should refer to specific programs for descriptions of these awards.

IUPUI Honors Degree

Qualified students at IUPUI may work toward the General Honors Degree, which can be earned at the baccalaureate or associate degree level.

At the baccalaureate level, the student must fulfill both general and departmental requirements. Minimum requirements for an honors degree are 24 hours of honors credit, at least 6 of which are outside the major. A student passing in an honors course will receive credit toward graduation; however, only grades of A or B count for honors credit. There is a grade point average requirement of 3.30 overall and 3.50 for honors courses.

At the associate level, students must complete all regular associate degree requirements. In addition, they must complete a minimum of 12 credit hours in honors work of which no more than 3 may be in skills courses. In their required courses, they must include 3 credit hours (usually honors courses) outside the department or school in which they are majoring. Students must earn a grade point average of 3.30 overall and 3.50 for honors work.

Students in the School of Allied Health Sciences who would like to pursue courses under the IUPUI Honors Program should consult with program faculty regarding the availability of such courses within the particular program of interest.

Student Rights and Responsibilities

Application to and enrollment in the university constitute the student's commitment to honor and abide by the practices and policies stated in the university's official announcements, bulletins, handbooks, and other published materials and to behave in a manner that is mature and compatible with the university's function as an institution of

higher learning. The *Indiana University Code of Student Rights, Responsibilities, and Conduct* is available in electronic format. Students are expected to read this document and, by their enrollment, agree to its contents and additional School of Allied Health Sciences statements, which appear below.

Academic Advising A professional advisor is available to assist students who are working on the prerequisites for a professional program. Once admitted to a professional program, students are advised by faculty within the program. It is the student's responsibility to seek counseling and guidance. *The student is responsible for planning a program to meet degree requirements.*

Appeals The School of Allied Health Sciences abides by the appeals procedures discussed in the *Indiana University Code of Student Rights, Responsibilities, and Conduct*. Students may obtain a copy of the school's Appeals Policy and Procedure from any of the school's administrative offices.

Attendance Students are responsible for complying with all attendance requirements that may be established by the school faculty.

Cheating and Plagiarism Faculty and students have rights and responsibilities for learning, teaching, and scholarship within the entire university community. Academic functions are characterized by reasoned discourse, intellectual honesty, mutual respect, and openness to constructive change. Individuals must remain active in avoiding violation of academic ethics.

Cheating Dishonesty of any kind with respect to examinations, course assignments, alteration of records, or illegal possession of examination questions shall be considered cheating.

It is the responsibility of the student not only to abstain from cheating but, in addition, to guard against making it possible for others to cheat. Any student who helps another student to cheat is as guilty of cheating as the student assisted. Students should also do everything possible to induce respect for the examination process and for honesty in the performance of assigned tasks in or out of class.

Plagiarism Honesty requires that any ideas or materials taken from another source for either written or oral use must be fully acknowledged. Offering the work of someone else as one's own is plagiarism. The language or ideas thus taken from another may range from isolated formulas, sentences, or paragraphs to entire articles copied from books, periodicals, speeches, or the writings of other students. The offering of materials assembled or collected by others in the form of projects or collections without acknowledgment also is considered plagiarism. Any student who fails to give credit for ideas or materials that are taken from another source is guilty of plagiarism.

Clinical Affiliations Clinical affiliations (fieldwork experiences) are required in most School of Allied Health Sciences programs. The program faculty is responsible for the selection, approval, and assignment of clinical experiences. Although individual student needs and desires will be recognized, the final placement decisions are made

by the program faculty. Students are responsible for transportation, fees, and self-support, and for following the rules and regulations of the center(s) to which they are assigned. In addition, student conduct must be consistent with the standards of the university and the profession.

Confidentiality of Records Indiana University, in compliance with the General Education Provisions Act, Section 438, titled Family Educational Rights and Privacy Act, provides that all of a student's records are confidential and available only to that student and to the parents if the student is under 21 and dependent as defined by IRS standards. The student may review the record upon request and may ask for deletions or corrections of the record in a hearing process described in detail in the *Indiana University Code of Student Rights, Responsibilities, and Conduct*. References, recommendations, and other similar documents may carry a voluntary waiver relinquishing the student's right to review this specific material. The student may also release the record to others by signing a written release available in the offices that maintain records. Further details regarding the provisions of the Privacy Act and a list of offices where student records are kept may be found in the *Indiana University Code of Student Rights, Responsibilities, and Conduct*.

Degree Applications Each fall, students preparing to graduate during the following calendar year must file an intent-to-graduate form in the office of the program in which they are enrolled. Program faculty then certify the student's satisfactory completion of degree requirements. If changes in the anticipated date of degree completion occur, students must consult their faculty advisor and file an updated intent-to-graduate form.

Financial Aid A student may seek financial assistance through the financial aid office on the campus of interest. In addition, assistance may be available through the School of Allied Health Sciences Student Affairs Committee, professional associations, and other external groups and agencies.

Costs Students are responsible for the following costs:

Fees and Tuition Fees and tuition are established annually by the Trustees of Indiana University.

Books and Supplies Books and supplies are determined by the program.

Uniforms During clinical/fieldwork experiences, students must adhere to the dress code requirements of the program and training site. Students are responsible for providing their own uniforms.

Transportation Students are responsible for travel and lodging costs associated with clinical/fieldwork experiences.

While tuition, fees, and other related expenses change each year, the estimated cost associated with matriculating in one of the undergraduate professional programs for the 2001-2002 academic year ranged from \$5,000 to \$12,500. Contact the program of interest for a current cost sheet.

Liability Insurance All students participating in required fieldwork experience are covered by the

university's medical malpractice insurance. When requested, students may be required to purchase and show proof of general liability insurance prior to being certified to begin the clinical experience.

Health Before the beginning of the professional program, students are required to demonstrate proof of immunization for tetanus and diphtheria, rubella, rubeola (measles), mumps, varicella (chicken pox), and hepatitis. All students must have a PPD tuberculin skin test within the last three months. Students may be required to complete a physical examination (see program specific requirements). All students must show proof of health insurance before beginning the professional program.

International Students Foreign nationals enrolled in the school are subject to the same rights and responsibilities as all other students. International students should consult the office for international students on the campus of interest. A processing fee may be charged to entering students.

Orientation School of Allied Health Sciences programs require students to attend orientation programs prior to the beginning of the professional courses. Students are responsible for attending these sessions and for the program-specific policies and standards distributed and discussed at the sessions.

Professional Conduct Students are responsible for exhibiting conduct appropriate to their professional training and education. Each program distributes standards and policies of appropriate professional conduct at the time of program orientation.

Registration and Record Changes It is the student's responsibility to enroll in each required academic session and satisfactorily complete all courses required for the degree. Faculty are available to provide academic advising.

Students are responsible for filing the necessary Student Record Change form with the School of Allied Health Sciences Office of Academic and Student Affairs in Coleman Hall 120 as soon as possible following a change of name or permanent address. Additional information regarding degree requirements and academic standards may be found elsewhere in this bulletin.

Credentials/Licensure

Students completing any of the professional programs are qualified to sit for the appropriate licensure and/or credentialing examinations. Contact the program director for further information.

Allied Health Alumni Association

The Allied Health Alumni Association, which has an enrollment of more than 700 active members, was officially recognized as a constituent member of the Indiana University Alumni Association in 1976. Active membership is open to all graduates of the School of Allied Health Sciences programs.

For more information, contact the Indiana University Alumni Association, School of Allied Health Sciences Alumni Association, University Place Conference Center, room 241, 850 W. Michigan Street, Indianapolis, IN 46202-6044; (317) 274-8828.

Academic Programs

Clinical Laboratory Science/Medical Technology

The educational program in clinical laboratory science/medical technology is located on the Indiana University–Purdue University Indianapolis campus, Indiana University Medical Center.

Description of the Profession Clinical laboratory science/medical technology is a diverse, science-oriented profession aimed at accurate performance of clinical laboratory procedures on biologic samples from patients. The results from these procedures are used by physicians in diagnosing and treating diseases. Some of the tasks that clinical laboratory scientists/medical technologists perform are listed below:

- Analysis of simple/complex chemical components of body fluids.
- Evaluation of cellular components of blood.
- Identification of microorganisms and their antibiotic susceptibilities.
- Preparation of blood components for patient therapy.
- Evaluation of new techniques, procedures, and instruments.

These laboratory personnel continually evaluate the quality of the results from procedures and instruments and solve any problems that relate to inconsistencies. Excellent communication skills are required to interact with other members of the health care team, to teach, and to manage individuals under their supervision.

Clinical laboratory scientists/medical technologists typically work in laboratories located in hospitals, clinics, physician group practices, blood centers, medical research facilities, or medically oriented industries.

Graduates of the Program Students who successfully complete the senior/professional year of the clinical laboratory science/medical technology program and have a baccalaureate degree are eligible to take national certification examinations. Nationally recognized certification is a requirement for employment in many settings.

Credentials Required to Practice M.T. (ASCP), Medical Technologist; or C.L.S. (NCA), Clinical Laboratory Scientist.

Licensure Requirements to Practice There is no state licensure in Indiana; however, some states require licensure in addition to or instead of national certification.

Bachelor of Science in Clinical Laboratory Science at Indiana University–Purdue University Indianapolis

Medical Director: Professor Eble

Program Director: Associate Professor Kasper

Professors: Allen, Davis, Glick, Leland, Ryder

Associate Professors: Baenziger, Marler, Rodak

EDUCATIONAL PROGRAM

Length of Program Clinical laboratory science is a four-year baccalaureate degree program that is typically full-time days; however, some part-time day positions are available on the IUPUI campus. The program is structured in a 3 + 1 arrangement in which three years are spent in regular college courses in order to complete prerequisite courses and the fourth year is the senior/professional year. The professional year includes both didactic and supervised clinical experiences.

Additional Cost In addition to regular university fees, the student should expect to pay for program-related expenses. Contact program for current cost sheet.

Description of Program Facilities The Clinical Laboratory Science Program at IUPUI has program offices, a classroom, and a student laboratory located on the fourth floor of Fesler Hall.

Location of Clinicals Facilities utilized for clinical experiences include University Hospital, Riley Hospital, Wishard Memorial Hospital, and Richard Roudebush Veterans Administration Medical Center.

Opportunity for Students to Work Students who must work should limit employment hours to 8-10 hours a week if possible.

Accreditation The Clinical Laboratory Science Program at Indiana University–Purdue University Indianapolis is fully accredited by the National Accrediting Agency for Clinical Laboratory Sciences, 8410 W. Bryn Mawr Avenue, Suite 670, Chicago, IL 60631, phone (773) 714-8880.

ADMISSION

General Information

Students accepted into the program must complete the school's and the following program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Cumulative and science/math grade point average, essay, interview, and motivation.

Class Size 24 students

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Clinical Laboratory Science Program at IUPUI.

Application Deadline December 1 of the year prior to desired entry into the senior/professional year.

Total Number of Prerequisite Credit Hours 90

Distribution of Credit Hours in Specific Areas

Applicants must complete at least 18 credit hours in the biological sciences and 18 credit hours in chemistry. See prerequisites.

Limitations of Course Work Courses in chemistry (upper level), microbiology, and immunology must have been taken within the previous six years.

Minimum Cumulative Grade Point Average 2.50 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained. Grades from remedial courses are not used in this calculation.

Minimum Specific Grade Point Average 2.50 on a 4.00 scale in science and mathematics courses. This requirement is applied at the time of program application and must be maintained. Grades from remedial courses are not used in this calculation.

Minimum Grade in a Stated Prerequisite Course C (2.00 on a 4.00 scale) in all required courses.

Interview Applicants must complete the interview process. Interviews are scheduled between November and January.

Technical Standards See School of Allied Health Sciences policy.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience While volunteer experience is not required, it is very helpful in making a career choice.

CURRICULUM

Prerequisites

Prior to entering the program, students must complete the following minimum prerequisites. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements.

Written Communications (G)	2 courses
Verbal Communications (G)	3 cr.
Humanities (G)	3 cr.
Social-Behavioral Sciences (G)	6 cr.

Biological Sciences Applicant must complete, by entry date, at least 18 credit hours or the equivalent of biology, to include the following courses:

Introductory Biology (G)
Microbiology (with lab)
Genetics
Human Physiology
Immunology

Chemistry Applicant must complete, by entry date, at least 18 credit hours or the equivalent of chemistry, to include the following courses:

Qualitative (with lab) (G)
Quantitative (with lab)

Organic I (with lab)
Advanced Chemistry Elective
(*Suggested Chemistry Electives:* Organic II, Biochemistry, Analytical Chemistry, or Clinical Chemistry)

Mathematics Applicant must complete, by entry date, the following courses:

Mathematics (Algebra and Trigonometry or higher) (G)
Statistics

Suggested Electives

While not inclusive or mandatory, the following is a list of suggested elective areas: human anatomy, introduction to computers, medical terminology, and medical microbiology.

Suggested Plan of Study

The following is a suggested three-year plan of the prerequisites. Changes in this schedule can be made. Students should check with their advisors to make sure all of the requirements are met.

Freshman

<i>Fall</i>	
Elementary Composition I	3 cr.
Algebra and Trigonometry	3 cr.
Biology—Plants	5 cr.
Principles of Chemistry I (with lab)	5 cr.
Total	16 cr.

Spring

Speech Communications or Interpersonal Communication	3 cr.
Algebra and Trigonometry	3 cr.
Biology—Animals	5 cr.
Principles of Chemistry II (with lab)	5 cr.
Total	16 cr.

Sophomore

<i>Fall</i>	
Organic Chemistry	3 cr.
Organic Chemistry Lab	2 cr.
Human Physiology	5 cr.
Electives	6 cr.
Total	16 cr.

Spring

Microbiology (with lab)	3-4 cr.
Chemistry Elective	3 cr.
Sociology	3 cr.
Humanities Elective	3 cr.
Elective	3 cr.
Total	15-16 cr.

Junior

<i>Fall</i>	
Immunology	3 cr.
Genetics	3 cr.
Electives	6 cr.
Total	12 cr.

Spring

Statistics	3 cr.
Psychology	3 cr.
Electives	6 cr.
Written Communication	3 cr.
Total	15 cr.

Professional Program

Courses in the professional program are sequential and must be taken in the order specified by the program faculty.

Fall

Urine Analysis AHLT C410	2 cr.
Diagnostic Medical Microbiology AHLT C411	4 cr.
Diagnostic Microbiology Laboratory AHLT C421	2 cr.
Serology AHLT C409	1 cr.
Serology Laboratory AHLT C429	1 cr.
Principles of Immunohematology AHLT C408	1 cr.
Techniques in Immunohematology AHLT C428	1 cr.
Hematology AHLT C407	3 cr.
Hematologic Techniques and Procedures AHLT C427	3 cr.
Total	18 cr.

Spring

Clinical Chemistry AHLT C406	4 cr.
Clinical Chemistry Instrumentation and Methodologies AHLT C426	2 cr.
Mycology/Parasitology AHLT C420	2 cr.
Hemostasis AHLT C404	1 cr.
Hemostasis Techniques AHLT C424	1 cr.
General Externship I AHLT C401	2 cr.
General Externship II AHLT C402	2 cr.
Total	14 cr.

Summer Session I

General Externship III AHLT C403	2 cr.
General Externship IV AHLT C405	2 cr.
Topics in Medical Technology AHLT C412	3 cr.
Total	7 cr.

Scholarships A limited number of scholarships are available for accepted students. Contact the program when notified of admission.

Awards Based on academic performance, the program faculty will recommend students for degrees awarded with distinction in accordance with the school's honors criteria. The program recognizes one superior student meeting specific academic performance criteria for the senior/clinical year with the Clinical Laboratory Science Academic Achievement Award.

For further information, contact Professor Linda Kasper, Director of the Clinical Laboratory Science Program, IUPUI, Fesler Hall 409, 1120 South Drive, Indianapolis, IN 46202-5113; (317) 274-1264; Fax: (317) 278-0643; E-mail: lmkasper@iupui.edu.

Courses in Clinical Laboratory Science/Medical Technology

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT C401 General Externship I (2 cr.)
Supervised clinical experience in clinical chemistry. Student rotates through various areas of clinical chemistry.

AHLT C402 General Externship II (2 cr.)
Supervised clinical experience in clinical hematology.

Student rotates through various areas of clinical hematology and coagulation.

AHLT C403 General Externship III (2 cr.)

Supervised clinical experience in clinical microbiology. Student rotates through various areas of microbiology, serology, virology, and parasitology.

AHLT C404 Hemostasis (1 cr.) Hemostasis is a course covering the basic principles of the hemostasis mechanism, including an overview of the laboratory techniques used to evaluate disorders of hemostasis. Emphasizes the major components of hemostasis, interaction of these components, and laboratory evaluation of the major hemostatic disorders.

AHLT C405 General Externship IV (2 cr.)

Supervised clinical experience in blood banking. Student rotates through various areas of modern blood bank, including donor room, transfusion service, antibody identification, component therapy, transplantation therapy, and quality control.

AHLT C406 Clinical Chemistry (4 cr.) Emphasis on metabolic processes that maintain chemical homeostasis in humans, the application of clinical chemistry assay values in evaluating the integrity of these processes, and the correlation of abnormal results with metabolic dysfunction and/or disease states.

AHLT C407 Hematology (3 cr.) Study of functions, maturation, and morphology of blood cells in addition to factors regulating production, metabolism, and kinetics of blood cells. The etiologic and morphologic classifications of blood disorders and diseases; correlations with bone marrows and cytochemistries. Study of cellular contents of other body fluids.

AHLT C408 Principles of Immunohematology (1 cr.)

Emphasis on major blood group antigens and antibodies including their role in transfusion medicine. Current practices in blood donation, apheresis, and quality control are also covered.

AHLT C409 Serology (1 cr.) Lectures describing and comparing all pertinent serologic procedures utilized in diagnosis of rheumatoid arthritis, rubella, streptococcal disease, syphilis, various febrile conditions, fungal infections, parasite infections, and infectious mononucleosis. Selected lectures in viral culturing methods.

AHLT C410 Urine Analysis (2 cr.) Routine urine examination and special tests; laboratory and special lectures.

AHLT C411 Diagnostic Medical Microbiology (4 cr.)

An in-depth study of the clinically significant microorganisms with special emphasis on their clinical significance, cultural and biochemical characteristics, and susceptibility testing patterns.

AHLT C412 Topics in Medical Technology (3 cr.)

Selected topics in medical technology covered by lecture and clinical experience.

AHLT C420 Mycology/Parasitology (2 cr.)

Lecture and laboratory experience covering clinically significant fungi and parasites. Clinical manifestations, collection and procedures for processing of

specimens, and identification techniques will be employed.

AHLT C421 Diagnostic Microbiology Laboratory (2 cr.)

Laboratory experience in the performance of skills and procedures needed for the isolation, identification, and susceptibility testing of clinically significant microorganisms.

AHLT C424 Hemostasis Techniques (1 cr.)

Laboratory course emphasizing the major screening and definitive test for the evaluation of normal and abnormal hemostasis. Tests will include evaluation of platelets, blood vessels, coagulation, and fibrinolysis.

AHLT C426 Clinical Chemistry Instrumentation and Methodologies (2 cr.)

Emphasis is on utilization of basic and intermediate methodologies and instrumentation and their application to assaying a variety of body constituents in a clinical chemistry laboratory.

AHLT C427 Hematologic Techniques and Procedures (3 cr.)

Experience in blood cell identification on stained smears; blood cell, platelet, and reticulocyte counting procedures. Techniques of sedimentation rates, hematocrits, corpuscular indices, hemoglobin determination, and smear preparation staining. Introduction to instrumentation and quality control. Special procedures including bone marrow preparations, flow cytometry, and automated differential counters.

AHLT C428 Techniques in Immunohematology (1 cr.)

Emphasis on laboratory techniques used in blood banks, including blood typing, crossmatching, antibody identification, record keeping, and quality control.

AHLT C429 Serology Laboratory (1 cr.)

Laboratory experience in performance of various testing procedures utilized in serologic diagnosis of infectious diseases and various syndromes.

Techniques include precipitation, flocculation, and various hemagglutination and hemagglutination inhibition techniques, fluorescent antibody testing, and complement fixation.

AHLT C413 Clinical Correlation and Theory (2 cr.)

Lectures in theoretical and clinical areas designed to emphasize the relationship between laboratory tests and disease states.

AHLT C431 Hematology I (2 cr.)

Collecting, staining, and counting blood cells; supervised experience with patients. Experience with specimens of spinal fluid, special determinations (platelets, reticulocytes), and pathologic smears.

AHLT C432 Hematology II (2 cr.)

C431, C432, and C434 offer more experience than C431 allows in the same techniques and offer additional techniques such as sedimentation rate, hematocrit, and the figuring of indices.

AHLT C434 Hematology III (2 cr.)

C431, C432, C433. Continuation of practice and experience in hematologic techniques. Individual projects assigned if student is sufficiently advanced.

AHLT C440 Bacteriology I (2 cr.)

Diagnostic procedures as means to familiarize student with techniques; work on specimens received from hospital patients under supervision; practical

experience with all types of human specimens for bacteriologic and mycologic study.

AHLT C441 Bacteriology II (2 cr.)

* P: C440. Agglutination and precipitin techniques and their special application to agglutination titers and the use of antibiotics. Special assignments to provide experience with organisms infrequently encountered.

AHLT C442 Bacteriology III (2 cr.)

* P: C440, C441. At the end of this course, student should be able to handle usual and somewhat unusual hospital bacteriologic and mycologic problems independently.

AHLT C450 Serology I (2 cr.)

* Introduction to serologic and immunologic principles.

AHLT C451 Serology II (2 cr.)

* P: C450. Additional experience (for students with satisfactory proficiency in C450) in adapting complement fixation, agglutination, hemagglutination, precipitin, and flocculation techniques to diagnostic procedures.

AHLT C471 Clinical Chemistry I (2 cr.)

* Training and experience with more frequently used chemistry tests, e.g., determination of glucose and urea nitrogen; automated and manual methods.

AHLT C472 Clinical Chemistry II (2 cr.)

* P: C471. Limited experience with less frequently performed special procedures.

AHLT C473 Clinical Chemistry III (2 cr.)

* P: C471 and C472. Special equipment utilization; preparation and maintenance of solutions.

AHLT C476 Chemistry IV (2 cr.)

* P: C471, C472. Advanced procedures, method developments, special projects.

AHLT C477 Chemistry V (2 cr.)

* P: C471, C472. Training and experience in special technical and methodological microprocedures.

AHLT C491 Blood Bank I (2 cr.) * Review of serologic principles and technical fundamentals of transfusion practice; comprehensive consideration of blood groups and Rh factors, extensive practice with pretransfusion techniques and safety practices. Other blood types, antigen-antibody relationships with techniques for demonstrating them. Elementary knowledge of genetics is helpful.

AHLT C492 Blood Bank II (2 cr.)

* P: C491. Transfusion service bloods provide problem cases in isoimmunization and sensitization, Rh titration, etc. Responsibility for blood bank operation and application to special transfusion problems placed before the student.

AHLT C493 Blood Bank III (2 cr.)

* P: C491, C492. Required for students working toward special certificate in blood banking. Emphasis on supervision, reference techniques, and such accessory functions as plasma production.

*This medical technology course is offered intermittently and is NOT part of the standard curriculum.

Cytotechnology

An educational program in cytotechnology is located on the Indiana University–Purdue University Indianapolis campus.

Description of the Profession Cytotechnology is a medical laboratory specialty in which microscopic studies of exfoliated, abraded, and aspirated cells from the human body are performed. The cytotechnologist studies cell samples from various body sites to detect cellular changes indicative of cancer. In providing a means of early detection, cytology makes possible the early diagnosis of cancer, thus increasing the chances of a cure. Cytology also serves as a prognostic tool during the course of cancer treatment programs. In addition, it aids in establishing the diagnosis of benign disease processes, such as endocrine disorders, and in detecting some pathogenic microorganisms.

Graduates of the Program The Cytotechnology Program is designed to provide its graduates a comprehensive, fundamental knowledge of clinical cytology that will enable them to function as competent cytotechnologists and will provide a basis for continuing education and professional growth. Graduates will be eligible for the certification examination administered by the Board of Registry leading to certification and registration in cytotechnology with the American Society of Clinical Pathologists. Graduates should be prepared for management, supervisory, and educational responsibilities and should seek ways to contribute to the growing body of knowledge in clinical cytology. The program is designed to prepare graduates to realize their position in the total health care structure and understand their legal, ethical, and moral responsibilities to the employers and communities they serve. Cytotechnologists normally practice in hospitals, laboratories, or research laboratories.

Credential Required to Practice B.S.; CT(ASCP), cytotechnology certification by American Society of Clinical Pathologists.

Licensure Requirements to Practice No license is required to practice in Indiana.

Bachelor of Science in Cytotechnology at Indiana University–Purdue University Indianapolis

Medical Director: Associate Professor Cramer

Program Director: Associate Professor Crabtree

Clinical Assistant Professor: Frain

EDUCATIONAL PROGRAM

Length of the Program Four years, including three years (90 semester hours) of prerequisite course work plus 11 months (37 semester hours) of professional course work.

Structure of the Program The prerequisites may be taken on a part-time basis; the professional program is presented in a full-time, day format only.

Design of the Professional Curriculum An integral relationship between the program and the cytology service laboratory provides students with maximum exposure to a functioning cytology laboratory. The learning process follows a structured, logical sequence for the presentation of essential concepts and skills.

Individual instruction, demonstrations, lectures, and conferences are all utilized as methods of instruction.

Student inquiry and research that will foster greater understanding and possible revision of presented material are encouraged. Opportunity is provided for the student to pursue special interests in the field of cytology.

Location of Clinicals All clinical sites for the program are located within the Indianapolis area.

Additional Cost In addition to regular university fees, the student should expect to pay for program-related expenses. Contact program for current cost sheet.

Opportunity for Students to Work Some students have part-time jobs.

Program Facilities The Cytotechnology Program is offered at the IUPUI campus, which has modern educational and medical facilities. Classroom facilities and faculty offices are located in the Medical Sciences Building B029. The combined student and cytology service laboratory is located on the third floor of Indiana University Hospital. Cytology laboratories located in Wishard Memorial Hospital, Methodist Hospital, and the Veterans Administration Hospital are also utilized.

Accreditation The curriculum of the Cytotechnology Program is fully accredited by the Commission on Accreditation of Allied Health Education Programs.

ADMISSION General Information

As grade point average is a reflection of self-motivation, self-discipline, and the desire to achieve, favorable consideration is given to applicants with high grade point averages. In addition, proficiency must be demonstrated in biological and physical sciences. Candidates for this program should work well with others, have a genuine desire to improve the health of humanity, and be willing to accept the responsibilities of providing health care service. Students accepted into the program must complete the school's and the following program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Cumulative grade point average, biology grade point average, interview.

Class Size Eight each fall semester.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Cytotechnology Program.

Application Deadline December 1 of the year prior to anticipated entry.

Total Number of Prerequisite Credit Hours 90

Distribution of Credits in Specific Areas 25 credit hours in biology.

Limitations of Course Work Biology credits earned more than seven years prior to application

must be updated by taking 3 additional credit hours related to cell biology within a period of time not to exceed 12 months prior to admission. Remedial courses will not fulfill prerequisite hours.

Minimum Cumulative Grade Point Average 2.50 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained.

Minimum Specific Grade Point Average Biology grade point average of 2.50 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale).

Interview All qualified applicants must participate in an interview. Interviews are conducted the second week of January.

Technical Standards See School of Allied Health Sciences policy.

Medical Requirements Students accepted into the professional program must complete a health form, immunization card, chest X-ray, and eye examination before classes begin.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience While volunteer experience is not required, it is very helpful in making a career choice.

CURRICULUM Prerequisites

Prior to entering the program, the student must complete the following minimum prerequisites. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements. Courses taken via correspondence will not be accepted as fulfilling stated prerequisites. No more than 15 semester hours of correspondence course work will be counted toward the degree.

Written Communications (G)	2 courses
Verbal Communications (G)	3 cr.
Humanities (G)	3 cr.
College Algebra (G)	3 cr.
Introductory Biology (G)	4-5 cr.
Social-Behavioral Science (G)	6 cr.
Chemistry I (with lab) for science majors (G)	4-5 cr.
Chemistry—sequential course(s) (for science major beyond above) (4 cr. minimum; 5-8 cr. preferred)	
Human Anatomy-Physiology	5-10 cr.

Advanced Science In addition to the courses listed above, students must also take upper-level biology courses to total a minimum of 25 credit hours including Human Anatomy-Physiology. Recommended courses include microbiology with laboratory, developmental anatomy or embryology with laboratory, genetics with laboratory, molecular or cellular biology, histology, and immunology.

Questions regarding alternative biology courses should be directed to the Cytotechnology Program faculty.

Suggested Electives

It is recommended that the following courses be taken as electives: microbiology, embryology, genetics, animal cell physiology, and immunology. While not inclusive or mandatory, the following is a list of suggested elective areas: medical microbiology, endocrinology, parasitology, virology, cytogenetics, computer science, management, organic chemistry, biochemistry, physics, advanced mathematics, and statistics.

A Suggested Plan of Study

The following is a suggested three-year plan of prerequisites.

Freshman

Fall

Elementary Composition I	3 cr.
Algebra and Trigonometry.	3 cr.
Biology—Plants	5 cr.
Elementary Chemistry I or Principles of Chemistry I	<u>5 cr.</u>
Total	16 cr.

Spring

Speech Communication or Interpersonal Communication	3 cr.
Biology—Animals	5 cr.
Elementary Chemistry II	5 cr.
Electives	<u>3 cr.</u>
Total	16 cr.

Sophomore

Fall

Humanities Elective	3 cr.
Beginning Psychology or higher	3 cr.
Human Anatomy	5 cr.
Electives	<u>6 cr.</u>
Total	17 cr.

Spring

Elementary Composition II or Professional Writing	3 cr.
Biology Elective	3 cr.
Biology Elective	4 cr.
Sociology	<u>3 cr.</u>
Total	13 cr.

Junior

Fall

Human Physiology	5 cr.
Electives	<u>9 cr.</u>
Total	14 cr.

Spring

Biology Elective	3 cr.
Electives	<u>12 cr.</u>
Total	15 cr.

Professional Program

Courses in the professional program are sequential and, therefore, must be taken in the order specified by the program faculty.

Senior

Fall

Gynecologic Cytology, Normal AHLT A412	3 cr.
Gynecologic Cytology, Abnormal AHLT A422	3 cr.
Techniques in Medical Cytology AHLT A462	2 cr.
Seminar in Cytology AHLT A470	2 cr.
Medical Care I AHLT W374	3 cr.
Pulmonary Cytology AHLT A432	<u>3 cr.</u>
Total	16 cr.

Spring

Cytology of Body Fluids AHLT A442	2 cr.
Urinary Tract Cytology AHLT A454	2 cr.
Seminar in Cytology AHLT A470	2 cr.
Medical Care II AHLT W471	3 cr.
Cytology of the Gastrointestinal Tract AHLT A453	2 cr.
Certification Internship AHLT A465	<u>3 cr.</u>
Total	14 cr.

Summer

Investigations in Cytopathology AHLT A490	2 cr.
Cytology of Fine Needle Aspiration AHLT A455	2 cr.
Certification Internship AHLT A465	<u>3 cr.</u>
Total	7 cr.

Scholarships Students interested in scholarship information for the professional year should contact the program office.

Awards Recommendations for degrees awarded with distinction are based upon superior academic performance. The Cytotechnology Program recognizes superior academic and professional conduct with the Liang-Che Tao Outstanding Student Award, which is awarded to a graduating senior.

Graduation Requirements Satisfactory completion of 126 credit hours to include 90 credit hours of prerequisite and general-education courses and 37 credit hours of professional courses. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Professor William Crabtree, Director, Cytotechnology Program, IUPUI, Corporate Square West, 5610 Crawfordville Road, Building 24, Suite 2401, Speedway, IN 46224, (317) 481-6746, E-mail: wcrabtre@iupui.edu or www.pathology.iupui.edu.

Courses in Cytotechnology

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT A412 Gynecologic Cytology, Normal (3 cr.) Detailed microscopic study of normal squamous, endocervical, and endometrial epithelial cells, as well as other non-epithelial cells. Cellular changes seen with microbiological infections, repair, inflammation, degeneration, artifact, and vitamin deficiency status.

AHLT A422 Gynecologic Cytology, Abnormal (3 cr.) Histopathology and cytopathology of lesions of the female genital tract. Detailed studies in the cytologic diagnosis of dysplasia, carcinoma in situ, and invasive cancer of this anatomic area. Differential diagnosis of these lesions includes the severity, site of origin, and grade where appropriate.

AHLT A432 Pulmonary Cytology (3 cr.)

Systematic study of normal, nonmalignant, and malignant cells in the lower respiratory system.

AHLT A442 Cytology of Body Fluids (2 cr.)

Cytology of the eye, central nervous system, synovial membranes, and serosal cavities in fluids associated with nonmalignant and malignant disease processes.

AHLT A453 Cytology of the Gastrointestinal Tract (2 cr.)

Study of cells associated with nonmalignant and malignant diseases of the gastrointestinal tract, including the oral cavity, esophagus, stomach, and small and large intestines.

AHLT A454 Urinary Tract Cytology (2 cr.)

Clinical cytologic study of cells from normal, nonmalignant, and malignant diseases of the urinary tract, to include the urethra, ureters, renal pelvis, bladder, prostate, seminal vesicles, and kidney.

AHLT A455 Cytology of Fine Needle Aspiration (2 cr.)

The study of nonmalignant and malignant cells aspirated from lung, thyroid, salivary glands, breast, liver, prostate, lymph nodes, soft tissue masses, and miscellaneous organs; and the study of fine needle aspiration techniques.

AHLT A462 Techniques in Medical Cytology (2 cr.)

Fixation and staining procedures, preparation of smears and cell blocks from fluids and other exfoliates; use of filter techniques and microscopy.

AHLT A465 Certification Internship (3 cr.)

Includes six months of clinical internships. Students gain further practical experience by working with routine cytology material. Conferences and lectures are used to provide additional experience.

AHLT A470 Seminar in Cytology (2 cr.) Review of current literature pertaining to diagnostic cytology. Reports and discussions by students and faculty.

AHLT A490 Investigations in Cytopathology (1-3 cr.)

P: A470. To provide the student with an experience in the realm of scientific investigation related to cytopathology. The investigation may be conducted as a research project or a literature review.

Emergency Medical Services

Educational Program An educational program in Emergency Medical Technician-Basic and Paramedic Science is located on the Indiana University-Purdue University Indianapolis campus.

Description of the Profession Emergency Medical Technicians (EMTs)—Basic and Paramedic—care for people at the scene of emergencies and transport them to hospitals or other health care institutions. EMTs (basic and paramedic) determine the nature and the extent of victims' medical and trauma-related emergencies and provide

initial emergency care. EMT-Paramedics administer medications, supply intravenous therapy, perform heart monitoring, and provide other life-saving interventions for the victims of acute illness or injury. The EMT-Basic is the entry level of the emergency medical field. The EMT-Paramedic is the advanced practitioner with more independence.

Graduates of the Program The EMT-Basic and the Associate of Science in Paramedic Science degree programs are designed to prepare the EMT to deliver emergency patient care in the prehospital setting. Graduates of both programs primarily provide emergency care in ambulance or fire services at their level of training. Nontraditional areas of employment are available in hospitals and industry.

Credential Required to Practice

EMT-B, Emergency Medical Technician—Basic
EMT-P, Emergency Medical Technician—Paramedic.

Licensure Required to Practice Graduates of either program must successfully challenge a state-administered certification examination prior to credentialing. The certification examination may vary from state to state. The EMT-Basic exam in Indiana is the written and skill exam from the Indiana Public Safety Training Institute. The Paramedic exam in Indiana is the written and skill exam for the National Registry of EMT-Ps.

Emergency Medical Technician-Basic at Indiana University-Purdue University Indianapolis

Medical Director: Professor McGrath

Acting Program Director: Clinical Assistant Professor Bell

Faculty: Clinical Assistant Professor Hallam

Adjunct Faculty: Ervin, Abram, Jerin, Hutchinson

EDUCATIONAL PROGRAM

Length of Program Two semesters, which may be taken in the same or back-to-back semesters. A new course begins each fall semester.

Additional Costs Students are encouraged to purchase their own stethoscope.

ADMISSIONS

General Information Students accepted into the program must complete the school and program admission requirements prior to the first day of classes.

Prerequisites Current credential in CPR.

Proposed Class Size 24 each fall semester.

Technical Standards See School of Allied Health technical standards.

CURRICULUM

Prerequisites Current credential in health care provider-level CPR.

Fall

EMTB-II AHIL E202 3 cr.

Spring

EMTB-I AHIL E201 3 cr.
EMTB-II AHIL E202 3 cr.

Students may take EMTB-II AHIL E202 in either the fall or spring semester.

Courses in Emergency Medical Services

AHIL E201 Emergency Medical Technician

Basic I (3 cr.) This course focuses on well-being of the EMT, basic patient assessment and airway management, and special considerations for the pediatric and geriatric patient.

AHIL E202 Emergency Medical Technician

Basic II (3 cr.) The content of the course covers specific medical emergencies, trauma, and basic pharmacology.

Associate of Science in Paramedic Science at Indiana University-Purdue University Indianapolis

Medical Director: Professor McGrath

Acting Program Director: Clinical Assistant Professor Bell

Faculty: Clinical Assistant Professor Hallam

Adjunct Faculty: Ervin, Abram, Jerin, Hutchinson

EDUCATIONAL PROGRAM

Length of the Program Two years; one year (29 credit hours) of prerequisite work plus 12 months of professional course work.

Structure of the Professional Program The prerequisites may be taken on a part-time basis; the professional program is a full-time program conducted primarily during the day. Clinical activities occur during the evening or on weekends.

Design of the Professional Curriculum The curriculum is a competency-based education program of clinical, didactic, and practical instruction integrated with a field internship in advanced emergency care and services.

This program will serve students seeking careers in emergency medical services. It will serve students entering the program immediately after high school as well as nontraditional students. The majority of students will be nontraditional in that they have begun to pursue a career in the emergency medical services field on a part-time, full-time, or volunteer basis before deciding on a full-time role in emergency medicine as an EMT-P.

The program follows guidelines established by the Committee on Allied Health Education and Accreditation (CAHEA) of the American Medical Association, integrating general-education course work and paramedic science course work leading to an Associate of Science degree. The degree program will build on resources established in the largest and most comprehensive EMT-paramedic program in Indiana, the program at Wishard Hospital. In addition to classroom and laboratory facilities located on the Indiana University-Purdue University Indianapolis campus, area health care facilities involved in the

preparation of EMT-paramedics in this program include Wishard Hospital, Wishard Ambulance Service, Avon Fire Department, and Riley Hospital for Children.

Location of Clinicals The primary locations of the clinical rotations are in Indianapolis. A few rotations may be required in central Indiana.

Additional Costs In addition to regular university fees, students will need to purchase a personal stethoscope, EKG caliper, and uniform for the clinical rotation. Contact the program for a current cost sheet.

Opportunity for Students to Work Some students have part-time jobs while completing the professional course work.

Description of Facilities The program offices are located at Wishard Memorial Hospital. The classroom and laboratory are located in the Wayne Township Training Academy. The primary clinical site is at Wishard Ambulance Service. Other clinical sites may be available in central Indiana.

ADMISSIONS

General Information

Students accepted into the program must complete the school's and the program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Grade point average, personal interview, and EMT experience.

Proposed Class Size 10 each fall semester.

Specific Requirements In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following apply to the paramedic science degree program.

Application Deadline December 1 of the year prior to anticipated entry.

Total Number of Prerequisite Credit Hours 29.

Distribution of Credit Hours in Specific Areas See prerequisites.

Limitations of Course Work Remedial courses will not fulfill prerequisites or count as credit hours toward the degree.

Minimum Cumulative Grade Point Average 2.30 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale).

Interview All qualified applicants must participate in an interview. Interviews are generally conducted in February.

Technical Standards See School of Allied Health Sciences policy.

Medical Requirements Documentation must include a current immunization record that indicates Hepatitis B immunization.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience While volunteer experience is not required, it is helpful in making a career choice.

CURRICULUM

Prerequisites

In addition to the following prerequisites, each applicant must currently be certified in Indiana as an EMT and have a minimum of 20 hours of patient care activity as an EMT in the patient care area of an ambulance. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements. Correspondence courses will not be accepted for any of the prerequisite course work.

Human Anatomy (G)	5 cr.
Human Physiology (G)	5 cr.
English Composition (G)	3 cr.
Speech (G)	3 cr.
Mathematics (G)	4 cr.

Clinical Rotation II AHLT E223	5 cr.
Total	16 cr.

Summer I

Clinical Rotation III AHLT E233	5 cr.
Total	5 cr.

Summer II

Clinical Rotation IV AHLT E243	5 cr.
Total	5 cr.

Scholarships Scholarship opportunities may be available through the Office of Scholarships and Financial Aid.

Awards Based on academic performance, the program faculty will recommend students for degrees awarded with distinction in accordance with the school's honors criteria.

Graduation Requirements Satisfactory completion of all prerequisites and 40 credit hours of professional course work. All course work must be completed in compliance with the program's and school's academic and professional policies. All professional courses (AHLT E courses) must be completed within 24 months after beginning the professional program.

For further information, contact Leon Bell, Acting Director, Paramedic Sciences Program, Ott Building 115, Wishard Hospital, 1001 W. 10th Street, Indianapolis, IN 46202, (317) 630-7614, E-mail: lbell1@iupui.edu.

Courses in Emergency Medical Services

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT E210 Medical Emergencies I (3 cr.) C: E212, E213, E215. This course offers an introduction to the role of the paramedic, radio communications, and general patient assessment and a review of body chemistry. The student learns to assess and manage medical emergencies involving the respiratory and cardiovascular systems.

AHLT E212 Techniques Laboratory I (2 cr.) C: E210, E213, E215. This course provides a hands-on setting in which the student will learn how to present reports, conduct patient assessments, and perform various invasive procedures. Also included is the study of electrocardiograms for rhythm interpretation and the techniques of cardiac arrest management.

AHLT E213 Clinical Rotation I (6 cr.) C: E210, E212, E215. Interaction with patients in the hospital and prehospital settings. Assessment and management of the patient with respiratory and cardiovascular disorders. Perform invasive respiratory and intravenous techniques. Deliver radio and written patient reports.

AHLT E214 Pediatrics (3 cr.) P: E210, E215. C:E220, E221, E222, E223. This course focuses on

the care of the sick or injured child. Also included is growth and development of children and emergency prehospital care of the neonate.

AHLT E215 Emergency Paramedic Pharmacology (3 cr.) C: E210, E212, E213. This course focuses on the use of specific emergency medications during life-threatening situations as well as the use of prescribed medications for specific chronic illnesses.

AHLT E220 Medical Emergencies II (3 cr.) P: E210. C: E214, E221, E222, E223. This course prepares the student to assess and manage medical emergencies involving the endocrine, gastrointestinal, neurological, gynecological, and genitourinary systems. Also included are obstetrics, behavioral, and environmental emergencies.

AHLT E221 Trauma (3 cr.) C: E214, E220, E222, E223. This course focuses on the assessment and management of the trauma victim. Also included are rescue techniques, mass casualty and triage principles, and stress management techniques.

AHLT E222 Techniques Laboratory II (2 cr.) P: E212. C: E214, E220, E221, E223. This course provides a hands-on setting in which students will learn how to manage trauma victims. This course includes PHTLS, PALS, and ACLS certification courses.

AHLT E223 Clinical Rotation II (5 cr.) P: E213. C: E214, E220, E221, E222. This course provides students an opportunity to manage the trauma victim and the obstetrical patient in the hospital and prehospital settings.

AHLT E233 Clinical Rotation III (5 cr.) P: E223. This course provides students an opportunity to interact with patients in the hospital and in urban, rural, and private prehospital settings. Students function as team members with the prehospital team.

AHLT E243 Clinical Rotation IV (5 cr.) P: E233. This course provides a clinical setting in which students practice as paramedics in urban, rural, and private ambulance services. Students will be expected to function as the team leaders of the prehospital team.

AHLT E299 Independent Study in Paramedic Science (1-4 cr.) Special topics, projects, or readings for students enrolled in paramedic science.

Health Information Administration/Health Information Technology

The educational program in health information administration is located on the Indiana University-Purdue University Indianapolis campus. Educational programs, to include certificate programs, in health information technology are located on the following Indiana University campuses: Indiana University Northwest, Indiana University Southeast.

A program is being developed at Indiana University Kokomo. For further information, contact Dr. Robert

Roales, Chairperson of the Division of Allied Health Sciences, (765) 455-9371.

Description of the Profession Health information administrators collect, interpret, and protect health data and determine how data are used. They are managers and information specialists who frequently interact with other members of the medical, financial, and administrative staffs. It is their responsibility to ensure that the information system is protected and driven by accurate, up-to-the-minute information. Some examples of the responsibilities of department managers follow:

- Supervise and train clerical and technical personnel.
- Determine health information policies.
- Design health information collection, storage, and report systems.
- Select computer systems for processing and storing clinical data.
- Serve on standards, improvement, and utilization review committees.
- Act as liaison to other departments.
- Determine departmental budget and resource needs.
- Assure that the medical documentation requirements of various accrediting and governmental agencies are met.

Graduates of the Program While many health information administrators are employed in hospitals, others work for insurance companies, nursing homes, psychiatric facilities, computer companies, physician group practices, drug companies, and government agencies. They also coordinate quality management programs for health care facilities, teach in colleges and universities, and perform consulting activities.

The program graduate is eligible to seek registration as a Registered Health Information Administrator (RHIA) by successfully passing a national qualifying examination offered by the American Health Information Management Association. RHIA registration is an important credential when seeking employment as a health information administrator.

Credentials Required to Practice RHIA, Registered Health Information Administrator.

Licensure Requirements to Practice State licensure does not apply.

Bachelor of Science in Health Information Administration at Indiana University-Purdue University Indianapolis

Acting Program Director: Lecturer Forgey

Assistant Professor: Miller

Adjunct Assistant Professors: Gannaway, Hogan, Michau

Adjunct Lecturers: Clearwater, Hurd, Keith, Leeds, Traves, Walker

Clinical Assistant Professor: Welsh

EDUCATIONAL PROGRAM

Length of the Program Four years; 90 semester hours of prerequisite course work plus one year (40 credit hours) of professional course work. The

professional component of the program is offered as the senior year of a Bachelor of Science undergraduate degree. The program begins in the fall semester and ends with summer session I.

Structure of the Program The prerequisites and the professional program may be taken on a part-time or full-time basis. Professional courses are offered primarily during the day.

Design of the Professional Curriculum The professional courses focus on the management of health information systems and utilization of computerized clinical data. The professional component of the curriculum integrates lecture and laboratory courses with technical and professional practice experiences in hospitals and other health care facilities and related settings. A four-week professional practice experience is arranged for each student in summer session I.

Opportunity for Students to Work Because the class schedule for full-time students in the professional program is rigorous, it is difficult to pursue full-time employment. Some students have part-time or weekend jobs.

Additional Cost In addition to regular university tuition and fees, students should expect to pay program-related expenses. Contact the program for a current cost sheet.

Program Facilities The Health Information Administration Program is offered at the Indiana University Medical Center, which has modern educational and medical facilities. The program offices and most classrooms are located in Coleman Hall. Classes also meet in other Medical Center buildings. Professional practice is provided by health care facilities and agencies in Indiana and surrounding states.

Accreditation The Health Information Administration Program is accredited by the Commission on Accreditation of Allied Health Education Programs.

ADMISSION

General Information

Students accepted into the program must complete the school's and the following program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Grade point average, interview, and school's residency policy.

Class Size 20 each fall semester.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Health Information Administration Program at Indiana University-Purdue University Indianapolis.

Application Deadline November 1 of the year preceding the planned date of entry.

Total Number of Prerequisite Credit Hours 90.

Distribution of Credit Hours in Specific Areas See prerequisites.

Limitations of Course Work Remedial course work will not count toward the 90 required prerequisite credit hours.

Minimum Cumulative Grade Point Average 2.50 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained. Grades for remedial courses are included in the cumulative grade point average.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale) in anatomy, physiology, computer science, statistics, business administration, management and behavior in organizations and personnel or supervisory management.

Interview All qualified applicants will be interviewed prior to admission.

Technical Standards See School of Allied Health Sciences policy.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience While volunteer experience is not required, it is very helpful in making a career choice.

CURRICULUM Prerequisites

Prior to entering the program, students must complete the following minimum prerequisites. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university.

The code "G" indicates a course that meets the school's general-education requirements.

English Composition (G)	3 cr.
Business Communications	3 cr.
Additional Written	
Communication (G)	2-3 cr.
Psychology (G)	3 cr.
Sociology (G)	3 cr.
Speech (G)	3 cr.
Ethics, Biomedical Ethics, or	
Medical Ethics	3 cr.
Humanities (G)	6 cr.
Human Anatomy (with lab) (G)	3-5 cr.
Human Physiology (with lab) (G)	3-5 cr.
Microbiology	3 cr.
Statistics (G)	3 cr.
Introduction to Business	3 cr.
Introduction to Accounting I and II	4-6 cr.
Management and Behavior in	
Organizations	3 cr.
Personnel or Supervisory	
Management	3 cr.
Computer Science/Technology	8 cr.
Business/Commercial Law	3 cr.

Suggested Electives

The following suggestions for electives are made to aid the student in the prerequisite courses and in the professional course work: management information systems, office management, personnel and/or

supervisory management, methods of employee training, health administration, computer sciences, research methods, interpersonal communications, medical terms from Greek and Latin, and foreign languages.

A Suggested Plan of Study

The following is a suggested three-year plan of prerequisites. Variations of this schedule can be made. Students should check with their advisors to make sure all requirements are met.

Freshman

Fall

Elementary Composition I	3 cr.
Humanities Elective	3 cr.
Psychology	3 cr.
Computer Science/Technology	3 cr.
Introduction to Business Administration	<u>3 cr.</u>
Total	15 cr.

Spring

Elementary Composition II or Professional Writing	3 cr.
Sociology	3 cr.
Humanities Elective	3 cr.
Computer Science/Technology	3 cr.
Elective	<u>3 cr.</u>
Total	15 cr.

Sophomore

Fall

Speech	3 cr.
Human Anatomy	5 cr.
Computer Science/Technology	3 cr.
Introduction to Accounting I	<u>1-3 cr.</u>
Total	12-14 cr.

Spring

Microbiology	3-4 cr.
Business Law	3 cr.
Business Communications or Professional Writing	3 cr.
Electives	<u>6-7 cr.</u>
Total	15-17 cr.

Junior

Fall

Human Physiology	5 cr.
Introduction to Accounting II	3 cr.
Personnel Psychology or Supervisory Management	3 cr.
Statistics	3 cr.
Electives	<u>2 cr.</u>
Total	16 cr.

Spring

Ethics	3 cr.
Management and Behavior in Organizations	3 cr.
Electives	<u>9 cr.</u>
Total	15 cr.

Professional Program

Courses in the professional program are sequential and, therefore, must be taken in the order specified

by the program faculty. A minimum grade of C (2.00) is required in each professional course.

Senior

Fall

Medical Record Science I AHLT M411	5 cr.
Directed Practice Experience I AHLT M441	4 cr.
Medical Terminology AHLT M330	3 cr.
Medical Care I AHLT W374	3 cr.
Hospital Organization and Management AHLT M322	2 cr.
Clinical in Medical Record Technology AHLT M357	<u>1 cr.</u>
Total	18 cr.

Spring

Medicine and the Law AHLT M445	2 cr.
Medical Care II AHLT W471	3 cr.
Medical Specialty Lectures AHLT M310	2 cr.
Medical Record Science II AHLT M412	5 cr.
Directed Practice Experience II AHLT M442	<u>6 cr.</u>
Total	18 cr.

Summer Session I

Clinical in Medical Record Administration AHLT M459	<u>4 cr.</u>
Total	4 cr.

Scholarships Four Van Ausdall and Farrar Scholarships are awarded to full-time senior students in the Health Information Administration Program, two in the fall and two in the spring. Awards are predicated on demonstrated financial need and ability to successfully complete the program. Preference is given to students who plan employment in Indiana.

Two Gertrude L. Gunn Memorial Fund Scholarships, established in memory of the founder of the program, are awarded to senior health information administration students. They are based on scholarship and demonstrated financial need.

The Mary L. McKenzie Scholarship is awarded to a senior health information administration student. It is based on scholarship and demonstrated financial need.

The Indiana Health Information Management Association annually awards one scholarship to a senior health information administration student. The criteria for selection include scholastic ability, leadership attributes, professionalism, and potential contribution to the profession.

The Elton T. Ridley Minority Scholarship is awarded to senior health information administration students. The scholarship is awarded to a student who is a member of a class of individuals who are traditionally underrepresented in the program.

The Central Indiana Health Information Management Association awards scholarships to Indiana residents enrolled as senior students in the Health Information Administration Program. They are based on scholarship and membership in the national professional association.

Four Medical Coding Services Scholarships are awarded in memory of Kathy Wilmoth, a graduate of

the Health Information Administration Program. The scholarships are awarded by selection of the Health Information Administration Program Scholarship Committee.

Awards Based on superior performance and in accordance with Indiana University–Purdue University Indianapolis policies, the program faculty will recommend that qualified students be awarded degrees with distinction.

Graduation Requirements Satisfactory completion of 130 credit hours to include 90 credit hours of prerequisite and general-education courses and 40 credit hours of professional courses. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Danita Forgey, Acting Director of the Health Information Administration Program, IUPUI, Coleman Hall 303, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 274-1572, E-mail: dforgey@iupui.edu.

Courses in Health Information Administration

“P” refers to a course prerequisite and “C” to a course that must be taken concurrently.

AHLT M310 Medical Specialty Lectures (2 cr.)

P: Anatomy, Physiology. Lectures on disease and treatment in the areas of medicine, surgery, obstetrics, gynecology, and pediatrics. Selected clinical areas, e.g., pharmacology, radiology, clinical laboratory, pathology, and radiation therapy, will also be included.

AHLT M322 Hospital Organization and Management (2 cr.)

P: junior standing. Orientation to hospital departments; hospital organization; inter- and intra-relationships of hospital and community agencies.

AHLT M330 Medical Terminology (3 cr.)

(2 lectures—2 lab hrs.) P: BIOL N261, P215, and MICR J200 or equivalents. Understanding and use of medical vocabulary; emphasis on speaking, reading, and writing skills.

AHLT M357 Clinical in Medical Record Technology (1 cr.)

Professionally supervised assignments in the technical aspects of health information services in an approved clinical site.

AHLT M411 Medical Record Science I (5 cr.)

History, content, form, numbering, filing, securing, preserving, coding, and indexing medical records; computer applications and statistics; the professional health information administrator and his/her relationship to the health facility, the medical staff, and committees.

AHLT M412 Medical Record Science II (5 cr.)

Principles and practices of health information services administration in the hospital and in specialized health care facilities.

AHLT M441 Directed Practice Experience I (4 cr.)

Supervised laboratory practice with onsite observations of medical record technical and administrative systems. Application of health information management procedures in the clinical setting.

AHLT M442 Directed Practice Experience II (6 cr.) Seminar in health information administration topics. Planning and layout of health information services. Inservice presentations for health information personnel. Computer applications in medical and administrative systems. Individualized instruction in health information practice. Project assignments in the quality improvement area for health information services.

AHLT M445 Medicine and the Law (2 cr.) P: BUS L201 or L203. Presentation of concepts of law in medical and/or health-related areas as applied to the physician, the hospital, health institutions, the medical record, and the individual health worker.

AHLT M459 Clinical in Medical Record Administration (4 cr.) Professionally supervised internship in an approved clinical site for management experiences in health information services.

Educational programs, to include certificate programs, in health information technology are located on the following Indiana University campuses: Indiana University-Purdue University Fort Wayne, Indiana University Northwest, Indiana University Southeast.

A program is being developed at Indiana University Kokomo. For further information, contact Dr. Robert Roales, Chairperson of the Division of Allied Health Sciences, (765) 455-9371.

Health Sciences Education

The educational program in Health Sciences Education is located on the Indiana University-Purdue University Indianapolis campus.

Description of the Profession Health sciences educators plan, implement, and evaluate educational programs designed to prepare persons to practice in the health care delivery system. Additionally, educators may be involved in in-service or continuing professional education.

Graduates of the Program While most health sciences educators are employed in college or university settings, others work in secondary schools, hospitals, vocational-technical institutions, health care facilities, and agencies. They also coordinate in-service and continuing professional education programs for health care facilities, agencies, and associations.

The program graduate is eligible to seek teacher certification as a secondary teacher in health occupations education in the state of Indiana. However, this requires completion of the teacher certification option. This certification is important when seeking employment as a health occupations teacher in the secondary schools.

Credentials Required to Practice Current credentials in health care specialty.

Licensure Requirements to Practice State teaching license, if required. License to practice in credentialled area if required by state.

Bachelor of Science in Health Sciences Education at Indiana University-Purdue University Indianapolis

Program Director: Associate Professor Gable

EDUCATIONAL PROGRAM

Length of the Program A total of 129-130 credit hours is required for the noncertification option while the teacher certification option requires 139 credit hours. The length of the program depends upon the number of credit hours in which the student enrolls per semester to complete the requirements for the degree.

Structure of the Program The program can be completed on either a full-time or part-time basis. Program courses are frequently scheduled during evening hours.

Design of the Professional Curriculum The professional courses focus on the planning, implementation, and evaluation of educational episodes and programs. The professional component of the curriculum integrates knowledge bases of educational philosophy, psychology, methodology, and evaluation with practical experiences in health care sciences educational settings. A 12 credit hour capstone teaching practicum is required.

Opportunity for Students to Work Most students continue their employment as full-time health care practitioners while completing program and degree course work on a part-time basis.

Program Facilities The office for the Health Sciences Education Program offered at the Indiana University Medical Center is located in Coleman Hall. Classes convene in Coleman and other IUPUI buildings. Practicum experiences are completed in schools, hospitals, vocational-technical institutions, colleges, and universities in Indiana.

ADMISSION General Information

Students accepted into the program must complete the university's, school's, and program's admission requirements.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Health Sciences Education Program.

Credentials Applicants must possess current and appropriate credentials representing their health care field.

Work Experience Applicants must show evidence of a minimum of two years (or equivalent) full-time employment in their credentialled health care field.

Application Deadline There is no application deadline. Students may begin course work the semester following their acceptance.

Distribution of Credit Hours in Specific Areas Applicants must have official transcripts identifying educational preparation in their credentialled health care field.

Limitations of Course Work Remedial course work will not count toward the cumulative grade point average at application or as credit toward the degree.

Minimum Cumulative Grade Point Average 2.50 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained.

Interview Qualified applicants will be interviewed prior to admission.

Technical Standards See School of Allied Health Sciences policy.

Medical Requirements Admitted students must be able to present evidence of acceptable health status upon request.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

CURRICULUM Prerequisites

Prior to entering the program, the student must complete an educational program that leads to an appropriate credential and/or licensure in a nationally recognized health care field.

Program Plan of Study

Based on the student's prior educational experiences, the program director and the student formulate an academic program plan to assure that the student obtains a general-education component representing principles identified on the IUPUI campus. These principles will permeate the general-education component of a minimum of 45 credit hours of course work made up of humanities, social and behavioral sciences, and life and physical sciences. If the minimum of 52 credit hours of course work in the health care sciences component of the degree has not been met by the student's prior educational preparation, further course work will be identified and required. The specific health sciences education component of the program represents 32-42 credit hours depending on the program option selected. Courses in the professional component may be sequential and, therefore, must be taken in the order specified by program faculty.

Awards Based on superior performance and in accordance with Indiana University-Purdue University Indianapolis policies, the program faculty will recommend that qualified students be awarded degrees with distinction. Additionally, students may choose to participate in the IUPUI Honors Program and may be qualified for appropriate recognition.

Graduation Requirements Satisfactory completion of 129-142 credit hours (depending on the program option selected) to include 45 credit hours in general education, 52 credit hours in health care preparation, and 32-42 credit hours in health sciences education and a capstone teaching practicum. All course work must be completed in compliance with the program's, school's, and university's academic and professional policies.

For further information, contact Professor Karen E. Gable, Director of the Health Sciences Education Program, School of Allied Health Sciences, IUPUI, Coleman Hall 304, 1140 W.

Michigan Street, Indianapolis, IN 46202-5119, (317) 278-1353, Fax: (317) 274-1795, E-mail: kgable@iupui.edu.

Master of Science in Health Sciences Education at Indiana University–Purdue University Indianapolis

Program Director: Associate Professor Gable

The Master of Science is an advanced degree program for credentialed health care practitioners intending to work in educational and clinical settings. The program curriculum integrates knowledge from educational philosophy, psychology, methodology, and evaluation with existing skills from a specialized health care field.

The program accommodates the needs of students employed full time as health care practitioners and can be completed on either a full-time or part-time basis. Program courses are scheduled during evening hours.

Program Requirements

The graduate program consists of a minimum of 39 credit hours including a required 6 credit hour practicum or thesis. The program curriculum consists of four components: (1) core foundation courses, (2) health sciences education courses, (3) elective courses outside of health sciences education, and (4) completion of a capstone practicum or research-based thesis that includes at least 6 credit hours and two semesters of course work. The program director and the student formulate an academic program plan to assure relevance to the student's long-range professional plans.

ADMISSION

Requirements Students accepted into the program must complete the university's, school's, and program's admission requirements. The minimum admission requirements are as follows.

1. Undergraduate academic achievement with a grade point average of at least a 3.00 on a 4.00 scale.
2. Acceptable performance on the Graduate Record Examination.
3. Three letters of recommendation describing clinical expertise and potential, experience and potential as a health care educator, and potential of academic achievement as a graduate student.
4. Applicants must possess current and appropriate credentials representing their health care field.
5. Applicants should show evidence of a minimum of two years (or equivalent) of full-time employment in their credentialed health care field.

Exceptions to these requirements may be granted by the School of Allied Health Sciences Graduate Studies Committee upon written petition from the applicant and with written recommendation from the coordinator of graduate studies of the Health Sciences Education Program. The petition must include a full statement of conditions justifying the exception. Conditional admission will be for a stated time period and will entail specific conditions to be met to receive regular admission status.

No student will be permitted to work toward a degree without first being admitted to the Master of Science Program.

Prior Course Work Applied Toward Degree Requirements A maximum of 6 graduate credit hours earned at Indiana University prior to admission may be applied toward a degree. Upon the recommendation of the coordinator of graduate studies of the Health Sciences Education Program and with the approval of the School of Allied Health Sciences Graduate Studies Committee, up to 8 credit hours of graduate work at other institutions may be transferred in partial fulfillment of degree requirements. No course may be transferred from another institution unless the course was completed with a grade of B or better within five years prior to matriculation in the Master of Science degree program.

Application Materials An applicant must submit completed application forms to the Office of Research and Graduate Studies. Transcripts from all universities attended must be included. Indiana University graduates should request that the Registrar's Office send unofficial copies of their transcripts. Non-Indiana University graduates must submit at least one official transcript from each university attended.

A nonrefundable application fee is required from all applicants who have never attended Indiana University.

For further information, contact Professor Karen E. Gable, Director and Coordinator of Graduate Studies, Health Sciences Education Program, School of Allied Health Sciences, Coleman 322B, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 278-1353, Fax: (317) 274-1795, E-mail: kgable@iupui.edu.

Courses in Health Sciences Education

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT Z298 Credit by Experience

AHLT Z299 Credit by Credentials

AHLT Z477 Teaching Methodology in Health Sciences Education (3-5 cr.) P: EDUC P255 or equivalent, EDUC H340 or equivalent, EDUC M300 or equivalent if teacher certification is sought. Teaching methods and techniques and choices of material and equipment, with emphasis on evaluation.

AHLT Z486 Student Teaching in Health Sciences Education (12 cr.) P: AHLT Z477, AHLT Z497, two years of experience in health specialty. Each student assumes responsibility under a supervising teacher for teaching in a cooperating secondary, postsecondary, or technical program.

AHLT Z490 Topics in Health Sciences Education (1-3 cr.) Permission required. Special electives offered by the faculty. Prerequisites vary with topic. Honors credit may be available. Students may repeat this course as long as the topic changes each time of enrollment.

AHLT Z497 Principles and Purposes of Health Sciences Education Programs (3 cr.) Historical, legislative, and theoretical foundations of health occupations training and service. Emphasis on roles, responsibilities, and functions of the health occupations/sciences educator.

AHLT Z501 Scientific Inquiry Applied to Health Sciences Education (3 cr.) Analysis and interpretation of data, introduction to theory of advanced statistical techniques, and principles of research design appropriate to didactic, student laboratory, or clinical settings.

AHLT Z507 Evaluation in Health Sciences Education (3 cr.) Principles of construction and interpretation of written achievement tests and other evaluative procedures applied to allied health education in academic, laboratory, and clinical settings.

AHLT Z518 Occupational Education in Health Care Delivery Systems (3 cr.) Historical development of educational and training programs for health sciences/occupations education with emphasis on the educational routes leading to credentialing of a practitioner. Investigation of selected educational trends.

AHLT Z525 Curriculum and Instruction in Health Sciences Education (3 cr.) Principles of curricular construction and design. Content, materials, and methods of instruction in health sciences education.

AHLT Z526 Workshop: Selected Topics in Health Sciences Education (1-3 cr.) Individual and group study dealing with current topics for improving teaching and practice in the health sciences.

AHLT Z530 Clinical Education and Performance Evaluation in Health Sciences Education (3 cr.) Analysis of health care facilities as instructional sites. Emphasizes the educational purpose of clinical experiences, effective use of sites, and legal aspects of clinical educational and clinical performance evaluation.

AHLT Z540 Continuing Education of Health Care Professionals (3 cr.) Orientation to the processes of continuing education as they relate to health care professions, with emphasis on professionalization as a process and its implications for continuing education. Includes exploration of processes of needs determination and instructional episode planning, design, implementation, and evaluation.

AHLT Z590 Individual Study in Health Sciences Education (1-3 cr.) Analysis of select readings; study of health sciences education/allied health sciences research; or critique of research problems, methodology, or theoretical bases with faculty guidance.

AHLT Z594 Administration in Health Sciences Education (3 cr.) Principles of effective organization, supervision, and administration of educational programs in the health sciences. Techniques of program management, budgeting and accounting, and records and reports applied to educational programs in allied health sciences.

AHLT Z595 Practicum in Health Sciences Education (3-6 cr.) Relating educational theory to practice through developmental activities or supervised teaching experience in a health setting. Emphasis upon planning, structuring, and evaluating learning experiences.

AHLT Z599 Thesis in Health Sciences Education (3-6 cr.) Individual investigation in the form of an organized scientific contribution or a comprehensive analysis in a specified area related to health sciences education.

The following graduate courses are integrated into the graduate program.

AHLT W510 Trends and Issues in Allied Health (3 cr.) A seminar course to review pertinent literature and other sources of information as a basis for discussing trends and issues affecting the therapeutic professions and the health care delivery system.

AHLT W520 Research Methodology in Allied Health (3 cr.) P: Graduate-level statistics course. Fundamentals of research methodology, design, techniques, and procedures applicable to research problems in the allied health disciplines. Introduction to computer data analysis.

AHLT W560 Topics (1-3 cr.) Permission required. Prerequisites vary with topic. Exploration of a selected topic related to allied health science disciplines at an advanced level. May be repeated once for credit if topics differ.

AHLT W570 Research Communication in Allied Health Sciences (3 cr.) P: consent of major advisor. Focuses on the conceptualization and writing of research communications in a variety of formats including but not limited to abstracts, peer-reviewed original publications, theses, and grant submissions. Limited to allied health students.

AHLT W799 Master's Thesis Continuation (1 cr.) Used as continuation credits for completing the master's thesis in a format acceptable to the student's advisory committee, leading to successful defense of the final product. May be repeated for credit.

Histotechnology

The nontraditional educational certificate program in histotechnology is based on the Indianapolis campus of Indiana University, with didactic course work delivered via audio teleconferencing to clinical affiliates where the practicum courses are pursued. An Associate of Science in Histotechnology degree is offered to graduates of the certificate program and to histotechnology practitioners who have previously earned certification as a Histologic Technician (HT) or Histotechnologist (HTL) from the Board of Registry of the American Society of Clinical Pathologists.

Description of the Profession A histology technician processes surgical, autopsy, or research

tissue specimens for microscopic examination.

Although most histology technicians work in human health care facilities, many are employed in veterinary, industrial, or research laboratories.

Graduates of the Program After completion of the certificate program, students are eligible to take the national certification exam offered by the Board of Registry of the American Society of Clinical Pathologists. Those who pass the Board of Registry exam may use the initials HT(ASCP) after their name. Students who have completed the program and are certification exam eligible are qualified to practice prior to taking the exam. Although graduates of the associate degree program generally maintain their employment in histopathology laboratories, they often enjoy enhanced opportunity for advancement in the profession.

Associate of Science in Histotechnology at Indiana University-Purdue University Indianapolis

EDUCATIONAL PROGRAM

Length of Program Ten months of certificate level course work, or prior Histologic Technician certification by the Board of Registry of the American Society of Clinical Pathologists, plus additional time for completion of degree requirements. Students should have as their goal to complete the course work in no more than five years from the time they first enroll in the program.

Structure of Program Designed for the employed histologist, the professional course work is offered by distance education. General-education courses may be completed at Indiana University, at other accredited colleges or universities, or through distance education courses.

Design of Professional Curriculum Completion of the certificate-level course work (24 credit hours) is required before pursuit of the associate degree. Alternately, the previously-certified HT(ASCP) may apply for special credit in lieu of completion of the certificate course work. Required general-education courses may be transferred from any accredited college or university, in accordance with university and school policy, or completed through Indiana University's School of Continuing Studies' independent study courses. The Histotechnology Capstone, offered by distance education via audio teleconferencing, will be taken as the student nears completion of the degree.

Program Facilities The Histotechnology Program office is in Coleman Hall at Indiana University-Purdue University Indianapolis.

Additional Costs of the Program In addition to tuition and fees incurred for course registration, the student is responsible for books and/or laboratory fees which may be assessed.

Opportunity to Work The program is designed with the employed histologist in mind; full- or part-time employment is assumed.

ADMISSION

General Information

Students accepted into the program must complete the school's and the following program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program. Enrollment in the associate degree program is not limited, therefore most qualified applicants are admitted. However, in the event that enrollment exceeds program resources, applicants who are residents of Indiana are given preference for admission before out-of-state applicants.

Criteria Used for Selection of Class Successful completion of the certificate-level course work. Alternately, prior certification by the ASCP BOR as an HT or HTL and application for the program's special credit option.

Specific Requirements In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this bulletin, the following admission policies apply to the Associate of Science in Histotechnology degree.

Application Deadline Applications are accepted year-round.

Minimum Academic Requirements High school graduate or equivalent. A minimum grade point average of 2.00 on a 4.00 scale in prerequisite courses is required for admission and must be maintained in all courses throughout the program.

Minimum Cumulative Grade Point Average 2.00 on a 4.00 scale. This requirement is applied at admission and must be maintained. Grades earned in remedial courses are not used to calculate the cumulative grade point average.

Minimum Grade Requirement in Prerequisite Courses C (2.00 on a 4.00 scale).

Technical Standards See School of Allied Health Sciences policy.

Professional Program

All required general-education courses (except for anatomy and chemistry courses) are offered by distance delivery through the School of Continuing Studies at Indiana University; however, courses may be completed elsewhere and transferred to IUPUI. General-education courses may be completed in any sequence. The Histotechnology Capstone course is designed to be taken near the completion of the associate degree.

Fall Semester

Histotechnology I AHLT H101	3 cr.
Histotechnology Practicum I	
AHLT H181	3 cr.
Histotechnology II AHLT H102	3 cr.
Histotechnology Practicum II	
AHLT H182	3 cr.

Spring Semester

Histotechnology III AHLT H103	3 cr.
Histotechnology Practicum III AHLT H183	3 cr.
Histotechnology IV AHLT H104	3 cr.
Histotechnology Practicum IV AHLT H184	3 cr.
Total	24 cr.

Degree Completion Courses The following courses must be satisfactorily completed for the associate degree. The code "G" indicates a course that meets the school's general-education requirements.

Introductory Psychology (G)	3 cr.
Introduction to Sociology (G)	3 cr.
College Pre-Calculus Math (G)	3 cr.
Elementary Composition (G)	3 cr.
Professional Writing Skills (G)	3 cr.
Interpersonal Communication (G)	3 cr.
Introduction to Microcomputers and Computing (G)	3 cr.
Contemporary Biology (G)	3 cr.
Medical Terms from Greek and Latin (G)	2 cr.
Anatomy (G)	3 cr.
Elementary Chemistry (G)	3 cr.
Histotechnology Capstone	6 cr.

Total Professional and Degree Completion Courses 62 cr.

Special Credit Policy Practicing histologists certified by ASCP (HT or HTL) may apply for special credit courses H105 and/or H185, in lieu of taking certificate-level courses, when working toward the associate degree at IUPUI. Special credit courses H105 and H185 are not transferable to other colleges or universities.

Scholarships The American Society for Clinical Pathologists, the National Society for Histotechnology, and several states' histology professional organizations sponsor scholarships for students in histotechnology. Other scholarship and financial aid opportunities may be available through the IUPUI Office of Scholarships and Financial Aid.

Graduation Requirements Satisfactory completion of 62 credit hours to include 32 credit hours of general-education courses and 30 credit hours of professional courses. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Glenda Hoye, Director, Histotechnology Program, IUPUI, Coleman Hall 322, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 278-1599 or 278-1690, Fax: (317) 278-1820, E-mail: ghoye@iupui.edu.

Certificate in Histotechnology at Indiana University-Purdue University Indianapolis

Medical Director: Ulbright

Program Director: Hoye

EDUCATIONAL PROGRAM

Length of the Program 10 months of professional course work beginning with fall

semester. The course of study consists of eight courses (24 credit hours), including four didactic courses and four practicum courses.

Structure of the Program Histotechnology didactic course teleconferences are delivered once per week during the day; practicum course work is done at qualified clinical sites and can be completed at any time approved by the supervisor in the student's laboratory.

Design of Professional Curriculum Students employed in laboratories that qualify as clinical affiliate sites are accepted into the Histotechnology Program to begin the course of study in the fall semester. The curriculum consists of didactic and practicum courses delivered by distance learning to students pursuing on-the-job training in histology laboratories. The 120-minute interactive audio-teleconference lectures are delivered once per week and are accompanied by related assignments that require approximately 3.5 hours per week for completion. The practicum course modules are designed to be accomplished in approximately 16 hours per week; however, as part of on-the-job training, students' full-time technical training at their place of employment is assumed. The Histotechnology Program is designed to:

- Provide educational and clinical experiences in all areas of histologic technology to prepare students for beginning a career as a histologic technician.
- Provide the medical communities nationwide with individuals qualified to effectively carry out the functions of the histotechnology discipline.
- Assist the affiliate site's histology trainers in effectively meeting students' needs in accomplishing the course work.
- Assist students in reaching their goals by providing academic, occupational, and personal guidance.

Program Facilities The Histotechnology Program office is located in Coleman Hall at Indiana University Purdue University—Indianapolis (IUPUI).

"Classrooms" for delivery of teleconferences, as well as practical training sites, are located in institutions throughout the United States that qualify as clinical affiliates where students are located. Clinical affiliate sites may vary from year to year, as training needs change.

Additional Costs of the Program In addition to Indiana resident tuition and course fees, students are required to purchase books. Completion of course requirements may necessitate the purchase of laboratory supplies not ordinarily used at the student's training facility laboratory. Clinical training laboratories may cover some expenses for laboratory supplies and mailing costs for submission of assignments to the program office. Additional training costs to the student and/or laboratory are estimated at \$400.00 per year.

Feasibility of Work for Students Since the program is designed with the on-the-job student in

mind, full-time employment in a histology laboratory is assumed.

Accreditation The Histotechnology Program at Indiana University—Purdue University Indianapolis is fully accredited by the National Accrediting Agency for Clinical Laboratory Sciences (NAACLS), 8410 W. Bryn Mawr Avenue, Chicago, IL 60631; (773) 714-8880.

ADMISSION

Criteria Used for Selection of Class High school graduate (or equivalent), completion of prerequisites, employed in or having appropriate access to a qualified laboratory, and recommended by the laboratory supervisor. Admission to the program is limited by the number of teleconference connections available for delivery of lectures; therefore, completion of the program application does not guarantee admission.

The Histotechnology Program is designed to reach students in all parts of the nation. However, preference for admissions is ranked as follows: (1) students in laboratories with multiple noncertified students; (2) students in laboratories with one noncertified student. Other applicants will be admitted as class capacity allows.

Class Size Class size is limited by the teleconference ports available for delivery of lectures to distance sites. Affiliate sites may accommodate more than one student, depending on the laboratories' capacity for training; the training facility may accommodate students from additional local sites for teleconference purposes. Theoretically, there is no limit to class size.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Histotechnology Program.

Application Deadline May 1 of the year of anticipated entry.

Minimum Academic Requirements High school graduate or equivalent. A minimum grade point average of 2.00 on a 4.00 scale in prerequisite courses is required for admission, and must be maintained in professional courses. See prerequisites.

Minimum Grade Requirement in Prerequisite Courses C (2.00 on a 4.00 scale).

Technical Standards See School of Allied Health Sciences policy.

Volunteer Experience Although volunteer experience is not required of applicants, it is highly recommended that students with no histology laboratory experience spend time in a histology laboratory to assure serious interest before proceeding with application to the program.

Scholarships The American Society for Clinical Pathologists, the National Society for Histotechnology, and several states' histology professional

organizations sponsor scholarships for students in histotechnology. Other scholarship and financial aid opportunities may be available through the Office of Scholarships and Financial Aid.

CURRICULUM

Prerequisites

Students are required to have completed, within 10 years prior to admission, courses in chemistry, biology, and mathematics. High school or college courses with a minimum grade point of 2.00 on a 4.00 scale are acceptable. All prerequisite courses must be completed before admission to the program.

Professional Program

Paired didactic and practicum subject courses must be taken concurrently. Courses are offered and must be completed in sequence. Students register for classes as follows:

Fall

Histotechnology I AHLT H101	3 cr.
Histotechnology Practicum I AHLT H181	3 cr.
Histotechnology II AHLT H102	3 cr.
Histotechnology Practicum II AHLT H182	3 cr.
Total	12 cr.

Spring

Histotechnology III AHLT H103	3 cr.
Histotechnology Practicum III AHLT H183	3 cr.
Histotechnology IV AHLT H104	3 cr.
Histotechnology Practicum IV AHLT H184	3 cr.
Total	12 cr.

Program Completion Requirements Satisfactory completion of 24 credit hours of professional courses. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Glenda Hoye, Director, Histotechnology Program, IUPUI, Coleman Hall 322, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 278-1599 or (317) 278-1690, Fax: (317) 278-1820. E-mail: ghoye@iupui.edu.

Courses in Histotechnology

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT H101 Histotechnology I (3 cr.) C: H181. Teleconference lectures and related written supplemental assignments with focus on specimen receipt and accessioning, laboratory safety, laboratory chemistry and math, instrumentation and fixation.

AHLT H102 Histotechnology II (3 cr.) P: H101; C: H182. Teleconference lectures and related written supplemental assignments with focus on decalcification, tissue processing and embedding, microtomy, general staining theories, and nuclear and cytoplasmic staining.

AHLT H103 Histotechnology III (3 cr.) P: H102; C: H183. Teleconference lectures and related written supplemental assignments with focus on special

staining methodology to include connective tissue, carbohydrates, amyloid, lipids, microorganisms, pigments and minerals.

AHLT H104 Histotechnology IV (3 cr.) P: H103; C: H184. Teleconference lectures and related written supplemental assignments with focus on special staining methodology to include nerve and special cells and enzyme and immunohistochemical staining, with an overview of selected topics.

AHLT H105 Histotechnology Credential Theory (12 cr.) Special credit awarded for ASCP registry status or for histology experience and accomplishment of partial registry exam. Contact program director for further information.

AHLT H181 Histotechnology Practicum I (3 cr.) C: H101. Clinical practicum experience in topics covered in H101, performed under direct supervision of designated registered histologist.

AHLT H182 Histotechnology Practicum II (3 cr.) P: H181; C: H102. Clinical practicum experience in topics covered in H102, performed under direct supervision of designated registered histologist.

AHLT H183 Histotechnology Practicum III (3 cr.) P: H182; C: H103. Clinical practicum experience in topics covered in H103, performed under direct supervision of designated registered histologist.

AHLT H184 Histotechnology Practicum IV (3 cr.) P: H183; C: H104. Clinical practicum experience in topics covered in H104, performed under direct supervision of designated registered histologist.

AHLT H185 Histotechnology Credential Practicum (12 cr.) Special credit awarded for ASCP registry status or for histology experience and accomplishment of partial registry exam. Contact program director for further information.

AHLT H201 Comprehensive Experience in Histotechnology (6 cr.) P: Completion of 50 credit hours toward Associate of Science in Histotechnology, to include completion of the technical writing course requirement. Course emphasizes critical thinking, problem-solving skills and literature searches associated with technical and scholarly writing. Introduces students to management issues, supervision, quality assurance principles, and other issues associated with histotechnology laboratory employment.

Medical Imaging Technology

An educational program in medical imaging technology is located on the Indiana University–Purdue University Indianapolis campus. This program is an advanced program for the registered radiographer.

Description of the Profession The medical imaging technologist in radiologic sciences is a skilled radiographer qualified to provide patient service in interventional procedures, computed tomography, ultrasonography, and magnetic

resonance imaging. These areas represent the most advanced imaging in diagnostic radiology. Effective medical imaging technologists utilize principles of radiation protection as they determine exposure factors and position patients for a variety of examinations. Many of the patient examinations are highly specific, utilizing computers or computerized equipment. Medical imaging technologists are also capable of assisting in the surgical procedures performed during the examination, assessing the technical quality of the image, and providing basic patient care. The technologist must function as a member of the health care team.

Graduates of the Program Graduates receive a Bachelor of Science degree and are eligible to take specialty examinations depending on their major area of concentration.

Credentials Required to Practice RT(R) (ARRT) Registered Radiographer. Advanced qualification credentials are available and may be required by some employers. Currently, depending on the clinical major completed, graduates may be eligible for one or more of the following credentials in addition to the RT(R) (ARRT) required for entry into the program: from the ARRT, cardiovascular-interventional technology (CV), computed tomography (CT), mammography (M), and magnetic resonance imaging (MR), ultrasound (U); from the ARDMS, medical sonography (RDMS) and vascular technology (RVT).

Indiana Certification Requirements to Practice State certification is required to operate an X-ray machine. The state accepts the ARRT Registry for Certification.

Bachelor of Science in Medical Imaging Technology at Indiana University–Purdue University Indianapolis

Medical Director: Professor Cohen

Program Director: Associate Professor Hernandez

Coordinator: Assistant Professor Kehrein

Associate Professor: Long

Assistant Professor: Cox

Adjunct Lecturers: Hinchman, Smith

EDUCATIONAL PROGRAM

This program is designed to prepare qualified medical imaging technologists. The principal aim of the major is to provide students with educational experiences that will permit them to develop the competencies required to function effectively as advanced imaging technologists. Theory and clinical experiences are provided in interventional procedures, computed tomography, magnetic resonance imaging, and ultrasound. Students receive theory in all areas and select one major for clinical experiences.

Length of the Program A new class begins with summer session II each year and continues through the end of the spring semester the next year (10.5 months).

Structure of the Program Students have professional classes or clinical experiences from 8 a.m. to 4 p.m., Monday through Friday. Some evening clinical hours may be required.

Design of the Professional Curriculum The lecture material and clinical experiences are integrated.

Opportunity for Students to Work Generally, employment as a part-time radiographer is available at one of the medical centers or area hospitals.

Additional Cost In addition to regular university tuition and fees, students should expect to pay program-related expenses. Contact the program for a current cost sheet.

Program Facilities The Medical Imaging Technology Program is offered in Indianapolis at the Indiana University Medical Center. The offices, classrooms, and laboratory facilities are located on the first floor of the Clinical Building. Clinical education sites are in the Indianapolis metropolitan area. Students are responsible for their transportation to these sites.

ADMISSION

General Information

Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Previous academic record, evidence of registration by the American Registry of Radiologic Technologists (ARRT), an essay, recommendation letters, and availability of major clinical concentration.

Class Size Based on the availability of clinical education sites for each major area.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this bulletin, the following admission policies apply to the Medical Imaging Technology Program.

Application Deadline November 15 of the year prior to anticipated entry.

Total Number of Prerequisite Credit Hours 82.

Minimum Cumulative Grade Point Average 2.50 on a 4.00 scale at the time of application. All college courses taken, including remedial courses and courses that do not meet prerequisite requirements, are considered when calculating the minimum cumulative grade point average.

Minimum Specific Grade Point Average Cumulative 2.30 on a 4.00 scale for all life and physical science course work. All college life and physical sciences courses taken, including remedial courses and courses that do not meet prerequisite requirements, are considered when calculating the minimum life and physical science grade point average. 2.70 for all radiologic technology courses and 3.00 for clinically related courses.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale).

Interview An interview is not required.

Technical Standards See School of Allied Health Sciences policy.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Experience While radiography experience beyond the initial radiography program is not required, it is highly recommended.

Awards The program faculty will recommend to the university graduating students with superior academic performance for degrees awarded with distinction. Also, students with outstanding academic and clinical achievement during their professional program may be recognized by the program at the time of graduation.

CURRICULUM

Prerequisites

Prior to entering the program, students must complete the following minimum prerequisites. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Equivalent prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements.

General-Education Areas

Verbal Communication (G)	2-3 cr.
Written Communication (G)	two courses
(The second writing course should focus on writing a research paper.)	
Humanities Elective (G)	3 cr.
Social/Behavioral Science Elective (G)	3 cr.
Introductory Psychology (G)	3 cr.
College Algebra, Trigonometry, or Calculus (G)	3-5 cr.
General Physics (G)	4-5 cr.
Elementary Chemistry (with lab) (G)	4-5 cr.
Anatomy and Physiology I (with lab)* (G)	4-5 cr.
Anatomy and Physiology II (with lab)* (G)	4-5 cr.
*Individual Anatomy and Physiology courses with labs equaling 8-10 credits may be substituted.	
Introduction to Computers	2-3 cr.
Preprofessional Radiography Course Work	40 cr.

Radiography

This area is complete for applicants who have earned 40 college credit hours in radiography.

Students who received their radiography education without transferable university credit and who have full credentials in radiography (ARRT) may be awarded credit for their credentials and experience and/or may petition to test out of professional radiography courses. The Special Credit Policy is available upon request. Each applicant will be evaluated individually.

Students must select additional courses in radiography or in areas that support, complement, or extend their radiography background if they lack 40 semester hours of earned college credit in radiography.

Suggested Electives (To bring total credit hours up to 82). The number of elective credit hours will differ

for each student to complete a total of 82 credit hours of prerequisite course work. Additional electives may be required, before or during the professional program, to complete a minimum of 122 credit hours of academic work for graduation.

Professional Program

Courses in the professional program are sequential and, therefore, must be taken in the order specified by the program faculty.

Senior

Summer Session II

Sectional Imaging Anatomy AHLT R404	2 cr.
Seminar: Medical Imaging AHLT R407	1 cr.
Topics: Introduction to MIT Project I AHLT R408	1 cr.
Total	4 cr.

Fall

Medical Care I AHLT W374	3 cr.
Topics: Introduction to MIT Project II AHLT R408	1 cr.
Medical Imaging Theory AHLT R451	3 cr.
Clinical Practicum: A choice of 6 credit hours from one or a combination of the following courses; some restrictions apply according to major.	
Interventional Imaging AHLT R481	1-6 cr.
Computed Tomography AHLT R482	1-6 cr.
Magnetic Resonance Imaging AHLT R483	1-6 cr.
Ultrasound Imaging AHLT R484	1-6 cr.
Total	13 cr.

Spring

Medical Care II AHLT W471	3 cr.
Senior Project in Medical Imaging Technology AHLT R409	3 cr.
Medical Imaging Applications AHLT R452	3 cr.
Clinical Practicum: A choice of 6 credit hours from one or a combination of the following courses; some restrictions apply according to major.	
Interventional Imaging AHLT R481	1-6 cr.
Computed Tomography AHLT R482	1-6 cr.
Magnetic Resonance Imaging AHLT R483	1-6 cr.
Ultrasound Imaging AHLT R484	1-6 cr.
Total	15 cr.

Graduation Requirements Satisfactory completion of 122 credit hours. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Professor Suetta Kehrein, Coordinator, Medical Imaging Technology Program, IUPUI, Clinical Building 120, 541 N. Clinical Drive, Indianapolis, IN 46202-5111, (317) 274-3803, Fax: (317) 274-4074. E-mail: skehrein@iupui.edu.

Courses in Medical Imaging Technology

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT R404 Sectional Imaging Anatomy (2 cr.)

An in-depth study of sectional anatomy pertinent to ultrasound, computed tomography, and magnetic resonance imaging. Standard transverse, parasagittal, and coronal planes are included, utilizing images from all three imaging modalities. A discussion of technique, artifact, and pathology-related alterations of cross-sectional anatomic appearances is included.

AHLT R407 Seminar (1-5 cr.) Individual and group study focusing upon advances in medical imaging.

AHLT R408 Introduction to MIT Projects I and II (0.5-4 cr.) Study of selected topics in radiologic sciences. May be repeated once for credit if topics differ.

AHLT R409 Senior Project in Medical Imaging Technology (3 cr.) Independent readings and research on a selected medical imaging topic. A paper in publishable form must be written as part of the project.

AHLT R451 Medical Imaging Theory (3 cr.) P: Math, Physics, AHLT R404. Lectures on the physical principles of advanced imaging modalities including computed tomography, magnetic resonance, ultrasound, and interventional imaging. Image evaluation of normal studies is stressed. Student presentations and journal reports are required.

AHLT R452 Medical Imaging Applications (3 cr.) P: AHLT R451. Lectures on and evaluations of the computed tomographic, magnetic resonance, ultrasound, and interventional images as applied to pathologic conditions of specific body areas. Student presentations and journal reports are required.

AHLT R481 Clinical Practicum: Interventional Imaging (.5-8 cr.) P: AHLT R404, RT(R). Clinical experience in the performance of interventional imaging studies.

AHLT R482 Clinical Practicum: Computed Tomography (.5-8 cr.) P: AHLT R404, RT(R). Clinical experience in the performance of computed tomographic imaging studies.

AHLT R483 Clinical Practicum: Magnetic Resonance Imaging (.5-8 cr.) P: AHLT R404. Clinical experience in the performance of magnetic resonance imaging studies.

AHLT R484 Clinical Practicum: Ultrasound Imaging (.5-8 cr.) P: AHLT R404. Clinical experience in the performance of ultrasound imaging studies.

AHLT R485 Clinical Practicum (.5-8 cr.) P: AHLT R404. Clinical experience in medical imaging studies.

Specific area of experience will be determined by availability of instruction.

Nuclear Medicine Technology

An educational program in nuclear medicine technology is located on the Indiana University-Purdue University Indianapolis campus.

Description of the Profession The graduate nuclear medicine technologist is qualified to provide patient diagnostic and therapeutic services using ionizing radiation in the form of gamma rays, X rays, and beta rays. These radiations emanate from radioactive materials. Nuclear medicine technologists perform patient organ imaging procedures, radioactive analysis of biological specimens (blood, urine), and some therapeutic applications of radioactive materials. Effective nuclear medicine technologists utilize principles of radiation protection as they prepare and administer radioactive materials for a variety of examinations. They are capable of performing quality control procedures on the instrumentation and radioactive materials. Nuclear medicine technologists also assist physicians in clinical procedures, give intravenous injections, draw blood, assess the technical quality of the studies, and provide basic patient care. The nuclear medicine technologist must function as a member of the health care team.

Graduates of the Program Graduates receive a Bachelor of Science degree and are eligible to take the certification examination of the American Registry of Radiologic Technologists (ARRT) and the Nuclear Medicine Technology Certification Board (NMTCB) to become certified as a nuclear medicine technologist, R.T.(N) or C.N.M.T.

Credentials Required to Practice

R.T.(N) (ARRT), Registered Nuclear Medicine Technologist or C.N.M.T. (NMTCB), Certified Nuclear Medicine Technologist.

Bachelor of Science in Nuclear Medicine Technology at Indiana University-Purdue University Indianapolis

Medical Advisor: Professor Schauwecker

Program Director: Associate Professor Hernandez

Educational Program Director: Associate Professor Kosegi

Associate Professors: English, Mock, Mulholland

Assistant Professors: Richard, Anger

Instructor: Lewis

Lecturers: Hall, Kuster, Shiplett, Fain

EDUCATIONAL PROGRAM

Length of the Program A new class begins summer session II each year and continues for 22 months.

Structure of the Professional Program The curriculum is designed for persons with no previous experience in nuclear medicine, although experienced technologists may apply for admission. During the junior year, students have classes on Monday, Wednesday, and Friday plus eight hours of

clinical practicum on each Tuesday and Thursday and four hours on Friday mornings. Senior students have eight hours of clinical practicum on each Monday, Wednesday, and Friday plus classes on Tuesday and Thursday. Clinical practicums may also require some evening and off-hour assignments.

Design of the Professional Curriculum This degree is designed to prepare qualified nuclear medicine technologists. The principal aim of the degree is to provide students with educational experiences that will permit them to develop the competencies required to function effectively as nuclear medicine technologists. The curriculum integrates theory and clinical experience.

Opportunity for Students to Work Some part-time employment may be available in the radiology departments at the Indiana University Medical Center. There are no restrictions on the number of hours a student may work during the program as long as work does not interfere with program requirements. However, the student must recognize that the professional curriculum requires approximately 25 to 35 clock hours per week of on-campus participation in classroom, laboratory, and clinical course work. Study time and completion of general education courses must also be considered. While most of the professional course activities are scheduled during daytime hours Monday through Friday, there are some clinical experiences that may require student participation during evenings or other off hours. Please contact the program for more information.

Additional Cost In addition to regular university tuition and fees and textbook expenses, students should expect to pay program-related expenses. Contact the program for a current cost sheet.

Program Facilities The nuclear medicine technology program is offered in Indianapolis at the Indiana University Medical Center. The offices, classrooms, and library are located on the first floor of the Clinical Building. Students obtain clinical experience in the nuclear medicine areas of radiology departments located in University, Riley, Wishard, and Veterans Administration hospitals. Other clinical education sites in the Indianapolis area may also be used.

Accreditation The bachelor's degree in nuclear medicine technology is fully accredited by the Joint Review Committee on Educational Programs in Nuclear Medicine Technology.

ADMISSION

General Information

Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Class Size Seven students each summer session II (late June).

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following apply to the Nuclear Medicine Technology Program.

Application Deadline November 15 of the year prior to anticipated entry.

Total Number of Prerequisite Credit Hours
60.**Minimum Cumulative Grade Point Average**

2.50 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained. The grades from all college courses taken, including remedial courses and courses that do not meet prerequisite requirements, are considered when calculating the minimum cumulative grade point average.

Minimum Specific Grade Point Average 2.50

on a 4.00 scale for all life and physical science course work. This requirement is applied at the time of program application and must be maintained. The grades from all college life and physical sciences courses taken, including remedial courses and courses that do not meet prerequisite requirements, are considered when calculating the minimum specific grade point average.

Minimum Grade Requirement in a Stated

Prerequisite Course C (2.00 on a 4.00 scale).

Interview Qualified applicants must participate in an interview. Interviews are conducted in January or early February.

Technical Standards See School of Allied Health Sciences policy.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience Volunteer experience is not required. However, applicants must observe in a nuclear medicine facility before an interview will be scheduled.

Awards The faculty will recommend to the university graduating students with superior academic performance for degrees awarded with distinction. Also, students with outstanding academic and clinical achievement during their professional program may be recognized by the program at the time of graduation.

CURRICULUM**Prerequisites**

Prior to entering the program, students must complete the following minimum prerequisites. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements.

Written Communications (2 courses) (G)	4-6 cr.
(The second writing course should focus on writing a research paper.)	
Verbal Communications (G)	2-3 cr.
Introductory Psychology (G)	3 cr.
Elementary Chemistry I (with lab) (G)	4-5 cr.
Elementary Chemistry II (with lab) (G)	4-5 cr.
Physics (G)	4-5 cr.
Anatomy and Physiology I (with lab)*	4-5 cr.
Anatomy and Physiology II (with lab)*	4-5 cr.
*Individual Anatomy and Physiology courses with labs equaling 8-10 credits may be substituted.	

College Algebra and Trigonometry or Algebra and Survey of Calculus (G)	5-6 cr.
Introduction to Computers	1-3 cr.
Science Electives	6 cr.
*Electives (to complete 60 credit hours selected from the following graduation requirements)	
Humanities elective (G)	3 cr.
Social/Behavioral Science electives (G)	6 cr.
General electives	9 cr.
Total	60 cr.

A Suggested Plan of Study**Freshman****Fall**

English Composition	3 cr.
Verbal Communications course	3 cr.
Algebra	3 cr.
Chemistry I (with lab)	5 cr.
Total	14 cr.

Spring

English Composition	3 cr.
Psychology	3 cr.
Trigonometry or Brief Survey of Calculus	3 cr.
Chemistry II (with lab)	5 cr.
Total	14 cr.

Sophomore**Fall**

Anatomy & Physiology I	4 cr.
Introduction to Computers	3 cr.
Science elective	3 cr.
General electives	6 cr.
Total	16 cr.

Spring

General Physics	5 cr.
Anatomy and Physiology II	4 cr.
Social/Behavioral Science elective	3 cr.
Humanities elective	3 cr.
Total	15 cr.

Professional Program

Courses in the professional program are sequential and, therefore, must be taken in the order specified by the program faculty.

The 63 professional credits listed below are obtained within a 22-month period and fulfill eligibility requirements for the registry examination in nuclear medicine technology. Some electives may be taken (as shown below) during the 22-month program.

Junior**Summer Session II**

Patient Care in Radiologic Sciences AHLT R104	2 cr.
Medical Terminology AHLT R185	1 cr.
Seminar: Professional Values AHLT R207	1 cr.
Radiation Protection in Nuclear Medicine AHLT R437	1 cr.
Total	5 cr.

Fall

Projects in Nuclear Medicine Technology AHLT R410	1 cr.
Physics and Instrumentation of Nuclear Medicine I AHLT R412	2 cr.
Applications of Radionuclides I AHLT R432	3 cr.
Clinical Nuclear Medicine Practicum I AHLT R445	6 cr.
Elective (if needed for graduation)	3 cr.
Total	15 cr.

Spring

Topics: Medical Assisting in Radiology AHLT R208	2 cr.
Seminar: Nuclear Medicine In-Service I AHLT R407	1 cr.
Projects in Nuclear Medicine Technology AHLT R410	1 cr.
Physics and Instrumentation of Nuclear Medicine II AHLT R417	2 cr.
Radionuclide Measurement AHLT R422	2 cr.
Clinical Nuclear Medicine Practicum I AHLT R445	4 cr.
Elective (if needed for graduation)	3 cr.
Total	15 cr.

Senior**Summer Session I**

Radiobiology in Nuclear Medicine AHLT R440	1 cr.
Clinical Nuclear Medicine Practicum II AHLT R446	2 cr.
Elective (if needed for graduation)	3 cr.
Total	6 cr.

Summer Session II

Topics: Nuclear Medicine Management AHLT R408	1 cr.
Clinical Nuclear Medicine Practicum II AHLT R446	2 cr.
Elective (if needed for graduation)	3 cr.
Total	6 cr.

Fall

Medical Care I AHLT W374	3 cr.
Seminar: Nuclear Medicine In-Service II AHLT R407	1 cr.
Radiopharmaceuticals AHLT R427	2 cr.
Clinical Nuclear Medicine Practicum III AHLT R447	6 cr.
Total	12 cr.

Spring

Medical Care II AHLT W471	3 cr.
Seminar: Nuclear Medicine In-Service III AHLT R407	1 cr.
Projects in Nuclear Medicine Technology AHLT R410	3 cr.
In Vivo and In Vitro Studies AHLT R430	1 cr.
Applications of Radionuclides II AHLT R433	2 cr.
Clinical Nuclear Medicine Practicum III AHLT R447	6 cr.
Total	16 cr.

Graduation Requirements Satisfactory completion of a minimum of 122 credit hours. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Professor Sarah Baker, Nuclear Medicine Admissions Advisor, or Judy Kosegi, Educational Director, Nuclear Medicine Technology Program, IUPUI, Clinical Building 120, 541 Clinical Drive, Indianapolis, IN 46202-5111, (317) 274-3802, Fax: (317) 274-4074, E-mail: ssbaker2@iupui.edu or jkosegi@iupui.edu.

Courses in Nuclear Medicine Technology

The AHLT courses with R100- or R200-level numbers are found in the radiography section of this bulletin.

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT R408 Topics in Radiologic Sciences (5-4 cr.) Study of selected topics in radiologic sciences. May be repeated once for credit if topics differ.

AHLT R410 Project in Nuclear Medicine Technology (1-3 cr.) Independent readings and research on a selected topic in nuclear medicine technology. A paper in publishable form must be written as part of the project.

AHLT R412 Physics and Instrumentation of Nuclear Medicine I (2 cr.) An introduction to the physical disciplines of nuclear medicine. Lectures and laboratory exercises on radiation physics, computer programming, and the statistics of radiation measurements.

AHLT R417 Physics and Instrumentation of Nuclear Medicine II (2 cr.) A continuation of AHLT R412. Lectures and exercises on electronic principles, the operational fundamentals of radiation counting devices and imaging systems, and quality assurance programs.

AHLT R422 Radionuclide Measurements (2 cr.) Lectures and laboratory sessions emphasizing the clinical utilization of nuclear counting and imaging systems and principles of quantitative measurements.

AHLT R427 Radiopharmaceuticals (2 cr.) Lectures and laboratories concerning properties and preparation of radiopharmaceuticals.

AHLT R430 In Vivo and In Vitro Studies (1 cr.) This course will introduce the principles of tracer methodology and apply that methodology to the measurement of dynamic and steady state systems within the body. Special emphasis will be placed on measuring physiological and hematological functions.

AHLT R432 Application of Radionuclides I (3 cr.) Lectures covering the clinical aspects of nuclear medicine procedures, including the physiological and technical procedures for each type of study.

AHLT R433 Application of Radionuclides II (2 cr.) P: AHLT R432. Lectures covering the clinical aspects of nuclear medicine procedures. Includes pathology related to procedures and the role

technologists play in helping physicians gather information for accurate interpretations.

AHLT R437 Radiation Protection in Nuclear Medicine (1 cr.) Lectures on the principles of radiation protection in nuclear medicine.

AHLT R440 Radiobiology in Nuclear Medicine (1 cr.) Lectures on the biological effects of ionizing radiation.

AHLT R445 Clinical Nuclear Medicine Practicum I (4-8 cr.) Practical clinical application of nuclear medicine theory.

AHLT R446 Clinical Nuclear Medicine Practicum II (4-8 cr.) Continuation of AHLT R445.

AHLT R447 Clinical Nuclear Medicine Practicum III (2-8 cr.) Continuation of AHLT R446.

Nutrition and Dietetics

The Nutrition and Dietetics Program offers three post-baccalaureate programs: two certificate programs—the Dietetic Internship and the Pediatric Nutrition Fellowship—and the master of science program in nutrition and dietetics. The three programs require separate enrollments; the internship may not be completed concurrently with the master's program or Pediatric Nutrition Fellowship. However, the Pediatric Nutrition Fellowship may be completed as part of the master's degree in nutrition and dietetics. In addition to graduate course work, the Nutrition and Dietetics Program also offers two undergraduate nutrition classes.

Program Director: Clinical Professor O'Palka
Professors Emeriti: Hopp, Irwin, Van Ness, Wilson
Professors: Brady, Rickard
Associate Professor: Ernst
Clinical Associate Professor: Blackburn

Dietetic Internship at Indiana University-Purdue University Indianapolis

The Dietetic Internship Program is accredited by the American Dietetic Association and accepts 16 interns annually. Admission requirements for the internship include a bachelor's degree from an accredited college or university, a minimum grade point average of 2.90 (4.0 scale) overall, completion of current academic requirements of the American Dietetic Association (must be verified by approved undergraduate dietetic program), and work experience. For further information, contact the Nutrition and Dietetics Program.

Master of Science in Medical Sciences (Nutrition and Dietetics) at Indiana University-Purdue University Indianapolis

EDUCATIONAL PROGRAM

Location of the Program The program is located at the Indiana University Medical Center in Indianapolis and utilizes facilities throughout central Indiana.

Description and Purpose of the Program This graduate program, offered through Indiana University Graduate School, is designed for health care

professionals who have already earned a baccalaureate degree in nutrition or dietetics. The objective of this program is to provide an opportunity for health care professionals and nutrition students to deepen their knowledge base, improve critical thinking skills, and develop research skills in nutrition and dietetics.

The curriculum is designed for the student with a special interest in health promotion or in the nutritional requirements and provision of medical nutrition therapy in acute and chronic conditions such as diabetes or in the care of special populations such as preterm infants. Program affiliations throughout central Indiana provide the opportunity for the student to work with patient populations in both outpatient and inpatient settings as well as with the general public.

This curriculum will not prepare the student to sit for the Registration Examination for Dietitians. Concurrent enrollment in the Master of Science in Nutrition and Dietetics and the Pediatric Nutrition Fellowship is possible. However, concurrent enrollment in the Master of Science in Nutrition and Dietetics and the Dietetic Internship Program is not permitted.

Course Requirements Students will be required to take graduate-level courses in biochemistry, statistics or biostatistics, and physiology. Other courses and clinical study (open only to students who are registered dietitians) may be selected from the graduate-level offerings of the Nutrition and Dietetics Program and from other schools and departments on the Indiana University-Purdue University Indianapolis campus.

Minimum Requirements for the Degree To earn the M.S. degree, a minimum of 37 credit hours (43 if the Pediatric Nutrition Fellowship is included) at the graduate level are required. Candidates for this degree may petition to apply up to 8 credit hours of graduate work from other institutions or programs to this degree. A thesis is required.

ADMISSION

General Information

Admission requirements The School of Allied Health Sciences offers the M.S. in Nutrition and Dietetics through the University Graduate School. Students accepted into the program must meet all the requirements of both the University Graduate School and the School of Allied Health Sciences. The minimum admission requirements are: a bachelor's degree from an accredited institution; a current health care practice credential or proof of completion of undergraduate major in nutrition or dietetics; cumulative undergraduate GPA of at least 3.0 on a 4.0 scale; an appropriate level of achievement on the Graduate Record Examination; and for international students, a suitable level of achievement on the TOEFL Examination.

Applicants must submit the following: 1) official undergraduate transcripts; 2) a 300- to 500-word personal statement of academic and professional goals; 3) three letters of recommendation from those familiar with the applicant's academic and professional performance; 4) official scores of the Graduate Record Examination (GRE) and the GRE Writing Assessment Exam, taken within the last five

years; 5) for international students, official TOEFL scores.

Applications and further information may be obtained by writing to the following address:

Office of Research and Graduate Studies
School of Allied Health Sciences
Indiana University–Purdue University Indianapolis
1140 W. Michigan Street
Indianapolis, IN 46202-5119

Grade Requirement A minimum of a 3.00 (B) grade point average in graduate work is required for continuance in graduate study. When the grade point average of a student falls below 3.00 or the student is not making sufficient progress toward the degree, the Allied Health Graduate Studies Committee will review the student's record and recommend to the dean that the student be placed on probation. Unless the student achieves a 3.00 grade point average, or begins making satisfactory progress, in the next semester of enrollment, the student will not ordinarily be allowed to continue in the graduate program. For more information about academic regulations, contact the program director.

For further information, contact Professor Jacquelynn O'Palka, Ph.D., R.D., Program Director, Nutrition and Dietetics, IUPUI, Ball Residence Hall 112, 1226 West Michigan Street, Indianapolis, IN 46202-5119, (317) 278-0933, E-mail: jopalka@iupui.edu.

The Pediatric Nutrition Fellowship

The Pediatric Nutrition Fellowship is part of the "Leadership Education Excellence in Pediatric Nutrition" Program, formerly known as the "Neonatal Nutrition Training Program," located at the James Whitcomb Riley Hospital for Children in Indianapolis, IN. The Nutrition and Dietetics Program and the Department of Pediatrics within the Indiana University School of Medicine jointly sponsor this program. The program has been supported by the Bureau of Maternal and Child Health and Resources Development, Health and Human Services since 1978.

The Pediatric Nutrition Fellowship for dietitians/nutritionists is four to six months in length. The fellowship consists of didactic (10 hours/week) and clinical experiences to provide or enhance the pediatric nutrition knowledge, clinical expertise, and leadership skills of the dietitian/nutritionist. The four-month fellowship provides a core of pediatric nutrition competencies related to infants, children and adolescents with special health needs. During the last two months of the six-month fellowship, fellows may specialize in one of three areas: (1) care of newborns in intensive care units and following discharge, (2) nutritional care of children with special health needs, and (3) nutritional care of adolescents including those with type 1 diabetes. Core training occurs at Riley Hospital, community public health clinics, and the Indiana State Board of Health central office in Indianapolis. The fellowship program accepts four to six dietitians/nutritionists annually. Although helpful, a master's degree is not required for fellowship eligibility. The Pediatric Nutrition Fellowship Program begins in August.

For further information, contact the Pediatric Nutrition Fellowship Program, Nutrition and Dietetics Program, IUPUI, Ball Residence Hall 112, 1226 West Michigan Street, Indianapolis, IN 46202-5180, (317) 278-0933, Fax: (317) 278-3940, E-mail: krickard@iupui.edu.

Courses in Nutrition and Dietetics

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT N265 Nutrition and Exercise (3 cr.) This course will allow the student to apply the principles of physiology, chemistry, and biology to describe the role of nutrition and exercise in the human body and to explore the interrelated and protective role of nutrition and exercise in wellness, health promotion, and disease prevention.

AHLT N270 Nutritional Sciences and Health (3 cr.) This course will allow the student to apply the principles of physiology, chemistry, and molecular biology to describe the role of nutrients within the body. Recommendations and guidelines to make personal food choices and create eating plans to support good health will be explored.

AHLT N544 Diet Therapy (2 cr.) P: Dietetic internship. Study of physiological and biochemical alterations that occur during disease states and their effect on nutritional requirements and methods of providing nutrients.

AHLT N546 Medical Lectures (cr. arr.) Lectures by professional staff and invited guests in the health care field.

AHLT N550 Human Nutritional Pathophysiology I (3 cr.) P: B500, F503 or BIOL 557, or consent of instructor. An integrated study of the biochemical and physiological aspects of human macronutrient metabolism with special reference to fundamental nutrition issues including determination of nutrient quality, nutrient interrelationships, and energy balance in the normal human adult and in common clinical problems.

AHLT N552 Human Nutritional Pathophysiology II (3 cr.) P: AHLT N550 or consent of instructor. A continuation of AHLT N550. An integrated study of the biochemical and physiological aspects of human fluid and micronutrient metabolism with special reference to nutritional pathophysiology involving fluid and micronutrient metabolism.

AHLT N560 Review of Nutrition Standards (3 cr.) Review of various nutrition standards including those of the United States, the United Kingdom, Canada, and the World Health Organization. Course includes a review of all cited literature for one of the nutrients listed in the Recommended Dietary Allowances.

AHLT N563 Recent Advances in Dietetics (2 cr.) P: Dietetic internship. Study of research methodology utilized in dietetics. Course includes critique of literature and preparation of research proposal.

AHLT N570 Pediatric Nutrition I (3 cr.) P: B500, BIOL 557, undergraduate metabolic nutrition course, or consent of instructor. An application of principles of physiology, biochemistry, and nutrition to the

specialized nutrient needs and nutritional care of healthy infants, children, and adolescents and those with the most common pediatric conditions/illnesses or disorders of broad nutritional significance.

AHLT N572 Advanced Pediatric Nutrition (3 cr.) P: AHLT N550, AHLT N570, or consent of instructor. An application of principles of physiology, biochemistry, and nutrition to the specialized nutrient needs and nutritional care of infants, both preterm and term, and patients with complex pediatric conditions/illnesses that have a significant nutritional component.

AHLT N590 Dietetic Internship (4-10 cr.) P: Dietetic internship. Supervised clinical experience in clinical and community nutrition and food service systems management. Course meets the requirements of the American Dietetic Association for the post-baccalaureate experience needed for dietetic registration. Previous admission into dietetic internship required. May be taken for a maximum of 23 credit hours. Not applicable to a graduate degree program.

AHLT N591 Seminar in Nutrition and Dietetics (1 cr.) Exploration of various topics and issues in nutrition. May be repeated for a maximum of 4 credits.

AHLT N593 Topics in Nutrition (1-3 cr.) P: Consent of instructor. Exploration of a selected topic in nutrition at an advanced level. May be repeated once for credit if topics differ.

AHLT N595 Readings in Nutrition (1-3 cr.) P: Consent of instructor. Individualized readings on topics not covered in regular course offerings.

AHLT N596 Clinical Dietetics (cr. arr.) Clinical study in specialized areas of dietetics. May be taken more than once with the consent of the department for a maximum of 15 credit hours.

AHLT N597 Management Issues in Dietetics (2 cr.) P: Dietetic internship. Advanced study in institutional and hospital dietetic management, including personnel, financial, operational, and regulatory issues.

AHLT N598 Research in Dietetics (cr. arr.) Original research as approved by the department.

Occupational Therapy

An educational program in occupational therapy is located on the Indiana University–Purdue University Indianapolis campus. The last baccalaureate class will be admitted for fall 2002 with an anticipated graduation date of August 2004. The program will then transition to post-baccalaureate entry level. For further information, contact the School of Allied Health Sciences at (317) 274-4702.

Description of the Profession Occupational therapy is the art and science of assisting people to do those activities/occupations that are important to them despite impairment, disability, or handicap. In this context, "occupation" refers to all of the activities that occupy people's time and give meaning to their lives, primarily: activities of daily living, work and productive activities, and play and leisure skills (AOTA, 1994). Occupational therapists can work in mental health, pediatric, geriatric, physical disability,

community wellness programs, or other specialty areas.

Graduates of the Program The baccalaureate degree program in occupational therapy is designed to prepare the graduate to meet professional standards for occupational therapy practice. Upon completion of the program, a graduate will be expected to demonstrate entry-level competence in basic knowledge and application of physical, behavioral, and medical sciences to the practice of occupational therapy. Graduates of the program will be able to sit for the national certification examination for the occupational therapist administered by the National Board for Certification in Occupational Therapy (NBCOT). After successful completion of this exam, the individual will be an Occupational Therapist, Registered (OTR).

Credential Required to Practice OTR, Occupational Therapist Registered.

Licensure Requirements to Practice All states have credentialing requirements. Graduates must take the responsibility to ascertain and conform to the specific credentialing requirements of the state in which they plan to practice. State credentialing requirements are usually based on the results of the NBCOT certification examination.

Bachelor of Science in Occupational Therapy at Indiana University-Purdue University Indianapolis

Program Director: Associate Professor Hamant

Associate Professors Emeriti: Lampert, Nathan, Simek

Assistant Professor: Worrell

Clinical Associate Professor: Kiel

Clinical Assistant Professor: Griswold

Lecturers: Chase, Janson, Swinehart, Troyer

Adjunct Assistant Professor: Feinberg, Stroup

Adjunct Instructor: Hamman, Troxell

Adjunct Lecturers: Atkins, Hale, Raisor, Yoder

EDUCATIONAL PROGRAM

Length of the Program Four years, if full time; two years (59 credit hours) of prerequisite course work plus 22 months of professional course work.

Structure of the Professional Program The academic and fieldwork portions of the curriculum are designed as full-time experiences.

Design of the Professional Curriculum Full-time students entering the Occupational Therapy Program will attend three academic semesters. There will be a summer clinical experience between the junior and senior years and a six-month fieldwork (clinical) experience beginning in January of the senior year. The curriculum content includes basic knowledge of occupational development; medical and psychiatric conditions; technical skills, occupational therapy theory and practice; interpersonal communication; creative problem solving; understanding human occupation as it relates to health and wellness; and beginning professional practice (Fieldwork Level I). Following the academic course work are two, three-month, full-time practice

experiences (Fieldwork Level II) to provide integration of the academic material and further prepare the student for entry into the profession. Fieldwork Level II must be completed within 24 months of completing all academic course work. The curriculum content contains all of the subject matter required in an accredited occupational therapy program and is organized to emphasize the occupational model.

Additional Cost In addition to regular university fees, students should expect to spend approximately \$1,400 on textbooks. Additionally, some courses have clinical fees that are assessed at the rate of \$30 per credit hour. Contact program for current cost sheet. Students should be prepared to assume living and travel expenses associated with fieldwork experiences in the spring semester of the senior year. Some assignments may be out of state.

Opportunity for Students to Work The class schedule for full-time occupational therapy students is rigorous; part-time employment during the evening or weekend hours is possible for some students during fall and spring semesters.

Program Facilities The Occupational Therapy Program offices are located on the third floor of Coleman Hall. Classrooms are located in Coleman Hall, Ball Residence, and other buildings on the Indianapolis campus.

Location of Fieldwork Sites Fieldwork Level I occurs in a variety of settings, including hospitals, rehabilitation centers, nursing homes, school systems, community sites, and other health and wellness facilities within Indiana. Fieldwork Level II is directed toward physical and psychosocial dysfunction and may be located throughout the United States depending on the student's individual assignment. Prior to starting fieldwork experience, students may be required to undergo drug testing and/or a criminal background check.

Accreditation The Occupational Therapy Program is fully accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA) located at 4720 Montgomery Lane, P.O. Box 31220, Bethesda, MD 20824-1220. AOTA's phone number is (301) 652-AOTA. Applicants should be advised that as of January 1, 2007, Occupational Therapy educational programs will only be accredited at the post baccalaureate degree level.

ADMISSION General Information

Students accepted into the program must complete the school's and the following program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Cumulative grade point average and personal interview.

Class Size 50 each fall semester.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the

beginning of this section of the bulletin, the following admission policies apply to the Occupational Therapy Program.

Application Deadline November 1 of the year prior to desired entry into the program.

Total Number of Prerequisite Credit Hours 59 semester hours. Applicants must have completed a minimum of 30 credit hours, including six courses from the prerequisite list, including one laboratory science, by the time of application.

Distribution of Credit Hours in Specific Areas See prerequisites.

Limitations of Course Work Remedial courses do not count toward the 59 prerequisite credit hours and are not calculated in the cumulative grade point average.

Minimum Cumulative Grade Point Average Requirement In-state residents, 3.00 on a 4.00 scale. Out-of-state students, 3.30 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained throughout the admissions process.

Fresh Start/Academic Bankruptcy/Repeated Courses The Indiana University Occupational Therapy Program adheres to the School of Allied Health Sciences Fresh Start Policy and the Repeated Courses Policy. In addition, the Occupational Therapy Program may grant Academic Bankruptcy for up to one academic year to students with a GPA of 2.00 or above. A student may use either the Fresh Start Policy or Academic Bankruptcy Policy, but not both, for purposes of admission. No requests for Fresh Start, Academic Bankruptcy, or Repeated Courses will be accepted after November 1.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale).

Interview A personal interview is required. However, if the number of applications to the program far exceeds the number of positions available, the program admissions committee reserves the right to limit the number of applicants to be interviewed to two times the number of positions available in the class. Selection of the candidates to be interviewed will be based solely on the cumulative grade point average. Interview topics are highlighted in an interview letter sent to all applicants.

Technical Standards In addition to School of Allied Health Sciences technical standards, the Occupational Therapy Program has developed program-specific technical standards. These standards are available upon request and are sent to all applicants selected to be interviewed.

Indiana Residents Preference Policy See School of Allied Health Sciences policy. Out-of-state candidates must have a cumulative grade point average of 3.30 on a 4.00 scale to be considered eligible.

Volunteer Experience Although volunteer experience is not required, it is recommended as very helpful in making a career choice.

OT for Adults with Psychosocial Dysfunction AHLT T461	4 cr.
OT for Adults with Physical Disabilities AHLT T462	4 cr.
Multicultural & Ethical Issues in OT AHLT T464	2 cr.
Management of Occupational Therapy Services II AHLT T458	1 cr.
Total	17 cr.

Spring

Fieldwork Level II-A AHLT T495	6 cr.
Fieldwork Level II-B AHLT T496	6 cr.
(AHLT T495 and AHLT T496 are two three-month internships scheduled within the nine-month period from January of the senior year through the following September.)	
Total	12 cr.

Total Credits**63 cr.**

Students must successfully complete a first aid class and a professional CPR class that have written examinations prior to beginning Fieldwork Level II (AHLT T495, AHLT T496). If either of the classes is graded, the course grade must be acceptable according to the Occupational Therapy Program Performance Policies. The CPR course should be the Professional Rescuer or Healthcare Provider course, not the Community CPR course. If a documented physical problem makes a person incapable of performing the activities in either or both of these areas, the person must be able to pass the written examinations required in the course.

Scholarships In addition to financial assistance obtained through the IUPUI Office of Student Financial Aid, there are scholarship opportunities available through the Occupational Therapy Program.

Following admission into the Occupational Therapy Program, students may seek information from the program director regarding scholarship opportunities specific to occupational therapy.

Awards The program faculty will recommend students with superior academic performance for degrees awarded with distinction. The Carol D. Nathan Leadership Award is presented annually to a senior selected by the senior class and the faculty as having demonstrated outstanding leadership potential. The award is in recognition of Associate Professor Emerita Carol D. Nathan, former director of the Occupational Therapy Program.

Honors The Occupational Therapy program offers students the option of participating in an Honors Degree Program. Students may enter the honors program no later than the second semester of their first year in the program. The honors degree requires 12 hours of honors credit, distributed as follows: two theory courses, two techniques or media courses, and one course in the basic sciences. No more than two honors courses may be taken per semester. Students must earn no less than a B+ (3.5) in an honors course. Students seeking to graduate with honors must maintain a cumulative grade point average of 3.3 with a 3.5 grade point average in honors course work.

Graduation Requirements for a B.S. in Occupational Therapy Satisfactory completion of 122 credit hours: 59 prerequisite credit hours and 63 credit hours of professional courses. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Professor Cel Hamant, Program Director, Occupational

Therapy, IUPUI, Coleman Hall 316, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 274-8006, E-mail: chamant@iupui.edu.

Courses in Occupational Therapy

"P" refers to a course prerequisite.

AHLT T325 Fieldwork Level I-A; Practicum Experience (1 cr.) P: AHLT T360. Fieldwork observation and practice of the occupational therapy skills and theory presented in theory and technique courses. Attendance at a weekly seminar is required.

AHLT T342 Occupational Performance, Area C—Play and Leisure Activities (2 cr.) Exploration of play/leisure as a primary occupational performance area. The focus for the course is from an occupational perspective and includes lecture/discussion and experiential activities.

AHLT T343 Occupational Performance, Area B—Work and Productive Activities (2 cr.) Exploration of work/productive activity as a primary occupational performance area. Uses hand and power tools, a variety of other work skills, and ergonomics as therapeutic occupational modalities.

AHLT T357 Professional Writing in Occupational Therapy (1 cr.) P: AHLT T360. Instruction and practice in professional documentation and writing for reimbursement, necessary in the practice of occupational therapy.

AHLT T358 Management of Occupational Therapy Services I (2 cr.) Study of the occupational therapist's role in service management and the health care system. Managerial functions and managed care are emphasized.

AHLT T360 Fundamentals of Occupational Therapy (3 cr.) Material presented as a foundation for the development of the clinical aspects of occupational therapy practice. Emphasis is on the philosophy of using occupation as a basis of treatment.

AHLT T361 Occupational Therapy Process (2 cr.) P: AHLT T360. Introduction to and relationship of professional values, principles of occupation, and therapeutic use of self to occupational therapy standards of practice.

AHLT T362 Occupational Therapy for Children (4 cr.) P: AHLT T360. Developmental approach to principles of occupational therapy evaluation and treatment of infants and children.

AHLT T365 Concepts of Occupation and Human Lifespan Development I (3 cr.) Investigation of the dynamic interrelationships among the biological, psychological, and sociological aspects of human development and their impact on occupational behavior and performance applicable from infancy through adulthood.

AHLT T367 Research in Occupational Therapy I (1 cr.) Examination and study of the research process and its implication and application in practice and academic settings.

AHLT T368 Research in Occupational Therapy II (1 cr.) Preparation for participation in the research process.

AHLT T372 Common Medical Conditions in Occupational Therapy (3 cr.) Review of major medical conditions including clinical description, etiology and pathology, medical/surgical management, treatment and prognosis.

AHLT T373 Clinical Psychiatry for Occupational Therapy (2 cr.) Review of major psychiatric disorders including clinical description, etiology, medical management, and treatment. Legal and pharmacological issues in psychiatry are presented.

AHLT T375 Functional Neuroanatomy (3 cr.) Major functional concepts of neuroanatomy presented in longitudinal systems with implications for abnormality and subsequent occupational therapy intervention.

AHLT T376 Kinesiology for the Occupational Therapist (3 cr.) Principles of human movement including analysis of biomechanics, joint structure and function, muscle physiology, and musculoskeletal function. An introduction is given to methods to improve movement quality in occupational performance.

AHLT T426 Fieldwork Level I-B; Practicum Experience (1 cr.) P: AHLT T325. Fieldwork observation and practice of the occupational therapy skills and theory presented in the theory and technique courses. Seminar attendance is required.

AHLT T452 Occupational Performance, Area A-ADL (3 cr.) Lecture and laboratory provide the student with supervised learning experiences that emphasize maximum patient/client independence in the occupational performance area of activities of daily living (ADL and IADL).

AHLT T453 Topics in Occupational Therapy (1-5 cr.) Permission of instructor required. Selected topics in occupational therapy offered by occupational therapy faculty. Students may repeat this course as long as the topic changes each time it is taken.

AHLT T455 Techniques of Splinting in Occupational Therapy (1 cr.) Lecture and laboratory course that provides supervised experiences in the construction of splints and their use as a therapeutic modality.

AHLT T457 Group Process in Occupational Therapy (2 cr.) P: AHLT T373. Principles and concepts of group process related to occupational therapy practice.

AHLT T458 Management of Occupational Therapy Services II (1 cr.) P: AHLT T358 and senior standing in the professional program or instructor's permission. Study of occupational therapy reimbursement, credentialing, and other professional activities.

AHLT T461 Occupational Therapy for Adults with Psychosocial Dysfunction (4 cr.) P: AHLT T373. Introduction to and application of selected theories, frames of reference, and paradigms from

occupational therapy, psychiatry, and psychology to the occupational therapy process specific to the treatment of adolescents and adults with mental illness.

AHLT T462 Occupational Therapy for Adults with Physical Disabilities (4 cr.) P: AHLT T372 and AHLT T375. Study and application of the principles of occupational therapy evaluation and treatment to adolescents and adults with physical disabilities.

AHLT T464 Multicultural and Ethical Issues in Occupational Therapy Practice (2 cr.)

Examination of the occupational therapy ethics code and ethical decision-making in practice settings. Knowledge of cultural and ethnic development and occupational behaviors. Sensitivity and approaches to the practice of occupational therapy with specific and diverse multicultural populations in the United States.

AHLT T480 Electives in Occupational Therapy (1-3 cr.) P: Permission of instructor required; second year or senior standing in the professional program. Special electives in occupational therapy offered by occupational therapy faculty and clinicians. Students may repeat this course as long as the topic changes each time it is taken.

AHLT T495 Fieldwork Level II-A (6 cr.) P: Successful completion of all professional courses. A three-month internship in psychosocial or physical dysfunction occupational therapy facilities.

AHLT T496 Fieldwork Level II-B (6 cr.) P: Successful completion of all professional courses. A three-month internship in psychosocial, physical dysfunction or other occupational therapy facilities.

AHLT T497 Fieldwork Level II-C (Optional) (4-6 cr.) P: Successful completion of AHLT T495 and AHLT T496. Six- to twelve-week optional experience providing occupational therapy students an opportunity to specialize in a selected practice area (e.g., community, pediatrics, geriatrics, or hand rehabilitation).

AHLT T580 Graduate Electives in Occupational Therapy (2-4 cr.) Graduate electives in occupational therapy offered by occupational therapy faculty and clinicians. Students may repeat this course as long as the topic changes each time it is taken.

Paramedic Science

For information concerning the Associate of Science in Paramedic Science, see Emergency Medical Services.

Physical Therapy

An educational program in physical therapy is located on the Indiana University–Purdue University Indianapolis campus.

Description of the Profession As members of the health care team, physical therapists help restore clients to normal functioning of the musculoskeletal and other systems through interventions utilizing therapeutic exercise, physical agents, and assistive devices. The client's physical therapy needs are determined through evaluation and examination of muscle strength and tone, joint status, posture,

sensory status, functional mobility, exercise tolerance as it relates to cardiorespiratory status, skin condition, pain, and other medical conditions that impair physical function. Physical therapists are concerned with health promotion and disease prevention as well as restoration of function following disease, injury, or loss of a body part. In addition to patient care, the physical therapist participates in administrative, teaching, and research activities and provides consultative services. Physical therapists work in hospitals, outpatient facilities, industrial clinics, governmental and voluntary health agencies, educational settings, extended care facilities, and private practice settings.

Graduates of the Program The educational experiences of the Physical Therapy Program curriculum are designed to graduate a physical therapist with skills as a generalist. Graduates of the program are eligible to apply for licensure in the state in which they will practice.

Credential Required to Practice P.T., Physical Therapist.

Licensure Requirements to Practice All states require that an individual graduate from an accredited physical therapy program and successfully complete the national physical therapy licensure examination in order to practice as a physical therapist.

Doctor of Physical Therapy at Indiana University–Purdue University Indianapolis

Program Director: Associate Professor Quillen

Professors Emeritae: Ekstam, Ladue

Professors: MacKinnon, Oldridge

Associate Professors: Hartsell, Porter

Assistant Professor: Chapman

Clinical Assistant Professors: Bainbridge, Carey

Visiting Assistant Professor: Dunning

EDUCATIONAL PROGRAM

Length of the Program The course of study is 35 months (98 graduate credit hours) of graduate professional course work.

Structure of the Program The program is presented in a full-time, day format only.

Design of the Professional Curriculum The physical therapy curriculum is organized so that the lecture and laboratory course work is integrated with patient care experiences. Full-time clinical education experiences of varying length occur throughout the course of study. The Physical Therapy Program course of study develops an understanding of normal and abnormal physical structure and function. The curriculum focuses on the management of patient problems rather than procedures. The graduate of the Physical Therapy Program demonstrates competencies in physical therapy and the basic skills of research, administration, and teaching. Additionally, the graduate shows the ability and interest to continue professional development.

Opportunity for Students to Work Because of the intense nature of the program, students are not encouraged to seek outside employment during their enrollment.

Additional Cost In addition to Physical Therapy Program tuition and university fees, students should expect to pay program-related expenses. Contact the program for a current cost sheet.

Facilities Physical Therapy Program offices are located in Coleman Hall. Lecture and laboratory classes are located in Ball Hall, Long Hospital Building, and other locations on the IUPUI campus.

Accreditation The Doctor of Physical Therapy Program has been approved by the Indiana University Board of Trustees and the Indiana Commission for Higher Education (ICHE). Indiana University has been granted Interim Accreditation for the post-baccalaureate professional education program by the Commission on Accreditation in Physical Therapy Education (CAPTE).

ADMISSION

General Information

Students accepted into the program must complete the School of Allied Health Sciences and the following Physical Therapy Program specific admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Admission into the School of Allied Health Sciences Doctor of Physical Therapy Program is based on the overall grade point average, the mathematics and science prerequisite courses grade point average, student's suitability for physical therapy profession as reported by volunteer experience supervisor evaluation of generic abilities, and a statement of personal values.

Class Size 36 students each fall semester.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of the bulletin, the following admission policies apply to the Physical Therapy Program.

Application Deadline June 1 prior to anticipated August entry.

Total Number of Prerequisite Credit Hours

Applicants may have no more than two (2) DPT Program prerequisite courses unfinished at the time of program application (see below). **NO WAIVERS FOR DEGREE COMPLETION OR COURSE PREREQUISITES WILL BE GRANTED BY THE PHYSICAL THERAPY PROGRAM.**

Limitations of Course Work The prerequisite credit hours in human anatomy, human physiology, chemistry, and physics must be completed no more than seven years prior to date of entry.

Minimum Cumulative Grade Point Average 3.0 on a 4.0 scale. The minimum grade point average must be met at the time of application and maintained until admission.

Minimum Specific Grade Point Average 3.0 on a 4.0 scale in all credit hours attempted in mathematics and science prerequisite courses. The

minimum grade point average must be met at the time of application and maintained until admission.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.0 on a 4.0 scale).

Technical Standards See School of Allied Health Sciences technical standards.

Medical Requirements Basic immunizations as determined by Student Health Services must be completed by the first day of classes. Students must demonstrate proof of health insurance prior to entry into the program and must maintain health insurance throughout their enrollment.

Volunteer Experience Students must complete the equivalent of a one-day (8 hours) volunteer observational experience at two or more different types of Physical Therapy treatment facilities and have the supervising physical therapist complete the Program's student evaluation form.

Additional Requirements Accepted applicants, conditionally accepted applicants and applicants on the alternate list must complete all requirements for their baccalaureate degree prior to enrolling in the Doctor of Physical Therapy Program and maintain the following:

- a 2.0 grade point average in each semester following notification of their status;
- a minimum cumulative grade point average of 3.0 on a 4.0 scale in all attempted credit hours; and,
- a minimum grade point average of 3.0 on a 4.0 scale in all credit hours attempted in mathematics and science prerequisite courses.

International Student Applicants There are special application procedures for those who are not citizens of the United States or who have had their previous schooling outside of the United States. International student applicants interested in the Doctor of Physical Therapy Program should obtain an International Application packet from the IUPUI Office of International Affairs. Information and an International Application packet may be downloaded from the Web at www.international.iupui.edu. Because of the extra procedures required in evaluating foreign credentials, the application fee for international students is currently \$55, in addition to DPT Program application fee. International student applicants, except those whose native language is English, are expected to submit results of the Test of English as a Foreign Language (TOEFL). The TOEFL is given worldwide throughout the year. IUPUI's school code number for the TOEFL application is 1325. The Physical Therapy Program faculty has established a minimum TOEFL test score of 600 paper-based/250 computer-based for Program eligibility. All newly admitted international students are also required to take the IUPUI English (ESL) examination administered by the IUPUI ESL Program and Office of International Affairs prior to registration for class. Students are required to take any ESL courses that are deemed to be necessary by this testing until they have fulfilled university and program requirements for English proficiency.

CURRICULUM

Prerequisites

Prior to entering the DPT Program, students must have completed requirements for their baccalaureate degree and the following prerequisite courses. Students should consult with their academic advisers for appropriate courses and semester sequence in order to complete prerequisites. Listed credit hours are minimums.

Humanities/Social Sciences	6 cr.
(Two courses such as sociology, anthropology, art, history, or philosophy.)	
Introductory Statistics	3 cr.
Human Anatomy—	
one course with laboratory	3-4 cr.
Human Physiology—	
one course with laboratory	3-4 cr.
Chemistry—two courses with laboratory	8 cr.
Physics—two courses with laboratory	8 cr.
(Note: Level of the anatomy, physiology, chemistry, and physics courses must be appropriate for science majors.)	
Psychology—Introductory	3 cr.
Human Lifespan Development	3 cr.

Students must demonstrate proficiency in medical terminology prior to entering the professional program. Students will need to be competent writers and demonstrate computer literacy including e-mail, Internet, database searches, spreadsheet, and word processing capabilities.

Professional Program

	<i>Credit Hours</i>
Semester 1, Year 1, Fall Semester	
P511 Clinical Decision Making	1
P512 Muscle Physiology	2
P513 Functional Anatomy and Clinical Biomechanics	3
D850 Gross Anatomy	8
	<hr/> 14
Semester 2, Year 1, Spring Semester	
P646 Physical Agent/Modality Interventions	2
P515 Introduction to Physical Therapy Examination and Interventions	6
P534 Introduction to Motor Sciences	2
P530 Medical Conditions and Pathophysiology	4
	<hr/> 14
Semester 3, Year 1, Summer Session 1 (8 weeks)	
P514 Foundations of Research I	2
P643 Psychosocial Dimensions of Physical Therapy Practice	2
P570 Pharmacology for Physical Therapists	3
	<hr/> 7
Semester 4, Year 2, Fall Semester	
D852 Neuroscience and Clinical Neurology	5
P532 Legal and Ethical Issues in Physical Therapy	2
P533 Lifespan Motor Development	2
P526 Physical Therapy Examination/Interventions II	4
P645 Foundations of Research II	2
	<hr/> 15

Semester 5, Year 2, Spring Semester

P524 Cardiopulmonary Practice Patterns	3
P641 Neuromuscular Practice Patterns I	4
P541 Musculoskeletal Practice Patterns I	4
P650 Integumentary Practice Patterns	2
P680 Health Promotion and Community Outreach	2
	<hr/> 15

Semester 6, Year 2, Summer Session 2

P599 Clinical Education I (6 Weeks)	3
	<hr/> 3

Semester 7, Year 3, Fall Semester

P622 Musculoskeletal Practice Parameters II	5
P642 Neuromuscular Practice Patterns II	5
P660 Special Topics in Physical Therapy	3
P667 Foundations of Research III	1
P664 Administration and Management of Physical Therapy Services	3

Semester 8, Year 3, Spring Semester

P695 Clinical Education II (12 Weeks)	6
P696 Clinical Education III (6 Weeks)	3
	<hr/> 9

Semester 9, Year 3, Summer Session 1

P697 Clinical Education IV (6 Weeks)	3
P675 Capstone Seminar	1
	<hr/> 4

Total Credits 98

Students must successfully complete and maintain current Health Care Professional Level CPR certification prior to beginning clinical education experiences.

Scholarships The Constance Brown Memorial Scholarship, established in memory of a deceased classmate, is awarded to an outstanding first year physical therapy student. The Frances C. Ekstam Scholarship, in honor of the Physical Therapy Program's first director, is awarded to an outstanding second year physical therapy student.

Awards The program recommends to the university superior academic students for degrees awarded with distinction. The William D. Porter Award is presented annually to a program graduate selected by faculty as having demonstrated excellence in both the study and clinical application of neurological rehabilitation techniques. The award is in recognition of Mr. William D. Porter, who contributed to the education of innumerable Indiana University physical therapy students through his textbook photographs and classroom audiovisual materials.

Graduation Requirements Satisfactory completion of 98 graduate credit hours including clinical education. All course work must be completed in compliance with the program and school's academic and professional policies.

For further information, contact Professor William S. Quillen, Director, Physical Therapy Program, IUPUI, Coleman Hall 120, Indianapolis, IN 46202-5119. Telephone (317) 278-1875.

Courses in Physical Therapy

P511 Clinical Decision Making (1 cr.) An overview of the profession of physical therapy and a framework for the process of clinical decision-making. Includes the role of physical therapy in contemporary health care delivery, the disablement model and an introduction to the APTA *Guide to Practice* as components of the clinical reasoning process.

P512 Muscle Physiology (2 cr.) Essential concepts of muscle physiology critical to the scientific development and application of physical therapy interventions; includes energy transfer during exercise, nutritional considerations, exercise and functional capacity evaluation and body composition.

P513 Functional Anatomy and Clinical Biomechanics (3 cr.) Integration of foundational knowledge of gross anatomy with structure and function of the neuromusculoskeletal system and human motion. Includes the study of the concepts of biomechanics, joint structure and function as they apply to physical therapy interventions.

P514 Foundations of Research I (2 cr.) Introduction to clinical research methodology and critical interpretation of the professional literature.

P515 Introduction to Physical Therapy Examination and Interventions (6 cr.) First of two courses covering examination, evaluation and intervention aspects of physical therapy practice. Emphasis is on history taking, systems review, functional examination and intervention, and documentation.

P524 Cardiopulmonary Practice Patterns (3 cr.) Provides the essential knowledge base for development of exercise prescriptions for well populations and for physical therapy interventions for patients with cardiopulmonary pathologies or dysfunctions.

P526 Physical Therapy Examination and Interventions II (4 cr.) The second of two courses covering examination, evaluation and intervention aspects of physical therapy practice. Regional application is emphasized along with corresponding documentation.

P530 Medical Conditions and Pathophysiology (4 cr.) Overview of pathophysiology and medical management for common disorders of the endocrine, immune, neurological, genitourinary and gastrointestinal systems. Included are fundamental principles of pharmacology and diagnostic imaging as utilized in medical management.

P532 Legal and Ethical Issues in Physical Therapy (2 cr.) Includes essential information related to ethical, legal and professional practice regulations and standards of care. Interpersonal communication skills for the healthcare environment are also presented.

P533 Lifespan Motor Development (2 cr.) Overview of human neuromusculoskeletal development across the lifespan.

P534 Introduction to Motor Sciences (2 cr.) Principles and concepts of motor learning and motor control for the development of physical therapy interventions.

P541 Musculoskeletal Practice Patterns I (4 cr.) Physical therapy management of patients with impaired posture, joint mobility, motor function, and muscle performance. Integrates previous coursework involving evaluation and interventions.

P570 Pharmacology for Physical Therapists (3 cr.) Survey of contemporary pharmacology including pharmacokinetic principles with special emphasis on the relation of drug therapy to therapeutic interventions provided by physical therapists.

P599 Clinical Education I (3 cr.) Initial full-time clinical experience of 6 weeks duration. This course will serve as the introduction to clinical integration of physical therapy knowledge and skills. Students will be assigned to specific sites.

P622 Musculoskeletal Practice Patterns II (4 cr.) Physical therapy management of patients with impaired joint mobility, motor function, muscle performance associated with spinal dysfunction, connective tissue disorders, trauma and surgical procedures.

P641 Neuromuscular Practice Patterns I (4 cr.) Physical therapy management of individuals with motor and sensory integration dysfunctions associated with peripheral nerve injuries, polyneuropathies and spinal cord injury.

P642 Neuromuscular Practice Patterns II (5 cr.) Physical therapy management of individuals throughout the lifespan with supraspinal central nervous system disorders.

P643 Psychosocial Dimensions of Physical Therapy Practice (2 cr.) Social, psychological and behavioral components of patient-therapist interactions are illustrated including grief, loss, motivation, social support and cultural influences amongst diverse patient populations.

P645 Foundations of Research II (2 cr.) Development, approval and generation of the proposal for the review of the literature related to a specific topic in patient outcomes assessment or other approved area.

P646 Physical Agent—Modality Interventions (2 cr.) Includes both theory and application of thermal, acoustic, infrared and electrotherapeutic physical agents utilized in physical therapy interventions.

P650 Integumentary Practice Patterns (2 cr.) The physical therapy management of the integumentary system with special emphasis on physical therapy interventions for burns and various types of wounds.

P660 Selected Topics in Physical Therapy Practice (3 cr.) Introduction to emerging physical therapy practice patterns in such areas women's health, occupational health, chronic metabolic and

immunologic diseases and cognitive and emotional disorders.

P664 Administration and Management of Physical Therapy Services (3 cr.) The administration and management of physical therapy services within the context of multiple types of healthcare systems.

P667 Foundations of Research III (1 cr.) Mentored seminar for the completion of a review of the literature on an approved topic and preparation for presentation of the final product.

P675 Capstone Seminar (1 cr.) Capstone seminar experience integrating classroom and clinical learning. Presentations mentored by clinical and academic faculty will be required.

P680 Health Promotion and Community Outreach (2 cr.) Essential concepts related to the roles of physical therapists in prevention and in the promotion of health, wellness and fitness. Course includes application of concepts through service component in selected community agencies.

P695 Clinical Education II (6 cr.) Full-time clinical experience of 12 weeks duration, which provides students the opportunity to apply theory and skills in physical therapy interventions with specific patient populations.

P696 Clinical Education III (3 cr.) Full-time clinical experience of 6 weeks duration, which provides students the opportunity to apply theory and skills in physical therapy interventions with specific patient populations.

P697 Clinical Education IV (3 cr.) Full-time clinical experience of 6 weeks duration, which provides students the opportunity to apply theory and skills in physical therapy interventions with specific patient populations.

Radiation Therapy

Educational programs in radiation therapy are located on the Indiana University–Purdue University Indianapolis and Indiana University Northwest (Gary) campuses.

Description of the Profession Radiation therapy involves the use of different forms of ionizing radiation for the treatment of benign and malignant tumors. Radiation therapists administer the prescribed dose of ionizing radiation to specific sites of the patient's body as directed by the physician. They operate varied types of equipment, including high energy linear accelerators, and work with radioactive materials. In addition, radiation therapists observe the clinical progress of the patient undergoing radiation therapy, observe the first signs of any complication, and determine when treatment should be withheld until a physician may be consulted.

Graduates of the Program The Radiation Therapy Program is designed to prepare graduates to meet the scope of practice standards for radiation therapy. Upon completion of the program, graduates are eligible to take the radiation therapy certification examination given by the American Registry of

Radiologic Technologists (ARRT). Having successfully passed this exam, certificate holders are classified as Registered Radiation Therapists, R.T.(T) (ARRT).

Licensure Required to Practice Licensure of radiation therapists is not required in Indiana, but licensure requirements are mandated in some states.

Bachelor of Science in Radiation Therapy at Indiana University–Purdue University Indianapolis

Medical Advisor: Professor Randall

Program Director: Assistant Professor Dunn

Clinical Assistant Professor: Schneider

EDUCATIONAL PROGRAM

Length of the Program The radiation therapy program is a four-year baccalaureate degree program and has two tracks: one for the nonradiographer and one for the radiographer. For the nonradiographer, the program is composed of 50 credit hours of prerequisite and general-education requirements and a 22-month professional core in the junior and senior years. For the radiographer, the program includes general-education requirements and a 20-month professional core.

Structure of the Program The classroom and clinical experiences are provided Monday through Friday from 8 a.m. to 4:30 p.m. with continuous enrollment during the professional core.

Opportunity for Students to Work Students often seek employment in part-time positions outside the program, which must be balanced with evening study.

Additional Cost In addition to regular university tuition and fees, students should expect to pay program-related expenses. Contact the program for a current cost sheet.

Program Facilities The Radiation Therapy Program offices are located in Ball Residence, Rooms 119 and 120. Classrooms and laboratories are located in Coleman Hall, in radiation oncology departments of area hospitals, and in other buildings on the Indiana University–Purdue University Indianapolis campus.

Location of Clinicals The clinical practicums are provided at a variety of clinical sites located within a 60-mile radius of Indianapolis.

Accreditation The program is accredited by the Joint Review Committee on Education in Radiologic Technology, 20 North Wacker Drive, Suite 900, Chicago, IL 60606-2901.

ADMISSION—NON-RADIOGRAPHER General Information

Admission into the School of Allied Health Sciences radiation therapy program is based on an admission index that is composed of a cumulative grade point average, the mathematics and science grade point average, prerequisite courses grade point average, and an interview.

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this bulletin, the following admission policies apply to the radiation therapy program.

Application Deadline December 1 of the year prior to desired entry into the program.

Minimum Number of Prerequisite Credit Hours 50.

Minimum Cumulative Grade Point Average 2.50 on a 4.00 scale. This requirement is applied at the time of program application. Grades from remedial courses are not calculated in the grade point average of the prerequisite courses to determine the admission index.

Minimum Specific Grade Point Average Science and math grade point average of 2.30 and a 2.50 grade point average in stated prerequisite courses (on a 4.00 scale). This requirement is applied at the time of program application and must be maintained. Grades from remedial courses are not calculated in the mathematics and science grade point average to determine the admission index.

Minimum Grade Requirement in a Prerequisite Course C (2.00 on a 4.00 scale).

Interview A personal interview is required. However, if the number of applications to the program far exceeds the number of positions available, the program's admissions committee reserves the right to limit the number of applicants to be interviewed to two times the number of positions available in the class. Interviews are conducted in January.

Technical Standards See School of Allied Health Sciences policy.

Medical Requirements All required immunizations must be completed before the start of the program. Verification of immunizations and the health form must be submitted during orientation.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience The student must observe in a radiation oncology facility prior to applying to the program.

CURRICULUM—NON-RADIOGRAPHER Prerequisites

The following prerequisite course of study must be completed to be eligible for admission into the professional program. Students should consult with their academic advisors for appropriate courses and semester sequence.

General-Education Areas

Verbal Communications (G)	2-3 cr.
Written Communications (G)	
(2 courses)	6 cr.
(Second writing course must focus on research and professional writing skills)	
Humanities Elective (G)	3 cr.

Social/Behavioral Science Elective (G)	3 cr.
Introductory Psychology (G)	3 cr.
College Algebra and Trigonometry (G)	5-6 cr.
General Physics (with lab) (G)	4-5 cr.
Human Anatomy (with lab)	4-5 cr.
Human Physiology	4-5 cr.
Medical Terminology	1 cr.
Introduction to Computers	2-3 cr.
Business/Education Electives	6 cr.

Suggested Electives (To bring total credits up to 50.) The number of elective courses will differ for each student to complete a total of 50 credit hours of prerequisite course work. Additional electives may be required, before or during the professional program, to complete a minimum of 122 credit hours of academic course work for graduation.

A Suggested Plan of Study

Freshman

Fall

Elementary Composition	3 cr.

ADMISSION—RADIOGRAPHER Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the radiation therapy program.

Application Deadline December 1 of the year prior to desired entry into the program.

Minimum Number of Prerequisite Credit Hours

Satisfactory completion of general-education and technical specialty requirements.

Minimum Cumulative Grade Point Average

2.50 on a 4.00 scale; this requirement is applied at the time of program application. Grades from remedial courses are not calculated into the grade point average of the prerequisite courses to determine the admission index.

Minimum Specific Grade Point Average Science or math grade point average of 2.30 and a 2.50 grade point average in stated prerequisite courses (on a 4.00 scale); this requirement is applied at the time of program application and must be maintained. Students must attain a cumulative grade point average of 2.30 for all radiography courses. Grades from remedial courses are not calculated into the mathematics and science grade point average to determine the admission index.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale).

Interview A personal interview is required. However, if the number of applications to the program far exceeds the number of positions available, the program's admissions committee reserves the right to limit the number of applicants to be interviewed to two times the number of positions available in the class. Interviews are conducted in January.

Technical Standards See School of Allied Health Sciences policy.

Medical Requirements All required immunizations must be completed before the start of the program. Verification of immunizations and the health form must be submitted during orientation.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience Students must observe in a radiation oncology facility prior to applying to the program.

CURRICULUM—RADIOGRAPHER Prerequisites

The following prerequisite course of study must be completed for students to be eligible for admission into the professional program. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements.

Verbal Communication (G)	2-3 cr.
Written Communication (G)	
(2 courses)	6 cr.
(Second course must focus on research and professional writing skills)	
Humanities Elective (G)	3 cr.
Social/Behavioral Science Elective	3 cr.
Introductory Psychology (G)	3 cr.
College Algebra and Trigonometry	5-6 cr.
General Physics (with lab) (G)	4-5 cr.
Human Anatomy (with lab)	4-5 cr.

Human Physiology	4-5 cr.
Medical Terminology	1 cr.
Introduction to Computers	2-3 cr.
Business/Education Elective	3 cr.

Technology Specialty Applicants must supply evidence of registration in radiography by the ARRT or completion of a radiography program accredited by the Joint Review Committee on Education in Radiologic Technology.

The technical specialty area is complete for applicants who have completed an associate or baccalaureate degree in radiography.

Students who received their technical training in noncredit awarding programs and who have full credentials in radiography (ARRT) may be awarded credit for their credentials and experiences and/or petition to test out of technical specialty courses.

Professional Program—Radiographer

Courses in the professional program are sequential and, therefore, must be taken in the order specified by the program faculty.

Fall (Junior)

Orientation to Radiation Oncology	
AHLT J301	4 cr.
Clinical Dosimetry I AHLT J305	2 cr.
Clinical Experience: Basic AHLT J350	3 cr.

Total	13 cr.

Spring (Senior)

Physics of Radiation Oncology II AHLT J401	2 cr.
Radiation and Cancer Biology AHLT J406	2 cr.
Clinical Oncology II AHLT J403	3 cr.
Clinical Practicum V AHLT J453	5 cr.
Total	12 cr.

Scholarships Some hospitals and employers offer financial assistance for students pursuing radiation therapy.

Graduation Requirements for Baccalaureate Degree To be eligible for graduation with a baccalaureate degree, students must successfully complete the general-education requirements, technical specialty (radiographers), and professional core in radiation therapy. They must also achieve clinical competency in each area identified in the clinical manual requirements.

For further information, contact Professor Donna Dunn, Director, Radiation Therapy Program, IUPUI, Coleman Hall 120, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 274-1302, E-mail: dodunn@iupui.edu.

Courses in Radiation Therapy

"P" refers to a course prerequisite, and "C", to a course that must be taken concurrently.

AHLT J101 Orientation to Radiation Therapy (2-4 cr.) Overview of radiation oncology and the role of the radiation therapist. Basic radiation protection, patient care particular to the clinical setting, and equipment procedures and techniques. Discussions of computers and hyperthermia are also presented. The 2 credit offering is an option for radiographers only.

AHLT J181 Clinical Practicum I (2 cr.) Clinical experience in the use of equipment, simulations, and delivery of radiation treatments through observation and assistance under direct supervision of a radiation therapist.

AHLT J182 Clinical Practicum II (4 cr.) P: AHLT J181 or AHLT R290. Clinical experience in patient positioning, mould construction, patient simulation techniques, treatment delivery, dosimetry, treatment planning, patient care, and radiation protection under direct supervision of a radiation therapist.

AHLT J200 Technical Radiation Oncology (3 cr.) P: AHLT J101. Technical aspects of radiation oncology emphasizing clinical utilization of simulators and treatment machines. Presentations will include distinctive properties of several pathology setup considerations, contouring methods, auxiliary equipment, and basic hand calculations.

AHLT J201 Clinical Radiation Oncology I (3 cr.) P: AHLT J101. Fundamental clinical practice in radiation oncology to include the roles and principles of tumor pathology and surgical, radiation, and medical oncology. Malignant conditions, etiology, methods of treatment, patient prognosis, treatment results, and effects of combined therapies are presented. Student case presentations required.

AHLT J202 Clinical Radiation Oncology II (3 cr.) P: AHLT P201. Fundamental clinical practice in radiation oncology: malignant conditions, etiology, methods of treatment, patient prognosis, treatment results, and effects of combined therapies. Student case studies required.

AHLT J203 Treatment Planning (3 cr.) P: AHLT J200. Concepts of clinical dosimetry and treatment planning. Delivery methods, to include single- and multiple-beam techniques, are discussed. Tumor localization, dose calculations, and summation of isodose curves are performed.

AHLT J204 Quality Assurance and Radiation Protection (3 cr.) P: AHLT R260. Identification of the team approach to quality assurance and the principles and concepts. Implementation of methods for quality control is discussed. Practical radiation protection for the radiation therapist will be presented.

AHLT J250 Physics of Radiation Therapy I (3 cr.) P: AHLT R250. Fundamental principles of the physical qualities of radiation and atomic and nuclear theory. To include presentations on radiation therapy equipment measurement and quality of radiation and measurement of absorbed dose and calculation techniques.

AHLT J251 Physics of Radiation Therapy II (3 cr.) P: AHLT J250. Emphasizing the principles of radioactivity, radiation detection, measurement devices, equipment calibration, brachytherapy, and calibration techniques. Principles and concepts of radiation protection are discussed.

AHLT J281 Clinical Practicum III (4 cr.) P: AHLT J182. Clinical experience in patient positioning, mould construction, patient simulation techniques, treatment delivery, dosimetry, treatment planning, patient care, and radiation protection under the direct supervision of a radiation therapist.

AHLT J282 Clinical Practicum IV (4 cr.) Clinical experiences in patient positioning, mould construction, patient simulation techniques, treatment delivery, treatment planning, patient care, and radiation protection under supervision of a radiation therapist.

AHLT J300 Simulation/Treatment Procedures (6 cr.) P: AHLT R103, AHLT R104, and AHLT R185. Lecture and laboratory sessions emphasizing the clinical utilization of simulators and treatment machines.

AHLT J301 Orientation to Radiation Oncology (4 cr.) P: R.T.(R). An overview of radiation oncology and the role of the radiation therapist. Presentations will orient students to the physical and biological basis of radiation oncology equipment, procedures, tumor pathology, and patient interaction.

AHLT J302 Radiation Oncology Techniques I (3 cr.) P: R.T.(R) or AHLT R102, J300, and J350. Lecture and laboratory sessions presenting concepts of treatment-planning techniques of head, pelvis, spine, lung, and brain. To include implant localization techniques.

AHLT J303 Clinical Oncology I (3 cr.) P: R.T.(R) or AHLT R102, and AHLT J300. Examines the roles and principles of tumor pathology, surgical oncology, radiation oncology, and medical oncology. To include the characteristics, growth patterns, and treatment modalities utilized for tumors of the lung and central nervous system.

AHLT J304 Radiation Oncology Patient Care (2 cr.) P: R.T.(R) or AHLT R104. Concepts of radiation oncology patient care, including considerations of patients' physical and psychological condition. Factors influencing patients' general health during and following a course of radiation therapy treatments will be identified.

AHLT J305 Clinical Dosimetry I (2 cr.) Review of fundamental mathematics concepts as they relate to practical dosimetry and performing routine calculations pertaining to patient set-up and treatment.

AHLT J306 Clinical Dosimetry II (2 cr.) P: AHLT J305. Development of computer treatment planning skills in radiation oncology.

AHLT J307 Medical Imaging and Processing in Radiation Oncology (2 cr.) Fundamentals of radiologic exposure techniques, latent image formation, and processing of radiographs utilized in radiation oncology.

AHLT J350 Clinical Experience: Basic (3 cr.) P: AHLT R103 and AHLT R104. Clinical observation and assistance in the clinical skills of radiation therapy technology under the direct supervision of a registered radiation therapist or equivalent.

AHLT J351 Clinical Practicum I (3 cr.) P: R.T.(R) or AHLT J350. Clinical application of patient positioning immobilization, block fabrication, patient simulation techniques, treatment delivery, dosimetry, treatment planning, patient care management, and radiation protection under the direct supervision of a registered radiation therapist or equivalent.

AHLT J400 Physics of Radiation Oncology I (2 cr.) P: R.T.(R) or AHLT R250; MATH 147 and 148 or MATH 150; PHYS P201 and P218. Fundamental principles of the physical quantities of radiation and atomic and nuclear theory. To include discussions of radiation oncology equipment.

AHLT J401 Physics of Radiation Oncology II (2 cr.) P: AHLT J400. Continuation of J400 with emphasis on the interactions of ionizing radiation with matter; radiation detection and measurement devices; radiation units; equipment calibration; brachytherapy; and calculation techniques. Principles and concepts of radiation protection are discussed.

AHLT J402 Radiation Oncology Techniques II (3 cr.) P: AHLT J302. Lecture and laboratory sessions present concepts of treatment-planning techniques of breast, esophagus, mantle and inverted-Y, pituitary, total body and hemi-body, and common palliative portals.

AHLT J403 Clinical Oncology II (3 cr.) P: R.T.(R) and AHLT J303 or AHLT R102, AHLT R103, AHLT R104, AHLT R185, AHLT J300, and AHLT J303. Examines the characteristics, growth patterns, and treatment modalities utilized for tumors of the female genital, urological, male genital, breast, head and neck, bone and soft tissue, hematopoietic, alimentary tract, lymphorecticular, and pediatric sites. Student case presentations required.

AHLT J404 Quality Management in Radiation Oncology (3 cr.) P: J300 or J301, J305, and J350. Identification and application of a comprehensive quality management program in a radiation oncology facility. Includes discussion on the operations and functions of a radiation oncology facility with emphasis on quality improvement techniques.

AHLT J406 Radiation and Cancer Biology (2 cr.) Emphasis on the modern principles of cellular and molecular biology as they relate to normal and cancer cell response both in vitro and in vivo to various radiation types, i.e., X/gamma rays, neutrons, and charged particles. Topics include dose time, fractionation, repair, tumor kinetics, hyperthermia, and radiation protection.

AHLT J409 Senior Project in Radiation Oncology (3 cr.) Individual research in radiation oncology. Research proposal requires the approval of the program director.

AHLT J450 Clinical Practicum II (4 cr.) P: AHLT J351. Clinical application of patient positioning immobilization, block fabrication, patient simulation techniques, treatment delivery, treatment planning, patient care management, and radiation protection under the direct supervision of a registered radiation therapist.

AHLT J451 Clinical Practicum III (6 cr.) P: AHLT J450. Clinical application of patient positioning immobilization, block fabrication, patient simulation techniques, treatment delivery, dosimetry, treatment planning, patient care management, and radiation protection under the direct supervision of a registered radiation therapy technologist.

AHLT J452 Clinical Practicum IV (5 cr.) P: AHLT J451. Clinical application of patient positioning immobilization, block fabrication, patient simulation techniques, treatment delivery, patient care management, and radiation protection under the direct supervision of a registered radiation therapist.

AHLT J453 Clinical Practicum V (5 cr.) P: AHLT J452. Clinical application of patient positioning immobilization, block fabrication, patient simulation techniques, treatment delivery, dosimetry, treatment planning, patient care management, and radiation protection under the direct supervision of a registered radiation therapist.

Radiography

Educational programs in radiography are located on the following Indiana University campuses: Indiana University–Purdue University Indianapolis, Indiana University Northwest (Gary), Indiana University South Bend, and Indiana University–Purdue University Fort Wayne.

A program is being developed at Indiana University Kokomo. Contact Dr. Robert Roales, Chairperson of the Division of Allied Health Sciences on the Kokomo campus, for further information, (765) 455-9371.

Description of the Profession Radiologic technology is a science involving the medical use of X-rays in the diagnosis of disease. A radiologist is a

physician specializing in this science, and a radiologic technologist (radiographer) is the technical assistant to the radiologist. Radiographers make up the largest group of imaging professionals. Their principal duties consist of performing X-ray examinations of patients. They also assist in fluoroscopic examinations and in special radiographic procedures. Tasks performed by radiographers vary. Radiographers must be able to handle seriously ill and injured patients to obtain the maximum amount of information without injury to the patient and with the least amount of pain and discomfort from the examination. They may assist the radiologist in some complex procedures, often involving the injection of opaque media through needles or catheters. Radiographers must be well trained and experienced in aseptic techniques, requiring skills often comparable to those of nurses in some specialties. Most technologists are employed in hospitals, clinics, and physicians' offices.

Graduates of the Program Graduates receive an associate of science degree and are eligible to take the certification examination of the American Registry of Radiologic Technologists (ARRT) to become certified as a Registered Technologist, Radiography, R.T.(R).

Credential Required to Practice R.T.(R) Registered Radiographer.

Indiana Certification Requirements to Practice State certification is required to operate an X-ray machine. The state accepts the ARRT registry for certification.

Associate of Science in Radiography at Indiana University–Purdue University Indianapolis

Program Director: Associate Professor Hernandez

Medical Advisor: Professor Cohen

Associate Professors: Baker, Kosegi, Long, Rafert

Assistant Professors: Kehrein

Assistant Clinical Professors: Cox, Robinson

Clinical Lecturer: DeVore

EDUCATIONAL PROGRAM

Length of the Program A new class begins in late June of each year (summer session two at IUPUI) and continues for 22 months, including all summer sessions.

Structure of the Program The two-year curriculum for radiography is based on a combination of professional courses, general-education courses, and clinical experience. Professional classes and clinical experience are scheduled from 8 a.m. to 4 p.m., Monday through Friday. Students are also required to participate in clinical experience on 5 Saturdays, during approximately four weeks of evening rotations and one holiday during the 22-month period. Indiana University holidays are observed. The schedule of classes and clinical experiences follow the IUPUI academic calendar. Vacations must be taken in the breaks between academic sessions of the university.

Design of the Professional Curriculum The lecture/laboratory course material and the clinical experiences are integrated throughout the program.

Additional Cost In addition to regular university tuition and fees, students should expect to pay program-related expenses. Contact the program for a current cost sheet.

Opportunity for Students to Work There are no restrictions on the number of hours a student may work during the program. However, the student must recognize that the professional curriculum requires approximately 25-32 clock hours per week of on-campus participation in classroom, laboratory, and clinical course work. Study time and completion of general-education courses must also be considered. While most of the professional course activities are scheduled during daytime hours on Monday through Friday, there are several clinical experiences that require student participation on weekends and evenings. Please contact the program for more information.

Program Facilities The Radiography Program is offered in Indianapolis at the Indiana University Medical Center. The program offices, classrooms, and laboratory facilities are located on the first floor of the Clinical Building. Students obtain clinical experience in the radiology departments located in Indiana University, Riley, Wishard, and Veterans Administration hospitals and Regenstrief Health Center and St. Francis Hospital (Beech Grove). Students should expect to rotate to at least four clinical sites during the program.

Accreditation The associate degree program in radiography is fully accredited by the Joint Review Committee on Education in Radiologic Technology, 20 N. Wacker Drive, Suite 900, Chicago, IL 60606-2901, (312) 704-5300, www.jrcert.org.

ADMISSION

General Information

Students accepted into the program must complete the school's and the following program admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class In the selection of applicants to be offered admission, the Radiologic Science Admission Committee considers academic background, including total and science/math GPA, the completion of general-education courses that are part of the associate degree curriculum, any background applicants may have in a health-care related area, including but not limited to radiography, previous application for admission to the program, and the results of a personal interview.

Class Size 36 new students are admitted each June (beginning of summer session II).

Specific Requirements

In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following apply to the Radiography Program.

Application Deadline November 15 of the year prior to anticipated entry in the program.

Total Number of Prerequisite Credit Hours 7.

Minimum Qualifications Meeting minimum criteria listed below will qualify applicants for continuation of the admission process. It does not guarantee admission to the program. Applicants for admission to the Associate of Science in Radiography degree may qualify for admission consideration in one of two ways:

A. Applicants with fewer than 12 college credit hours

Completion of fewer than 12 credit hours of GPA-earning courses including the prerequisite courses in composition (ENG W131) and algebra (MATH 110 or 111).

Qualifying Criteria:

1. High school cumulative academic GPA of at least 3.00 on a 4.00 scale. The high school GPA is calculated using college preparatory academic courses only. Other courses, such as band, chorus, physical education, etc., are removed from the GPA when it is calculated.
2. High school math/science GPA of at least 3.00 on a 4.00 scale.
3. Qualifications for regular admission to IUPUI if not already admitted.
4. College GPA of at least 2.50 on a 4.00 scale.
5. No less than a C in either of the prerequisite courses.

B. Applicants with 12 or more college credit hours

Completion of a minimum of 12 credit hours of GPA-earning courses to include the prerequisite courses in composition (ENG W131) and algebra (MATH 110 or 111).

Qualifying Criteria:

1. College GPA of at least 2.50 on a 4.00 scale for all college work completed. (Course grades from *all* institutions attended will be used.)
2. No less than a C in either of the prerequisite courses.
3. College math/science GPA of at least 2.30 on a 4.00 scale.
4. All college courses taken, including remedial courses, are considered when calculating the minimum total GPA and math/science GPA.

The criteria listed above represent the minimum criteria. The required grade point averages will be applied at the time of application and must be maintained at the completion of each enrollment period. Applicants who do not meet the GPA requirements when they apply may request a reactivation of their application if they subsequently meet the GPA requirements and the class selection process has not been completed.

High School Applicants Check with your school to see if you can earn college credit while in high school to complete the two prerequisite courses.

GED Applicants Those who have completed the GED certificate must qualify under Section B above. In addition to the required prerequisite courses, the GED applicant must include a college science course in the minimum of 12 credits to qualify.

College Applicants All applicants with more than 12 credit hours of GPA-earning courses must qualify under Section B regardless of high school background.

Interview An interview is required for admission. However, if the number of applications to the program far exceeds the number of positions available, the program admissions committee reserves the right to limit the number of applicants interviewed to two times the number of positions available in the class. Interviews are scheduled during late January.

Technical Requirements See School of Allied Health Sciences policy.

Indiana Residents Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience The admissions committee urges all interested applicants to spend time observing or volunteering in a radiology department. If you cannot arrange to do so at a local hospital by calling the chief technologist and indicating your desire to learn more about the field, a time can be scheduled in one of the Medical Center hospital departments.

CURRICULUM

Prerequisites

Elementary Composition I	
ENG W131	3 cr.

Courses in Radiologic Sciences

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT R100 Orientation to Radiologic Technology (2 cr.) C or P: R101, R102, and R181. Introduction to the field of radiology and its history. Students learn proper ethical standards, become acquainted with the duties and responsibilities in personal care for the patient, and investigate radiation protection for the patient and personnel. Degree credit will not be given for both R100 and R104.

AHLT R101 Radiographic Procedures I (3-4 cr.) C or P: R100 or R104, R102, and R181. Concepts in radiography with emphasis on the radiographic procedures used to demonstrate the skeletal system.

AHLT R102 Principles of Radiography I (3 cr.) C or P: College Algebra, R101, R181. Basic concepts of radiation, its production, and its interactions with matter. Includes the production of the radiographic image and film processing.

AHLT R103 Introduction to Clinical Radiography (2 cr.) Introduction to the functions and basic procedures of a diagnostic radiography department. Emphasis is placed on radiographic equipment, radiation protection, positioning terminology, and procedures used on typical radiographic examinations.

AHLT R104 Patient Care in Radiologic Science (2 cr.) Introduction to health care practices in the radiology department. Includes an overview of the field of radiology, ethics, patient care, and professional standards. Degree credit will not be given for both R100 and R104.

AHLT R181 Clinical Experience in Radiography I (1-6 cr.) C or P: R100 or R104. Clinical application of radiographic positioning, exposure techniques, and departmental procedures in all phases of radiologic technology, under the direct

supervision of a registered technologist until mastery of clinical objectives is reached.

AHLT R182 Clinical Experience in Radiography II (1-6 cr.) P: R101 and R181. Clinical application of radiographic positioning, exposure techniques, and departmental procedures in all phases of radiologic technology, under the direct supervision of a registered technologist until mastery of clinical objectives is reached.

AHLT R185 Medical Terminology (1 cr.) Introduction to the origin, derivation, and meaning of medical words.

AHLT R200 Pathology (2-3 cr.) P: Anatomy/Physiology. A survey of the changes that occur in the diseased state to include general concepts of disease, causes of disease, clinical symptoms and treatment, and diseases that affect specific body systems.

AHLT R201 Radiographic Procedures II (3 cr.) C or P: R101, R202, and R182. Concepts in radiography with emphasis on radiographic procedures used to demonstrate the skull and those requiring the use of contrast media.

AHLT R202 Principles of Radiography II (3 cr.) C or P: R102, R201, and R181. Continuation of R102 with emphasis on the properties that affect the quality of the radiographic image.

AHLT R205 Radiographic Procedures III (3 cr.) C or P: R201 and R222. Concepts in radiography with emphasis on special radiographic procedures and related imaging modalities.

AHLT R207 Seminar (1-5 cr.) Individual and group study focusing on the current state of the art in radiography. Student may enroll in this course multiple times depending on the topic covered.

AHLT R208 Topics in Radiography (1-4 cr.) Selected topics in radiography. May be repeated for credit if topics differ. Prerequisites may exist for some topics.

AHLT R209 Project (1-5 cr.) Individual and group activities that have a tangible result. Project examples for this course include the preparation of an exhibit, essay, or interesting radiography case file. Student may enroll in this course multiple times depending on the topic covered.

AHLT R222 Principles of Radiography III (3 cr.) P: R202. Continuation of R202 with emphasis on the application of radiography principles on imaging equipment.

AHLT R250 Physics Applied to Radiology (2-4 cr.) P: College Algebra. Fundamentals of radiation physics, X-ray generation, and equipment quality control.

AHLT R253 Radiation Experiments and Quality Control (2 cr.) P: R250. A laboratory course emphasizing the major characteristics of diagnostic X-ray systems and methods of assuring adequate function of radiographic equipment. Major topics

include anode heel effect, inverse square law, half-value layer, film sensitometry, radiation intensity, and quality control testing.

AHLT R260 Radiation Biology and Protection in Diagnostic Radiology (1-3 cr.) P: R250. Study of the biological effects of ionizing radiation and the standards and methods of protection. Emphasis is placed on X-ray interactions. Also included are discussions on radiation exposure standards and radiation monitoring.

AHLT R281 Clinical Experience in Radiography III (1-6 cr.) P: R201 and R182. Clinical application of radiographic positioning, exposure techniques, and departmental procedures in all phases of radiologic technology, under the direct supervision of a registered technologist until mastery of clinical objectives is reached.

AHLT R282 Clinical Experience in Radiography IV (1-6 cr.) P: R201 and R182. Clinical application of radiographic positioning, exposure techniques, and departmental procedures in all phases of radiologic technology, under the direct supervision of a registered technologist until mastery of clinical objectives is reached.

AHLT R283 Clinical Experience in Radiography V (1-6 cr.) P: R201 and R182. Clinical application of radiographic positioning, exposure techniques, and departmental procedures in all phases of radiologic technology, under the direct supervision of a registered technologist until mastery of clinical objectives is reached.

AHLT R290 Comprehensive Experience (1-8 cr.) P: R281, R282, and R283. Clinical application of radiographic positioning, exposure techniques, and departmental procedures in all phases of radiologic technology under the direct supervision of a registered technologist. Successful completion involves mastery of all clinical aspects of the program.

Respiratory Therapy

Educational programs in respiratory therapy are located on the following Indiana University campuses: Indiana University–Purdue University Indianapolis and Indiana University Northwest.

Description of the Profession Respiratory therapists assist patients with the “Breath of Life.” A career in respiratory therapy allows practitioners to care for individuals with cardiorespiratory disorders. The primary focus of a respiratory therapist is to care for patients, from the infant to the elderly, with heart and lung disease. Respiratory therapists are an integral part of the fast-paced world of medicine. They utilize life-support equipment to treat disease and aid in assessing and diagnosing cardiopulmonary disorders, often working in settings where respiratory therapists teach patients and their families about various respiratory diseases, smoking cessation techniques, or the equipment and drugs used to treat these problems. The Bachelor of Science in Respiratory Therapy degree provides graduates a career ladder that includes a broadened clinical emphasis within the cardiorespiratory field as well as leadership training.

Graduates of the Program The graduates of the Respiratory Therapy Program are eligible for state licensure examinations as well as examinations offered by the National Board for Respiratory Care. Completion of the program will allow a graduate to sit for the Registered Respiratory Therapist (R.R.T.) examination.

Credential Required to Practice C.R.T., Certified Respiratory Therapist; R.R.T., Registered Respiratory Therapist

Licensure Requirements to Practice The graduates of the Respiratory Therapy Program will file an application for certification as a respiratory care practitioner for the state of Indiana.

Bachelor of Science in Respiratory Therapy at Indiana University–Purdue University Indianapolis

Medical Director: Professor Hillier

Associate Medical Director: Professor Naven

Program Director: Professor Cullen

Clinical Director: Associate Professor Koss

Associate Professors: Van Scoder

Clinical Assistant Professor: Johnson

Lecturer, Part-time: Hunt

EDUCATIONAL PROGRAM

Description of the Program The Bachelor of Science program encompasses two professional years and two preprofessional years. Clinical experiences during the program include general adult and pediatric respiratory care, critical care, and pulmonary diagnostics. Emphasis is placed on clinical research, leadership skills, and communication. Senior clinical opportunities are available in adult critical care, neonatal-pediatric care, geriatrics, nicotine intervention, cardiovascular monitoring, polysomnography, and emergency care.

Length of the Program Four years; two years (55 credit hours) of prerequisite course work plus two years of professional course work.

Structure of the Program The prerequisites may be taken on a part-time basis; the professional program is a full-time program conducted primarily during the day.

Design of the Professional Curriculum The emphasis of the program is on general respiratory care as well as critical care and life-support equipment. Courses are organized to provide a diversity of experience.

Program Facilities The program offices, classroom, and laboratory are located on the second floor of Coleman Hall on the Indianapolis campus.

Location of Clinical Sites Clinical education experiences occur in a variety of settings, including hospitals, rehabilitation centers, nursing homes, physician offices, and other nontraditional health care facilities within Indiana. Most of the clinical sites are located within a 60-minute drive from downtown Indianapolis, and many are on the IUPUI campus. Students are expected to provide their own transportation to all clinical sites.

Additional Cost In addition to standard university fees, students are responsible for travel to clinics, laboratory fees, clinical fees, uniforms, vaccination costs, and CPR card fees. Students may be required to attend career seminars, professional meetings, or seminars. Occasionally small fees for attending these events may be necessary. Professional membership is required.

Opportunity for Students to Work Most students work part time while completing the program.

Accreditation The Respiratory Therapy Program is accredited by the Commission on Accreditation for Allied Health Education Programs.

ADMISSION

General Information

Students accepted into the program must complete the school's and the program's admission requirements prior to the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class Grade point average and results of personal interview.

Class Size Approximately 30 students.

Specific Requirements In addition to the School of Allied Health Sciences admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Respiratory Therapy Baccalaureate Degree Program.

Application Deadline December 1 of the year prior to anticipated entry. Late applications may be considered on a space-available basis.

Total Number of Prerequisite Hours 55. Graduates from accredited associate degree respiratory therapy programs are eligible to apply; however, applicants must have all prerequisites.

Minimum Cumulative Grade Point Average 2.30 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained.

Minimum Math/Science Grade Point Average 2.30 on a 4.00 scale. This requirement is applied at the time of program application and must be maintained.

Minimum Grade Requirement in a Stated Prerequisite Course C (2.00 on a 4.00 scale).

Interview All qualified applicants must participate in an interview. Interviews are conducted in December and/or January.

Technical Standards See School of Allied Health Sciences policy.

Medical Requirements All students are required to complete a medical history and document a complete vaccination program once accepted into the Respiratory Therapy Program.

Indiana Resident Preference Policy See School of Allied Health Sciences policy.

Volunteer Experience Volunteer experience is very helpful in making a career choice and is highly recommended.

CURRICULUM

Prerequisites

Prior to entering the program, the student must complete the following minimum prerequisites. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university. The code "G" indicates a course that meets the school's general-education requirements.

Written Communication (G)	6 cr.
(Second course should focus on professional and technical writing.)	
Verbal Communication (G)	3 cr.
College Math (G)	5-6 cr.
Social and Behavioral Science (G)	3 cr.
Lifespan Development (G)*	3 cr.
Statistics (G)	3 cr.
Human Anatomy (with lab) (G)	3-5 cr.
Human Physiology (with lab) (G)	3-5 cr.
Chemistry (with Lab) (G)	3-5 cr.
Microbiology (G)	3-4 cr.
Ethics (G)*	3 cr.
Physics (G)	3 cr.
Introduction to Computers (G)	3 cr.

Suggested Electives

The following courses, while not inclusive or mandatory, are suggested: science, cellular biology, nutrition, CPR, health care administration, exercise physiology, medical terminology, epidemiology, health, computer literacy, psychology, and ethics.

Cardiopulmonary Resuscitation In addition to the above courses, all students are required to complete instruction for both adult, child, and infant CPR prior to entry into the program. This must be the Healthcare Provider course, not the Community CPR course. This course is offered for a fee through the American Heart Association.

A Suggested Plan of Study

First Year

Fall

Elementary Composition I	3 cr.
Chemistry (with lab)	3-5 cr.
Social and Behavioral Science	3 cr.
College Math I	3 cr.
Total	12-14 cr.

Spring

Speech Communication	3 cr.
College Math II	3 cr.
Human Anatomy (with lab)	3-5 cr.
Ethics/Philosophy	3 cr.
Total	12-14 cr.

*These courses may be completed prior to or during the professional program.

Second Year

Fall

Professional Writing	3 cr.
Physics I	3 cr.
Human Physiology with laboratory	4-5 cr.
Introduction to Computers	3 cr.
Total	13-14 cr.

Spring

Statistics	3 cr.
Introduction to Microbiology	3-4 cr.
Lifespan or Human Development	3 cr.
Elective	3+ cr.
Total	12+ cr.

Professional Program

Courses in the professional program are sequential and, therefore, must be taken in the order specified by the program faculty.

Third Year

Fall

Cardiorespiratory Physiology	
AHLT F311	3 cr.
General Respiratory Care	
AHLT F325	3 cr.
Respiratory Care Techniques I	
AHLT F326	2 cr.
Cardiorespiratory Assessment and Patient Care	
AHLT F315	2 cr.
Respiratory Care Practicum I	
AHLT F345	1 cr.
Cardiorespiratory Pharmacology I	
AHLT F333	2 cr.
Medical Care I	
AHLT W374	3 cr.
Total	16 cr.

Spring

Cardiorespiratory Diseases	
AHLT F350	3 cr.
Advanced Life Support	
AHLT F355	3 cr.
Respiratory Care Techniques II	
AHLT F356	2 cr.
Respiratory Care Practicum II	
AHLT F385	3 cr.
Pulmonary Diagnostics	
AHLT F371	3 cr.
Medical Care II	
AHLT W471	3 cr.
Total	17 cr.

Summer Session I

Respiratory Care Practicum III	
AHLT F395	3 cr.

Fourth Year

Fall

Neonatal-Pediatric Respiratory Care	
AHLT F405	3 cr.
Cardiorespiratory Monitoring and Special Techniques	
AHLT F451	3 cr.
Respiratory Care Practicum IV	
AHLT F456	4 cr.

Introduction to Research in Respiratory Care	
AHLT F420	3 cr.
Pulmonary Rehabilitation and Geriatrics	
AHLT F461	2 cr.
Management and Leadership for Respiratory Care	
AHLT F430	3 cr.
Total	18 cr.

Spring

Cardiorespiratory Pharmacology II	
AHLT F444	2 cr.
Case Study Review	
AHLT F425	3 cr.
Advanced Clinical Specialty I	
AHLT F485	5 cr.
Seminar in Cardiorespiratory Care	
AHLT F445	1-5 cr.
Smoking Cessation Techniques	
AHLT F480	1 cr.
Advanced Cardiac Life Support	
AHLT F440	2 cr.
Application of Research for Respiratory Care	
AHLT F465	2 cr.
Total	16-20 cr.

Scholarships Once accepted to the program, students are eligible for scholarships offered by the Indiana Society for Respiratory Care and the American Association for Respiratory Care.

Graduation Requirements Satisfactory completion of 125 credit hours to include 55 credit hours of prerequisite course work and 70 credit hours of professional course work. All course work must be completed in compliance with the program's and school's academic and professional policies.

For further information, contact Dr. Deborah Cullen, Director of the Respiratory Therapy Program, IUPUI, Coleman Hall 224, 1140 W. Michigan Street, Indianapolis, IN 46202-5119, (317) 278-7381 or 274-7381, Fax: (317) 278-7383, E-mail: rstaff@iupui.edu

Courses in Respiratory Therapy

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT F311 Cardiorespiratory Physiology (3 cr.)

This course focuses on the normal anatomy and physiology of the cardiorespiratory system, including lung mechanics, ventilation, perfusion, diffusion, gas transport, and acid-base balance.

AHLT F315 Cardiorespiratory Assessment and Patient Care (2 cr.)

This course focuses on basic cardiorespiratory assessment, vital signs, laboratory studies, and charting. Normal and abnormal variations are reviewed.

AHLT F325 General Respiratory Care (3 cr.)

This course focuses on basic respiratory therapy procedures. Physiologic applications, effects on the cardiopulmonary system, and hazards for each therapeutic procedure are discussed. Topics include physical principles, airway care, humidity and aerosol

therapy, medical gas therapy, hyperinflation therapy, and chest physical therapy.

AHLT F326 Respiratory Care Techniques I (2 cr.) This course focuses on the most important clinical laboratory procedures and on procedures used by the respiratory therapist. Specifically, this course instructs students in patient assessment, oxygen administration, humidity and aerosol therapy, chest physical therapy, hyperinflation therapy, and monitoring expired gas.

AHLT F333 Cardiorespiratory Pharmacology I (2 cr.) This course provides an overview of the basics of pharmacology therapeutics, focusing on dosages and solutions and bronchodilator drugs. Indications, side effects, mechanism of action, and route of administration are discussed.

AHLT F345 Respiratory Care Practicum I (1 cr.) This course applies cardiorespiratory assessment techniques, information gathering skills, and communication skills in the clinical setting.

AHLT F350 Cardiorespiratory Diseases (3 cr.) This course outlines general cardiorespiratory diseases of the adult, including acute and chronic disorders. Respiratory therapeutics applied to these diseases are discussed.

AHLT F355 Advanced Life Support (3 cr.) This course includes care of the artificial airway, cardiovascular monitoring and supportive therapy, principles of ventilatory care, and maintenance as well as physiologic effects and complications of airway pressure therapy.

AHLT F356 Respiratory Care Techniques II (2 cr.) This course focuses on the most important clinical laboratory procedures and equipment used by the respiratory therapist to support critically ill patients. Specifically, this course instructs students in mechanical ventilators, pressure and heart rate monitors, pulmonary mechanics devices, and arterial blood gas sampling.

AHLT F371 Pulmonary Diagnostics (3 cr.) This course outlines and discusses both normal and abnormal lung volumes and capacities, mechanics of ventilation, inspiratory and expiratory flows, and diffusion of the lung. Additionally, specialty diagnostic techniques such as X-rays, bronchoscopy, ventilation perfusion scans, and exercise testing are overviewed.

AHLT F375 Respiratory Care Practicum V (4 cr.) This clinical practicum allows students to apply assessment skills, general respiratory care, and critical respiratory care techniques to the neonatal/pediatric patient and adult critical care patient with emphasis on performance of advanced life-support techniques.

AHLT F385 Respiratory Care Practicum II (3 cr.) This course applies cardiopulmonary assessment techniques, information gathering, and communication skills in providing general respiratory care in the clinical setting, including medical gas, humidity and aerosol therapy delivery, and treatment modalities.

AHLT F395 Respiratory Care Practicum III (3 cr.) This clinical practicum introduces students to variations in oxygen delivery and basic mechanical ventilation. Treatment modalities and hemodynamic

monitoring on mechanically ventilated patients will be integrated.

AHLT F405 Neonatal-Pediatric Respiratory Care (3 cr.) This course outlines fetal physiology, cardiorespiratory transition, and respiratory management of neonatal pathologies, including respiratory distress syndrome. Cardiorespiratory techniques for the pediatric patient as well as pediatric trauma and transport are reviewed.

AHLT F420 Introduction to Research in Respiratory Care (3 cr.) This course examines research in respiratory care and applies basic statistics and concepts of research design.

AHLT F425 Case Study Review (3 cr.) Case studies for diseases involving acid-base balance, electrolyte balance, ventilatory management, and other advanced life-support techniques or procedures as applied to the cardiorespiratory system are reviewed. Emphasis is on decision-making skills.

AHLT F430 Management and Leadership for Respiratory Care (3 cr.) Specific theory and practice applied to directing and managing a respiratory therapy department, including the managerial functions of budgeting, controlling, organization, planning, staffing, and coordinating. Leadership and skills pertinent to these functions as well as effective communication and professionalism are included.

AHLT F440 Advanced Cardiac Life Support (2 cr.) This course introduces students to the didactic and technical skills needed for successful proficiency of Advanced Cardiac Life Support standards as set forth by the American Heart Association.

AHLT F444 Cardiorespiratory Pharmacology II (2 cr.) P: AHLT F333. An overview of pharmacologic agents and their effect on the various body systems. Drug effects on the respiratory, circulatory, and nervous systems are emphasized.

AHLT F445 Seminar in Cardiorespiratory Care (1-5 cr.) Seminar is designed to meet the specialty selected by the student. Students may repeat this course with a new specialty area requested. Each student is required to take a minimum of one hour and a maximum of five hours.

AHLT F451 Cardiorespiratory Monitoring and Special Techniques (3 cr.) This course reviews electrocardiograms, intracranial pressure monitoring, capnography, and pulmonary artery monitoring techniques. Case studies emphasizing these special procedures are presented.

AHLT F456 Respiratory Care Practicum IV (4 cr.) This course allows students to apply advanced patient assessment techniques, information gathering skills, and communication and leadership skills in the neonatal/pediatric and adult critical care clinical settings.

AHLT F461 Pulmonary Rehabilitation and Geriatrics (2 cr.) This course gives an overview of rehabilitation therapies and techniques applicable to chronic lung disease. Basic concepts of gerontology and geriatrics are presented.

AHLT F465 Application of Research for Respiratory Care (2 cr.) Review studies related to

cardiorespiratory sciences. Conduct small group projects and literature review.

AHLT F475 Clinical Specialty II (4 cr.) Advanced clinical experiences in a specialty area of respiratory care supervised by registered respiratory therapists in varied clinical settings.

AHLT F480 Smoking Cessation Techniques (1 cr.) Theory and techniques of smoking education and cessation are presented. Attendance at seminars and community meetings required.

AHLT F485 Advanced Clinical Specialty I (5 cr.) Introductory clinical experience in a specialty area of respiratory care supervised by registered respiratory therapists in varied clinical settings.

General Allied Health Courses Available at IUPUI

Undergraduate

AHLT W100 Careers in Health Professions (2 cr.) P: ENG W131. Provides students interested in pursuing a health career with information on the variety of professions available in allied health, dentistry, medicine, nursing, and public health. Topics include a general description of each profession, educational requirements, salaries, employment opportunities, and educational outlook.

AHLT W101 Allied Health Keys to Success (1 cr.) P or C: ENG W131. Entering pre-allied health students, in partnership with allied health faculty and advisors, establish the foundations for success at IUPUI. This course is presented in a lecture/discussion format; each student accepts personal responsibility for learning. This course will assist students to create their personal goals for academic and career success and devise an action plan for achieving these goals. To reach these goals, students will become aware of personal and institutional resources.

AHLT W105 Medical Terms for the Health Sciences (1 cr.) This course is a programmed learning approach to the study of medical terminology. The course will cover the definition and spelling of medical word roots and combining forms, prefixes, suffixes, and medical abbreviations.

AHLT W374 Medical Care I (3 cr.) Interdisciplinary approach to the study of selected disease processes and conditions in all age groups and a survey of the medical and/or surgical management of these conditions.

AHLT W471 Medical Care II (3 cr.) Continuation of Medical Care I. Interdisciplinary approach to the study of selected disease processes and conditions in all age groups and a survey of the medical and/or surgical management of these conditions.

Graduate

AHLT W520 Research Methodology in Allied Health (3 cr.) P: G651 or equivalent. Fundamental concepts of research, ranging from philosophical foundations to practical applications. Course will provide the conceptual framework in which graduate students may develop their own research agenda. In keeping with the diversity of research, this course strives to introduce graduate students to the entire

continuum of research paradigms, from qualitative, naturalistic inquiry to quantitative, experimental designs.

AHLT W570 Research Communication in Allied Health (3 cr.) P: W520 and consent of both instructor and research advisor. Instruction and consultation in the preparation of master's thesis proposals, including computer applications for conducting on-line literature searches, developing an individual bibliographic database, designing an original research project, and devising a sound methodology. Final outcome is a completed thesis proposal for submission to a graduate student's thesis committee. Course is open only to allied health graduate students pursuing the research/thesis track in their program of study. Students must begin the course with a specific research agenda already approved by their research advisor.

Graduate Programs—University Graduate School

Therapeutic Outcomes Research

This graduate program is offered through University Graduate School. For a more detailed description, see that section of the bulletin. This program is designed to prepare credentialed health care professionals to conduct patient outcomes research in order to evaluate the effectiveness of therapeutic interventions within their own disciplines. The chief feature of this program is the emphasis on original research to determine therapeutic benefit in terms of physiologic, symptomatic, functional, perceptual, and quality-of-life outcomes.

Description of the Outcomes Research

There have been three major eras in the evolution of the U.S. health-care system since the late 1940's: expansion, cost-containment, and now assessment and accountability. In the expansion era, health care underwent remarkable growth in technology, training, and delivery. Emphasis was on the perfection of health care, with no consideration of costs or resource demands. Spiraling costs and disenchantment with the curative power of technology brought on the cost-containment era. Emphasis was now placed on limiting spending and maximizing productivity, often at the expense of patient satisfaction. Today, there is a growing understanding of the balance between use of health-care resources on one hand and patient benefits on the other, or between assessment and accountability. Based on a more sophisticated awareness of what actually constitutes the costs and benefits of treatment, emphasis is now placed on rational use of resources in light of a realistic appraisal of therapeutic benefits. Patient-centered outcomes research concentrates on the assessment of therapeutic interventions under conditions of real, not ideal, practice. Allied health professionals are particularly well positioned to conduct therapeutic outcomes research because their clinical work is oriented toward the holistic factors that outcomes research purports to measure: multidimensional assessment of health status and improvement of patient quality of life. Moreover, as

demand for useful and valuable outcomes measurement continues to grow among health-care institutions and organizations, allied health professionals are increasingly being called upon to conduct outcomes assessment at their place of employment.

Master of Science in Therapeutic Outcomes Research at Indiana University–Purdue University Indianapolis

Program Director: Professor Oldridge

Professors: Cullen, MacKinnon, Sothmann

Associate Professor: Quillen

EDUCATIONAL PROGRAM

Admission Requirements

Students accepted into the program must meet all requirements of both University Graduate School and the School of Allied Health Sciences. Applicants must submit the following: (1) official undergraduate transcripts; (2) a 300- to 500-word personal statement of academic and professional goals; (3) three letters of recommendation from those familiar with applicants' academic and professional performance; (4) official scores of the Graduate Record Examination (GRE); and (5) for international students, official TOEFL scores. The minimum admission requirements are:

1. A bachelor's degree from an accredited institution.
2. Eligibility for license or credential in a health profession.
3. Total undergraduate GPA of at least 3.00 on a 4.00 scale.
4. GRE scores of at least 500 each for the verbal and analytical sections.
5. If applicable, a TOEFL score of at least 600.

Course Requirements

A total of 30 credit hours beyond the bachelor's degree, of which 12 credit hours are in health outcomes, 3 credit hours are in electives, and 15 credit hours are in research (including thesis work).

Thesis Requirement

The capstone experience is the writing and submission of a thesis based on original research conducted by the student and supervised by a thesis committee. Curricular electives are focused on developing expertise to articulate and research a testable hypothesis in a specific content area pertaining to patient-centered outcomes under the direction of a research advisor holding graduate faculty membership in University Graduate School. Theses must follow the *Indiana University Guide to the Preparation of Theses and Dissertations*.

CURRICULUM

Health Outcomes (12 cr.):

AHLT W510 Trends and Issues in Allied Health (3 cr.)

SPEA H517 Managerial Epidemiology (3 cr.)

SPEA H615 Health Outcomes and Decision Making (3 cr.)

AHLT W560 Topics in Patient-Centered Outcomes Research (3 cr.)

Electives (3 cr.):

[In consultation with graduate advisor] (3 cr.)

Research (15 cr.):

GRAD G651 Introduction to Biostatistics I (3 cr.)

AHLT W520 Research Methodology in Allied Health (3 cr.)

AHLT W570 Research Communication in Allied Health (3 cr.)

AHLT Z599 Thesis in Health Sciences (6 cr.)

AHLT W799 Master's Thesis Continuation (1 cr., can be repeated)

Total Minimum Credits: 30 cr.

Courses in Therapeutic Outcomes Research

Courses offered in the School of Allied Health Sciences

"P" refers to a course prerequisite and "C" to a course that must be taken concurrently.

AHLT W510 Trends and Issues in Allied Health (3 cr.) A seminar course to review pertinent literature and other sources of information as a basis for discussing trends and issues affecting the therapeutic professions and the health-care delivery system.

AHLT W520 Research Methodology in Allied Health (3 cr.) P: G651 or equivalent. Fundamental concepts of research, ranging from philosophical foundations to practical applications. Course provides the conceptual framework in which graduate students may develop their own research agenda. In keeping with the diversity of research, this course strives to introduce graduate students to the entire continuum of research paradigms, from qualitative, naturalistic inquiry to quantitative, experimental designs.

AHLT W560 Topics in Patient-Centered Outcomes Research (3 cr.) Explorations of selected patient-centered outcomes assessment methodology and research evidence related to allied health science professions at an advanced level.

AHLT W570 Research Communication in Allied Health (3 cr.) P: W520 and consent of both instructor and research advisor. Instruction and consultation in the preparation of master's thesis proposals, including computer applications for conducting online literature searches, developing an individual bibliographic database, designing an original research project, and devising a sound methodology. Final outcome is a completed thesis proposal for submission to a graduate student's thesis committee. Course is open only to allied health graduate students pursuing the research/thesis track in their program of study. Students must begin the course with a specific research agenda already approved by their research advisor.

AHLT Z599 Thesis in Health Sciences Education (3 cr.) Individual investigation in the form of an organized scientific contribution or a comprehensive

analysis in a specified area related to health sciences education.

AHLT Z799 Master's Thesis Continuation (1 cr., can be repeated) Used as continuation credits for completing the master's thesis in a format acceptable to the student's advisory committee, leading to successful defense of the final product. May be repeated for credit.

Courses offered in other IUPUI Schools:

GRAD G651 Introduction to Biostatistics I (3 cr.)
SPEA H517 Managerial Epidemiology (3 cr.)
SPEA H615 Outcomes Assessment and Outcomes Management (3 cr.)

Herron School of Art

History

The Herron School of Art boasts a rich tradition. The roots of the school were planted in 1877, when it was established as the first school in Indiana dedicated to the teaching of art on a professional level. After several years of intermittent instruction, the school resumed on a permanent basis in 1902. The Herron School of Art has completed over 100 years of uninterrupted education in art. Through the years, the school has become a nationally recognized institution.

In 1967 the Herron School of Art became a school of Indiana University. Two years later, with the creation of Indiana University–Purdue University Indianapolis (IUPUI), Herron became part of this innovative approach to higher education. As a professional art school within a university, Herron offers students a full range of university resources. Yet Herron retains the comfortable, efficient size and friendly spirit of an independent college of art.

Mission

The primary mission of the Herron School of Art is to provide quality education for students committed to careers in the visual arts, including ceramics, painting, photography, printmaking, sculpture, visual communication, furniture design, art education, and art history. Herron also offers courses to provide visual literacy and an understanding of the visual arts for students who are not majoring in art and for other interested members of the community.

The school's size, numerous programs, and location in downtown Indianapolis create multiple opportunities for students to grow in their own disciplines. For more information about Herron School of Art, visit our World Wide Web page at www.herron.iupui.edu.

Degrees

The Herron School of Art educates students seeking professional careers in the fine arts, visual communication, art history, and art education. Degrees currently offered are the Bachelor of Fine Arts (B.F.A.), the Bachelor of Arts (B.A.) in art history, the Bachelor of Art Education (B.A.E.), and the Master of Art Education (M.A.E.).

Accreditation

The Herron School of Art is an accredited institutional member of the National Association of Schools of Art and Design (NASAD) since 1952. Herron is also accredited as a school of Indiana University by the North Central Association of Colleges and Schools and by the Teacher Training Licensing Commission of the Indiana State Board of Education.

Faculty

The Herron School of Art faculty is made up of artists, designers, art historians, art educators, and scholars engaged in the integrated activities of teaching and research. Faculty in the school believe a high level of professional activity not only enhances teaching but also provides students with models upon which to pattern their own careers. The faculty is consistently recognized with awards, commissions, exhibitions, and publications both regionally and nationally. The expertise of the Herron faculty is further extended by a program of visiting artists and lecturers from the Indianapolis community and throughout the nation.

Resources

Herron Gallery

The Herron Gallery is a nonprofit visual art gallery that provides the community, local high school students, and IUPUI students, faculty, and staff with daily, firsthand exposure to contemporary works of art created by regional, national, and international artists.

The gallery is committed to a program of seven exhibits each year that explore all areas of visual artistic expression. The gallery holds annual student and senior exhibitions, and it facilitates an ongoing series of faculty exhibitions in its 1,800 square feet.

Each year's exhibit schedule is coordinated with the school's lecture series to provide a broader understanding of the works presented at any given time. In addition, workshops are conducted by visiting/exhibiting artists to give students the opportunity to work directly with recognized professionals.

The gallery is intended as an educational resource for students as well as the community. Each exhibit is accompanied by an announcement and a public opening. A mailing list exists for anyone interested in receiving gallery information. Informal talks are available, and group visits are encouraged.

The gallery is staffed by a full time director/curator and hourly student employees placed through the university's work-study program. The gallery is open to the public, free of charge, during the academic year, with additional exhibitions and hours that vary. Interested persons may visit the gallery, located in the Museum Building at Herron School of Art. Call for current gallery hours and an exhibition schedule at (317) 920-2420.

Indianapolis Museums and Galleries

The Indianapolis Museum of Art is housed in a spectacular facility on the former Eli Lilly estate at Oldfields. This fine museum features a notable permanent collection and a lively program of changing exhibitions.

Several art galleries are in the Indianapolis area, including one operated by the Herron School of Art. The Herron Gallery maintains an exciting program of

changing exhibitions, serves as Indianapolis's center for contemporary art, and annually focuses on works by Herron students and faculty.

Admission

Admission to Herron School of Art is based on the student's previous school record. Herron does not require a portfolio review for admission. All students are admitted into Herron as pre-fine art or pre-art education majors. To be admitted to a major, a student must go through the portfolio review process, which occurs after students complete the freshman Foundation Program courses and 9 credit hours of

sophomore-level studio work. Students interested in art history may be admitted directly into that program and do not have to go through the portfolio review process.

Students enrolled in other schools or divisions of Indiana University—Purdue University Indianapolis may enroll in the elective studio courses. Arrangements may be made for enrolling in Herron courses at the time of the student's regular registration.

Admission with Transfer Credit

Students with transfer credit from other colleges or universities may be considered for the Herron School of Art. Transfer students may receive credit for successfully completing academic courses (C or higher) of equivalent content from other regionally accredited institutions. Transfer credit for studio art courses, however, is granted only from institutions with National Association of Schools of Art and Design (NASAD) accreditation. Credits for studio art courses from institutions not accredited by NASAD may be eligible for evaluation toward a Herron degree by individual degree programs. Transfer students ready to register for 300-level studio courses must submit a portfolio for review. Students who are eligible for advancement will be notified by the Student Services Office after admission to the university. Review dates and guidelines will be determined by the individual degree programs.

Students who are already in the Indiana University system may transfer to Herron School of Art at any time. To transfer they must have a 2.0 cumulative grade point average. They should contact Herron's Student Services Office, Herron Fesler Hall, Room 201, telephone (317) 920-2416, or email herrart@iupui.edu.

Readmission of Former Students

Former students in good standing who withdraw in accordance with the regulations of the school and who desire to return within two years should notify the Herron Student Services Office. Students who want to be readmitted and have been gone for two or more years must follow the current bulletin requirements and contact the Student Services Office.

Former students whose standing was not satisfactory at the time of withdrawal, former students who withdrew without compliance with the regulations of the school, and former students who were terminated on the basis of performance must apply in writing to the Herron Student Services Office, 1701 N. Pennsylvania Street, Indianapolis, IN 46202, for consideration by the Student Affairs Appeals Committee. See section on "Petition for Readmission."

Academic Sequencing

The studies at the Herron School of Art are sequential, in that a student moves through definite programs of prescribed and optional studies on a year-to-year basis until all the requirements for a particular degree are fulfilled.

Students who fall behind in fulfilling degree requirements at a particular year's level will be

expected to fulfill those requirements in sequence, either in conjunction with or in place of courses offered at the next level. Conflicts in scheduling may occur when students try to make up requirements, and they may find that their enrollment must be extended beyond the original graduation date. Students are therefore strongly advised to carefully plan their academics.

Herron Expenses

A Herron student will spend approximately \$1,000 on books and supplies during a school year. IUPUI maintains an art supply shop and bookstore at Herron. Modest lab fees are charged for materials used in certain studio classes. These fees are subject to change. Please request current information. Information about university fees can be found under "Fees" in this bulletin's section on "Indiana University."

Review for Advancement

In order for students to be admitted into degree programs at Herron School of Art, they are required to pass a portfolio review for advancement. (This requirement does not apply to art history majors.)

To be admitted to the degree programs, students must pass the portfolio review; therefore, completion of portfolio review requirements does not guarantee admission into the degree program. The decision of the faculty review is final.

For students interested in a fine arts degree, the portfolio review typically occurs during the sophomore year after the student completes all of the foundation requirements, including two semesters of art history and one semester each of English composition and English literature, and 9 credit hours of 200-level studio courses. The student must also have a 2.5 cumulative studio grade point average and a 2.0 overall cumulative grade point average. A student may not take any 300-level or higher studio classes until advancement has been approved.

Students interested in art education must complete their foundation year to go through the review process. They must also have a 2.5 cumulative grade point average. They will not be able to advance in art education until they pass the review and Pre-Professional Skills Test (PPST), and are accepted into the IUPUI School of Education.

Transfer students ready to register for 300-level courses *must* submit a portfolio for review.

Students who are eligible for advancement will be notified by the Student Services Office. Review dates and guidelines will be determined by the individual degree programs.

Academic Policies and Regulations

Attendance

The work of the school is intensive; therefore, prompt and regular attendance is required. If at any time a student has a legitimate reason for not attending class, immediate notification should be made to the faculty secretary. Attendance requirements are set by individual instructors. Students should keep

themselves informed of these requirements and are held responsible for fulfilling them.

Dean's List

Degree-seeking students in good standing who have a grade point average of 3.33 or higher with a load of 12 or more credit hours for a given semester will be placed on the Dean's List for that semester. Students carrying fewer than 12 credit hours and a grade of Incomplete in one or more classes will not be placed on the Dean's List until the Incomplete is removed from the semester record. Students carrying 12 credit hours and taking a course as Pass/Fail will not qualify for the Dean's List.

Academic Probation

Students in the Herron School of Art are expected to maintain a cumulative grade point average (GPA) of at least a 2.00. If they do not, the dean will give them formal written notice of probation. Students will be placed on academic probation for the academic session following one in which they fail to attain the 2.00 cumulative grade point average. They will also be placed on academic checklist, which will prohibit them from registering for future semesters until they meet with a student services representative.

Academic Dismissal

A student in the Herron School of Art may be dismissed from the school when, in the judgment of the faculty, the student has ceased to make satisfactory progress toward a degree. When an undergraduate student fails to attain a C (2.00) cumulative grade point average *in any two academic semesters*, the student is automatically considered to be making unsatisfactory progress toward a degree and is therefore eligible for dismissal.

The student will be informed in writing by the dean of the school. The student will be withdrawn from any courses in which he or she is currently enrolled and will be placed on academic checklist, which will prevent registration for future semesters. Any student who has been dismissed under these provisions may be readmitted only after one year has elapsed.

Petition for Readmission

Students under dismissal may appeal in writing to the Herron Student Affairs Committee. The committee may readmit the student if it decides that evidence of changed circumstances indicates the probability of improved academic performance. Each petition is considered individually, and a decision is based on the student's academic history and personal circumstances.

Students readmitted through this appeal process must earn a minimum cumulative semester GPA of 2.30 or above for the returning semester. Readmitted students failing to achieve the cumulative 2.30 grade point average are permanently dismissed from the Herron School of Art program.

Academic Forgiveness

The Herron School of Art forgiveness policy applies to former IUPUI students pursuing a first undergraduate degree who have been away from IUPUI and have not attended any other college or university, including any campus of IU, for at least three years. Only students

who meet the three-year requirement and have a grade point average not greater than 2.0 will be considered for the forgiveness policy. If the student's petition is approved, all previously taken courses will remain on the permanent record but will not count toward the student's grade point average (GPA). Only course credits with grades of A through C+, P, and S will count toward degree completion but again will not count towards the student's GPA. If a student's petition for forgiveness is approved, the student enters Herron with a recalculated cumulative grade point average of 0.00, after which all the rules of academic probation and dismissal for Herron School of Art will apply. After approval, the student must complete a minimum of 32 credit hours at IUPUI. All eligible students will be admitted under the Herron School of Art curriculum in place at the time of admittance. If the petition is approved, the Herron Student Affairs committee has the authority to impose stipulations or conditions upon the enrollment of the student. Herron School of Art reserves the right to deny the acceptance of credits from obsolete courses when the student has been away from Herron for three or more years. Forgiveness may be invoked only once.

Pass-Fail Option

The Pass-Fail option is available to Herron undergraduate students in good standing for a maximum of 12 credit hours of academic elective study within the total degree requirement. This option may not be used for studio courses or the required freshman English courses, and it is limited to two courses per year, including summer instruction. Under the Pass-Fail option, a grade of P (Pass) will not be used in computing the grade point average, but an F grade will be so used. A grade of P will not be subsequently changed to an A, B, C, or D.

Students electing to take the Pass-Fail option in an elective course must complete the required form in the Student Services Office before the deadline published each semester in the IUPUI *Schedule of Classes*.

Graduation

Students expecting to complete a course of study leading to the degree of Bachelor of Fine Arts, Bachelor of Art Education, Bachelor of Arts, or Master of Art Education must be in good standing and file an application with the Herron Student Services Office by October 15 during the academic year in which they wish to graduate. After they file this application, their records will be reviewed, and they will be notified of graduation status by the end of the fall semester.

General Requirements for a Baccalaureate Degree

1. Complete the minimum credit hours as required by degree program.
2. Achieve a minimum overall grade point average of 2.0.
3. Achieve a minimum Herron studio grade point average of 2.0.
4. Be in residence at Herron for at least two semesters, and complete, while at Herron, at least

24 credit hours of studio work at the 300 level or higher.

Requirements for a Second Degree

Holders of bachelor's degrees who have additional academic objectives may, if admitted by the Herron School of Art, pursue a second bachelor's degree. The student must earn a minimum of 24 additional credit hours in residence and meet the requirements of the Herron School of Art and of the program in which they are enrolled.

Herron Scholarships

Entering Student Portfolio Scholarships

Students who are applying to Herron for the first time are eligible for scholarships based on a portfolio review. General scholarship money is available to all entering portfolio applicants. The Helen Mowrey scholarship gives priority to Marion County students graduating from Lawrence or Warren Township's high schools. The deadline for all scholarship applications is the April 1 before enrollment.

Portfolio Criteria Members of the Herron faculty admissions committee will review portfolios based on the following criteria: Application of principles of two- and/or three-dimensional work, creativity and imagination, ability in drawing (preferably drawing from life as opposed to copying from photographs or other art work), and ability in the use of color, materials, and technique. Applicants must submit a portfolio of 10 to 15 pieces of original art works. Size, media, and technique are left to the discretion of the applicant.

Continuing Student Scholarships

Herron students are the only competitors for many scholarships donated directly to the school. The number of these scholarships varies, they may be for either full or partial expenses, and they are awarded on the recommendation of the Herron School of Art faculty. In addition to the scholarships mentioned above, cash awards are given annually for outstanding achievement.

Student Services

Student Activities

Student activities vary from year to year but have in the past included parties, dances, field trips, programs by visiting artists, and films. The exhibitions and opening receptions of the Herron Gallery are well attended by students and involve considerable student participation. Herron students may also avail themselves of student-sponsored activities and facilities at other schools of the university.

The IUPUI Student Assembly represents the Herron student body at the university level. Herron also maintains a Student Senate of its own.

Alumni Association

Membership in the Herron Alumni Association is open to all former students who have completed one full semester in good standing. Graduates and former

students are urged to keep the alumni office informed of their latest activities and addresses. Each graduate of the Herron School of Art receives a one-year membership in the Herron Alumni Association as a gift of the association.

Career Counseling and Placement

Careers in art are almost as varied as the artists themselves. Graduates of the Herron School of Art can be found in professional positions throughout the United States and in various parts of the world. Many Herron graduates in the fine arts go on to graduate schools to continue their art preparation. Many, however, also go directly into art professions, some working full time producing their art, others working as artists and illustrators for private and public agencies, in museums, in galleries, and in many other settings.

Graduates of the Visual Communication Program have many career options open to them, including design positions in business, industry, and academic settings, as well as advertising agencies and design studios. Art education graduates from Herron have certification to teach in the public schools in Indiana. Many also teach in private settings or work with museums or public agencies concerned with art and recreational media. Some graduates in art education go on to earn master's degrees and become permanently certified. For a list of 60 different career options in art, contact the Herron Student Services Office.

Information about employment in specific careers is available from placement offices, admissions offices, and department coordinators.

IUPUI, in cooperation with the Herron School of Art, works on the local and national levels to assist students and alumni in career placement. Counseling coordinators provide recommendations and maintain a schedule of on-campus recruiting dates by corporate and governmental representatives.

Herron School of Art has a World Wide Web page for all students and graduates who are seeking jobs. It is updated weekly and lists part-time, full-time, and freelance jobs for all fine arts majors. The jobs line page is located in the student services section of the Herron Web page at www.herron.iupui.edu/student_services

International Travel

The experience and wisdom gained through travel abroad is vital to a student's artistic growth. Students emerge from their adventures abroad with an expanded knowledge of art, a deeper appreciation for another person's culture and way of life, and a different perspective on how they view art. Herron has long recognized the value of such experiences and offers summer programs to China, Vietnam, Ireland, France, England, the Netherlands, and Belgium. The school plans to expand on these offerings as resources become available and as new relationships develop with other schools around the world. Scholarship opportunities are available through Herron on a competitive basis. Please see the international travel contact at Herron for details on each program.

School Requirements: First-Year Foundation Program

Foundation Division Coordinator William Potter

The Foundation Program serves as a base for future work at Herron. The Foundation Program student develops drawing skills, powers of observation, an understanding of visual principles, and a working knowledge of materials and techniques, while becoming more knowledgeable about art history. The program is constructed so that students, through self-examination and faculty counseling, will be able to select intelligently the area in which they will major when the Foundation Program has been completed. Much of the success of Herron programs has been due to the comprehensive strength of the Foundation Program and the basic preparation that it provides.

The Foundation Program or its equivalent in previously earned credit (as determined by the Admissions Committee) is a prerequisite for work in the fine art and education degree programs.

Foundation Program Curriculum

Semester I

		credits
F101	Foundation Studio I	4
C111 ¹	Three-dimensional Design	3
D101	Life and Object Drawing I	3
H103	Introduction to Contemporary Art	3
ENG W131 ²	Elementary Composition I, <i>or</i>	3
L115	Literature for Today <i>or</i>	
L105	Appreciation of Literature	

Semester II

		credits
F102	Foundation Studio II	4
C121 ¹	Design Theory	3
D102	Life and Object Drawing II	3
H101	History of Art I	3
ENG W131 ²	Elementary Composition I, <i>or</i>	3
L115	Literature for Today <i>or</i>	
L105	Appreciation of Literature	
Total credit hours		32

¹If a student takes C111 in the fall, then he or she takes C121 in the spring. This can also be done in the reverse order.

²Students not scoring well on the writing placement test will be required to register for W001 Fundamentals of English, a developmental noncredit course, before taking W131 Elementary Composition I.

* Accomplished as part of the Foundation Program.

Bachelor of Fine Arts Programs

Ceramics, Furniture Design, General Fine Arts, Painting, Photography, Printmaking, Sculpture, Visual Communication

General Academic Requirements

Students in all Herron B.F.A. degree programs must successfully complete a program of general academic courses, as well as more concentrated studies within their specialties, to earn their degrees. Students are required to have 15 credit hours of art history and 30 credit hours distributed in the humanities, life and physical sciences, and social and behavioral science.

The list that follows provides details on general academic requirements. See the description of each major program in the sections that follow for a list of specialty requirements.

General Academic Requirements for all B.F.A. Students

Art History H101*, H102, H103*, and 6 additional credit hours in art history.
Total: 15 credits

Humanities English W131*, L115 or L105*, and 6 additional credit hours selected from
Afro-American Studies
Classical Studies
Communications Studies
Comparative Literature
English
Film Studies
Folklore
Foreign Language
Journalism
Music
Philosophy
Religious Studies
Speech and Hearing
Total: 12 credits

Life and Physical Science 6 credits from

Anatomy
Astronomy
Biology
Chemistry
Computer Science
Food and Nutrition
Geology
Mathematics
Physics
Physical Geography (G107, G303, and G404)
Total: 6 credits

Social and Behavioral Science 6 credits from

Anthropology
Business
Economics
Nonphysical Geography
History
Labor Studies
Political Science
Psychology

Public and Environmental Affairs
Social Work
Sociology
Total: 6 credits

Academic Electives An additional 6 credits must be taken from one or more of the above groups, i.e., Humanities, Life and Physical Sciences, Social and Behavioral Science. Art history may *not* be used to satisfy this academic elective requirement.

Total: 6 credits

Ceramics

The ceramics curriculum develops an understanding of ceramics as an expressive artistic medium in contemporary society. The study of ceramic materials and techniques is balanced with the study of historical tradition and contemporary trends. The ceramic studio is well equipped so that students experience the variety of technologies used by contemporary artists. The program provides a solid foundation for students pursuing graduate studies or a studio art career.

Ceramics Suggested Plan of Study

Sophomore Year

		credits

Furniture Design

Herron School of Art has established a tradition of providing a rich and stimulating environment for aspiring studio art furniture makers. The Furniture Design Program curriculum provides students the framework for their development as designers and makers. The furniture design program's commitment to excellence is reflected in the high standards of professionalism achieved by its graduates.

Courses are taught by experienced and accomplished faculty. Students have the use of a well-equipped and maintained woodworking shop/studio. Introductory courses stress the importance of drawing, conceptualizing skills, design research and development, construction techniques and technologies, model making, art furniture history, and the completion of full-size furniture prototypes.

Intermediate and advanced courses challenge students to continue to develop their technical skills and begin to forge a personal design aesthetic. Career goals and strategies are explored and developed. Classes are augmented with visiting artists, field trips, student/professional design competitions and shows, and other pertinent professional activities.

Furniture Design Suggested Plan of Study**Sophomore Year**

<i>Fall</i>		credits
D201	Drawing III	3

General Fine Arts

The General Fine Arts Program allows students to participate in a wide range of studies without the need to specify a major. Through careful counseling, individual goals and directions are established, and the student is assisted in setting up a well-coordinated program of fine art studies. The flexibility of this program enables the student to combine studies in painting, drawing, printmaking, sculpture, ceramics, woodworking, design, etc., to achieve objectives in keeping with specific goals. Opportunities following graduation are essentially the same as for students identifying with a single program.

General Fine Arts Suggested Plan of Study**Sophomore Year**

Painting

The Painting Program features balanced instruction and a diverse faculty presenting a wide range of viewpoints. This well-rounded educational preparation provides students with the opportunity to acquire the knowledge and ability essential to creative activity. Emphasis is placed on the development of critical thinking skills, refinement of intellectual processes, and exposure to traditional and contemporary aspects of the painter's craft.

Painting Suggested Plan of Study

(Students must earn a B– or better in HER P301, P302, P303, and P304 in order to enroll in HER P401 or P402.)

Photography

Both black and white and color photography are integral to the department's approach to visual literacy. Emphasis is placed on the student's personal growth and aesthetic development, technical facility in mechanical areas, and a thorough understanding of photography's place in history and its different forms and applications. Primarily through the production of artworks, as well as through lectures, demonstrations, and readings, students become acquainted with the position of photography in contemporary art. Fine art photographers who work in a wide variety of genres are studied.

Herron's photo facilities include multiple black and white labs, individual color darkrooms, special problem processing areas, a computer lab, a shooting studio, and a gallery. Faculty members who are dedicated to their own professional development and set high standards for the department teach the curriculum.

Techniques covered in the program include basic and advanced black and white printing, Type-C color printing, Ilfochrome color printing, non-silver alternative processes, and developing control. In addition, mixed media, installation, time-based electronic media, digital imaging, video, use of the view camera, and studio lighting are taught. The department also provides students with access to professional equipment, including medium format and 4x5 view cameras, light kits, light meters, tripods, Polaroid equipment, and video cameras.

Printmaking

The printmaking curriculum provides a broad and intensive experience for printmaking majors and studio elective opportunities for other fine art, visual communication, and art education students. Course work in lithography and etching is offered at

*Students should take K211 or D202 or D211. K211 is offered only during the fall semester. Students must have completed K201 prior to K211. If students choose to take D202 or D211, they should take those courses in the spring, after they have completed D201.

beginning, intermediate, and advanced levels every semester. Processes covered include plate and stone lithography and the intaglio processes of etching, engraving, and aquatint. Additional courses include printing in monotype, woodcut, and silkscreen. Spacious, well-equipped, accessible facilities for the study of these traditional approaches to printmaking are augmented by additional facilities for the investigation of digital and photomechanical processes.

Basic courses establish a solid, comprehensive foundation of traditional technical skills unique to the printed image, while instruction emphasizes the development of drawing, self-expression, and concept. At the intermediate and advanced levels, students continue to acquire new technical skills. There is extensive work in color, as the emphasis shifts to imagery, concept, and critical thinking.

Advanced students are given considerable autonomy, working largely in self-defined directions in consultation with faculty while focusing on printing technologies most appropriate for individual development. Group critiques, field trips, portfolio projects, student exhibition opportunities, and workshops and lectures by visiting artists complement the studio experience by providing critical discussion, participation, incentives, and role models.

Sculpture

Herron's sculpture program encourages consistent growth, from the introductory three-dimensional experience through the fourth and final year of advanced work. The multimedia fabrication and foundry facilities provide a level of sophisticated technical experience unique to the undergraduate level.

As sophomores, sculpture students are introduced to a wide spectrum of techniques and processes, which include metal fabrication, casting, woodcarving, construction, resins, plastics, and stone carving, as well as work in nontraditional materials. Through a team-teaching approach, students are exposed to a broad base of practical information, critical analysis, and creative discourse.

As juniors and seniors, students continue investigations and creative pursuits begun in their sophomore year. Juniors and seniors work more independently as they sharpen their individual focus and prepare for graduate school or professional work. Graduates of the sculpture program have had the opportunity to investigate all three-dimensional media and are prepared to continue independent development.

	Academic elective	3
Total		18

Visual Communication

Designers essentially organize information and give visual form to ideas. Herron's Visual Communication Program emphasizes the process of solving design problems. Students are taught to develop thinking and problem-solving skills and to apply them using digital, interactive, and traditional media. Beginning students are challenged by design problems structured to provide balanced theoretical and technical growth experiences. Advanced students carry design problems from initial planning through final production phases. They are also given the opportunity to use their skills in professional practice situations. The program owes much of its success to the fact that Herron takes advantage of the rich resources of the thriving design and graphic arts industry in Indianapolis.

Students proceeding to the junior- and senior-level Visual Communication program must maintain a Herron studio grade point average of 3.0 in their

major studio courses and an overall grade point average of 2.0. Students falling below these requirements will be notified, placed on probation, and required to submit a portfolio for review. Students on probation failing to submit a portfolio will be denied advancement to upper-level Visual Communications courses.

Graduates of the program hold positions in the private and public sectors, including design offices, advertising agencies, and communication departments within corporations, government, and nonprofit organizations.

Capstone Experience

As a requirement for graduation, students in all programs must successfully complete a senior seminar class or an approved equivalent course or project that includes an advanced writing experience. Please refer to J400 and J410 under "Art Degree Senior Capstones and Research Courses" in the "Course Descriptions." While we recommend that students take these classes during the senior year, they can be taken in the junior year for more flexibility.

As a requirement for the B.F.A. degree, students may be required to display a body of work in a one-person or small group show, a portfolio, or other approved exhibit option. Students may also be required by their departments to turn in up to five slides of their work, which will become the property of the school.

Summary of Credits Required for B.F.A. Majors

Art Education Programs

Division Coordinator Dr. Cindy Bixler Borgmann

Students wishing to become certified to teach in public schools may pursue either a Bachelor of Art Education or a Master of Art Education at Herron.

The Art Education Program of the Herron School of Art is offered in conjunction with the School of Education of Indiana University Bloomington and IUPUI. All degree requirements of the Art Education Program satisfy Rules 46-47 of the Indiana

** Academic elective courses can be from Humanities, Social and Behavioral Science, or Life and Physical Sciences.

Department of Public Instruction. A student may satisfy certification requirements to teach art in the public schools of Indiana by being an art major in the Herron School of Art.

The Bachelor of Art Education Degree

The Bachelor of Art Education (B.A.E.) Program leads to certification (teaching license) in art education in all grades (K-12) in the state of Indiana. The program features a commitment to practical experience integrated with a strong studio program. Throughout the program, students increase skill and knowledge in the content of art education, including art history, criticism, aesthetics, studio, and teaching methodology. Students gain experience by teaching school-age students in a variety of programs and settings, including Art Talks (surrounding elementary and secondary schools), Visiting Artist: Art to School (Herron Gallery), Search (Indianapolis Museum of Art), Saturday School (Herron campus), at the Indianapolis Museum of Art, and student teaching. In addition, students observe and participate in art programs and events around the city.

Students enrolled in the B.F.A. program at the Herron School of Art may also pursue an All-Grade Indiana State Teachers License in Art. Students wishing to pursue certification need to declare a second major (B.A.E.) and follow the requirements for this degree as well as the B.F.A. Students should meet regularly with advisors from both major areas to ensure efficient completion of both degrees. Transfer students holding a baccalaureate degree and M.A.E. candidates without a teaching license may also pursue certification to teach in the public schools in Indiana. These students must have completed a minimum of 50 credit hours in undergraduate art courses, have a 2.5 cumulative grade point average, have submitted a portfolio of studio work, and be admitted to the Teacher Education Program in the School of Education at IUPUI.

Curriculum Requirements for the B.A.E. Degree

Certification Requirements, Rules 46-47 of the Indiana Department of Public Instruction

Summary of Credits Required for the B.A.E. Degree

Studio	50
Art History	12
Professional Education	19
Art Education	10
Student Teaching	12-16
Humanities	12
Life and Physical Science	9
Social and Behavioral Science	9
Total	133-137 cr.

A minimum total of 133 credit hours is required. You may exceed this amount depending on courses selected. Please see an art education advisor *before* registering for classes. All art education students *must* maintain a 2.5 grade point average.

The Bachelor of Art Education plus the Bachelor of Fine Arts

Adding the second degree (B.F.A.) gives students a teaching license plus a strong studio foundation. The B.F.A. provides more than 30 additional credit hours in studio and art history. Students wishing to pursue the double degree should consult with both B.F.A. and B.A.E. advisors each semester. Electives in one degree may be met by fulfilling requirements in the other degree; advisors can counsel students on the most efficient ways to complete the program. The double degree takes a minimum of five and one half years to complete, including summer school.

Admission into the Art Education Program

- Maintain a 2.5 GPA at all times with no lower than a C in all methods courses
- Complete and pass the Preprofessional Skills Test prior to fall of sophomore year
- Pass the portfolio advancement into the Art Education Program in January of sophomore year

Admission into the Teacher Education Program

- Be admitted into the Art Education Program
- Maintain a minimum GPA of 2.5
- Complete formal application to the Teacher Education Program by February 1 of the sophomore year. This online application package

includes application, IUCARE report, criminal history check, PPST scores, and course authorization forms. This application is available **only** at education.iupui.edu/forms/teacher-sec.htm. To access this file, students must have Word 97 for Windows or Word 98 for the Mac. These programs are available in all university computer labs.

Timeline Requirements

- Obtain and read the Herron and School of Education bulletin sections concerning art education programs and student teaching for all-grades students. Students are responsible for planning their own academic progress in this school, so they should meet with their advisors before registration each semester to be sure all requirements are being fulfilled at the proper times.
- Pass the PPST exam prior to sophomore review.
- Register for student teaching *one full academic year prior* to the academic year in which you plan to student teach (i.e., register by October 2002 for teaching in fall 2002 or spring 2003). Failure to register by the published date will delay student teaching for one full year without exceptions. At the same time as registration, students must sign up for an orientation meeting and submit an application to the Student Teaching Office in the School of Education, Education and Social Work Building, ES3165, on the IUPUI campus. Information on this process can be obtained from the Student Teaching Office. Read the section on student teaching for All-Grade Education (K-12 license) in the School of Education section of the IUPUI Campus Bulletin.
- Attain a cumulative GPA of 2.5 in all major area courses and professional education courses; and, a 2.0 in Speech R110 and English W131.
- Register for the *National Teachers Exam (NTE)*—*Art Education Specialty Area* the semester prior to student teaching.
- File an application for graduation in the Herron student services office by October 15 during the year in which students wish to graduate.
- Apply for a teaching certificate during the second semester of the senior year. Obtain this application from Student Services at the School of Education, IUPUI.

A minimum of 133 total credit hours is required. Students may exceed this amount depending on courses selected, so students should see an art education advisor before registering for classes. All art education students must maintain a 2.5 grade point average.

The Master of Art Education Degree

The Master of Art Education Program (M.A.E.) strengthens and revitalizes student artistic and professional experience. The underlying philosophy of the program is a strong belief in the artist-teacher. Course work for this degree is divided equally between art content (studio/history/criticism/aesthetics) and professional methodology.

Students wanting to enter the graduate program at the Herron School of Art must apply to the Graduate School of IUPUI and submit an application and portfolio to the Herron School of Art. Students holding an undergraduate degree, but not certification from the Department of Public Instruction, must complete all requirements for Rules 46-47. To be accepted to the M.A.E. program, the student must have a teaching certificate in art, a 3.0 cumulative grade point average, and must pass the portfolio review.

Curriculum Requirements for the M.A.E. Degree

Certification Requirements, Rules 46-47 of the Indiana Department of Public Instruction

Academic Requirements—Distributive

Art

From the following groups:

Studio (from 400-500 level; non-art major courses may not be applied)

Art History

Art Education (Studio C312, C412)

Total

18 cr.

Note: All graduate students must consult with the appropriate faculty advisor to determine the distribution of credit.

Art Education (Professional)¹

Choose three courses from the following group:

EDUC Z500 Advanced Art Education (May be used to satisfy Art Education [Professional] or Educational Inquiry, but not both.)

EDUC Z510 Arts for Exceptional Children

EDUC Z511 Nonstudio Approaches to Art Instruction

EDUC Z512 Improving Studio Instruction in Art

EDUC Z513 Special Topics in Art Education

EDUC Z532 Advanced Methods and Materials in Art Education

EDUC Z590 Independent Study in Art Education

EDUC Z700 Practicum in Art Education

Total

9 cr.

Education (Professional)

Educational Inquiry

Choose one course from the following:

EDUC Y501 Statistical Methods Applied to Education

EDUC Y507 Testing in the Classroom

EDUC Z500 Advanced Art Education (May be used to satisfy Art Education [Professional] or Educational Inquiry, but not both.)

Psychology of Education

Choose one course from the following:

EDUC P510 Psychology in Teaching

EDUC P515 Child Development

EDUC P516 Adolescent Development

EDUC P525 Psychological Issues in Education

EDUC P540 Learning and Cognition in Education

History and Theory of Education

Choose one course from the following:

EDUC H504 History of American Education

EDUC H520 Education and Social Issues

EDUC H530 Philosophy of Education

EDUC H538 Critical Thinking and Education

Total

9 cr.

Total

36 cr.

The Master's in Art Education plus Certification B.A.E. is required of all graduate students not certified to teach K-12 in the Indiana Public Schools before the M.A.E. degree is awarded. Students accepted to the M.A.E. program on the basis of a portfolio of work and an undergraduate major in art with 50 credit hours, but without a certificate to teach K-12 in Indiana public schools, must complete Rules 46-47 for an all-grade visual art major before they can be granted the M.A.E. degree. The total number of professional education credit hours required is 35 to 41, including student teaching.

Requirements will vary based on the individual student's undergraduate program. While most professional education courses for certification are undergraduate courses, students can substitute 6 hours of graduate credits including P510 for P254, and H520 or H530, to replace H340. M.A.E. candidates must maintain a 3.0 grade point average.

Art History Program

The Bachelor of Arts major in art history gives the undergraduate student an opportunity to study the visual culture of humankind from prehistoric times to the art of today and to understand the significant role played by visual communication in world societies. Art historians develop skills in visual analysis, criticism, research, and writing that enrich life experiences and can lead to a variety of rewarding professional careers.

Unlike the studio B.E.A. degrees at Herron, the art history major is a liberal arts program leading to the B.A. degree. Art history majors take 36 credit hours of surveys and seminars in their major field covering at least three of the following areas: ancient, medieval, Renaissance and Baroque, American, world art, modern, and art theory. Majors must take at least 6 credit hours of studio art as well as a variety of core requirement courses in the humanities and sciences, including at least one foreign language. Specific requirements for the art history major are outlined later in this section.

An art history minor enables students majoring in other areas to expand their knowledge of art history and gain valuable career-building experience. Minor in art history will require 18 hours of art history credits from a variety of historical periods.

Art history can lead to a variety of careers, including the traditional professional paths of teaching and museum work as well as art conservation and restoration, historic preservation, architecture, art dealership, auctioneering and collecting, art criticism and journalism, advertising, filmmaking and photography, exhibition design and preparation, historical research and writing, interior and commercial design, librarianship, independent consulting, and publishing. Art history also enriches the life of the practicing artist. More information is available from the art history office in the Herron Main Building, or by calling the Art History Program at (317) 920-2460 or visiting our World Wide Web site at www.herron.iupui.edu/arhistory/.

¹All Professional Art Education courses are offered only in the summer sessions.

Academic Requirements for a B.A. in Art History

1. A minimum of 128 credit hours is required to complete the Bachelor of Arts in art history degree.
2. A minimum cumulative grade point average of 2.00 (C) is required for graduation.
3. Art history majors must fulfill the following general education requirements:
6 credit hours in English composition
3 credit hours in speech communication
10 credit hours in foreign language (8 in some languages)
6 credit hours in analytic skills
9 credit hours in natural science
6 credit hours in history
6 credit hours in arts and humanities
6 credit hours in social and behavioral sciences
15 credit hours in advanced courses
4. A minimum of 36 credit hours of art history courses is required. Neither H100 Art Appreciation nor H103 Introduction to Contemporary Art may be counted for the art history major or minor requirements. They may, however, be used as general electives. No course in art history in which a student receives a grade below C (2.0) may be used to fulfill the 36 credit hour requirement.
5. A minimum of 6 credit hours in studio art is required.
6. A minimum of 19 credit hours of electives is required. Art Appreciation H100 may count toward elective credit in the major only if taken prior to H101 and/or H102.
7. A minimum of 26 credit hours of senior-year courses must be completed at Herron/IUPUI.
8. A maximum of 8 courses may be taken Pass/Fail but no more than two Pass/Fail courses may be taken in any one academic year. Pass/Fail courses can be used only as electives or non-major 300- or 400-level requirements.
9. A maximum of 12 credit hours may be taken by correspondence through the Indiana University Office of Distributed Education. Authorization from the Art History Program faculty and the Student Services Office at Herron School of Art is required prior to registration.
10. Once a course has been applied toward one requirement, it cannot be used again to satisfy a second requirement except where explicitly stated otherwise. In addition, except in cases of variable-title courses, internships, and other special courses, no course can be counted more than once toward graduation.
11. Credits in the following courses will not be accepted toward the art history degree: English W001, G010, G011, G012, or G013; MATH 130, 132, or any mathematics course lower than M118.

Distribution Requirement Details

Communication Core 19 credits

The communication core, which students are to take as early in their college careers as possible, provides work in written and spoken English to prepare students for organizing and presenting their thoughts

effectively. Further, skills in foreign languages are necessary for a liberally and broadly educated person and are especially important to the professional art historian.

English Composition W131/W132 (6 credits). This requirement may be satisfied in one of the following ways:

1. by completing W131 and W132 or Honors W140 and W150 with a grade of C (2.00) or higher; or
2. by testing out of W131 through the IUPUI English Credit by Exam and completing W132 with a grade of C (2.00) or higher; or
3. for transfer students, by completing course work equivalent to W131 and W132 with a grade of C (2.00) or higher at another campus or institution.

Communication Studies R110 (3 credits). Students with previously acquired competency in public speaking may be eligible for special credit and exemption from this requirement.

Foreign Language (8-10 credits). First-year competency is required, and second-year competency is strongly recommended. This requirement may be satisfied in one of the following ways:

1. by completing first-year courses (10 credit hours, 8 in some languages) with passing grades;
2. by completing a second-year course with a grade of C (2.00) or higher; or
3. by attaining a satisfactory score on a placement test.

Students for whom English is not a first language may be exempted from this requirement, without credit, by completion of English W131 and W132 with the required grade of C or higher. *Note:* Special English-as-a-second-language sections of W131 have been designated for students whose first language is not English.

Native speakers of languages other than English are not permitted to receive credit for 100- and 200-level courses in their native language. Similarly, native speakers of English who have achieved elementary or intermediate proficiency in a foreign language by living or studying in a country where the language is spoken ordinarily will not receive credit for 100- and 200-level courses in that foreign language by taking first- or second-year courses.

In all cases, individual foreign language departments are responsible for determining a student's placement and for recommending a specific number of credit hours for prior work. Before registering for foreign language courses, native speakers of languages other than English should confer with the academic advisor in the relevant department.

Basic Courses 33 credits outside the major

Analytic Skills (6 credits). These courses provide the student with insight into processes of logical reasoning.

Mathematics M118 or above (3 credits)
Logic (Philosophy P262 or P265) or Mathematics or Computer Science or Computer Technology or Statistics (3 credits)

Natural Sciences (9 credits). This area allows for a choice of courses treating the "natural" phenomena of the world according to models of scientific

thought. The 9 credits are to be selected from at least two of the following subjects:

Astronomy
Biology (including botany, zoology, microbiology, anatomy, and physiology)
Chemistry
Geology
Physics
Psychology (B105)
Geography (up to 3 credits may count: G107, G303, or G307 may be counted toward this requirement)

History (6 credits). Courses exploring patterns and processes of history are essential for making decisions in the present, giving the background necessary for students to more capably assume societal responsibility.

H108/H109 Perspectives on the World to 1800 and since 1800

H113/H114 History of Western Civilization I and II

This requirement is fulfilled by two semesters of the following courses: H108, H109, H113, H114, but not H109 and H114.

Transfer students who have taken history courses other than those listed above should consult with the art history faculty about transfer credit.

Arts and Humanities (6 credits). Courses lead to viewing the world from more than one perspective and learning something about its social, cultural, intellectual and spiritual dimensions. The 6 credits must be divided between two of the following four areas:

Fine Arts: Music M174 or Communication Studies T130
English Literature L105 or L115
Philosophy P110 or P120
Religious Studies R133

Transfer credits in the arts and humanities that are not the content equivalent to the courses listed above may be used to fulfill this requirement as follows:

1. Subject to review and approval of the art history faculty, introductory courses in any of the arts and humanities may count toward this requirement.
2. With approval of the art history faculty, where it seems appropriate to the breadth of the course, nonsurvey courses may count toward this requirement.
3. Other arts and humanities courses will be counted toward this requirement on a 2-for-1 basis (6 credit hours satisfying 3 credit hours of this requirement).
4. The following *will not satisfy* this requirement: creative writing, drawing, performance, or studio courses.

Social Sciences (6 credits). An examination of the complexities of human behavior, society, and human interaction, this area uses procedures and information developed in social and behavioral studies. The 6 credits must be divided between two of the following areas:

Anthropology A103 or A104
Economics E201 or E202
Geography G110
Political Science Y101 or Y103

Psychology B104
Sociology R100

Transfer credits in the social sciences that are not equivalent to the courses listed above may be used to fulfill this requirement as follows:

1. With the approval of the division coordinator, introductory survey courses in any of the social sciences shall count toward this requirement.
2. With approval of the division coordinator, where it seems appropriate to the breadth of the course, nonsurvey courses may count toward this requirement.
3. Other social science courses will be counted toward this requirement on a 2-for-1 basis (6 credit hours satisfying 3 credit hours of this requirement).

Advanced Courses (300-400 level) 15 credits outside art history

In addition to cultivating expertise in art history, the degree student should conduct in-depth study of other appropriate subject areas.

Offerings on the 300- and 400-levels of at least four departments or programs of the School of Liberal Arts, the School of Science, the School of Music, or the Herron School of Art may count toward satisfying this requirement. Advanced courses may include those that involve significant cross-disciplinary input, e.g., appropriately designed honors courses or specially designed liberal arts topics courses. Herron advanced studio courses may be counted toward satisfying the advanced courses requirement. Students wanting to take studio classes must submit examples of their artwork to the Office of the Associate Dean for approval.

In order to register for any 300- or 400-level course, the student must satisfy the prerequisite requirements.

The 300- and 400-level courses in Afro-American studies, women's studies, American studies, and the IUPUI Honors Program can also be counted.

The Herron School of Art programs from which advanced courses may be selected include the following:

Ceramics
Drawing
Furniture Design
Painting
Photography
Printmaking
Sculpture
Visual Communication

School of Liberal Arts departments and/or programs from which advanced courses may be selected include the following:

Afro-American Studies
American Studies
Anthropology
Classical Studies
Communication Studies
Economics
English

Film Studies
Foreign Language and Cultures
Folklore
Geography
History
International Studies
Museum Studies
Music
Philosophy
Political Science
Religious Studies
Sociology
Women's Studies

Major Requirements (100-400 level) 36 credits
Includes both H101-H102 History of Art I-II, no fewer than 12 credits at the 300 level, and no fewer than 12 credits at the 400 level. The 300- and 400-level courses should be distributed among at least three different areas of art history selected from the following: ancient, medieval, Renaissance and Baroque, American modern, world art, or art theory. At least 3 credit hours must be taken in art history after 1900.

At least 15 of the 36 credits must be completed in residence at IUPUI; of these 15 credits, two courses at the 300 level and two courses at the 400 level must normally be completed to fulfill this requirement.

Any course in which the student receives a grade below C may not be used to fulfill this requirement. However, courses in which D is received may be counted toward the total 128 credits required.

Studio Art 6 credits

Electives 19 credits
Elective subjects allow students to adjust their curricula to satisfy additional personal needs and interests. These subjects may be used to add an even greater diversity to a liberal arts program or provide opportunity for in-depth reinforcement of required studies. Art history and studio art courses not used to satisfy previously listed requirements may be counted as electives.

Suggested Plan of Study for the B.A. in Art History

Freshman

<i>Fall</i>	credits

Summary of Credit Required for the B.A. in Art History

Communications	19
Analytic Skills	6
Natural Sciences	9
Arts and Humanities	6
Social Science	6
History	6
Advanced Courses (6 cr. in studio art)	21
Art History (major)	36
Electives	19
Total	128 cr.

Minor in Art History

Requirements 15 credits in art history as follows:

H101-H102 Two semester introductory survey 6 cr.
Upper-level courses (200 optional, 300-and 400-level)

One 400-level course recommended.
The 9 credits must include courses in at least two historical periods or subject categories (ancient, medieval, Renaissance/Baroque, American, 19th/20th-century, and art theory) 9 cr.

Only courses completed with a grade of C (2.0) or better will count toward the minor.

Consult the bulletin and schedule of classes for regular and cross-listed courses. Art history courses not eligible to be counted toward the minor (or major) include H100 Art Appreciation and H103 Contemporary Art.

Procedure

Students interested in minoring in art history must make an appointment with the art history faculty advisor for the minor to go over the requirements and plan their programs of study. The Art History office is located in HM 209. Call (317) 920-2460 for an appointment.

Community Resource Faculty

The art history program utilizes the experience and expertise of numerous professionals in the Indianapolis community. Specialists teaching art history in the areas of their professional expertise are:

Paul Diebold, Lecturer in Art History; M.A., Ball State University; B.A., Herron School of Art
Charles Haines, Lecturer in Art History; M.A., M.F.A., B.A., Indiana University
J. Scott Keller, Lecturer in Art History; B.S., Indiana University
William L. Selm, Lecturer in Art History; M.A., Boston University; B.A., Indiana State University
William E. Taylor, Lecturer in Afro-American Studies, Lecturer in Art History; M.S., B.S., Indiana University

Options for Nonmajors

Elective Courses

While Herron's primary emphasis is on its degree programs, the school also provides a broad range of instruction for adult nondegree students and for university students who desire to learn about various phases of art on an elective basis. Generally, the courses have either no prerequisite requirements or modest prerequisite requirements.

Enrollment in any of these elective courses does not in itself constitute admission to any of the Herron School of Art degree programs.

For complete information, including detailed course listings and admissions procedures, please contact the Herron Student Services Office at (317) 920-2416.

Precollege Classes

Saturday Art Classes for High School and Junior High School Students

The Herron Saturday classes provide a wide range of learning experiences for the high school or junior high school student who is especially interested in the visual arts. Sixth-grade students will be accepted if the grade is part of a middle school program. Instruction is provided by capable junior and senior Herron students working under faculty supervision. The combination of quality instruction and an art school environment encourages exceptional development of creative skills.

Partial scholarships are available through local high school teachers. For more information call (317) 920-2451.

Summer Honors Art Workshop

The Herron Summer Honors Art Workshop is an intense program of instruction for high school students and recent graduates who are interested in summer art programs. Instruction in drawing, design, theory, three-dimensional design, and printing is provided by a Herron faculty member, and assignments are carefully selected equivalents of those given to Herron's first-year students. The moderate class size leads to quality instruction.

During the workshop, visiting artists will talk about their work and introduce students to various career opportunities in art. A series of planned field trips provides meaningful exposure to many aspects of the art and opportunities to do artwork in the field.

To qualify for the Summer Honors Art Workshop, a student must have completed the sophomore year of high school. For more information call (317) 920-2455.

Continuing Education

Noncredit adult education courses at IUPUI are open to adults regardless of age or educational background. These courses are intended for persons who, for personal or professional enrichment purposes, want to expand their knowledge. Formal admission to the university is not required for enrollment in the continuing education programs.

For complete information, please call the IUPUI Division of Continuing Studies, Noncredit Programs, (317) 274-4501.

Courses

Actual course content may occasionally deviate somewhat from the description printed in this bulletin. Changes are sometimes made during the period covered by a bulletin with the intention of improving courses or updating content.

The abbreviation "P" refers to the course prerequisite or prerequisites; the abbreviation "C" refers to the course corequisite or corequisites.

For registration purposes, the department abbreviation for Herron is HER.

Art Courses for Nonmajors

E101-E102 Beginning Drawing I and II (3-3 cr.) Introduction to drawing, exploring a wide

range of techniques. Study from nature and still-life objects and sketching from the model.

E105-E106 Beginning Painting I and II (3-3 cr.) Introduction to the techniques of painting. Aspects of pictorial composition; wide range of media. Painting from still life and live model. Will not count toward a Herron B.F.A. degree.

E201 Photography I for Non-Art Majors (3 cr.) Introduction to the basics of black-and-white fine art photography for non-art majors only. Students provide their own fully manual 35mm camera. Will not count toward a Herron B.F.A. degree.

Art Degree Foundation Program

C111 Three-dimensional Design (3 cr.)

P: Admission to the Herron School of Art. Introduction to the three-dimensional creative process through the expressive use and exploration of a wide range of materials and techniques.

C121 Design Theory (3 cr.) P: Admission to the Herron School of Art. Introduction to basic design and color theory through the manipulation of imagery in two-dimensional media. Equal emphasis on thought processes and manual skills.

D101-D102 Life and Object Drawing I-II (3-3 cr.) P: Admission to Herron School of Art. Introduction to the basic skills of drawing. Working from natural and manufactured objects and the human figure. Development of expressive draftsmanship with an emphasis on proportion and structure.

F101-F102 Foundation Studio I-II (4-4 cr.) P: Admission to Herron School of Art. Introduction to art and design, fundamental and orientation session to Herron and the university. Students survey many art concepts and processes by working with two different faculty members over the course of the semester. Students are periodically introduced to Herron and university services such as e-mail, campus libraries, the Herron Gallery, and other opportunities.

Art Degree Senior Capstones and Research Courses

Senior Capstone

J400 Practical Concerns for Studio Artists (3 cr.) Course devoted to practical aspects of managing a studio and maintaining an artistic career. Subjects including artwork photography, gallery representation, legal and tax issues, and health hazards will be covered. This course is required for all fine arts students.

J410 A Critical Approach to Art: Seminar (3 cr.) A capstone seminar-style class in which students define and refine their personal artistic philosophies through analytic comparisons to various historical and contemporary ideas from the realms of philosophy, art history, critical theory, etc. In short weekly papers and open discussions, student address large-scale questions whose answers should help them develop the confidence to chart their conceptual and professional development after graduation.

Visual Research

R201-R202, R311-R312, R411-R412, R511-R512 Visual Research (Variable Title) (3-3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

Art Education

Graduate

EDUC Z500 Advanced Art Education (3 cr.) Survey of contemporary issues in art education. Examination of research history and philosophy of art education to discover relationships between developments in education as a whole and art education. Emphasis on issues that directly affect the art teacher within the educational system.

EDUC Z510 Art for Teachers of Exceptional Children (3 cr.) A course concerned with planning and presentation of art lessons and programs for children with a variety of special needs. The program involves presentations by guest professionals and field experiences. Emphasis is on public school applications. For nonpublic school application, see M431.

EDUC Z511 Nonstudio Approaches to Art Instruction (3 cr.) Exploration of critical approaches to newer media, including film, video, and television, directed toward an art context. Emphasis on the development of critical skills and approaches to new media in the classroom.

EDUC Z512 Improving Studio Instruction in Art (3 cr.) Designed to examine major directions in art and the points of view of professional artists in order to develop new approaches to elementary and secondary art instruction.

EDUC Z513 Special Topics in Art Education (1-3 cr.) A variable topic course designed to cover current issues in art curriculum and assessment. Designed for the K-12 art specialist.

EDUC Z532 Advanced Methods and Materials in Art Education (3 cr.) P: EDUC M453 or equivalent. Designed to provide the advanced art specialist with an opportunity to continue exploration of materials and the ability to relate the knowledge to specific professional situations.

EDUC Z533 Arts and Crafts for Elementary Teachers (3 cr.) Not open to art education majors. The course is designed to familiarize elementary teachers with concepts and materials in the visual arts. A vocabulary familiar to classroom teachers is used. The focus of the class is not on the mechanics of teaching art, but rather on developing positive attitudes toward and understanding of the visual arts.

EDUC Z590 Directed Independent Study in Art Education (Variable Credit) (1-6 cr.) P: Permission of instructor. Individual study. Credit to be arranged.

Professional

EDUC M332 Art Experiences for Elementary Teachers, Part I (2 cr.) Not open to art education majors. The selection, organization, guidance, and evaluation of two- and three-dimensional art activities in the elementary grades. Laboratory experience with materials and methods.

EDUC M333 Art Experiences for the Elementary Teacher, Part II (2 cr.) P: HER H100. Not open to art education majors. Development of skills in viewing and discussing art. Guidance in selecting and organizing visuals and media for art instruction in the elementary classroom.

EDUC M371 Foundations of Art Education (4 cr.) Historical, sociological, and philosophical foundations of art education; curriculum development; individualized and interdisciplinary learning; introduction to K-12 audiences and school organization; and general processes and practices of teaching art, including the creative problem-solving process and interpreting, understanding, and judging art. School and museum field experiences included.

EDUC M472/M400 Teaching Art in Elementary Schools and Laboratory/Field Experience for Seniors (3 cr.) P: M371, PPST. Develops understanding and appreciation of teaching, with emphasis on teaching in the elementary schools. Includes curriculum and lesson planning, organization of materials and ideas, and techniques of classroom management. To be taken concurrently with EDUC M400, which encompasses off-campus experiences in the elementary schools.

EDUC M473/M401 Teaching Art in Secondary Schools and Laboratory/Field Experience for Seniors (3 cr.) P: EDUC M371, C311. Develops understanding and appreciation of teaching, with emphasis on teaching art in the secondary schools. Includes advanced studies of curriculum and lesson planning, classroom organization, and management techniques. Must be taken concurrently with EDUC M401, which encompasses off-campus experiences in the secondary schools.

EDUC M482 Student Teaching: All Grades (1-16 cr.) P: EDUC P254, H340, W200, M300, K205, M464, required methods courses (C311, M371, M472, and M473), and senior standing. Each student assumes, under the direction of the supervising teacher, responsibility for teaching his or her subject matter area in an Indiana public school. Additional course fee. Only S-F grades given.

Studio

C311 Art Education Studio Survey (3 cr.) A course intended to insure broad knowledge of the type and scope of media likely to be encountered in elementary and secondary art programs with consideration of inclusion students. Required for all art education majors.

C312 Art Education Studio (3 cr.) Jewelry or papermaking. Studio experience designed to supplement the major offerings at Herron. Provides an opportunity to explore jewelry or papermaking as art forms. Various media and techniques not normally

covered in major studio offerings but useful in a teaching situation.

C412 Advanced Art Education Studio: (Variable Content) (2 cr.) P: C312. Jewelry or papermaking. This course allows students the option of acquiring deeper knowledge in areas not normally available through Herron studio programs.

C513 Advanced Art Education Survey (3 cr.) A studio course designed primarily to meet needs of in-service teachers to keep current with developments in materials and techniques available for artistic expression.

Art History

H100 Art Appreciation (3 cr.) An understanding and appreciation of outstanding works of art through analysis of artistic purposes and techniques, and knowledge of historical style and subject matter. Not counted as credit toward the B.F.A. or B.A.E. degree, nor toward the major or minor requirements in art history.

H101-102 History of Art I-II (3-3 cr.) Visual analysis of selected works from the history of Western art. First semester defines historical terms, processes, and principles of architecture, painting, and sculpture, and covers the history of art from Prehistoric through Late Gothic. Second semester examines problems of style and subject matter from Early Renaissance to the twentieth century. Required of all Herron degree students.

H103 Introduction to Contemporary Art (3 cr.) This course introduces the vocabulary of visual arts in the twentieth century. Major movements are briefly introduced with characteristic works. Painting, sculpture, photography, printmaking, computer graphics, video, and environmental and performance art in the past three decades are emphasized. Required of all Foundation Program students. Not counted toward the major or minor requirements in art history. May be counted under electives.

H203 Topics in Art History (3 cr.) Study of selected topics or issues in the history of the visual arts. Topics change in order to coordinate with current exhibitions, special events, or faculty expertise. Refer to the current *Schedule of Classes* for specific course descriptions.

H300 Black Visual Artists (3 cr.) A survey of the artistic traditions of Africans in the New World, from the period of slavery in North and South America through contemporary and expatriate African American artists. Equivalent to Afro-American Studies A352; students may not receive credit for both courses.

H301 Arts of Africa, Oceania, and the Americas (3 cr.) This course introduces the visual arts of sub-Saharan Africa, Oceania, and pre-Columbian and historic Native America. A limited number of cultures from each of these four world regions is selected for analysis.

H302 Beginnings of Twentieth-Century Art: 1886-1914 (3 cr.) From the last impressionist group show of 1886 until the end of World War I, the foundation was laid for new visual expressions by both painters and sculptors. Course topics include

post-impressionism, symbolism, art nouveau, fauvism, expressionism, orphism, cubism, and futurism.

H303 Contemporary African American Art and Artists: 1920-80 (1 cr.) This distance education telecourse targets the African American visual artist, but it also includes the political and social non-art-related elements that contributed to the period's activities. The course presents an introduction to, and the foundations of, the African American visual artist. It begins with the pre- and post-Harlem Renaissance of the 1920s and journeys to modern African American art and its relation to post-World War II contemporary European and Euro-American art.

H310 Classical Archaeology (3 cr.) The material remains of the classical lands from prehistoric through Roman times and a variety of approaches by which they are understood. Archaeological theory and methods are illustrated through select sites, monuments, works of art, and other remains of cultural, artistic, and historical significance. (Equivalent to Classical Studies A301; students may receive credit for only one of these courses.)

H323 History of Printmaking I (3 cr.) This course explores the artistic evolution and cultural significance of printmaking from the invention of printing through the eighteenth century. Emphasis is given to the development of the woodcut, engraving, and etching processes, and to the works of major printmakers such as Durer, Rembrandt, and Hogarth.

H324 History of Printmaking II (3 cr.) This course covers the history of printmaking from 1800 to the present with emphasis on the development of new techniques such as lithography and silkscreen; the relationship of printmaking processes to other media in the work of artists such as Cassatt, Picasso, and Warhol; and the role of printmaking in the cultural context of visual communication.

H326 Romanesque and Gothic Art (3 cr.) Romanesque and Gothic art covers the period from about 1000 until 1550, from the artist-craftsman tradition of monasteries and cathedrals to the end of the Age of Faith in Europe. Painting, sculpture, and stained glass will be considered in their social and architectural context.

H333 Art of the Renaissance (3 cr.) Introduction to the architecture, painting, sculpture, and graphic media of Renaissance Europe. Emphasis is placed on the political and social climate prevailing from 1400 to 1600, and its effect on the arts of Italy, Flanders, Spain, Holland, France, Germany, and England.

H334 Baroque Art (3 cr.) Exploration of the characteristics of Baroque art and its development in the seventeenth century. Special emphasis on selected Baroque artists such as Bernini, Rubens, Rembrandt, Velazquez, and Poussin, and on their personalities, styles, and positions in seventeenth-century society.

H341 Nineteenth-Century Art (3 cr.) Focus is on the major movements and artists in European painting and sculpture from the French Revolution to post-impressionism. Topics include neoclassicism, romanticism, realism, and impressionism. Artists such as David, Ingres, Goya, Delacroix, Courbet, Manet, Monet, and Degas will be covered.

H342 From Dada to Abstract Expressionism: 1915-1950 (3 cr.) International movements in painting and sculpture from World War I until the emergence of the New York School after World War II including Dada activities in Europe and New York, the Bauhaus, European surrealism, and American art.

H343 Nineteenth-Century Architecture and City Planning (3 cr.) An analysis of significant architecture and city planning in Europe and North America from 1790 to 1886. Emphasis on aesthetic, spatial, and theoretical concepts of key architects and their solutions, technological advances, and social implications.

H344 Modern Architecture (3 cr.) Emphasis is given to European and American modern architecture since 1892 and to contemporary architecture in Indiana since 1942. Selected modern movements such as art nouveau, Chicago school, prairie, the Bauhaus, international style, and post-modernism will be studied. Special attention is directed to the American architects Henry Hobson Richardson, Louis Henri Sullivan, and Frank Lloyd Wright, and to their contemporaries in Europe: Walter Gropius, Le Corbusier, and Ludwig Mies van der Rohe.

H345 American Art to 1913 (3 cr.) A multicultural and interdisciplinary stylistic approach will be used to study selected examples of American architecture, painting, and sculpture from the seventeenth century to the Armory Show of 1913. Some consideration will be given to Indiana architecture and painting.

H347 Art from 1950 to the Present (3 cr.) Deals with European and American painting and sculpture from abstract expressionism to the present. Topics include post-painterly abstraction, pop art, minimal art, conceptual art, body and performance art, photorealism, site and architectural sculpture, and installations.

H348 History of Photography (3 cr.) This course is a critical examination and in-depth study of photography from 1839 until the present. The general approach is from an artistic and cultural viewpoint, stressing the development of photography as a medium of personal artistic expression as well as its relationship to broader artistic ideas and sociocultural issues.

H349 History of Twentieth-Century Crafts (3 cr.) A survey of twentieth-century crafts from the Bauhaus to the present. Uses of clay, fiber, glass, wood, and metal will be covered and the function of crafts in society. Emphasis is mainly historical, but techniques will be discussed.

H351-H352 African Art I and II (3-3 cr.) First semester: Art of sub-Saharan Africa with particular attention given to the artistic traditions of the western Sudan and Atlantic coast to the Niger River. Second semester: Art from the Niger-Benue through the Cameroons and Ogowe River valley to the Congo River basin and Zaire. This course will examine the historical methods, stylistic classifications, and ethnographic contexts in which African art is created and studied.

H355 Arts of the American Indian (3 cr.) Survey of Native American Indian arts from pre-Columbian

cultures to the 19th century. Particular attention is given to the arts of Meso-America, Eastern United States, American Southwest Plains, and Northwest Coast.

H361-H362 Asian Art I and II (3-3 cr.) Major art forms from the Islamic cultures of western and central Asia, the Hindu cultures of India and southeast Asia, and the Buddhist, Tao, and Shinto cultures of east Asia are discussed.

H400 Topics and Methods in Art History (1-3 cr.) Critical examination of important topics and methods from the history of art, using the seminar approach. Content may vary according to the specialty of the instructor. May be repeated up to three times for a maximum of 9 credit hours.

H402 The Roots of Modernism: 1905-1915 (3 cr.) This seminar deals with the decade in the early twentieth century that saw the rise of drastically new attitudes and styles in painting and sculpture. From the first group exhibit of the fauves in 1905 until the arrival of Marcel Duchamp in New York in 1915, the foundations for future developments in art were laid for the twentieth century.

H403 Art Museum Studies (3 cr.) Designed to provide insight into the various functions and activities of the art museum, with emphasis on professional opportunities. Administration, conservation, education, and exhibition are some of the areas covered. Includes an introduction to the history, present-day operation, and future of the art museum in America.

H404 Art of the Past Two Decades (3 cr.) A seminar focusing on directed research into the art, critical writing, and conceptual attributes of current art. Topics include postmodernism, appropriation, feminism, multiculturalism, deconstruction, and semiotics.

H407 Historical Painting Techniques (3 cr.) Introduction to materials and techniques used in fresco, encaustic, egg tempera, and resin-oil glaze painting. Each unit is introduced by a slide lecture illustrating major historical examples of the painting medium to be explored. Remaining studio time is devoted to the actual painting processes.

H413 Art and Archaeology of Greece (3 cr.) Art and archaeology of Greece from about 1000 B.C. through the Hellenistic period. Special attention given to the development of Greek architecture, sculpture, and vase painting. Equivalent to Classical Studies C413; students may receive credit for only one of these courses.

H414 Art and Archaeology of Rome (3 cr.) Development of Roman architecture, sculpture, and painting from the beginning through the fourth century A.D. Consideration given to the major archaeological sites. Continuation of H413, but H413 is not a prerequisite. Equivalent to Classical Studies C414; students may receive credit for only one of these courses.

H418 Myth and Reality in Greek Art (3 cr.) An introduction to Greek iconography (the study of images) that explores contemporary approaches to narration and representation. The course examines

the illustration of myth, history, and everyday life in relation to ancient society. Equivalent to Classical Studies A418; students may receive credit for only one of these courses.

H495 Problems in Art History (1-3 cr.) Directed study in art history for independent research and/or special external programs. May be repeated three times for a maximum of 9 credit hours.

H497 Educational Opportunities Abroad (1-6 cr.) A variable-credit course designed to allow credit for exceptional opportunities in art history study and travel outside the United States.

Book Arts

A204 The Visual Book (3 cr.) Exploration of the communicative possibilities of the book format through lecture, studio projects, and field trips. Introduction to letterpress, binding, and typographic concerns.

A291 Bookbinding (3 cr.) A beginning course in bookbinding dealing with traditional bookbinding and box-building techniques. Students are instructed on use of tools and materials. Projects are designed to encourage exploration and experimentation of book structure.

Ceramics

C204 Beginning Ceramics, Hand Building (3 cr.) P: Foundation Program. Beginning studio introduction to handbuilding, glazing, and firing of clay as an expressive studio medium applicable to contemporary and sculptural concepts.

C206 Beginning Ceramics, Wheel Throwing (3 cr.) P: Foundation Program. Focus on wheel throwing as an expressive tool within an overall ceramic experience. Clay vessels will be utilized to develop an understanding of glazing and firing techniques. Traditional forms will be used to expand sensitivity to material, history, and wheel throwing techniques.

C208 Intermediate Wheel Throwing (3 cr.) P: C206. Designed for non-art majors who wish to pursue wheel throwing. Emphasis is on developing skill through an exploration of more complex forms and investigative advanced embellishment and firing techniques.

C304-C305 Ceramics III-IV (3-3 cr.) P: C204-C206 Advanced workshop. Focus on students' conceptual development and self-motivated projects. Heavy concentration on material testing and exploration of firing techniques. Emphasis will be placed on the merging of technique and concept to ready students for entry into a career as a ceramic artist or educator.

C307 Clay and Glaze Materials (3 cr.) P: C204, C206, and C304. This course is an investigation into the chemistry that makes up clays and glazes. Students develop an understanding of these materials and their interactions by systematically testing a variety of glazes and clay bodies that are used by contemporary ceramic studio artists. Topics include low and high fire glazes, clay bodies, specialty glazes, and clays.

C308 Intermediate Wheel Throwing (3 cr.) P: C204 and C206. Designed for art majors who wish to pursue wheel throwing as a main focus of expression. Assignments will focus on developing wheel throwing skills through an investigation of contemporary vessel makers as well as development of a personal style in vessel work.

C350 Ceramic Workshop (3 cr.) P: C204 and C206. This course is designed to offer specific focused topics of interest in the ceramic arts. Such topics may include kiln building, slip casting, mold making, making and using decalomania, raku firing to name a few.

C400 Individual Research in Ceramics (1-6 cr.) P: C305. This course is designed to investigate specific advanced ceramic techniques as used by contemporary artists. Areas of study will be offered on an alternate basis. Subject matter to be covered will include kiln construction and glaze calculations.

C405 Individual Research in Ceramics (1-6 cr.) P: C305 and C307. Study devoted to the student's independent research in ceramics. Emphasis placed on advanced techniques and the development of concepts and philosophies pertinent to the student's direction.

Drawing

D201-D202 Drawing III-IV (3-3 cr.) P: Foundation Program. Investigation of nature and the human figure through drawing. Emphasis on structure, line, gesture, and movement.

D230 Figure Drawing (3 cr.) Students draw in a variety of media directly from the live model.

D301-D302 Drawing V-VI (3-3 cr.) P: D201-D202. Investigation of traditional and nontraditional elements of space in drawing. Emphasis placed on conceptual development and on drawing as an exploratory process and a means of producing finished works of art.

D401-D402 Drawing VII-VIII (3-3 cr.) P: D301-D302. Concerned solely with conceptual and technical capabilities in drawing necessary to satisfy the student's individual expressive needs. A primary aim of the course is to refine and extend analytical and verbal skills by means of participation in regularly scheduled open class critiques.

Furniture Design

Q241-Q242 Beginning Furniture Design I-II (3-3 cr.) P: Foundation Program or permission of instructor. Beginning Furniture Design concentrates on the concept of art furniture through the design and building of functional objects. Furniture design focuses on both historical reference and contemporary theory. Works created in the courses range from utilitarian to non-utilitarian furniture forms. Students are introduced to wood as a material, its preparation, and furniture construction, including basic joinery, forming, shaping, and finishing techniques. Students learn to start from a working drawing, build a model, and construct a finished piece. Beginning projects generally focus on table and bench forms.

Q341-Q342 Intermediate Furniture Design III-IV (3-3 cr.) P: Q241 and Q242. Intermediate Furniture Design concentrates on furniture as an art form as well as applications for everyday use. Furniture is defined as a medium in how its formal concerns address conceptual motives. Students are required to undertake an in-depth investigation of furniture, its historical roots as well as contemporary individual artist-makers. Students learn advanced joinery and carcass construction with door and drawer assemblies. Alternative materials and experimentation are encouraged.

Q441-Q442 Advanced Furniture Design V-VI (3-3 cr.) P: Q341 and Q342. Advanced Furniture Design offers the student an opportunity to define himself/herself as an artist in the field. Individual design aesthetic is emphasized. Complex furniture forms and advanced techniques are applied to each student's expertise.

Illustration

A311-A312 Illustration I-II (3 cr.) P: D211 or D201. Students receive a broad exposure to basic techniques of pictorial communication common to all phases of illustration.

A411-A412 Advanced Illustration (3 cr.) P: A312. Students are exposed to contemporary professional illustration. Students may participate in local and national competitions.

A414 Children's Book Illustration (3 cr.) Working with a preexisting children's text, students will develop a layout and mock-up or "dummy" of a children's picture book. Each student will then produce three finished illustrations for interior pages and/or the cover. Issues of page composition, sequential imaging, visual flow, and use of techniques will be covered.

A415 Independent Study in Illustration (3 cr.) P: A311 and A312. Students will develop individualized projects that will explore a specific aspect of illustration or illustrations that are theoretically linked throughout the semester. All students will be responsible for submitting a written proposal which will outline the content goals and timelines for their projects.

Painting

P201-P202 Painting I and II (3-3 cr.) P: Foundation Program. Investigation of the figure and landscape in painting. Emphasis on composition, content, and the development of a working knowledge of painting processes.

P210 Portrait Painting (3 cr.) Includes the study of features and basic construction of the head. Exploration of various media. Emphasis on rendering flesh tones, form, and colors with respect to the model.

P220 Watercolor Painting (3 cr.) Investigation of watercolor processes and techniques. Emphasis on individual creative objectives. Very intense study that will require exploration of watercolor to its fullest potential.

P222 Advanced Watercolor Painting (3 cr.) P: P220 This is a continuation of P220 watercolor. Students will work independently and be responsible for further investigation of concepts and ideas.

P301-P302 Painting III and IV (3-3 cr.) P: P201-P202, D201-D202. Exploration of traditional and contemporary concepts in painting with emphasis on relationships between form and content.

P303-P304 Concepts in Figuration I and II (3-3 cr.) This class will explore the discipline of figure and figurative paint in both traditional and conceptual approaches. Emphasis will be placed on sound painting techniques, composition, drawing, color, and concept.

P401-P402 Painting V and VI (3 or 6 cr.—3 or 6 cr.) P: P301-P302. Emphasis on personal solutions to form and content in painting. Classroom format features scheduled criticisms and seminars. Special counseling in areas of graduate study, fellowships, assistantships, grants, exhibitions, and professional potential following graduation.

P403-P404 Individual Research in Painting I and II (3-3 cr.) Offered in conjunction with P401-P402 only. Research devoted to the student's own projects in painting.

Photography

K201-K202 Photography I and II (3-3 cr.) P: Foundation Program. Introduction to black-and-white photography with an emphasis on the development of creative, personal, and photographic vision. The student must have a camera (standard 35mm or larger format) with an adjustable shutter and diaphragm. Film, paper, and film developer are supplied by the student.

K211 Introduction to Electronic Media (3 cr.) This course serves as an introduction to electronic photo-based media, including digital imaging and video. Students are introduced to both the technical and conceptual aspects of these media, specifically in relation to contemporary photography. This course will cover digital imaging technique through Adobe Photoshop as well as discussions about digital artists, critical thinking, principles of the photographic language and aesthetics relating to, and impact on personal creativity and expression. No prior knowledge of the computer or video is expected.

K300 Advanced Digital Imaging (3 cr.) P: K211 or permission of instructor. The course will cover time-based digital media techniques as well as discussions about video artists and digital artists, critical thinking, language and aesthetics in relation to, and impact on personal creativity and expression. This investigation will be accomplished through a combination of producing work; using Adobe Photoshop, Illustrator, After Effects, Premiere, and Macromedia Director; discussing the work of other photographers who work with digital imaging; historical lectures. Prior knowledge of computer basics and Adobe Photoshop required.

K301-K302 Photography III and IV (3-3 cr.) P: K201-K202. Exploration of photography as an expressive visual medium and the relationship of photography to culture. Advanced controls over negative production and printing techniques are taught. Students learn to speak critically of their own work, as well as the work of their peers, and the work of other artists. Alternative methods of

presentation, beyond the window mat, are introduced.

K303 Color Photography (3 cr.) P: K201-K202 or permission of the instructor. Students are introduced to a theoretical basis for color theory and the psychology of color. On a technical level, color balancing and regional color correction are stressed. In individual color darkrooms, students produce their own color-coupler prints, as large as 16 x 20 inches, from our on-site Kreonite processor. As in the department's other photo classes, there is an emphasis on developing good exposure and printing techniques. Students are encouraged to develop material conceptually, to understand how work is produced, and to speak about it.

K304 Advanced Color Photography (3 cr.) P: K303. Advanced color photography builds on the skills obtained in K303. Using knowledge gained in color balancing and regional color corrections. Students experiment with advanced printing techniques using materials such as Polaroid, transparency film, as well as some of the traditional alternative processes. Students further their study of significant historic and contemporary photographers and develop an understanding of the relationship of their work to that which has preceded theirs.

K311 Individual Research in Photography (3 cr.) Junior-level course that will provide special arranged instruction within photography. May take form of a field experience, in which case there will be close collaboration between specialized faculty member and work supervisor, who will jointly evaluate performance.

K401-K402 Advanced Photography (6-6 cr.) P: K301-K302, K303, photographic portfolio, and permission of the instructor. An advanced course taught as a seminar for graduating photo majors. During the course of the semester, the student produces two professional-quality exhibitions and a photographic portfolio. Within the context of this class, students may produce mixed media, performance, video, time-based work, as well as traditional black-and-white and color photography. Emphasis is placed on individual instruction, preparation for graduate study, and professional exhibition practice.

K411-K412 Individual Research in Photography (3-3 cr.) Senior-level course for students who have already taken K311. Will allow a student additional individualized instruction with a photography faculty member.

Printmaking

G201 Etching I (3 cr.) P: D101-D102, C121. Beginning course in intaglio printmaking, which introduces students to etching, engraving, and drypoint techniques. Students are instructed in basic printing processes and in use of the presses.

G202 Lithography I (3 cr.) P: D101-D102, C121. Beginning course in lithography dealing with basic techniques of black-and-white and color printing. Includes specific lectures in litho technology, materials, and application.

G203-G307 Silkscreen Printing I and II (3-3 cr.) Design and drawing for silkscreen processes, construction of equipment, and methods of making stencils (including photo stencils). Printing in black and white and in color.

G205 Monotype/Woodcut (3 cr.) P: D101-D102, C121. Beginning course in monotype and woodcut. Students learn traditional and experimental approaches to relief printmaking. Students are instructed on use of tools and materials and basic printing processes. Printing is in color and black and white.

G301-G303 Etching II and III (3-3 cr.) P: G201, G202, D201, D202. An extensive introduction to color printing processes in etching is provided at the beginning of the course. Students are required to do at least a part of their work in color. Other etching techniques not covered in G201 will also be presented.

G302-G304 Lithography II and III (3-3 cr.) P: G201-G202, D201-D202. Advanced study designed to extend students' ability to use their technical knowledge as a means of expression. Experimental printing in color and black and white.

G305-G306 Photo Processes for Printmaking I and II (3-3 cr.) P: K201-K202, G201-G202, and/or permission of the instructor. C: Enrollment in a 300-, 400-, or 500-level printmaking course. Introduction to the use of light-sensitive materials in printmaking processes. Involvement with nonsilver photographic processes such as kallitype, photoetching, photolithography (using halftone and contact materials), photosilkscreen, and gum printing. Color separation principles for printmaking processes.

G309 Monotype/Woodcut II (3 cr.) P: G205. Advanced study of monotype techniques, both traditional and nontraditional. Emphasis is placed on students gaining control of monotype process in order to accurately express their artistic vision. Students are encouraged to explore their individual goals and research into the various mediums available.

***G401-G402 Printmaking III and IV Etching (3-6 cr.)** A continuation of advanced processes in intaglio printmaking with demonstrations and experimentation with materials and techniques, including computer-assisted approaches. Individual and group critiques and discussions promote ongoing development of images and concepts.

***G401-G402 Printmaking III and IV Lithography (3-6 cr.)** A continuation of advanced processes in lithography with demonstrations and experimentation with materials and techniques, including computer-assisted approaches. Individual and group critiques and discussions promote ongoing development of images and concepts.

G403-G404 Individual Research in Printmaking I and II (3-3 cr.) Offered in conjunction with G401-G402 only. Research devoted to the student's own projects in printmaking.

*Printmaking majors may accumulate the 12 credit hours required in 400-level printmaking with any combination of the above etching and lithography courses. Printmaking students at this level may also work in monotype, woodcut, silk screen, or other printmaking mediums within the context of any of the G400-level offerings after consultation with the instructor.

G501-G502 Printmaking (3 and/or 6 cr.—3 and/or 6 cr.) Graduate-level printmaking for students who have completed G401-G402 or their equivalent. Visual research on a highly individual level with personal criticism by the instructor.

Sculpture

S201-S202 Sculpture I and II (3-3 cr.)

P: Foundation Program. Basic consideration of three-dimensional form in sculptural concept. Exposure to various related materials, techniques, and processes.

S301-S302 Sculpture III and IV (3 or 6 cr.—3 or 6 cr.) P: S201-S202, D201-D202. Emphasis on creative expression through sculpture. Covers wood and plastic materials, metal casting, and industrial fabricating techniques.

S401-S402 Sculpture V and VI (3 and/or 6 cr.)

P: S301-S302. Concentrated, specialized study of sculpture, with emphasis on extensive research in pursuit of individual direction.

S403-S404 Individual Research in Sculpture I and II (3-3 cr.) Research devoted to the student's own projects in sculpture.

Visual Communication

A201 Visual Communication I (3 cr.) P:

Foundation Program. Introduction and general exposure to the graphic design profession. Provides instruction in mastering technical and conceptual skills relative to design. Students explore the meaning and power of images and investigate problem-solving processes.

A202 Visual Communication II (3 cr.) P: A201, A251, A271, D211 and/or K201 C: A272, A252, D211 and/or K201. A continuation of Visual Communication I with emphasis on multifaceted projects. Projects explore combining type and conceptual image and continues to investigate problem-solving processes.

D211 Communicative Drawing (3 cr.)

P: Foundation Program. Emphasis is placed on communicating verbal concepts in a visual manner and developing drawing techniques.

A251 Typography I (3 cr.) P: Foundation Program. Introduction to the history, terminology, and the formal aspects of typography through projects using foundry type and letterpress combined with computer technology.

A252 Typography II (3 cr.) P: A201, A251, A271, D211 and/or K201 C: A272, A202, D211, and/or K201 or consent of instructor. Students are involved in a wide range of problems dealing with the manipulation of type. Course explores typographic systems and multiple-page formats.

A261 Introduction to Computer Imagery I (3 cr.) P: Foundation Program. An introductory course providing hands-on learning experiences in using the Macintosh computer and Adobe Photoshop, a pixel-based paint and image-editing software package, to create, scan, and manipulate images. A studio elective open to all Herron degree-seeking students with little or no computer experience who have completed the foundation year.

A262 Introduction to Computer Imagery II (3 cr.) P: A261 or permission of instructor. A continuing course that extends the student's abilities in using the Macintosh computer and Adobe Photoshop as a means of creative self-expression. A studio elective for all Herron degree-seeking students with the above prerequisites.

A271 Computers in Visual Communication I (3 cr.) P:

Foundation Program. An introductory computer course for exploring software programs used in the graphic design profession. Course covers basics in page layout, image generation, digital imaging, scanning, and color output. Required for all visual communication majors.

A272 Computers in Visual Communication II (3 cr.) P:

A201, A251, A271, D211, and/or K201. C: A252, A202, D211, and/or K201. A continuation of Computers in Visual Communication I. Students learn more advanced techniques in page layout and image-generation software. Course will introduce students to new media areas in interactive multimedia, animation, and Web design. Required for all visual communication majors.

A281 Macintosh Computer Basics (3 cr.)

Introduction to Macintosh computers. Basics include operation of the computer including save, store, retrieve, and print files; printer options at Herron; introduction to the Internet and e-mail; and introduction to four Macintosh software applications: Suitcase, QuarkXPress, Photoshop, and Illustrator.

A301 Visual Communication III P: A202, A252, A272, D211, and K201. C: A331, A341. An in-depth examination of design systems through the study of corporate identity. Students work on an extensive identity project, designing a logo and applying it to stationery and other applications. Emphasis is placed on research, analysis, and problem-solving processes. Students create a visual documentation of their design process.

A302 Visual Communication IV (4 cr.) P: A301, A331, A341. Students are challenged with projects that examine the social responsibility of graphic designers. More emphasis is placed on practical concerns and professional practice.

A331 Typography III (3 cr.) P: A202, A252, A272, or consent of instructor. C: A301, A341. Advanced exploration of typographic systems and multiple-page formats. Introduction to typographic explorations in time-based media.

A332 Typography IV (3 cr.) P: 331 and consent of instructor. Independent study in advanced typography. Student pursues individual projects that encourage typographic experimentation.

A341 Production for Design (3 cr.) P: A202, A252, A272. Students learn to prepare graphic design work for commercial printing. Includes field trips, lectures, and discussions on various printing processes, ink and paper selection, proofing methods, and binding. In a final group project, students prepare artwork digitally to be printed on a four-color offset press.

A362 Computer Imagery III (3 cr.) P: A262 and authorization from the instructor. A studio elective

course for Herron degree-seeking students. Provides the opportunity to explore personally relevant themes using digitally scanned, painted, and manipulated images as the medium.

A371 Introduction to Interactive Design (3 cr.)

Through reading, discussion, and hands-on projects, students discover how humans communicate using images, words, and sound, then learn to use the computer as a medium of expression. Students develop proficiency with image, sound, and multimedia authoring software. Projects emphasize storytelling and involving the use of computers in a compelling and satisfying experience.

A401-A402 Visual Communication V and VI (5-5 cr.) P:

A302, A331, A341. An advanced course dealing in graphic design concerns. Semester projects include writing a design brief, researching content, organizing material, and preparing a multifaceted design solution. Projects are more self-directed in nature.

A421 Independent Design Problems (3 cr.) P:

A301, A331, A341. For junior- and senior- level students, the course provides an opportunity for the student to choose and become involved in one extensive project. Students are required to write a proposal, establish goals, and obtain an instructor's approval. During the course, students are reviewed on a regular basis by faculty and peers.

A422 Design Seminar (3 cr.) P: A202, A252, A272 or consent of instructor. Students are exposed to a range of topics relating to the business of graphic design and its theory and practice. The course includes reading and discussion of current design issues, visiting designers, lecturers, and field trips.

A453 Professional Practice Internship (3 cr.)

P: A301, A331, A341, 3.00 GPA, and consent of instructor. Program offers students the opportunity to learn by working with professionals in a design studio or corporate design firm. Student must apply to the IUPUI Professional Practice Program and are required to interview by portfolio review.

A461 Professional Practice Studio (3 cr.) P:

A301, A331, A341, 3.00 GPA, and consent of instructor. Structured like a working design studio. Students are given an opportunity to design projects for clients of the IRIS Center for Digital Arts. Projects span all media from print to interactive multimedia and Web design. Managing time schedules, budget considerations, client/designer relationships, and general work ethics are covered.

A462 Computer Imagery IV (3 cr.) P: A362 and authorization from the instructor. A studio elective course for Herron degree-seeking students. Provides a continuing experience using digitally scanned, painted, and manipulated images as the medium to express student-proposed themes.

A471 Advanced Interactive Design (3 cr.)

Students work in computer-based media to explore topics including differences between traditional and digital media, the new relationship between the designs and user, and the influence of colors, sound, etc. Students work individually to create electronic notebooks and in teams on long-term projects.

Message from the Associate Dean, Kelley School of Business

Thank you very much for your interest in the undergraduate program of the Kelley School of Business. The school's history can be traced to the early 1920s, when a small group of students and faculty had the foresight to undertake a program of study that has become known throughout the United States as one of the finest of its kind. From the Indianapolis and Bloomington campuses, which offer a "core program" of study, the Kelley School of Business conducts operations around the world, with educational programs extending to the Far East and to Western and Eastern Europe.

The joint resources of Indiana University-Purdue University Indianapolis and IU Bloomington permit us to offer outstanding programs in business administration to a significant percentage of Indiana's population.

IUPUI is Indiana University's capital city campus. As Indiana's state capital and a major metropolitan area, Indianapolis is an ideal place to study business. Within blocks of the Business/SPEA Building is the highest concentration of corporations, government offices and agencies, small businesses, health care providers, professional practices, and not-for-profit organizations in the state. The campus affords a dynamic environment for learning, conducting research, teaching, and collaborating with business, a combination which fosters maximum personal development. It is difficult to imagine a richer context in which men and women of all ages may enhance their knowledge and leadership skills.

The curriculum of the undergraduate program is based on a solid foundation of study in the liberal arts and sciences in order to develop interpersonal, communications, and decision-making skills. To this can be added specialized education in the fields of accounting, computer information systems, finance, management, human resource management, marketing, or marketing distribution management. But, in today's global environment, training in business functions alone is insufficient. For this reason, students are asked to broaden their program of studies to include learning relevant to international business affairs. This requirement may be fulfilled in any one of the following ways: language study, international business and economics courses, participation in an approved overseas study program, or approved liberal arts course work with an international focus. Our intent is to help prepare students for the global economic environment of the future.

The entire program is offered in a convenient, accessible way to both full- and part-time students. High-tech delivery systems, joint programs with other schools at IUPUI, a challenging Honors Program,

student clubs, and alumni activities make the Kelley School of Business an exciting place to be. Participation in the undergraduate program is more than merely taking courses. It is a comprehensive educational experience that prepares you to join the growing number of IU graduates providing leadership in business organizations around the world.

Roger W. Schmenner
Associate Dean for Indianapolis Programs

Kelley School of Business and the Indianapolis Campus

Purpose of the School

The basic purpose of the Indiana University Kelley School of Business is to foster learning about the creation, management, and continuing adaptation of organizations and enterprises in an ever-changing environment.

This role requires that the school engage in the following:

- the generation and documentation of knowledge and the sharing of that knowledge with the academic community;
- the organization and preservation of knowledge;
- the transmission of knowledge to a broad mix of students and practicing executives;
- the application of knowledge to benefit our many constituencies.

Responsibilities

The school will realize this vision to the extent that it succeeds in addressing the needs of its various constituencies, each of which has specific and often widely differing expectations. To meet these obligations, the school must balance its efforts along several dimensions.

- As an academic institution, the school is responsible for the quality and quantity of its research, for the preparation of new researchers, and for service to the university system and wider academic community.
- As a public institution, the school is responsible for the quality of the graduates from its programs and for sharing both its information and its expertise with the community at large.
- As a professional school, the school is responsible for serving the diverse segments of the business community in Indiana, across the nation, and around the world.
- As a state-assisted institution, the school has a continuing responsibility to serve the people of the state of Indiana.

Shared Values

Critical to the school's success is its distinctive culture. Certain key values and widely shared beliefs shape the essential character of the school and thereby become important criteria for basic decisions.

Quality Emphasis The school seeks to meet its goals with distinction and to do so consistently. This principle requires insight into its areas of competence, the aspirations of the faculty and staff, and the availability of resources.

Proactive Change Change in any organization is driven ultimately by the long-term forces that shape the body of constituencies it was created to serve. Business organizations constantly undergo change; the rate may vary, but the environment is always dynamic. The school is committed not only to responding to change via its research variety and curriculum emphases, but to anticipating basic changes as well.

Integrative Programs The school attracts faculty who have a broad understanding of business enterprises and a capacity for configuring and interrelating business functions. This capacity is demonstrated in the school's academic programs, which emphasize the interdependence of business functions, provide a solid grounding in the liberal arts, and recognize the importance of breadth of understanding to overall organizational success.

Programmatic Approach to Education The school's degree programs are more than just a set of requirements. Every step of the degree sequence comprises a carefully planned and coordinated set of activities. Support activities such as admissions and placement counseling, extracurricular activities, overseas study opportunities, and faculty involvement in student activities enrich the student's course work.

Balance and Diversity The school conscientiously seeks to achieve breadth in its research focus, curriculum, pedagogy, and faculty and student composition. Diversity of viewpoint and background is encouraged. Heterogeneity, in lieu of regimentation, is nurtured. The school recognizes the need to provide students and faculty with a rich, balanced context for the study of business and a learning environment that is conducive to the lively exchange of ideas and intellectual stimulation necessary for productive, independent scholarship.

Citizenship Good citizenship is valued strongly in the school. Citizenship involves more than fulfilling formal academic requirements. It encompasses participation in multiple roles, a willingness to serve, and a commitment to perform activities that sustain the broader life of the school as an institution. Citizenship is manifested in both respect for individual rights and acknowledgment of individual responsibilities to the institution.

Collegiality A spirit of collegiality is a hallmark of the school. It is grounded in the faculty's inherent respect for each other and for students as individuals. The goal is to maximize development of the specific abilities and potential each student brings to the institution. The school sustains this spirit through mutual trust and demonstrates it through the encouragement of student-faculty interaction and student consultation through organizations and advisory groups.

Undergraduate Principles On May 7, 1998, the IUPUI Faculty Council approved the adoption of the following six principles of undergraduate learning:

core communication and quantitative skills; critical thinking; integration and application of knowledge; intellectual depth, breadth, and adaptive ness; understanding society and culture; and values and ethics. These principles provide the conceptual framework for the general education component of the undergraduate curriculum at the Kelley School of Business.

Development of the School

Today, IU's Kelley School of Business operates as one school on two campuses: Indianapolis and Bloomington. Business education at Indiana University began in Bloomington more than a century ago. The first Indiana University catalog, 1830-31, included political economy in the curriculum. From this first course, there developed a Department of Political Economy, later referred to as the Department of Economics and Social Science. From early courses in these areas grew what is now referred to as the "core program" of study in the Kelley School of Business.

In 1902, several business courses were introduced and listed in the university catalog of that year. A two-year "commercial course," preceded by two years of pre-commerce work in liberal arts, was established. In 1904, the first business catalog, referred to as the commercial course number, was published. These commerce courses constituted the last years of a four-year course of study leading to a baccalaureate degree. The first two years were a pre-commerce requirement and included all the required courses of the liberal arts curriculum of that period.

Thus was established more than a century ago the pattern of building a program of professional education for business upon a liberal arts base—a pattern maintained throughout the years and currently emphasized in the education of the American businessman and businesswoman. In 1920, a separate School of Commerce and Finance was organized. The school became a member of the American Assembly of Collegiate Schools of Business in 1921, and in 1933 it was renamed the School of Business Administration and placed under the direct control of its own faculty. In 1938, the title of the school was shortened to the School of Business.

The Junior Division (now University College) of the university was established for all first-year students in 1942. From that time until 1994, enrollment in the School of Business did not include freshmen. Graduate work in business administration, first authorized in 1936, expanded rapidly after World War II. Programs for the degrees Master of Business Administration and Doctor of Business Administration were instituted in 1947. In 1961, the designation of the area of study formerly referred to as the Graduate Division of the School of Business was changed to the Graduate School of Business. With the reorganization of the university in November 1974, the School of Business began operating at the Bloomington and Indianapolis campuses.

Although business courses were offered as early as 1916 on the Indianapolis campus, the bachelor's degree in business was not available at the

Indianapolis campus until the 1969 merger with Purdue University. Beginning in 1969, divisional structure emerged in Indianapolis with an assistant chairperson at its head. In 1969-70, a complete undergraduate degree program for four major areas in business was offered, as well as three two-year certificate programs.

The terms "Graduate Kelley School of Business" and "undergraduate program" are used in this bulletin on appropriate occasions to designate the level of study concerned. When the term "Kelley School of Business" is used, reference is being made to the entire school, including both the Graduate School of Business and the undergraduate program on both campuses.

Organization of the School

The school's resident faculty of approximately 200 members is its basic governing body. The various programs and curricula, as well as all major policy considerations, are reviewed and approved periodically at meetings of the entire resident faculty. Administrative support for the school is provided by the Office of the Dean, by a chair in each of the school's eight academic departments, and by a chair of each academic program. The Academic Council administers Kelley School of Business policy. The council is made up of those administrators mentioned above, with the addition of two elected faculty representatives. Additionally, a number of committees appointed by the dean assist by recommending to the faculty various academic and operating policies. At times, these committees are also assigned specific administrative responsibilities.

The school's administration manages its programs on both the Bloomington and Indianapolis campuses. The Office of the Dean consists of the dean, the associate dean for academics, the associate dean for Indianapolis programs, and the associate dean for research and operations. It is assisted by various chairs and directors. Administrative support for instructional programs is provided by five organizational units: the Kelley School of Business Undergraduate Program Office (Bloomington and Indianapolis), the M.B.A. Office (Bloomington), the M.B.A. Office (Indianapolis), the Doctoral Program (Bloomington), and Kelley Executive Partners. Admissions, student counseling and advising, and degree certification are provided by professional staff members assigned to each of these organizational units. (See section entitled "Graduate Programs" in this bulletin.)

Departmental and Curricular Structure The faculty of the Kelley School of Business is organized into eight academic departments. Most of the school's course offerings are provided by faculty in the organizational units. As indicated in the descriptions of the school's curriculum in this bulletin, a department may be responsible for several areas of specialization.

Although recognition is given to the importance of departmental units, the Kelley School of Business follows the general principle of flexibility in organization. Thus, some members of the faculty may

have responsibilities in two or more departments, programs, or areas of specialization. As well as being responsible for a specific division of the school's operation, the chairs of the departments are considered to be general officers of the school.

Research Centers and Institutes In recent years, the Kelley School of Business has put new emphasis on the establishment and promotion of research centers and institutes. These organizational units are distinct from the traditional academic departments, and therein lies their strength. The centers have research and outreach to the business community as their primary objectives. This focus serves to make them more interdisciplinary in nature and more visible both inside and outside the university. The Kelley School of Business currently supports eight research centers, each with a specific mission and a natural constituency in the business world:

Indiana Business Research Center (IBRC)
Institute for Research on the Management of Information Systems (IRMIS)
Institute for Urban Transportation
Center for Real Estate Studies
Center for Entrepreneurship and Innovation
Indiana Center for Econometric Model Research
Indiana Center for Global Business
International Business Education and Research

Publications The Kelley School of Business assists the faculty in preparing research results and other publications for communication to various audiences. In addition to periodic monographs and discussion papers, the school regularly distributes two publications, both appearing six times a year.

Indiana Business Review (IBR) This publication contains articles based on research analysis of the economic environment of the state and its regions, counties, and cities. Because of its importance to planners in both the public and private sectors, *IBR* is provided without charge to those who request it.

Business Horizons Since 1957, the Kelley School of Business has published a journal of analysis and commentary on subjects of professional interest to business executives and students of business. *Business Horizons* is managed by an editorial board drawn from the school's faculty. It publishes articles by many outside contributors as well as by the school's own faculty and students and is sent to a national and international audience on a subscription basis.

Executive Education The director of Kelley Executive Partners is responsible for coordinating all nondegree educational programs, including the Indiana Business Seminars, the Indiana Executive Program, and many other institutes and programs. This office conducts or sponsors a number of seminars in which students, faculty members, and members of the business community join in considering current issues of mutual interest. Seminars may concern management, production, marketing, financing, or related aspects of business, focusing on either internal business operations or the national or world economies in which these operations take place.

Graduate Programs

Master of Business Administration

The Indiana University M.B.A. Program is recognized as one of the top graduate business programs in the country. It offers two programs leading to the Master of Business Administration degree.

Admission to either program is selective. It is based on evaluation of factors including results from the Graduate Management Admissions Test, undergraduate performance, essays, recommendations, work experience, leadership, and other indicators of potential for success in a rigorous program of study and in a business career.

Bound by a common body of knowledge and philosophy, each program is designed to meet the diverse needs of men and women at different levels of career development and responsibility. For further information on the curriculum, format, prerequisites, and admission requirements for each program, contact the specific program of interest.

M.B.A. Program, Indianapolis Campus

Candidates for the M.B.A. degree in the evening program in Indianapolis come from diverse academic backgrounds and represent many businesses and industries. The program incorporates a wide range of business issues and integrates business disciplines to provide a strong program experience. Study teams and networking play an integral part in the evening program. Skill building in the areas of leadership,

collaborative decision making, teamwork, and communications are integral aspects of the total program experience.

Modules of study generally span one semester with class meetings two nights a week. A streamlined 32-month, 51 credit hour program allows for maximum planning and integration with career and personal commitments.

Qualified men and women from all academic backgrounds, representing any business or industry, who are motivated to study in a challenging graduate business program are encouraged to apply for admission to graduate programs in the Kelley School of Business at Indiana University in Indianapolis. Application materials are due in the M.B.A. office by May 1 for August entry and November 1 for January entry.

For information, contact the M.B.A. Office:

M.B.A. Program, Bloomington Campus

Bloomington's program is a full-time, two-year residential program taught during the day for men and women who plan to take a leave from their careers while they pursue graduate education.

Graduate Programs
Kelley School of Business
Indiana University
1309 E. Tenth Street
Bloomington, IN 47405-1701
Phone: (812) 855-8006

Master of Professional Accountancy

The M.P.A. Program is devoted to teaching the skills required of today's accountant. The plan of study insures that students are not only well versed in the technical aspects of their chosen specialty but also the non-technical skills that are required for them to become true leaders in industry and government.

M.P.A. Program, Indianapolis Campus

Students may apply to the M.P.A. Program with or without a bachelor's degree in business or accounting. Those entering the program with a bachelor's degree in business normally must complete a minimum of 30 credit hours of course work. Those with backgrounds in other fields may be required to do additional work to develop expertise in the core areas of business.

Students may apply to the program after completing a bachelor's degree. Admission selection is based on

evaluation of factors including results from the Graduate Management Admissions Test (GMAT), undergraduate performance, recommendations, and work experience.

Doctoral Programs, Bloomington Campus

Indiana University offers two doctoral programs in business: the Doctor of Philosophy (Ph.D.) and the Doctor of Business Administration (D.B.A.). The former degree is awarded through the University Graduate School, while the latter is awarded through the Kelley School of Business. The D.B.A. has been offered since February 1954; the Ph.D. in business, since October 1, 1982.

The Office of Doctoral Programs in the Kelley School of Business administers both programs. Students may select either degree designation at the time of application. It is possible to change from one degree to the other provided all the requirements of the new degree are met. While the objectives and requirements for both degrees are quite similar, there are some differences. Applicants should decide which degree best fits their career and intellectual objectives.

Student Services and Campus Resources

See also "Useful Phone Numbers" at the beginning of this bulletin.

Advising and Counseling

Our professional advising staff members are devoted to assisting students in making informed program and career choices. All undergraduates in the Kelley School of Business choose an area of concentration, such as accounting or finance. (See "Departments and Concentrations" in this bulletin.) Faculty members in each area of concentration, as well as the professional advisors, are available to help students understand and plan for meeting concentration requirements. Academic advisors for the Kelley School of Business are available in

Business/SPEA Building 3024, 801 W. Michigan Street. Please call (317) 274-2147 to schedule an appointment with an advisor. Students also may obtain counseling from the Office of Career and Employment Services, the Office of International Affairs, or from University College (UC).

International Affairs

International students may continue to seek general or personal support services through the Office of International Affairs even after admission to the Kelley School of Business.

Undergraduates in the Kelley School of Business are eligible to participate in foreign study programs established by Indiana University. These programs offer undergraduates the opportunity to do part of their academic work abroad. Students can participate in summer programs in the Netherlands, Germany, or Finland; semester programs in the Netherlands, France, Chile, and Singapore; and regular academic year programs, as well as programs offered through the Center on Southeast Asia.

Students also may apply for overseas internships. Advanced standing, high scholarship, and strong language skills are required. In addition, IUPUI administers a number of short-term programs of interest to business students.

International students for whom English is a second language and who seek information about language tests or about academic assistance should contact the Coordinator of English as a Second Language, Cavanaugh Hall 243, 425 University Blvd.; (317) 274-2188.

On-campus housing is available for international students. (See the "Housing" section of the bulletin.)

For more information, contact the Office of International Affairs, Union Building 207; phone (317) 274-7000.

Internships

The Professional Practice Program is an internship program for the Kelley School of Business. The program places students who are in advanced stages of their degree programs in paid positions for one-semester placements. (See also the section entitled "Internships" under "Special Opportunities" in this bulletin.)

Writing Center

The University Writing Center provides tutoring for all kinds of writing needs as well as a hotline service for telephone inquiries. Faculty and trained writing fellows serve as tutors. Business school students are encouraged to use the center's services. The writing center is located in Cavanaugh Hall 427, 425 University Blvd.; phone (317) 274-2049. The hotline number is (317) 274-3000.

University College

University College (UC) is the academic home for most IUPUI undergraduate students with fewer than 56 credit hours. Among the UC students are students who plan a business major but have not yet been admitted into the Kelley School of Business. To

request a UC student manual, please contact University College, IUPUI, 815 W. Michigan Street, Indianapolis, IN 46202-5164; phone (317) 274-4856.

International students who plan to apply to the business school are served academically and administratively by the Office of International Affairs rather than the UC. (See the "International Affairs" section of this bulletin.)

Some students with a bachelor's degree may want information about taking additional undergraduate courses; for example, a student who holds a B.A. degree may wish to take accounting courses to prepare to sit for the C.P.A. exam. Such students should contact the Graduate Nondegree Office, Union Building 518, 620 Union Drive; or phone (317) 274-1577. (See also the section "Second Bachelor's Degree" in the "Special Opportunities" section of this bulletin.)

Undergraduate Program

The Undergraduate Program of the Kelley School of Business provides opportunities for breadth of education as well as for a reasonable amount of specialization. As a member of the Association to Advance Collegiate Schools of Business (AACSB), the school subscribes to the principle that a significant portion of a student's academic program should be in general-education subjects, complemented by study in the basic areas of business administration. This assures the planning of balanced study programs while enabling a student with an interest in one or more professional areas of business to specialize in those fields.

All undergraduate study programs also include courses that ensure the development of a basic understanding of the principles and practices involved in the management of business firms in the dynamic economic, social, and political environment of the world today. At IUPUI, three interrelated, rigorous junior-level courses in the management of finance, marketing, and operations, known collectively as the integrative core, are required of all business majors. Integrative core studies emphasize the trends likely to shape the pattern of the world in the years ahead. Beyond these basic requirements, students are given an opportunity to pursue studies from a wide variety of subject areas.

Honors courses are available to students with eligible records. A number of internship programs, industry studies, and overseas study programs are also available to students with specialized professional interests.

To develop leadership skills and a sense of social responsibility, students are strongly encouraged to participate in one or more of the student organizations at IUPUI. Special emphasis is placed on volunteerism and the personal benefits derived from participating in community service. The Kelley School of Business Learning Community course, X103,

involves freshmen in a service project in the local community school system. This course is an entrance requirement for admission into the school. The business course X401 Community Service Learning offers students an opportunity to earn course credit for participation in a specific volunteer project.

Upon attaining senior standing, students enjoy a broader range of elective courses and special opportunities for discussion and counseling with senior members of the faculty. Courses at the senior level assure widespread participation by students in the solution of case studies, projects, and special problems drawn from the contemporary business scene. Also, seniors typically hold offices in professional student organizations, which gives them exceptional extracurricular experience. The business course X420 Business Career Planning and Placement prepares students for the transition to the world of business. This course also helps them locate and select employment opportunities that hold the greatest promise for them.

Program Objectives

Graduates of the Undergraduate Program of the Indiana University Kelley School of Business should:

1. have a general knowledge and appreciation of human accomplishments in the physical sciences, arts, humanities, and social sciences;
2. possess a broad-based knowledge of business and the business firm and the role business plays in our society;
3. understand the national, international, political, social, and economic environment that affects a firm's operations;
4. be able to articulate their thoughts orally and in writing and be computer literate;
5. have a sensitivity to and appreciation of ethical issues;
6. possess an appreciation of the opportunities and problems of managing complex organizations;
7. have the skills and ability to work effectively with others in the completion of joint tasks;
8. possess the ability to find and formulate problems, think analytically, and recommend solutions to problems.

The curriculum of the undergraduate program is designed to provide students with the above attributes. Graduates should have acquired an education that will serve them throughout their careers in business, not just prepare them for an entry-level position.

Honor Code

To foster an academic environment that holds personal integrity and honesty in the highest regard, the undergraduate students at the Kelley School of Business have established an honor code to which students are willing to hold not only themselves but also their peers. This code endorses shared values that incorporate honesty, responsibility, and ethical behavior.

This student-written code describes violations, reporting requirements, and procedures for addressing academic misconduct. It encompasses all courses taught within Indiana University's Kelley

School of Business and includes all students enrolled in them. Students who have been admitted to the Kelley School of Business are expected to continue their commitment to ethical behavior in all of their endeavors, including course work outside of the Kelley School of Business, internships, co-op programs, and overseas study.

Admission

Admission Requirements

Admission to IU's Kelley School of Business at Indianapolis is possible at several different points in a student's academic career. Procedures and requirements for each option are described below. For a key to the codes used in referring to different courses, see the beginning of this bulletin.

Please note that *all applications for admission to the university* are submitted through the IUPUI Office of Undergraduate Admissions, Cavanaugh Hall 129, 425 University Boulevard, Indianapolis, IN 46202-5140; telephone: (317) 274-4591. Beginning students normally enter University College (UC) where they are advised on enrolling in required general-education and pre-business courses.

Dual Admission

Upon recommendation of the Office of Admissions, high school students who have been admitted to IUPUI may be considered for admission into the Kelley School of Business as freshmen if they rank in the top 25 percent of their high school graduating class and have re-centered SAT I scores over 1010 (ACT composite scores of 22 or above). If these students are admitted to the Kelley School of Business, they are dually admitted to both the School of Business and University College. Students will retain early admission status as long as they are making satisfactory progress in their academic program, including business prerequisite courses. This option offers students special access to Kelley School of Business advisors and opportunities for early involvement in Kelley School of Business organizations and activities.

Option I Admission Criteria

To be considered for admission under the Option I admission standards, students must meet the following requirements:

1. Complete between 26 to 56 credit hours of college course work that count toward graduation with an overall cumulative GPA of 2.5 or better. This course work may be taken at Indiana University or at another accredited institution offering a comparable program. (Students with more than 26 credit hours who apply for admission to the Kelley School of Business for the first time may do so using the Option I admission standards. This also applies to transfer students.)

2. Complete ENG W131 (or equivalent), X100, and X103 with a grade of C or higher.

3. Successfully complete two or more of the following courses with an average GPA of 2.5 or better:

BUS K201 The Computer in Business
MATH M118 Finite Mathematics
MATH M119 Brief Survey of Calculus

For admission purposes, the two highest grades achieved in the courses listed above will be used to compute the applicant's admission grade point average. (If only two of the three courses are taken, the admission decision will be based upon the grades achieved in both courses.) A minimum grade of C in BUS K201, and a C- in M118 and M119 is required.

4. Submit an application by the required deadline. Application periods for admission are January 15-March 1 for fall admission and August 15-October 1 for spring admission. Applications are available at the Kelley School of Business, Business/SPEA Building 3024, and online through the School of Business Web site at kelley.iupui.edu.

Admission to the school is competitive, and each applicant is considered individually. Applications will initially be reviewed on the basis of grades. Additional factors include extracurricular and community service activities, work experience, rigorosity of course work taken, grade trends, high school class rank, and factors beyond the student's control that may have temporarily impaired academic performance. Students may apply only one time under Option I criteria. **NOTE:** All students admitted under Option I must still complete all Option II requirements before taking Integrative Core (I-Core).

Option II Admission Criteria

Students who have been denied admission based upon Option I admission standards or have more than 56 credit hours are eligible to apply according to the following criteria:

1. Complete 56 credit hours of college course work that counts toward graduation with an overall cumulative GPA of 2.0 or better. This course work may be taken at Indiana University or at another accredited institution offering a comparable program.

2. Successfully complete the following nine prerequisite courses with a minimum grade of D in each course and an average GPA of 2.0 or better:

BUS A100 Business Accounting Skills
BUS A201 Introduction to Financial Accounting
BUS A202 Introduction to Managerial Accounting
BUS L203 Commercial Law I
ECON E201 Introduction to Microeconomics
ECON E202 Introduction to Macroeconomics
ECON E270 Introduction to Statistical Theory in Economics and Business
MATH M118 Finite Mathematics
MATH M119 Brief Survey of Calculus I

3. Complete the following courses with a grade of C or above in each course:

ENG W131 Elementary Composition I or equivalent
BUS K201 The Computer in Business
BUS X100 Business Administration: Introduction
BUS X103 Business Learning Community
BUS X204 Business Communications
COMM R110 Fundamentals of Speech Communication

4. File an application by the appropriate deadline for fall or spring admission. See details under "Option I Admission Criteria" in this section.

Although other factors may be taken into consideration in the admission decision, applicants applying under the Option II admission standards will

be reviewed primarily upon the grade point average achieved in the nine prerequisite courses listed above.

For additional information about admission to the Kelley School of Business, contact the undergraduate office at Business/SPEA Building 3024, 801 W. Michigan Street, Indianapolis, IN, 46202-5151; phone: (317) 274-2147.

Policies Governing the Undergraduate Program

Academic Regulations and Scholastic Standards

Under the General Scholarship Rule, any student who does not possess the necessary preliminary training or who lacks other qualifications may be required by the Committee on Admissions and Probation to enroll in such courses as the committee may designate or to take such other corrective action as is necessary or desirable. The committee may review a student's record at any time and may take whatever action seems necessary for the student's best interest or for the best interest of the school.

Upon the recommendation of the appropriate school committee and with the approval of the dean of the Kelley School of Business, any student whose work is unsatisfactory or whose conduct is unethical may be dismissed from the Kelley School of Business.

Academic Misconduct Indiana University and the Kelley School of Business expect that students will follow the fundamental principles of academic integrity in the pursuit of learning. Academic integrity requires that students take credit only for their own work and ideas. Violation of these principles is considered an act of academic misconduct.

The Kelley School of Business strictly follows the guidelines listed in the *Code of Student Rights, Responsibilities, and Conduct* and the Kelley School of Business Honor Code. In addition, the school's policy regarding the appropriate penalty for any degree of academic misconduct permits the removal of the student from the course involved, with a grade of F.

Academic Standing Those students who consistently maintain a minimum grade point average of 2.0 (C) or above, in both their cumulative and semester records are considered to be in good standing.

Auditing Courses Students are not permitted to audit undergraduate business courses or M.B.A. courses. See the Master of Professional Accountancy program chair for the current policy regarding audit of M.P.A. classes.

Columbus Students Transferring to IUPUI

Students who matriculate to Indiana University-Purdue University Columbus (IUPUC) and who wish to earn a Kelley School of Business degree must meet senior residency requirements and complete the last 30 credit hours on the IUPUI campus. Students cannot take any of the final course work in Columbus to receive the Kelley School of Business degree. The eight-year statute of limitations (see "Graduation

Requirements”) mandates that students complete their degree requirements within eight years in order to earn a Kelley degree. This policy does not apply to students who matriculated prior to the fall of 2001.

IUPUC students who wish to earn a Kelley degree must apply for admission to the Kelley School of Business in Indianapolis by the stated deadlines and meet all Indianapolis program requirements. Course work may be taken at either campus for students who matriculated to IUPUC prior to fall 2001. Students must also apply to graduate from the Kelley School of Business in Indianapolis.

Integrative Core Prerequisites The prerequisites for the Integrative Core are: a total of 56 credit hours or more; overall cumulative GPA of 2.0 or better; BUS K201, BUS X100, BUS X103, BUS X204, COMM R110, and ENG W131 (with a grade of C or better); BUS A100, BUS A201, BUS A202, BUS L203, ECON E201, ECON E202, ECON E270, MATH M118, and MATH M119 (with a grade of D or better and a grade point average of 2.0 or better). Option 1 admission to the Kelley School of Business in Indianapolis does not guarantee admission into the Integrative Core.

Maximum Semester Credit-Hour Load A typical academic load for full-time students is 12 to 15 credit hours. A student expecting to carry more than 18 credit hours during a regular semester or 8 credit hours in a summer session should have a minimum cumulative grade point average of 3.0 (B) or have earned a 3.0 (B) grade point average in the previous full semester.

Military-Related Credit Both Army and Air Force ROTC programs are available at Indianapolis. Completion of either program leads to a commission as a second lieutenant. Programs are available to both men and women. Courses are pursued in conjunction with an academic curriculum and receive academic credit as electives.

Placement credit is available to veterans and students with high school ROTC backgrounds. Veterans of military service are also eligible for academic credit as a result of their military training and experience. The Kelley School of Business follows the provisions of the “Guide to the Evaluation of Education Experiences in the Armed Services” issued by the American Council on Education (ACE) in granting credit. Credit in business subjects is evaluated as “undistributed” and is subject to oral or written examination for specific equivalency.

Physical Education Courses Students may elect a maximum of 4 credits of elective physical education courses (HPER courses with the prefix “E”). Physical education courses carry regular credit, count toward minimum degree requirements, and are included in the cumulative grade point average.

Probation, Dismissal, and Readmission

Students are sent a warning following any regular semester or summer session in which they fail to attain a semester grade point average of 2.0 (C). They are placed on critical probation whenever their cumulative grade point average is below a 2.0 (C). At the discretion of the Committee on Admissions and Probation, a student whose cumulative grade point

average falls significantly below a 2.0 (C) or whose grade point average continues to decline may be dismissed from the school.

The Committee on Admissions and Probation considers readmission petitions from students who have been dismissed. In such cases, petitions must be submitted at least *30 days prior* to the semester or summer session in which the student wishes to be readmitted.

Upper-Level Business Courses Kelley School of Business students must have senior standing and have completed Integrative Core to enroll in 400-level business courses. Enrollment in business courses numbered 301-499 is limited to the following:

1. Kelley School of Business students.
2. Non-business students who are registered for the minor in business.
3. Non-business students who are registered for degree programs requiring specific business courses. Such programs include engineering, health administration, journalism, and telecommunications. (Enrollment will be permitted only in the *required* business courses using this priority category.)
4. Other students with specific permission of the department offering the course. Departments may choose to declare certain courses “open enrollment” courses.
 - Graduate Continuing Nondegree students may take upper-level business courses with permission.

Unless students are registered in an official program, as identified in items (2) and (3) above, a maximum of 12 credit hours of upper-level business courses may be taken. In addition, for students enrolled in these specific programs, upper-level business courses may comprise no more than 25 percent of their programs.

To enroll in an upper-level business course (301 or higher), a non-business student must meet course prerequisites and have a minimum cumulative grade point average of 2.5 (on a 4.0 scale).

Credit Earned Externally or Transferred to IU

CLEP and DANTES Credit Kelley School of Business does not accept CLEP or DANTES credit for business courses; however, the school will accept CLEP or DANTES credit awarded by other IUPUI academic units for non-business courses.

Credit for Independent Study by

Correspondence The Kelley School of Business accepts a maximum of two courses (6 credit hours) taken by correspondence as counting toward the degree requirements. However, because of their basic importance in the degree program, the following courses or their equivalents may not be taken by correspondence to satisfy admission or degree requirements:

- Business or economics courses
- Prerequisites (for both business and non-business courses)
- Courses required for a concentration (for both business and non-business courses).

Any exceptions to the above policy must have the written approval of the Executive Director of Academic Programs, Indianapolis. **Note:** All correspondence courses taken in the final semester to fulfill Bachelor of Science degree requirements must be completed three weeks prior to the end of a regular semester.

Credit for Self-Acquired Competency The Kelley School of Business does not award credit on the basis of self-acquired competency (for example, work experience). However, the school will give credit examinations for specific courses when the chair of the department offering the course feels a student’s experience gives that student a reasonable chance of passing the examination. To be eligible to take a credit examination, the student must be regularly registered at IUPUI.

The school will not accept the transfer of credit from other institutions for business courses if the credit was awarded on the basis of self-acquired competency.

For non-business courses, the school will accept course-specific credit awarded on the basis of self-acquired competency by other baccalaureate-granting divisions/schools of Indiana University and by other institutions accredited by the North Central Association of Colleges or comparable regional associations.

The school will not accept general (non-course-specific) self-acquired competency credit awarded by other divisions or schools of Indiana University or by other institutions.

Transfer of Credit

1. *Transfer of Credit from Other Colleges and Universities*

Acceptance of credit from other institutions, including Purdue University, will be determined by the IUPUI Office of Admissions. The applicability of credit toward degree requirements in the Kelley School of Business will be determined by the school. Credits in business courses at the lower-division level (100- and 200-level courses) that are accepted for transfer are usually accepted for specific course equivalency.

Courses in upper-division business subjects (300- and 400-level courses) may be accepted for specific equivalency if the course work is taken in the junior or senior year at a four-year institution that is accredited by the Association to Advance Collegiate Schools of Business (AACSB). If the institution is not so accredited, credit in upper-division courses accepted for transfer will be accepted as “undistributed” credit subject to oral or written examination for equivalency.

Upper-division business courses taken in the freshman or sophomore year at four-year institutions may be accepted as “undistributed” credit subject to oral or written examinations for specific equivalency.

Upper-division business courses taken at two-year institutions may be accepted as “undistributed” credit that will count only as business electives.

No more than 94 credit hours may be accepted for transfer from a four-year institution. Course grades from other institutions are not transferred; only credit hours earned in a course are recorded. Evaluation of credit is completed after a student is admitted to the university.

2. **Transfer of Credit from Junior and Community Colleges**

No more than 60 credit hours earned at junior or community colleges may be applied to an Indiana University Kelley School of Business degree.

3. **Transfer of Credit from Other Indiana University Campuses**

Four-year degree programs in certain concentration areas may be completed at Indiana University East, Indiana University-Purdue University Fort Wayne, Indiana University Kokomo, Indiana University Northwest, Indiana University South Bend, Indiana University Southeast, and Indiana University-Purdue University Columbus, as well as at the Bloomington and Indianapolis campuses. Admission and degree requirements will vary among campuses.

Students wishing to transfer to the Kelley School of Business in Indianapolis are required to meet the same admission requirements to the school as do all other students, both internal and external, at the Indianapolis campus. Students who expect to graduate from IU's Kelley School of Business in Indianapolis must complete the last 30 credit hours of the degree program and one-half of their concentration requirements at the Indianapolis campus and complete an application to the school.

Ordinarily, such students must complete the Integrative Core (BUS F301, BUS M301, and BUS P301) on the Bloomington or Indianapolis campus. Transfer students who have completed all three courses of the Integrative Core before starting classes on the Indianapolis campus are required to enroll in BUS X390 The Integrative Experience (1 cr.) during their first semester of admission to the Kelley School of Business. A minimum grade of C- is required in the course. This course requirement applies to all students transferring credit for BUS F301, M301, or P301 from other institutions or another Indiana University campus. Students who are unclear about this requirement should see an academic advisor in the Kelley School of Business.

Grading System

Incomplete Courses A temporary grade of Incomplete (I) on the transcript indicates that the work completed is satisfactory but that the entire course has not been completed. A grade of I may be assigned only if the student is not in attendance during the last 25 percent of a semester or summer session and the instructor has reason to believe that the absence was beyond the student's control. Otherwise, the instructor shall assign a grade of F.

It is the instructor's responsibility to specify the work to be done to remove the Incomplete and the period

of time allowed for completion. However, it is the student's responsibility to contact the instructor to verify that all requirements have been completed. If the Incomplete is not removed within one calendar year of the date of the recording of the Incomplete grade, the registrar will automatically change the I to an F grade. The instructor may, however, require the Incomplete to be removed after a period that is less than one year. Upon satisfactory completion of the work within the time allowed, the Incomplete will be removed and the earned grade recorded. In special circumstances, the dean may authorize that a grade of I be changed to a grade of W (Withdrawn).

Students may not re-enroll in a course in which they have a grade of I.

Pass/Fail Option Business students may elect to take 3 credit hours each semester with a grade of P (Pass) or F (Fail), with a maximum of 6 credit hours each school year, including summer sessions. The election of this option must be exercised by the student within the first three weeks of the semester or equivalent time period in a summer session. Limitations on use of the Pass/Fail option are as follows: Kelley School of Business students may not take any business course Pass/Fail. Also, the Pass/Fail option cannot be used for courses that satisfy the general-education requirement or any course that would fulfill a concentration requirement. In short, the option can be used only for courses that are pure electives taken outside the Kelley School of Business. A grade of P is not counted in the cumulative grade point average, but a grade of F is included. A grade of P cannot be changed subsequently to a grade of A, B, C, or D.

Withdrawals A grade of W (Withdrawn) is given automatically on the date of withdrawal to the student who withdraws during the first seven weeks of a regular semester or during the first three weeks of a summer session.

After the automatic withdrawal deadline, instructors have the option of assigning a grade of W (if the student is passing on the date of withdrawal) or F (if the student is failing on the date of withdrawal).

Any student who wishes to withdraw from a business course in the final quarter of the semester (after the final drop date published in the *Schedule of Classes*) will be required to submit a petition describing the reason for the request. If the instructor of the course supports the student's request, he or she must sign this petition and a drop/add slip. The Appeals Committee will review these petitions. Approval for a student to withdraw with a grade of W will be granted only in cases of illness or emergency.

Effective spring 2000, students admitted to Kelley School of Business are permitted to withdraw from a maximum of five 300- and 400-level business courses. If students withdraw from more than five upper-division courses, they are not allowed to enroll in upper-division business courses during the subsequent fall or spring semester. Students will be placed on academic contract during the semester in which they are eligible to re-enroll in upper-division business courses. Following successful completion of the contract semester (no withdrawals from upper-division courses), students will be released from

academic contract unless they withdraw from another upper-division course.

In addition, effective fall 2001, students may withdraw from a maximum of 20 courses and cannot withdraw from a single course more than 3 times.

Graduation Requirements

Though the school makes every attempt to provide students with ample advising and counseling help, *students in the Kelley School of Business are responsible for planning their own programs and for meeting degree requirements.* It is their responsibility to fully understand and comply with all the provisions of this bulletin. Requests for deviation from department, program, or school requirements may be granted only by written approval from the respective chair, director, or dean, or their respective administrative representatives.

Credit Deadline All course work except work from the current semester must be completed and recorded on the degree candidate's Indiana University transcript at least one month prior to the date of graduation.

Credit Hours and GPA Requirements For students admitted or readmitted fall 2002 a minimum of 124 credit hours must be successfully completed in courses meeting the various requirements stated in this bulletin to earn the Bachelor of Science in Business degree. Of this number, at least 48 credit hours must be in business and economics courses and at least 62 credit hours must be in courses other than business and economics. A minimum cumulative GPA of 2.0 (C) is required for graduation. In addition, students must achieve a minimum 2.0 (C) grade point average in business courses, and a minimum 2.0 (C) grade point average in their concentration requirements to graduate from the Kelley School of Business. Students with outstanding cumulative GPAs may graduate with honors. (See "Academic Distinction" in the "Special Opportunities" section.)

Senior Residence Requirement Students who expect to receive the B.S. in Business degree from the Indiana University Kelley School of Business, Indianapolis, must complete the last 30 credit hours of work toward the degree program and one-half of their concentration requirements on the Indianapolis campus.

Permission to take up to 6 credit hours during the senior year at another institution or by correspondence may be requested by petitioning the Chairperson of Undergraduate Programs, Business/SPEA 3024, 801 W. Michigan Street, Indianapolis, IN 46202-5151; phone (317) 274-2147.

Degree Applications Candidates for the B.S. in Business degree must file a degree application with the Recorder's Office, Kelley School of Business, Business/SPEA Building 3024. Application deadlines are September 1 for December graduation and December 1 for May, June, or August graduation. Kelley School of Business transcripts may reflect from one to three concentrations or majors and zero to two minors.

Statute of Limitations Candidates for the B.S. in Business degree have the right to complete the degree requirements specified by the bulletin in effect at the time they entered Indiana University, as long as the required courses are available and no more than eight calendar years have elapsed since the date of entry. In the event that the required courses are not available or more than eight years have elapsed, students are required to meet the degree requirements currently in effect. Students who are unclear about this requirement should see a Kelley School of Business advisor.

Special Opportunities

Awards, Recognition, and Scholarships

Scholarships available through the Kelley School of Business are based on academic achievement and/or financial need. Eligible candidates must be certified as students in the Kelley School of Business. Ordinarily, a student transferring from another institution must complete at least one semester of study at IUPUI in order to be considered for a scholarship.

The following awards are made to IUPUI students in the Kelley School of Business: Ginny Marzke Memorial Scholarship; John W. Berry Memorial Scholarship; Chancellor's Scholar Award; Delta Sigma Pi Award; Financial Executives Institute Outstanding Finance and Accounting Awards; Irwin Katz Accounting Excellence Award; George S. Olive Scholarship; J. Dwight Peterson Key Award; Arthur W. Tuttle Scholarship; Outstanding Upperclass Scholarship Awards; Nelson/Modern Vending Scholarship; Hazel P. Chattaway Scholarship; Roger Jerman Scholarship; American United Life Scholarship; Bank One Outstanding Finance Student Scholarship; United Parcel Service Scholarship; Ralph L. Swingley Scholarship; Klapper Scholarship; and Transportation Awards. In addition, scholarships and awards are generally given to outstanding students in each concentration.

Academic Distinction Academic distinction for excellence in scholarship is awarded at Commencement to a limited number of students graduating with the Bachelor of Science in Business degree. The number so honored will not exceed 10 percent of the graduating class in the school for that year. Students whose grade point averages are in the highest 1 percent (approximately 3.9 GPA or higher) and who complete at least 60 credit hours at Indiana University graduate with "highest distinction"; those whose grade point averages are in the next highest 4 percent (approximately 3.75 to 3.89 GPA) and who complete at least 60 credit hours at Indiana University graduate "with high distinction"; and the remaining 5 percent (approximately 3.55 to 3.74 GPA) who complete at least 60 credit hours at Indiana University graduate "with distinction." The grade point averages cited are approximate and may vary slightly depending on class statistics. Graduates receiving these honors have them so noted on their diplomas and in the Commencement program and are eligible to wear cream and crimson fourragères at Commencement.

Dean's Honor List All undergraduate students in the Kelley School of Business who are taking at least 6 credit hours during a fall or spring semester and who have a semester grade point average of 3.5 or higher are placed on the Dean's Honor List. These honor students receive letters from the dean recognizing their meritorious efforts.

Business Foundations Certificate Program

This program is designed for students who want to become more generally educated about business, improve the conduct of their personal business affairs, and have a business foundation to aid them in their careers.

General requirements for the certificate program include: (1) admission to IUPUI; (2) completion of a minimum of 30 credit hours of college-level or university-level course work; (3) completion of approximately half of the required credit hours at IUPUI; (4) a minimum cumulative grade point average of 2.0 (C); (5) a minimum number of credit hours of business course work taken at Indiana University.

To obtain specific course requirements, see an advisor in the Kelley School of Business Undergraduate Office, 801 W. Michigan Street, Business/SPEA 3024, Indianapolis, IN 46202-5151; phone (317) 274-2147.

Honors Program

Timothy D. Bennett, *Director of Honors Program and Placement Operations*

The Kelley School of Business's highly distinctive Honors Program is designed to enrich the academic experience of selected students.

The program enables the Kelley School of Business to offer the superior student a means to obtain skills and insights not available in the general business program. In this way, its educational offerings can reflect differences in individual student capabilities and motivation. It also enables the school to encourage students who display the promise of high achievement in the field of business to return something to society once they have met their goals. Contact the honors director for information: (317) 274-5693, tbennet@iupui.edu.

Internships

Russell C. Vertner, *Director of Assessment and Student Professional Experiences*

Students are encouraged to gain work experience to enhance the academic knowledge acquired in the business degree program.

International Internships For information about overseas internships, contact the Office of International Affairs, Union Building 207; phone (317) 274-7000.

Professional Practice Program The Professional Practice Program, which administers the internship program of the Kelley School of Business, offers supervised work experience. The program places undergraduates who are in advanced stages of their degree programs in paid internships for one semester.

The following policies govern the "for credit" option in the Professional Practice Program's operations in the Kelley School of Business:

1. A student may receive a maximum of 6 credit hours, 3 credits per internship, in the Kelley School of Business for participation in Professional Practice Program internships.
2. Internships may be part-time or full-time employment assignments.
3. The student must have completed the Integrative Core.
4. Each internship position must be approved by the department of the Kelley School of Business offering the internship, and this approval must be established prior to the time applications from students are solicited. Individual departments may have specific course and GPA requirements.
5. At the conclusion of an internship, the student intern is required to submit a substantial written report to the department in the Kelley School of Business from which internship credit is to be received. The written report is to describe the nature of the problems, objectives, organizational structure, and operations of the functional area in the organization in which the internship was taken. A grade of S or F will be assigned by faculty for internships in all program areas except in the Department of Accounting, where the internship will be graded using the full range of grades.

For additional information and applications, contact the director at (317) 274-3492, vertner@iupui.edu.

Minor in Business

A minor in business has been established with a number of departments in the Schools of Engineering and Technology, Liberal Arts, Science, Journalism, and Health, Physical Education, and Recreation. Students are required to meet course prerequisites and entrance requirements with a GPA of 2.0 or better. These include completion of the following eight courses or equivalents with a sufficient grade point average to ensure admission into the business Integrative Core (described below), which are taken as a unit:

BUS A200 Foundations of Accounting
 BUS L203 Commercial Law I
 BUS K201 The Computer in Business
 ECON E201 Introduction to Microeconomics
 ECON E202 Introduction to Macroeconomics
 ECON E270 Introduction to Statistical Theory in Economics
 MATH M118 Finite Mathematics
 MATH M119 Brief Survey of Calculus I

BUS K201 The Computer in Business, or its equivalent, must be completed with a minimum grade of C prior to starting the Integrative Core. Business minors are required to take the Integrative Core, which is 9 credit hours taken together as a single educational unit (BUS F301 Financial Management, M301 Introduction to Marketing Management, P301 Operations Management). Note that to take these three core classes, business minors must apply for a place in them. Application deadlines are March 1 for the summer and fall semesters, and October 1 for the spring semester. Applications are available in the undergraduate office, Business/SPEA Building 3024; call (317) 274-2147 if you have questions.

In addition to the 11 required courses listed above, BUS X204 Business Communications (3 cr.) and BUS Z302 Managing and Behavior in Organizations (3 cr.) are recommended. For all courses listed above, the Kelley School of Business will impose essentially the same standards on students minoring in business as on business majors.

The above minor requires 15 credit hours outside of business and 18 credit hours of business courses, one-half of which must be taken on the IUPUI campus, to comprise the 33 credit hours required for the minor. Students may consult with Kelley School of Business advisors, but are urged to seek academic advising from their major department to ensure that program planning is accurate.

Outside Minors for Business Students

Business students may complete the requirements for a minor through the other schools and departments that offer approved minors, which currently include the Schools of Liberal Arts, Science, and Journalism. The department offering the minor will define the requirements for completing the minor. Students will be required to follow the departmental rules regarding grades, IUPUI credit hours, and course requirements. The minor will appear on the student's official transcript. No more than two minors may appear on the transcript.

Information concerning approved minors is available in the undergraduate office, Business/SPEA Building 3024. Students must consult with an advisor in the department offering the minor.

Overseas Study Programs

The Kelley School of Business offers students the opportunity to study overseas for one semester so that they may gain exposure to other cultures and to international business and economic institutions. A study tour is incorporated into the program, enabling students to visit government and political institutions. Multinational firms are visited throughout the semester.

Qualified students may participate in programs in France, the Netherlands, Finland, Singapore, Chile, Germany, Japan, and Australia, among others. Additional information is available in the undergraduate office, Business/SPEA Building 3024.

The overseas study program will fulfill the international dimension requirement. (See the "Undergraduate Curriculum" section of this bulletin.)

Second Bachelor's Degree

Normally, the holder of a bachelor's degree who wishes to pursue further education is encouraged to seek admission to a graduate program. For example, students interested in taking the additional courses necessary to sit for the C.P.A. exam are encouraged to apply to the Masters of Professional Accountancy Program. In certain cases, however, the undergraduate program of the Kelley School of Business may admit students who have already earned a bachelor's degree in an area *other than business*. In such cases, candidates must earn at least 30 additional credit hours in residence and meet the requirements of the Kelley School of Business and of their selected concentrations. The requirements are similar to those for the bachelor's degree in business (see following pages). The candidate will, of course,

be exempt from any requirements already fulfilled in acquiring the first bachelor's degree.

Students who have already earned a bachelor's degree in business **are not eligible** to earn a second bachelor's degree in business.

Student Organizations

The faculty of the Kelley School of Business recognizes that student organizations contribute greatly to the programs of the school. Some of these are honorary organizations facilitating recognition of outstanding performance. Others enable students to develop their interests in various fields through extracurricular programs. More information about the organizations and names of individuals to contact is available in the undergraduate office, Business/SPEA Building 3024; phone (317) 274-2147.

Accounting Club The Accounting Club maintains a close relationship with IUPUI accounting students, alumni, accounting faculty, and practicing accountants. Members provide numerous services to the community and university, including free help with income tax issues, tutoring in accounting subjects, auditing of student organizations, and arranging scholarships for accounting students. Members meet for discussions and panel presentations and to hear speakers from prominent businesses and accounting firms. Membership is open to all students.

Beta Gamma Sigma Undergraduate membership in this national scholastic honorary business fraternity is restricted to no more than the upper 10 percent of the senior class and the upper 5 percent of the junior class. Graduate students pursuing the M.B.A. degree also may be invited to participate. All successful doctoral degree candidates are eligible for membership if not previously admitted.

Delta Sigma Pi This national professional fraternity for students enrolled in schools of business fosters the study of business in universities, encourages scholarship, promotes closer affiliation between the business world and business students, and furthers the development of high standards of business ethics. Public outreach via guest speakers, corporate tours, and volunteer community service is an important part of Delta Sigma Pi's activities.

Finance Club The Finance Club is an organization of undergraduate students interested in careers in finance. The program includes meetings with prominent people in banking, brokerage, investments, and other phases of finance, as well as trips to financial institutions in the larger cities.

Honors Business Association The Honors Business Association's purpose is to promote and aid honors students.

International Business Organization (IBO) Open to all students, the organization is designed to address the international aspects of business enterprise. The IBO sponsors company visits, serves as a liaison with other international groups, and distributes information on international opportunities. Representatives from multinational firms are frequent guests.

Marketing Club All students concentrating in the field of marketing are eligible to join this organization, which is affiliated with the American Marketing Association. Its objectives are to further the individual

welfare of its members; to acquaint them with practical situations in the marketing field; to foster marketing research in the fields of advertising, retailing, and sales; and to promote fellowship among the marketing students and the faculty. Outside speakers frequently address the club.

Multicultural Students in Business Membership is open to all IUPUI students. The purpose of the organization is to provide a support structure for business students with common concerns and objectives. Professionals from the corporate sector are frequent guest speakers.

National Association of Black Accountants (NABA) Membership is open to all IUPUI students but has the primary purpose of developing, encouraging, and serving as a resource for greater participation of African Americans and other minority groups in the accounting profession. The goals of the association include: (1) promoting and developing the professional skills of members; (2) encouraging and assisting minority students in entering the accounting profession; (3) providing opportunities for members to fulfill their civic responsibilities; (4) ensuring long-term financial stability for and providing adequate resources to implement chapter, regional, and national programs; and (5) representing the interests of current and prospective minority accounting professionals.

Women in Business Membership is open to all women at IUPUI, both undergraduate and graduate, who have an interest in exploring business career possibilities and preparing for entry into the business world.

Undergraduate Curriculum

Degree Requirements

To be awarded the Bachelor of Science in Business degree, students must meet the following requirements. (Also see "Undergraduate Program" in this section.)

1. Complete a minimum of 124 credit hours. Of this number, at least 48 credit hours must be in business and economics courses; a minimum of 62 credit hours must be in courses other than business and economics. A maximum of 9 credit hours of economics will be counted as general education credits in meeting this requirement.
2. Complete the specific degree requirements of the Kelley School of Business as listed below.
3. Complete the last 30 credit hours of the degree program at IUPUI.
4. Complete a minimum of 50 percent of the concentration requirements on the IUPUI campus. This requirement applies to all courses listed for each curricular concentration.

Students in the Kelley School of Business are responsible for understanding and for meeting the degree requirements. Approval for any exceptions or modifications in the degree requirements must be *in writing* and may be granted only by the dean of the Kelley School of Business, the undergraduate program chairperson, the chairperson of the student's concentration, or the chairperson's administrative representative.

Students who would like assistance in planning an academic program or clarification of degree requirements may consult an academic advisor in the Kelley School of Business. See “Useful Phone Numbers” at the beginning of this section.

The undergraduate curriculum in the Kelley School of Business consists essentially of three parts:

(1) general-education courses, (2) basic business and economics courses, and (3) business concentrations. (A key to relevant course codes may be found at the beginning of this bulletin.)

General-Education Requirements (Minimum of 62 cr.)

I. Foundation Courses (12 cr.)¹

ENG W131 Elementary Composition I (3 cr.)²

COMM R110 Fundamentals of Speech Communication (3 cr.)²

MATH M118 Finite Mathematics (3 cr.)

MATH M119 Brief Survey of Calculus (3 cr.)

II. Humanities (12 cr.)

HIST H105 American History I (3 cr.)

or

HIST H106 American History II (3 cr.)

or

Any history course with an “A” prefix except A361 and A363.

The remaining 9 credit hours may be completed by taking courses as specified below:

Art—Courses with an “H” prefix (art history) that are at the 200 level or above

Classical Studies—(except C209)

Communications—T130, T337, T338

Comparative literature—Courses with a “C” prefix that are at the 200 level or above

English—Courses with an “L” prefix (English literature) that are at the 200 level or above

History

Philosophy

Religious Studies

III. Social Sciences (6 cr.)

The social science requirement may be satisfied by selecting 6 credit hours from any of the following departments:

Anthropology

Geography

Political Science

Psychology (except practica)

Sociology

IV. Science (5-6 cr.)

One or more courses selected from the following departments:

Astronomy

Biology

Chemistry

Geology

Physics

V. General-Education Electives

General-education courses are chosen from throughout the university, excluding Kelley School of Business courses and Department of Economics courses. The number of credit hours required in this category depends upon the manner in which the above requirements are met. At least 62 credit hours in general-education courses are required.

Note: The following courses do not count for any credit toward any degree program in the Kelley School of Business: ENG W001 Fundamentals of English, MATH M010 Pre-Algebra, MATH 001 Introduction to Algebra, MATH 110 Fundamentals of Algebra, and MATH 111 Algebra. As a general rule, remedial courses do not count for any credit toward any degree program in the Kelley School of Business. Consult an advisor for specific information.

VI. International Dimension Requirements

The international dimension can be fulfilled in any one of the following four ways.

- A. Language: A minimum of 6 credit hours in courses at the 200 level or above in a language other than English.
- B. International business and economics: Two courses selected from the following list: BUS D301 The International Business Environment; BUS D302 International Business: Operation of International Enterprises; BUS F494 International Financial Management; BUS L411 International Law; BUS M401 International Marketing; ECON E303 International Economics; ECON E325 Comparative Economic Systems; ECON E430 Introduction to International Economics; ECON E495 Economic Development.
- C. Participation in approved overseas study programs: earning at least 6 credit hours through participation in any approved overseas program of Indiana University will fulfill this requirement. Participation in non-IU programs may be possible, but the student must have prior approval of a Kelley School of Business advisor.
- D. International focus: selection of two courses from a list of international courses offered in various IUPUI departments, such as history, political science, and geography. See a Kelley School of Business undergraduate program advisor for a current list of approved international courses.

Kelley School of Business students from other countries will generally be considered to have fulfilled this requirement. To apply for this waiver, contact the Undergraduate Program Office, Business/SPEA Building 3024.

Basic Business and Economics Requirements

Freshman and Sophomore Years¹

BUS X100 Business Administration: Introduction (3 cr.)²

BUS X103 Business Learning Community (1 cr.)²

BUS A100 Basic Accounting Skills (1 cr.)

BUS A201 Introduction to Financial Accounting (3 cr.)

BUS A202 Introduction to Managerial Accounting (3 cr.)

BUS K201 The Computer in Business (3 cr.)²

BUS X204 Business Communications (3 cr.)²

BUS L203 Commercial Law I (3 cr.)

ECON E201 Introduction to Microeconomics (3 cr.)

ECON E202 Introduction to Macroeconomics (3 cr.)

ECON E270 Introduction to Statistical Theory in Economics (3 cr.)

Junior Year

BUS F301 Financial Management (3 cr.)³

BUS M301 Introduction to Marketing Management (3 cr.)³

BUS P301 Operations Management (3 cr.)³

BUS Z302 Managing and Behavior in Organizations (3 cr.)

BUS X420 Business Career Planning and Placement (2 cr.)

Senior Year

BUS J401 Administrative Policy (3 cr.)

For information about Kelley School of Business departments and areas of study, see “Departments and Concentrations” and “Course Descriptions.”

¹ Equivalent or approved substitute courses may be used to fulfill these course requirements. Courses may be repeated only once. (See “Admission Requirements.”)

² Must be completed with a minimum grade of C prior to admission to the Integrative Core (BUS F301, M301, and P301).

¹ Equivalent or approved substitute courses may be used to fulfill these course requirements. Courses may be repeated only once. (See “Admission Requirements.”)

² Must be completed with a minimum grade of C prior to admission to the Integrative Core (BUS F301, M301, P301).

³ F301, M301, and P301 must be taken together as the Integrative Core. BUS X390 Integrative Experience (1 cr.) is required of transfer students who have completed two or more courses of the Integrative Core. All prerequisites must be completed prior to a student registering for core. See an advisor if you have any questions.

Typical Program for Full-Time Students

A typical Kelley School of Business program for a full-time Indianapolis student (minimum total of 124 credit hours)² would be as follows:

SEMESTER I	First Year	Second Year	Third Year	Fourth Year
	BUS X100 (3 cr.) ¹	BUS A201 (3 cr.)	BUS F301 ³ (3 cr.)	International dimension ²
	BUS X103 (1 cr.) ¹	BUS K201 (3 cr.) ¹	BUS M301 ³ (3 cr.)	(3 cr.)
	ENG W131 (3 cr.) ¹	BUS L203 (3 cr.)	BUS P301 ³ (3 cr.)	Concentration
	MATH M118 (3 cr.)	ECON E201 (3 cr.)	Humanities ² (3 cr.)	requirements
	American history (3 cr.)	Humanities ² (3 cr.)	Electives ^{2,4} (3 cr.)	or electives ² (14 cr.)
	Social science ² (3 cr.)	Electives ^{2,4} or Science (1-3 cr.)		
SEMESTER II	BUS A100 (1 cr.)	BUS A202 (3 cr.)	BUS X420 (2 cr.)	BUS J401 (3 cr.)
	BUS X204 (3 cr.) ¹	ECON E202 (3 cr.)	BUS Z302 (3 cr.)	Concentration
	COMM R110 (3 cr.)	ECON E270 (3 cr.)	International dimension ¹	requirements
	MATH M119 (3 cr.)	Humanities ² (3 cr.)	(3 cr.)	or electives ² (12 cr.)
	Science (3-5 cr.)	Electives ² (3-5 cr.)	Concentration	
	Social science ² (3 cr.)		requirements or electives ² (7 cr.)	
Total Credits	32-34 credits	31-35 credits	30 credits	32 credits

¹ Must be completed with a minimum grade of C prior to admission to the Integrative Core (BUS F301, M301, P301).

² See "General-Education Requirements," "Basic Business and Economics Courses," and "Departments and Concentrations."

³ The Integrative Core courses must be taken together. All prerequisites must be completed prior to registering for core.

⁴ Electives should be chosen to complete the science requirement if the first course selected in semester II was worth fewer than 5 credit hours.

IUPU Columbus

Columbus Students Transferring to IUPUI

Students who matriculate to Indiana University-Purdue University Columbus (IUPUC) and who wish to earn a Kelley School of Business degree must meet senior residency requirements and complete the last 30 credit hours on the IUPUI campus. Students cannot take any of the final course work in Columbus to receive the Kelley School of Business degree. The eight-year statute of limitations (see "Graduation Requirements") mandates that students complete their degree requirements within eight years in order to earn a Kelley degree. This policy does not apply to students who matriculated prior to the fall of 2001.

IUPUC students who wish to earn a Kelley degree must apply for admission to the Kelley School of Business in Indianapolis by the stated deadlines and meet all Indianapolis program requirements. Course work may be taken at either campus for students who matriculated to IUPUC prior to the fall of 2001. Students also must apply to graduate from the Kelley School of Business in Indianapolis.

Students currently admitted to degree programs at Indiana University campuses other than IUPUI, but who plan to attend IUPU Columbus on a permanent basis, must request that a permanent Intercampus Transfer be sent to IUPU Columbus from their current campus.

Students who plan to attend IUPU Columbus for specific courses and return to a campus other than IUPUI to complete their program should request that a temporary Intercampus Transfer be sent to IUPU Columbus. This transfer should specify the length of

time to be spent at IUPU Columbus or list the course(s) that the student is authorized to complete.

Calendar and Schedule of Classes Final schedules and calendars pertaining to IUPU Columbus are available at IUPU Columbus. Registration dates at IUPU Columbus generally do not correspond with those at IUPUI.

For further information on business study at IUPU Columbus, contact:

IUPU Columbus
4601 Central Avenue
Columbus, IN 47203-1769
Phone: (812) 372-8266

Departments and Concentrations

In addition to the general-education and general business curricula discussed previously, students majoring in business also must select an area of concentration within the business program. The areas of concentration, along with the curriculum for working toward that concentration, are presented by department in this section and are summarized below.

Accounting
Computer Information Systems
Finance
Human Resource Management
International Studies¹

¹ May be selected as a second concentration only.

Management
Management of Nonprofit Organizations
Marketing
Marketing-Distribution Management

Students with special interests, such as an interest in a specific industry, may seek permission from their faculty advisors to plan programs that vary somewhat from those outlined in this section.

Concentration requirements are subject to change during the two years covered by this bulletin. Students are expected to stay informed of concentration changes by seeing a business academic advisor on a regular basis.

Department of Accounting and Information Systems

Accounting Concentration

The accounting curriculum prepares students for careers in auditing, corporate accounting and management consulting, governmental and nonprofit organizations, and taxation. In addition, it equips the prospective business executive with tools for intelligent analysis, planning, control, and decision making. The accounting curriculum also provides excellent background for the student who wants to pursue graduate work in business, public administration, or law.

Accounting graduates who meet requirements of the State Board of Public Accountancy of Indiana are eligible to sit for the Uniform C.P.A. Examination in

Indiana. Most accounting graduates will need to engage in further study to be eligible to sit for the exam. Those who wish to engage in public accounting practice in Indiana as certified public accountants should familiarize themselves with the rules and regulations issued by the Indiana State Board of Accountancy, Indiana Professional Licensing Agency, 302 W. Washington Street, Rm. E034, Indianapolis, IN 46204-2724; phone (317) 232-2980. Students planning practice outside Indiana should consult the C.P.A. board in their state of residence. Call 1-800-CPA-EXAM for additional information.

Internships in business or government are available on a selective basis during the fall, spring, or summer. Fall is the ideal time to apply for an accounting internship, since the majority of public accounting internships are spring semester positions. For further information about internships, contact Career and Employment Services, Business/SPEA Building 2010; phone (317) 274-2554.

Concentration Requirements

Freshman Year: BUS A100

Sophomore Year: BUS A201, A202

Junior and Senior Years:

- BUS A311, A312, A325, A328, A424, S302, and X302
- Two accounting electives from the following: A335, A337, A339, A380, A422, A437, A439, A490 or other approved accounting or systems course.
- Nonaccounting concentration (9 cr.): Students must use these hours to build a three-course sequence, a concentration that creates an expertise normally in some nonaccounting business area (e.g., computer information systems or finance). However, a concentration that includes non-business courses (e.g., courses from Computer Technology) may be acceptable. This concentration might be obtained in a number of ways. For example, students might construct a three-course sequence in a particular area such as finance, computer information systems, or something similar. Information about *preapproved* concentrations may be obtained from the Kelley School of Business advisors. Students may construct their own concentration, but all proposed concentrations must have approval from an accounting or systems faculty member. Students also are encouraged to use this flexibility to double major.

NOTE: Most states (including Indiana) require that those accounting professionals who wish to be licensed as certified public accountants must have completed 150 credit hours of education with an accounting concentration. Students must choose among three alternatives. Students who plan to forego C.P.A. licensure may begin their careers after four years with a bachelor's degree. Students interested in licensure may either continue for a fifth year to earn a master's degree (fulfilling the 150-hour requirement) or enter the workforce after four years (with the bachelor's degree) and continue to work toward the master's as part-time or returning students.

The Department of Accounting has created a Master of Professional Accountancy Program for students wishing to pursue licensure.

Computer Information Systems Concentration

Information has joined land, labor, capital, and materials as a central resource for all business managers. Thus, although management specialists with an in-depth education in information systems are needed, every manager is called on to utilize information for business advantage.

Information systems include computers, a wide variety of programming languages, telecommunications, mathematical modeling and computer software for data analysis, factory and office automation, robotics, and expert systems. Managers need to know how and when to apply these technologies, how organizations can acquire and manage information systems that use these technologies, and how businesses should organize themselves to take advantage of opportunities through these technologies.

Students from all areas of business can benefit from understanding information systems. For example, since accounting systems are usually computerized, cost accountants, auditors, and corporate finance managers must be able to use and analyze information systems. General managers need to understand information systems as organizational innovations that must be adopted and implemented simultaneously with changes in organizational designs, strategies, and behaviors. Market researchers must be able to extract data from large databases and analyze them using sophisticated decision and business modeling techniques. Manufacturing and engineering managers must understand the linkages between technical and business computing applications. The undergraduate curriculum offers three different tracks in this concentration.

Concentration Requirements

Junior and Senior Years: All Options
BUS S302, S305, S307, and S310

CSCI N-series Option Only

1. CSCI N305 and N331
2. Choose two from the following list:
 - BUS S490
 - CSCI N241, N311, N335, N341, N345, N355

CSCI Programming Language Option Only

1. CSCI 230, 265, and 452
2. Choose one from the following list:
 - BUS S490
 - CSCI N241, N311, N331, N335, N341, N345, N355

Database Option Only

CSCI 230, 265, 340, 362, and 443

Note: This is a rigid concentration track due to programming prerequisites. There are no concentration electives.

Department of Business Law

The business law department's course offerings acquaint students with what is probably the most important external factor affecting business operations: the law. The courses provide students with an understanding of the nature, functions, and practical operations of the legal system. They also provide considerable information about the most important legal rules restricting—and facilitating—business operations. Finally, they help develop both critical reasoning skills and an appreciation of the social, ethical, and economic forces that help make the law what it is.

Although a concentration in business law is not currently available on the Indianapolis campus, courses in this department may be elected to enhance most other business concentrations.

Department of Finance

The finance undergraduate curriculum provides for a high degree of flexibility while offering the basic preparation needed to deal with the complexities of the modern financial environment.

All students in the concentration must take a common core of three courses: BUS A311, F305, and F420. These three courses provide a basic grounding in financial accounting systems, the capital and money markets, and corporate financial decision making. An understanding of these areas is necessary for someone who is planning a career in finance.

Finance Concentration

The undergraduate curriculum in this concentration is designed to provide familiarity with the instruments and institutions of finance and with a financial approach for structuring and analyzing management decisions.

Course offerings are designed to integrate various aspects of the environment, such as the state of the economy, taxes, and legal considerations, into the decision-making process.

Study in finance, along with appropriate electives, provides academic preparation for careers in corporate financial management; commercial banking, savings and credit institutions; investment analysis; and the selling of financial instruments and services.

Candidates are encouraged to select electives in accordance with career objectives.

Concentration Requirements

Junior and Senior Years:

- A. Finance core requirements: BUS A311, F305, F420
- B. Select two of the following:
 - BUS F402, F446, F494
- C. Select three of the following:
 - BUS A312, BUS A325, BUS A328, ECON E305, ECON E470, BUS R305, BUS R440, BUS R443

Note: Double majors in finance and accounting may take any accounting course other than A100, A201, and A202 as a Section C elective.

Department of Management

The Department of Management encompasses the areas of management, human resource management, organizational behavior, business policy, management of nonprofit organizations, entrepreneurship, and international business. The curriculum is designed to offer students either a broad-based background preparing them for entrance into managerial positions or specialized training in an area of concentration.

At the undergraduate level, the department offers a major concentration in management, nonprofit management, or human resource management, as well as the option to pursue a second concentration in international studies.

Management Concentration

Society recognizes the importance of understanding both management itself and the complex nature of the organizations—in business, government, hospitals, and universities—in which managers operate. The faculty is concerned with improving this understanding through the study of individual and group behavior, organizational theory, and human resource development.

The undergraduate courses offered in this concentration are concerned not only with the broad aspects of management and organization, but also with developing skills for dealing with problems of motivation, organization design, and the increasingly complex problems of human resource allocations in our interdependent society.

This concentration provides the flexibility to accommodate students whose interests include preparation for corporate management training positions, application of behavioral science to management, personnel function in both line and staff capacities, and managing the small business.

Concentration Requirements

Junior and Senior Years:

1. BUS W430 and Z440
2. Four of the following (a minimum of two must be business courses):
 - BUS D301, D302, J404, W311, W406, W408, W494, Z404, Z441, Z444;
 - ECON E304;
 - OLS 378;
 - POLS Y302;
 - PSY B370, B374, B424;
 - SOC R317, R478;
 - SPEA V432;
 - Any 400-level Kelley School of Business course approved by a business advisor.

Entrepreneurship Emphasis

Within the management concentration there is a special emphasis in entrepreneurship and small business.

The image of business in the United States is often one of mammoth national and multinational corporations. Too often the role of the entrepreneur and the importance of small businesses in the economy are overlooked. A vital cornerstone in

sustaining the free enterprise system is the continual birth of new enterprises and the identification, encouragement, and nurturing of entrepreneurial aspirations.

The Indiana University Kelley School of Business, recognizing the contributions of entrepreneurs and the interest shown by students in creating and entering small businesses, has developed an entrepreneurship and small business emphasis within the management concentration. This emphasis focuses the requirements of an individual concentrating in management toward small business.

Students interested in the entrepreneurship emphasis may satisfy the requirements by taking BUS W311, BUS W406, and an approved elective from the list of management concentration electives. (Note: BUS W490 requires the consent of the instructor and the department chairperson.)

Management of Nonprofit Organizations Concentration

For students interested in either the public or private sector, this concentration responds to the need for individuals with broad backgrounds in business to fill managerial positions in nonprofit institutions. These nonprofits include such diverse institutions as social service agencies, museums, hospitals, churches, educational bodies, and arts and cultural agencies. As government funding has tightened, many of these nonprofits have begun commercial activities in order to diversify their revenue bases. Students in this area will receive instruction in fundraising, appreciation of the arts, volunteer programs, and general philanthropic studies. Students who meet these requirements and apply to the Kelley School of Business and the School of Public and Environmental Affairs will earn **both** a B.S. degree in Business and a Certificate in Non-Profit Management.

Concentration Requirements

Junior and Senior Years:

1. BUS A335, W430, J404, Z440, W480
2. SPEA V221, V362
3. One of the following
 - SPEA E162, H316, H320
 - POLS Y326
 - PSY B310
 - SOC R335

Human Resource Management Concentration

This program is designed for students whose career objectives lie in the field of personnel management. From its early beginnings as a staff function involving the maintenance of records and the administration of benefit programs, personnel administration has grown and expanded to encompass the total development and deployment of human resources in organizations. While company titles may vary from vice president of industrial relations to vice president for organization planning and development, there are few firms of any size or consequence today that do not have a human resource management specialist reporting directly to the company's highest level. This practice reflects the awareness that the people who work in an organization are its greatest asset.

For this reason, the curriculum in human resource management is designed to acquaint the student with modern personnel management in its broadest sense.

Included are both the traditional areas of personnel administration and labor relations (such as employment, management development, wage and salary administration, organizational planning, and contract negotiation) and developments in the behavioral sciences with implications for a complete human resource management program.

The objectives at the undergraduate level are to provide students with the broad spectrum of knowledge they need for a career in organizational leadership; to prepare them for a career in human resource management; and to encourage and develop interest in further study and research in this area.

Concentration Requirements

Junior and Senior Years:

1. BUS Z440, Z441, Z443, and Z445
2. Two of the following:
 - BUS S302, W430, Z404, Z444, Z480
 - OLS 331

International Studies Concentration

In response to new and dynamic patterns of international business, American business firms have progressed far beyond the comparatively simple stage of import-export operations. Many companies are becoming multinational, with production units in numerous foreign countries. Private enterprise in the United States has become more intimately concerned with the economic, political, and social trends of foreign nations. The Kelley School of Business has recognized these developments in its global business programs.

All students may elect two courses dealing with the general problems involved in international business: BUS D301 and D302. They also may participate in overseas programs, which offer students an opportunity to see firsthand the problems treated in the course of study, as well as to enhance their language facility.

Students who wish to continue studies in the international area may choose, as a second concentration, the international studies concentration (ISC).

1. The ISC is an option available only to students admitted to the Kelley School of Business.
2. The ISC is a second concentration available to Kelley School of Business students. It may not be listed as a first concentration.
3. The ISC consists of 9 credit hours of course work taken in addition to the international dimension requirement. These 9 credits cannot be selected from the same option used for the international dimension requirement. (See the "General-Education Requirements" section of this bulletin.)

See a business advisor to discuss the possible combinations for fulfilling this concentration's requirements.

Department of Marketing

Marketing Concentration

The study of marketing concerns all activities related to the marketing and distribution of goods and

services from producers to consumers. Areas of study include customer behavior, the development of product offerings to meet consumer needs, pricing policies, institutions and channels of distribution (including retailers and wholesalers), advertising, selling, sales promotion, research, and the management of marketing to provide for profitable and expanding businesses.

The marketing curriculum endeavors to provide the business community with broadly trained men and women who can approach problems with a clear understanding both of marketing and of the interrelationships between marketing and other functions of the firm. Students planning careers in marketing management, advertising, sales, sales management, retailing, wholesaling, marketing research, or distribution normally major in marketing and then may pursue within the curriculum a modest degree of specialization in the area of their vocational interest.

Concentration Requirements

Junior Year: BUS M303

Junior and Senior Years:

Select at least one course from each of the following areas:

1. Buyer behavior: BUS M405 or M407
2. Channel management: BUS M402 or M419
3. Promotion management: BUS M415 or M426
4. Logistics management: BUS M411 or M412

Senior Year: BUS M450

Marketing-Distribution Management Concentration

The undergraduate program in distribution management prepares students for careers in physical distribution management and transportation. The curriculum emphasizes the role of distribution and transportation in making goods available in the world marketplace and to the nation in a timely and economical fashion. A student completing the distribution management program is qualified for work in corporate distribution management; private carrier management; warehousing; and transportation carrier management in the railroad, motor carrier, airline, or related fields. The courses combine theory, principles, concepts, and practice involving marketing, distribution channels, rate negotiations and rate making, transportation regulation, transportation economics and public policy, customer service standards, and related subjects.

Concentration requirements

Junior Year: BUS M303

Junior and Senior Years:

1. BUS M411 and M412
2. Two of the following: BUS M402, M407, M426, M450

Undergraduate Courses

The courses listed in this bulletin represent the complete undergraduate offerings of departments and programs of the Kelley School of Business on the Indianapolis campus.

The number of credit hours given to a course is indicated in parentheses following the course title.

The abbreviation "P" refers to course prerequisites; the abbreviation "C" refers to course corequisites.

Accounting and Information Systems

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

A100 Basic Accounting Skills (1 cr.) The course covers the process of recording economic events that underlie financial statements. The basics of generally accepted accounting principles are introduced as they affect financial statements. The fundamental aspects of managerial accounting are related to planning, controlling, and decision making in business organizations. Different cost definitions are developed and cost-volume-profit analysis is introduced as an important financial planning and control skill.

A200 Foundations of Accounting (Nonmajors) (3 cr.) P: sophomore standing. The course addresses the role of accounting in society and business, with a special emphasis on fundamental concepts and the basic design of accounting systems. This course is intended for non-business majors who are interested in learning about how accounting affects their lives and businesses. Credit not given for both A200 and either A201 or A202.

A201 Introduction to Financial Accounting (3 cr.) P: A100; sophomore standing. Provides balanced coverage of the mechanics, measurement theory, and economic context of financial accounting. Strikes a balance between a preparer's and a user's orientation, emphasizing that students must understand both how transactions lead to financial statements (preparer's orientation) as well as how one can infer transactions given a set of financial statements (user's orientation). Relies on current real-world examples taken from the popular business press. The first part of the course introduces students to the financial accounting environment, financial statements, the accounting cycle, and the theoretical framework of accounting measurement. The second part of the course covers the elements of financial statements, emphasizing mechanics, measurement theory, and the economic environment. Students cannot receive credit for both A201 and A200.

A202 Introduction to Managerial Accounting (3 cr.) P: A100; sophomore standing. The course covers the concepts and issues associated with the accounting and the management of business. Particular emphasis is given to understanding the role of accounting in product costing, costing for quality,

cost-justifying investment decisions, and performance evaluation and control of human behavior. Credit not given for both A202 and A200.

A311 Intermediate Accounting I (3 cr.) P: A201, A202. Provides students with a thorough understanding of the theoretical foundations underlying financial reporting, revenue recognition, and the matching of expenses; financial statement presentation; and accounting for assets. The course's primary objective is to give students the tools necessary to understand and execute appropriate accounting procedures. Another goal is to help students understand the process through which accounting standards are determined and to evaluate the outcomes of that process from the perspectives of managers, shareholders, auditors, and others. Students will learn to assess competing accounting theories and methods from multiple perspectives.

A312 Intermediate Accounting II (3 cr.) P: A311. Provides students with a thorough understanding of accounting for long-term liabilities and debt investment, stockholders' equity, and preparation of cash flow statements. The course's first objective is to give students the tools necessary to understand and execute appropriate accounting procedures. The course's second objective is to help students understand the process through which accounting standards are determined and to evaluate the outcomes of that process from the perspectives of managers, shareholders, auditors, and others. Students will learn to assess competing accounting theories and methods from multiple perspectives.

A325 Cost Accounting (3 cr.) P: A201, A202. Conceptual and procedural aspects of management and cost accounting. Product costing, cost control over projects and products, decision making, profit planning, quantitative modeling, activity-based management, and computer applications.

A328 Introduction to Taxation (3 cr.) P: A201, A202. C: X302. This course examines the fundamentals of federal income taxation. Primary emphasis is on a basic understanding and awareness of the tax law as it applies to individuals but includes an overview of the taxation of corporations, partnerships, and estates and trusts. The course introduces students to tax research and the various sources of tax law, including the Internal Revenue Code, regulations, administrative pronouncements, and case law.

A335 Fund Accounting (3 cr.) P: A201, A202. Financial management and accounting for non-profit-seeking entities such as municipal and federal governments, schools, and hospitals.

A337 Computer-Based Accounting Systems (3 cr.) P: A311, S302. Impact of modern computer systems on analysis and design of accounting information systems. Discussion of tools of systems analysis, computer-based systems, and internal controls and applications. Focus on microcomputer use.

A339 Advanced Income Tax (3 cr.) P: A328. Advanced aspects of the income taxation of corporations, partnerships, and S-corporations.

A380 Professional Practice in Accounting (1-3 cr.) P: F301, M301, P301; junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Students receive work experience in cooperating firm or agencies. Comprehensive written report required.

A422 Advanced Financial Accounting (3 cr.) P: A312. Generally accepted accounting principles as applied to partnerships, business combinations, branches, foreign operations, and nonprofits. Particular emphasis on consolidated financial statements.

A424 Auditing (3 cr.) P: A312. Objectives of this course are to provide students with an understanding of (1) the auditing environment and professional ethics, (2) audit reports and the conditions under which alternatives are used, (3) basic auditing concepts, (4) audit evidence and documentation, (5) analytical reviews, (6) the audit risk model, (7) review and documentation of internal controls, (8) audits of cycles, (9) statistical sampling, and (10) audit objectives and audit procedures for mechanized systems. Emphasis is on the conceptual development of the subject matter, the nature of professional practice, and the technology of auditing.

A437 Advanced Managerial Accounting (3 cr.) P: A325, and consent of the instructor. Objective of course is to provide students with advanced managerial accounting knowledge and skills. Emphasis is on strategic decision making and management control systems. Students will provide case analyses and presentations.

A439 Advanced Auditing (3 cr.) P: A424. Coverage of ethics for the accounting profession. Issue of legal liability. Audit program planning. Statistical sampling applications. Use of EDP auditing.

A490 Independent Study in Accounting (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Computer Information Systems

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

S302 Management Information Systems (3 cr.) P: K201. Overview of management information systems (MIS) within a business context with emphasis on end-user computing. Covers MIS theory and practice as they relate to management and organization theories; current trends in MIS;

managerial usage of information systems; computer hardware, software, and telecommunications; information systems for marketing, finance, accounting, and other business areas; systems development process; and the role of microcomputers. Provides experiential learning by exposure to various decision-support tools for microcomputers.

S305 Business Telecommunications (3 cr.)

P: S302. Introduces students to a wide range of telecommunications technologies, including local area networks, wide area networks, and the Internet, as well as to the uses of these technologies in the organization.

S307 Data Management (3 cr.) P: K201. Improves students' understanding of, and develops their skills in, the design and implementation of business databases using modern database management systems. Covers data structures and the conceptual, logical, and physical design of databases, as well as database implementation and general issues in business data management.

S310 Systems Analysis and Design (3 cr.)

P: F301, M301, P301; S307 or concurrent. Analysis of an organization and the subsequent design of computer systems to meet business requirements are at the heart of the computer information systems (CIS) field. This is the first in a two-course sequence with S410 that addresses the multiphased process for developing information systems. Courses follow the system's development life cycle, although alternative methodologies are also covered. This first course covers the phases from information systems planning through the specification of structured system requirements in functional form (i.e., logical system design) and concentrates on methods, techniques, and tools used to determine information requirements and to document these requirements in a thorough and unambiguous form. Also introduces computer-aided software engineering (CASE) technology. Students learn the discipline of systems analysis and logical design through a hypothetical case situation.

S410 Systems Implementation (3 cr.)

P: S310. Effective development of an information system depends on proper utilization of a broad range of information technology, including database management systems, operating systems, computer systems, and telecommunications networks. The second course in a two-course sequence with S310 that addresses the multiphased process for developing information systems, this course covers the phases from physical system design through the installation of working information systems. Concentrates on using the results of systems analysis and design, typically documented in CASE technology, and either building or generating systems to meet these specifications. A semester-long field project and various hands-on exercises provide practical experience in building, testing, and installing a system.

S435 Advanced Topics in Computer

Information Systems (3 cr.) P: S302 and consent of the department chairperson. Variable topics course; topics offered will depend on student interest and faculty interest and expertise. Possible topics include telecommunications and networking, advanced systems development methods, data administration, and management of the information systems function.

S490 Independent Study in Computer

Information Systems (1-3 cr.) P: S305, S307, S310; consent of department chairperson and instructor. Supervised individual study and research in student's special field of interest. Student will propose the investigation to be completed. Comprehensive written report required.

Business Law

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

L100 Personal Law (3 cr.) Effects of law on everyday lives. May include such topics as family law; criminal offenses and traffic violations; personal injury and property damage claims; employee rights; landlord-tenant law; consumer rights; debt collection; selected real and personal property issues; wills and estates; selected contract law issues; and forms of business organization (partnership, proprietorship, and corporation).

L201 Legal Environment of Business (3 cr.) P: sophomore standing. Emphasis on understanding the nature of law through examining a few areas of general interest such as the duty to avoid harming others (torts), the duty to keep promises (contracts), and government regulation of business. Credit not given for both L201 and L203. Not offered on Indianapolis campus.

L203 Commercial Law I (3 cr.) P: sophomore standing. Includes the nature of law, torts, contracts, the sale of goods, and the legal regulation of business competition. For accounting majors and others intending also to take L303 in order to attain a broad yet fairly detailed knowledge of commercial law. Credit not given for both L203 and L201.

L303 Commercial Law II (3 cr.)

P: L201 or L203. Focuses on the law of ownership, forms of business organization, commercial paper, and secured transactions. For accounting majors and others desiring a broad yet fairly detailed knowledge of commercial law.

L490 Independent Study in Business Law

(1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Finance

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

F260 Personal Finance (3 cr.) Financial problems encountered in managing individual affairs; family budgeting, installment buying, insurance, home ownership, and investing in securities. No credit for Kelley School of Business students when taken concurrently with or after the integrative core.

F301 Financial Management (3 cr.) P: BUS A100, A201, A202, K201, L203, X100, X103, X204, COMM R110, ECON E201, E202, E270, ENG W131, MATH M118, M119. Part of the integrative core, along with P301 and M301. Broad survey of finance for all business students. Provides a conceptual framework of a firm's investment, financing, and dividend decisions; includes working capital management, capital budgeting, and capital structure strategies.

F305 Intermediate Corporate Finance (3 cr.) P: F301. Part of the finance core. Provides a rigorous treatment of the fundamental concepts of corporate finance for finance majors. Covers capital budgeting, the valuation of firms, and capital structure and payout policies. Serves as a foundation for all 400-level finance electives.

F402 Corporate Financial Strategy and Governance (3 cr.) P: F305, A311. Advanced treatment of corporate financial management. Covers all major areas of corporate financial decisions: capital budgeting, dividends, capital structure, cash-flow projections, mergers, and acquisitions. Makes extensive use of spreadsheet modeling.

F420 Equity and Fixed Income Investments (3 cr.) P or C: F305, A311. Rigorous treatment of fundamental concepts of finance for all students with a concentration in finance. In particular, enables students to develop the skills for portfolio optimization, pricing of equity, examining derivatives and fixed income, analyzing market efficiency, and understanding the basis of corporate financial policy. Serves as a foundation for all 400-level finance electives.

F446 Bank and Financial Intermediation (3 cr.) P: F305, A311. The main topics are (1) the economic role of financial intermediaries, with an emphasis on commercial banks; (2) the evolution of markets in which banks and other financial intermediaries operate; and (3) the regulation of commercial banks and other financial institutions.

F480 Professional Practice in Finance (3-6 cr.) P: junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Work experience in cooperating firm or agencies. Comprehensive written report required. Grade of S or F assigned by faculty.

F490 Independent Study in Finance (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

F494 International Finance (3 cr.) P: F301. A study of the international financial markets in which firms operate and of financial management in an international environment. Topics include exchange rates, international arbitrage, exchange rate risk management, international financing and diversification, and multinational capital budgeting.

Real Estate

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

R305 Introduction to Real Estate Analysis (3 cr.) P: F301. For students who may take additional real estate courses. Topics include real estate law, brokerage, property management, appraising, mortgage finance, and investment analysis. Emphasis on the analytical techniques applicable to real estate.

R440 Real Estate Appraisals (3 cr.) P: F305 or consent of instructor. Methods of appraising real property, with emphasis on income property; covers relevant concepts and analytical techniques. Course content is similar to that which a professional appraiser must learn.

R443 Real Estate Finance and Investment Analysis (3 cr.) P: F305 or consent of instructor. Application of financial concepts and techniques to the analysis of real estate financing and investment alternatives. Computer analysis and case studies are used.

R490 Independent Study in Real Estate and Land Economics (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, will develop the scope of work to be completed. Comprehensive written report required.

Management

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

J401 Administrative Policy (3 cr.) P: F301, M301, P301, Z302, X420, and senior standing. Administration of business organizations: policy formulation, organization, methods, and executive control.

J404 Business and Society (3 cr.) Examines major ethical theories as a basis for analyzing ethical behavior in the business environment. Investigates such issues as economic competition, discriminatory

practices, manipulation of power, environmental conservation, and organizational cultures.

J490 Independent Study in Personnel Management and Organizational Behavior (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

W311 New Venture Creation (3 cr.) P: F301, M301, P301. Primarily for those interested in creating a new business venture or acquiring an existing business. Covers such areas as choice of a legal form, problems of the closely held firm, sources of funds, preparation of a business plan, and negotiating.

W430 Organizations and Organizational Change (3 cr.) P: Z302. Analysis and development of organizational theories with emphasis on environmental dependencies, sociotechnical systems, structural design, and control of the performance of complex systems. Issues in organizational change, such as appropriateness of intervention strategies and techniques, barriers to change, organizational analysis, and evaluation of formal change programs.

W480 Professional Practice in Management (3-6 cr.) P: junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Provides work experience in cooperating firm or agency. Comprehensive written report required. Grade of S or F assigned by faculty.

W490 Independent Study in Business Administration (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

W494 Herman B Wells Seminar in Leadership (3 cr.) P: senior standing and consent of instructor. Open to Kelley School of Business seniors and selected seniors from other schools with high scholastic ability and promise of developing leadership qualities exemplified by Herman B Wells.

Z302 Managing and Behavior in Organizations (3 cr.) P: junior standing. Integration of behavior and organizational theories. Application of concepts and theories toward improving individual, group, and organizational performance. Builds from a behavioral foundation toward an understanding of managerial processes.

Z404 Effective Negotiations (3 cr.) P: Z440. Exposure to the concepts of negotiations in both the national and international environments, including

negotiation strategies and tactics, influence, third-party intervention, audience effects, nonverbal communication, and ethical and cultural aspects. Case studies, simulations, and guest speakers will be used throughout the course.

Z440 Personnel-Human Resource Management (3 cr.) P: Z302. Nature of human resource development and utilization in American society and organizations, government programs and policies, labor force statistics, organizational personnel departments, personnel planning, forecasting, selection, training, and development. Integration of government and organizational human resource programs.

Z441 Wage and Salary Administration (3 cr.) P: Z440. Survey of problems faced by modern managers of compensation systems. In-depth look at the role of company, government, union, and employee in the design and administration of total compensation systems. Describes current wage and salary systems and their advantages and disadvantages. Integrates theory and practice through case analysis.

Z443 Developing Employee Skills (3 cr.) P: Z440. Focuses on skills that relate to the acquisition and/or identification of knowledge, skills, and abilities among job applicants or current employees. Students will learn how to identify individuals who currently possess the knowledge, skills, and abilities (KSAs) required to be effective members of contemporary organizations and how to identify specific training needs and formulate and implement programs designed to address observed KSA deficiencies.

Z444 Personnel Research and Measurement (3 cr.) P: Z440. Review and evaluation of studies in personnel research in appropriate journals. In-depth study of selected personnel topics. Includes development of personnel measures and human resource audits.

Z445 Human Resource Selection (3 cr.) P: Z440. The ability to evaluate applicants and predict their future performance is a critical function in any organization that wishes to have a competitive edge over other firms. This course will provide students with an understanding of the technical components of selection, including how to determine which applicant characteristics should be examined, what procedures should be used to gather information, and how that information should be combined to identify qualified job applicants.

Z480 Professional Practice in Human Resource Management (3-6 cr.) P: junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Provides work experience in cooperating firm or agency. Comprehensive written report required. Grade of S or F assigned by faculty.

Z490 Independent Study in Personnel Management and Organizational Behavior (1-3 cr.) P: consent of undergraduate program

chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

International Business

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

D301 The International Business Environment (3 cr.) P: ECON E201-E202 or equivalent, minimum of junior standing, or consent of instructor. Economic environment for overseas operations. Governmental policies and programs that affect international business. Economic and political philosophies around the world; patterns of government-business relationships. Economic development and business activities in differing political and cultural environments.

D302 International Business: Operation of International Enterprises (3 cr.) P: ECON E201-E202 or equivalent, minimum of junior standing, or consent of instructor; D301 recommended. International dimensions of marketing, finance, accounting, taxation, and personnel with an emphasis on management decisions and implementation. Analytical framework for decision making in a multinational context.

D490 Independent Study in International Business (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

D496 Foreign Study in Business (2-6 cr.) P: senior standing and consent of instructor. Work in, or visits to, business firms; discussions with business executives and government officials. Prior background reading, orientation work, and approval of project required. For every three weeks of foreign residence, students earn 2 credit hours.

Marketing

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

M300 Introduction to Marketing P: A200, ECON E201-E202. Examination of the market economy and marketing institutions in the United States. Decision making and planning from the manager's point of view; impact of marketing actions from the consumer's point of view. No credit toward a degree in business.

M301 Introduction to Marketing Management (3 cr.) P: BUS A100, A201, A202, K201, L203, X100, X103, X204, COMM R110, ECON E201, E202, E270,

ENG W131, MATH M118, M119. Part of the integrative core, along with F301 and P301. Marketing planning and decision making examined from firm's and consumer's points of view; marketing concept and its companywide implications; integration of marketing with other functions. Market structure and behavior and their relationship to marketing strategy and implementation.

M303 Marketing Research (3 cr.) P: M301. Focuses on the role of research in marketing decision making. Defining research objectives, syndicated and secondary data sources of marketing information, exploratory research methods, survey research design, experimental design, and data analysis.

M401 International Marketing (3 cr.) P: M303, or concurrent, or consent of the instructor. Covers world markets, their respective consumers, and their political/economic marketing environments. Examines the marketing issues required to meet the product, promotion, price, and distribution demands of a world market. Although the course has a global orientation, issues specific to exporting are discussed.

M402 Marketing Channels (3 cr.) P or C: M303 or consent of instructor. Marketing channels analyzed as organized behavior systems. Focuses on the institutional structure, relationships, and functions of channels of distribution. Franchising, vertical integration, and vertical channel agreements also are emphasized.

M405 Buyer Behavior (3 cr.) P or C: M303 or consent of instructor. Description and explanation of consumer behavior. Demographic, socioeconomic, psycho-graphic, attitudinal, and group influences on consumer decision making. Applications to promotion, product design, distribution, pricing, and segmentation strategies.

M407 Business-to-Business Marketing (3 cr.) P or C: M303 or consent of instructor. Problems, activities, and decision methods involved in the marketing of goods and services by business to business. Demand estimation, pricing, promotion distribution systems, and role of nonconsumer buyers.

M411 Transportation Carrier Management (3 cr.) P or C: M303 or consent of instructor. Study of the carrier-shipper marketing interface with concentration on the variables of rates, service, and government regulations. Modal coverage from an integrated marketing viewpoint. An advanced course that exposes students to market-rate considerations, carrier financial problems, operational factors, and marketing opportunities. Functional analysis of all major transportation modes. Identification of major issues, analysis of alternatives, and discussion of probable future outcomes.

M412 Physical Distribution Management (3 cr.) P or C: M303 or consent of instructor. Management of product distribution systems within an organization. Traffic, inventory control, warehousing,

and other activity centers are analyzed for improvement and related to overall systems performance. Order entry and the customer service variables of order-cycle time and reliability are examined in relation to the sales function. Includes analysis of the impact of physical distribution decisions on other functional areas.

M415 Advertising and Promotion Management (3 cr.) P or C: M303 or consent of instructor. Basic advertising and sales-promotion concepts. The design, management, and integration of a firm's promotional strategy. Public policy aspects and the role of advertising in marketing communications in different cultures.

M419 Retail Management (3 cr.) P or C: M303 or consent of instructor. Major management problems in retail institutions. Treatment of retail/marketing strategy design and problems related to financial requirements, buying, inventory, pricing, promotion, merchandising, physical facilities, location, and personnel.

M426 Sales Management (3 cr.) P or C: M303 or consent of instructor. Emphasizes the activities and problems of field sales management. Includes organizing the sales force, recruiting, training, compensation, motivation, sales techniques, forecasting, territory design, evaluation, and control. Lectures and case studies.

M450 Marketing Strategy (3 cr.) P: M303, one advanced marketing course, and senior standing; restricted to students in the marketing concentration. Ideally taken in the student's last semester. Capstone course for marketing majors. Draws on and integrates materials previously taken. Focuses on decision problems in marketing strategy and policy design, and application of analytical tools for marketing and decision making.

M480 Professional Practice in Marketing (3-6 cr.) P: M301, junior or senior standing in major area, and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Work experience in cooperating firm or agency. Comprehensive written report required. Grade of S or F assigned by faculty.

M490 Independent Study in Marketing (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Operations and Decision Technologies

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

K201 The Computer in Business (3 cr.) Introduction to the role of computers and other information technologies in business (with emphasis on microcomputer applications). Provides instruction

in both functional and conceptual computer literacy. Experimental exercises include learning a Windows-based spreadsheet (Excel), a relational database (Access), electronic mail, and Internet navigation tools. These hands-on labs emphasize application of these learned skills to solve a variety of business problems. The lectures focus on the use and application of technology (hardware, software, storage/multimedia, Internet history, Internet in business, database management systems, and security/privacy of data in this information age).

K480 Professional Practice in Decision Sciences (3-6 cr.) P: junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the Professional Practice Program office. Work experience in cooperating firm or agencies. Comprehensive written report required. Grade of S or F assigned by faculty.

K490 Independent Study in Decision Sciences (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

P301 Operations Management (3 cr.) P: BUS A100, A201, A202, K201, L203, X100, X103, X204, COMM R110, ECON E201, E202, E270, ENG W131, MATH M118, M119. A survey course concerned with the production and distribution of goods and services. Part of the integrative core, along with F301 and M301. Examines how a firm produces and delivers its goods and services, with consistent and acceptable levels of quality, in a cost-effective manner. The discussion covers a wide range of interrelated issues including quality and process improvement, forecasting, planning, resource management, customer service, scheduling, and layout and process design. A semester-long, team project is the primary activity used to integrate the three core courses.

P480 Professional Practice in Operations Management (3-6 cr.) P: junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Work experience in cooperating firm or agency. Comprehensive written report required. Grade of S or F assigned by faculty.

P490 Independent Study in Operations Management (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

General and Honors Courses

Note: Senior standing and Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

X100 Business Administration: Introduction (3 cr.) Business administration from the standpoint of the manager of a business firm operating in the contemporary economic, political, and social environment. No credit for Kelley School of Business students when taken concurrently with or after the integrative core.

X103 Business Learning Community (1 cr.) Authorization required. This course is designed to assist students to be successful at the university and to develop skills and competencies that will enable a student to perform well in courses offered by the Kelley School of Business. Each Learning Community has an instructional team that is led by a faculty member and includes a student mentor, an academic advisor, and a librarian. The instructional team structures the learning environment to provide participants with as much academic support as possible.

X203 Independent Study in Community Service Learning (1-3 cr.) P: sophomore standing. Authorization required. Independent study course for students intending to apply to the Kelley School of Business and who have 26-56 credit hours. Students will participate in an online library research program, survey and analyze written works on business ethics and societal responsibility, and participate in a group social learning project that involves multiple visits to elementary schools. Credit not given for both X103 and X203.

X204 Business Communications (3 cr.) P: ENG W131 or equivalent with grade of C or better. Theory and practice of written communication in business; use of correct, forceful English in preparation of letters, memoranda, and reports.

X220 Career Perspectives (2 cr.) P: sophomore standing. Assists students in constructing their academic programs and postcollege plans. Students are involved in group interaction with managers, senior executives, faculty, junior or senior student mentors, alumni, and community leaders. Students use data from tests and exercises to consider career options as they relate to such topics as globalization, total quality management, workforce diversity, leadership theory, and volunteerism.

X302 Communication Core II (1 cr.) C: A328. Emphasizes development of communication skills through writing exercises related to tax research. In addition, covers how to access the primary and secondary sources of tax law, including the Internal Revenue Code, regulations and other administrative pronouncements, and judicial decisions. Explains the research process and the use of research tools to locate sources of tax law. Utilizes both paper products and electronic (Internet) resources. Emphasizes how to read and interpret source materials. Tax research assignments stress writing skills and the need for effective communication of research findings.

X390 Integrative Experience (1 cr.) Integrative case exercise involving the finance, marketing, and operations functions; required of students who did not complete the integrative core course work (F301,

M301, P301) on the Bloomington or Indianapolis campuses.

X400 Integration of International Business Study (1 cr.) P: admission to a Kelley School of Business overseas study program. Seminar integrates curriculum in business overseas study program with domestic business practice and philosophy and the Kelley School of Business curriculum.

X401 Community Service Learning: Focus on Children (1 cr.) P: authorization. Provides training, orientation, and reflection for student volunteers who are assigned to elementary school children during the enrolled semester. The course will briefly cover child development and issues related to at-risk children and the agencies that serve them. A minimum of two hours per week community service through a Kelley School of Business-approved program is required. The course is graded S/E.

X405 Topical Explorations in Business (1-3 cr.) Specific topic to be announced as the course is offered.

X420 Business Career Planning and Placement (2 cr.) P: junior standing. Assists students in obtaining positions consistent with career goals. Covers career planning, self-assessment, career options, organized employment campaigns, interviewing techniques, employment communications, alternate job search strategies, and career management. Involves in-depth work with resume software, electronic mail, and other communication tools. Session with corporate managers describing work issues and training programs. Also open to seniors in schools other than business.

X485 Overseas Study I (3 cr.) P: enrollment in a Kelley School of Business overseas study program. Lectures and discussion on aspects of the current international business environment.

X486 Overseas Study II (3 cr.) P: enrollment in a Kelley School of Business overseas study program. Lectures and discussion on aspects of the current international business environment.

X487 Seminar in Business Administration (1-3 cr.) Instruction of an interdisciplinary nature for student groups involved in university-related nonprofit ventures. Interested groups must be sponsored by a Kelley School of Business faculty member and must obtain approval for the seminar from the Undergraduate Policy Committee. May be repeated up to a maximum of 6 credits.

X488 Current International Topics (1-6 cr.) P: enrollment in a Kelley School of Business overseas study program. Lectures and discussion on aspects of the current international business environment, as well as the cultural aspects of the area in which an overseas study program is located.

X496 Supervised Independent Honors Research in Business (1-5 cr.) P: senior standing. For students in Kelley School of Business Honors Program.

Kelley School of Business Administrators and Faculty, Bloomington and Indianapolis

The faculty of the Indiana University Kelley School of Business at Bloomington and Indianapolis are identified below. In addition to these full-time faculty, a dedicated group of individuals who work elsewhere full-time also teach classes for the school. Although some of these people are new each semester, many have made long-term commitments to the Kelley School of Business. We gratefully acknowledge their contributions to the strength of the faculty and the school.

Administrative Officers

DAN DALTON, Ph.D., *Dean*

School of Continuing Studies

Mission and History

Created in 1975, the School of Continuing Studies reflects the commitment of Indiana University and the state government to meeting the educational needs of adult citizens. The school consists of the following units:

- Academic Programs
- Administrative Services
- Marketing and Communication
- Learner Services
- Learning Partnerships
- Technology and Distance Learning Resources
- Campus Divisions

Through these units, the school plans and provides both credit and noncredit programs/courses that are offered in various learning formats at convenient times and locations. These programs/courses include:

- Associate of Arts in General Studies and Bachelor of General Studies
- Master of Science in Adult Education
- Certificate programs
- Independent study courses
- Credit and noncredit programs
- Courses for professional development and personal growth
- Conferences, workshops, and seminars on a wide range of subjects
- Evening and outreach programs
- Televised courses
- Weekend and “Learn and Shop” programs
- Workforce development and training

The School of Continuing Studies also provides specialized courses for on-site delivery at businesses, industries, and other off-campus locations via telecommunication and other electronic technologies.

A Statement from the Dean

The School of Continuing Studies is committed to providing high-quality educational opportunities to all interested citizens in Indiana and elsewhere. The school brings the resources of Indiana University to people who cannot take advantage of the traditional formal programs at fixed campus locations. The school also serves people who want to develop or maintain their vocational/professional competence or enrich their individual/family lives. Programming is continuously updated to meet the demands of a changing society.

We look forward to serving you.

Best wishes.

Jeremy Dunning, Dean
School of Continuing Studies

General Studies Degree Program

The School of Continuing Studies administers the General Studies Degree Program, which extends to students the opportunity to pursue a college education, regardless of their work schedules, domestic responsibilities, or logistical problems. Students may fulfill degree requirements by proceeding at their own pace and working from their own location.

The core of each general studies degree is a broadly based education encompassing the arts and humanities; the social, behavioral, and natural sciences; and mathematics. The curriculum expands students' body of knowledge and awareness of major areas of human experience.

A general studies education is not limited in scope; it develops historical consciousness and enables students to view the present within the context of the past as it nurtures future insight. The curriculum also explores ethical dimensions, and encourages students to think critically and creatively. A general studies degree establishes the foundation for a lifetime of continual learning and serves as the framework for a productive professional and personal life.

Students pursue an Associate of Arts in General Studies (A.A.G.S.) to achieve such personal and professional goals as career advancement, certification, self-enrichment, expanded employment options, military advancement, and a stepping stone to advanced studies. Upon completion of the A.A.G.S., many students apply to complete the Bachelor of General Studies (B.G.S.). The A.A.G.S. degree replaced the Associate of General Studies (A.G.S.) degree in 2001.

The B.G.S. provides basic preparation for many careers and graduate programs. B.G.S. graduates are employed in various professional fields, including education, law, government and social service, real estate, and private industry. Many B.G.S. students have gone on to graduate programs in such fields as anthropology, business, divinity studies, education, fine arts, international affairs, law, library science, management, nursing, public health, and social work. B.G.S. graduates have earned master's degrees and doctorates at Indiana University and other universities.

Two groups of students pursue general studies degrees: campus-based students, who have access to an Indiana University campus; and at-a-distance students, who do not. Campus-based students attend classes and receive counseling and other services through the campuses at which they are enrolled. At-a-distance (non-campus-based) students are admitted and receive counseling through the university-wide General Studies Degree Program office; they most often complete their degree requirements through the Independent Study Program, televised courses, and learning formats based on other alternative technology.

In addition to enrolling in regular session courses at any Indiana University campus or in independent study courses, students may fulfill general studies degree requirements in various ways, including credit

for self-acquired competency, credit by examination, credit for educational programs in noncollegiate organizations, military service credit, and credit for courses completed at other regionally accredited institutions.

Admissions and Transfers

New applicants and transfers are admitted to the General Studies Degree Program as follows:

1. **Applicants who have previously attended Indiana University or other colleges/universities as degree-seeking students** and who have earned a cumulative grade point average (GPA) of 2.0 or higher are eligible for admission to the General Studies Degree Program. Transfer students and former Indiana University students with lower than a 2.0 cumulative GPA may be admitted on academic probation. Current students whose cumulative GPA is lower than 2.0 are not directly admissible. Students who have been dismissed for academic reasons will not be considered for admission for at least one calendar year from the date of dismissal.
2. **Applicants 21 years of age or older who have received a high school diploma or General Educational Development (GED) high school equivalency diploma** and who have not attended a college/university are eligible for admission to the General Studies Degree Program.
3. **Applicants 21 years of age or older who have not earned a high school diploma or GED high school equivalency diploma** may be granted provisional status and apply for regular admission after successfully completing 12 semester hours of credit with a cumulative GPA of 2.0.
4. **Applicants under 21 years of age who have received a high school diploma or GED high school equivalency diploma** are generally required to meet admission criteria in effect at the campus to which they apply.

Applications will be processed after all academic credentials and the application fee are received. Once admitted, applicants receive a letter of admission, an information packet, and any transfer course evaluations within approximately six weeks.

Transfers from and within Indiana University Campuses

Students with previously earned credit from any academic program on any Indiana University campus may apply to pursue a general studies degree. Credits are evaluated on a course-by-course basis. (To find out how to apply previously earned Indiana University credit to a general studies degree, see “Credits from Indiana University.”) Students with academic deficiencies (cumulative GPA below 2.0) may be admitted on probation.

Students who have been dismissed from another academic unit of Indiana University and whose cumulative GPA is below 2.0 will not be considered for admission for at least one calendar year from the

date of dismissal. Students in dismissal status are eligible to enroll in independent study courses as nondegree students.

Transfers from Other Colleges/Universities

The School of Continuing Studies welcomes students who want to transfer from other regionally accredited colleges/universities. Applications for transfer admission are evaluated on the basis of applicants' cumulative GPA and the number of credits earned in all subjects. Transfer credit is awarded only for courses in which students earn a minimum grade of C in curricula similar to those offered by Indiana University.

Acceptance of credit from other institutions is determined by the Indiana University Office of Admissions, and the applicability of credit toward degree requirements is determined by the School of Continuing Studies. Only credits earned at Indiana University are calculated in a student's cumulative GPA.

Students who have been dismissed from other postsecondary institutions will not be considered for admission to the General Studies Degree Program for one calendar year from the date of dismissal. Students in dismissal status are eligible to enroll in independent study courses as nondegree students.

Recognition of Previously Earned Credit

Many students have previously earned academic credit from Indiana University or other institutions. These students may be eligible for credit by examination or self-acquired competency (SAC) credit. Previously earned credits are applied to the requirements of the A.A.G.S. and B.G.S. according to the following guidelines:

Credits from Indiana University A maximum of 50 credit hours previously earned at Indiana University may be applied to the A.A.G.S. A maximum of 100 credit hours previously earned at Indiana University may be applied to the B.G.S. Courses in which grades of D+, D, or D– were earned may be used as elective credit only; they will not be used to satisfy course distribution requirements.

Credits from Other Institutions A maximum of 45 hours of transfer credit from other regionally accredited colleges/universities may be applied to the A.A.G.S. A maximum of 90 hours of transfer credit from other regionally accredited colleges/universities may be applied to the B.G.S.

Credit by Examination from Other Institutions Students wanting to transfer credit by examination earned from other institutions must have satisfactorily completed sequential courses in that subject area prior to transfer.

Self-Acquired Competency (SAC) Credit within Indiana University SAC credit awarded on the basis of a portfolio by the faculty of one Indiana University campus will be honored on any other Indiana University campus to which students may transfer to complete the A.A.G.S. or B.G.S. Students should understand, however, that this credit will not

necessarily be honored by other Indiana University degree programs or by other institutions.

Self-Acquired Competency (SAC) Credit from Other Institutions A maximum of 8 hours of SAC credit awarded by other regionally accredited colleges/universities will be applicable toward the A.A.G.S.; a maximum of 15 credit hours will be applicable toward the B.G.S. Additional hours of SAC credit from other institutions must be reviewed in the same manner as other Indiana University SAC credit. The maximum amount of credit (transfer and Indiana University) awarded on the basis of a SAC portfolio that may be applied to the degrees is 15 credit hours toward the A.A.G.S. and 30 credit hours toward the B.G.S.

Application Procedures

Students interested in pursuing a general studies degree should apply for admission to the School of Continuing Studies as follows:

1. **All applicants** must complete the application form included in the General Studies Degree Program bulletin or available from any General Studies Degree Program office.
2. **Citizens of other countries, including those in the United States on immigrant visas**, must submit TOEFL scores and a 300- to 500-word handwritten essay. The essay is to be written on a topic of the student's choice and may include autobiographical information. Students who intend to pursue a general studies degree on an Indiana University campus must also submit the international application for admission.
3. **Applicants who have not previously attended a college/university as a degree student** must submit official copies of their high school transcripts or evidence of having earned a GED high school equivalency diploma. Applicants over the age of 21 without a high school diploma or GED high school equivalency diploma should attach a letter explaining how their previous experience has prepared them to pursue a college degree.
4. **Applicants who have previously attended a college/university** must request that the college(s) or university(ies) attended forward official transcripts to the Indiana University office to which the application form is being sent.
5. **Applicants who are veterans** should submit a copy of the DD214 form.
6. **Applicants presently on active duty** should request an official copy of their DD295 form from their education officer.
7. **Applicants who have completed educational programs/courses in noncollegiate organizations** must request that official records of program/course completion be sent directly from the awarding organization.
8. **Applicants who have taken the College-Level Examination Program (CLEP), the Defense Activity for Non-Traditional Support (DANTES) exams, or the ACT-PEP Regents (Excelsior) College exams** should request that official transcripts of their exam scores be sent directly from the testing agency.

9. **Applicants who have been placed on academic probation, dismissed, or denied readmission to a previously attended school** must provide a letter explaining the circumstances and the reasons they believe they will now be successful.

10. **Applicants** should submit application materials to the appropriate office on the campus at which they want to be admitted.

11. **At-a-distance (non-campus-based) students** should submit application materials to the university-wide office.

Application Fees

Applicants who have not previously attended Indiana University must pay a nonrefundable application fee at the time they submit their application. Application fees vary from campus to campus and are subject to change.

Application and Admission Deadlines

Applicants intending to take regular session courses on campus must check with the campus at which they will enroll for the specific application deadline. There are no specific application deadlines for at-a-distance (non-campus-based) students.

The official date of a student's admission is the date the student is accepted into the General Studies Degree Program. This date does not necessarily coincide with the date the application was processed by the Indiana University Office of Admissions. Current course work of students whose admission has been approved on or prior to the campus pass/fail deadline will be considered course work taken after admission to the General Studies Degree Program.

General Requirements

Academic Guidance

A counselor provides guidance for each General Studies Degree Program candidate. **Note:** Although students are encouraged to seek the advice of a General Studies Degree Program counselor, students are responsible for planning their own programs and meeting the degree requirements for graduation.

General Requirements for the A.A.G.S.*

1. Students must successfully complete a minimum of 60 credit hours to graduate.
2. No more than 15 credit hours—including credits earned on the basis of a Self-Acquired Competency (SAC) portfolio—in any one academic department may be applied toward the 60 required credit hours.
3. Students must successfully complete at least 15 of the 60 required credit hours at Indiana University or through the Independent Study Program. Earning credit through an academic department examination at Indiana University is equivalent to having completed that course at Indiana University. Credits earned by self-acquired competency, Defense Activity for Non-Traditional Education Support (DANTES), and College-Level Examination Programs (CLEP) may not be applied to this 15 credit hour requirement.

* Students must check with their home campus regarding how courses apply to their degree.

4. Students must complete at least 10 credit hours after admission to the General Studies Degree Program. This must be Indiana University course work. Credits earned by self-acquired competency, Defense Activity for Non-Traditional Education Support (DANTES), and College-Level Examination Programs (CLEP) may not be applied to this 10 credit hour requirement.
5. Students must earn a minimum cumulative GPA of 2.0 on all courses considered for the A.A.G.S. and on all courses completed after admission to the School of Continuing Studies. C– is the minimum grade accepted for any course completed to satisfy course distribution requirements.
6. Students must also fulfill the fundamental skills and course distribution requirements (see “Fundamental Skills Competency Requirements” and “Course Distribution Requirements”).
6. Students must earn a minimum cumulative GPA of 2.0 on all courses considered for the B.G.S. and on all courses completed after admission to the School of Continuing Studies. C– is the minimum grade accepted for any course completed to satisfy course distribution requirements.
7. Students who pursue the B.G.S. after completing the A.A.G.S. must fulfill the B.G.S. requirements in effect at the time of admission to the bachelor’s program.
8. Students may not be awarded the A.A.G.S. and B.G.S. within the same academic year. For example, academic year 2002 includes students graduating in December 2002, May 2003, June 2003, and August 2003.
9. Students must also fulfill the fundamental skills and course distribution requirements (see “Fundamental Skills Competency Requirements” and “Course Distribution Requirements”).

General Requirements for the B.G.S.*

1. Students must successfully complete a minimum of 120 credit hours to graduate.
2. Students must successfully complete at least 69 of the 120 required credit hours in the arts and sciences. No more than 21 of these 69 credit hours—including credits earned on the basis of a Self-Acquired Competency (SAC) portfolio—may be taken in a single arts and sciences department or subject area. In addition, no more than 30 of the 51 credit hours allowed outside the arts and sciences—including credits earned on the basis of a SAC portfolio—may be taken in any one professional school or technical program.
3. Students must successfully complete at least 30 of the 120 required credit hours at Indiana University or through the Independent Study Program. Earning credit through an academic department examination at Indiana University is equivalent to having completed that course at Indiana University. Credits earned by self-acquired competency, Defense Activity for Non-Traditional Education Support (DANTES), and College-Level Examination Programs (CLEP) may not be applied to this 30 credit hour requirement.
4. Students must complete at least 20 credit hours after admission to the General Studies Degree Program. This should be Indiana University course work. Credits earned by self-acquired competency, Defense Activity for Non-Traditional Education Support (DANTES), and College-Level Examination Programs (CLEP) may not be applied to this 20 credit hour requirement.
5. Students must successfully complete at least 30 of the 120 required credit hours at the 300 and 400 upper-division level.

* You must check with your home campus regarding how courses apply to your degree.

Competency and Course Requirements

The fundamental skills competency and course distribution requirements for the A.A.G.S. and B.G.S. are summarized in this section. Students must also complete the general requirements for the A.A.G.S. or B.G.S.

Fundamental Skills Competency Requirements

For both the A.A.G.S. and B.G.S., students must meet fundamental skills competency requirements that demonstrate college-level competency in four areas: written communication, oral communication, quantitative reasoning, and computer literacy. Students may demonstrate competency by completing an appropriate college-level nonremedial course or its transfer equivalent in English composition/writing, speech/communication, quantitative reasoning, and computer science; or by exercising other options, including departmental, CLEP, or DANTES exams.

A course that fulfills one of the four competency requirements at any Indiana University campus fulfills that requirement for the General Studies Degree Program at any other Indiana University campus. Acceptable grades for courses meeting competency requirements must be consistent with the campus’s requirements.

Many courses in the Independent Study Program are available to fulfill competency requirements. **Note:** Students should consult with their General Studies Degree Program counselors to determine which independent study courses fulfill competency requirements on their campuses.

Course Distribution Requirements for the A.A.G.S.

Twelve (12) credit hours are required in *each* of three learning areas: arts and humanities, science and mathematics, and social and behavioral sciences. The 12 credit hours required in each learning area

must include courses from at least two academic departments.

An additional 24 hours of elective credit must also be completed to fulfill A.A.G.S. requirements.

Arts and Humanities	12 credit hours
Science and Mathematics	12 credit hours
Social and Behavioral Sciences	12 credit hours
Electives	24 credit hours
Total Credit Hours Required for the A.A.G.S.	60 credit hours

Course Distribution Requirements for the B.G.S.

Twelve (12) credit hours are required in *each* of three learning areas: arts and humanities, science and mathematics, and social and behavioral sciences. *Students must also complete an 18 credit hour concentration in one of these three learning areas.* The 12 credit hours required in each learning area, as well as the 18 credit hour concentration, must include courses from at least two academic departments.

An additional 66 hours of elective credit—including a minimum of 15 additional credit hours in the arts and sciences and no more than 30 credit hours in any one professional school or technical program—must also be completed to fulfill B.G.S. requirements.

Arts and Humanities	12 credit hours
Science and Mathematics	12 credit hours
Social and Behavioral Sciences	12 credit hours
Concentration	18 credit hours
Arts and Sciences Electives	15 credit hours
General Electives	51 credit hours
Total Credit Hours Required for the B.G.S.	120 credit hours

Completing Course Distribution Requirements

Each general studies degree requires completion of course work in three learning areas: arts and humanities, science and mathematics, and social and behavioral sciences. These requirements provide students with a broad exposure to the humanities and sciences. To fulfill the requirements, students may choose from a wide variety of subject fields within each learning area. These subject fields are described below. **Note:** The subject fields grouped under the three learning areas may vary among Indiana University campuses. Students should consult their General Studies Degree Program counselors for their campuses’ specific requirements.

Arts and Humanities The distribution courses in this learning area provide knowledge and interpretive frameworks through which students may reflect on the complexity of human history, assess the difficulties of determining moral values, appreciate the range and value of human emotion and thought, and be sensitive to the varieties of aesthetic expression. The following departments offer courses

that fulfill the arts and humanities distribution requirement:

Afro-American Studies
American Studies
Classical Studies
Comparative Literature
English
Fine Arts
Folklore
Foreign Language courses
History
History and Philosophy of Science
Musicology and Music History
Philosophy
Religious Studies
Speech
Theatre and Drama

Science and Mathematics The distribution courses in this learning area provide an appreciation of the physical and biological environment, introduce students to the discipline of systematic inquiry, provide insight into experimental methods and results, and illustrate the role and methods of the mathematical sciences. The following departments offer courses that fulfill the science and mathematics distribution requirement:

Anatomy and Physiology
Astronomy
Biology
Chemistry
Computer Science
Geology
Mathematics
Microbiology
Physics
Plant Sciences
Zoology

Social and Behavioral Sciences The distribution courses in this learning area provide students with the means to analyze and understand the social institutions in which they live, as well as the behavior of individuals in relating to one another and the world. The following departments offer courses that fulfill the social and behavioral science distribution requirement:

Anthropology
Economics
Geography
Linguistics
Political Science
Psychology
Sociology

Completing B.G.S. Concentration Requirements

B.G.S. students must complete a concentration area by adhering to the following guidelines:

1. Students must complete an additional 18 credit hours in one of three learning areas: arts and humanities, science and mathematics, or social and behavioral sciences.
2. Students must complete courses from at least two departments in the learning area they select for their concentration area.
3. Students must earn a minimum grade of C– in courses used to fulfill the concentration

requirement. Passing grades below C– may be used only as elective credit.

Completing Elective Requirements

A.A.G.S. and B.G.S. students may select any of the nonremedial, nondevelopmental courses offered by Indiana University to fulfill elective requirements. These electives enable students to explore diverse academic areas of interest and to tailor their general studies degree to their individual needs. Students are encouraged to consult with their General Studies Degree Program counselors and to choose courses in subjects related to their academic, professional, and personal interests.

Academic Policies and Regulations

Graduate Credit Hours

Graduate-level courses are often completed for personal enrichment; the credits are generally not applied to the undergraduate degree program. However, with prior approval, a maximum of 6 graduate credit hours may be applied to the B.G.S. The application of more than 6 graduate credit hours must have the dean's approval.

Remedial Course Work

Remedial courses are not college-level courses and therefore do not count toward the A.A.G.S. and B.G.S.

Minors and Certificates

Completing Optional Minors Minors may be completed in conjunction with the B.G.S. Students must discuss this possibility and obtain written approval from the school or department awarding the minor. This approval is to be placed in the student's file.

Completing Optional Certificates While meeting degree requirements, general studies students may simultaneously fulfill requirements for certain certificates. For example, the certificate in hospital accounting may be completed by at-a-distance (non-campus-based) General Studies Degree Program candidates, as well as by students enrolled on any Indiana University campus.

Most Indiana University campuses offer additional certificate programs that may be completed by local on-campus students. For more information on earning certificates, students should consult their General Studies Degree Program counselors.

Program Planning and Counseling Guidelines

The experience of faculty, counselors, and successful students suggests the following guidelines for effective planning of undergraduate programs.

Requirements Students should be thoroughly familiar with the school's general requirements, competency and course requirements, and academic policies.

Counseling Students consult with a General Studies Degree Program counselor as an integral

aspect of the School of Continuing Studies enrollment process. The counselor assists students in formulating a plan of study, which includes the required and elective courses that students must take to earn their degree.

Students should discuss with their counselor the appropriate method to establish fundamental skills competency requirements: specific courses, self-acquired competency, College-Level Examination Programs (CLEP), Defense Activity for Non-Traditional Education Support (DANTES) examination, departmental examination, or departmental exemption.

Students wanting to receive credit for self-acquired competency that also meets a fundamental skills competency requirement may use the portfolio review process (see "Credit for Self-Acquired Competency").

Pass/Fail Option

A.A.G.S. students may enroll in a maximum of four elective courses taken with a grade of P (pass) or F (fail). B.G.S. students in good academic standing may enroll in a maximum of eight elective courses taken with a grade of P or F.

Courses taken pass/fail must be electives. They may not be used to satisfy any of the course distribution requirements nor counted as part of a student's concentration area. The courses may be used to meet the B.G.S.'s 300- to 400-level course requirement and fundamental skills competency requirements.

Withdrawal from Courses

Because deadlines and procedures for withdrawal from courses may vary by campus and/or school, students should check with the appropriate campus's current *Schedule of Classes* to verify deadlines and procedures.

Special Opportunities

Credit for Self-Acquired Competency

The School of Continuing Studies recognizes that students gain college-level knowledge through various life experiences that are equivalent to the subject matter of specific courses in the university curriculum or that may be recognized as general-elective credit. Students who believe they may be eligible for Self-Acquired Competency (SAC) credit should discuss their life experiences in detail with their General Studies Degree Program counselor.

In general, the following procedures and limitations govern the awarding of SAC credit:

1. Students must be admitted to the School of Continuing Studies, have completed 12 credit hours at Indiana University subsequent to admission, and be in good academic standing before credit for self-acquired competency may be evaluated.
2. A maximum of 15 hours of SAC credit may be applied toward the A.A.G.S. A maximum of 30 hours of SAC credit may be applied toward the B.G.S.
3. Students seeking either general-elective or specific-course credit for self-acquired competency must always do so in consultation

with their General Studies Degree Program counselor. SAC credit must be carefully integrated with the total degree plan.

4. Learning must parallel courses in the Indiana University curriculum in order to be recognized as specific-course credit. Learning of college-level caliber that cannot be equated to a specific course is awarded as general-elective credit.
5. The General Studies Degree Program offices arrange for assessment of the SAC portfolio by faculty of the appropriate school or department.
6. The fee per credit hour recorded for self-acquired competency is the per-credit-hour fee charged for independent study university courses at the time the SAC credit is recorded on the official student record.

The SAC Portfolio The careful development of a SAC portfolio can be a rewarding learning experience. The General Studies Degree Program offices conduct self-acquired competency classes for students who want to complete a SAC portfolio. An independent study course, Education F400 Development of the Self-Acquired Competency Portfolio, is also available for this purpose.

Credit by Examination at Indiana University

Students who want to pursue credit by examination at Indiana University should consult with their General Studies Degree Program counselors and the appropriate department(s) at their local campuses.

Credit Awarded through Nondepartmental Examinations

Indiana University awards credit for Advanced Placement (AP) Examinations, College-Level Examination Programs (CLEP), Defense Activity for Non-Traditional Education Support (DANTES) examinations, and ACT-PEP Regents (Excelsior) College examinations on the basis of policy established by faculty at the campus where students will pursue their degrees. Students should consult with their General Studies Degree Program counselors as to the options available through nondepartmental examinations.

Students will not receive credit by taking DANTES, CLEP, or ACT-PEP Regents (Excelsior) College examinations for courses for which they have already received credit. Credits awarded on the basis of CLEP and DANTES scores will not be considered as after-admission or Indiana University credit hours.

Students should request that official transcripts of their AP, CLEP, DANTES, and ACT-PEP Regents (Excelsior) College examination scores be sent directly to the office to which they are applying.

Credit Awarded for Educational Programs in Noncollegiate Organizations

The School of Continuing Studies will consider the evaluation and credit recommendations of the following two publications when awarding credit to students who have successfully completed noncollegiate or in-company sponsored programs/courses:

1. American Council on Education, *The National Guide to Educational Credit for Training Programs*
2. The University of the State of New York, *A Guide to Educational Programs in Noncollegiate Organizations*

Students must request that official records of program/course completion be sent directly from the awarding organization. Students must also submit a complete description of the program/course, preferably a copy of program/course literature or an explanatory letter on the organization's letterhead stationery. For assistance with requests for transcripts or program/course descriptions, students may contact their General Studies Degree Program counselor.

Military Service Credit

Indiana University adheres to the American Council on Education's *Guide to Evaluation of Educational Experiences in the Armed Services* in granting students credit on the basis of education gained through military service, schools, and experience. To receive credit for their military service background, students must submit copies of their official discharge (DD214) or active-duty document (DD295), as well as certificates of completion and/or transcripts of service schools attended (for example, Army ARTS, Community College of the Air Force, Defense Language Institute).

Academic Standing of Students

Candidates for Degrees in Good Standing

Students are considered to be candidates in good standing for a general studies degree when they have

1. been officially admitted to degree status by the Office of Admissions.
2. earned a minimum academic GPA of 2.0 (C) for the last semester's work.
3. earned a minimum after-admission GPA of 2.0.
4. earned a minimum cumulative GPA of 2.0.

Graduation Certification

Candidates for graduation initiate the certification process by filing an Intent to Graduate form. For the specific procedure, students should consult with their General Studies Degree Program counselor at the time they enroll for their final semester/course.

Degrees Awarded with Distinction

The School of Continuing Studies recognizes outstanding performance in course work by awarding degrees with three levels of distinction: distinction, high distinction, and highest distinction. The level of distinction is determined by the overall GPA of each graduating class.

In order to graduate with distinction, students must have successfully completed 30 graded Indiana University credit hours for the A.A.G.S. and 60 graded Indiana University credit hours for the B.G.S. Remedial courses and courses taken on a pass/fail basis, as well as self-acquired competency (SAC) credits, are not counted.

Dean's List

The School of Continuing Studies Dean's List is announced in November of each year. General studies students are placed on the Dean's List when they have

1. completed—after admission to the School of Continuing Studies—at least 12 credit hours of graded course work. (FX, I, P, R, S, and SAC are not counted in the 12 credit hours). The course work must be completed during the prior academic year (from August 1 to July 31). **Note:** Independent study courses must be completed by July 31 for Dean's List consideration.
2. earned a minimum grade point average of 3.5 for applicable credit hours. For part-time students, all course work completed during the prior academic year (from August 1 to July 31) is included in tabulating the GPA. For full-time students, one semester (or both summer sessions) in which a minimum of 12 credit hours is completed may be considered in tabulating the GPA.

Students placed on the Dean's List receive a letter and certificate signed by the dean and the division representative.

Academic Probation

Students are automatically placed on academic probation whenever their GPA for a full-time semester or a 12 credit hour unit of work is below 2.0. Students' academic performance—and the academic performance of students who have been admitted on probation—will be evaluated upon completion of an additional 12 credit hours at Indiana University. Students will be removed from probationary status if their GPA for these 12 credits is at least 2.0 and if their cumulative GPA is at least 2.0. If a probationary student's GPA for the additional 12 credits is 2.0 but the cumulative GPA remains below 2.0, probationary status will be continued for another 12 credit hour unit of work; the cumulative GPA must be raised to at least 2.0 during this time, or probationary students will be dismissed (see below).

Dismissal

Students are subject to academic dismissal when they fail to make satisfactory progress toward their degree. Students will be dismissed whenever their GPA for a full-time semester or a 12 credit hour unit of work is below 1.0 and their cumulative GPA is below 2.0.

Probationary students will be dismissed if their GPA for the additional 12 credit hour unit of work is below 2.0. Students whose probationary status has been continued for a second 12 credit hour unit and who fail to achieve a cumulative GPA of 2.0 will also be dismissed.

Readmission to the School of Continuing Studies

The director of General Studies may consider petitions for readmission from students who have been dismissed. The director may recommend re-entrance without delay if warranted by exceptional circumstances and if the director believes the student will make satisfactory progress toward the degree. Students dismissed a second time may not be admitted for the next regular semester, but they are eligible to submit a petition for readmission after at least one regular semester has elapsed.

Academic Forgiveness

Upon successful completion (minimum GPA of 2.0) of 12 credit hours in the General Studies Degree Program, the following policies take effect:

1. At a student's option, grades of D or F earned at Indiana University five years or more before admission to the School of Continuing Studies may be deleted from the internal School of Continuing Studies record. The cumulative GPA on the Indiana University transcript will not change.
2. Students may request forgiveness of an unsatisfactory semester or 12 credit hours of part-time work at Indiana University if the semester/12 credit hours is/are within a five-year period before admission to the School of Continuing Studies. Although all Indiana University courses remain on a student's permanent record, the school can exclude all credits attempted and grade points earned during this unsatisfactory semester/12 credit hours when computing a student's School of Continuing Studies GPA. **Note:** If students exercise this option, none of the grades and credits earned during the unsatisfactory semester/12 credit hours may be applied to a general studies degree. Therefore, students are advised to consult with their General Studies Degree Program counselor about this policy's advisability.

Note: Although the options above allow unsatisfactory grades to be removed from the School of Continuing Studies' internal record, the grades remain on the official record maintained by the Indiana University Office of the Registrar.

Scholarships

School of Continuing Studies Scholarships

The School of Continuing Studies offers several scholarships for general studies degree students. Available to both full- and part-time students, the scholarships are based on financial need and academic merit, and usually range from \$500 to \$750 per academic year. The scholarships may also be eligible for the matching program at the Office of Student Financial Assistance (OSFA), doubling their actual value. Scholarship applications may be obtained from any general studies office until March 15, the application deadline.

Master of Science in Adult Education Program

Mission and History

Offered since 1946, Indiana University's Master of Science in Adult Education Program teaches the most effective and up-to-date practices in adult education. The program is based on sound theories and the latest research and learning concepts. It values the uniqueness of individual learners and views learning as a lifelong process that can take place at all times and locations.

Faculty in the program believe that adult educators must possess vision, theoretical knowledge, and practical skills and that their teaching methods must integrate reflection and active learning. Faculty encourage students in the program to take control of their learning process and to treat their life experiences as part of the content of the graduate program.

Degree Requirements

To earn the Master of Science in Adult Education, students complete courses in four key areas:

1. Major core courses (18 to 21 credit hours).
2. Concentration courses (minimum of 9 credit hours). Courses outside the adult education major that help students meet their individual professional needs.
3. Bridge courses (optional, up to 6 credit hours). Self-directed study and practica that integrate adult education theory and practice into students' concentrations.
4. Elective courses. Courses that students may take to increase their understanding of topics that interest them. Not all students take electives.

Frequently Asked Questions about the Adult Education Program

1. **What do students learn?** Students learn the technical, instructional, and intellectual skills needed to perform the duties of a training

manager, human resource development specialist, or adult educator. They learn how to integrate experience and formal educational or training activities into an overall lifelong learning program to achieve personal and organizational goals.

2. **Who are adult education students?** Students include businesspeople, government employees, educators, nurses, clergy, airline pilots, attorneys, consultants, veterinarians, bankers, and individuals in many other occupations. Many students join the program to begin a new career; others join to enhance their current one.
3. **Where do graduates find jobs?** Graduates of the program live and work throughout the world. They include teachers and administrators in vocational programs and community colleges, human resource managers, corporate trainers, continuing educators, technical instructors, and computer trainers. Their job titles indicate the variety of adult education and training opportunities in both the private and public sectors.

Adult Education Course Descriptions

Required Courses (18 to 21 credit hours)

D500 Introduction to Adult Education Theory (3 cr.) A study of the writings of major adult education theorists, including Lindeman, Knowles, Bergivin, and Friere. Adult education theories of practice in historical perspective. Students develop and defend their personal theories of practice.

D505 The Adult as a Client of Education I (3 cr.) Analysis of contemporary adult life with emphasis on the individual as related to the professional discipline of adult education and the development of educational programs for adults. Critical analysis of the theories and research methods in designing comprehensive adult education programs. This course is usually referred to as the life stages course.

D506 The Adult as a Client of Education II (3 cr.) D506 helps the student learn the adult education, human resources development, and training program planning process, including needs assessment, program development and promotion for organizational groups, either in the public or private sector. The course uses a market-based model and is often referred to as the marketing course.

D512 Seminar in Forms and Forces in Adult Education (3 cr.) The history and current status of adult education in the United States; the nature, scope,

purpose, and historical development of adult education institutions and program areas.

D521 Participation Training (2 cr.) Team building in groups; collaborative program planning and implementation; application of the design to appropriate settings; training in the roles of group leader, observer, and recorder; recognition and treatment of dysfunctional behaviors in group settings. Emphasis on functional aspects of group cohesion, consensus decision making, shared leadership, and program evaluation. Participation training is a small group, consensus decision-making process.

D620 Adult Education Research (3 cr.) Research in adult education. Survey course designed to develop an understanding of the philosophies that inform current research paradigms, the methods associated with those paradigms, and the relationship between theory and practice in adult education. This course uses current research articles and case studies as a means to critically examine issues of design, methodology, and trustworthiness.

D625 Topical Seminar (1-3 cr.) A one credit hour weekend workshop whose topics vary. One example is Distance Learning Technologies, which introduces the methods of creating and facilitating, using distributed education technologies.

Elective Courses (optional)

D600 Seminar in the Teaching-Learning Transaction in Adult Education (3 cr.) Critical inquiry into the theory of adult education learning activities. Includes a review of current research in the adult teaching-learning transaction and the designing and evaluating of individualized instruction of adults. This course is commonly called the instructional design course and involves developing an understanding of implementing adult education learning events.

D613 Diagnostic Procedure in Adult Education (3 cr.) Ways of identifying the educational needs of adults, with major emphasis on the theory and practice of the diagnostic procedure and the use of diagnostic skills for effective adult education program development. The student learns strategic planning, skills forecasting, and developing long-term training objectives. This course is often referred to as the organizational development course.

Bridge Courses (optional, up to 6 credits)

D550 Practicum in Adult Education (1-3 cr.) Supervised practice in instructional planning, teaching, and program development in adult education settings, including schools and agencies.

D590 Independent Study in Adult Education (1-3 credit hours) Individual research or study with adult education faculty members, arranged in advance of registration. A one- or two-page written proposal specifying the scope of the project, project activities, meeting times, completion date, and study product(s) should be submitted to the instructor during the first week of term. This course may be used to do an in-depth study of the relationship of the student's concentration area to the field of adult education.

D650 Internship in Adult Education (1-6 credit hours) Relates theory to practice through supervised field experiences and faculty appraisal and guidance. Students plan, conduct, and evaluate adult education programs in various institutional and community settings.

D660 Reading in Adult Education (1-6 credit hours) Guided individual study to meet the professional needs of advanced graduate students. Consultations with instructor required.

Portfolio (1-6 credit hours) A purposeful collection of a student's work assembled over time that documents the student's learning efforts, progress, and achievements.

School of Continuing Studies Officers

JEREMY DUNNING, Ph.D., *Dean*

History of the School of Dentistry

Indiana University School of Dentistry is one of the oldest dental schools in the nation. It was established as the Indiana Dental College in 1879 and became part of Indiana University in 1925. In 1933, IU built a facility to house the school at its current site on what is now known as the Indiana University–Purdue University Indianapolis campus. Today this sprawling, five-story edifice is composed of the original building and two major additions. It is the only dental school in the Hoosier state.

The school's reputation for excellence took firm root in the 1940s, when several key teachers and researchers began long and prolific careers on the dental faculty. It was during this era, for example, that three IU scientists, including dental professor Joseph Muhler, created the first stannous fluoride formula that became the active decay-preventing agent in Crest toothpaste. Dr. Muhler and other pioneering teachers at the dental school contributed a body of groundbreaking work that drew worldwide attention to Indiana University, and each left a legacy of knowledge that helped build the foundation for contemporary dental science.

In the twenty-first century, about 135 full-time and 120 part-time faculty members contribute to IU's teaching and research programs, and many have earned solid reputations as experts in their fields. About 40,000 square feet of space divided into more than a dozen facilities is now devoted to dental research opportunities at IU, including the school's Oral Health Research Institute, whose researchers have gained prominence for their studies of such subjects as fluoride and dental caries prevention.

More than 10,000 alumni of the school pursue a variety of careers in private practice, education, research, and public health throughout the United States and in more than 30 other countries.

Mission

The school is a member of the American Dental Education Association and is fully accredited by the Commission on Dental Accreditation of the American Dental Association.

Its mission is to promote optimal oral and general health of Indiana citizens and others through educational, research, and service programs. The school is committed to recruiting quality students and preparing them to become highly competent, ethical, and socially responsible practitioners of dentistry. The school also sees as part of its responsibilities the creation of opportunities for career-long learning for its graduates and other dental professionals through continuing education programs.

The school strives to maintain its role as a vital and productive member of Indiana University's scholarly community. It is dedicated to increasing the knowledge base in all areas related to oral health through an extensive research program that includes the participation of both faculty and students.

The school provides a broad spectrum of patient services as a principal means of furnishing clinical educational opportunities for students. About 100,000 dental appointments are scheduled annually for a population of nearly 17,000 dental patients. Treatment is provided at the school's clinic on campus as well as at several other patient care facilities, including the pediatric dentistry clinic at IU's James Whitcomb Riley Hospital for Children, the oral and maxillofacial surgery clinics at University and Wishard Memorial hospitals, and two clinics located in the community.

The dental school continually emphasizes to its students the importance of community service. Through collaborative partnerships with schools, health care centers, and other facilities in central Indiana, the school seeks to expose students to a variety of outreach experiences, particularly those involving special population groups. Students also are taught that part of their ongoing responsibilities as health care providers in the community will be to increase public awareness of the critical role oral health plays in one's overall well-being.

List of Programs

About 600 students of allied dentistry, dentistry, and graduate dental programs currently are pursuing certificates and degrees on the Indianapolis campus. Programs are offered in the following subjects:

Undergraduate*

Certificate in Dental Assisting
Associate of Science in Dental Hygiene (A.S.D.H.)
Bachelor of Science in Public Health Dental Hygiene (B.S.)

Professional

Doctor of Dental Surgery (D.D.S.)
Master of Science in Dentistry (M.S.D.) in a choice of eight subjects: dental materials, endodontics, operative dentistry, orthodontics, pediatric dentistry, periodontics, preventive dentistry, and prosthodontics.

Graduate

Master of Science (M.S.) in dental materials. (This degree is offered through the IU University Graduate School.)

Doctor of Philosophy (Ph.D.) in Dental Science

Descriptions of the Indianapolis campus's Allied Dental Programs (dental assisting certificate and A.S. in dental hygiene) are included not only in this bulletin but also in the School of Dentistry Bulletin. Persons with an interest in applying to, or learning more about, these two programs should obtain a copy of the School of Dentistry Bulletin for a full account of the school's rules, policies, fees, curricula, courses, or other matters.

*Information presented in this bulletin pertains to Allied Dental Programs on the Indianapolis campus only. Allied Dental Programs also are offered at several other IU campuses, accordingly: the dental assisting certificate and dental hygiene associate's degree programs are available at the Fort Wayne, Gary, and South Bend campuses; the bachelor's degree program for dental hygienists is offered at Fort Wayne; and an associate degree program in dental laboratory technology is offered only at Fort Wayne. Students interested in programs at Fort Wayne, Gary, and South Bend should check with counselors on those campuses for specific requirements, which may vary from those at Indianapolis.

For information about the other degree programs listed above (B.S., D.D.S., M.S.D., M.S., and Ph.D.), see the School of Dentistry Bulletin. Requests for bulletins should be directed to:

Office of Records and Admissions
Indiana University School of Dentistry

Allied Dental Programs

Periodontics and Allied Dental Programs Chair and Professor of Periodontics E. Brady Hancock

Allied Dental Programs is a title that serves as an umbrella primarily for three areas of study for persons seeking careers associated with the profession of dentistry—dental assisting, dental hygiene, and dental laboratory technology. The Indianapolis campus offers programs in dental assisting and dental hygiene; both are housed in the school's Department of Periodontics and Allied Dental Programs.

Dental Hygiene

Director and Associate Professor Nancy A. Young
Chairperson of Periodontics and Allied Dental Programs and Professor E. Brady Hancock

Professors Mark E. Mallatt, Byron L. Olson, Gail F. Williamson, Susan L. Zunt

Associate Professors Charles O. Hazelrigg, Steven H. Larsen, Don-John Summerlin

Clinical Associate Professors Pamela A. Rettig, David C. Vandersall

Assistant Professors R. Hunter Rackley Jr., Lewis B. Spear

Clinical Assistant Professors Patricia A. Capps, Lorinda L. Coan, Elizabeth A. Hughes, Sybil S. Niemann

Visiting Clinical Assistant Professor Joyce C. Hudson

Instructors Rodney J. Eccles, Peggy A. Fabiani, Lisa L. Falls, Kay S. Hinshaw, Katie A. Lazard, Fariborz B. Nasser, James M. Oldham, Sharon A. Querry, Angel J. Reed, Stephanie L. Schafer, Wendy S. Smith, Norman L. Stump, Laverne C. Whitmore

Clinical Lecturers Melinda L. Meadows, Sally I. Phillips

The dental hygienist is a member of the dental health team providing educational, preventive, and therapeutic oral health services. Employment opportunities may be available in private dental practice, hospitals, public health, educational institutions, and research. The Indianapolis-based associate's degree program in dental hygiene is two academic years in length, and is composed of a core curriculum of 27 courses presented over four semesters and one summer session. All courses are mandatory.

The program prepares the graduate to:

1. master and apply knowledge of the basic, social, and dental sciences to all aspects of patient care delivery and comprehensive health care programs;
2. deliver quality comprehensive dental hygiene services to patients within a variety of health delivery systems;
3. communicate effectively with other health care professionals in coordination and provision of care;
4. become effective communicators and advocates of oral health and disease prevention to achieve positive behavior changes in the population;
5. initiate, design, implement, and evaluate community dental health care programs;
6. employ problem-solving and decision-making skills to provide dental health services for community-based programs;
7. develop skills in evaluating research relevant to dental hygiene practice;
8. be aware of and responsive to changes in dental health care; and
9. qualify for and seek admission to bachelor's-level programs.

Admission Requirements

Required prerequisite courses may be taken at any accredited college or university. They include one semester each of English composition, chemistry with laboratory, human anatomy, human physiology, psychology, sociology, and public speaking; and two semester courses in arts and humanities. To learn which is the appropriate chemistry course, contact the Office of Records and Admissions at the School of Dentistry. Remedial courses may not be used to fulfill this requirement. All applicants must maintain a minimum grade point average of 2.0 (on a 4.0 scale) to be considered for admission to the program, and applicants must earn a minimum grade point average of 2.5 in the prerequisite science courses (inorganic chemistry, human anatomy, and human physiology). Courses taken at institutions other than Indiana University must show a minimum grade of C to be accepted as transfer credit by Indiana University. In addition, all required courses are to be completed by June of the year in which the applicant wishes to enter the program.

A personal interview with members of the dental hygiene admissions committee is scheduled for all applicants with a grade point average of at least 2.5.

All applications and supporting materials are to be submitted by February 1. Applications may be obtained by contacting the dental school's Office of Records and Admissions. Class size is limited, and there are more qualified applicants than can be accepted each year. All applicants are encouraged to consult with the specific program directors for pre-dental hygiene counseling. Selections are made on an individual basis, upon appraisal of the applicant's established record and potential for development.

Tuition and Ancillary Fees

For information about tuition and ancillary fees, including mandatory health insurance coverage, contact the School of Dentistry's Office of Records and Admissions.

Core Courses for the Professional Curriculum for Dental Hygienists

H204 Periodontics (1 cr.) Study of the normal periodontium at the clinical, histologic, and biochemical levels; procedures involved in carrying out a comprehensive periodontal examination and performing a periodontal prophylaxis.

H205 Medical and Dental Emergencies (1 cr.) A study in emergency situations in the dental office, including predisposing factors and drugs, and treatment to include the support of the cardiopulmonary system.

H206-H207 General Pathology I and II (1-1 cr.) Mechanisms of disease at the cellular, organ, and systemic levels with special references to specific disease processes; includes general concepts, terminology, and pathology of organ systems.

J210 Microbiology and Immunology (4 cr.) P: N261, C101-C102, and N217, or equivalent. For pre-nursing, allied health sciences, and dental hygiene students; others by consent of instructor. Consideration of immunology and host-defense mechanisms, and pathogenic bacteria, viruses, fungi, and parasites in human disease. Laboratory exercises include microbial biology, microscopy, asepsis, pure culture, identification, antimicrobial agents, viral hemagglutination, representative immunological reactions. There are three hours of lecture and two hours of laboratory exercises each week in a 15-week course.

H214 Oral Anatomy (3 cr.) A study of the morphology, structure, and function of deciduous and permanent teeth and surrounding tissues, also including osteology of the maxilla and mandible, nerve and vascular supply of teeth, and muscles of mastication, with reinforcing laboratory procedures and clinical application.

H215 Pharmacology and Therapeutics: First Year (2 cr.) Actions and uses of drugs and theory of anesthetics; emphasis on drugs used in dentistry.

H216 Chemistry and Nutrition: First Year (3 cr.) Specific ideas in chemistry are correlated with working principles in dentistry—previous knowledge of chemistry assumed.

H217 Preventive Dentistry: Second Year (1 cr.) Detection and prevention of dental disease; included is a study of dental surveys, dental indices, and fluoride therapy.

H218 Fundamentals of Dental Hygiene: First Year (4 cr.) An introduction to the dental and dental hygiene profession, including the basic didactic and laboratory/clinic practice for the performance of dental hygiene services.

H219 Clinical Practice I (4 cr.) Performance of dental hygiene services in various clinical settings. Included is didactic instruction and application of dental hygiene procedures for providing patient care and an introduction to oral diagnosis.

H221 Clinical Dental Hygiene Procedures (1-3 cr.) Clinical assignment for instruction and experience in performing dental hygiene services.

H224 Oral Histology and Embryology (1 cr.) Histological aspects of the tooth and periodontium: embryologic development of the face and neck.

H242 Introduction to Dentistry (1 cr.) An overview of the specialties of dentistry with specific lectures on management of the child patient, cavity classification and nomenclature, the space maintenance concept, patient motivation, and auxiliary involvement with the geriatric patient.

H301-H302 Clinical Practice II-III (5-5 cr.) Continued performance of dental hygiene services in various clinical settings. Included are didactic instruction and clinical application of dental hygiene services for providing patient care.

H303 Radiology (1 cr.) Principles of radiation production, placement of intraoral film, proper exposure and processing of film, radiation safety, and interpretation of radiographs.

H304 Oral Pathology: Second Year (2 cr.) Developmental abnormalities and acquired disorders of teeth and surrounding structure.

H305-H306-H307 Radiology Clinic I-II-III (1-1-1 cr.) Clinical application of intraoral and extraoral radiographs.

H308 Dental Materials: First Year (2 cr.) Composition and physical and chemical properties of materials used in dentistry.

H311 Dental Health Education (3 cr.) An introduction to basic communication and motivation skills, instructional objectives, learning theory, evaluation of educational materials, and special needs patients.

H321 Periodontics (1-2 cr.) A study of periodontal disease, including the anatomy, classification, etiology, treatment, and relationship to systemic conditions.

H344 Senior Hygiene Seminar (2 cr.) Ethics, jurisprudence, and practice management concepts, including a study of state practice acts, dental hygiene employment opportunities, recall systems, and current trends in the dental hygiene profession.

H347 Community Dental Health (4 cr.) Principles and practice of program planning, implementation, and evaluation for community and school dental health programs.

E351 Advanced Dental Materials for Dental Auxiliaries (2 cr.) Lecture and laboratory course designed to teach additional concepts of dental materials and their use in intraoral techniques. Included is instruction in dental auxiliary utilization principles and the manipulation of dental materials used in delegated intraoral functions.

Dental Assisting

Director and Clinical Assistant Professor

Patricia A. Capps

Executive Associate Dean, Associate Dean and Professor

Chris H. Miller

Professor

Gail F. Williamson

Assistant Professor

Paul A. Zitterbart

Clinical Assistant Professors

Matthew C. Moeller, Sybil S. Niemann

Clinical Lecturer

Karen M. Beard

Instructors

Sheri R. Alderson, Teresa A. Macauley, James M. Oldham, Norman L. Stump

The dental assisting program covers one academic year (two semesters) and includes approximately 1,000 hours of lecture, laboratory, and clinical instruction. In addition to 17 mandatory courses in the core curriculum, an elective course in expanded restorative functions is offered in the summer session immediately following the academic year.

The program prepares the graduate to:

1. integrate knowledge of the basic, social, and dental sciences in assessing and performing dental assisting procedures;
2. assist the dentist in the comprehensive treatment and education of patients, serving as an integral part of the dental health care team;
3. perform a full range of dental assisting functions, as defined by the American Dental Association, in a variety of dental practice settings;
4. employ decision-making and communications skills in providing educational and health care services to special population groups in the community; and
5. establish learning habits that will lead to the graduate's lifelong pursuit of knowledge through continuing education and other relevant sources of information.

Admission Requirements

Candidates for admission to the program must be high school graduates with a minimum grade point average of 2.0 (on a 4.0 scale) or the GED equivalent. They must submit scores for the Scholastic Aptitude Test (SAT) or the American College Test (ACT), a transcript of high school credits, and any credits received above this level. High school courses in biology and chemistry are strongly recommended. Students who successfully complete the program are eligible to take the Dental Assisting National Certificate Examination.

Requests for application forms or other information should be directed to:

Director of Dental Assisting
Periodontics and Allied Dental Programs
Indiana University School of Dentistry
1121 West Michigan Street
Indianapolis, IN 46202-5186
Telephone: (317) 274-4407

Applications must be submitted to the director of dental assisting by June 10; those received after May 15 will be considered on a space-available basis.

Tuition and Ancillary Fees

For information about tuition and ancillary fees, including mandatory health insurance coverage, contact the director of dental assisting.

Core Courses for the Professional Curriculum for Dental Assistants

A110 Oral Histology and Embryology (1 cr.)

Histological aspects of the tooth and periodontium: embryologic development of the face and neck.

A111-A113 Oral Pathology, Physiology, Anatomy I-II (2-2 cr.)

An overview of the structures, functions, and diseases of the human body, including basic cells, tissues, organs, and organ systems, with specific emphasis on diseases of the face and mouth.

A112 Dental and Medical Emergencies and Therapeutics (2 cr.)

A course including recognition and clinical experience of systemic emergencies. Comprehensive study of the physiological, toxicological, and therapeutic effects of drugs on living organisms, with emphasis on their rational application in the treatment of disease. Content includes discussions of drugs that are widely prescribed by physicians and dentists.

A114 Oral Anatomy (3 cr.) A study of the morphology, structure, and function of deciduous and permanent teeth and surrounding tissues, also including osteology of the maxilla and mandible, nerve and vascular supply of teeth, and muscles of mastication, with reinforcing laboratory procedures and clinical application.

A116 Introduction to Dentistry (1 cr.)

An overview of the specialties of dentistry with specific lectures on management of the child patient, cavity classification and nomenclature, the space maintenance concept, patient motivation, and auxiliary involvement with the geriatric patient.

A121 Microbiology and Asepsis Technique (1 cr.)

An overview of microbiological aspects of health and disease with emphasis on sterile procedures and disinfection techniques.

A131-A132 Dental Materials I-II (2-2 cr.)

A course designed to acquaint the student with the basic mechanical, physical, and chemical properties of dental materials and the effect of manipulation procedures on these properties. The exact role of properties in the usage and clinical behavior of materials is stressed. Also, certain biological considerations are covered.

A141 Preventive Dentistry and Nutrition (2 cr.)

Etiology of prevalent oral diseases and their preventions with particular emphasis on plaque, plaque control, and fluorides. The effects of major nutrients on the physiologic body processes; applied nutrition in dental caries and periodontal disease. Clinical and laboratory experiences.

A151 Radiology Clinic I (2 cr.)

The principles of radiation production, theories and techniques of radiographic imaging, film processing and mounting, radiation safety, and radiographic interpretation are studied in this didactic and preclinical course.

A152 Radiology Clinic II (1 cr.) Clinical experience in the placing, exposing, processing, evaluating, and mounting of intraoral and extraoral dental radiographs. Practical application of radiation safety measures is required in the clinical setting.

A161 Behavioral Science (1 cr.)

An introduction to psychology applicable in the dental office, emphasizing communication and personal relationships; the role of the dental assistant as seen by the dentist, auxiliaries, and patient. Attitude, personality, motivation, and habit formation are discussed from a dental perspective.

A162 Oral and Written Communication (2 cr.)

Instruction and practice in gathering and organizing material for written and oral presentation. Individual and group projects in communication, including table clinics, posters, and professional articles for publication.

A171 Clinical Science I (4 cr.)

A core course in dental nomenclature; historical developments in dentistry; role of assistant as member of dental health team; dental specialties; charting the mouth; identification and utilization of instruments and equipment; principles of dental procedures and instrument transfer.

A172 Clinical Science II (3 cr.)

Clinical chairside experience in extramural assignments with a seminar to provide opportunities for students to share experiences.

A182 Practice Management, Ethics, and Jurisprudence (2 cr.)

Dental practice management in reception procedures, appointment control, and clinical and financial records; purchasing and inventory control. Study of the legal and ethical aspects of dentistry.

Elective Course

A190 Expanded Restorative Functions (4 cr.)

Laboratory and clinical course in the techniques for rubber dam application; study model impressions; matrix placement; placement and removal of treatment restorations; placement, carving, and finishing of amalgam restorations; placement and finishing of resin, composite, and silicate restorations.

Administration

Dean

Lawrence I. Goldblatt

Executive Associate Dean

Chris H. Miller

Associate Deans

James L. McDonald Jr., Dental Education

Chris H. Miller, Academic Affairs and Graduate Education

Margot L. Van Dis, Student Affairs

George P. Willis, Clinical Affairs

Chairs

Cecil E. Brown Jr., Department of Endodontics (Acting)

Arden G. Christen, Department of Oral Biology (Acting)

E. Steven Duke, Department of Restorative Dentistry and Indiana Dental Association Endowed Chair in Restorative Dentistry

E. Brady Hancock, Department of Periodontics and Allied Dental Programs

James K. Hartsfield Jr., Department of Oral Facial Development
 William C. Hine Jr., Department of Oral Surgery and Hospital Dentistry (Acting)
 Jack E. Schaaf, Department of Oral Pathology, Medicine, and Radiology (Acting)
 Domenick T. Zero, Department of Preventive and Community Dentistry

Faculty

(The following list includes the names of the dental school's administrators as well as faculty associated with the Allied Dental Programs. See the School of Dentistry Bulletin for a complete list of the dental faculty.)

Alderson, Sheri R., *Instructor in Dental Assisting* (B.S., Indiana University, 1979)
 Beard, Karen M., *Clinical Lecturer in Dental Assisting* (M.S., Indiana University, 2001)
 Brown, Cecil E. Jr., *Acting Chairperson of Endodontics; Associate Professor of Endodontics; Director of Graduate Endodontics* (D.D.S., University of Tennessee, 1959)
 Capps, Patricia A., *Clinical Assistant Professor and Director of Dental Assisting* (M.S., Ball State University, 1997)
 Christen, Arden G., *Acting Chairperson of Oral Biology; Professor of Oral Biology; Adjunct Professor of Preventive and Community Dentistry; School of Dentistry; Adjunct Professor of Public Health, School of Medicine* (D.D.S., University of Minnesota, 1956)
 Coan, Lorinda L., *Clinical Assistant Professor of Dental Hygiene* (B.S., Indiana University, 1996)
 Duke, E. Steven, *Chairperson of Restorative Dentistry; Indiana Dental Association Endowed Chair in Restorative Dentistry; Professor of Operative Dentistry* (D.D.S., Loyola University of Chicago, 1975)
 Eccles, Rodney J., *Instructor in Dental Hygiene* (D.D.S., Indiana University, 1985)
 Fabiani, Peggy A., *Instructor in Dental Hygiene* (B.S., Indiana University, 1998)
 Falls, Lisa L., *Instructor in Dental Hygiene* (B.S., Indiana University, 2000)
 Goldblatt, Lawrence I., *Dean of Dentistry; Professor of Oral Pathology* (D.D.S., Georgetown University, 1968)
 Hancock, E. Brady, *Chairperson of Periodontics and Allied Dental Programs; Professor of Periodontics* (D.D.S., University of Illinois, 1967)
 Hartsfield, James K., Jr., *Chairperson of Oral Facial Development; Director of the Division of Oral Facial Genetics; Professor of Oral Facial Genetics and of Orthodontics, School of Dentistry; Professor of Medical and Molecular Genetics, School of Medicine* (Ph.D., University of South Florida, 1993; D.M.D., Medical University of South Carolina, 1981)
 Hazelrigg, Charles O., *Associate Professor of Pediatric Dentistry and of Dental Hygiene* (D.D.S., Indiana University, 1970)
 Hine, William C. Jr., *Acting Chairperson of Oral Surgery and Hospital Dentistry; Clinical Assistant Professor of Hospital Dentistry; Director of Grassy Creek Clinic* (D.D.S., Indiana University, 1996)

Hinshaw, Kay S., *Instructor in Dental Hygiene* (B.S., Indiana University, 1964)
 Hudson, Joyce C., *Visiting Clinical Assistant Professor of Dental Hygiene* (M.S., University of Missouri, 1982)
 Hughes, Elizabeth A., *Clinical Assistant Professor of Dental Hygiene* (M.S., Indiana University, 2000)
 Larsen, Steven H., *Associate Professor of Microbiology and Immunology, School of Medicine* (Ph.D., University of Wisconsin, 1974)
 Lazard, Katie A., *Instructor in Dental Hygiene* (B.A., University of Arizona, 1982)
 Macauley, Teresa A., *Instructor in Dental Assisting* (B.S., Indiana University, 2001)
 Mallatt, Mark E., *Professor of Preventive and Community Dentistry and of Dental Hygiene* (D.D.S., Indiana University, 1975)
 McDonald, James L., Jr., *Associate Dean for Dental Education; Professor of Preventive and Community Dentistry* (Ph.D., Indiana University, 1968)
 Meadows, Melinda L., *Clinical Lecturer in Dental Hygiene, Oral Facial Development; Adjunct Lecturer in Dental Hygiene, Periodontics and Allied Dental Programs* (B.S., Indiana University, 2000)
 Miller, Chris H., *Executive Associate Dean; Associate Dean for Academic Affairs and Graduate Education; Professor of Oral Microbiology, School of Dentistry; Professor of Microbiology and Immunology, School of Medicine* (Ph.D., University of North Dakota, 1969)
 Moeller, Matthew C., *Clinical Assistant Professor of Operative Dentistry; Director of Comprehensive Care Clinic* (D.D.S., Indiana University, 1985)
 Nasser, Fariborz B., *Instructor in Operative Dentistry and Dental Hygiene* (D.D.S., Indiana University, 1994)
 Niemann, Sybil S., *Clinical Assistant Professor of Allied Dental Programs* (D.D.S., Indiana University, 1966)
 Oldham, James M., *Instructor in Dental Hygiene* (D.D.S., Indiana University, 1983)
 Olson, Byron L., *Professor of Preventive and Community Dentistry, School of Dentistry; Professor of Biochemistry and Molecular Biology, School of Medicine* (Ph.D., Case Western Reserve University, 1970)
 Phillips, Sally L., *Clinical Lecturer in Dental Hygiene* (B.S., Indiana University, 1981)
 Querry, Sharon A., *Instructor in Dental Hygiene* (B.S., Indiana University, 1998)
 Rackley, R. Hunter, Jr., *Assistant Professor of Dental Hygiene* (M.H.E., Medical College of Georgia, 1977)
 Reed, Angel J., *Instructor in Dental Hygiene* (B.S., Indiana University, 1990)
 Rettig, Pamela A., *Clinical Associate Professor of Dental Hygiene* (M.S., University of Missouri, 1993)
 Schaaf, Jack E., *Acting Chairperson of Oral Pathology, Medicine, and Radiology; Associate Professor of Dental Diagnostic Sciences* (D.D.S., Indiana University, 1975)

History of the School of Education

Indiana University has been preparing teachers since 1851. The first “Department of Pedagogy” was part of what is now the College of Arts and Sciences in Bloomington. In 1908 a formal School of Education was established, and in 1923 the school became autonomous from the College of Arts and Sciences. The first B.S. in education was awarded in 1925.

Education classes have been offered in Indianapolis since 1914, when the Extension Division of Indiana University was founded. Enrollments and course offerings in Indianapolis grew steadily and by 1969 it was possible to earn a bachelor’s degree in education at Indianapolis. In 1969, regional campuses of Indiana University and Purdue University merged to form IUPUI. In 1972 the IUPUI Division of Education was formally established with offices in the Marrott Building on North Meridian Street. In 1975 the School of Education in Bloomington and the Division of Education in Indianapolis merged to become a single School of Education with two campuses, and the School of Education at IUPUI moved into a new Education/Social Work Building at 902 West New York Street.

Today, Indiana University’s School of Education is one of America’s most respected educational institutions for the preparation of teachers, administrators, and specialists in all areas of education. The School of Education has full equality with the other professional schools of the university and grants the degrees of Bachelor of Science in Early Childhood Education, Bachelor of Science in Education, Master of Science in Education, Specialist in Education, and Doctor of Education. Students may earn the B.S. degree in education entirely at IUPUI. IUPUI offers select graduate programs in education and enrolls a growing number of doctoral students. The Indiana University School of Education at IUPUI awards nearly 300 degrees annually, and boasts well over 10,000 alumni.

Mission of the School of Education

The mission of the Indiana University School of Education at IUPUI is to offer challenging undergraduate and graduate programs that prepare reflective, caring, and highly skilled professionals for diverse educational settings. Through on-going collaboration and interdisciplinary partnerships, we are dedicated to advancing teaching and learning practices, informing educational theory and research, and influencing state and federal education policy.

Accreditation

The School of Education is accredited by the National Council for Accreditation of Teacher Education

(NCATE) and by the North Central Association of Colleges and Secondary Schools. In addition, the Indiana Professional Standards Board has approved all teacher education programs offered through the School of Education at IUPUI.

Title II

In 1998, the U.S. Congress enacted an amendment to the Higher Education Act that required a testing process for all teacher education programs. For the 1999–2000 cohort of program completers, the School of Education at IUPUI had an institutional pass rate of 90 percent on aggregate basic skills tests and a 98–100 percent aggregated pass rate on content area tests.

Program Framework

The School of Education has integrated the campus “Principles of Undergraduate Learning” and the various state and national frameworks for beginning teachers into the IUPUI “Principles of Teacher Education.” These Principles provide the conceptual framework for all undergraduate degree and licensure programs.

Principles of Teacher Education

Principle 1: Conceptual Understanding of Core Knowledge

Definition: The ability of teachers to communicate and solve problems while working with the central concepts, tools of inquiry, and structures of different disciplines. For prospective secondary teachers this means developing rich expertise within their chosen discipline.

This principle is demonstrated by the ability to:

- Set learning goals that reflect command of the subject matter.
- Design and implement instruction that develops students’ conceptual frameworks.
- Interact with learners, providing accurate and in-depth information.
- Improve learners’ communication and quantitative skills through meaningful learning engagements.
- Model effective communication and problem solving.
- Use a variety of media and technology.
- Distinguish high quality educational materials.
- Write and speak with clarity.

Principle 2: Reflective Practice

Definition: The ability of teachers to step outside of the experiences that make up teaching and to analyze and critique from multiple perspectives the impact of these experiences and contexts.

This principle is demonstrated by the ability to:

- Explain the principles that guide teaching.
- Demonstrate teaching as an inquiry process, collecting and analyzing data about students’ learning and generating plans designed to support student learning.

- Entertain multiple perspectives.
- Self-assess from multiple perspectives.
- Collect information through observation of classroom interaction.
- Assess learners’ development and knowledge.
- Use assessment processes appropriate to learning outcomes.
- Invite learners to employ multiple approaches, solutions, and diverse pathways to learning.

Principle 3: Teaching for Understanding

Definition: The ability of teachers to draw on their knowledge and frameworks to plan, implement, and assess effective learning experiences and to develop supportive social and physical contexts for learning.

This principle is demonstrated by the ability to:

- Set clear goals for learning experiences.
- Establish suitable classroom routines.
- Provide learners with meaningful choices.
- Create a collaborative, supportive social environment.
- Engage learners in generating knowledge and testing hypotheses.
- Help learners articulate their ideas and thinking processes.
- Use multiple strategies that engage students in active learning.
- Encourage learners to see, question, and interpret ideas from diverse perspectives.
- Convince learners to assume responsibility for themselves and for their own learning.
- Motivate all children to learn.
- Create an inviting, interactive learning environment.
- Ask questions that promote learning.
- Build on children’s prior knowledge.

Principle 4: Passion for Learning

Definition: The ability of teachers to continually develop their own complex content and pedagogical knowledge and to support the development of students’ habits of continual, purposeful learning.

This principle is demonstrated by the ability to:

- Synthesize and teach complex concepts and networks of knowledge.
- Learn about learners and teaching through reflective practice.
- Recognize and support learners’ intellectual, social, and personal growth.
- Support learners with special needs.
- Engage learners in multiple ways of knowing.
- Convey reasonable, but high and positive expectations for learner achievement.
- Integrate the disciplines to create meaningful curriculum.
- Give learners opportunities to solve community problems and to make authentic choices.
- Provide learners with access to learning opportunities.
- Seek help from other professionals when needed.
- Engage in personal inquiry to construct content knowledge and skills.

Principle 5: Understanding School in the Context of Society and Culture

Definition: The ability of teachers to value and to teach about diversity; to recognize the impact of social, cultural, economic, and political systems on daily school life; and to capitalize on the potential of school to minimize inequities.

This principle is demonstrated by the ability to:

- Act as a change agent.
- Communicate in ways that demonstrate a sensitivity to a broad range of diversity.
- Mediate when learners need help to resolve problems or change attitudes.
- Collaborate with parents, teachers, administrators, and other community members involved in the lives of students.
- Embed knowledge of community into teaching.
- Challenge negative attitudes.

Principle 6: Professionalism

Definition: The ability of teachers to be active contributors to professional communities that collaborate to improve teaching and student achievement by developing shared ethics, standards, and research-based practices.

This principle is demonstrated by the ability to:

- Articulate the ethical principles guiding professional conduct.
- Demonstrate and document standards-based practice in the classroom.
- Stay current in terms of research on pedagogy and content areas.
- Participate in professional organizations and resource networks beyond the school.
- Dialogue with colleagues about issues that are complex and difficult.
- Give presentations for other professionals.
- Initiate activities such as teacher research, study groups, and coaching to improve the teaching and learning of a school community.
- Promote positive attitudes.
- Facilitate decision making.
- Operate on democratic principles.

Program Format

The undergraduate teacher education program is called “Learning to Teach/Teaching to Learn.” The program has several distinct elements:

1. A recommended sequence of *general education*,
2. A *professional education* component, and
3. *Student teaching* or other supervised practicum experience.

For secondary education majors or those pursuing license to teach at the secondary level, preparation in the *teaching area* or an academic major constitutes a fourth distinct program component. Each component is briefly described below; additional detail is provided later in the bulletin.

General Education

“General education” refers to courses and other experiences that lay the foundation for IUPUI students to evidence progress toward the IUPUI “Principles of Undergraduate Learning.” There is a focus on building skills in written and oral communication, information technology, inquiry, science, literature, quantitative reasoning, and both global and democratic perspectives.

The general education requirements for elementary and early childhood majors are identical, and define the strong generalist preparation that is imperative for elementary teachers and early childhood educators. Students pursuing initial license at the secondary level are expected to fulfill the general education requirements articulated by the major department.

Students are encouraged to complete a program of general education by enrolling in course clusters or learning communities designated for education majors whenever they are available. In particular, students are urged to follow the general education template for the first 30 credit hours of their program. The sequence has been planned to provide the strongest foundation in learning and to build the most powerful connections between the content of the individual courses.

Professional education The professional education component of “Learning to Teach/Teaching to Learn” develops the knowledge, disposition, and skills required for entry to the profession. Some courses focus on knowledge, dispositions, and skills that underlie all teacher education regardless of the developmental focus. Other courses and field experience focus on what it takes to promote effective teaching and learning at a particular developmental level or in a particular school setting. At IUPUI, the professional education component (41-42 credit hours) is not a collection of isolated courses, but rather a carefully articulated program of study. Courses are taken in blocks and in a prescribed order.

Teaching Area Candidates pursuing a secondary (middle school/high school) or all-grades license must meet the content standards for the disciplines or subject areas they intend to teach. Typically, this is done by completing 36-51 credit hours in a major with appropriate supporting areas. Elementary and early childhood majors do not have a teaching area per se. However, their general education component includes a requirement for an academic concentration in a selected area of study. The concentration is intended to be responsive to the interests and talents of individual students and to the public expectation that all teachers will have some area of particular expertise. Course lists for concentrations are available from Education Student Services.

Student teaching The 16 credit hours of student teaching and the accompanying integrated seminar represents the culminating experience in the Learning to Teach/Teaching to Learn program. By assuming full responsibility for a class of students, candidates demonstrate their achievement of standards, and reflect both on student learning and on their own effectiveness as teachers.

At IUPUI, all students are prepared to teach at two developmental levels and can expect to complete two separate student teaching assignments.

Indiana License Types and Coverage

IUPUI’s educator preparation programs at both the graduate and undergraduate level were developed to meet the license framework adopted by the Indiana Professional Standards Board (IPSB) in 1999. The new framework establishes requirements not in terms of courses to be taken, but rather in terms of the standards that program graduates are expected to meet. The license framework addresses the principles set forth by the Interstate New Teacher Assessment and Support Consortium (INTASC) and includes both

content standards for different subjects and teaching areas, and *developmental standards* associated with particular educational settings (early childhood, elementary, middle school, high school).

IUPUI offers programs leading to the following licenses:

Early Childhood License

Preparation to teach preschool through second grades

Developmental Standards: *Early Childhood*

School Settings: *Preschool* and *Elementary*; *Primary*

Content Standards: *Generalist*; *Early Childhood* and *Elementary*; *Primary Generalist*

Elementary License

Preparation to teach kindergarten through sixth grades

Developmental Standards: *Early Childhood* and *Middle Childhood*

School Settings: *Elementary*; *Primary* and *Elementary*; *Intermediate*

Content Standards: *Elementary*; *Primary Generalist* and *Elementary*; *Intermediate Generalist*

Middle School/High School Content Area License

Preparation to teach sixth through twelfth grades in a particular content area

Developmental Standards: *Early Adolescence* and *Adolescence/Young Adult*

School Setting: *Middle School/ Junior High School* and *High School*

Content Standards: *Language Arts*, *Social Studies*, *Science*, *Mathematics*, or *Foreign Language*

All-Grades License

Preparation to teach kindergarten through twelfth grades

Developmental Standards: *Early Childhood*, *Middle Childhood*, *Early Adolescence*, and *Adolescence/Young Adult*

School Settings: *Elementary*; *Primary*, *Elementary*; *Intermediate*, *Middle School/ Junior High School*; and *High School*

Content Standards: *Fine Arts*, *Health* and/or *Physical Education*

Exceptional Needs License

Preparation to teach children with special needs

The program requires that this license be coupled with one of the licenses above. The developmental standards and school setting of the license will be the same as the partner license.

Content Standards: *Exceptional Needs*

Planning is underway for a program leading to licensure in English as a New Language. The ENL license will be coupled with an early childhood, elementary, middle school/high school, or all grades license.

The School of Education at IUPUI also offers programs at the graduate level that lead to the following licenses:

- School Services (Counselor)
- Building Level Administrator
- District Level Administrator

Requirements for Admission to the Undergraduate Program

Entering students with strong academic credentials who indicate education as their choice among academic programs may be dually admitted to University College and the School of Education. Students admitted to University College who subsequently make a decision to pursue an education degree or complete a program leading to an initial teaching license may transfer to the School of Education when they attain a minimum 2.5 overall grade point average (GPA). Education majors transferring to IUPUI from other colleges and universities may be dually admitted to the University College and the School of Education if their GPA is 2.5 or better, or admitted to University College if they have not yet achieved a 2.5 overall GPA. Students must attain a 2.5 overall GPA to transfer to the School of Education.

It is important to note that admission to the school does not guarantee admission to the Teacher Education Program. Application to teacher education is a separate process that typically occurs during the second semester of the sophomore year (or during the semester prior to beginning the professional education component of the licensure program).

Transfer Credit Policy

Acceptance of credit from other institutions will be determined by Enrollment Services. After transfer courses have been credited through Enrollment Services, the student should meet with a School of Education academic advisor to determine which transfer courses will fulfill degree requirements for programs in education.

Students in secondary or all-grade programs must have a minimum grade point average (GPA) of 2.5 in the transfer courses that would apply toward their teaching major. Early childhood and elementary majors must earn a GPA of 2.0 or better in any transfer course used to meet general education requirements.

IUPUI's Teacher Education Program—Learning to Teach/Teaching to Learn—is built on a coherent sequence of professional education courses and field experiences. To support program integrity and continuity, students interested in completing a program leading to initial licensure through the School of Education are encouraged to complete the entire professional education component at the IUPUI campus. Requests for transfer credits for professional education courses will be reviewed on an individual basis in consultation with program faculty; feedback will be provided in a timely fashion.

Admission to the Teacher Education Program

Students wishing to earn a license to teach at any developmental level (early childhood, elementary, middle, or high school) must apply to the Teacher Education Program and be formally admitted before they will be authorized to enroll in any professional education courses. The standards for admission to the Teacher Education Program, listed below, apply both to education majors *and* to majors in other schools who are seeking an initial teaching license. A student must:

1. *Attain a minimum overall grade point average (GPA) of 2.5.*
2. *Complete required courses.*
 - Elementary and early childhood majors must achieve a grade of C or higher in ENG W131, ENG W132, a literature elective, GEOL G110, HIST H105, EDUC W200, EDUC Q200, BIOL N100, and MATH M130/132, M136 *or* EDUC N443.
 - Students pursuing a secondary or all-grade license must
 - Achieve a grade of C or higher in ENG W131 and EDUC W200.
 - Complete three-fourths of the general education course requirements, with a minimum GPA of 2.5.
 - Complete at least one-half of the courses in the major, with a minimum GPA of 2.5.
3. *Receive qualifying scores on all sections of the Professional Assessments for Beginning Teachers PRAXIS I: PPST.* See Education Student Services for information about the test and qualifying scores.
4. *Complete a formal application.* Applications for admission to the Teacher Education Program are due early in the semester, the semester before the students want to begin professional education courses (e.g., in February for the fall semester and in October for the spring semester).

Since space is limited and admission is competitive, students interested in Teacher Education are urged to meet application deadlines. The application and supporting information are available from the School of Education home page on the Web at education.iupui.edu.

Academic Expectations

Student Responsibilities

The School of Education has established academic requirements concerning admission, course of study, majors and minors, and campus residence, all of which must be met before a degree is granted. Students are held responsible for understanding the requirements and for meeting the conditions prior to graduation. A student pursuing a secondary (middle school/high school) or all-grades license while enrolled in a degree-granting program in another

school must satisfy requirements of the degree-granting school as well as School of Education requirements for licensure.

Students are encouraged to:

1. Develop a strong foundation for meeting the campus “principles of undergraduate learning” by following the course sequence presented in this bulletin and by enrolling in course clusters or learning communities designated for education majors whenever they are available.
2. Plan a program with an Academic Advisor in the School of Education or with the designated education advisor in University College, and meet with that advisor at least once each semester.
3. Check the IUCARE (INSITE) report at least once each semester (insite.indiana.edu). For questions about IUCARE or accessing INSITE, please see an advisor or visit Education Student Services.
4. Apply for admission to the Teacher Education Program during the semester when program prerequisites will be completed.

Specific Degree Requirements

Students must enroll in a program at the School of Education at IUPUI and meet all of the requirements for that program. For the Bachelor of Science in Education or Early Childhood Education, students must:

1. Meet the regular matriculation requirements of the university.
2. Be admitted to the Teacher Education Program.
3. Complete the requirements for licensure, as outlined in this bulletin.
4. Complete at least 35 credit hours of junior- and senior-level courses (courses numbered 300 or above).
5. Complete at least 30 of the last 60 credit hours required for a specific degree program at IUPUI. These 30 credit hours include student teaching as well as methods courses in the major teaching area.
6. Complete the professional education courses as stipulated in the specific program, and all of the general education and subject-matter courses required for recommendation by Indiana University for an initial teaching license.
7. Complete a minimum of 124 credit hours of academic credit (see specific program requirements). Some programs require additional hours for graduation.
8. Maintain a minimum cumulative grade point average (GPA) of 2.5 in all courses taken at Indiana University.
9. Achieve a minimum grade of C in each professional education class while maintaining a cumulative GPA of 2.5 in professional education courses.
10. Earn a C or better in courses that relate directly to the content taught in the elementary (K-6) curriculum.

Students pursuing a middle/high school or all-grades license must:

1. Meet conditions 1 through 9 above.
2. Achieve a minimum GPA of 2.5 in the teaching area(s).
3. Take some of the course work in the major at IUPUI.

Assessment in the Teacher Education Program

Students recommended for a teaching license by IUPUI will be expected to demonstrate the knowledge, disposition, and skills expected of beginning teachers. It is IUPUI's responsibility to ensure that students recommended for an initial license have met all relevant standards set by the Indiana Professional Standards Board.

The *Learning to Teach/Teaching to Learn Curriculum and Assessment Handbook* outlines assessment procedures employed at different points in the program. In addition to traditional feedback in the form of course grades, students will receive feedback on their performance relative to standards for the teaching profession. Movement through the program will be contingent on satisfactory performance at each assessment point. A student who receives one or more negative indicators on the Block I Rubric or who fails to achieve a passing score on the Block II Performance Task will be notified in writing and advised of options by a Student Assessment Committee of the faculty. As a rule, a student will not advance to Block III course work until he or she is authorized by the Student Assessment Committee. If the student teaching portfolio submitted at the conclusion of the initial student teaching placement does not receive a passing score, the student will receive feedback and have the opportunity to revise and resubmit it after the second student teaching placement.

Prior to graduation, all students must also pass the PRAXIS II test(s) in their area(s) of specialty, while early childhood and elementary education majors must pass an *additional* test in the area of reading. Beginning with students who matriculate in fall semester 2002, only those who maintain an appropriate GPA, pass the tests required by the Indiana Professional Standards Board, and successfully complete all components of the unit assessment system will be recommended to the state for an initial teaching license.

Academic Policies and Procedures

Probation, Dismissal, and Reinstatement

Failure to meet the minimum standards results in academic probation or in dismissal. A cumulative minimum grade point average (GPA) of 2.5 is required to remain in good standing.

Probation

The academic progress of students in the School of Education is reviewed at the close of each semester and summer session; students will receive formal, written notice if they have been placed on probation and are, or may be, subject to dismissal. Students on academic probation have one semester to meet the minimum academic standards before they are dismissed from the school.

Dismissal

Once dismissed, students are placed on the all-university checklist, which means that they may not enroll in courses on any Indiana University campus.

Reinstatement

Once dismissed, the student must wait for at least one semester (not including summer sessions) before applying for readmission. If the student is readmitted, the course load may be restricted or adjusted in the student's best interest. The student should send a letter and completed form petitioning for readmission to:

Assistant Dean for Student Services
School of Education
902 W. New York Street
IUPUI
Indianapolis, IN 46202-5155

Voluntary Withdrawal While on Probation

If a student voluntarily withdraws from the School of Education while on probation, that student may enter another school at the university if the student's grade point average is acceptable to that school. Some schools require an application process. The student may reenter the School of Education in good standing if, by taking academic course work in other divisions or schools of the university, grades have been earned that raise the cumulative grade point average to a minimum of 2.5, and the student has made progress toward fulfilling program requirements.

Stopping Out

Once admitted to the Teacher Education Program, a student who intends to "stop out" of the professional education courses for one or more semesters must notify Education Student Services in writing in order to be guaranteed readmission to the program. Upon reentering the program, the student must meet any new program requirements.

Grading Policy

Pass/Fail Option

Within certain restrictions, students in good standing may choose to take some elective courses or general education courses on a Pass/Fail basis. Instructor approval is not needed for the student to take a course Pass/Fail.

There are two restrictions to the Pass/Fail option:

1. The Pass/Fail option may not be used for any course in a subject in which the student wishes to be certified to teach. That is, all courses in the teaching area (or supporting areas) and all professional education courses must be taken for a letter grade. No courses identified to meet unit expectations for "communication and quantitative reasoning" may be Pass/Fail. Elementary education majors may use the Pass/Fail option only for credit hours over and above the minimum hours required in literature, fine arts, science, or historical inquiry. Secondary and all-grade license candidates may use the Pass/Fail option only for elective credit hours or for courses that satisfy the general education requirements.
2. A maximum of two courses per academic year may be taken on a Pass/Fail basis. The academic

year begins in the fall and includes the following year's summer sessions.

The grade of Pass (P) is assigned no grade points and is not considered in computing the grade point average. A grade of P may not subsequently be changed to a letter grade. A grade of Fail (F) received in course taken with the Pass/Fail option is entered on the transcript, treated as a regular letter grade, and used in computing the grade point average.

The decision to take a class Pass/Fail must be made on or before the end of the first three weeks of class during the regular semester, and on or before the end of the first two weeks in a summer session. Check the *Schedule of Classes* for the exact dates. Appropriate forms are available at Education Student Services, ES 3131.

Incomplete (I) Grades

If a student is not in attendance during the last several weeks of a semester, the instructor may report a grade of Incomplete (I) (indicating that the work submitted is satisfactory but that the entire course has not been completed) *if* the instructor has reason to believe that the absence was beyond the student's control. If this is not a valid assumption, the instructor shall record a grade based on the work submitted to date. The student must have completed 75 percent of the course requirements and must have an I grade contract completed and on file. The time allowed for the removal of an I grade is one calendar year from the date of its initial recording, unless, in exceptional circumstances, the dean of the student's college or school authorizes adjustment of this period. By assigning a grade of I, an instructor implicitly authorizes and requires that the registrar automatically change an I to an F at the end of the appropriate time period if the student fails to complete the course work to the instructor's satisfaction. Both the student and the instructor in whose course the student received the Incomplete will be notified of this change of grade.

Withdrawal from Courses

Withdrawal (W) is not a grade and does not figure in hours of credit or grade point average (GPA) calculations. However, students should be aware that a pattern of repeated withdrawals may affect admission to Teacher Education, student teaching placement, and/or eventual employment.

A student must refer to the *Schedule of Classes* to determine the last date for an automatic W from a class for each semester or summer session. The *Schedule* is available online at registrar.iupui.edu. After the automatic withdrawal date has passed, the instructor and the Assistant Dean of Student Services make a determination whether to assign a W or an F. Ordinarily the only acceptable reason for withdrawal is illness or obligation of employment. Students withdrawing from a class during the second half of a regular semester or summer session may be assigned a W only for compelling nonacademic reasons, and only if the student's work up to that point is passing. It is the student's responsibility to start the withdrawal procedure by getting the form from Education Student Services and securing the appropriate signatures. The application for withdrawal must be processed within 10 days of its receipt.

Important: Students withdrawing from a course to which a Laboratory/Field Experience is linked must withdraw from the Field Experience as well as from the course itself; such a withdrawal is not automatic. Failure to withdraw from both sections may result in a grade of F in the Laboratory/Field Experience.

FX Policy: Policy and Procedure on Course Reenrollment and Recalculation of Student Grade Point Average

The University Faculty Council has stated that:

Any undergraduate who has retaken a course previously failed shall have only the second grade in that course counted in the determination of the overall grade point average by the Office of Records and Admissions. The student's transcript shall record both grades. Any grade point average calculated in accord with this policy shall be marked FX denoting that a grade of F has been replaced by the grade in the course when taken subsequently.

The FX policy can take effect only if the failed course was repeated after the beginning of the academic year 1976-77. The IUPUI School of Education FX policy has been revised, effective since fall 1996. The new policy allows approved undergraduate students seeking their first degree to repeat a maximum of 15 credit hours subject to school/division approval. Students in education must submit a petition form before the FX policy can take effect. Petitions are available from Education Student Services, 3131 Education/Social Work Building.

Determination of GPA

The School of Education uses the grade point average (GPA) indicated on the IUCARE program for all audits, including those for admission to the Teacher Education program, probation and dismissal, and graduation. Students can ascertain their IUCARE grade point average (GPA) with INSITE, available on the Web (insite.indiana.edu).

Note: Only credit hours are transferred to Indiana University. Grades earned at other institutions are disregarded after credit conversion is verified. Only the grades made in courses taken at Indiana University will be used to compute a student's grade point average.

Grade Change Appeal

Students wishing to appeal a grade in any course in the School of Education should follow the IUPUI grade appeal procedure as outlined in this bulletin. Grade appeal forms are available from the Registrar's Office, online from registrar.iupui.edu, or from Education Student Services ES 3131.

A student's request to have a grade in a course offered by the School of Education changed from a grade of F to Withdrawn (W) will be granted if one or more of the following conditions exists:

1. The student has provided official documentation of a medical emergency that prevented the student from attending and officially withdrawing from the course.
2. The student was a first-semester freshman and never attended the class.

All other requests will be denied. If a student feels there were other extenuating circumstances that prevented him or her from attending and/or officially withdrawing from the course, he or she may write a letter of appeal to the Student Services Appeals Committee. Any available official documentation pertaining to the extenuating circumstances should be included with the letter of appeal.

Good Standing

A student is determined to be in "good standing" in the School of Education when the undergraduate grade point average (GPA) meets or surpasses the minimum 2.5 standard, and when the student has no pending issues with the Student Assessment Committee.

Bulletin Designation

Students must meet requirements for graduation and licensure as stated by the school in the IUPUI Campus Bulletin at the time of initial enrollment, or as set forth in any subsequent bulletin. Students are expected to meet requirements of a single bulletin.

Due to changes adopted by the Indiana Professional Standards Board, most programs at IUPUI are under review and revision. Students are encouraged to see an academic advisor each semester for current program information.

Other Special School or Program Requirements, Including Graduation Policies

Revalidation of Professional Education Courses

Professional education courses must be current in order to be acceptable in undergraduate certification programs. No professional education or technology courses can be more than 10 years old at the time of student teaching. Course work that is older, whether taken at IUPUI or another university, will need to be revalidated, retaken, or updated; the student should consult with a School of Education academic advisor.

A candidate's content knowledge must be similarly up-to-date. Individuals pursuing a secondary teaching license who have courses in the teaching area(s) more than 10 years old must also consult with an academic advisor about updating or revalidating the work.

Campus Residency Requirement

A student must complete at least 30 of the last 60 credit hours required for a specific degree program while in residence at IUPUI. These 30 credit hours will include methods courses in the major as well as student teaching. For students who are completing a first undergraduate degree, some work in the major must also be completed at IUPUI, unless the student has transferred from an IU campus offering a degree in that major.

Correspondence Courses

Students in education degree or license programs are not encouraged to take correspondence courses. Neither professional education courses nor courses meeting unit expectations for "communication and quantitative reasoning" may be taken by correspondence.

Temporary and Permanent Intercampus Transfers

To register for a single semester or for the summer session(s) at another campus of Indiana University, the student must file a Temporary Intercampus Transfer Request with the Education Student Services Office on the campus currently being attended. To transfer permanently from one campus to another campus of Indiana University, the student must file an Intercampus Transfer Request with the Education Student Services Office on the campus currently being attended. Advance notice is necessary to allow for the transfer of records and the validation of the student's eligibility to continue studies. Contact Education Student Services for details and deadlines established by each campus.

Honors Program

The School of Education Honors Program is part of the university-wide Honors Program at IUPUI, and is available to students who are interested in strengthening and/or enriching their academic experiences. This program is built on the IUPUI Principles of Undergraduate Learning and the Interstate New Teacher Assessment and Support Consortium (INTASC) standards for teacher education. Honors students are eligible for financial stipends and have opportunities to work closely with faculty. Students must complete an application for admission to the Honors Program.

Undergraduate Students in Graduate Courses

There are two conditions under which undergraduate students may enroll in graduate courses:

1. Undergraduate students in their junior or senior year may take graduate courses that will count in their undergraduate program if the graduate courses are relevant to their program of study and there is no similar undergraduate course available.
2. Undergraduate students in the last semester of their senior year may take graduate courses that may later be applied to a graduate program. Graduate courses taken prior to the last undergraduate semester may not be applied to a graduate program, and no course may be applied to both an undergraduate and a graduate program. Undergraduate students who meet either of these conditions must, further, have an undergraduate grade point average (GPA) of 3.0 or higher, obtain written permission from the course instructor, and obtain the approval of the Director of Graduate Studies.

Graduation

The School of Education requires a **minimum** of 124 credit hours to qualify for graduation, determined by specific degree requirements. Some programs require additional hours for graduation. Consult a School of Education academic advisor for specific requirements.

All degree candidates admitted to the Teacher Education Program in fall 2000 or after must have achieved passing scores on the relevant PRAXIS II: Specialty Test(s) to qualify for graduation and to be recommended for initial licensure.

Students should file an application for a Bachelor of Science degree in the School of Education at the beginning of their final year of classes or at the beginning of their senior year. The application for graduation is available on the Web at education.iupui.edu/forms/home.htm or from Education Student Services (ES 3131). Application for a degree is a student responsibility, and the School of Education will not be responsible for the graduation of students who fail to file an application.

Degree with Honors The School of Education recognizes high cumulative grade point averages with the designations "Distinction," "High Distinction," and "Highest Distinction." To earn a degree with honors, students must earn a minimum grade point average of 3.6 in all course work taken toward the B.S. in Education degree, must be in the top 10 percent of the class, and must complete at least four full semesters in residence at Indiana University campuses.

Application for Licensure

Within two weeks of graduation, students should file an Indiana State Application for a Teaching License. The application requires evidence of passing scores for all state licensure exams as well as a recent criminal history check. Instructions for obtaining the criminal history check are included in the application packet available from Education Student Services, (ES 3131) or from the School of Education homepage on the Web at education.iupui.edu.

Information about both required exams can be obtained at Education Student Services or through the Educational Testing Service (ETS) Web site (www.ets.org/prxsets.html). Additional information on licensing and current state standards is available through the Indiana Professional Standards Board or from their Web site (www.state.in.us/psb).

Career Services

Students and alumni are encouraged to register with the Career Center at IUPUI. The Career Center (1) assists registrants in locating teaching, administrative, and special service positions in schools, colleges, and universities, and as appropriate in business, industry, and governmental agencies; (2) assists registrants with the development of employment credentials, and upon request, sends that credential to prospective employers and other eligible agencies; (3) provides career counseling and planning services for students and alumni; (4) conducts research concerning supply and demand and employment trends, issues, and procedures; (5) assists employers in finding qualified candidates for vacant positions in their respective institutions and agencies; and (6) sponsors on-campus recruiting activities for education students.

There is a nominal fee for the initial registration and for establishing the placement file. A nominal fee is also charged to cover the cost of duplicating, assembling, and mailing each credential file to a

prospective employer. Resume writing assistance and access to listings of positions open in area school systems are available through the Career Center Web site (www.iupui.edu/~career/).

Students are encouraged to initiate their placement file early in the year in which they will become available for employment. Nearly all employers in the field of education request formal credentials as a part of the employment process

School Awards and Scholarships

In 1987, IUPUI instituted a scholarship program in memory of the astronauts who perished in the Challenger shuttle tragedy. Each year since, this program has enabled IUPUI to recognize a group of scholars who, by way of their own careers, will keep alive the examples set by those courageous space pioneers. The **Challenger Scholarship** supports undergraduate students to pursue careers teaching science, social science, or engineering at any level, from primary to post-secondary.

The **Everett E. Jarboe Award** honors a graduating senior who exhibits academic excellence, campus and community leadership and service. The award was established to honor the first administrator of the School of Education at IUPUI who served from 1968-1973.

The **Ruth Esther Holland Award** supports outstanding undergraduate students in the field of elementary and secondary language education. Currently Professor Emerita, Holland taught language education at IUPUI from 1972-1989.

In 1996, the faculty and staff of the School of Education established two scholarships to help support students with financial need during the student/teaching semester. Each year one **Faculty/Staff Scholarship** is awarded to a student who will student teach in the fall semester and one to a student who will student teach in the spring.

The **Nicholas H. Noyes, Jr., Scholarship** is awarded to an undergraduate student in teacher education at IUPUI. The recipient must be a member of Kappa Delta Pi honorary and have a grade point average (GPA) of at least 3.6.

A **Global Education Prize** is awarded to honor the work of Dr. Golam Mannan, Professor Emeritus in the School of Education. The prize goes to an international or minority student in the School of Education who has shown particular interest in global and multicultural issues in education.

The **Patricia Tefft Cousin Scholarship** was established by the Tefft and Cousin families, friends, and colleagues to honor the life and work of Pat Tefft Cousin, a member of faculty from 1996-1999. The scholarship goes to an outstanding undergraduate student majoring in elementary education who has a demonstrated interest in special education, literacy, or early childhood education.

The **Barbara L. Wilcox Scholarship** was established anonymously in 1996 to honor the

contributions and accomplishments of Barbara Wilcox, a member of the Education faculty who served as Executive Associate Dean from 1992-2001.

A complete list of scholarships is available from the Curriculum Resource Center (CRC). Applications, which are available on the home page on the Web at education.iupui.edu, are typically due early in the spring semester.

School Organizations

Education Student Advisory Council (ESAC)

ESAC is the student organization of the School of Education. It is open to all undergraduate students, both elementary and secondary. ESAC sponsors both informational and social programs throughout the year, including workshops in areas of interest in curriculum and instruction, as well as job search strategies. More information on ESAC membership and sponsored events is available in the Curriculum Resource Center, Education/Social Work Building, (ES) 1125, or on the bulletin boards on the first-floor hallway in the ES building.

Kappa Delta Pi

Kappa Delta Pi is an international honorary organization founded to recognize excellence in education. Students who are invited for membership exhibit the ideals of scholarship, high personal standards, and outstanding achievement in professional education courses. The IUPUI chapter of Kappa Delta Pi sponsors a wide variety of programs for its members and the School of Education.

School of Education Alumni Association

The School of Education Alumni Association was founded in 1951 "to further the educational, professional, and social interests of the School of Education and the alumni." The association provides an ongoing link between the graduate and the university. The Education Alumni Association sponsors education-related events throughout the state, and publishes *Chalkboard*, a semiannual magazine for all graduates of the Indiana University School of Education.

General Education

General education refers to courses and other experiences that lay the foundation for IUPUI students to evidence progress toward the IUPUI "Principles of Undergraduate Learning." There is a focus on building skills in written and oral communication, information technology, inquiry, science, literature, quantitative reasoning, and both global and democratic perspectives.

Students are encouraged to follow this template for the first 30 credit hours of the program. Both the particular sequence and the course clusters or

learning communities designated for education majors have been planned to provide the strongest foundation and to build the most powerful connections between the content of the individual courses.

Courses that build the general education foundation for early childhood and elementary education majors are listed below; they are organized by the Principles of Undergraduate Learning to which they are most directly related. Students pursuing a secondary or all-grades license are expected to fulfill the general education requirements articulated by the major department or school.

Communication and Quantitative Skills

ORAL and WRITTEN EXPRESSION (9 cr.)

ENG W131	Elementary Composition I*
ENG W132	Elementary Composition II*
COMM R110	Fundamentals of Speech Communication*

QUANTITATIVE REASONING (9 cr.)

MATH 130 and 132 or 136	or
EDUC N443	Teaching Elementary School Mathematics Problem Solving

QUANTITATIVE ELECTIVE (3 cr. selected from the following)

MATH M118	Finite Mathematics
MATH M290	Mathematics and Art
PHIL P162	Logic
PHIL P265	Elements of Symbolic Logic
POLS Y205	Elements of Political Analysis
PSY B305	Statistics
SOC R251	Methods of Social Research
STAT 301	Elementary Statistical Methods (I)
STAT 302	Elementary Statistical Methods (II)

TECHNOLOGY LITERACY (3 cr.)

EDUC W200	Using Computers in Education
-----------	------------------------------

Critical Thinking

SCIENCE (12 cr.)

EDUC Q200	Introduction to Scientific Inquiry
BIOL N100	Contemporary Biology
GEOL/CHEM	GEOL G110 or CHEM C100
PHYS P200	Physical Environment

HISTORICAL PERSPECTIVES AND INQUIRY (3 cr. from the following)

HIST H105	American History*
HIST H217	The Nature of History

Understanding Society and Culture

GEOG G110	Human Geography
-----------	-----------------

SOCIAL SCIENCE ELECTIVE (3 cr. from the following)

ANTH A103	Human Origins and Prehistory
ANTH A104	Culture and Society
ECON E101	Survey of Current Economic Issues and Problems
POLS Y101	Principles of Political Science
SOC R100	Introduction to Sociology
SOC R121	Social Problems
SPEA V170	Introduction to Public Affairs

LITERATURE (6 cr.)

Literature for Children and Youth	
ENG L390	Children's Literature or

EDUC E449	Trade Books and the Classroom Teacher
-----------	---------------------------------------

Literature Elective (3 cr. from the following)

FLAC F200	World Cultures through Literature
ENG L115	Literature for Today
COMM T130	Introduction to Theater

FINE ARTS (7 cr.)

HER H110	Art Appreciation
MUS E241	Introduction to Music Fundamentals
HPER P290	Movement Experiences for Preschool and Elementary Children

Depth, Breadth, and Adaptiveness

Diversity Elective (3 cr. from the following)*

ANTH A104	Culture and Society
REL R212	Comparative Religion
AFRO A150	Survey of the Culture of Black Americans
POLS Y217	Introduction to Comparative Politics
WOST W105	Introduction to Women's Studies

Concentration (9 additional cr. for a total of 12-15 cr.) in one of the following areas. See Education Student Services for course lists for each concentration.

- Afro-American Studies
- American Studies
- Anthropology
- Art
- Creative Writing
- Geography
- History
- Language Studies
- Literature
- Mathematics
- Movement and Dance
- Music
- Philosophy
- Political Science/Government
- Science
- Sociology
- Theater

Values and Ethics

Social science, historical inquiry, and diversity electives all address this principle, as do courses throughout the professional education component of the program.

Integration/Application

These principles are addressed in the professional education (41-42 cr.) and student teaching (16 cr.) components of each program (described below).

Suggested Sequence for General Education

A recommended sequence for completing the general education component is presented below. Please consult the *Schedule of Classes* or Education Student Services each semester to identify the "learning communities" and designated sections for education majors. Courses noted optional may be taken at any time but should be completed before entry into the Teacher Education Program

First Semester (13-16 cr.)

First Year Seminar (1 cr.) *and*

EDUC W200: Using Computers in Education (3 cr.) *and*

GEOG G110: Human Geography (3 cr.)

ENG W131: Elementary Composition (3 cr.) *and* Social Science elective (3 cr.)

HER H100: Art Appreciation (3 cr.) * (optional this semester)

Second Semester (12-15 cr.)

EDUC Q200: Introduction to Scientific Inquiry (3 cr.) *and*

BIOL N100: Human Biology (3 cr.)

ENG W132 Elementary Composition II (3 cr.) *and* Historical Perspectives Elective (3 cr.)

Literature Elective (3 cr.) (optional this semester)

Third Semester (15-17 cr.)

MATH M130/132 (6 cr.) or M136 (6 cr.) or EDUC N443 (6 cr.)

COMM R110 Speech Communication (3 cr.) *and* Diversity elective (3 cr.)

HPER P290 Movement Experiences Preschool/Elementary (2 cr.) (optional this semester)

Elective for concentration (3 cr.)

Fourth Semester (14-17 cr.)

GEOL/CHEM integrator (3 cr.) *and*

PHYS/AST integrator (3 cr.)

Children's Literature ENG L390 or EDUC E449 (3 cr.) *and*

MUS E241 Music Fundamentals (2 cr.)

Quantitative reasoning elective (3 cr.) (optional this semester)

Electives for concentration (3 cr.)

Note: Course groupings connected by "*and*" denote clusters or learning communities developed for education majors. Courses noted by * indicate that special sections of the freestanding course will be designated for education majors. An additional 3 credit hours remains to be scheduled. Some courses, especially the freestanding courses and electives for the concentration may be scheduled during summer sessions.

Professional Education

The professional education component is a carefully articulated program of study where courses are taken in blocks and in a prescribed order (presented below). The professional education courses that are part of Learning to Teach/Teaching to Learn are tied closely to specific "professional development school" (PDS) sites in Marion County. These are schools that have entered into a special partnership with the School of Education. Some of the formal course work as well as all of the field experiences that accompany this course work are conducted at the PDS sites. Students also have the option to student teach at these PDS sites.

Because LT/TL is a field-based program in which formal class sessions are integrated with field experiences, most professional education courses are offered at a time when teacher education candidates are able to work with students in K-12 classrooms. Most professional education courses are scheduled during the day, and students will need to make arrangements to devote one day (part-time enrollment) or two days (full-time enrollment) each week to complete the class and field experience work.

Student Teaching

All interns complete student teaching assignments in two school settings. For early childhood and elementary education majors, student teaching will comprise two 8-week placements, the first in Block IIIB and the second in Block IVB. Elementary majors will complete one primary placement and another intermediate placement while early childhood majors will complete a preschool/kindergarten placement and a second placement in a primary classroom (grades 1-3).

In the secondary programs, the student teaching requirement will be met by consecutive eight-week placements in a middle school and high school setting during Block IV. Students completing a program leading to an all-grades license should consult with their major advisor about the logistics of the student teaching placements.

Eligibility Requirements for Student Teaching

To be eligible for student teaching, an intern must have:

1. Been admitted to the Teacher Education Program.
2. Attended a Student Teaching Information Session and submitted an Application for Student Teaching before the end of the fall semester of the academic year preceding the year of the desired experience.
3. Passing scores on the Block I Rubric and Block II performance task and no issues outstanding with the Student Assessment Committee.
4. Senior or graduate standing in the university or be within two semesters and one summer session of graduation. (In no case should a student have completed fewer than 84 credit hours prior to the semester in which the student teaching and/or practicum is to be done.)
5. Completed at least three-fourths of the credit hours required for licensing in the teaching area(s).
6. Completed all professional education and education technology courses within ten years and attained a minimum grade point average (GPA) of 2.5 in all professional education courses with a minimum grade of C in each professional education course.
7. Earned a minimum overall GPA of 2.5 at Indiana University.

Application for Student Teaching

All students must sign up for and attend a Student Teaching Information Session and file an Application for Student Teaching. This application must be filed during the fall semester of the academic year preceding the year in which student teaching is to be done. (For example: students apply fall semester 2002 for student teaching assignments in either fall 2003 or spring 2004.)

Placements

The mechanics of student teaching placements are discussed at the Student Teaching Information Session. Final placement decisions reflect both recommendations from the intern's major department

or school and collaborative planning with partnership schools. Arrangements for placement and supervision are made by the Office of Student Teaching.

Assessment During Student Teaching

A *student teaching portfolio* submitted at the end of the first student teaching assignment is a key element of IUPUI's performance assessment system. The requirements of the portfolio are outlined in the *Learning to Teach/Teaching to Learn Curriculum Assessment Handbook*. If the student teaching portfolio submitted at the conclusion of the initial student teaching placement does not receive a passing score, the student will receive feedback and have the opportunity to revise and resubmit after the second student teaching placement.

Interns also undergo formal observation by their mentor teachers and university supervisors.

Degree Tracks and Program Requirements

Bachelor of Science in Early Childhood Education

The B.S. in Early Childhood Education will prepare teachers with the knowledge, disposition, and skills to provide programs to children 0-8 years in a variety of educational settings. The program welcomes candidates who have completed the Associate of Science in Early Childhood Education. Candidates pursuing the B.S. in Early Childhood Education may matriculate *only* in fall semester.

GENERAL EDUCATION (68 credit hours)

Students in the early childhood program complete the general education requirements outlined above in the sample program of study. Students are encouraged to enroll in course clusters or learning communities designated for education majors whenever they are available.

PROFESSIONAL EDUCATION (42 credit hours)

Students in the early childhood program are authorized for professional education courses only after admission to Teacher Education. Courses are taken in the order indicated below. Unless otherwise noted, the prefix for all courses is EDUC. Field experience is closely integrated with courses and will be completed at sites designated by the program.

Block I

A: Diversity and Learning

Component Courses:

M320	Diversity and Learning: Teaching Every Child
	Field Experience

B: Literacy and Numeracy in Early Childhood

Component Courses:

E345	Language Arts and Mathematics for Young Children
	Field Experience

Block II

A: Early Childhood A

Component Courses:

E330	Infant Learning Environments
M324	Teaching about the Arts
	Field Experience

B: Early Childhood B

Component Courses:

E328	Science in the Elementary Schools
E337	Classroom Learning Environments
	Field Experience

Block III

A: Curriculum in a Democracy

Component Courses:

E338	The Early Childhood Educator
P249	Rhythmic Experiences for Children
	Field Experience

B: Reflective Practitioner

Component Courses:

M424	Student Teaching: Kindergarten-Primary
------	--

Block IV

A: Individualizing Instruction

Component Courses:

K307	Methods of Teaching Students With Special Needs
E340	Reading Methods I
	Field Experience

B: Reflective Practitioner

Component Courses:

M424	Student Teaching: Early Childhood
------	-----------------------------------

STUDENT TEACHING (16 credit hours)

The 16 credit hour Student Teaching and Senior Seminar will include specific experience at both early childhood (0-3 yrs)/preschool (3-5 yrs) and middle childhood (5-8 years; grades K-12) developmental levels.

Bachelor of Science in Education/Elementary Education

The elementary education program prepares graduates to meet standards for teaching in K-6 settings.

GENERAL EDUCATION (68 credit hours)

Students in the elementary education program complete the general education requirements outlined above in the sample program of study. Students are encouraged to enroll in course clusters or learning communities designated for education majors whenever they are available.

Students are encouraged to see an education advisor for course lists for the "concentration" and to begin planning early to meet that requirement.

PROFESSIONAL EDUCATION (42 credit hours)

Students pursuing an initial license to teach in grades K-6 are authorized for professional education courses only after admission to the Teacher Education Program. Courses are taken in the order indicated. Unless otherwise noted, the prefix for all courses is EDUC. Field experiences are completed in professional development school sites designated by the program.

Block I

A: Diversity and Learning

Component Courses:

M320	Diversity and Learning: Teaching Every Child
	Field Experience

B: Literacy and Numeracy in Early Childhood

Component Courses:

E345	Language Arts and Mathematics for Young Children
	Field Experience

Block II

A: Literacy and Numeracy in Middle Childhood

Component Course:

E340	Methods of Teaching Reading I
M324	Teaching About the Arts
	Field Experience

B: Scientific and Aesthetic Exploration

Component Courses:

E328	Science in the Elementary Schools
E343	Mathematics in the Elementary Schools
	Field Experience

Block III

A: Individualizing Instruction

Component Courses:

K307	Methods for Teaching Students with Special Needs
E341	Methods of Teaching Reading II
	Field Experience

B: Reflective Practitioner

Component Courses:

M425	Student Teaching: Kindergarten-Primary
------	--

Block IV

A: Curriculum in a Democracy

Component Courses:

E325	Social Studies in the Elementary Schools
H340	Education and American Culture
	Field Experience

B: Reflective Practitioner

Component Courses:

M425	Student Teaching: Elementary
------	------------------------------

Student Teaching (16 credit hours)

All students complete two eight-week assignments, one during Block IIIB and the second during Block IVB. One assignment will be to grades K-3 ("primary") and the second to grades 3-6 ("intermediate").

Elementary Endorsements (12-21 credit hours)

Additional study in designated areas qualifies a student for endorsements to the elementary license. A minimum grade point average (GPA) of 2.5 is required for each endorsement.

KINDERGARTEN ENDORSEMENT (GRADUATE TRACK)

This track is available to students who already hold an elementary teaching license.

EDUC E506 Curriculum in Early Childhood Education (3 cr.)

EDUC E508 Seminar in Early Childhood Education (3 cr.)

EDUC E509 Internship in Early Childhood Education/Student Teaching (6 cr.)

EDUC E525 Advanced Curriculum in Early Childhood Education (3 cr.)

HPER H363 Personal Health (3 cr.) or

HPER N231 Human Nutrition (3 cr.)

COMPUTING ENDORSEMENT

The addition of the "Computer Endorsement" to the standard elementary teaching license serves as an additional credential for those who wish to serve as leaders in the use of technology within their schools.

Prerequisite Courses:

EDUC W200 Using Computers in Education (3 cr.)

Required:

EDUC W204 Programming for Microcomputers in Education (3 cr.) or

CSCI N331 Visual Basic Programming (3 cr.)

EDUC W210 Survey of Computer-Based Education (3 cr.)

EDUC W220 Technical Issues in Computer-Based Education (3 cr.)

EDUC W310 Computer-Based Teaching Methods (3 cr.)

EDUC W410 Practicum in Computer-Based Education (6 cr.)

Plans are underway for a graduate-level certificate in Technology Infusion. Interested students should consult an academic advisor in education.

READING ENDORSEMENT TO ELEMENTARY LICENSE

The holder of the reading minor is eligible to be a reading teacher at the level of the certification to which it is attached. The minor is valid for the duration of the certificate to which it is attached.

Required courses:

EDUC E340 Methods of Teaching Reading I (3 cr.)

EDUC E341 Methods of Teaching Reading II (3 cr.)

EDUC X401 Critical Reading in the Content Area (3 cr.)

EDUC X425 Practicum in Reading (6 cr.)

EDUC X470 Psycholinguistics for Teachers of Reading (3 cr.) or an advisor-approved linguistics course

EDUC E449 Trade Books and the Classroom Teacher (1-3 cr.) or

ENG L390 Children's Literature (3 cr.)

Electives: Approved courses from reading, educational psychology, special education, and language-related areas.

SPECIAL EDUCATION (MILD INTERVENTION): DUAL CERTIFICATION PROGRAM FOR ELEMENTARY EDUCATION MAJORS (24 credit hours)

The field of special education has become more collaborative and inclusive. Special educators must be prepared to work collaboratively with general education personnel, and they must be well-versed in curriculum and instruction that meets the needs of all learners, including those with disability labels.

This program prepares students to teach in elementary schools, (grades 1-6) and to teach students with "mild" intervention needs. Mild intervention certification will replace licensure in the state of Indiana in the areas of learning disabilities and mild cognitive and emotional disabilities.

Students must enroll in either the full-time or part-time Learning to Teach/Teaching to Learn program beginning in the fall semester. In addition, students are required to take one of the following 3-credit seminars each semester while completing this program.

Professional Education courses:

Prerequisite/Corequisite (with Seminar 1) EDUC K201 Schools, Society, and Exceptionality (3 cr.), EDUC K305 Teaching the Exceptional Learner in the Elementary School (3 cr.)

Prerequisite/Corequisite (with Seminar 5) EDUC K307 Methods for Teaching Students with Special Needs (3 cr.)

Required Special Education courses:

Seminar 1 EDUC K490* (fall) Individuals and Families in School and Society

Seminar 2 EDUC K490* (spring) Assessment and Instruction

Seminar 3 EDUC K490* (summer I) Collaboration and Service Delivery

Seminar 4 EDUC K490* (summer II) Assistive Technology in Education

Seminar 5 EDUC K490* (fall) Classroom Management and Behavior Support

Seminar 6 EDUC K490* (spring) Transition Across the Lifespan

Practicum EDUC K495 (6 cr.)

Field experience will be scheduled as part of the normal course block. For these candidates, one of the eight-week student teaching experiences will be a special education assignment.

TEACHING ENGLISH AS A NEW LANGUAGE

A program leading to a license in Teaching English as a New Language is under development. The primary audience is practicing educators; however, the program is also available to qualified students working toward an initial teaching license. The program combines work in English and education with supervised practicum experience. A minimum of two semesters of a college-level foreign language is required for admission

*Note: K490 is a temporary course number for the Dual Certification Program seminars.

Bachelor of Science in Education with Middle School/High School Teaching License

GENERAL EDUCATION (a minimum of 45 credit hours)

Students pursuing an initial license to teach at the secondary level are expected to fulfill the general education requirements articulated by the major department/teaching area. Students are expected to enroll in EDUC W200 as a vehicle for developing technology literacy.

TEACHING AREAS

A minimum grade point average (GPA) of 2.5 is required for all courses in the teaching area(s). The course of study for the various secondary teaching areas is presented below.

ENGLISH (36 credit hours)

At present, individuals interested in teaching English at the middle school or high school level major in "English Education" in the School of Education. A review of requirements for the English major is currently underway to determine whether students might complete a double major meeting requirements for a major in English as well as covering the professional education courses required for licensure. Students should consult an academic advisor in the School of Education for requirements well before applying to the program.

FOREIGN LANGUAGES (36 cr.)

Program leading to French, German, Spanish

All three language majors require a minimum of 36 credit hours covering language, literature, culture and civilization, and electives. A review of requirements for each major is currently underway. Students should consult an academic advisor in the School of Education for requirements well before applying to the program.

Prior to admission into EDUC M445 Methods of Teaching Foreign Languages, all language majors must take a departmental proficiency examination. The examination may be taken more than once, but the student must pass the examination before being admitted to student teaching. The examination will test the student's oral proficiency and knowledge of language structure.

MATHEMATICS (38 credit hours)

Students pursuing the standard senior high/junior high/middle school teacher certification program in mathematics for a first undergraduate degree at IUPUI must be enrolled in the IUPUI School of Science and must meet degree requirements for the IUPUI School of Science as well as for teacher certification.

Students pursuing a license to teach secondary mathematics can matriculate in the Teacher Education Program during fall semesters only. Requirements are currently under review in light of the new license framework. At present they include:

- CSCI 230 Computing I (3 cr.)
- MATH 163 Integrated Calculus and Analytic Geometry I (5 cr.)
- MATH 164 Integrated Calculus and Analytic Geometry II (5 cr.)
- MATH 261 Multivariate Calculus (4 cr.)
- MATH 262 Linear Algebra and Differential Equations (4 cr.)
- MATH 300 Foundation of the Number Systems (3 cr.)
- MATH 351 Elementary Linear Algebra (3 cr.)
- MATH 453 Algebra I (3 cr.)
- MATH 463 Advanced Geometry (3 cr.)
- MATH 583 History of Elementary Mathematics (3 cr.)
- STAT 311 Introductory Probability I (3 cr.) or
- STAT 511 Statistical Methods I (3 cr.)

SCIENCE (51 credit hours)

Students pursuing licensure to teach in biology, chemistry, earth science, or physics at the secondary level as part of a first undergraduate degree must be enrolled in the School of Science at IUPUI. They must meet degree requirements of the School of Science as well as School of Education requirements for licensure.

The license framework adopted by the Indiana Professional Standards board in June 1999 represented a significant departure from earlier regulations. Rather than the traditional single discipline license in science, the new framework will license middle and high school teachers for the following interdisciplinary areas:

- Life Science (comprising biology and ecology)
- Physical Science (comprising chemistry and physics)
- Earth/Space Science (comprising geology, astronomy, and geography)

In addition, Indiana has adopted new science standards for K-12 students that also has implications for science teacher preparation.

Work is currently underway to reconcile new license requirements with various departments' requirements for the major so that students can develop necessary supporting areas and complete all School of Education requirements. Interested students should consult with a School of Education academic advisor or with the designated advisor in the department of interest.

SOCIAL STUDIES (includes History and Political Science) (52 cr.)

What is referred to as "social studies" in middle school or high school actually comprises content from seven different university departments: history, political science/government, geography, economics, sociology, anthropology, and psychology. At present, individuals interested in teaching social studies at the secondary level major in "social studies education" and earn a B.S. from the School of Education. Requirements combine broad-based work in various academic departments, and professional education and student teaching in the education department. A review of the program requirements in various departments is underway with the goal of enabling students to complete a double major in education and

either history or political science while still meeting the supporting area requirements of the license framework.

Students should plan their program of study with an Academic Advisor in the School of Education and with a relevant departmental advisor in the School of Liberal Arts.

SPEECH COMMUNICATION AND THEATER (36 cr.)

As a result of the new license framework, a review of requirements is currently underway. Students should plan their program of study with an academic advisor in the School of Education and with a relevant departmental advisor from the School of Liberal Arts in the Speech Communication/Theater department.

PROFESSIONAL EDUCATION (25 credit hours)

Students pursuing an initial license to teach in middle/high school are authorized for professional education courses only after admission to the Teacher Education Program. Courses should be taken in the order indicated. Unless otherwise indicated, all prefixes are EDUC. Field experiences for each block are completed with mentor teachers designated by the School of Education.

H341/H520 Educational Foundations (3 cr.)

Diversity and Learning Block (7 cr.)

Component Courses: M322 Diversity and Learning: Reaching Every Adolescent Field Experience

Middle School Block (7 cr.)

Component Courses: S420 Teaching and Learning in the Middle School
M469 Content Area Literacy Field Experience

High School Block (4 cr.)

Component Courses: S430 Teaching and Learning in the High School
Field Experience

Content Block (4 cr.) spring only

Component Courses: Special Methods
Field Experience

Student Teaching (16 cr.)

Component Courses: M451 Student Teaching in the Middle School—8 weeks
M480 Student Teaching in the High School—8 weeks

STUDENT TEACHING (16 credit hours)

For students pursuing a license to teach at the secondary level, student teaching comprises the final semester. Back-to-back placements in a middle school and high school setting are arranged through the School of Education. Either developmental level may be scheduled first; order will depend on student preference and on the availability of mentor teachers.

Endorsements to Secondary License

Additional study in designated areas qualifies a student for endorsement to the secondary license. A minimum grade point average (GPA) of 2.5 is required for each endorsement.

COACHING ENDORSEMENT (18 credit hours)

HPER A480 Care and Prevention of Athletic Injuries (1 cr.)

HPER P397 Kinesiology (3 cr.)

HPER P450 Principles and Psychology of Coaching (3 cr.)

HPER Theory and Techniques of Coaching—6 credits from the following: A361, A362, A363, A364, A365, A366, A367, A368, A369, A370, A371, or A372.

BIOL N217 Human Physiology (5 cr.)

COMPUTER ENDORSEMENT (18 cr.)

The addition of the “Computer Endorsement” to the standard secondary teaching license serves as an additional credential for those who wish to serve as leaders in the use of technology within their schools.

Prerequisite Courses:

EDUC W200 Using Computers in Education (3 cr.)

Required:

EDUC W204 Programming for Microcomputers in Education (3 cr.) or

CSCI N331 Visual Basic Programming (3 cr.)

EDUC W210 Survey of Computer-Based Education (3 cr.)

EDUC W220 Technical Issues in Computer-Based Education (3 cr.)

EDUC W310 Computer-Based Teaching Methods (3 cr.)

EDUC W410 Practicum in Computer-Based Education (6 cr.)

DRIVER AND TRAFFIC SAFETY EDUCATION ENDORSEMENT (12 credit hours)

HPER S350 Content and Materials in Safety Education (2 cr.)

HPER S456 Traffic Safety Education for Teachers (4 cr.)

HPER S458 Driver Education Multiple Instruction Techniques (3 cr.)

HPER S360 Highway Safety Administration (3 cr.)

JOURNALISM Minor (27 credit hours)

Communications Theory and Writing (18 credit hours)

JOUR J110 Foundations of Journalism and Mass Communications (3 cr.)

JOUR J200 Reporting, Writing, and Editing I (3 cr.) P: JOUR J100

JOUR J201 Reporting, Writing, and Editing II (3 cr.)

JOUR J300 Communications Law (3 cr.)

JOUR J410 The Media as Social Institutions (3 cr.)

JOUR J425 Supervision of School Publications (3 cr.)

Reporting and Editing (select one pair) (6 credit hours)

JOUR J341 Newspaper Reporting (3 cr.) and

JOUR J351 Newspaper Editing (3 cr.)

JOUR J342 Magazine Reporting (3 cr.) and

JOUR J352 Magazine Editing (3 cr.)

JOUR J343 Broadcast News (3 cr.) and

JOUR J353 Advanced Broadcast News (3 cr.)

JOUR J344 Photojournalism (3 cr.) and

JOUR J354 Photojournalism Editing (3 cr.)

Elective (select one) (3 credit hours)

JOUR J210 Visual Communications (3 cr.)

JOUR J463 Computer Publication Design I (3 cr.)

JOUR J465 Computer Publication Design II (3 cr.)

READING ENDORSEMENT TO SECONDARY LICENSE (Middle School/High School Program) (24 credit hours)

Required:

EDUC M469 Content Area Literacy (3 cr.)

EDUC X400 Diagnostic Teaching of Reading in the Classroom (3 cr.)

EDUC X401 Critical Reading in the Content Area (3 cr.)

EDUC X425 Practicum in Reading (6 cr.)

EDUC X470 Psycholinguistics for Teachers of Reading (3 cr.) or an advisor-approved linguistics course.

EDUC X460 Books for Reading Instruction

(Adolescent Literature) (3 cr.) or

ENG L376 Adolescent Literature (3 cr.)

Electives:

Approved courses from reading, educational psychology, special education, and language-related areas.

All-Grade Licensure Programs

Students pursuing an all-grades license must be students in good standing in either HPER or Herron, and must meet both the degree requirements of the relevant school and the School of Education requirements for licensure.

General Education

Students must complete the program of general education outlined by the relevant school (HPER or Herron).

Teaching Areas

PHYSICAL EDUCATION

Because of changes in the state license framework, the requirements for Physical Education students pursuing a teaching license are currently under review. Students are encouraged to contact Dr. Betty Jones, chair of Teacher Education in the School of Physical Education, for a current list of requirements in the teaching area.

VISUAL ARTS

The art education program is currently under review, and students are encouraged to consult with Dr. Cindy Bixler Borgmann, coordinator of Art Education in the Herron School of Art.

Professional Education and Student Teaching

The professional education and student teaching requirements for students in all-grades programs are currently under review. Students should consult an academic advisor in the School of Education for specific information.

Statement on Graduate Programs

Post-Baccalaureate Licensure Programs

Students who already hold a baccalaureate degree may apply to the Teacher Education Program in the School of Education. A formal transcript evaluation and an orientation session are required before enrollment. There is a fee for the transcript evaluation. Information and the transcript evaluation request form are available on the School of Education Web site (education.iupui.edu) or by calling Education Student Services at (317) 274-6801. Students who have earned a baccalaureate degree are expected to enroll in graduate-level sections.

Beginning Summer 2001, IUPUI will offer a field-based, post-baccalaureate program leading to an initial license to teach science in middle school and high school settings. Qualified candidates can complete the program in a 15-month period (four consecutive semesters: summer/fall/spring/summer). Applicants must have

- earned a B.S. or B.A. degree from an accredited college or university.
- maintained a cumulative grade point average (GPA) of 3.0.
- completed a major in a field of science.
- passed all components of Praxis I or the PreProfessional Skills Test. (Note: Praxis and PPST are required by the Indiana Professional Standards Board (IPSB); IUPUI does not have authority to waive the requirement.)

Credits earned in the post-baccalaureate program can be applied toward the master's degree. Interested individuals should contact the Director of Graduate Education.

Graduate Degree Programs

A full range of graduate opportunities is available through the School of Education at IUPUI. Students can earn the Master of Science in Elementary Education, Secondary Education, Early Childhood Education, Language Education, Special Education, and complete requirements for the master's in Higher Education/Student Affairs. The program in Counseling and Counselor Education leads to a master's degree and a license in school counseling. The school also offers a master's degree with a special focus on technology integration on-site in several area school systems.

IUPUI provides unique opportunities for collaborative studies (for example, education and museum studies) or interprofessional work (for example, courses that enroll students from education, nursing and social work to emphasize service integration at the school site).

Through its "Summer in the City" program, the school offers a range of graduate workshops each summer on contemporary topics of interest to teachers and administrators. A growing number of courses for license renewal or continuing professional development is available on line or through interactive video technology.

Indianapolis also offers opportunities for doctoral study in education. Although applications for all doctoral programs are submitted through the Bloomington campus, substantial course work and some entire programs are available at IUPUI. Opportunities for research in Indianapolis and for collaboration with IUPUI-based faculty are available to any student in a graduate program offered by the core campus. Doctoral students in any program area may work with, and have dissertations directed by, faculty whose tenure is at IUPUI. Both teaching and research assistantships are available at IUPUI to support students in advanced graduate work in Indianapolis.

IUPU Columbus

Coursework leading to the B.S. in Elementary Education is available at IUPU Columbus; however, at the present time, students pursuing an initial license to teach in the elementary setting must register for student teaching through IUPUI.

Students at IUPU Columbus must meet the same admission and degree requirements as those in Indianapolis, including the same standards for performance assessments. Application to the Teacher Education Program is made directly to IUPU Columbus. Enrollment is limited and students are urged to consult an education program advisor at the Columbus campus.

Calendar and Schedule of Classes

Registration dates at IUPU Columbus generally do not correspond with the calendar listed in this bulletin. Final schedules and calendars pertaining to IUPU Columbus are available at IUPU Columbus.

IUPU Columbus
4601 Central Avenue
Columbus, IN 47203

Undergraduate Courses in the School of Education

The abbreviation "P" refers to course prerequisites. The number of hours of credit given a course is indicated in parentheses following the course title. The "I" or "B-I" after the course title indicates whether the course is offered at Indianapolis, or at both the Indianapolis and Bloomington campuses.

Courses in this section are listed alphabetically by prefix letter and in ascending numerical order within each of the sections. Unless otherwise specified, the prefix to all courses is EDUC.

Elementary Education

E325 Social Studies in the Elementary Schools (3 cr.) B-I Emphasizes the development of objectives, teaching strategies, and evaluation procedures that facilitate the social learning of young children. Special attention given to concept learning, inquiry, decision making, and value analysis.

E328 Science in the Elementary Schools (3 cr.) B-I The focus of this course will be on developing teacher competencies in writing performance objectives, question-asking, evaluating, and sequencing. These competencies will reveal themselves in the preparation and development of science activities and the teaching strategies involved in presenting those activities to elementary school children.

E330 Infant Learning Environments (3 cr.) B-I P: P251 and M101 or taken concurrently. Appropriate instructional strategies to enhance infant-toddler development, caregiving skills, and knowledge of appropriate learning environments. Students will apply strategies and knowledge in providing care and educational experiences. Open to students from allied health, psychology, pediatric nursing, and social work.

E337 Classroom Learning Environments (3 cr.) B-I This course focuses on the curriculum aspects of early childhood programs designed to meet ethnic and cultural differences, and on planning, utilizing, and evaluating learning environments. Selection of materials and activities, and the acquisition of skills for using these to stimulate children's development, are major focuses.

E338 The Early Childhood Educator (3 cr.) B-I P: E337. Includes the role of the teacher as a professional educator, including professional responsibilities, legal rights and responsibilities of teachers and students, school and community relations, and involvement in professional organizations. A major emphasis is on parent involvement and parent education.

E339 Methods of Teaching Language Arts in the Elementary School (2-3 cr.) B-I Describes the methods, materials, and techniques employed in the elementary school language arts program.

E340 Methods of Teaching Reading I (2-3 cr.) B-I Describes the methods, materials, and techniques employed in elementary school developmental reading programs.

E341 Methods of Teaching Reading II (2-3 cr.) B-I P: E339 and E340. Describes the methods, materials, and techniques employed in diagnosis and corrective instruction in elementary school reading programs.

E343 Mathematics in the Elementary Schools (1-3 cr.) B-I Emphasizes the developmental nature of the arithmetic process and its place as an effective tool in the experiences of the elementary school child.

E345 Language Arts and Mathematics for Young Children (6 cr.) Methods of developing language, cognition, reading and mathematical readiness, mathematical thinking through play, the arts, and directed experiences; design of curriculum and appropriate teaching strategies for young children.

E449 Trade Books and the Classroom Teacher (3 cr.) Emphasizes the use of trade books in language and reading in elementary classrooms.

E490 Research in Elementary Education (1-3 cr.) B-I Individual research.

E495 Workshop in Elementary Education (cr. arr.) B-I For elementary school teachers. Gives one credit hour for each week of full-time work.

Foundations of Education

F200 Examining Self as a Teacher (3 cr.) B-I Designed to help a student make a career decision, better conceptualize the kind of teacher the student wishes to become, and reconcile any preliminary concerns that may be hampering a personal examination of self as teacher. Students will design a major portion of their work.

F203 Topical Exploration in Education (1-3 cr.) B A one-semester course on a particular topic, established at the request of a faculty member and by the approval of the Academic Affairs Committee. Applies only as elective credit.

H340 Education and American Culture (3 cr.)

B-I The present educational system: its social impact and future implications viewed in historical, philosophical, and sociological perspective.

Special Education

K201 Schools, Society, and Exceptionality (1-3 cr.) B-I This course is designed to provide an overview of the many complex issues related to special-education policy and practice in the United States. Content will include an introduction to the definitions and characteristics of various exceptionalities; an exploration of the options available for instructing exceptional children in public school settings; and discussion of the many important topics and issues related to planning and implementing special education in American public schools.

K305 Teaching the Exceptional Learner in the Elementary School (3 cr.) B-I Knowledge, attitudes, and skills basic to the education of exceptional learners (students who are handicapped as well as gifted and talented) in the regular elementary classroom. Topics include historical and international perspectives, the law and public policy, profiling the exceptional learner, developing a responsive curriculum, teaching and management strategies, and teachers as persons and professionals. (Sem. I and II)

K306 Teaching Students with Special Needs in the Secondary Classrooms (3 cr.) This course includes an overview of skills and knowledge necessary for effective instruction of students with disabilities in inclusive secondary programs.

K307 Methods for Teaching Students with Special Needs (3 cr.) This course prepares future teachers to work with students with diverse abilities in

inclusive settings. Participants learn to use learning modalities, varied rates and complexity of instruction, and making use of individual interests and preferences. Additionally, differentiating and/or individualizing instruction for all learners and developing classroom management skills are emphasized.

K490 Research in Special Education (1-3 cr.)

B-I Individual research and study in special education.

K490 Topical Seminars for Special Education Dual Certification Program (3 cr.) I

Seminar 1: Individuals and Families in School and Society

The purpose of this seminar is to learn the perspectives of individuals with disabilities and their families regarding the impact of disabilities in their daily lives. A life-span approach will be used to discuss issues related to birth and early childhood, school-age years, and adulthood. Additional topics include labeling, legal issues, person-centered planning, and academic, social/emotional, behavioral, and environmental issues.

Seminar 2: Assessment and Instruction

This seminar teaches students how to gain knowledge of formal and informal assessment techniques, how to link assessment to curriculum and instruction, and how to effectively choose, construct, deliver, and evaluate curriculum and instruction to students with diverse learning needs.

Seminar 3: Collaboration and Service Delivery

The purposes of this seminar are to explore service delivery options currently available in special education and to assist students in building their collaborative skills, including effective communication and consultation skills.

Seminar 4: Assistive Technology in Education

This seminar assists students in developing an understanding of assistive technology and its role in assisting individuals with disabilities in all areas of life, including education, employment, housing, recreation, and transportation.

Seminar 5: Classroom Management and Behavior Support

The purpose of this course is to provide students with basic knowledge and skills for (1) developing and maintaining proactive classroom environments; (2) teaching children social problem-solving and self-control skills; (3) managing and preventing school-based crisis behaviors; and (4) working with parents and other professionals.

Seminar 6: Transition Across the Lifespan

This course provides an in-depth discussion of issues and strategies related to transitions from pre-school through elementary, middle, and high school, and into adulthood. Relevant laws, planning, processes, strategies for interagency collaboration, and resources will be highlighted.

K495 Laboratory/Field Experiences in Special Education (cr. arr.: max. 9) B-I

P: Consent of instructor. This course provides the student a field-based, supervised experience with individuals with severe handicaps. It allows the opportunity to interact within school/work/community settings on a daily

basis (three hours a day, five days a week). Specific assignments, which are mutually agreed upon among student, cooperating teacher, and practicum supervisor, are also required.

Language Education

L441 Bilingual Education: Introduction (3 cr.)

B-I Introduction to the development of bilingual/bicultural education in the United States and its antecedents, rationale, and theories. Comparison of existing bilingual/bicultural programs.

L442 Methods for Bilingual Teaching (3 cr.) B-I

P: L441. Methods of teaching the content areas in a bilingual setting, including techniques of linguistic analysis.

L490 Research in Language Education (1-3 cr.)

B-I Individual research and study in language education.

Methods

M101 Laboratory/Field Experience (0-3 cr.) B-I
Laboratory or field experience. Grade: S or F.

M201 Laboratory/Field Experience (0-3 cr.) B-I
Laboratory or field experience for sophomores. Grade: S or F.

M300 Teaching in a Pluralistic Society (3 cr.)

B-I This course is designed to introduce students to teaching as a profession. Students focus upon the "self as teacher," learning styles, cultural pluralism, and classroom teaching strategies that respond positively to the personal and ethnic diversity of the learner.

M301 Laboratory/Field Experience (0-3 cr.) B-I
Laboratory or field experience for juniors. Grade: S or F.

M303 Laboratory/Field Experiences: Junior High/Middle School (0-3 cr.) B-I Laboratory or field experiences at the junior high or middle school level. (May be repeated.) Corequisite with M314, M330, or M336. Grade: S or F.

M304 Laboratory/Field Experience (0-3 cr.)
Laboratory or field experience. Grade: S or F

M305 Laboratory/Field Experience (0-3 cr.)
Laboratory or field experience. Grade: S or F

M306 Laboratory/Field Experience (0-3 cr.)
Laboratory or field experience. Grade: S or F

M307 Laboratory/Field Experience (0-3 cr.)
Laboratory or field experience. Grade: S or F

M314 (M313) General Methods for Senior High/Junior High/Middle School Teachers (3 cr.) B-I General methodology and organization; knowledge about the teaching process, including general methods, instructional media, measurement, curriculum development and organization of the senior high/junior high/middle school; and techniques to promote individualized and interdisciplinary learning.

M316 Secondary General Methods (1-4 cr.) B-I This is an introductory course in general teaching strategies for secondary schools, with an emphasis on adolescent learning and current issues in curriculum and instruction.

M317 Student Commonality and Diversity (1-3 cr.) B-I Examines the implications of diversity

and the value of cultural sensitivity in education. Students will become familiar with differences in learning and communication styles on the basis of race, gender, ethnicity, religion, socioeconomic class, and language as well. They will also become familiar with multicultural education in practice, and its effects on the curriculum, classroom, and school structure.

M320 Diversity and Learning: Teaching Every Child (6 cr.)

This course integrates information from education psychology and multicultural and special education to prepare students to teach children in their early childhood and middle childhood years. The content includes adolescent development, learning theory, motivation, and assessment. Students reflect critically on personal assumptions and develop attitudes and beliefs supportive of multicultural education and inclusion.

M322 Diversity and Learning: Reaching Every Adolescent (6 cr.)

This course integrates information from education psychology and multicultural and special education to prepare students to teach adolescents and young adults. The content includes adolescent development, learning theory, motivation, and assessment. Students reflect critically on personal assumptions and develop attitudes and beliefs supportive of multicultural education and inclusion.

M324 Teaching About the Arts (1-3 cr.) B-I

Introduction to the importance of the arts in elementary-school curriculum. Students are given a foundation of methods and materials in art and music that will enable them to integrate the arts into the general curriculum, supplement art lessons given by school art specialists, and encourage student discussion and understanding of art and music in the world today.

M330 Foundations of Art Education and Methods I (3 cr.) B-I **P:** H340, P254, M300 and 15 credit hours of studio art courses. An introduction to art-education theory and related social issues. Supervised art teaching in elementary schools is an important part of this course.

M371 Foundations of Art Education (4 cr.) I Historical, sociological, and philosophical foundations of art education; curriculum development; individualized and interdisciplinary learning; instructing K-12 audiences; K-12 school organization; and general processes and practices of teaching art, including the creative problem-solving process, along with interpreting, understanding, and judging art. School and museum field experiences included.

M401 Laboratory/Field Experience for Seniors (0-3 cr.) B-I Laboratory or field experience. Grade: S or F.

M403 Laboratory/Field Experiences (0-3 cr.) B-I Laboratory or field experiences at the high school level. (May be repeated.) Corequisite with the required special methods course. Grade: S or F.

M411 Laboratory/Field Experience: Middle and Secondary School (1-3 cr.) B Laboratory or field experience in middle or secondary school science classes. (May be repeated.) Corequisite with M446 Methods of Teaching Senior High/Junior High/Middle School Science.

M423 Student Teaching: Early Childhood

(1-16 cr.) Full-time supervised student teaching for a minimum of eight weeks in a preschool identified by the university. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

M424 Student Teaching: Kindergarten-Primary

(1-16 cr.) Full-time supervised student teaching for a minimum of eight weeks in a kindergarten or primary grade in a school accredited by the state of Indiana. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

M425 Student Teaching: Elementary (1-16 cr.)

B-I Full-time supervised student teaching in grades 1-6 for a minimum of ten weeks in an elementary school accredited by the state of Indiana, or in an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

Methods Courses for Subject Matter**Concentrations: General Information**

P: (1) junior standing; (2) 20 credit hours in the subject in which the methods course is to be taken if in the major field, 15 credit hours if in the minor field; (3) admission to the Teacher Education Program; (4) a minimum grade of 2.5 in all education courses and in courses in the major and minor areas (any exceptions are noted under specific subject concentration). Students applying for student teaching must take their methods course on the campus to which they are applying. Methods courses concern problems of teaching the subject indicated, including the methods, procedures, devices, materials, and outstanding research in the field.

M442 Teaching Secondary School Social Studies

(4 cr.) B-I Develops concepts and theories from social science, humanities, and education into practices of successful social studies instruction. Integrates social issues and reflective thinking skills into the social studies curriculum. Emphasis on curriculum development skills and on building a repertoire of teaching strategies appropriate for middle/secondary school learners. Includes micro-teaching laboratory.

M445 Methods of Teaching Foreign Languages

(1-4 cr.) B-I Development and practice of skills and techniques for teaching foreign languages, selecting content and materials, and evaluating student and teacher performance. Micro-teaching laboratory included. This course should be taken during the semester immediately preceding student teaching. (Sem. I only)

M446 Methods of Teaching Senior High/Junior

High/Middle School Science (1-5 cr.) B-I P: 35 credit hours of science. Designed for students who plan to teach biology, chemistry, earth science, general science, or physics in the junior high/middle school or secondary school. Assignments and credit will be differentiated for graduate students.

M451 Student Teaching: Junior High/Middle

School (1-16 cr.) B-I Full-time supervised student teaching for a minimum of 10 weeks in a junior high or middle school accredited by the state of Indiana, or

in an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

M452 Methods of Teaching English in the Senior High/Junior High/Middle School

(1-5 cr.) B-I Methods, techniques, content, and materials applicable to the teaching of English in secondary schools, junior high schools, and middle schools. Experiences provided to assess ongoing programs in public schools and to study materials appropriate for these programs.

M456 Methods of Teaching Physical Education

(3 cr.) B-I P: M314 General Methods. Development and organization of teaching materials for various teaching styles found in the elementary and secondary public schools. Includes class management concepts and demonstration of teaching skills in laboratory sessions.

M457 Methods of Teaching Senior High/Junior High/Middle School Mathematics (2-4 cr.) B-I

P: 30 credit hours of mathematics. Study of methodology, heuristics of problem solving, curriculum design, instructional computing, professional affiliations, and teaching of daily lessons in the domain of secondary and/or junior high/middle school mathematics. (Sem. I only)

M469 Content Area Literacy (1-3 cr.) B-I

Focuses on middle, junior, and senior high school. Curriculum, methods, and materials for teaching students to read and learn more effectively in all content areas.

M470 Practicum (3-8 cr.) B-I

Instructional experience under the direction of an identified supervising teacher, with university-provided supervision in the endorsement or minor area, and at the level appropriate to the area. Placement will be in an accredited school within the state of Indiana unless the integral program includes experience in an approved and accredited out-of-state site. The practicum may be full- or part-time, but in every instance the amount of credit granted will be commensurate with the amount of time spent in the instructional setting. Grade: S or F.

M472 Teaching Art in the Elementary School

(3 cr.) I P: M371, HER C311. Develops understanding and appreciation of teaching, with emphasis on teaching in the elementary schools. Includes curriculum and lesson planning, organization of materials and ideas, and techniques of classroom management. To be taken concurrently with M301, which encompasses off-campus experiences in the elementary schools.

M473 Teaching Art in the Secondary Schools

(3 cr.) I P: M371, HER C311. Develops understanding and appreciation of teaching, with emphasis on teaching art in the secondary schools. Includes advanced studies of curriculum and lesson planning, classroom organization, and management techniques. Must be taken concurrently with M401, which encompasses Herron Saturday School experience.

M480 Student Teaching in the Secondary School

(1-16 cr.) B-I Full-time supervised student teaching

for a minimum of ten weeks in a junior high/middle school or senior high school accredited by the state of Indiana, or in an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-approved supervision. Grade: S or F.

M482 Student Teaching: All Grades (1-16 cr.)

B-I Full-time supervised student teaching in the areas of visual arts, music, physical education, special education, or school library/media services for a minimum of ten weeks at an elementary school, junior high/middle school, and/or senior high school accredited by the state of Indiana, or at an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

S420 Teaching and Learning in the Middle

School (3 cr.) Middle schools operate on unique philosophical and organizational foundations. This course will explore the design of middle schools and the ways teachers work to meet the needs of a diverse range of learners including those with specific needs. Preservice teachers will develop the skills needed to provide challenging learning opportunities to young adolescent learners.

Mathematics Education**N443 Teaching Elementary-School Mathematics**

Problem Solving (3 cr.) B-I The teaching and learning of problem solving. Topics include types of problems, appropriate instructional sequences, strategies for solving problems, factors related to problem difficulty, evaluating problem-solving learning. Work with elementary-school children is included.

Educational Psychology**P249 Growth and Development in Early**

Childhood (3 cr.) B-I Focuses on the cognitive, social, affective, and physical development of the child during the early years of life. The goal of understanding the growing child from multiple perspectives guides the study of theory and research on child development. Theoretical study is integrated with observations of, and experiences with, children in a way that increases the insights and competence of the teacher of young children. Addresses the unique developmental problems of special groups of children such as members of minority groups and children who are handicapped or economically deprived.

P251 Educational Psychology for Elementary

Teachers (1-4 cr.) B-I The application of psychological concepts to school learning and teaching, using the perspective of development from childhood through preadolescence. Special attention is devoted to the needs of the handicapped.

P254 Educational Psychology for Teachers of

All Grades (1-4 cr.) B-I The application of psychological concepts to school learning and teaching, using the perspective of development from childhood through adolescence. Special attention is devoted to the needs of the handicapped.

P255 Educational Psychology for Middle and

Secondary School Teachers (1-4 cr.) B-I The application of psychological concepts to school learning and teaching, using the perspective of

development from the beginning of preadolescence through adolescence. Special attention is devoted to the needs of the handicapped.

P490 Research in Educational Psychology (1-3 cr.) Individual Research.

Science Education

Q200 Introduction to Scientific Inquiry (1-3 cr.) B-I Course provides the elementary-education major with background in the science process skills needed to complete required science courses.

Q490 Research in Science Education (1-6 cr.) B-I Individual research and study in science education.

Secondary Education

S490 Research in Secondary Education (1-3 cr.) B-I Individual research.

Computer Education

W200 Using Computers in Education (1-3 cr.) B-I Required of all students pursuing teacher education. Introduction to instructional computing and educational computing literature. Hands-on experience with educational software utility packages and commonly used microcomputer hardware.

W204 Programming for Microcomputers in Education (3 cr.) B-I P: W210. Develops programming skills necessary for using a computer and for understanding computer programming as it applies to teaching. Not offered for credit if W201 and W202 have been taken.

W210 Survey of Computer-Based Education (3 cr.) B-I P: W200 or permission of instructor. The first course for the endorsement in educational computing. Proficiency in the use of application programs. Study of social, moral, and technological issues of educational computing.

W220 Technical Issues in Computer-Based Education (3 cr.) B-I P: W210. An examination of computer hardware and peripheral devices in classroom settings (e.g., networking, communications, and hypermedia). Understanding of educational applications of a programming or authoring language.

W310 Computer-Based Teaching Methods (3 cr.) B-I Integration of educational technology into the school curriculum; methods of teaching computer literacy, computing skills, and programming at K-12 levels; principles of educational software design and evaluation; staff development techniques.

W410 Practicum in Computer-Based Education (3-6 cr.) B-I The culminating experience for the computer endorsement. Either six weeks of full-time fieldwork or 12 weeks of half-time fieldwork in an educational setting that incorporates instructional computing.

W450 Research in Instructional Computing (1-3 cr.) B-I Research in instructional computing.

Reading

X400 Diagnostic Teaching of Reading in the Classroom (3 cr.) B-I Diagnosis of reading difficulties and solution to problems through research, conference, and practice in the use of materials and equipment.

X401 Critical Reading in the Content Area (3 cr.) B-I Aids elementary and secondary teachers in the development of instructional strategies that assist students in the comprehension, critical analysis, and integration of ideas presented in print material from various subject matter areas.

X425 Practicum in Reading (1-6 cr.) B-I P: X400 or E339 and E340 and E341; or consent of instructor. Students will work in selected elementary and secondary classrooms to diagnose reading problems and to develop students' reading competence.

X460 Books for Reading Instruction (3 cr.) B-I Examines the use of trade books and non-text materials for teaching language arts and reading K-8. Special sections may focus on specific student populations. Section emphasis announced each semester. (At IUPUI, the focus of this course is adolescent literature, grades 5-12.)

X470 Psycholinguistics for Teachers of Reading (1-3 cr.) B-I Explores the linguistic and cognitive dimensions of language. Discusses relationships among the systems of language and also among the various expressions of language. Always includes topics on semantics, grammar, and dialect.

X490 Research in Language Education (1-6 cr.) B-I Individual research.

School of Education Administrative Officers and Faculty

Administrative Officers

University Dean, Gerardo M. Gonzalez, Bloomington, Education, ED 4105, (812) 856-8001

Executive Associate Dean, Khaula Murtadha, Education/Social Work Building, ES 3138A, (317) 274-6862

Associate Dean, Academic Affairs, Christine H. Leland, Education/Social Work Building, ES 3153, (317) 274-6832

Chair, Undergraduate Teacher Education, Beth Berghoff, Education/Social Work Building, ES 3127, (317) 278-1108

Chair, Graduate Education and Continuing Professional Development, Pat Rogan, Education/Social Work Building, ES 3128 (317) 274-6806

Assistant Dean, Student Services and Student Teaching, Linda Houser, Education/Social Work Building, ES 3144, (317) 274-6842

Undergraduate Recorder, Maureen Jayne, Education/Social Work Building, ES 3143, (317) 274-0643

Graduate Recorder, Dee Outlaw, Education/Social Work Building, ES 3140, (317) 274-6868

Directors of Departments and Programs

Art Education, Cindy Borgmann, Herron School of Art, Photo Lab, JD 100E, (317) 920-2450

Counseling and Counselor Education, Keith Morran, Education/Social Work Building, ES 3111, (317) 274-6850

Introduction

The Purdue School of Engineering and Technology offers undergraduate and graduate programs that prepare students for careers in industry. The school is one of the largest degree-granting schools at IUPUI, with an enrollment of approximately 2,300 students. All degrees are awarded by Purdue University.

History of the Purdue School of Engineering and Technology

The School of Engineering and Technology was formed in 1972 and is the successor to Purdue University programs that began in Indianapolis in 1940. The first Purdue University courses in the city were defense training courses sponsored by the U.S. Office of Education. After World War II, the curriculum was changed from a certificate to a diploma program. Three technical-institute programs were established: drafting and mechanical technology, electrical technology, and supervision and production technology. Ten students graduated at the first commencement in 1947. Freshman engineering courses were added in 1948; the Bachelor of Science in Engineering degree was first offered in 1969. The School now offers undergraduate and graduate programs leading to Purdue University degrees. Several of the programs have transfer and articulation agreements with a few Indiana colleges and universities as well as with international institutions abroad.

Vision and Mission of the School

The Purdue School of Engineering and Technology vision is to be an innovative leader in effective, collaborative, and accessible education, research and scholarship, and service programs in engineering and technology. Its mission is to provide quality education, develop technical leaders, and conduct basic and applied research. To enhance our community through civic responsibility and by promoting economic development.

Academic Programs

The School of Engineering and Technology is unique in offering programs in both engineering and engineering technology. What is the difference between the two areas? **Engineering students** learn the principles and theories needed to plan, design, and create new products and are more likely to use broad analytical skills in achieving engineering solutions. **Engineering technology students** learn technical methods and practices to become experts who apply technology to solve industrial problems.

Engineering Degree Programs

Bachelor of Science in Computer Engineering (B.S.Cmp.E.)
 Bachelor of Science in Electrical Engineering (B.S.E.E.)
 Bachelor of Science in Engineering (B.S.E.)
 Bachelor of Science in Mechanical Engineering (B.S.M.E.)
 Master of Science (M.S.)
 Master of Science in Biomedical Engineering (M.S.Bm.E.)
 Master of Science in Engineering (M.S.E.)
 Master of Science in Electrical and Computer Engineering (M.S.E.C.E.)
 Master of Science in Mechanical Engineering (M.S.M.E.)
 Doctor of Philosophy in Biomedical Engineering (Ph.D.)

Technology Degree Programs

Associate of Science (A.S.) degrees with a major field of study in one of the following:

Architectural Technology
 Biomedical Electronics Technology
 Civil Engineering Technology
 Computer Engineering Technology
 Computer Graphics Technology
 Computer Integrated Manufacturing Technology
 Computer Technology
 Electrical Engineering Technology
 Interior Design
 Mechanical Engineering Technology
 Organizational Leadership and Supervision
Bachelor of Science (B.S.) degrees with a major field of study in one of the following:
 Computer Engineering Technology
 Computer Graphics Technology
 Computer Integrated Manufacturing Technology
 Computer Technology
 Construction Technology
 Electrical Engineering Technology
 Mechanical Engineering Technology
 Organizational Leadership and Supervision

In addition to IUPUI's accreditation by the North Central Association of Colleges and Secondary Schools, most individual programs have professional accreditation from either the Engineering Accreditation Commission or the Technology Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700. Where appropriate, program accreditation is identified on the page describing the individual plan of study.

Undergraduate Admission

The Purdue School of Engineering and Technology offers admission opportunities to all students qualified to complete any of its programs, as long as space for effective instruction is available. The school reserves the right, however, to give admission preference to those students whose legal residence is within the state of Indiana. Inquiries about admission as well as requests for admission applications should be addressed to the Office of Admissions, Cavanaugh Hall 129, 425 University Boulevard, IUPUI, Indianapolis, IN 46202-5140.

Admission with Advanced Standing

Many prospective students may be eligible to begin their program of study in the School of Engineering and Technology at an advanced level. Eligibility for advanced standing will be established most frequently by transfer of credit from another college or university, by formal advanced placement courses in high school, by participation in the College Level Examination Program (CLEP), or by achievement of credit by examination.

Qualified applicants who have not previously attended another college or university may obtain specific information by writing the Office for Academic Programs, Purdue School of Engineering and Technology, Room 215, IUPUI, 799 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5160.

Transfers

From IUPUI Schools, Indiana University Campuses, or Purdue University Campuses

Students wishing to transfer from these schools must have a minimum cumulative grade point average of 2.0 on a 4.0 scale and be in good academic and disciplinary standing. The required minimum cumulative grade point average may be higher in some programs. Students must follow the procedures listed below. After reviewing the transfer request and supporting materials, the school will inform students in writing of the acceptance or rejection of the application.

1. IUPUI students or students in the IU system wishing to transfer into the School of Engineering and Technology must apply directly to their intended department. Transfers out of the School of Engineering and Technology must be processed by the school Recorder.
2. A Purdue University student from another campus must complete an official undergraduate application through the IUPUI Office of Admissions.
3. If a student seeking admission to the School of Engineering and Technology previously has been dismissed for academic reasons, he or she must file a petition for readmission that will be reviewed by the Committee on Readmissions. The petition may be obtained from the Office for Academic Programs, School of Engineering and

Technology, Room 215, 799 W. Michigan Street, Indianapolis, IN 46202.

From Other Colleges and Universities

Applicants transferring from colleges and universities other than Indiana University or Purdue University must fulfill the following requirements:

1. An IUPUI application for undergraduate admission and a copy of high school records must be submitted to the Office of Admissions.
2. An official transcript of all course work done, from all institutions previously attended, also must be forwarded to the Office of Admissions.
3. For admission to an engineering or technology program, residents of Indiana must have a cumulative grade point average of at least 2.0 on a 4.0 scale, and out-of-state applicants must have an average of at least 2.5, for all courses previously taken at a recognized college or university. Transfer credits are evaluated by the Office of Admissions and distributed by the Office for Academic Programs in coordination with the department in which the student enrolls.
4. Residency requirement to receive a degree: Transfer students must complete a program of study that includes at least 32 credit hours for a bachelor's degree and at least 15 credit hours for an associate degree in the School of Engineering and Technology. For the associate degree, at least 6 out of the 15 credits are expected to be in the major. For the bachelor's degree, at least 12 out of the 32 credits are expected to be in the major at the junior level or higher.
5. Individual academic programs may require that transfer students complete specific courses prior to admission with advanced standing.
6. Transfer students must be in good academic and disciplinary standing at the college(s) previously attended. Students who have been dismissed for academic reasons by another college or university, or who have less than a 2.0 grade point average, must file a petition for readmission that will be reviewed by the Committee on Readmissions. The petition form may be obtained from the Office for Academic Programs, ET 215.

Transfer students may receive credit in the School of Engineering and Technology for successfully completed course work of equivalent amount and character from another accredited college. However, if a student changes to a different course of study in the process of transferring from another college or university, credits for certain courses may not be applicable toward requirements in the new curriculum.

Transfer credit is not granted for work done at institutions that are not fully approved by a regional accrediting association of secondary schools and colleges. In addition to regional association approval, certain programs may require accreditation by professional organizations and/or societies before credit will be considered for transfer. Credit will not be transferred from any institution whose regional accreditation designation is A/V (Associate/Vocational-Technical). The only exception is when agreements exist that specify courses or blocks of credit that will

transfer into specific Purdue University degree programs.

Graduates of unaccredited institutions, proprietary institutions, or institutions accredited only as occupational training institutions are encouraged to review their academic plans carefully before seeking advanced credit. All prospective transfer students are encouraged to write or visit the school for further information about their opportunities.

To Other Indiana University Campuses

Indiana University credits transferred from one campus of Indiana University to another will be evaluated and accepted in terms at least as favorable as credits transferred from other accredited institutions in the United States. No review of the credits will be undertaken except on good-faith terms, using the same criteria as those used in evaluating external credits.

Second Degrees or Additional Major Fields

Requirements for a Second Degree

Holders of bachelor's degrees who have additional academic objectives are generally encouraged to pursue appropriate graduate degree programs. Bachelor's degree holders may, however, obtain special permission to enroll in programs at either the associate or bachelor's degree level in the School of Engineering and Technology. Candidates must fulfill all academic requirements for the additional major field of study. Applicants for a second degree must complete a program of study that includes at least 32 credit hours for a bachelor's degree and at least 15 credit hours for an associate degree in the School of Engineering and Technology. For the associate degree, at least 6 out of the 15 credits are expected to be in the major. For the bachelor's degree, at least 12 credit hours must be in the major at the junior level or higher.

Graduates of the School of Engineering and Technology are permitted to pursue a second degree program.

Requirements for an Additional Major Field (Technology Programs Only)

Holders of Purdue University A.S. or B.S. degrees, whether from IUPUI or another campus, may enroll in technology courses typically taken by students completing degrees in a different major field. Upon successful completion of the requirements for the additional program, students will receive a notation on their transcripts that they have completed the equivalent of an additional major field of study.

Students working toward second degrees are required to complete all of the same courses in a plan of study as students majoring in the field for the same degree. The student may be required to complete a minimum number of credit hours that have not been used to fulfill requirements for any other major field of study or degree program.

Dual Majors and Dual Degrees

A student who will be completing the requirements for two or more degree programs simultaneously may be eligible to apply for more than one degree according to the following criteria:

1. If the degree programs are in different schools, the student must apply to each school for the appropriate degree. In the School of Engineering and Technology, the student must apply for the degree the semester prior to the one in which he or she expects to complete the degree requirements.
2. If the degree programs are both in the School of Engineering and Technology and lead to different degrees, the appropriate degrees shall be awarded.
3. In technology programs, students in all fields of study receive the same degree, an A.S. or a B.S. Therefore, a student who completes multiple fields of study will receive only one degree; the transcript will reflect the multiple fields of study.

Special Credit

Special credit by examination, by credentials, and/or by experience may be awarded in order to help qualified students earn their degrees more quickly. Each instructional department determines which of its courses are available for special credit and establishes procedures to determine student eligibility, administer evaluations for special credit, and grade them. The evaluations are as comprehensive as those given in the course and are graded as either satisfactory (performance comparable to that expected of students who receive A through C— in the course) or unsatisfactory. Newly admitted students or currently enrolled students who have not received a grade or directed grade other than W (Withdrawal) in the course may request an examination for credit.

Responsibility for initiating a request for special credit in a specific course normally rests with the student. To find out if special credit can be awarded, the student should consider meeting first with the department chair, advisor, or course instructor.

Admission of International Students

Applicants from other countries are considered for admission on the basis of credentials certifying the completion of secondary school. They are not required to take the Scholastic Assessment Tests (SAT) or the American College Test (ACT). Official translations must accompany transcripts and other credentials not written in English. The applicant must demonstrate adequate English proficiency for admission by submitting results from the Test of English as a Foreign Language (TOEFL). A TOEFL score of at least 500 (or 180 on the computer-based TOEFL) is required for regular admission to all undergraduate programs offered by the School of Engineering and Technology. All international undergraduate students must take the IUPUI English as a Second Language (ESL) placement test before they can register for classes. They will be placed in language classes based on their performance on this examination.

International student applicants must also furnish sufficient evidence of adequate financial support for the entire period of their schooling. International applicants should submit all credentials at least six months prior to the semester in which they want to enroll. Inquiries should be directed to the IUPUI

Office of International Affairs, 620 Union Drive,
Indianapolis, IN 46202-5167.

Admission as a Nondegree Student

Adults who want to study in any of the departments of the university without undertaking a regular plan of study and without becoming candidates for degrees may be admitted as nondegree students. Applicants must give evidence of prerequisite background for the course or courses in which they plan to enroll.

Applicants who do not have bachelor's degrees should apply to the Office of Admissions, Cavanaugh Hall, Room 129, 425 University Boulevard, IUPUI, Indianapolis, IN 46202-5140. Regardless of whether they plan to take undergraduate or graduate courses, applicants who have bachelor's degrees should apply to the IUPUI Graduate Office, Union Building 518, 620 N. Union Drive, IUPUI, Indianapolis, IN 46202-5167; telephone (317) 274-4023.

Auditing Courses

Auditors are students who want to take classes without receiving either credit or grades for these classes.

Auditors may attend lecture classes when they have paid the appropriate fees and identified themselves as auditors to the instructor. Auditors are not admitted in courses with a credit hour laboratory component.

Academic Advising and Counseling

Faculty, department chairs, and the Office for Academic Programs are available to provide information about programs of study and career opportunities in engineering and technology.

Students who are admitted to the School of Engineering and Technology are assigned an academic advisor in their major department. Before they meet with their advisor for initial counseling and registration, beginning and transfer students are required to participate in IUPUI's placement testing program. The Office of Admissions will inform the students of this procedure and scheduling. Faculty are available in each department to assist students in planning their academic programs to meet graduation requirements. *It is the student's responsibility to meet periodically with advisors in order to assess progress toward an academic goal.* Students may be required by departments to see an advisor each semester to plan their course schedules.

Undergraduate Admission Requirements

Admission is based on evidence presented by individual applicants to show that they are capable of profiting from and contributing to one of the academic programs of the school. Inquiries about admission to engineering and technology programs, as well as requests for admission applications, should be addressed to the Office of Admissions, Cavanaugh Hall 129, 425 N. University Boulevard, IUPUI, Indianapolis, IN 46202-5140.

Undergraduate Engineering Admission Requirements

In determining the qualifications of an applicant to undergraduate engineering programs, the Office of Admissions uses the following criteria:

1. Graduation from a high school accredited by a state Department of Public Instruction.
2. The extent to which the student meets or exceeds the following minimum requirements:
 - a. All applicants' high school records must include the following:

Subjects	Semesters
English	8
History or social studies	2
Algebra	2
Plane geometry	2
Advanced algebra	1
Trigonometry	1
Chemistry	2
Laboratory science	2
 - b. Your admission as a new student into the Purdue School of Engineering and Technology at IUPUI is determined by a combination of rank in class, test scores, probability of success, grade average in college preparatory subjects, grades in courses related to the degree objective, trends in achievement, completion of high school subject matter requirements, and the strength of the college preparatory program. All applicants who have not completed a full year of college work are required to take the SAT-I or the ACT.
 - c. All applicants who have not completed a full year of college work are required to take the College Entrance Examination Board (CECEB), Scholastic Assessment Test (SAT), or American College Test (ACT). For admission to the engineering programs, minimum SAT scores of 480 verbal and 520 mathematics or minimum ACT scores of 21 English and 23 mathematics are required.

Because of a limitation on the total number of students that may be accepted as beginners, out-of-state admissions may close at any time. When it becomes necessary to limit the number of Indiana residents accepted for a specific program, students will be offered admission to an alternate program or admission to the desired program for a subsequent semester.

Undergraduate Technology Admission Requirements

In determining the qualifications of an applicant to undergraduate technology programs, the Office of Admissions uses the following criteria:

1. Graduation from a high school accredited by a state Department of Public Instruction.
2. The extent to which the student meets or exceeds the following minimum requirements:
 - a. All applicants' high school records must include the following:

Subjects	Semesters
English	6
History or social studies	2
Algebra	2
Geometry	2
Laboratory science	2

- b. Indiana residents must rank in the upper half of their high school graduating class, and out-of-state residents must rank in the upper third of their high school graduating class.
- c. Your admission as a new student into the Purdue School of Engineering and Technology at IUPUI is determined by a combination of rank in class, test scores, probability of success, grade average in college preparatory subjects, grades in courses related to the degree objective, trends in achievement, completion of high school subject matter requirements, and the strength of the college preparatory program. All applicants who have not completed a full year of college work are required to take the SAT-I or the ACT.
- d. Graduates of State of Indiana high school tech prep programs are eligible for admission if they have successfully completed the equivalent tech prep courses listed in paragraph 2a above and have complied with the requirements of paragraphs 2b and 2c above.

Because of a limitation on the total number of students that may be accepted as beginners, out-of-state admissions may close at any time. When it becomes necessary to limit the number of Indiana residents accepted for a specific program, students will be offered admission to an alternate program or admission to the desired program for a subsequent semester.

Special Expenses

Fees and Payment Procedures

University Fees

All fees are due and payable by the due date on the student's schedule confirmation and are subject to change without notice by action of the Trustees of Indiana University. A complete listing of all fees is published for each term in the class schedule.

The following rates per credit hour, student technology fee rates, student activity fees, and athletic development fees were in force at the time of publication of this bulletin. For current listings of fees, consult your *Schedule of Classes*.

Rates per Credit Hour	Indiana Residents	Out-of-State Students
Undergraduate	\$127.95	\$398.00
Graduate Engineering	\$171.25	\$494.15

Extra laboratory fees may be charged when appropriate and when laboratory instruction is required.

Residency Status

The criteria for establishing in-state residency and thus qualifying for in-state fee rates are very strict. Inquiry about establishing resident status for fee purposes should be made to the registrar, who is the proper source of this information. Contact the Office of the Registrar, Cavanaugh Hall 133, 425 N. University Boulevard, IUPUI, Indianapolis, IN 46202-5144; telephone (317) 274-1501.

Athletic Development Fee

This mandatory fee of \$28.80 per semester is assessed on all students enrolled in credit courses held on campus. The athletic development fee is refundable on the same schedule as course fees upon withdrawal from campus courses. It is not assessed on students during the summer session enrollment periods.

Student Activity Fee

This mandatory fee is assessed on all students enrolling in credit courses held on campus. The student activity fee is refundable on the same schedule as course fees upon withdrawal from campus courses.

Student Technology Fee

Student Technology Fee income is used to fund technology resources that are directly accessible to students and of which students are the primary beneficiaries. *Resources* are interpreted to include not only technological equipment, but also personnel to support student use of the equipment. Guidelines for the allocation of Student Technology Fee funds by academic units require student participation in the planning process. Technology fees are based on your class standing as determined by your academic unit at the time the fees are assessed. The IUPUI semester technology fee schedules are as follows:

Undergraduate Technology Fee

Semester	Credit Hours	Rates
Fall or Spring	3 or fewer cr. hrs.	\$29.50
	More than 3 to 6 cr. hrs.	\$59.05
	More than 6 cr. hrs.	\$88.55
Summer Sessions	3 or fewer cr. hrs.	\$29.50
	More than 3 cr. hrs.	\$44.25

Graduate Technology Fee

Semester	Credit Hours	Rates
Fall or Spring	7 or fewer credit hrs.	\$43.65
	More than 7 cr. hrs.	\$93.45
Summer Sessions	7 or fewer credit hrs.	\$43.65
	More than 7 cr. hrs.	\$46.75

Late Enrollment and Late Program Change Fees

All classes are considered closed following final registration for a specific term. Schedule changes after that date are considered a special privilege and require special authorization and an additional fee. The student should refer to the appropriate class schedule for a listing of these charges.

The School of Engineering and Technology will not allow any student to register after expiration of the 100 percent refund period. (See "Refunds" in this section of the bulletin.)

Special Credit Fees

The Trustees of Indiana University have approved the following fee structure for special credit.

1. If the credit is awarded as a result of an examination within the first three semesters following matriculation, there is no charge.
2. If the credit is awarded as a result of an examination and the student is a first-semester transfer student, there is a \$17.60 charge per credit hour.
3. If the credit is awarded as a result of an examination and the student does not meet either

of the above conditions, the charge per credit hour is at the regular resident or nonresident rate.

4. If the credit is awarded as a result of experience or credentials, the student will be charged \$17.60 per credit hour.

Auditing Fees

An audit form must be presented to the Office of the Registrar from your school or division to audit a course for record. No grades or credits are received for audits. If a course is changed from credit to audit after the first week of classes, a late program change fee of \$19.50 will be assessed.

Students who desire an official record of auditing a particular course will be charged full tuition. Written permission from the instructor must be obtained before a student may register to audit. Courses with a laboratory component may not be audited.

Other Fees

Students may also be required to pay special fees for the following services: housing, locker rental, parking, recreation, student identification card (depending on enrollment status and anticipated use), and transcript request. A complete listing of special fees is provided each term in the IUPUI *Schedule of Classes*.

Payment Procedures

Payments must be made in cash or by bank draft, express order, postal money order, traveler's check, personal check, MasterCard, Visa, or Discover for the exact amount of fees due at the time of registration. No check for a greater amount will be accepted. All payments must be made to the bursar at the registration site. Students who register before or during final registration may be able to pay fees using the two-installment option. For information about this option, refer to the IUPUI *Schedule of Classes*.

Credit Cards Students may use MasterCard, Visa, or Discover for payment of university fees and housing. Both Visa and MasterCard are accepted by the IUPUI bookstores. In the event that a student under age 21 wishes to use one of the above credit cards belonging to a parent, bank regulations require prior authorization by the parent.

Refunds

Refund credits are determined by the date the drop activity is processed by the IUPUI Office of the Registrar. Refunds are based on the following schedule.

1. For withdrawal during the first week of classes or through the drop/add period—100 percent refund.
2. For withdrawal during the second week of classes—75 percent refund.
3. For withdrawal during the third week of classes—50 percent refund.
4. For withdrawal during the fourth week of classes—25 percent refund.
5. For withdrawal during the fifth week and thereafter—NO REFUND.

To be eligible for a refund, the student must officially notify the Office of the Registrar at the time of

withdrawal. Refund information for summer sessions and courses scheduled from 1 to 8 weeks in length is published in the IUPUI *Schedule of Classes*.

Financial Aid

It is the philosophy of IUPUI to encourage students in their educational goals and to reduce financial barriers. IUPUI recognizes that many students and their parents cannot afford to finance a college education entirely from their own income and assets. For this reason, a program of financial assistance is available to admitted and enrolled students who have a demonstrated financial need. Aid is available in the form of scholarships, grants, and loans.

Students desiring further information about any of the following financial aid programs should write to:

Office of Scholarships and Financial Aid
Cavanaugh Hall 103
425 N. University Boulevard
IUPUI
Indianapolis, IN 46202-5140
Telephone: (317) 278-FAST (278-3278)
Web: www.iupui.edu/~finaid

Application Procedures

Potential financial aid recipients must complete the Free Application for Federal Student Aid (FAFSA), which is available from high schools or the Office of Scholarships and Financial Aid. The priority application deadline for any summer session and/or the following academic year is March 1, although applications will be processed as long as funds are available. Students who apply late should plan on finding other funds to pay for tuition and books until their financial aid applications are processed.

Eligibility

Financial aid awards are given on the basis of need as determined by the information supplied on the FAFSA. IUPUI students enrolled for 6 or more credit hours are eligible if need is demonstrated. The amount of the award will be less for part-time students than for full-time students; full-time student status is considered to be 12 or more credit hours. Only regularly admitted students and transient students from Purdue University are eligible.

Types of Aid

Financial aid is generally offered as a package consisting of a combination of scholarships, grants, loans, and/or work-study awards, although awards may vary with individual students. All awards are subject to the availability of funds.

Scholarships

Scholarships are awarded on the basis of academic achievement. Sources of scholarships may be both inside and outside IUPUI. Scholarship awards are often not based on need, and the student does not pay back the award later. You will be contacted by IUPUI if you are eligible to apply for scholarships; if an application is required, it will be sent to you automatically.

Grants

Grants are awarded on the basis of need only and do not have to be repaid by the student.

Student Loans

Unlike scholarships and grants, loans must be repaid. Several different student loan programs are available at IUPUI. Some are based on financial need; some are not. Interest rates and maximum awards vary by program. Contact the Office of Scholarships and Financial Aid for details.

Part-Time and Summer Employment

Many students who attend IUPUI are able to earn part of their expenses through part-time and summer employment. The IUPUI Career Center, Business/SPEA Building 2010, 801 W. Michigan Street, (317) 274-2554, offers help in finding part-time jobs and maintains current information about part-time job opportunities. Students should contact this office for further information on employment assistance.

Work-Study Program

The Federal College Work-Study Program available at IUPUI was established by the Higher Education Act of 1965. The main purpose of the program is to give eligible students the chance to do paid work that will complement their academic programs and career aspirations. Students who have been admitted to IUPUI may apply through the Office of Scholarships and Financial Aid.

Veterans Benefits

Information on benefits, including Veterans Administration paid tutorial assistance and work-study opportunities, is available from the veterans affairs representative at the Office of the Registrar, Cavanaugh Hall 133, 425 University Blvd., IUPUI, Indianapolis, IN 46202-5144; (317) 274-1521 or (317) 274-1522.

Academic Policies and Procedures

Probation, Dismissal, Reinstatement

Academic Probation and Academic Dismissal

Academic standards for probation (warning status) and dismissal are established by the faculty for each specific academic program. Therefore, a student is subject to the regulations applicable to all students enrolled in a particular program at the time of registration. If students are experiencing academic difficulty, they are urged to consult their academic advisor as soon as possible.

Students will be notified by letter from the Office of the Associate Dean for Academic Programs, School of Engineering and Technology, when they are placed on academic probation. The letter will also inform the student of the conditions that must be met for removal from academic probation. Students who are dismissed for academic reasons will also be notified by letter from the Office of the Associate Dean for Academic Programs.

The following standards are currently applicable for students enrolled in the School of Engineering and Technology.

Academic Probation

Full-time students are automatically on academic probation when either the cumulative semester index or the semester index is below 2.0 (C). Part-time students are automatically on academic probation when either the cumulative semester index or the grade point average for the last 12 credit hours of consecutive enrollment is below 2.0 (C). All students on probation are automatically placed on academic checklist. Students on checklist must obtain the signature of a departmental advisor in order to register.

Students who, in subsequent enrollments, do not improve significantly may receive a letter stating that they will be subject to dismissal if an index of 2.0 (C) or higher is not earned in the current enrollment period. Such students may register *only after their grades have been posted* and their departmental checklist clearance form has been approved by the dean.

Removal from Probation

Students are removed from academic probation when they complete 12 credit hours of consecutive enrollment with a minimum grade point average of 2.0, provided their overall grade point average is also at or above 2.0.

Academic Dismissal

Full-time students may be dismissed when they fail to attain a 2.0 semester grade point average in any two consecutive semesters or when their cumulative semester index has remained below 2.0 (C) for any two consecutive semesters. Part-time students may be dismissed when their cumulative semester index or grade point average for the last 18 credit hours of consecutive enrollment is below 2.0 (C).

Readmission

A student who has been dropped due to scholastic deficiency may petition the Faculty Committee on Readmission for readmission. If readmitted, the student will be placed on probation. Students may contact the particular department for specific rules and regulations.

Acceptance of Grade Replacement, Forgiveness, Repeating Courses, Audit

Repeated Courses (Grade Replacement Policy)

Students enrolled in the School of Engineering and Technology are permitted to apply only the provisions of the IUPUI Grade Replacement Policy that pertain to repeating a course in order to achieve a higher grade. This replacement will affect a student's academic

record only at the Purdue School of Engineering and Technology at IUPUI. If the student subsequently transfers to another academic unit at IUPUI or another campus, different interpretations of the grade replacement policy may be in place.

An undergraduate student who retakes any course may elect to have only the final grade counted in computation of the cumulative semester index, in accordance with the limitations listed below. After retaking the course, the enrollment and original grade will be removed from calculations used to determine the student's cumulative GPA. The student's transcript, however, will continue to show the original enrollment in the course and all grades earned for each subsequent enrollment.

This policy is subject to the following limitations:

1. Students may exercise the grade replacement option for no more than 15 credit hours, including any courses in which the former FX option was used.
2. A grade may be replaced only by another grade *for the same class*.
3. A student may exercise the Grade Replacement Policy a *maximum of two times* for a single course.
4. The request to remove a grade from the cumulative GPA calculation by this method is irreversible.
5. The second enrollment for any course covered by this policy must have occurred during fall semester 1996 or later.

Students who plan to use the grade replacement option must inform the engineering and technology recorder after they have retaken a course and wish to apply the policy.

Determination of GPA (If Different from IU/Campus Method)

Academic Regulations

Grades and Grade Reports

Students are responsible for completing all required work in each of their courses by the last scheduled class meeting, unless course assignments have been properly cancelled. Students receive a grade in each course in which they are enrolled at the close of the session. Grades indicate what a student has achieved with respect to the objectives of the course, and instructors are required, by action of the Faculty Senate, to record the grade a student has earned in a course. Grades that have been officially recorded will be changed only in cases of instructor error or subsequent finding of student academic dishonesty.

Basis of Grades

The School of Engineering and Technology uses a grading system that may include plus and minus grades as well as straight letter grades for all undergraduate and graduate courses. These grades and their grade point values are indicated below.

1. For credit courses:

A or A+	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0 (no credit)

2. For credit courses taken under the Pass/Fail option:

P: Pass; equivalent to grade A through D- (no grade point value assigned).

F: Failure; failure to achieve minimal objectives of the course. The student must repeat the course satisfactorily in order to obtain credit for it. The F is factored into the student's grade point average.

3. For noncredit courses including thesis research:

S: Satisfactory; meets course objectives (no grade point value assigned).

F: Unsatisfactory; does not meet course objectives (is factored into grade point average).

Note that no separate grades are given for course laboratory sections that have been given separate course designations for scheduling purposes.

4. Incomplete, Deferred, or Withdrawal grades for credit or noncredit courses (no grade point value assigned):

I: Incomplete, no grade; a temporary record indicating that the work is satisfactory as of the end of the semester but has not been completed. The grade of Incomplete may be assigned only when a student has successfully completed at least three-fourths of the work in a course and unusual circumstances prevent the student from completing the work within the time limits previously set. An instructor may require the student to secure the recommendation of the dean that the circumstances warrant a grade of Incomplete. When an Incomplete is given, the instructor will specify the academic work to be completed and may establish a deadline of up to one year. If the student has not completed the required work by the end of the following year, the registrar will automatically change the I to an F.

R: Deferred; a grade given for those courses that normally require more than one academic session to complete, such as project, thesis, and research courses. The grade indicates that work is in progress and that the final report has not been submitted for evaluation.

W: Withdrawal; a grade of W is recorded on the final grade report.

Withdrawing from Classes

During the first half of a semester or session, students may officially withdraw from classes without penalty if they obtain the approval of their advisor. During the third quarter of a semester or session, students may withdraw from classes if they obtain the approval of their advisor and the appropriate instructors; during

the last quarter of the semester, students will be allowed to withdraw from classes only under extenuating circumstances. At that time they must obtain the approval of the appropriate instructors, their advisor, and the dean, and must also present a written justification from a doctor, member of the clergy, advisor, or similar person of authority. *The fact that a student merely stops attending a class will not entitle the student to a grade of W.*

Uses of the Pass/Fail Option

To provide students with the opportunity to broaden their education with less worry about the grades they may earn, an alternate grading system, the Pass/Fail option, is permitted for a limited portion of the required credit hours. The following general rules are currently applicable; individual departments may impose further restrictions.

1. Subject to the regulations of divisions or departments, students may choose this option in any course that does not already appear on their academic record and that they are otherwise eligible to take for credit with a letter grade. Students may use this option for not more than 20 percent of the total credit hours required for graduation.
2. Students taking a course under this option have the same obligations as those taking the course for credit with a letter grade. When instructors report final grades in the course, any student who would have earned a grade of A through D- will receive a P, and any student who has not passed will receive an F. The registrar will note either result on the student's academic records, but will not use the course in computing the grade point average unless the student receives an F.
3. This option is not available to students on probation.
4. This option is available for a maximum of two courses in any one semester and one course during a summer session.
5. Students receiving the grade of Pass in a course taken under the Pass/Fail option may not retake the same course for a letter grade.
6. Courses taken under Pass/Fail option and courses taken by correspondence may not be used to fulfill graduation requirements for engineering students. Whether the courses are accepted for technology students is up to each major department.

These rules are general or minimum guidelines for those electing this option. There are certain specific limitations on registration for the Pass/Fail option. This option may be elected only during continuing student registration, late registration, and the drop/add period at the beginning of a semester or session. Changes from letter grade to Pass/Fail and vice versa may not be made after the second week of classes during the regular semester or after the first week of classes during the summer sessions.

Absence from Campus

Students who interrupt their course of study for more than one calendar year may be required to meet all departmental curriculum requirements for the program offered at the time of their return.

Scholastic Indexes

The scholarship standing of all undergraduate degree regular students is determined by two scholastic indexes: the semester index and the graduation index.

Semester Index

The semester index (semester grade point average) is an average determined by weighting each grade received (4.0 for an A, 3.7 for an A-, etc.) during a given semester and multiplying it by the number of credit hours in the course, adding up all the figures, and then dividing the sum by the total number of course credit hours obtained during that semester. Grades of P and S are not included in the computation; grades of F are included. The cumulative semester index is the weighted average of all courses taken by a student, except those to which the FX policy is applied. See "Repeated Courses (FX Policy)" above in this section of the bulletin.

Graduation Index

The graduation index (degree grade point average) is the weighted average of grades in only those courses that are used to meet the graduation requirements for the program in which the student is enrolled. When a student retakes a course with the advisor's approval or later substitutes an equivalent course for one previously taken, only the most recent course grade is used by the school in calculating the graduation index. Since certain courses previously completed by the student may on occasion be omitted from a program of study, the graduation index and the cumulative semester index may differ.

Graduation Index Requirements

For all bachelor's degrees in the School of Engineering and Technology, a minimum graduation index of 2.0 is required for graduation. Candidates for graduation from engineering programs must also have an index of 2.0 for all required engineering courses.

For the Associate of Science degree, a minimum graduation index of 1.9 is required for graduation.

Good Standing

For purposes of reports and communications to other institutions and agencies and in the absence of any further qualification of the term, students are considered in good standing unless they have been dismissed, suspended, or dropped from the university and have not been readmitted.

Graduation Requirements for Undergraduates**Undergraduate Engineering Requirements**

To earn a Bachelor of Science in Engineering (B.S.E.), Bachelor of Science in Computer Engineering (B.S.Cmp.E.), Bachelor of Science in Electrical Engineering (B.S.E.E.), or Bachelor of Science in Mechanical Engineering (B.S.M.E.) degree, students must satisfy the following requirements. Requirements for graduation include receiving credit in all required courses—at least 129 credit hours in the computer engineering program, 129 credit hours in the

electrical engineering program, 131 credit hours in the engineering management program, 130 credit hours in the interdisciplinary engineering program, or 130 credit hours in the mechanical engineering program.

Each student must have an approved plan of study that lists all courses for the specific degree program. Students should prepare their plans of study for approval during the junior year. If a student wants to deviate from the published curricula, written permission of the administrator of the program is required.

Additional requirements include the following:

1. Students must complete the program of study for the degree by resident course work, by examination, or by credit accepted from another institution. The dean may refuse to accept as credit toward graduation any course that was completed 10 or more years previously, and former students will be notified of all such decisions upon reentering. Substitution of courses required for graduation may be made by the dean of the school.
2. Students must complete at least two semesters of resident study at IUPUI, and they must complete at least 32 credit hours of appropriate course work, of which 12 credit hours must be completed in the major at the junior level or higher. Students are also expected to complete the senior year in residence; however, with the approval of the dean, students who have had at least four semesters of resident study may complete a maximum of 20 credit hours of the senior year in another approved college or university. For the purpose of this rule, two summer sessions are equivalent to one semester.
3. Students must be registered in the School of Engineering and Technology, either in residence or in absentia, during the semester or summer session immediately preceding the awarding of the degree.
4. Students must have a graduation index of 2.0 in required engineering courses in addition to an overall graduation index of 2.0 for all courses on the approved plan of study. Students who have completed all other requirements for a bachelor's degree but have failed to meet the minimum graduation index may register for additional courses, with the approval of an authorized representative of the dean, after a review of their record. The additional courses may not exceed 20 credit hours. Students may take a maximum of 9 of the 20 credit hours in another approved college or university, provided the courses are approved in advance and in writing by an authorized representative of the dean of the School of Engineering and Technology. A copy of the approval must be filed in the office of the engineering and technology recorder. Credit in these additional courses must be established within five years of the date on which all other degree requirements were met. Students will have fulfilled the requirements for graduation if graduation indexes, including extra courses, equal or exceed the minimum specified at the time when all other graduation requirements were satisfied.

5. Applicants for a second bachelor's degree, after they are admitted to the second bachelor's degree program, must complete at least 32 credit hours of appropriate course work, of which 12 credit hours must be completed in the major at the junior level or higher.
6. Courses taken under the Pass/Fail option and courses taken by correspondence may not be used to fulfill graduation requirements for engineering students.

Undergraduate Technology Requirements

Associate Degree

To earn an Associate of Science (A.S.) degree, students must satisfy the following requirements:

1. Students must complete the plan of study for the degree by resident course work, by examination, or by credit accepted from another institution. The dean of the school may refuse to accept as credit toward graduation any course that was completed 10 or more years previously, and former students will be notified of all such decisions upon reentering. Substitutions of courses required for graduation may be made by the dean of the School of Engineering and Technology.
2. Students must complete at least two semesters of resident study at IUPUI, and they must complete at least 15 credit hours of appropriate course work, of which 6 credit hours must be in the major. Students are generally expected to complete the entire second year in residence; however, with the approval of the dean of the school, students who have at least three semesters of resident study may complete a maximum of 16 credit hours of the second year in another approved college or university. For the purpose of this rule, two summer sessions are considered equivalent to one semester.
3. Students must be registered in the School of Engineering and Technology, either in residence or in absentia, during the semester or summer session immediately preceding the award of the degree.
4. Students must have a minimum graduation index of 1.9. Students who have completed all other requirements for an A.S. degree but have failed to meet the minimum graduation index (the average of grades earned in courses required for a degree) may register for additional courses, with the approval of an authorized representative of the dean of the school, after a review of their record. These additional courses may not exceed 10 credit hours, and credit in these courses must be established within three years of the date on which all other degree requirements were met. Students will have fulfilled the requirements for graduation if their graduation indexes, including the extra courses, equal or exceed the minimum specified at the time when all other graduation requirements were satisfied.
5. Applicants for a second A.S. degree must complete at least 15 credit hours at IUPUI of appropriate course work after admission to the second associate degree program. At least 6 of the 15

credit hours must be completed in the major. A second associate degree may not be earned in the same program.

Bachelor's Degree

To earn a Bachelor of Science (B.S.) degree, students must satisfy the following requirements.

1. Students must complete the program of study for the degree by resident course work, by examination, or by credit accepted from another institution. The dean may refuse to accept as credit toward graduation any course that was completed 10 or more years previously, and former students will be notified of all such decisions upon reentering. Substitution of courses required for graduation may be made by the dean of the school.
2. Students must complete at least two semesters of resident study at IUPUI, and they must complete at least 32 credit hours of appropriate course work, of which 12 credit hours are required to be in the major at the junior level or higher. Students are generally expected to complete the senior year in residence; however, with the approval of the dean, students who have had at least four semesters of resident study may complete a maximum of 20 credit hours of the senior year in another approved college or university. For the purpose of this rule, two summer sessions are considered equivalent to one semester.
3. Students must be registered in the School of Engineering and Technology, either in residence or in absentia, during the semester or summer session immediately preceding the awarding of the degree.
4. Students must have a minimum graduation index of 2.0. Students who have completed all other requirements for a bachelor's degree but have failed to meet the minimum graduation index may register for additional courses, with the approval of an authorized representative of the dean, after a review of their record. The additional courses may not exceed 20 credit hours. Students may take a maximum of 9 of the 20 credit hours in another approved college or university, provided the courses are approved in advance and in writing by an authorized representative of the dean of the School of Engineering and Technology. A copy of the approval must be filed in the Office of the Recorder. Credit in these additional courses must be established within five years of the date on which all other degree requirements were met. Students will have fulfilled the requirements for graduation if graduation indexes, including extra courses, equal or exceed the minimum specified at the time when all other graduation requirements were satisfied.
5. Applicants for a second bachelor's degree must complete at IUPUI at least 32 credit hours of appropriate course work after they are admitted to the second bachelor's degree program. At least 12 of the 32 credit hours must be completed in the major at the junior level or higher.

Engineering and Technology Minors

Minimum criteria for academic minors offered within the School of Engineering and Technology will include an overall 2.0/4.0 GPA and a grade of C– or above for each course required for the minor and at least one-half of the required courses for the minor will be completed in residency at IUPUI. Any courses, e.g., Web-based courses or courses via the Internet, delivered by an IUPUI school are considered to be residence courses for this purpose. The academic requirements for each minor offered by the school will consist of at least 21 semester hours.

Certificate Programs

Students who are seeking one of the certificate programs offered by the School of Engineering and Technology must qualify for admission under the published criteria for one of the academic units at IUPUI and must complete at least one-half of the academic requirements for that certificate after admission to that certificate program. Although there are several admission and/or enrollment options open to certificate students, it is expected that all of this remaining course work will be in courses taught by one or more of the IUPUI academic units. Any courses, e.g., Web-based courses or courses via the Internet, delivered by an IUPUI school are considered to be residence courses for this purpose.

Employment Enrichment Programs

Good career opportunities almost always require previous work experience. While earning a degree at the Purdue School of Engineering and Technology, Employment Enrichment Programs may provide essential opportunities to launch a career.

The lessons you learn in classes and laboratories receive their ultimate test through the school's cooperative education, internship, professional work experience, and international student exchange programs. We interact with a broad variety of area companies to provide the technical experience required to succeed in today's globally competitive economic markets.

The Cooperative Education Program (Co-op) is a five-year professional development experience, designed to combine practical on-the-job experiences with the classroom training of a four-year college curriculum; the Internship Program allows students to work full time or part time for an employing organization while simultaneously taking courses during one semester. This program allows flexibility for students that may wish to obtain work experience, but are not able to take a semester away from school as is required in the co-op program.

The greater metropolitan Indianapolis community offers extensive professional, governmental, and manufacturing resources, which provide a number of employment enrichment opportunities. Our community resources provide rich, practical, well-

paid professional opportunities usually unavailable at residential campuses.

After you have satisfactorily completed the freshman year of your academic program, you may have a choice of employment programs to meet your needs.

Eligibility

To be eligible for one of the Employment Enrichment Programs, you must

Be admitted to the Purdue School of Engineering and Technology, IUPUI.

Be enrolled in one of the academic programs offered by the school.

Continue in one of our Bachelor of Science degree programs.

Have satisfactorily completed the freshman year of your academic program.

Meet and maintain minimum GPA requirements.

Register for the appropriate Employment Enrichment Programs course before each work period.

Satisfactorily complete the work period requirements.

Attend a Co-op/Internship orientation session.

During your periods of professional employment, you will earn a competitive salary and may also earn academic credit toward your bachelor's degree. The amount and distribution of credit is determined by your academic department. For further information, contact the Office for Academic Programs, Engineering and Technology Building (ET) 215, 799 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5160; (317) 278-1000.

Graduate Engineering Programs

Nasser Paydar, Associate Dean for Academic Programs

The school offers six graduate degrees: the Doctor of Philosophy in Biomedical Engineering (Ph.D.), Master of Science in Biomedical Engineering (M.S.Bm.E.), Master of Science in Electrical and Computer Engineering (M.S.E.C.E.), Master of Science in Mechanical Engineering (M.S.M.E.), Master of Science in Engineering (M.S.E.), and Master of Science (M.S.). Qualified students may be authorized to pursue the Ph.D. degree in electrical and computer engineering or mechanical engineering at IUPUI. Programs leading to the Ph.D. in electrical engineering and in mechanical engineering are administered with the respective approval of the School of Electrical Engineering and the School of Mechanical Engineering at Purdue University, West Lafayette. Students are usually expected to complete the M.S.E.C.E. or M.S.M.E. before pursuing the Ph.D. degree.

Students completing a master's or doctoral degree in engineering will be prepared to enter the work force at a high level of responsibility and expertise. Knowledge of the dynamics of expanding new technologies and the strategic importance of high productivity prepares master's degree graduates to advance rapidly in today's business and industries.

Graduate courses are usually offered on the IUPUI evening schedule. The programs are designed to meet

the needs of part-time students employed in the Indianapolis area, as well as traditional students who are preparing for careers in research-directed areas.

For more information, call (317) 278-4960, or send e-mail to et_grad@iupui.edu or see the Web site: www.engr.iupui.edu

Scholarships and Awards

The Purdue School of Engineering and Technology offers scholarships through IUPUI's Office of Student Scholarships. Early admission to IUPUI is the best way to be assured of scholarship opportunities. The Purdue School of Engineering and Technology offers scholarships to incoming freshmen and continuing students. Most scholarships are merit-based awards offered at the departmental level but some are designated specifically for new students, or for minority, women, and other students from underrepresented populations. The following is a list of some available scholarships. For additional information, please consult the *Beginning Freshman Admissions Guide and Financial Aid Information* published by the Office of Admissions, or you may contact the Office of the Dean.

Scholarships for New Students

General Engineering and Technology Scholarship
Minority Engineering Advancement Program (MEAP)
Women in Engineering and Technology

Scholastic Recognition

Dean's List

At the conclusion of each semester, the recorder of the Office of Academic Programs determines which undergraduate students have earned grades reflecting outstanding scholastic work during the semester. The names of these students are publicly recognized and are posted in the school and on the school's Web pages. In addition, various activities are conducted to honor the academic success of qualifying students. The Dean's List is not compiled for summer sessions. In order to qualify for the Dean's List for a given semester, students must meet all the following requirements:

1. Earn a semester grade index of 3.5 or higher.
2. Complete all courses in which they were enrolled at the end of the semester with a grade of C or higher, R, or P.
3. Complete at least 6 credit hours for a letter grade. A letter grade is an A, B, C, D (including +/–), F, or P, but not R.
4. Complete a minimum of 15 credit hours while registered as a student in the School of Engineering and Technology, including the credit hours earned in the semester under consideration.
5. Earn a semester grade point average that places the student in the top 10 percent of all students in the department or division who have completed at

least 6 credit hours for a letter grade (as defined in item 3) that semester.

Graduation with Distinction

By awarding degrees “With Distinction” or “With Highest Distinction” the School of Engineering and Technology recognizes the outstanding scholastic achievement of selected associate and bachelor’s degree candidates.

Distinction at graduation is awarded on the basis of all course work taken for letter grades. Individuals must complete all the requirements for their field of study and meet the following conditions:

1. A candidate for the bachelor’s degree with distinction must have earned at least 65 hours of credit in the Purdue University or Indiana University system. A candidate for an associate degree with distinction must have earned at least 35 hours of credit in the Purdue University or Indiana University system.
2. Honors are awarded according to the following cumulative semester grade point averages:
Top 10 percent—With Distinction
Top 30 percent of the top 10 percent—With Highest Distinction

Note: For the purpose of determining graduation honors, the calculated cumulative semester grade point average includes *all* courses taken for a grade in either the Purdue or the Indiana University system, regardless of when the courses were taken.

Students who are awarded their degrees with distinction receive corresponding diplomas and are given special recognition during the annual commencement exercise.

School or Program Clubs

Engineering and Technology Student Societies

Engineering and technology students have the opportunity to participate in the activities of the following student society chapters:

American Foundrymen’s Society
American Institute for Aeronautics and Astronautics (AIAA)
American Society of Mechanical Engineers (ASME)
Association for Computing Machinery (ACM)
Engineering and Technology Student Council
Engineering Graduate Student Organization
Institute of Electrical and Electronics Engineers (IEEE)
National Society of Black Engineers (NSBE)
National Society of Professional Engineers
Society of Automotive Engineers (SAE)
Society of Human Resource Management (SHRM)
Society of Manufacturing Engineers
Society of Student Constructors

Society of Women Engineers (SWE)
Student Design Organization (SDO)
Tau Alpha Pi

Minority Engineering Advancement Program (MEAP)

The Minority Engineering Advancement Program (MEAP) was established in 1974 to encourage minority students to pursue studies in engineering and engineering technology. Through the annual MEAP summer workshops, the school identifies and recruits talented secondary school students and provides them with information about engineering careers and college requirements. Since 1976, more than 100 students have participated each summer in the program.

MEAP also provides counseling and tutor referral service to minority undergraduates enrolled in the School of Engineering and Technology. In addition, scholarships and grants are available to American Indian, African American, and Hispanic students, people from groups that have been historically underrepresented in engineering. For more information, students should contact the Office for Academic Programs, School of Engineering and Technology, 799 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5160; www.engr.iupui.edu/meap; telephone (317) 274-2943.

Opportunities to Study Abroad

The School of Engineering and Technology offers credit and noncredit internship opportunities abroad. Internships are full-time positions, and work assignments last from the middle of May until the middle of July. These internships allow students to gain technical experience in international companies, knowledge of a foreign culture, improved foreign language skills, and other benefits of an intercultural experience. Juniors or seniors with grade point averages of 3.0 or higher and specific language skills are eligible to apply. Participants receive a stipend to cover a major part of their expenses. Living accommodations are arranged, usually with a host family. Free time for travel, study, and recreation is available at the end of the program. For more information, contact the Office for Academic Programs, School of Engineering and Technology, 799 W. Michigan Street, Indianapolis, IN 46202-5160; telephone (317) 274-2533.

General-Education Program

Each engineering program requires a specific number of general-education courses. Eight credit hours are required in communications courses: ENG W151, COMM R110, and TCM 360. A 1-credit hour course in engineering ethics (ECE 401 or ME 401) is also required. Other courses in humanities and social sciences must be selected from approved lists available in each engineering department.

Specific Degree Tracks

Undergraduate Engineering Programs

Programs for full-time students pursuing bachelor’s degrees in engineering are presented in this section. The admission requirements, curricula, graduation requirements, and course descriptions of each program listed are those that were in effect at the time of printing and may subsequently change. Students are encouraged to obtain the latest course and curriculum information from their academic advisors.

The following undergraduate engineering degree programs are available in the School of Engineering and Technology:

Degree Program	Administered by
Bachelor of Science in Computer Engineering (B.S.Cmp.E.)	Department of Electrical and Computer Engineering
Bachelor of Science in Engineering (B.S.E.) (Interdisciplinary Engineering)	Department of Electrical and Computer Engineering
Bachelor of Science in Engineering (B.S.E.) (Interdisciplinary Engineering)	Department of Mechanical Engineering
Bachelor of Science in Electrical Engineering (B.S.E.E.)	Department of Electrical and Computer Engineering
Bachelor of Science in Mechanical Engineering (B.S.M.E.)	Department of Mechanical Engineering

Undergraduate Engineering Curriculum

All the undergraduate engineering curricula in this bulletin are presented as four-year programs. Well-qualified students with excellent high school preparation should be able to complete all requirements in four years or less. Students with gaps in their high school preparation or those who participate in the Cooperative Education Program may require more time to complete their degrees. Other students may adjust their semester credit loads to maintain employment or for other reasons. Programs can be tailored for part-time and evening students, as classes are scheduled for both day and evening. Part-time and evening students are urged to consult their advisors to avoid future scheduling problems.

It is important for students to recognize that some flexibility is provided in each of the curricula to allow for individual differences in backgrounds and academic goals. It is the student’s responsibility to

consult with an academic advisor to design a program to fit personal needs.

Creative accomplishment in an engineer's career often derives from an education that stresses major ideas and fundamental concepts of engineering rather than specific technologies. The engineering curricula provide wide experience in the mathematical, physical, and engineering sciences as well as in the social sciences and the humanities. In this way the student obtains both thorough training in engineering and a well-rounded education. Such an approach provides the best preparation for the engineer, who must envision and develop the technologies of the future and deal with scientific advances.

Engineers are responsible for translating the ever-expanding reservoir of scientific knowledge into systems, devices, and products and for further expanding knowledge. To meet these responsibilities, those who are learning to be engineers must not only master the ideas of others but must also originate new ideas. Moreover, although engineers deal extensively with facts and scientific fundamentals as a matter of course, they cannot rely on these alone. Engineers inevitably face decisions that cannot be made on the basis of technical skill, but that require a broad understanding of human values and behavior as developed by studies in the social sciences and humanities. They must also be able to accommodate situations where judgment and wisdom, combined with scientific knowledge or technical skill, can provide a solution.

Freshman Engineering Program

Director of Freshman Engineering Lamm

Lecturer Gee

Freshman Engineering Counselor Meyer

All qualified students interested in pursuing an engineering degree at IUPUI are admitted to the Freshman Engineering Program. This includes second degree and transfer students as well as beginning students.

While in this program, beginning students complete the basic sequence of courses common to all engineering majors. These courses include calculus I and II, chemistry and physics for science and engineering majors, English composition, and public speaking. Freshman engineering courses taken by all students include: ENGR 195 Introduction to the Engineering Profession, ENGR 196 Introduction to Engineering and ENGR 197 Introduction to Programming Concepts. The Freshman Engineering Program provides students with an opportunity to explore the various engineering disciplines before making a commitment to a specific curriculum.

Transfer and second degree students remain in Freshman Engineering until the evaluation of their transfer credits is completed.

The Office of Freshman Engineering has a full-time staff available year round. Prospective students and their families are invited to contact Freshman Engineering regarding any questions they may have concerning engineering and the engineering degree programs offered at IUPUI. The advisors in Freshman Engineering provide academic counseling and advising to prospective and continuing students. New students in engineering receive individualized attention while completing the basic core of freshman engineering courses. Transfer and second degree students likewise work closely with Freshman Engineering advisors until all transfer credit issues are resolved. The office has an open door policy, and students are encouraged to consult with advisors about any issues that may affect their academic progress.

Minor in Business for Engineering Students

The Indiana University Kelley School of Business and the School of Engineering and Technology have established a minor in business for engineering students. To qualify for the minor, students must meet course prerequisites and entrance requirements. In certain cases, substitutions are permitted for some requirements. Please consult with a Kelley School of Business academic advisor for more information (274-2147). Application deadlines are March 1 for the summer and fall semesters, and October 1 for the spring semester. Applications are available in the undergraduate office, Indiana University Kelley School of Business, Business/SPEA Building 3024.

Department of Electrical and Computer Engineering

Professors Berbari, Y. Chen, Y. P. Chien, Eberhart (*Chair*), El-Sharkawy, Needler, Rizkalla, Sinha, Yokomoto, Yurtseven

Associate Professors Lyshevski, Ramos

Assistant Professors Ben-Miled, Kim, Salama, Schild

Adjunct Faculty Analoui, Rajashekara, Svirsky

The Department of Electrical and Computer Engineering offers programs at the bachelor's, master's, and doctoral levels. At the bachelor's degree level, the department offers programs leading to the Bachelor of Science in Engineering (B.S.E.), Bachelor of Science in Computer Engineering (B.S.Cmp.E.), and Bachelor of Science in Electrical Engineering (B.S.E.E.) degrees. The B.S.E. degree program is designed for students who desire broad flexibility and the opportunity for interdisciplinary study; it does not have a designated professional curriculum. Additional information about the B.S.E. program can be obtained from the faculty in the Department of Electrical and Computer Engineering. The programs leading to the

B.S.E.E. and B.S.Cmp.E. are described in this section. Graduate programs in electrical and computer engineering are described in the section entitled "Graduate Engineering Programs" in this bulletin.

Electrical and Computer engineering programs are designed to prepare students for careers in the commercial, government, and academic sectors, where electrical and computer engineering expertise is needed in hardware and software design, information processing, circuit and electronic design, control and robotics, communications, biomedical engineering, energy systems, and manufacturing. Programs in the department are enhanced by interaction with local industry. Students have direct and routine access to full-time faculty, which further strengthens and accelerates the learning process. These advantages and the metropolitan environment of the university lead to an application-oriented, practical education that prepares students for success.

The Department of Electrical and Computer Engineering regards research as an important catalyst for excellence in engineering education. Graduate research and undergraduate design projects in the areas of signal processing, image processing, artificial intelligence, networking, software engineering, embedded systems, high performance computing, control, biomedical engineering, robotics, manufacturing, and electronics offer opportunities for applying and deepening students' expertise.

An undergraduate education in electrical and computer engineering provides a strong foundation in mathematical, physical, and engineering sciences. In acquiring this knowledge, students must also develop problem-solving skills. In addition, the general-education courses in the program provide the communication skills and appreciation of human and social issues necessary to translate engineering achievements into advances for society.

For more information, contact the Department of Electrical and Computer Engineering at (317) 274-9726.

Bachelor of Science in Electrical Engineering

Accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The B.S.E.E. degree prepares students for career opportunities in the hardware and software aspects of design, development, and operation of electronic systems and components, hardware and software design, control and robotics, communications, digital signal processing, and energy systems. Challenging positions are available in the government, commercial, and education sectors, in the areas of electronics, communication systems, signal and information processing, power, automation, robotics and manufacturing, control, networking, information processing, and computing. Within these areas, career

opportunities include design, development, research, manufacturing, marketing, operation, field testing, maintenance, and engineering management.

The minimum number of credit hours for graduation is 126, distributed as follows for each discipline:

1. Mathematics and Physical Sciences	
a. Calculus: MATH 163, 164, 261, and 262	18
b. Chemistry: CHEM C105	3
c. Physics: PHYS 152 and 251	9
2. Communications and Ethics	
a. Speech: COMM R110	3
b. Writing: ENG W131	3
c. Communication in Engineering Practice: TCM 360	2
d. Engineering Ethics and Professionalism: ECE 400 and 401	2
3. Humanities and Social Sciences	
a. Electives	15
4. Freshman Engineering Courses	
a. Introduction to the Engineering Profession: ENGR 195	1
b. Introduction to Engineering: ENGR 196	3
c. Programming Concepts: ENGR 197	3
5. Engineering Science	
a. Circuits: ECE 201, 202, and 207	7
b. Systems and Fields: ECE 301, 302, and 311	9
c. Unrestricted Elective	3
d. C Programming: ECE 264	2
6. Engineering Design	
a. Electronics: ECE 208 and 255	4
b. Digital Systems: ECE 266, 267, and 362	8
c. Communication Systems: ECE 440	4
d. Control Systems: ECE 382 and 340	6
e. Capstone Design: ECE 492	3
f. Design Electives	15
7. Science/Technical Elective	3
	<u>126</u>

Semester by semester, the 126 total credit hours should be distributed like this:

Freshman Year

First Semester

ENGR 195 Introduction to the Engineering Profession	1
ENGR 196 Introduction to Engineering	3
CHEM C105 Chemical Science I	3
MATH 163 Integrated Calculus and Analytic Geometry	5
COMM R110 Fundamentals of Speech Communication	3
	<u>15</u>

Second Semester

ENGR 197 Programming	3
PHYS 152 Mechanics	4
ENG W131 Elementary Composition I	3
Math 164 Integrated Calculus and Analytic Geometry II	5
Humanities or Social Science Elective ¹	3
	<u>18</u>

Sophomore Year

Third Semester

ECE 201 Linear Circuit Analysis I	3
ECE 207 Electronic Measurement Techniques	1
ECE 264 Advanced C Programming	2
PHYS 251 Electricity and Optics	5
MATH 261 Multivariate Calculus	4
	<u>15</u>

Fourth Semester

ECE 202 Circuit Analysis II	3
ECE 208 Electronic Design and Devices Lab	1
ECE 255 Introduction to Electronics Analysis and Design	3
ECE 266 Digital Logic Design	3
ECE 267 Digital Logic Design Laboratory	1
MATH 262 Linear Algebra Differential Equations	4
Humanities or Social Science Elective ¹	3
	<u>18</u>

Junior Year

Fifth Semester

ECE 301 Signals and Systems	3
ECE 311 Electric and Magnetic Fields	3
ECE 362 Microprocessor Systems and Interfacing	4
ECE Elective ⁴	3
Science ² or Technical ³ Elective	3
	<u>16</u>

Sixth Semester

ECE 302 Probabilistic Methods in Electrical Engineering	3
ECE 340 Simulation, Modeling, and Identification	3
ECE 382 Feedback System Analysis	3
ECE Elective ⁴	3
TCM 360 Communications in Engineering Practice	2
Humanities or Social Science Elective ¹	3

Eighth Semester

ECE 401 Ethics	1
ECE 492 Senior Design	3
ECE Elective ⁴	3
Unrestricted Elective ⁵	3
Humanities or Social Science Elective ¹	3
	<u>13</u>

After completing a rigorous, broad education in electrical and computer engineering during the first five semesters, juniors and seniors may select advanced electrical and computer engineering courses and

¹ From Approved Humanities or Social Science Elective List

² From Approved Science Elective List

³ From Approved Technical Elective List

⁴ From Approved Electrical Engineering Elective List

⁵ From Lists 1-4

technical elective courses from an approved list. Careful selection of these elective courses allows a student to concentrate in a specialized area of electrical engineering. A listing of acceptable electrical engineering and technical elective courses is given below. The actual course selection will depend on the schedule, as not every course is available every semester. Existing upper-level electrical engineering courses are offered in the areas of signal processing, imaging, robotics, control systems, VLSI, electronic circuits and manufacturing, parallel processing, network and data communication, software engineering, and embedded systems design. The Department of Electrical and Computer Engineering groups these and other allowable courses into several areas of specialization. An electrical and computer engineering student should file a plan of study with an academic advisor in either the fifth or sixth semester to decide how to select these electives.

The Department of Electrical and Computer Engineering has expanded its upper-level elective courses in the biomedical engineering field. Thus students may both obtain a professional B.S.E.E. degree and prepare themselves for medical or dental school, with only a slight increase in the number of credit hours required for the basic B.S.E.E. degree. These courses are presently taught with the ECE 495 variable-topics designation and are announced in the printed class schedule each semester. Descriptions of experimental courses are not given in the bulletin, but the descriptions are available from the registrar each semester.

ECE Elective Courses

ECE 305 Semiconductor Devices
ECE 321 Electromechanical Motion Devices
ECE 359 Data Structures
ECE 365 Introduction to the Design of Digital Computers
ECE 369 Discrete Mathematics for Computer Engineers
ECE 410 Introduction of Digital Signal Processing
ECE 411 Advanced Digital Signal Processing
ECE 424 Electromechanical Systems and Applied Mechatronics
ECE 427 Power Electronics
ECE 446 Digital Computational Techniques for Electronic Circuits
ECE 449 Design of Analog and Digital Filters
ECE 455 Integrated Circuit Engineering
ECE 456 Advanced Integrated Circuit Engineering
ECE 468 Introduction to Compilers and Translation
ECE 469 Operating Systems Engineering
ECE 471 Embedded Microcontrollers
ECE 483 Digital Control System Analysis and Design
ECE 489 Introduction to Robotics
ECE 491 Engineering Design Projects
ECE 495 Selected Topics in Electrical Engineering*
ECE 496 Electrical Engineering Design Projects
Any 500-level EE course

*Course ECE 495 Selected Topics in Electrical Engineering is used to offer new courses usually every semester. Below is a list of titles offered since 1999:

Multimedia Applications
Software Engineering and Embedded Microsystems
Impact of Computer Architecture on Performance
Electrical Fundamentals of Electric Vehicles
Biomedical Instrumentation
Electromechanical Systems and Applied Mechatronics
Digital Signal Processor System Design
Digital Communications
Parallel Processor Theory
Introduction to Computer Communication Networks
Advanced Multimedia and Mobile Communications

Science Elective Courses

BIOL K101 Concepts of Biology I
BIOL K103 Concepts of Biology II
BIOL K324 Cell Biology
CHEM C106 Principles of Chemistry II
CHEM C310 Analytical Chemistry
CHEM C341 Organic Chemistry I
CHEM C360 Elementary Physical Chemistry
CHEM C361 Physical Chemistry of Bulk Matter
CHEM C362 Physical Chemistry of Molecules
PHYS 310 Intermediate Mechanics
PHYS 342 Modern Physics
PHYS 400 Physical Optics
PHYS 442 Quantum Mechanics
PHYS 520 Mathematical Physics
PHYS 530 Electricity and Magnetism
PHYS 545 Solid State Physics
PHYS 550 Introduction to Quantum Mechanics

Technical Elective Courses

Any non-required ECE or CmpE elective course.

CSCI 437 Introduction to Computer Graphics
MATH 351 Elementary Linear Algebra or
MATH 511 Linear Algebra with Applications
MATH 510 Vector Calculus
MATH 520 Boundary Value Problems of Differential Equations
MATH 523 Introduction to Partial Differential Equations
MATH 525 Introduction to Complex Analysis
MATH 526 Principles of Mathematical Modeling
MATH 527 Advanced Mathematics for Engineering and Physics I
MATH 528 Advanced Mathematics for Engineering and Physics II
MATH 530 Functions of a Complex Variable I
MATH 531 Functions of a Complex Variable II
MATH 544 Real Analysis and Measure Theory
ME 200 Thermodynamics I
ME 270 Basic Mechanics I
ME 272 Mechanics of Materials
ME 274 Basic Mechanics II
ME 301 Thermodynamics II
MSE 345 Introduction to Engineering Materials

Bachelor of Science in Computer Engineering

The objective of the Bachelor of Science in Computer Engineering (B.S.Cmp.E.) degree curriculum is an in-depth education in the analytical skills, hardware, and software aspects of modern computer systems. The program builds on a strong foundation in engineering design, including traditional analog and digital circuit design. The three main areas of emphasis within the computer-engineering program are embedded systems, telecommunication and networking, software engineering, and distributed computing. Extensive laboratory experiences support the theoretical aspects of the course work. Students gain valuable digital hardware design and software design experiences throughout the curriculum. The junior and senior year strengthen the student's expertise with courses in data structure, embedded systems, computer architecture, parallel, and advanced digital systems.

The minimum number of credit hours for graduation is 127, distributed as follows for each discipline:

1. Mathematics and Physical Sciences	
a. Calculus: MATH 163, 164, 261,	18
and 262	
b. Chemistry: CHEM C105	3
c. Physics: PHYS 152 and 251	9
2. Communications and Ethics	
a. Speech: COMM R110	3
b. Writing: ENG W131	3
c. Communication in Engineering Practice: TCM 360	2
d. Engineering Ethics and Professionalism: ECE 400 and 401	2
3. Humanities and Social Sciences	
a. Electives	15
4. Freshman Engineering Courses	
a. Introduction to the Engineering Profession: ENGR 195	1
b. Introduction to Engineering: ENGR 196	3
c. Programming Concepts: ENGR 197	3
5. Engineering Science	
a. Circuits: ECE 201, 202, and 207	7
b. Systems and Fields: ECE 301, 302	6
6. Engineering Design	
a. Electronics: ECE 208 and 255	4
b. Digital Systems: ECE 266, 267, 362, and 365	11
c. Capstone Design: ECE 492	3
7. Computer Science	
a. Computing II: ECE 264 and CSCI 490	4
b. Advanced Programming: CSCI 265	3
c. Discrete Computational Structures: ECE 369	3
d. Data Structures: ECE 359	3
8. CmpE Electives	15
9. Science/Technology Electives	3
10. Unrestricted Electives	3

Semester by semester, the 127 total credit hours should be distributed like this:

Freshman Year**First Semester**

 MATH 527 Advanced Mathematics for Engineering and Physics I
 MATH 528 Advanced Mathematics for Engineering and Physics II
 MATH 530 Functions of a Complex Variable I
 MATH 531 Functions of a Complex Variable II
 MATH 544 Real Analysis and Measure Theory
 ME 200 Thermodynamics I
 ME 270 Basic Mechanics I
 ME 272 Mechanics of Materials
 ME 274 Basic Mechanics II
 ME 301 Thermodynamics II
 MSE 345 Introduction to Engineering Materials

* Course ECE 495 Selected Topics in Electrical Engineering is used to offer new courses usually every semester. Below is a list of titles offered since 1999:

Multimedia Applications
 Software Engineering and Embedded Microsystems
 Impact of Computer Architecture on Performance
 Electrical Fundamentals of Electric Vehicles
 Biomedical Instrumentation
 Electromechanical Systems and Applied Mechatronics
 Digital Signal Processor System Design
 Digital Communications
 Parallel Processor Theory
 Introduction to Computer Communication Networks
 Advanced Multimedia and Mobile Communications

Bachelor of Science in Engineering—Interdisciplinary Engineering

The Electrical and Computer Engineering Department offers a Bachelor of Science in Engineering (B.S.E.) degree program for students wishing to supplement a strong core curriculum in electrical and computer engineering science and design with courses from mathematics, science, business, biomedicine, or another engineering discipline. While not ABET accredited, the B.S.E. degree program offers the student greater flexibility to create a plan of study to accommodate broad interdisciplinary interests and objectives. The plan coincides with the traditional B.S.E.E. curriculum through the sophomore year and then diverges to include ECE electives and courses from interdisciplinary areas in the remainder of the curriculum.

The minimum number of credit hours for graduation is 126, distributed as follows for each discipline:

- | | |
|---|------------|
| 1. Mathematics and Physical Sciences | |
| a. Calculus: MATH 163, 164, 261, and 262 | 18 |
| b. Chemistry: CHEM C105 and C106 | 6 |
| c. Physics: PHYS 152 and 251 | 9 |
| 2. Communications and Ethics | |
| a. Speech: COMM R110 | 3 |
| b. Writing: ENG W131 | 3 |
| c. Communication in Engineering Practice: TCM 360 | 2 |
| d. Engineering Ethics and Professionalism: ECE 400 and 401 | 2 |
| 3. Humanities and Social Sciences | |
| a. Electives | 15 |
| 4. Freshman Engineering Courses | |
| a. Introduction to the Engineering Profession: ENGR 195 | 1 |
| b. Introduction to Engineering: ENGR 196 | 3 |
| c. Programming Concepts: ENGR 197 | 3 |
| 5. Electrical Engineering Courses | |
| a. ECE Core: ECE 201, 202, 207, 208, 255, 266, 267, 301, and 362 | 22 |
| b. ECE Electives (any ECE 300-, 400-, or 500-level course) | 12 |
| 6. Technical Elective Course | 3 |
| 7. Interdisciplinary Area | |
| a. Core Requirements | 12 |
| b. Core Electives | 12 |
| | 126 |

The remainder of the Interdisciplinary plan of study is individualized. You should speak to your academic advisor regarding your course selection.

Graduate Programs in Electrical and Computer Engineering

You can earn the Master of Science in Electrical and Computer Engineering (M.S.E.C.E.), Master of Science in Engineering (M.S.E.), and the Master of Science in Biomedical Engineering (M.S.Bm.E.) through the Department of Electrical and Computer Engineering at the Purdue School of Engineering and Technology at IUPUI. The M.S.E.C.E. degree is organized into several areas of study, including computer engineering, controls and automation, communication, and signal processing, and biomedical engineering while the M.S.E. degree is interdisciplinary in nature and is primarily for non-electrical engineering undergraduates. Qualified students may be authorized to pursue the Ph.D. degree in electrical and computer engineering or mechanical engineering at IUPUI. Programs leading to the Ph.D. in electrical engineering and in mechanical engineering are administered with the respective approval of the School of Electrical Engineering and the School of Mechanical Engineering at Purdue University, West Lafayette.

Department of Mechanical Engineering

Professors Akay (*Chair*), J. Chen, Ecer, Paydar, Pidaparti, Turner

Associate Professors Afolabi, Hsu, Katona

Assistant Professors El-Mounayri, Lamm, Nalim, Yokota

Adjunct Faculty Periaux, Oshida, Roberts

The Department of Mechanical Engineering offers programs at the bachelor's, master's, and doctoral levels. At the bachelor's level, programs described here lead to the Bachelor of Science in Mechanical Engineering (B.S.M.E.) and to the Bachelor of Science in Engineering (B.S.E.), an interdisciplinary degree. Students enrolled in the department study under full-time faculty actively engaged in research in a variety of areas: biomechanics, combustion, composites, computational fluid dynamics, computer-aided design, control, elasticity, experimental mechanics, fluid mechanics, finite element methods, fracture, heat transfer, manufacturing, robotics, solid and structural mechanics, stress analysis, turbomachinery, and vibration. Part-time employment is available to students in the research laboratories of the department. Such experience enhances course work and is particularly valuable to those who later undertake graduate study.

For more information, contact the Department of Mechanical Engineering at (317) 274-9717.

Bachelor of Science in Mechanical Engineering

Accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc. (ABET), 111

Market Place, Suite 1050, Baltimore, MD 21202,
(410) 347-7700.

Mechanical engineering has its foundation in the basic sciences, including mathematics, physics, and chemistry, and requires an understanding of such areas as solid and fluid mechanics, materials, thermodynamics, heat and mass transfer, manufacturing processes, instrumentation, and control. Mechanical engineers are engaged in a variety of activities including design, manufacturing, research, development, testing, construction, operations, sales, management, consulting, and teaching.

The mechanical engineering curriculum provides a broad base on which to build an engineering career. Traditional subjects in mechanical engineering are complemented by extensive computer experience in such areas as computer-aided design and numerical problem solving. The program's flexibility allows students to specialize in their area of interest through the choosing of electives.

The number of credit hours required for graduation is 130, distributed as follows for each discipline:

1. Mathematics and Physical Sciences	
a. Calculus: MATH 163, 164, 261, and 262	18
b. Chemistry: CHEM C105	3
c. Physics: PHYS 152 and 251	9
d. Science Elective	3
2. Communications and Ethics	
a. Speech: COMM R110	3
b. Writing: ENG W131	3
c. Communication in Engineering Practice: TCM 360	2
d. Engineering Ethics and Professionalism: ME 401	1
3. Humanities and Social Sciences	
a. Economics: ECON E201	3
b. Electives	15
4. Freshman Engineering Courses	
a. Introduction to the Engineering Profession: ENGR 195	1
b. Introduction to Engineering: ENGR 196	3
c. Introduction to Programming Concepts: ENGR 197	3
5. Mechanics and Materials	
a. Mechanics: ME 270 and ME 274	6
b. Materials: ME 272 and MSE 345	7
6. Design	
a. Mechanical Design: ME 262 and 372	7
b. Engineering Design: ME 462	4
7. Thermal Sciences	
a. Thermodynamics: ME 200	3
b. Fluid Mechanics: ME 310	4
c. Heat and Mass Transfer: ME 314	4
8. Electrical Engineering, Instrumentation, and Control	
a. Electrical Engineering: ECE 201 and 207	4
b. Systems, Instrumentation, and Control: ME 330, 340, and 482	9
9. Technical Electives	
a. Mechanical Engineering Electives	12
b. Elective	3
	130

Semester by semester, the 130 total credit hours should be distributed like this:

Freshman Year

First Semester

ENGR 195 Introduction to the Engineering Profession	1
ENGR 196 Introduction to Engineering	3
CHEM C105 Chemical Science I	3
COMM R110 Fundamentals of Speech Communication	3
MATH 163 Integrated Calculus and Analytic Geometry I	5
	15

Second Semester

Graduate Programs in Mechanical Engineering

The Department of Mechanical Engineering has an outstanding and up-to-date engineering faculty with expertise and research interests in the areas of advanced manufacturing, biomechanics, composites, computational fluid dynamics, computer-aided design, computer-aided manufacturing, combustion, controls, elasticity, fluid mechanics, finite element analysis, fracture, heat transfer, robotics, solid and structural mechanics, stress analysis, and turbomachinery. The department offers graduate programs of study that lead to the degrees of Master Science (M.S.), Master of Science in Engineering (M.S.E.), and Master of Science in Mechanical Engineering (M.S.M.E.). Qualified students may be authorized to pursue the Ph.D. degree in mechanical engineering at IUPUI. The program leading to the Ph.D. in mechanical engineering is administered with the approval of the School of Mechanical Engineering at Purdue University, West Lafayette.

Bachelor of Science in Engineering—Interdisciplinary Engineering

Interdisciplinary engineering provides an opportunity for students whose interests and talents, while oriented toward engineering and science, do not coincide with the plans of study previously outlined in this section. Interdisciplinary engineering does not have a designated professional curriculum, but it is constituted to accommodate a degree objective with broad flexibility and opportunity for interdisciplinary studies.

Students cooperate with their faculty advisors to develop a personalized plan of study leading to the Bachelor of Science in Engineering (B.S.E.) degree with interdisciplinary engineering identified as the major field of study. The Department of Mechanical Engineering has prepared plans of study with such major program areas as bioengineering and

engineering management. A description of the engineering management program follows. For information about other available options, please consult faculty in the Department of Mechanical Engineering.

Bachelor of Science in Engineering—Engineering Management

The School of Engineering and Technology and the Indiana University School of Business offer a joint program in engineering management. This program prepares students to begin careers that may lead to administrative or management positions in technological, engineering, or manufacturing operations. The program also prepares students for careers in large nontechnological organizations such as financial institutions, which may require skills generally associated with both engineering and business. The engineering management program provides a solid background in both engineering and management. To complete the graduation requirements, students take courses in electrical, industrial, and mechanical engineering, as well as accounting, business law, economics, finance, marketing, and management.

Students who finish this four-year degree have several options for continuing their education. With approximately three additional semesters of study, they can also complete an undergraduate program in industrial, electrical, or mechanical engineering. With approximately six additional undergraduate courses they can enroll in a master's degree program in industrial, electrical, or mechanical engineering. They may also apply for direct admission to law school. Students interested in any of these options for continued education should consult their advisors when determining their plans of study.

The number of credit hours required for graduation is 133, distributed as follows for each discipline:

1. Mathematics and Physical Sciences	
a. Calculus: MATH 163, 164, 261, and 262	18
b. Chemistry: CHEM C105	3
c. Physics: PHYS 152 and 251	9
2. Communications and Ethics	
a. Speech: COMM R110	3
b. Writing: ENG W131	3
c. Communication in Engineering Practice: TCM 360	2
d. Engineering Ethics and Professionalism: ME 401	1
3. Humanities and Social Sciences	
a. Sociology: SOC R100	3
b. Psychology: PSY B104	3
c. Electives	6
4. Freshman Engineering Courses	
a. Introduction to Engineering Concepts: ENGR 195	1
b. Introduction to Engineering: ENGR 196	3
c. Introduction to Programming Concepts: ENGR 197	3

5. Engineering Courses	
a. Electrical Engineering: ECE 201, 207, and 266	7
b. General Engineering	12
c. Mechanical Engineering: ME 200, 270, 272, 274, and 330	16
d. Materials: MSE 345	3
6. Economics: ECON E201, E202, and E270	9
7. Business	
a. Accounting: BUS A100, A201, and A202	7
b. Business Law: BUS L203	3
c. Finance: BUS F301	3
d. Management: BUS Z302	3
e. Marketing: BUS M301	3
f. Operations and System Management: BUS P301 and BUS P490	6
g. Computer: BUS K201	3

Bachelor of Science in Engineering—Biomedical Engineering

Biomedical engineering is a discipline that advances knowledge in engineering, biology, and medicine, and improves human health through cross-disciplinary activities that integrate the engineering sciences with the biomedical sciences and clinical practice. Biomedical Engineering is a vibrant and rapidly expanding field both in content and opportunities. As our technological infrastructure expands and our fundamental knowledge in the life sciences is now at the basic molecular level, biomedical engineers are poised to continue to make major advances.

Within the context of the Interdisciplinary Degree in Engineering (IDE), several plans of study have been developed to provide the student with a breadth of courses in one of the traditional engineering disciplines (electrical, computer, or mechanical) and a breadth of study in the sciences. This will allow a student to have a highly attractive degree program that combines engineering methods and problem-solving skills with a significant knowledge base in chemistry, physics, and biology. Thus, students may focus their engineering knowledge to problems in biology or chemistry.

This broadly based educational program is especially suited for pre-professional schools such as medicine, dentistry, or law as well as graduate programs in the medical sciences and biomedical engineering. Companies whose product lines cross the scientific and technical fields, such as pharmaceutical companies and medical device companies, may also find the degree attractive. Because of the high entrance requirements for many of these options, students should work closely with an academic advisor in developing their plan of study as well as monitoring their progress through the plan of study. Only students with strong academic backgrounds

should consider the Biomedical Engineering option in pursuing the B.S.E. degree.

Graduate Programs in Biomedical Engineering

Biomedical engineering is an interdisciplinary program that is a joint effort of the Purdue School of Engineering and Technology, the Purdue School of Science, and the Indiana University schools of Medicine and Dentistry on the Indiana University-Purdue University at Indianapolis (IUPUI). In addition to these participating academic units, the program operates in close collaboration with several centers and facilities on campus, and with the Department of Biomedical Engineering at Purdue University, West Lafayette.

Students interested in the M.S.Bm.E. degree should apply directly to the Graduate Programs Office of the Purdue School of Engineering and Technology in Indianapolis. Students with a master's degree or who are solely interested in the Ph.D. degree will apply to the Department of Biomedical Engineering at West Lafayette, even though they may be resident and study on the Indianapolis campus.

Engineering Course Descriptions

Key to Course Descriptions

The courses listed in this section will, for the most part, be offered during the 2002-04 academic years. Additional information about course schedules may be obtained from the specific departments in the school. Courses are grouped under their program subject abbreviation. Course descriptions may contain the following information, in this order: course number, course title, number of credit hours (in parentheses), number of hours of lecture per week, number of laboratory hours per week, number of hours per week for recitation (group discussion and problem solving), and prerequisites (P) and/or corequisites (C), followed by the course description. For example, under Electrical and Computer Engineering (ECE), a course description reads:

ECE 202 Linear Circuit Analysis II (3 cr.) Class 3. P: ECE 201. P or C: MATH 262. Continuation of ECE 201. Use of computer-aided design programs. Complex frequency plane, resonance, scaling, and coupled circuits. Two-port network parameters. Laplace transform methods. Use of trees, general loop and nodal equations, matrix formulations.

This listing indicates that the course number is ECE 202 with the title "Linear Circuit Analysis II" (a continuation of ECE 201). It's worth 3 credit hours. The class meets 3 hours a week for lectures. A required prerequisite course (i.e., a course that must be completed before taking ECE 202) is ECE 201. Another prerequisite or corequisite (i.e., a course that must be completed at the same time as ECE 202, if not sooner) is MATH 262. A brief course description then follows.

Please refer to the bulletin of the Purdue University Graduate School for descriptions of graduate courses not appearing in the following lists.

Electrical and Computer Engineering (ECE)

ECE 201 Linear Circuit Analysis I (3 cr.) Class 3. P or C: MATH 261 and PHYS 251. Recommended C: ECE 207. Volt-ampere characteristics for circuit elements; independent and dependent sources; Kirchhoff's laws and circuit equations. Source transformations; Thevenin's and Norton's theorems; superposition. Transient response of resistor capacitor (RC), resistor inductor (RL), and resistor inductor capacitor (RLC) circuits; sinusoidal steady-state and impedance. Instantaneous and average power.

ECE 202 Linear Circuit Analysis II (3 cr.) Class 3. P: ECE 201. P or C: MATH 262. Continuation of ECE 201. Use of computer-aided design programs. Complex frequency plane, resonance, scaling, and coupled circuits. Two-port network parameters. Laplace transform methods. Use of trees, general loop and nodal equations, matrix formulations.

ECE 207 Electronic Measurement Techniques (1 cr.) Lab 3. P or C: ECE 201. Experimental exercises in the use of laboratory instruments. Voltage, current, impedance, frequency, and waveform measurements. Frequency and transient response. Use of operational amplifiers in instrumentation systems.

ECE 208 Electronic Devices and Design Laboratory (1 cr.) Lab 3. P: ECE 207. C: ECE 255. Laboratory experiments in design and measurement with analog devices. Applications include single-stage and multistage bipolar and FET amplifiers, operational amplifier applications, differential amplifiers, and active filters.

ECE 255 Introduction to Electronics Analysis and Design (3 cr.) Class 3. P: ECE 201. Recommended C: ECE 208. Diode, bipolar transistor, and field effect transistor (FET) circuit models for the design and analysis of electronic circuits. Single-stage and multistage analysis and design. Computer-aided design calculations, amplifier operating point design and frequency response of single and multistage amplifiers. High frequency and low frequency designs are emphasized.

ECE 264 Advanced C Programming (2 cr.) Class 2. P: A basic knowledge of the UNIX operating system and an introductory C programming course. C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures.

ECE 266 Digital Logic Design (3 cr.) Class 3. P or C: ECE 201. Introduction to logic design, with emphasis on practical design techniques and circuit implementation. Topics include Boolean algebra; theory of logic functions; mapping techniques and function minimization; logic equivalent circuits and symbol transformations; transistor-transistor-logic (TTL)/metal oxide semi-conductor (MOS) logic into gate implementations; electrical characteristics; propagation

delays; signed number notations and arithmetic; binary and decimal arithmetic logic circuits; theory of sequential circuits; timing diagrams; analysis and synthesis of SR-, D-, T-, and JK-based sequential circuits; clock generation circuits; algorithmic state machine method of designing sequential circuits.

ECE 267 Digital Logic Design Laboratory (1 cr.) Lab 3. P: ECE 207. C: ECE 266. A series of logic circuit experiments using TTL integrated circuits. Designed to reinforce material presented in ECE 266 lecture.

ECE 301 Signals and Systems (3 cr.) Class 3. P: ECE 202 and MATH 262. Signal and system representation. Fourier series and transforms, sampling and discrete Fourier transforms. Discrete-time systems, difference equation, Z-transforms. State equations, stability, characteristic values and vectors. Continuous-time systems, time and frequency domain analysis. Continuous systems with sampled inputs.

ECE 302 Probabilistic Methods in Electrical Engineering (3 cr.) Class 3. P or C: ECE 301. An introductory treatment of probability theory, including distribution and density functions, moments, and random variables. Applications of normal and exponential distributions. Estimation of means and variances. Hypothesis testing and linear regression. Introduction to random processes, correlation functions, spectral density functions, and response of linear systems to random inputs.

ECE 305 Semiconductor Devices (3 cr.) Class 3. P: ECE 255, MATH 262, and PHYS 251. Materials- and phenomena-based examination of devices, emphasizing the how and why of solid-state device operation.

ECE 311 Electric and Magnetic Fields (3 cr.) Class 3. P: MATH 262 and PHYS 251. Continued study of vector calculus, electrostatics, and magnetostatics. Maxwell's equations, introduction to electromagnetic waves, transmission lines, and radiation from antennas. Students may not receive credit for both ECE 311 and PHYS 330.

ECE 321 Principles of Electromechanical Energy Conversion (3 cr.) Class 3. P: ECE 202. C: ECE 311. The general theory of electromechanical motion devices relating to electric variables and electromagnetic forces. Basic concepts and operational behavior of DC, induction, brushless DC, and stepper motors used in control applications.

ECE 340 Simulation, Modeling, and Identification (3 cr.) Class 2, Lab 3. P: ECE 207 and ECE 301. Investigation and evaluation of design problems through simulation of systems described by ordinary differential and difference equations. Development of simulation models from physical parameters and from experimental data. Topics include continuous, discrete, and hybrid models of electrical, mechanical, and biological systems. Laboratory experiences demonstrate concepts studied in text and lecture.

ECE 359 Data Structures (3 cr.) Class 3. P: ENGR 197. An introductory course in computer engineering, with emphasis on data structure and program design using the C language. The classical concepts of structured programming such as stack, queue, linked list, tree, recursion, sorting, and searching.

Applications of structured programming in engineering.

ECE 362 Microprocessor Systems and Interfacing (4 cr.) Class 3, Lab 3. P: ENGR 197, ECE 266, and ECE 267. An introduction to basic computer organizations, microprocessor instruction sets, assembly language programming, the design of various types of digital as well as analog interfaces, and microprocessor system design considerations. Laboratory provides practical hands-on experience with microprocessor software application and interfacing techniques. Design and implementation of a simple three-bus computer; detailed study of a particular microcomputer architecture and instruction set (Motorola 6809); assembly language programming techniques; system control signals and I/O port design and handshaking protocols; interrupt control systems; LSI parallel and serial interfaces; analog data and control interfaces.

ECE 365 Introduction to the Design of Digital Computers (3 cr.) Class 3. P: ECE 362. The hardware organization of computer systems: instruction set selection, arithmetic/logic unit design, hardwired and microprogrammed control schemes, memory organization, I/O interface design. Computer simulation of digital systems.

ECE 369 Discrete Mathematics for Computer Engineering (3 cr.) Class 3. P: ECE 266. Introduction to discrete mathematical structure and finite-state machines. Topics include foundation of discrete mathematics, groups and semi-groups, group codes in computer systems, basic model of finite-state machines, state and machine identification experiments, regular expressions, and complexity.

ECE 382 Feedback System Analysis and Design (3 cr.) Class 3. P: ECE 301 or ME 330 or equivalent. Classical concepts of feedback system analysis and associated compensation techniques. In particular, the root locus, Bode diagram, and Nyquist criterion are used as determinants of stability.

ECE 400 Electrical Engineering Undergraduate Seminar (1 cr.) Class 2. P: Senior standing in electrical engineering. A lecture-demonstration series on electrical and electronic devices, procedures, systems, and career topics.

ECE 401 Engineering Ethics and Professionalism (1 cr.) Class 1. P: Senior standing. Some ethical, social, political, legal, and ecological issues that practicing engineers may encounter. (ECE 401 and ME 401 are cross-listed courses; students may not get credit for both ECE 401 and ME 401.)

ECE 410 Introduction to Digital Signal Processing (3 cr.) Class 2, Lab 3. P: ECE 301. P or C: ECE 362. An introductory treatment of digital signal processing algorithms and implementation using high-speed digital signal processors. Sampling, architecture, addressing modes and instruction set of digital signal processors, discrete Fourier transform, fast Fourier transform, and digital filtering.

ECE 411 Advanced Techniques in Digital Signal Processing (3 cr.) Class 2, Recitation 2. P: ECE 302. P or C: ECE 410. Theory and algorithms for processing stochastic signals. Review of discrete-time transforms and stochastic process. Introduction to

optimum and adaptive filtering, and to classical and modern spectral analysis.

ECE 417 Multimedia Applications (3 cr.) Class 3. P: ECE 301 and ECE 365. An introductory treatment of multimedia algorithms and implementation using high-speed multimedia processors. Detailed discussion of architecture, addressing modes and instruction set of multimedia processors, entropy coding, transform coding, speech compression, image compression, and video compression.

ECE 427 Semiconductor Power Electronics (3 cr.) Class 2, Lab 3. P: ECE 255 and ECE 301. Introduction to power semiconductor devices, characteristics, and ratings. Emphasis on analysis and design of circuits with power semiconductors and associated devices. Power rectification, inversion, AC-to-AC power control, firing circuits, and microcomputer control of power circuits.

ECE 440 Transmission of Information (4 cr.) Class 3, Lab 3. P: ECE 301 and 302. Analysis and design of analog and digital communication systems. Emphasis on engineering applications of theory to communication system design. The laboratory introduces the use of advanced engineering workstations in the design and testing of communication systems.

ECE 446 Digital Computational Techniques for Electronic Circuits (3 cr.) Class 3. P: ENGR 197, ECE 301. Algorithmic and computational aspects of electronic circuit analysis, both linear and nonlinear. Numerical methods such as Newton-Raphson and various integration formulas. Sparse matrices and implicit integration techniques. Worst-case and tolerance analysis.

ECE 455 Integrated Circuit Engineering (3 cr.) Class 3. P: ECE 202 and ECE 255. Recommended P or C: ECE 305. Analysis, design, and fabrication of silicon, thin-film, and thick-film integrated circuits. Consideration of circuit design, layout, and fabrication techniques for integrated circuits. Circuit simulation studies aided by SPICE II software system. Integrated operational amplifiers and logic gates (TTL, I²L, MOS, and CMOS).

ECE 456 Advanced Integrated Circuit Engineering (3 cr.) Class 3. P: ECE 455. A continuation of ECE 455, with similar topics treated in greater depth. Additional material on epitaxy, sputtering, diffusion schedules, DMOS, VMOS, SOS, FET op-amps, Gummel-Poon models, threshold logic, flip-flops, and semiconductor memories is included. SPICE II simulations using macro models.

ECE 468 Introduction to Compilers and Translation Engineering (3 cr.) Class 3. P: ECE 359, ECE 362, and ECE 365. Design and construction of compilers and other translators. Compilation goals, organization of a translator, grammars and languages, symbol tables, lexical analysis, syntax analysis (parsing), error handling, intermediate and final code generation, assemblers, interpreters, and an introduction to optimization/parallelization. Emphasis on engineering, from scratch, a compiler or interpreter for a small programming language, typically a C or Pascal subset. Projects involve implementation (and documentation) of such a system using C on UNIX.

ECE 469 Operating Systems Engineering (3 cr.) Class 3. P: ECE 359, ECE 365. Design and construction of modern operating systems. Basic process concepts in multiprogrammed computer systems, including concurrency, scheduling, resource sharing, synchronization, deadlock, mutual exclusion, and protection. The engineering of operating systems involving detailed examination and modification of an existing operating system, UNIX. Presentation of analytic modeling and performance evaluation techniques. Case studies of existing operating systems. A substantial part of the course involves projects, centered on modification of UNIX, that support concepts of OS design and construction, including primary and secondary storage management, file systems, I/O subsystems, CPU scheduling, and disk scheduling.

ECE 471 Embedded Microcontroller, Microprocessor, and DSP-Based Systems (3 cr.) Class 3. P: ECE 362, ENGR 197. A structured approach to the development and integration of embedded microcontroller/microprocessor/DSP-based systems. The course provides students with design experience of embedded systems. The course covers the microprocessor selection, the configuration of peripheral components, and the hardware abstraction techniques. The course also covers the C programming techniques for embedded systems and using a fixed point microprocessor for floating point calculations.

ECE 483 Digital Control System Analysis and Design (3 cr.) Class 3. P: ECE 382. An introduction to real-time computer-controlled systems analysis and design in both frequency domain and state space. Sampling theory and its effect on digital control design. Implementation, application, and industrial practice of digital control using digital signal processors and other microprocessors. Matlab/Simulink and its toolboxes are used. Regular computer and lab assignments; final design project required.

ECE 489 Introduction to Robotics (3 cr.) Class 3. P or C: ECE 382. Homogeneous transformations; kinematics of manipulator arms; dynamic equations using Newton-Euler and Euler-Lagrange formulations; inverse kinematics; trajectory generation; task planning; manipulator control; robot languages; robot sensing and vision; and industrial applications of robots. Lab experiments and final project are required.

ECE 491 Engineering Design Project (1-2 cr.) P: Senior standing and consent of a faculty sponsor. The student selects an engineering design project and works under the direction of the faculty sponsor. Suitable projects may be from the local industrial, municipal, state, and educational communities. May be repeated for a maximum of 4 credit hours.

ECE 492 Senior Design (3 cr.) Class 1, Lab 5. P: Senior standing and consent of department chair. General design methodology, consideration of alternative solutions, and project planning in design. Influence of safety, reliability, economics, and aesthetics on design of engineering systems. Interpretation of specifications and requests for proposals. Early in the course, teams of students will

be assigned a major design problem that will be the focus throughout the course. Oral presentation and report writing required.

ECE 495 Selected Topics in Electrical Engineering (1-4 cr.)

ECE 496 Electrical Engineering Projects P: Consent of instructor. Hours and credits to be arranged.

ECE 522 Problems in the Measurement of Physiological Events (3 cr.) Class 3. P: Consent of instructor. Lectures devoted to the methods used to measure physiological events with demonstrations and laboratory exercises to emphasize the practical aspects of quantitative measurements on living subjects. The systems covered are cardiovascular, respiratory, central and peripheral nervous, gastrointestinal, and renal.

ECE 536 Introduction to Computational Intelligence (3 cr.) Class 3. P: C programming; graduate standing or permission of instructor. Basic concepts in theory and paradigms for neural networks, evolutionary computation, and fuzzy logic; algorithms and applications for hybrids of these tools known as computational intelligence are explored. Topics include artificial neural networks, fuzzy systems, and evolutionary computation. Implementations of a number of paradigms are presented, including particle swarm optimization. Applications to various areas such as biomedical engineering and non-linear control are examined.

ECE 537 Multimedia Applications (3 cr.) Class 2, Lab 2. P: ECE 301 and ECE 362. Treatment of multimedia algorithms and implementation using high-speed multimedia processors. Detailed discussion of entropy coding, transform coding, speech compression, image compression, video compression and architecture, addressing modes, and instruction set of multimedia processors.

ECE 538 Digital Signal Processing I (3 cr.) Class 3. P: ECE 301 and ECE 302 or equivalent. Theory and algorithms for processing of deterministic and stochastic signals. Topics include discrete signals, systems, transforms, linear filtering, fast Fourier transforms, nonlinear filtering, spectrum estimation, linear prediction, adaptive filtering, and array signal processing.

ECE 544 Digital Communications (3 cr.) Class 3. P: ECE 440 or graduate standing. Introduction to digital communication systems and spread spectrum communications. Analog message digitization, signal space representation of digital signals, binary and M-ary signaling methods, detection of binary and M-ary signals, comparison of digital communication systems in terms of signal energy and signal bandwidth requirements. The principal types of spread-spectrum systems are analyzed and compared. Application of spread spectrum to multiple-access systems and to secure communication systems is discussed.

ECE 546 Digital Computational Techniques for Electronic Circuits (3 cr.) Class 3. P: ECE 255 and 301 or graduate standing. Digital computer methods for DC, AC, and transient analysis of electronic circuits. Linear, nonlinear, and piecewise linear dynamic circuits. Actual usage of programs ECAP,

SPICE, CORNAP, and SNAP in course work along with study of algorithms used in these programs.

ECE 547 Introduction to Computer Communication Networks (3 cr.) Class 3. P: ECE 302 or equivalent. A qualitative and quantitative study of issues in design, analysis, and operation of computer communication and telecommunication networks as they evolve toward the integrated networks of the future, employing both packet and circuit-switching technology. Packet and circuit switching, the OSI standards for architecture and protocols, elementary queuing theory for performance evaluation, random access techniques, local area networks, reliability and error recovery, and integrated networks.

ECE 554 Electronic Instrumentation and Control Circuits (3 cr.) Class 3. P: ECE 255 and ECE 301 or graduate standing. Analysis and design of special amplifiers, pulse circuits, operational circuits, DC amplifiers, and transducers used in instrumentation, control, and computation.

ECE 559 MOS VLSI Design (3 cr.) Class 3. P: ECE 305 and 365. Introduction to most aspects of large-scale MOS integrated circuit design, including device fabrication and modeling; useful circuit building blocks; system considerations; and algorithms to accomplish common tasks. Most circuits discussed are treated in detail, with particular attention given those whose regular and/or expandable structures are primary candidates for integration. All circuits are digital and are considered in the context of the silicon-gate MOS enhancement-depletion technology. Homework requires the use of existing IC mask layout software; term projects assigned.

ECE 563 Programming Parallel Machines (3 cr.) Class 3. P: ECE 264 and 463. Examines how to program parallel processing systems. Various parallel algorithms are presented to demonstrate different techniques for mapping tasks onto parallel machines. Parallel architectures to be considered are: SIMD (synchronous), MIMD (asynchronous), and mixed-mode (SIMD/MIMD hybrid). Machines that represent these classes to be used in the course are the MasPar MP-1 (SIMD); nCUBE 2 (MIMD); and PASM (mixed-mode). There will be three programming projects, one on each machine. The similarities and differences among the machines and their languages will be discussed.

ECE 565 Computer Architecture (3 cr.) Class 3. P: ECE 365 or graduate standing. An introduction to problems of designing and analyzing current machine architectures. Major topics include performance and cost analysis, pipeline processing, vector machines and numerical applications, hierarchical memory design, and multiprocessor architectures. A qualitative approach allowing a computer system designer to determine the extent to which a design goal is emphasized.

ECE 566 CISC Microprocessor System Design (3 cr.) Class 3. P: ECE 365 or equivalent. An overview of advanced-architecture CISC microprocessors and their associated support components, with emphasis on incorporating these devices into both general-purpose and embedded board-level designs for multi-microprocessor systems utilizing open-architecture

system buses. Survey of 32-bit CISC microprocessor, memory management, floating point support, advanced peripherals, PLD-base "glue logic" design, performance evaluation, IEEE-standard open-architecture system buses, and various pertinent interface and networking standards. Design experience is gained through a comprehensive, semester-long project.

ECE 569 Introduction to Robotic Systems (3 cr.) Class 3. P: ECE 382 Basic components of robotic systems; selection of coordinate frames; homogeneous transformations; solutions to kinematics of manipulator arms; velocity and force/torque relations; dynamic equations using Euler-Lagrange formulation; digital simulation of manipulator motion; motion planning; obstacle avoidance; controller design using torque method; and classical controllers for manipulators. Lab experiments and final project required.

ECE 570 Artificial Intelligence (3 cr.) Class 3. P: ECE 359 or equivalent. Basic understanding of data structures including the proper use of arrays, lists, trees, and queues. Understanding of searching and sorting concepts. Basic understanding of probability and statistics, including Bayes rule, statistical tests of significance, and normal distribution.

ECE 574 Software Engineering Methodology (3 cr.) Class 3 P: ECE 359 or equivalent. Life-cycle models, software planning, software analysis, software design including data flow and data structure design, software testing methods, and software documentation. Software design project required.

ECE 580 Optimization Methods for Systems and Control (3 cr.) Class 3. P: Consent of instructor or graduate standing. Introduction to optimization theory and methods, with applications in systems and control. Nonlinear unconstrained optimization, linear programming, nonlinear constrained optimization, various algorithms and search methods for optimizations, and their analysis. Examples from various engineering applications are given.

ECE 595 Selected Topics in Electrical Engineering Hours and credits to be arranged.

ECE 600 Random Variables and Signals (3 cr.) Class 3. P: ECE 440 or ECE 483 or graduate standing. Engineering applications of probability theory. Problems of events, independence, random variables, distribution and density functions, expectations, and characteristic functions. Dependence, correlation, and regression; multivariate Gaussian distribution. Stochastic processes, stationarity, ergodicity, correlation functions, spectral densities, random inputs to linear systems, Gaussian processes.

ECE 602 Lumped System Theory (3 cr.) Class 3. P: ECE 301. P or C: MATH 511 or consent of instructor. An investigation of basic theory and techniques of modern system theory, emphasizing linear state model formulations of continuous- and discrete-time systems in the time and frequency domains. Coverage includes notion of linearity, time invariance, discrete- and continuous-times state models, canonical forms, associated transfer functions and impulse response models, the state transition matrix, the Jordan form, controllability, observability, and stability.

ECE 604 Electromagnetic Field Theory (3 cr.) Class 3. P: ECE 311 or graduate standing. Review of general concepts (Maxwell's equations, materials interaction, boundary conditions, energy flow); statics (Laplace's equation, Poisson's equation); distributed parameter systems (classification of solutions, transmission lines, and waveguides); radiation and antennas (arrays, reciprocity, Huygen's principle); a selected special topic (e.g., magnetostatics, waves in anisotropic media, and optical fibers).

ECE 606 Solid-State Devices (3 cr.) Class 3. P: ECE 305, graduate standing or consent of instructor. A relatively broad, moderate-depth coverage of semiconductor devices and related topics. Semiconductor fundamentals required in the operational analysis of solid-state devices; detailed examination of the positive-negative (PN) junction diode and PN junction devices; heterojunction surface devices including Schottky diode, the MOS capacitor, and the MOSFET.

ECE 608 Computational Models and Methods (3 cr.) Class 3. P: ECE 359 or equivalent or consent of instructor. Computation models and techniques for the analysis of algorithm complexity. The design and complexity analysis of recursive and nonrecursive algorithms for searching, sorting, and set operations; graph algorithms; matrix multiplication; polynomial evaluation; FFT calculations; and NP-complete problems.

ECE 637 Digital Image Processing I (3 cr.) Class 3. P: ECE 302 and ECE 538, or equivalent. Introduction to digital image-processing techniques for enhancement, compression, restoration, reconstruction, and analysis. 2-D signals and systems; sampling and scanning; random fields; discrete cosine transform; discrete Karhunen-Loeve transform; grayscale transformations; linear, ranked order, and morphological filters; human vision, printing, and display of images; entropy-based compression; vector quantization; block truncation coding; transform coding; predictive coding; image degradation models; Wiener filter; constrained deconvolution; computed tomography; edge detection; shape representation; and segmentation.

ECE 645 Estimation Theory (3 cr.) Class 3. P: ECE 600. The basic estimation theory commonly applied in communications and signal-processing systems. Covers basic theory and concepts, linear estimation, and special topics. Applications in the communications sciences considered throughout.

ECE 649 Speech Processing by Computer (3 cr.) Class 3. P: ECE 301 (knowledge of basic digital signal processing: time and frequency domains, Fourier and Z-transforms, convolution, knowledge of C or FORTRAN on UNIX). Models of the vocal tract; identification and extraction of speech features; speech transmission and compression systems; the recognition of speech and speakers by computers; control of speech synthesizers. Computer project required.

ECE 668 Introduction to Artificial Intelligence (3 cr.) Class 3. P: ECE 600 or consent of instructor. This course consists of four parts: The first part deals with heuristic search and shows how problems involving search can be solved more efficiently by the

use of heuristics; how in some cases it is possible to discover heuristics automatically; knowledge representation and deduction, with emphasis on predicate calculus and associated concepts such as resolution and unification. The last part of the course will deal with the design of a small-scale reasoning framework using the paradigm of logic programming.

ECE 680 Modern Automatic Control (3 cr.) Class 3. P: ECE 602 or consent of instructor. Theoretical methods in optimal control theory. Topics include the calculus of variations and the Pontryagin minimum principle with applications to minimum energy problems. Geometric methods will be applied to the solution of minimum time problems. Computational methods, singular problems, observer theory, and sufficient conditions for existence of solutions are also discussed.

ECE 696 Advanced Electrical Engineering Projects (Variable Credit) Individual research projects to be approved by the supervising faculty member before registering for the course. An approved written report must be filed before credit is given. (This course cannot be used on a Ph.D. plan of study for the primary area.)

ECE 698 Research (M.S. thesis) (1-6 cr.) Research for M.S. thesis.

ECE Employment Enrichment Programs

ECE C199, C299, C399, C494 and C499 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and preparedness for an intended career with a business, industry, or government agency. A comprehensive written report on the co-op practice is required.

ECE I199, I299, I399, I494, I499 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's preparedness for entering an initial or second career. A comprehensive written report on the internship experience is required.

ECE E199, E299, E399, E494, E499 Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full- or part-time related employment enrichment experiences designed to enhance the student's academic program and preparedness for an intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

Freshman Engineering (ENGR)

ENGR 195 Selected Topics in Engineering I (0-3 cr.) Selected topics in general or interdisciplinary engineering.

ENGR 195 Introduction to the Engineering Profession (1 cr.) Class 1. P: None. This course introduces students to the engineering profession and to campus resources. The course is designed to help students develop essential communication and thinking skills along with the study and time-management skills needed for success in studying engineering. Collaborative techniques used in engineering practice are utilized.

ENGR 196 Introduction to Engineering (3 cr.) Class 2, Lab 2. C: MATH 151 or 154 or equivalent. An overview of the engineering profession and methodologies of engineering design. Students develop skills using computer-aided design and simulation software for engineering systems. Projects and homework are implemented and tested in a laboratory environment. The course also introduces the students to standard computer application software and university network and software resources.

ENGR 197 Introduction to Programming Concepts (3 cr.) Class 2, Lab 2. C: MATH 163. Basic concepts and applications of software programming for solving engineering problems. Topics include techniques for developing structured algorithms, data input and output, conditional statements, loops, recursion, subroutines, arrays, and elementary concepts in mathematical programming. Examples, homework, and applications of programming concepts make extensive use of Matlab and the C programming language.

Materials Engineering (MSE)

MSE 345 Introduction to Engineering Materials (3 cr.) Class 3. P: Junior standing in engineering. Introduction to the structure and properties of engineering materials, including metals, alloys, ceramics, plastics, and composites. Characteristics and processing affecting behavior of materials in service.

MSE 523 Physical Ceramics (3 cr.) Class 3. P: Graduate standing. Physical and chemical processes responsible for microstructure development in modern ceramic materials; relationship between microstructures and physical properties. Solid-state processes, including structural defects, diffusion, sintering and grain growth, reaction rates, nucleation and growth, and microstructure development; mechanical and thermal behavior, including deformation, strength, thermal properties, and thermal and compositional stresses; and electrical and magnetic behavior, including electrical conductivity, dielectric properties, and magnetic properties.

MSE 540 High Temperature Alloys (3 cr.) Class 3. P: Consent of instructor. Theory of alloying and relationship among temperature, structure, and mechanical properties in nickel, cobalt, and iron base alloys. Effects of thermomechanical processing. Analysis of microstructures by transmission electron microscopy, scanning electron microscopy, X-ray diffraction, and X-ray microprobe.

MSE 575 Transport Phenomena in Solids (3 cr.) Class 3. P: Senior standing in engineering or science.

Energetics and kinetics of phase change in metals and alloys. Nucleation and growth models, with special emphasis on role of crystal defects. Selected topics in multicomponent diffusion.

MSE 576 Corrosion (3 cr.) Class 3. P or C: CHEM 373 or MSE 345. Rate-controlling steps in electrode processes; activation, ohmic, and concentration polarization; passivation; potentiostatic studies and alloy design; applications to engineering systems.

MSE 597 Selected Topics in Materials Science and Materials Engineering Hours and credits to be arranged.

Mechanical Engineering (ME)

ME 200 Thermodynamics I (3 cr.) Class 3. P: PHYS 152, C: MATH 261. First and second laws, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

ME 262 Mechanical Design I (3 cr.) Class 2, Lab 2. P: ENGR 197 and ME 270. C: ME 274. The basic concepts of mechanical design are introduced with emphasis on use of computer-aided design techniques. Applications are chosen from the area of linkage and mechanism design. Lab involves implementation of computer techniques in solving mechanical design problems.

ME 270 Basic Mechanics I (3 cr.) Class 3. P: PHYS 152. P or C: MATH 261. Fundamental concepts of mechanics, force systems and couples, free body diagrams, and equilibrium of particles and rigid bodies. Distributed forces; centroids and centers of gravity of lines, areas, and volumes. Second moment of area, volumes, and masses. Principal axes and principal moments of inertia. Friction and the laws of dry friction. Application to structures and machine elements, such as bars, beams, trusses, and friction devices.

ME 272 Mechanics of Materials (4 cr.) Class 3, Lab 2. P: ME 270 or equivalent. Analysis of stress and strain; equations of equilibrium and compatibility; stress/strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; elastic stability; selected topics. Experiments include testing of mechanical properties and failure analysis.

ME 274 Basic Mechanics II (3 cr.) Class 3. P: ME 270. P or C: MATH 262. Kinematics of particles in rectilinear and curvilinear motion. Kinetics of particles, Newton's second law, energy, and momentum methods. Systems of particles, kinematics and plane motion of rigid bodies, forces and accelerations, energy and momentum methods. Kinetics, equations of motions, energy and momentum methods for rigid bodies in three-dimensional motion. Application to projectiles, gyroscopes, machine elements, and other engineering systems.

ME 301 Thermodynamics II (3 cr.) Class 3. P: ME 200. Properties of gas mixtures, air-vapor mixtures, applications availability. Thermodynamics of combustion processes, equilibrium, energy conversion, power, and refrigeration systems.

ME 310 Fluid Mechanics (4 cr.) Class 3, Lab 2. P: ME 200 and ME 274. Continuum, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernoulli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics.

ME 314 Heat and Mass Transfer (4 cr.) Class 3, Lab 2. P: ME 310. Fundamental principles of heat transfer by conduction, convection, and radiation; mass transfer by diffusion and convection. Application to engineering situations.

ME 330 Modeling and Analysis of Dynamic Systems (3 cr.) Class 3. P: ECE 201 and MATH 262. Introduction to dynamic engineering systems; electrical, mechanical, fluid, and thermal components; linear system response; Fourier series and Laplace transform.

ME 340 Dynamic Systems and Measurements (3 cr.) Class 2, Lab 2. P: ME 330. Modeling and formulation of differential equations for dynamic systems, including mechanical vibratory systems, thermal systems, fluid systems, electrical systems, and instrumentation systems. Analysis of dynamic systems and measuring devices including transient response and frequency response techniques, mechanical systems, transducers, and operational amplifiers. Consideration of readout devices and their responses to constant, transient, and steady-state sinusoidal phenomena. Calibration and data analysis techniques are introduced. Both analog and digital computation are included.

ME 372 Mechanical Design II (4 cr.) Class 3, Lab 2. P: ME 262, ME 272, and ME 274. Type and dimensional synthesis of mechanisms. Vector loop approach. Numerical methods and graphical techniques. Computer-aided design techniques. Cams and gears. Static and dynamic balancing. Strength design for mechanisms and robotics. Reliability principles.

ME 401 Engineering Ethics and Professionalism (1 cr.) Class 1. P: Senior standing. Some ethical, social, political, legal, and ecological issues that a practicing engineer may encounter. Students may not receive credit for both ECE 401 and ME 401.

ME 402 Biomechanics of the Musculoskeletal System (3 cr.) Class 3. P: ME 272. Mechanical design of organisms, with emphasis on the mechanics of the musculoskeletal system. Selected topics in prosthesis design and biomaterials; emphasis on the unique biological criteria that must be considered in biomechanical engineering design.

ME 403 Thermal Science Applications (3 cr.) Class 3. P: ME 310 and ME 314. Applications of thermal science theory to such topics as heating, ventilating, and air conditioning; real cycles of combustion engines; turbomachinery; power plants and combustion.

ME 418 Heating and Air-Conditioning Analysis and Design (3 cr.) Class 3. P: ME 314. Psychometrics, air-conditioning systems, equipment selection, duct design, and piping design. Heating and cooling loads, solar radiation, and heat transmission

in buildings. Heat pumps. Application of air-conditioning to residences, computer rooms, light commercial, and high-rise buildings.

ME 430 Power Engineering (3 cr.) Class 3. P: ME 200. Rankine cycle analysis, fossil-fuel steam generators, energy balances, fans, pumps, cooling towers, steam turbines, availability (second law) analysis of power systems, energy management systems, and rate analysis.

ME 433 Principles of Turbomachinery (3 cr.) Class 3. P: ME 200 and ME 310. Unified treatment of principles underlying fluid mechanic design of hydraulic pumps, turbines, and gas compressors. Similarity and scaling laws. Cavitation. Analysis of radial and axial flow machines. Blade element performance. Radial equilibrium theory. Centrifugal pump design. Axial compressor design.

ME 446 CAD/CAM Theory and Application (3 cr.) Class 2, Lab 2. P: ENGR 196, ENGR 197, ME 262, or consent of instructor. Introduction to computer-aided design (CAD) and computer-aided manufacturing (CAM) theory and applications. Topics include CAD/CAM systems and integration, geometric modeling, process planning, and tool path generation, CAD/CAM interfacing with CNC (computer numerically controlled) machines, machining, and CNC programming. Projects involve CAD/CAM-based product development cycle. Hands-on experience is attained through laboratory experiment and actual CNC manufacturing.

ME 450 Introduction to Computer-Aided Engineering (3 cr.) Class 3. P: ME 262 and ME 272. Introduction to the use of finite element methods for analysis and design. Applications involving stress analysis and heat transfer of solids. The use of existing software and hardware for computer-aided engineering.

ME 451 Computational Methods in Thermal Sciences (3 cr.) Class 3. P: ME 314 and ME 330. Mathematical description of heat transfer and fluid flow problems, discretization methods, heat convection, convection and diffusion, incompressible flows, high speed flow.

ME 458 Composite Materials (3 cr.) Class 3. P: ME 272. Potential applications of composite materials. Basic concepts of fiber reinforced composites, manufacturing, micro and macro-mechanics, and static analysis of composite laminates. Performance (fatigue and fracture) and their application to engineering design.

ME 462 Engineering Design (4 cr.) Class 3, Recitation 2. P: MSE 345 and ME 372. C: ME 314. Concurrent engineering design concept is introduced. Application of the design is emphasized. Design problems from all areas of mechanical engineering are considered.

ME 472 Advanced Mechanics of Materials (3 cr.) Class 3. P: ME 272 and MATH 262. Studies of stresses and strains in three-dimensional elastic problems. Failure theories and yield criteria. Bending of curved beams. Torsion of bars with noncircular cross sections. Beams on elastic foundation. Energy methods. Selected topics. Students may not receive credit for both ME 472 and ME 550.

ME 474 Vibration Analysis (3 cr.) Class 3. P: ME 272, ME 274, and ME 330. Introduction to simple vibratory motions, such as undamped and damped free and forced vibrations, vibratory systems with more than one degree of freedom, Coulomb damping, transverse vibration of beams, torsional vibration, critical speed of shafts, and applications.

ME 482 Control System Analysis and Design (3 cr.) Class 3. P: ME 330 or equivalent. Classical feedback concepts, root locus, Bode and Nyquist techniques, state-space formulation, stability, design applications. Students may not receive credit for both ECE 382 and ME 482.

ME 484 Engineering Industrial Practice IV (1-5 cr.) P: Consent of the co-op advisor. For engineering students on cooperative assignment only.

ME 491 Engineering Design Project (1-2 cr.) P: Senior standing and consent of a faculty sponsor. The student selects an engineering design project and works under the direction of the faculty sponsor. Suitable projects may be from the local industrial, municipal, state, and educational communities. May be repeated for up to 4 credit hours.

ME 497 Selected Topics in Mechanical Engineering Hours and credits to be arranged.

ME 500 Advanced Thermodynamics (3 cr.) Class 3. P: ME 301. The empirical, physical basis of the laws of thermodynamics. Availability concepts and applications. Properties and relations between properties in homogeneous and heterogeneous systems. The criteria of equilibrium. Application to a variety of systems and problems including phase and reaction equilibrium.

ME 505 Intermediate Heat Transfer (3 cr.) Class 3. P: ME 315. Heat and mass transfer by diffusion in one-dimensional, two-dimensional, transient, periodic, and phase change systems. Convective heat transfer for external and internal flows. Similarity and integral solution methods. Heat, mass, and momentum analogies. Turbulence. Buoyancy-driven flows. Convection with phase change. Radiation exchange between surfaces and radiation transfer in absorbing-emitting media. Multimode heat transfer problems.

ME 506 Two-Phase Flow and Heat Transfer (3 cr.) Class 3. P: ME 314. Basic two-phase flow equations, homogeneous model, drift-flux model, flow regimes, pressure drop in two-phase flow. Nucleation and bubble dynamics, pool boiling, subcooled boiling, forced convection boiling, critical heat flux in pool boiling, critical heat flux in forced convection boiling, minimum heat flux, film boiling, post dryout heat transfer. Flow instabilities, choking in two-phase flow, film and dropwise condensation. Applications to heat exchangers. Special boiling and two-phase flow problems.

ME 509 Intermediate Fluid Mechanics (3 cr.) Class 3. P: ME 310 or equivalent. Fluid properties, basic laws for a control volume, kinematics of fluid flow, dynamics of frictionless incompressible flow, basic hydrodynamics, equations of motion of viscous flow, viscous flow applications, boundary layer theory, wall turbulence, and lift and drag of immersed bodies.

ME 510 Gas Dynamics (3 cr.) Class 3. P: ME 310. Flow of compressible fluids. One-dimensional flows including basic concepts, isentropic flow, normal and oblique shock waves, Rayleigh line, Fanno line, and simple waves. Multidimensional flows including general concepts, small perturbation theory for linearized flows, and method of characteristics for nonlinear flows.

ME 525 Combustion (3 cr.) Class 3. P: ME 310 and CHEM C105. Physical and chemical aspects of basic combustion phenomena. Classification of flames. Measurement of laminar flame speeds. Factors influencing burning velocity. Theory of flame propagation. Flammability, chemical aspects, chemical equilibrium. Chain reactions. Calculation and measurement of flame temperature. Diffusion flames. Fuels. Atomization and evaporation of liquid fuels. Theories of ignition, stability, and combustion efficiency.

ME 550 Advanced Stress Analysis (3 cr.) Class 3. P: ME 272 and MATH 262. Studies of stresses and strains in three-dimensional problems. Failure theories and yield criteria. Stress function approach to two-dimensional problems. Bending of nonhomogeneous asymmetric curved beams. Torsion of bars with noncircular cross sections. Energy methods. Elastic stability. Introduction to plates. Students may not receive credit for both ME 472 and ME 550.

ME 551 Finite Element Analysis (3 cr.) Class 3. P: Graduate standing or consent of instructor. Concepts of finite elements methods; formulations for different engineering problems and their applications. Variational methods, the finite element concept, and applications in stress analysis, dynamics, fluid mechanics, and heat transfer.

ME 552 Advanced Applications of Finite Element Method (3 cr.) Class 3. P: ME 551 or equivalent. Various algorithms for nonlinear and time-dependent problems in two and three dimensions. Emphasis on advanced applications with problems chosen from fluid dynamics, heat transfer, and solid mechanics areas. Independent project required.

ME 558 Composite Materials (3 cr.) Class 3. P: ME 272. Potential applications of composite materials. Basic concepts of fiber-reinforced composites. Manufacturing, micro- and macro-mechanics, and static analysis of composite laminates. Performance (fatigue and fracture) and its application to engineering design.

ME 560 Kinematics (3 cr.) Class 3. P: ME 372. Geometry of constrained-plane motion with application to linkage design. Type and number synthesis, size synthesis. Path curvature, inflection circle, cubic of stationary curvature. Finite displacements, three- and four-separated positions. Graphical, analytical, and computer techniques.

ME 562 Advanced Dynamics (3 cr.) Class 3. P: ME 372 or consent of instructor. Dynamics of multiple-degrees-of-freedom mechanical systems. Holonomic and nonholonomic constraints. Lagrange's equations of motion. Hamilton's principle for holonomic systems. Kinematics and kinetics of rigid-body motion, including momentum and energy methods, linearized

equations of motion. Classification of vibratory systems: gyroscopic, circulatory forces. Stability of linear systems: divergence and flutter. Applications to gyroscopes, satellite dynamics, etc.

ME 563 Mechanical Vibrations (3 cr.) Sem. 1. Class 3. P: ME 272 and ME 340, or equivalent. Review of systems with one degree of freedom. Lagrange's equations of motion for multiple-degree-of-freedom systems. Matrix methods. Transfer functions for harmonic response, impulse response, and step response. Convolution integrals for response to arbitrary inputs. Principle frequencies and modes. Applications to critical speeds, measuring instruments, isolation, torsional systems. Nonlinear problems. Mechanics staff.

ME 569 Mechanical Behavior of Materials (3 cr.) Class 3. P: MSE 345 or equivalent. How loading and environmental conditions can influence the behavior of materials in service. Elastic and plastic behavior, fracture, fatigue, low- and high-temperature behavior. Introduction to fracture mechanics. Emphasis is on methods of treating these conditions in design.

ME 572 Analysis and Design of Robotic Manipulators (3 cr.) Class 3. P: ME 372. Introduction to the analysis and design of robotic manipulators. Kinematic configurations, forward and inverse position solutions, velocity and acceleration, path planning, offline programming, force and torque solutions, rigid body dynamics, motors and actuators, robot design, sensors and controls, computer simulation, and graphical animation.

ME 575 Theory and Design of Control Systems (3 cr.) Class 3. P: Consent of instructor. Modern control techniques, state space representations, performance evaluation, controllability, observability, and observer design are introduced. The Bond graph is developed as a versatile computer-aided method of modeling coupled systems.

ME 581 Numerical Methods in Mechanical Engineering (3 cr.) Class 3. P: ME 314, ENGR 197 or its equivalent, and ME 372. The solution to problems arising in mechanical engineering using numerical methods. Topics include nonlinear algebraic equations, sets of linear algebraic equations, eigenvalue problems, interpolation, curve fitting, ordinary differential equations, and partial differential equations. Applications include fluid mechanics, gas dynamics, heat and mass transfer, thermodynamics, vibrations, automatic control systems, kinematics, and design.

ME 582 Thermal Stress Analysis (3 cr.) Offered in alternate years. Class 3. P: ME 272, ME 314 or equivalent, ordinary differential equations, or consent of instructor. Methods for determining the deformations and stresses due to temperature changes in materials. Fundamentals of thermoelasticity. Solutions to two-dimensional thermoelastic problems. Thermal stresses in beams and plates. Thermoelastic buckling. Introduction to thermoviscoelasticity, thermal fracture, and fatigue. Applications to dissimilar materials such as ceramic coatings, glass-metal bonds, and composites.

ME 597 Advanced Mechanical Engineering Projects I (1-6 cr.) Sem. 1 and 2. Summer Session. (May be repeated for credit). P: Master's standing. Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects courses. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and then prepare a brief description of the work to be undertaken in cooperation with the advisor.

ME 614 Computational Fluid Dynamics (3 cr.) Class 3. P: ME 581 or AAE 516 or equivalent; ME 509 or ME 510 or equivalent; or consent of instructor. Application of finite difference methods, finite element methods, and the method of characteristics for the numerical solution of fluid dynamics problems. Incompressible viscous flows: vorticity transport equation, stream function equation, and boundary conditions. Compressible flows: treatment of shocks, implicit and explicit artificial viscosity techniques, and boundary conditions. Computational grids.

ME 697 Advanced Mechanical Engineering Projects II (1-6 cr.) Sem 1 and 2. Summer Session. (May be repeated for credit). Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and then prepare a brief description of the work to be undertaken in cooperation with the advisor.

ME 698 Research (M.S. Thesis) (1-5 cr.) Research credit for students in M.S. thesis option.

ME Employment Enrichment Programs

ME C184, C284, C384, C483, and C484 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing, and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's preparedness for an intended career with a business, industry, or government agency. A comprehensive written report on the internship practice is required.

ME I184, I284, I384, I483, and I484 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's preparedness for entering an initial or second career. A comprehensive written report on the internship experience is required.

Technology Programs

The School of Engineering and Technology offers a variety of technology programs at the associate and bachelor's degree levels. Programs for full-time students pursuing these technology departments are

presented in this section. Although the school sets the normal length of time needed to complete each degree program, the required time may vary for individual students. For example, well-qualified students with excellent high school preparation may complete a program in less than the length of time indicated. Other students who decide to combine cooperative (co-op) education or internships with their course work may take more time to complete all degree requirements. Students may adjust their course loads for job or personal reasons, and plans of study can be tailored to meet the needs of part-time and evening students. Needing to study over a longer time should be no obstacle to completing the program successfully.

Associate of Science

Science and technology activities range from the applied and practical to the highly theoretical and abstract. At one extreme are the theoretical scientists; at the other are the mechanics, draftspeople, and service personnel. Within this spectrum, educational backgrounds include doctoral degrees, master's degrees, bachelor's degrees, and associate degrees at the university level, as well as certificates and diplomas from other postsecondary educational and training institutions.

The Associate of Science degree offered in the School of Engineering and Technology at IUPUI is awarded upon successful completion of two years of university-level study in applied science. Graduates of these programs are called technicians.

Technicians' jobs require applying technical knowledge and skills and, normally, the manipulative skills necessary to perform technical tasks. Technicians have considerable knowledge of the materials and processes involved and are equipped with the ability to apply the principles of physical and biological sciences, generally using instruments rather than tools. Their job contribution is mainly through mental activity, combined with applied skills. In many organizations the technician can move up in the organization to higher levels of responsibility, if he or she is capable and is willing to pursue further education.

The following associate degree programs are offered by the School of Engineering and Technology at IUPUI:

Program	Administered by
Architectural Technology	Department of Construction Technology
Biomedical Electronics Engineering	Department of Electrical and Computer Engineering Technology
Civil Engineering Technology	Department of Construction Technology
Computer Engineering Technology	Department of Electrical and Computer Engineering Technology
Computer Graphics Technology	Department of Mechanical Engineering Technology
Computer Integrated Manufacturing Technology	Department of Mechanical Engineering Technology
Computer Technology (Commercial Option)	Department of Computer Technology

Computer Technology (Technical Option)	Department of Computer Technology
Electrical Engineering Technology	Department of Electrical and Computer Engineering Technology
Electronics Manufacturing Technology	Departments of Mechanical Engineering Technology and Electrical and Computer Engineering Technology
Interior Design	Department of Construction Technology
Mechanical Engineering Technology	Department of Mechanical Engineering Technology
Organizational Leadership and Supervision	Department of Organizational Leadership and Supervision

Bachelor of Science

The Bachelor of Science degree is awarded under the “two-plus-two” education plan. A student following this plan first earns an associate degree in two years and then may complete a bachelor’s degree after two more years. Transfer students must meet all departmental requirements.

A student is awarded an Associate of Science degree upon successful completion of the two-year program. This degree indicates that the person who receives it is educated at the technician level. These individuals may go directly into the work force, or they may decide to continue their studies.

Students who want to continue may be admitted for an additional two years of bachelor’s-level study in the various technology programs. Students who successfully complete such a program are awarded a Bachelor of Science degree, which provides the basis for increased job responsibility.

The following technology bachelor’s degree programs are available to qualified students:

Program	Administered by
Computer Engineering Technology	Department of Electrical and Computer Engineering Technology
Computer Graphics Technology	Department of Mechanical Engineering Technology
Computer Integrated Manufacturing Technology	Department of Mechanical Engineering Technology
Computer Technology	Department of Computer Technology
Construction Technology	Department of Construction Technology
Electrical Engineering Technology	Department of Electrical and Computer Engineering Technology
Mechanical Engineering Technology	Department of Mechanical Engineering Technology
Organizational Leadership and Supervision	Department of Organizational Leadership and Supervision

For more specific information, see the advisors in the respective departments.

Technology Plans of Study

Semester-by-semester plans of study follow for the technology programs available in the school. These plans generally reflect the order in which courses are offered. In each plan, departmental courses are listed first, followed by courses outside the department or school that are required or recommended. Technology courses are described in the section “Technology Course Descriptions” in this bulletin.

In some technology plans of study, the word “selective” is used. This term refers to a course chosen from a list of particular courses recommended by the departments in a given area or subject. Students should get in touch with their faculty advisors for information about permissible electives or selectives.

Department of Computer Technology (CPT)

Professors Ho (*Chair*), Jafari, McRobbie, Orr

Associate Professor Price

Assistant Professors Defazio, Fernandez, Starks, Williamson

Director of CPTOnline Sullivan

Lecturers Clark, Stevens

The Department of Computer Technology (CPT) offers programs at both the associate and bachelor’s degree levels. These programs are designed to provide an applications-oriented, practical education that prepares students for careers as systems analysts (people who design, install, and evaluate information systems); commercial and technical programmer/analysts (people who design, write, and maintain programs for a variety of applications); and network systems specialists (people who select, specify, and maintain the networking needs of a company).

The Purdue University Associate of Science degree in computer technology at IUPUI features two four-semester options designed to prepare graduates to work in either **commercial** or **technical** areas. Students may choose to continue their education, rather than entering the job market, upon completion of their selected associate degree option. Others may return to college after a period of time in practical employment. Purdue University at IUPUI offers the educational opportunities of a B.S. degree to both types of students.

Students who must interrupt their course of study for two calendar years or more will be required to meet all requirements for the program as it stands at the time of their return. CPT courses over 10 years old may have to be repeated; check with a CPT advisor.

Purdue’s Bachelor of Science degree in computer technology is available in three tracks: a **standard** track with selected concentrations to be determined by student and advisor, a **business** track that also earns a minor from the Indiana University Kelley School of Business, and a **technical** track that earns a minor in

Digital Electronics Technology from the Department of Electrical Engineering Technology.

The Department of Computer Technology has been a leader in offering degree courses that can be completed by distance education. Selected courses may be taken either partially or completely via the Web.

The department offers a **minor** in computer technology to students majoring in other areas of study at IUPUI. The computer technology minor provides a basic set of computer concepts and programming courses along with a sequence of computing specialty courses.

The department also offers two Web-based certificate programs, which can be completed via distance education. The **Information Technology Certificate** focuses on the principles and techniques used to develop Web-based business applications. The six courses that comprise the program cover the application development process including analysis, design, Web programming, database integration and implementation. The **E-Commerce Development Certificate** is targeted to individuals who already have some application development experience but in a non-Web environment. This six-course program focuses on advanced techniques for building data-driven e-commerce applications including Web-based programming and development techniques.

For more information, visit our Web site at www.engr.iupui.edu/cpt or contact the Department of Computer Technology at (317) 274-9705 or et_cpt@iupui.edu.

Associate of Science in Computer Technology (Commercial Option)

The commercial option of the A.S. degree program features a business-oriented approach to computer information systems. Students take basic computing courses covering programming, systems analysis, data communications, operating systems, databases, and current technology. Coupled with these computing courses are courses in interpersonal communications, business and technology, and general education. Graduates of this program option can apply their educational credits toward the B.S. degree, or they can enter the workforce directly. The A.S. commercial option is designed to provide the fundamental requirements for either the standard or the business track of the B.S. in Computer Technology.

Associate of Science in Computer Technology (Commercial Option)

Program Plan of Study by Semester

Freshman Year

First Semester

CPT 106 Using a Personal Computer	3
CPT 115 Computer Information Systems Fundamentals.....	3
CPT 120 Quantitative Analysis I.....	3

	<u>16</u>

Total: 60-61 Credit Hours

Associate of Science in Computer Technology (Technical Option)

The technical option of the A.S. degree program features an approach that combines the fundamentals of electrical circuits and electronics with computer concepts and programming. This option also provides a basic foundation in applied mathematics and general physics for the problem-solving environment. Students who graduate with an A.S. degree, technical option, can apply their educational credits toward the B.S. degree or enter the work force directly. The A.S. technical option is designed to provide the fundamental requirements of the standard or the technical track of the Computer Technology B.S. degree.

Total: 63 Credit Hours

Bachelor of Science in Computer Technology

General Requirements

1. Completion of the requirements for the Associate of Science degree in computer technology or an equivalent degree.
2. Completion of the core requirements of a selected track. The required minimum of 120-122 credit hours (depending on the selected track) includes credits earned within the A.S. degree. See the following summary table of the core requirements of selected tracks for more specifics concerning requirements and courses.
3. A minimum of 39 credit hours must be earned in courses at the 300 level or higher. Students must verify upper-level credit with a CPT advisor.

Core Requirements

The bachelor's degree core requirements are fulfilled by meeting all of the requirements of a selected track. Three tracks are available for a student to select: a **standard** track with selected concentrations, a **business** track that also earns a minor from the IU Kelley School of Business, and a **technical** track that earns a minor in Digital Electronics Technology from the Department of Electrical and Computer Engineering Technology.

⁵Science electives may come from chemistry, physics, and life sciences; however, a laboratory must be associated with the course.

Core Requirements for Bachelor of Science Computer Technology

Track	Standard	Technical	Business
Core Requirements (minimum of 39 credit hours at upper level)	120 credit hours	120 credit hours	122 credit hours
General Education			
Communications [composition, speech, and report writing]	12	12	12
Humanities [creative arts, history, literature, religion, folklore, art appreciation, theatre, music, anthropology, philosophy, and languages]	3	3	3
Social Sciences [anthropology, economics, political science, psychology, sociology, and selected geography courses]	6	6	6
Mathematics/Science Science electives may come from chemistry, geology, physics, and life sciences; however, a laboratory must be associated with the course.	21	25	18
Business/Supervision	9	None	19
Upper Level			
Technical Science, Specialty, Design	29	24	27
Lower Level			
Technical Science, Specialty, Design	31	28	31
Electrical Engineering Technology Courses	None	22	None
Electives Free Electives—Students are strongly encouraged to select their electives from areas <i>outside</i> of CPT. The use of CPT courses as electives is allowed <i>only</i> with <i>prior</i> advisor approval.	9	None	6

Minor in Computer Technology

A minor in computer technology requires the completion of either 18 or 19 credit hours of computer technology courses, plus certain requirements in mathematics, statistics, and computer applications. Required courses in computer technology are provided in two groupings: (a) core requirements, and (b) a specialty sequence. At least 12 credit hours of the minor must be taken at IUPUI.

¹ Science electives may come from chemistry, geology, physics, and life sciences; however, they must have a laboratory associated with the course.

Students who wish to complete a minor in computer technology must already be accepted as a major by some other department on the IUPUI campus. Students should ask their department's academic advisor whether a minor in computer technology is acceptable with their major field.

A student who applies for a computer technology minor must have a mathematics competency as evidenced by completing MATH 118 and 119 or MATH 153 and 154, or MATH 151, and a college-level introductory statistics course. Students are also expected to have successfully completed CPT 106 Using a Personal Computer or equivalent.

The computer technology minor's core requirements (9 credit hours):

CPT 115 Computer Information Systems Fundamentals or BUS S302 Management Information Systems	3
CPT 140 Programming Constructs Laboratory	3
CPT 262 Problem Solving and Programming or 270 Java Programming I	3

Prior to continuing into the specialty sequences, a student must have

- completed the above computer technology minor's core requirements,
- attained the mathematics and statistical ability that would be evidenced by college-level algebra and college-level statistics courses,
- completed 30 credit hours toward his or her major,
- earned a cumulative grade point average (GPA) of 2.0 or higher.

The student who has met these conditions then selects one of the specialty sequences below and proceeds to complete the three courses of that selected specialty.

The computer technology specialty sequences are:

Systems and database development (10 cr.)
CPT 288 Using a Database Management System
CPT 374 Systems and Database
CPT 254 Analysis and Design or
BUS A337 Computer Based Accounting Systems Analysis

Network systems (9 cr.)

CPT 307 Data Communications
CPT 336 Data Communications Lab
CPT 402 Design and Implementation of Local Area Networks

Software systems (9 cr.)

CPT 233 Hardware/Software and Architecture
CPT 286 Operating Systems and Administration
 300-level programming language course (3 cr.)

Web technologies (9 cr.)

CPT 223 Web Page Design
CPT 323 Multimedia
CPT 423 Electronic Commerce

Information Technology Certificate

The Information Technology Certificate program requires the completion of 18 credit hours, all delivered over the Web. The courses cover the principles and techniques of the application development process as they apply to a Web environment.

The Information Technology Certificate requirements are:

CPT 112 Information Technology Fundamentals	3
CPT 212 Web Site Design	3
CPT 213 Web-based Analysis and Design	3
CPT 214 Web Data Management	3
CPT 215 Web Programming	3
CPT 313 Commercial Web Site Development	3
	18

E-Commerce Development Certificate

The E-Commerce Development Certificate requires the completion of 18 credit hours. All of the courses are offered over the Web. The program covers advanced Web techniques in an e-commerce environment.

The E-Commerce Development Certificate requirements are:

CPT 213 Web-Based Analysis and Design	3
CPT 312 Advanced Web Site Design	3
CPT 412 XML-Based Web Applications	3
Web Programming (two-course sequence):	
Java Thread	
CPT 270 Introduction to Java	3
CPT 329 Java Server Programming	3
or	
ASP .Net Thread	
CPT 242 Introduction to ASP .Net	3
CPT 347 Advanced ASP .Net	3
CPT 346 Advanced E-Commerce Development	3

Department of Construction Technology (CNT)

Professor Sener (Chair)

Associate Professor Gokhale

Assistant Professors Coles, Cyr, Kim, Kinsey

Adjunct Faculty Best, Fenske, Zody

Lecturers Botner, Lucas

The Department of Construction Technology (CNT) offers three Associate of Science degree programs: one in architectural technology, one in civil engineering technology, and one in interior design. Upon satisfactory completion of an A.S. degree in architectural technology or civil engineering technology programs, students may continue to obtain the degree of Bachelor of Science with a major in construction technology. For their B.S. degree studies in Construction Technology, students follow the track in construction management. Students in all the above degree programs/majors may apply to enter the co-op or internship work programs following their freshman year.

For more information, contact the Department of Construction Technology at (317) 274-2413 or et_cnt@iupui.edu.

Associate of Science in Architectural Technology (ART)

Accredited by the Technology Accreditation Commission of the Accreditation Board of Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The Architectural Technology (ART) curriculum is a two-year associate degree program designed to provide students with the skills to work in the areas of architectural drafting, detailing and presentation, simple structural design, planning, estimating, inspection, materials testing, surveying, and sales. The curriculum is not intended to prepare students for registration as professional architects.

Emphasis is on basic engineering principles of mechanics, surveying, residential and commercial construction drawings, mechanical and electrical systems in buildings, and materials testing. Also included are courses in mathematics, physical sciences, social sciences, communications, computer programming fundamentals, and the humanities.

Graduates typically find employment with architectural firms, construction firms, builders, testing companies, building material suppliers, and various governmental agencies. Graduates are also eligible to pursue a Bachelor of Science in Construction Technology in the Construction (Management) Option.

Associate of Science in Civil Engineering Technology (CET)

Accredited by the Technology Accreditation Commission of the Accreditation Board of Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The program in Civil Engineering Technology (CET) prepares students for employment in civil engineering firms, construction firms, surveying firms, testing laboratories, material supply companies, city engineering offices, and highway departments. Graduates of the two-year program are also prepared for office positions; laboratory work; or on-site positions in surveying, field engineering, and inspection.

Emphasis is on basic engineering principles of mechanics, soils, surveying, mechanical and electrical systems in buildings, civil engineering drafting, and materials testing. Also included are courses in mathematics, physical sciences, social sciences, communications, computer programming fundamentals, and the humanities.

Graduates may also continue their education by pursuing a Bachelor of Science in Construction Technology following the track in construction (management) option. The curriculum is not intended to prepare students for registration as professional engineers.

Associate of Science in Interior Design (INTR)

The interior design curriculum is a two-year associate degree program developed according to the Foundation for Interior Design Education and Research (FIDER) standards and guidelines. Employing faculty from the areas of interior design, architecture, and construction and using the latest technology, it provides students with the skills to work as interior design assistants and be able to sit for the National Council for Interior Design Qualification (NCIDQ) exam after four years of work experience.

The emphasis is on technical knowledge, methodology, and aesthetic appreciation of interior design for the health, safety, and welfare of the public; equipping students with visual presentation and communication skills; imparting an awareness for environmental, business, ethical, and other contemporary issues; and linking classroom knowledge to application in the field.

Graduates typically find employment in residential and commercial design, as interior design assistants to interior design and architectural firms, sales associates in retail or manufacturing settings, manufacturer's reps for products used in the design and construction industries, CAD technicians for interior design, or as self-employed designers.

Bachelor of Science in Construction Technology

Construction (Management) Option

Accredited by the Technology Accreditation Commission of the Accreditation Board of Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The bachelor's program in construction technology (CNT) is open to students with an A.S. in Architectural Technology or Civil Engineering Technology or with an equivalent degree. The curriculum is intended to further students' knowledge in areas of construction contract administration, specification writing, construction field operations, construction scheduling/project control, construction costs and bidding, and construction management through further course work. Additional course work in economics, law, management, mathematics, lab sciences, and training in written and oral communication is also included. Many students complete all or part of their course work on a part-time basis by taking a reduced course load during the semesters they are engaged in construction-related employment.

Graduates of the program are prepared for employment with architects, contractors, building product companies, consulting engineering firms, construction material and equipment vendors, testing labs, utilities, and state and other government organizations. Occupations such as detailing, drafting, inspecting, estimating, project management, merchandising, supervising, and testing may also be filled by graduates of this program. The curriculum is not intended to prepare students for registration as professional architects or engineers.

Bachelor of Science in Construction Technology

Surveying Option

Note: The surveying-related courses shown in the fall and spring semester course listings below, on certificate requirement course listings, and on department study plan sheets will **not** always be offered in their respective semesters or with any regular frequency. Offerings will depend on the number of students wanting to take a course and availability of instructors. Students who need to complete their degrees or certificates within a limited time should be aware that this may not be possible and that the department neither makes any guarantees for course offering frequency nor assumes any responsibility or liability for the consequences arising from this practice.

This degree program is accredited by the Technology Accreditation Commission of the Accreditation Board of Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The Bachelor of Science (B.S.) degree program in construction technology (CNT) – surveying option is open to students with an A.S. degree in civil engineering technology (CET) or an equivalent degree. The curriculum is intended to further students' knowledge in areas of surveying, including construction and route surveying, control surveying, property surveying, surveying computations, global positioning systems (GPS), and geodesy, as well as surveying law, legal descriptions, geographical information systems (GIS), and cartography through additional technical course work. Additional course work in economics, law, statistics, lab science, and in written and oral communications is also included. Many students complete all or part of their course work on a part-time basis by taking a reduced course load during the semesters they are engaged in construction-related employment.

Graduates of the program are prepared for employment with surveying companies, architects,

contractors, consulting engineering firms, utilities, and state and other government organizations. Occupations such as detailing, drafting, and surveying may also be filled by experienced graduates of the program. The curriculum is intended to prepare graduates for registration as land surveyors. The curriculum is not intended to prepare students for registration as professional architects or engineers.

Construction Drafting Certificate

This certificate is designed to provide educational opportunities for those who have an aptitude for and a desire to learn the drafting skills needed in the construction industry. This program focuses on computer-aided drafting education, thus providing contemporary training in the use of the latest drafting technology in the construction industry. Those who earn the certificate will qualify for entry-level positions as draftspeople in architectural, engineering, or other construction-related firms and will be competent in employing the current technology.

Good candidates for the program are people who wish to acquire additional marketable skills in construction drafting, who wish to upgrade existing

drafting skills, or who wish to earn tangible verification of acquired skills and bodies of knowledge related to construction drafting.

Curriculum

ART 117 Construction Graphics and CAD	3
ART 120 Architectural Presentation	3
ART 155 Residential Construction	3
ART 165 Building Systems and Materials	3
ART 222 Commercial Construction	3
CNT 105 Introduction to Construction Technology	3
CET 275 Applied Civil Engineering Drafting	3
INTR 103 Introduction to Interior Design	3
	<hr/> 24

Any student formally admitted to the university may be a candidate for this certificate. Courses taken at other universities may be recognized as equivalent to selected required courses, and course credit may be given for appropriate job experience.

Construction Management Certificate

This certificate is designed to provide educational opportunities for those who need or desire to learn contemporary construction management techniques and skills and employ the latest technology in doing so. This program emphasizes developing the skills required by the construction industry and relies on the use of computers, whenever possible, to provide a contemporary education in the use of the latest technology in the management process. Those who earn the certificate will qualify for entry-level positions as superintendents, project managers, estimators, or schedulers for construction-related firms and will be competent in using the latest technology.

Good candidates for the program are people who wish to acquire additional marketable skills in construction management, who wish to upgrade existing construction management skills, or who wish to earn tangible verification of acquired skills and bodies of knowledge related to construction management.

Curriculum

ART 165 Building Systems and Materials	3
CNT 280 Quantity Survey	3
CNT 330 Construction Field Operations	3
CNT 341 Construction Scheduling and Project Control	3
CNT 342 Construction Cost and Bidding	3
CNT 347 Construction Contract Administration and Specifications	3
CNT 447 Construction Project Management	3
CNT 452 Construction Safety and Inspection	3
	<hr/> 24

Prerequisites: **CET 160** Statics, **TCM 220** Technical Report Writing and **CET 430** Soils and Foundations.

Any student who has 8 credit hours in college-level technical mathematics including algebra, trigonometry, and calculus; proven computer competency; the ability to read and interpret construction documents; and is formally admitted to the university, may be a candidate for this certificate.

Courses taken at other universities may be recognized as equivalent to selected required courses, course credit may be given for appropriate job experience.

Surveying Certificate

Note: The surveying-related courses shown in the fall and spring semester course listings below, on certificate requirement course listings, and on department study plan sheets will **not** always be offered in their respective semesters or with any regular frequency. Offerings will depend on the number of students wanting to take a course and availability of instructors. Students who need to complete their degrees or certificates within a limited time should be aware that this may not be possible and that the department neither makes any guarantees for course offering frequency nor assumes any responsibility or liability for the consequences arising from this practice.

This certificate is designed to provide educational opportunities for people working in the surveying industry who wish to sit for the land surveying registration examination or enhance their surveying skills. This program focuses on the development of the skills required for land surveying and emphasizes the latest technology, such as computer-aided drafting, and use of total stations and ground positioning satellite systems, to provide a contemporary education in the use of the latest technology in land surveying. Those who earn the certificate will qualify for entry-level positions as surveyors in engineering, surveying, and construction-related firms and be competent in applying the latest technology. They will have also fulfilled the surveying course requirements for permission to take the Surveyor in Training (SIT) examination in the state of Indiana.

Good candidates for the program are people who wish to acquire additional marketable skills in surveying, who wish to upgrade existing surveying skills, or who wish to earn tangible verification of acquired skills and bodies of knowledge, particularly those intending to qualify for the Surveyor in Training examination.

Curriculum

CET 104 Surveying Fundamentals and Topography	3
CET 210 Surveying Computations	3
CET 275 Applied Civil Engineering Drafting	3
CET 304 Legal Descriptions for Surveyors	3
CET 305 Control Surveying	3
CET 307 Property Surveys	3
CET 308 GPS and Geodesy for Surveyors	3
CET 312 Construction and Route Surveying	3
CET 402 Surveying Law	3
	<hr/> 27

CET 104 has a prerequisite of **MATH 153** and a corequisite of **MATH 154**; **CET 275** has a prerequisite of **ART 117**. Courses taken at other universities may be recognized as equivalent to selected required courses, as corequisites, or as prerequisites, and course credit may be given for appropriate job experience. Any student formally admitted to the university who has the prerequisite or corequisite courses may be a candidate for this certificate. (Note: In addition to the above courses, additional mathematics and physical science course credit is required to qualify for the land surveying registration examination.)

Department of Electrical and Computer Engineering Technology (ECET)

Professors Conrad, Needler (*Chair*), Pfile

Associate Professors Cooney, Lin

Assistant Professors Christe, Reid

The Department of Electrical and Computer Engineering Technology (ECET) offers degree programs at the associate and bachelor levels. Degree programs at the two-year associate level consist of the Associate of Science degree with a major in Biomedical Electronics Technology (BMET), the Associate of Science degree with a major in Electrical Engineering Technology (EET), and the Associate of Science degree with a major in Computer Engineering Technology (CpET). Graduates from associate degree programs are eligible for admission to the department's programs leading to the Bachelor of Science degree. The department offers Bachelor of Science degrees in Electrical Engineering Technology and Computer Engineering Technology.

For more information, contact the Department of Electrical and Computer Engineering Technology at (317) 274-2363, e-mail et_ecet@iupui.edu, or visit our Web site at www.engr.iupui.edu/ecet.

Associate of Science in Biomedical Electronics Technology

This two-year program consists of a combination of courses in basic electrical circuits, analog and digital electronics, microprocessor fundamentals, mathematics, physics, medical instrumentation, human anatomy, and human physiology. The program is enhanced by the department's interaction with the Indiana University Hospital on the IUPUI campus and with other area hospitals.

The biomedical electronics technology (BMET) curriculum enables graduates to find employment as biomedical equipment technicians, medical equipment sales personnel, medical equipment servicing/maintenance technicians, and research technicians.

The curriculum satisfies the educational requirements of the Association for the Advancement of Medical Instrumentation (AAMI) and the Certified Biomedical Equipment Technician License.

Graduates of this program are eligible for admission to the Bachelor of Science degree program in electrical engineering technology. Approximately two additional years of study are necessary to complete the requirements for the B.S. in Electrical Engineering Technology.

Freshman Year**First Semester**

BMET 105 Introduction to Biomedical Electronics Technology	1

Clinical Laboratory Equipment Technology Certificate Program

This certificate features instruction focused on the biomedical equipment principles for the clinical laboratory environment. Upon certificate completion, participants will be able to apply their knowledge of electronic principles to equipment within the clinical laboratory environment including theory, function, operation and problem solving. They will be able to function and communicate as part of a multidisciplinary medical team within the clinical laboratory setting as well as understand and apply safety issues within the clinical laboratory. Participants are expected to possess a knowledge of active, passive, and digital prior to the certificate program.

Note: Materials for these courses are located on the World Wide Web and are supplemented with a textbook, handouts, software, and self-paced learning aids. Assignments and communication between students and faculty are maintained via e-mail. Upon successful completion of two-thirds of each course, students will come to campus for one day (eight hours total) of hands-on experience, invited speakers, and visits to area hospitals.

¹See "Advanced Curriculum Program" at the end of this department listing.

All students must complete the following courses:

BMET 330 Electronics for the Clinical Laboratory Technician	3
BMET 360 Applied Human Biology for the Clinical Laboratory	3
BMET 370 Safety and Regulations in the Clinical Laboratory	3
BMET 380 Clinical Laboratory Equipment	3
	12

Associate of Science in Computer Engineering Technology

The purpose of the new Computer Engineering Technology (CpET) Program is to train engineering technicians and technologists to design, develop, and implement modern computer-based applications. The CpET program is offered by a partnership arrangement between the Departments of Electrical and Computer Engineering Technology and Computer Technology. The technical portion of the program is a combination of revised EET courses, CPT courses, and new CpET courses. A major emphasis of the CpET program is practice-oriented, "hands-on" training in laboratories for each CpET course to provide students and graduates with a rich experience in computer applications.

Two options within CpET are offered: the industrial computing option and the telecommunications option. The industrial computing option is recommended for students interested in computer-controlled systems and the telecommunications option is recommended for students interested in data communications and networking.

The two-year CpET associate graduates will have career opportunities in providing software support and implementing hardware for computer systems involving automation, controls, telecommunications, embedded systems, product development, and instrumentation with job titles such as software technician, automation technician, controls technician, and network technician. The associate degree program will also prepare graduates for admission to the Bachelor of Science degree program in CpET.

The Associate of Science study plan in Computer Engineering Technology for the Industrial Computing option is as follows.

Freshman Year**First Semester**

Associate of Science in Electrical Engineering Technology

Accredited by the Technology Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

This two-year program provides a combination of courses in electricity, electronics, mathematics, science, and general academic areas that lead to the degree of Associate of Science. The program prepares students for careers as technicians in a wide variety of electronic, electrical, and related fields. Students find employment in automation, computer electronics, telecommunications, power, testing, quality assurance, field service, prototype fabrication, process management, cost estimating, and customer

service. Courses in this program are offered in both the daytime and the evening.

Graduates of this program are eligible for admission to the Bachelor of Science degree program. Approximately two additional years of study are necessary to complete the requirements for the B.S. in Electrical Engineering Technology degree.

Freshman Year

Bachelor of Science in Electrical Engineering Technology

Accredited by the Technology Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

Students who receive the Associate of Science degree in electrical engineering technology or biomedical electronics technology are eligible to enter this Bachelor of Science degree program. All transfer students should meet IUPUI requirements for the Associate of Science degree. The program provides additional study in electrical engineering technology as well as related technical and nontechnical areas essential in modern industry. Graduates of this program are qualified for high-level positions as technologists in diverse industries such as automotive electronics, computer electronics, military electronics, factory automation, broadcasting,

¹See "Advanced Curriculum Program" at the end of this department listing.

electronics manufacturing, telecommunications, energy and power, consumer electronics, robotics, and instrumentation.

Six specialty tracks are available in the B.S. program: communication systems, control systems, digital/microprocessor systems, electronic devices and systems, electronics manufacturing, and power systems. Within each of these tracks, 65 credit hours beyond the A.S. degree are required in the areas of science and mathematics, technical specialty, communications, humanities and social science, and interdisciplinary technical electives. The B.S. requirements are listed below; the recommended curriculum for each specialty track follows.

Communication Systems

The communication systems track prepares graduates for career opportunities in communication systems, signal processing, applications and specifications of systems, computer networking, and broadcasting. Students in this track study analog and digital communication systems, radio transmissions and reception, audio signal processing, and local area networks.

EET Technical Specialty Electives

EET 303 Communications I
EET 403 Communications II
EET 357 Real-Time Digital Signal Processing
EET 483 Industrial Local Area Networks
EET Elective

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor. See the effective plan of study for course suggestions.

Control Systems

The control systems track prepares graduates for career opportunities in the design and analysis of automatic control systems, including control hardware and software used in automation, robotics, industrial controllers, and military electronics systems. Prospective fields of employment are manufacturing industries, processing industries, and other areas of commerce that use control systems.

EET Technical Specialty Electives

EET 305 Advanced Microprocessors
EET 357 Real-Time Digital Signal Processing
EET 371 Automation, Instrumentation, and Process Control
EET 472 Automatic Control Systems
EET Elective

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor. See the effective plan of study for course suggestions.

Digital/Microprocessor Systems

The digital/microprocessor track prepares graduates for career opportunities in design, testing, and troubleshooting of computer-based systems.

Instruction is provided in computer hardware and software design, computer networking systems, and advanced digital design techniques utilizing simulation and computer-based design tools. Applications are found in consumer products, automation systems, computer systems, military electronics, communications, and instrumentation.

EET Technical Specialty Electives

EET 305 Advanced Microprocessors
EET 357 Real-Time Digital Signal Processing
EET 371 Automation, Instrumentation, and Process Control
EET 417 Analog and Digital Circuits
EET 483 Industrial Local Area Networks

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor. See the effective plan of study for course suggestions.

Electronic Devices and Systems

The electronic devices and systems track prepares graduates for career opportunities in analog and digital systems, signal processing, and integrated circuit technologies. Students in this track study analog and digital devices and systems, communications, D/A-A/D technologies, computer simulation, and applied analysis of circuits.

EET Technical Specialty Electives

EET 303 Communications I
EET 360 CIM in Electronics Manufacturing
EET 417 Analog and Digital Circuits
EET Electives

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor. See the effective plan of study for course suggestions.

Electronics Manufacturing

The electronics manufacturing track prepares graduates for career opportunities with a wide variety of manufacturers of electronic equipment. This fast-growing industry includes companies that manufacture audio, video, medical, computer, and consumer electronic equipment. Students in this track study computer interfacing, automated circuit board assembly, industrial automation, robotics, and process control.

EET Technical Specialty Electives

EET 305 Advanced Microprocessors
EET 360 CIM in Electronics Manufacturing
EET 371 Automation, Instrumentation, and Process Control
EET 417 Analog and Digital Circuits
EET 483 Industrial Local Area Networks

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor. See the effective plan of study for course suggestions.

Power Systems

The power track prepares graduates for career opportunities in the areas of power transmission and distribution in both the utility and the industrial setting. Applications include industrial power distribution, fault studies, fuse coordination, system economic analysis, lighting design, transmission losses, and power system protection.

EET Technical Specialty Electives

EET 331 Generation and Transmission of Electrical Power
EET 371 Automation, Instrumentation, and Process Control
EET 381 Electrical Distribution Systems
EET 472 Automatic Control Systems
EET Elective

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor. See the effective plan of study for course suggestions.

Advanced Curriculum Program

Electrical engineering technology students interested in pursuing advanced degrees in science, engineering, or professional registration are encouraged to take the ECET department's Advanced Curriculum Program (ACP).¹ This program maximizes a student's undergraduate preparation in the mathematics, science, and engineering science required for advanced studies within the framework of the B.S. degree program. The ACP requirements are listed below, with the four-year technology course substitution shown in parentheses.

Math and Science

MATH 163 Integrated Calculus and Analytic Geometry I (in place of Math 221)
MATH 164 Integrated Calculus and Analytic Geometry II (in place of Math 222)
MATH 261, 262
STAT 511 Statistical Methods I (in place of STAT 301)
PHYS 152 Mechanics (in place of PHYS 218)
PHYS 251 Heat, Electricity, and Optics (PHYS 219)
CHEM C105 Principles of Chemistry I (in place of CHEM C101)

¹For details on a specific program, consult a department advisor.

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor.

Minor in Electrical Engineering Technology

The minor in electrical engineering technology (EET) requires completion of a minimum of 22 credit hours of EET courses. Required courses are **EET 102, 105, 152, 154, and 155**. In addition, one course from the following list must be completed: **EET 204, 205, 212, or 302**. At least 12 credit hours of the minor must be completed in residence at IUPUI. Students with credit for EET 116 should consult the ECET department.

Students who wish to complete a minor in electrical engineering technology should consult a department advisor about prerequisite courses or credit for courses taken at other universities.

Minor in Digital Electronics Technology

The minor in Digital Electronics Technology focuses on digital and microprocessor systems. It requires completion of a minimum of 22 credit hours of EET courses.

The minor in Digital Electronics Technology focuses on digital and microprocessor systems. It requires completion of a minimum of 22 credit hours of EET courses. Required courses are **EET 105, 116, 155, 205, and 305**. In addition, one of the following must be completed: **EET 357 or 417**. At least 12 hours of the minor must be completed in residence at IUPUI.

Students who wish to complete a minor in Digital Electronics Technology should consult a department advisor about prerequisite courses or credit for courses taken at other universities.

Department of Mechanical Engineering Technology

Professor Zecher

Associate Professors Bluestein, Rennels (*Chair*),
Tharp

Assistant Professors Acheson, Frettinger-Devor,
Kovach, Workman

The Department of Mechanical Engineering Technology offers three Associate of Science degree programs, three Bachelor of Science degree programs, and five certificate programs. The two-year Associate of Science degree programs offered by the department are in computer graphics technology, computer integrated manufacturing technology, and mechanical engineering technology. The four-year Bachelor of Science degree programs are in computer graphics technology, computer integrated manufacturing technology and mechanical engineering technology. The short-duration certificate programs are in computer graphics, quality control, CAD/CAM, manufacturing systems, and electronics manufacturing.

For more information, contact the Department of Mechanical Engineering Technology at (317) 274-3428, or et_met@iupui.edu.

Associate of Science— Computer Integrated Manufacturing Technology

Accredited by the Technology Accreditation
Commission of the Accreditation Board for
Engineering and Technology, Inc. (ABET), 111
Market Place, Suite 1050, Baltimore, MD 21202,
(410) 347-7700.

Computer integrated manufacturing technology (CIMT) integrates all functions in manufacturing organizations and helps increase productivity, production efficiency, and profitability.

This program prepares students for a high-tech manufacturing environment. Graduates will be ready for positions in computer-aided design, computer numerical control, tool design, CAD/CAM, process planning, and quality control.

Successful completion of the program qualifies students for acceptance into the Bachelor of Science program in computer integrated manufacturing technology. Upon completion, students may also elect to pursue the Bachelor of Science in Mechanical Engineering Technology without loss of credit. Graduates of the A.S. degree program in computer integrated manufacturing technology are eligible for certification as manufacturing technologists. Co-op work programs with industry may be available to students.

Bachelor of Science— Computer Integrated Manufacturing Technology

Accredited by the Technology Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

This program prepares graduates to take their new skills in computer integrated manufacturing technology into traditional or fully integrated manufacturing environments. Typical areas of employment are traditional and nontraditional manufacturing processes, advanced manufacturing planning, CAD/CAM, robotics, production control, statistical quality control, process automation, computer integrated manufacturing, and manufacturing management.

IUPUI graduates with an A.S. in Computer Integrated Manufacturing Technology or Mechanical Engineering Technology are eligible for admission to the following two-year add-on curriculum leading to a Bachelor of Science degree.

Junior Year**Fifth Semester**

Associate of Science in Mechanical Engineering Technology

Accredited by the Technology Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc. (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

Mechanical Engineering Technology (MET) concerns the generation, transmission, and utilization of mechanical and fluid energy, as well as the design and production of tools, machines, and their products. This program prepares specialists in developing machines and products, in production processes, in installing and maintaining machines, and in solving repetitive engineering problems.

Graduates of this program are prepared to work as laboratory technicians, engineering aides, plant maintenance supervisors, layout designers, production assistants, and technical personnel. With additional experience, graduates may be promoted to such positions as industrial supervisor, machine and tool designer, technical buyer, production expeditor, and cost estimator.

Graduates of the A.S. degree program in mechanical engineering technology are eligible for certification as associate engineering technologists. In addition, successful completion of this program automatically qualifies a student for acceptance into the program leading to a Bachelor of Science in Mechanical Engineering Technology. Co-op work programs with industry may be available to students.

Computer Graphics Technology Certificate Program

This program places emphasis on learning industry-standard graphics software programs and sketching as a means of communication. Topics include computer literacy, electronic publishing, computer-aided drafting, raster and vector-based drawing, parametric modeling, multimedia, and animation. Upon successful completion of the program, the student may continue working toward the Associate of Science in Computer Graphics Technology.

CGT 111 Design for Visualization and Communication	3
CGT 112 Sketching for Visualization and Communication	3
CGT 116 Geometric Modeling for Visualization and Communication	3
CGT 117 Illustration for Visualization and Communication	3

CGT 251 Principles of Interactive and Dynamic Design	3
and CGT 356 Hypermedia Authoring I	3
	24

Quality Control Certificate Program

Developed in conjunction with the Northeast Indiana Section of the American Society for Quality Control, this certificate program provides training and instruction in the use of measuring instruments and techniques of statistical quality control. The course work provides a basis for putting these techniques to work in the quality control system of an industrial organization. The program includes an investigation of the concept of quality control and the impact of quality costs, determination of customer needs, and follow-up on field performance and feedback. A certificate will be presented to those who successfully complete all course work.

Curriculum

The courses are listed in the order in which they should be taken.

MATH 151 or MATH 153/154 Algebra and Trigonometry	5
IET 204 Maintaining Quality or	
IET 300 Metrology for Quality Assurance	3
IET 150 Quantitative Methods for Technology	3
IET 364 Total Quality Control	3
IET 374 Nondestructive Testing or	
IET 474 Quality Improvement of Products and Processes	3
IET 454 Statistical Quality Control	3
	20

CAD/CAM Certificate Program

This certificate program provides a quick overview of modern manufacturing, with special emphasis on CAD/CAM.

A total of 21 credit hours, with a cumulative grade point average of 2.0 on a 4.0 scale, is required to receive the certificate.

All students must complete the following courses:

CGT 116 Geometric Modeling for Visualization and Communication	3
MATH 151 or MATH 153/154 Algebra and Trigonometry	5
MET 242 Manufacturing Processes II	3
CGT 226 Introduction to Constraint-based Modeling	3
MET 271 Programming for Numerical Control	3
MET 328 CAD/CAM for Mechanical Design	3

Students must then choose one of the following electives:

MET 102 Production Design and Specifications	3
CGT 323 Introduction to 3D Surface Geometry	3
CGT 326 Manufacturing Graphics Standards	3
	23

Manufacturing Systems Certificate Program

This certificate program provides an overview of the manufacturing system and the control of its various components. The program can greatly benefit individuals without a technical background in adjusting to the manufacturing environment. A total of 21 credit hours and a cumulative grade point average of 2.0 on a 4.0 scale are required to receive the certificate.

All students must complete the following courses:

MATH 151 or MATH 153/154 Algebra and Trigonometry	5
CIMT 260 Robotics and Automated Material Handling	3
CIMT 224 Production Planning and Control	3
IET 104 Industrial Organization	3
IET 364 Total Quality Control	3
CGT 110 Technical Graphics Communication	3

Students must then choose one of the following electives:

MET 242 Manufacturing Processes II	3
CIMT 310 Plant Layout and Material Handling	3
IET 350 Engineering Economy	3
	23

Electronics Manufacturing Certificate

A certificate in electronics manufacturing will allow students to train and prepare for a career in the fast-growing electronics industry. Students will study a

wide range of topics in both electronics and manufacturing, including special processes used by today's industry, industrial organization, and quality techniques. For students who decide to continue their education, all the courses for the certificate will apply toward an associate degree in computer integrated manufacturing technology, electronics manufacturing option.

A total of 22 or 23 credit hours are required to receive the certificate.

All students must complete the following courses:

MATH 151 or MATH 153/154 Algebra and Trigonometry	5
IET 150 Quantitative Methods for Technology	3
IET 240 Quality Techniques for Electronics Manufacturing	3
EET M200 Electronics Manufacturing II	4
EET M290 Projects in Electronics Manufacturing	4

Students must then choose from one of the following electives:

EET 105 Digital Fundamentals I	3
EET 116 Electrical Circuits	4
EET M150 Electronics Manufacturing I	3
IET 104 Industrial Organization	3
MET 344 Materials II	3
	22/23

Department of Organizational Leadership and Supervision (OLS)

Associate Professor Goodwin (*Chair*)

Assistant Professors Feldhaus, Hundley

Lecturer Wolter

This program offers a broad-based education for those who desire leadership roles in business, government, or industry. A guiding vision of the department is to close the gap between theory and practice.

Associate of Science (A.S.) and Bachelor of Science (B.S.) degrees are available. The specialized Certificate in Human Resource Management and Certificate in International Leadership are also available.

The degree programs are flexible to meet the needs of both traditional and nontraditional students. As part of a relevant and practical discipline, our programs integrate a series of core courses with a choice of concentration tracks. The core courses offer a strong foundation in leadership, communication and general education, mathematics, and science. Concentration tracks allow students to develop their interests and talents within a particular technical field. Students will select courses from the following technical concentration areas:

Mechanical Engineering Technology (MET)
Computer Integrated Manufacturing Technology (CIMT)

Electrical Engineering Technology (ECET)
Construction Technology (CNT)
Computer Technology (CPT)
Interdisciplinary (INT)
Allied Health
Business
Nursing

Course work for the A.S. degree provides a solid foundation for students who wish to enhance their employment opportunities or pursue more advanced degrees. The work is balanced enough to include the study of mathematics and science, as well as study of technology related to the student's intended career, to general education, and to supervisory leadership. Students develop abilities that can help them become effective contributors early in their employment.

The B.S. degree increases the range and depth of the student's education in technical and leadership areas. Graduates are prepared to assume leadership positions in a variety of organizational functions as well as to pursue graduate degrees. The degree requirements are arranged in seven areas of study: leadership and supervision, mathematics and science, communication, behavioral science, social science and humanities, related technology, and electives.

Students working toward their B.S. degrees may earn certificates in specialty areas in technology and in OLS. For example, by taking a combination of organizational leadership and supervision (OLS) courses, students may earn a certificate in **Human Resource Management**. Academic advisors will assist the student in selecting courses needed to meet the requirements in the concentration area.

The Department of Organizational Leadership and Supervision agrees to accept credit hours earned at Ivy Tech in its Associate in Science and Associate in Applied Science programs, and where applicable these credit hours will be distributed to satisfy the requirements for the Associate of Science and Bachelor of Science degree programs in OLS. All courses that have been identified for transfer between campuses/programs under separate agreements will not be affected.

For more information, call (317) 278-0277 or e-mail et_ols@iupui.edu.

Associate of Science in Organizational Leadership and Supervision

The A.S. degree in Organizational Leadership and Supervision (OLS) requires a total of 61 credit hours. Program requirements for graduation are as follows:

- 22 credit hours in OLS—**OLS 100, 252, 263, 274, 327, 331, 378, 390** are required.
- Up to 18 credit hours in an applied technology that complements OLS and directly relates to specific career interests. At least 3 credit hours must demonstrate computer competency. 12 credit hours must be in a single department or program such as CNT, CPT, ECET, MET, business, nursing, allied health, etc. These courses must be related to a minor, or a certificate, or reflect some logical combination of courses. Note: Students

must have the set of courses they plan to apply to the related technology area pre-approved by an OLS academic counselor.

3. 3 credit hours in behavioral or social sciences, selected from courses in anthropology, psychology, sociology, economics, and/or geography (see an OLS advisor for approved geography courses with a social science dimension).
4. 9 credit hours in communications—**ENG W131**, **COMM R110**, and **TCM 220**.
5. 6 credit hours in mathematical skills, including **MATH 153–154** or **MATH 118–119** or equivalent. If MATH 151 or an equivalent or higher-level 5-hour course is substituted, one additional credit hour approved by an OLS advisor must be earned.
6. 3 credit hours in statistics such as **IET 150**, **STAT 301**, etc.

Bachelor of Science in Organizational Leadership and Supervision

The B.S. degree in Organizational Leadership and Supervision requires a total of 124 credit hours. Of the 43 credit hours required in OLS, 28 must result from taking **OLS 100**, **252**, **263**, **274**, **327**, **331**, **378**, **390**, **410**, and **490**. The balance of the requirements for graduation are as follows:

1. 15 additional credit hours of OLS course work beyond the required courses.
2. 24 credit hours in an applied technology competency that complements OLS and directly relates to specific career interests. 18 credit hours must be in a single department or program such as CNT, CPT, ECET, MET, business, nursing, allied health, etc., and at least 3 credits must demonstrate computer competency. These courses must be related to a second degree, a minor, a certificate, or reflect some logical combination of courses. Students will be directed to the appropriate advisor for a certificate, or minor; and the faculty in that department will counsel the student for those required courses. **Note:** Students must have the set of courses they plan to apply to the related technology area pre-approved by an OLS academic advisor.
3. 6 credit hours in behavioral or social sciences, selected from courses in anthropology, psychology, sociology, economics and/or geography (see an OLS advisor for approved geography courses with a social science dimension).
4. 18 credit hours in communication, including **COMM R110**, **ENG W131**, and **TCM 220**. The balance must be composed of speaking and writing courses.
5. 4 credit hours in a laboratory science elective. An approved 4 or 5 credit hour course in one of the basic sciences (3 hours of lecture and at least one hour of lab).
6. 6 credit hours in mathematical applications, which must include **IET 350** and an introductory

course in statistics. The introductory course in statistics must be selected after consultation with an OLS advisor.

7. 6 credit hours in mathematical skills, including **MATH 153–154** or **MATH 118–119** or equivalent. If MATH 151 or an equivalent or higher-level 5-credit hour course is substituted, one additional credit hour approved by an OLS advisor must be earned.
8. 6 credit hours in humanities, selected from courses in art, history, literature, music, religion, and/or theater.
9. 11 credit hours of electives from any department. Choose courses that “round out” your degree and expose you to different disciplines and ways of thinking. You should use these credits to improve your marketability in the workplace or to fill master’s degree prerequisites. Prior approval by an OLS advisor is strongly recommended.

Human Resource Management Certificate Program

This certificate program is co-sponsored by the Organizational Leadership and Supervision Department and the Human Resource Association of Central Indiana. The program aims to provide a thorough explanation of the human resource department’s role in the modern organization. The focus of the courses will be practical, emphasizing the application of vital concepts.

Students are required to successfully complete 21 credit hours (seven courses) to earn the certificate.

Required Core Courses

Students must successfully complete all seven of the following courses (21 credit hours):

OLS 331 Occupational Safety and Health.....	3
OLS 368 Personnel Law.....	3
OLS 375 Training Methods	3
OLS 378 Labor Relations	3
OLS 383 Human Resource Management ¹	3
OLS 476 Compensation Planning and Management	3
OLS 479 Staffing Organizations	3

¹OLS 383 Must be taken as a prerequisite or corequisite to any other certificate course.

To enroll in this program, students must be formally admitted by the Office of Admissions on the IUPUI campus. Credit may be given for applicable courses taken at other colleges or universities. Students may apply these courses toward degree programs in the Organizational Leadership and Supervision Program. Additional information may be obtained from the Organizational Leadership and Supervision Program, 799 W. Michigan Street, IUPUI, Indianapolis, IN 46202; telephone (317) 278-0277.

Certificate in International Leadership

This interdisciplinary certificate is appropriate for individuals who may have international supervisory leadership responsibilities and/or work with individuals from different countries. It is also appropriate for those students who wish to acquire knowledge, skills, and abilities to prepare for an overseas work assignment. A total of 27 credit hours is required for the certificate; of those 27 credits, 15 must be in core requirements (section I), at least 3 but not more than 7 credits from international experience and/or additional foreign language courses (section II), and the remainder from elective courses (section III). Transfer courses will be accepted, but at least half of the credits must be earned on the IUPUI campus. Any prerequisite courses may add additional credit hours, but those credits will *not* be counted toward the 27 credits required for the certificate.

Section I: Required Core Courses (15 credit hours)

- OLS 327** Leadership for a Global Work Force (P: ENG W131, COM R110)
OLS 328 Principles of International Management (P: OLS 327, MA 153 or equivalent)
COMM C482 Intercultural Communication (P: C180 or instructor’s consent)
LANG Six hours of a *single* foreign language (not American Sign Language)

Section II: International Experience and/or Additional Language Electives (3 to 7 total credit hours)

- INTERN** Up to 3 credit hours from IUPUI-approved overseas internships
STUDY Up to 6 credit hours from an IUPUI-approved study-abroad program
LANG Up to 4 *additional* hours of the foreign language chosen in the core

Section III: Related International Electives (5 to 9 total credit hours)

As students develop a certificate plan of study, they must accumulate the balance of their elective credits from one of the following four focus areas. The set chosen should relate to the student’s individual leadership interests, and at least three credits must be at a 300 or higher level.

1. Business and economics focus
2. Political focus
3. Social and cultural focus
4. Area studies focus

To enroll in this certificate program, students must be formally admitted by the Office of Admissions on the IUPUI campus. Credit may be given for applicable courses taken at other colleges or universities. Students may apply these courses toward degree programs in the Organizational Leadership and Supervision Program (OLS). Additional information may be obtained from the Organizational Leadership and Supervision Program (OLS), 799 West Michigan Street, Indianapolis, IN 46202; telephone (317) 278-0277.

Technical Communications Program

Associate Professor Wilkins

Assistant Professor Hovde

Adjunct Assistant Professor Fitzpatrick

The Technical Communications Program offers specialized courses for students in engineering and technology programs that help them prepare for the writing and speaking tasks they will perform as part of their professional work. These courses build on students' previous experiences in written and oral communication and help them learn to present technical information effectively for audiences in organizational settings. In addition, the program works with other schools and local industry to prepare students for careers as technical communicators.

Certificate in Technical Communication

The Technical Communication Certificate is offered by the Purdue School of Engineering and Technology in cooperation with the Department of English, the Department of Communication Studies, and the Hoosier Chapter of the Society for Technical Communication. Any student formally admitted to the university may be a candidate for the certificate. Students who earn the certificate will have demonstrated they have the core competencies necessary for entry-level positions as technical communicators: the ability to gather and transform technical information for a variety of audiences and the ability to design, develop, and edit effective documents using rhetorical principles and current technology.

Technical Specialty

A technical or scientific major or minor or technical interest demonstrated by 9 credit hours of courses, including CPT 106 or 115 or an equivalent introductory computer course.

Required Courses: 8/9 credits

TCM 220, 320, or 360—an introductory technical writing course

TCM 350 Visual Elements of Technical Documents

ENG W365 Theories and Practices of Editing

Selected Courses: 9/10 credits

ENG G205 Introduction to the English Language

ENG W315 Composing Computer-Delivered Text

TCM 370, COMM C401, or COMM C402, a course in oral presentation of technical information

COMM R320 Advanced Public Communication or **COMM R321** Persuasion

COMM C228 Discussion and Group Methods or

COMM C380 Organizational Communication

OLS 374 Supervisory Management, **OLS 375** Training Methods, or **OLS 385** Leadership Strategies for Quality and Productivity

JOUR J463/J563 Desktop Publishing or **JOUR J390** Corporate Publications

IET 364 Total Quality Control

TCM 399 Issues in Technical Communication

A course in visual communication

Internship

Other courses may be approved by the TCM coordinator based on a student's particular interests and career objectives.

Portfolio

In order to obtain a Certificate in Technical Communication, a student must submit a portfolio containing several samples of written work, each accompanied by a description of the document's purpose and intended audience, for review by representatives of the Hoosier Chapter of the Society for Technical Communication.

Technology Course Descriptions

Key to Course Descriptions

The courses listed in this section will, for the most part, be offered during the 2002-2004 academic years. Additional information about course schedules may be obtained from the specific departments in the school. Courses are grouped under the appropriate program subject abbreviation. Course descriptions contain the following information, with some exceptions, in this order: course number, course title; number of credit hours (in parentheses); number of lecture hours per week; number of laboratory hours per week; number of recitation hours per week (group discussion and problem solving); and prerequisites (P) and/or corequisites (C), followed by a course description. For example, under Civil Engineering Technology (CET), a course description reads:

CET 104 Fundamentals of Surveying (3 cr.) Class 2, Lab 3. P: MATH 154 or equivalent. Measurement of vertical and horizontal distances and angles using the tape, level, transit, theodolite, and EDM. Computations of grades, traverses, areas, and curves.

This listing indicates that the course number is CET 104 with the title "Fundamentals of Surveying." It's worth 3 credit hours. The class meets 2 hours a week for the lecture and 3 hours a week for the laboratory. The required prerequisite is MATH 154 or an equivalent course. A brief course description then follows.

The numbering system for courses reflects the following levels:

100-299	Courses normally scheduled for freshmen and sophomores
300-499	Courses normally scheduled for juniors and seniors
500-599	Dual-level courses that may be scheduled for seniors and for graduate students for graduate credits

Architectural Technology (ART)

ART 116 Construction Graphics (3 cr.) Class 1, Lab 6. P: High school geometry or equivalent. Introduction to drafting fundamentals, with emphasis on architectural and civil engineering topics. Use of instruments, lettering, orthographic projections, auxiliary views, intersections, and perspectives. Students may not receive credit for both ART 116 and ART 117.

ART 117 Construction Drafting and CAD (3 cr.) Class 1, Lab 4. P: High school geometry or equivalent. Introduction to drafting and CAD fundamentals, with emphasis on architectural and civil engineering topics. Development of basic drafting skills, using orthographic projections, auxiliary views, pictorial drawings, and drafting conventions. Students may not receive credit for both ART 116 and ART 117.

ART 120 Architectural Presentation (3 cr.) Class 1, Lab 4. Techniques for production of presentation drawings for a client. Three-dimensional drafting techniques including different perspective drawing techniques and other 3-D drafting methods are covered. The course also includes rendering; shades and shadows; and coloring using pen, pencil, and color markers. Focus is on learning presentation methods rather than learning rendering techniques.

ART 155 Residential Construction (3 cr.) Class 2, Lab 3. P: ART 165 or equivalent; ART 117 or equivalent; and CNT 105. Wood frame construction through a semester project requiring planning, preliminary, and working drawings. Outside lab assignments are required.

ART 165 Building Systems and Materials (3 cr.) Class 2, Lab 3. Study of the structural systems used in structures. The study of properties, uses, and methods of incorporation of various construction materials in modern construction.

ART 200 Fundamentals of CAD for Construction (3 cr.) Class 2, Lab 3. An introduction to computer-aided design (CAD) hardware and software with emphasis on two-dimensional drawings and design. Assignments focus on practical architectural and civil engineering applications for construction.

ART 210 History of Architecture I (3 cr.) Class 3. A survey of Western architecture from ancient times to the present day. Social, technological, and cultural influences on architectural styles are emphasized.

ART 220 Advanced Architectural Presentation (3 cr.) Class 1, Lab 6. P: ART 120 or consent of instructor. Advanced subjects in architectural presentation.

ART 222 Commercial Construction (3 cr.) Class 2, Lab 3. P: ART 155. Preparation of preliminary and working drawings for an intermediate-sized commercial building. At the instructor's option, the work may be done in groups.

ART 284 Mechanical Systems for Buildings (3 cr.) Class 3. P: MATH 154 or equivalent. Plumbing, heating, ventilation, air-conditioning, and other mechanical systems for buildings, including calculations and design for such systems.

ART 285 Electrical Systems for Buildings (2 cr.) Class 2. P: MATH 153 or equivalent. A survey of electrical and lighting system requirements for residential and commercial buildings. Lighting fundamentals and design, electric circuits, power requirements, and wiring layout used for building construction systems.

ART 299 Architectural Technology (1-4 cr.) Hours and subject matter to be arranged with staff. Course may be repeated for up to 9 credit hours.

ART 310 History of Architecture II (3 cr.) Class 3. Western architecture, structure, and building technology of the eighteenth, nineteenth, and twentieth centuries.

ART 350 Energy Conservation in Buildings (3 cr.) Class 3. P: ART 284. Heat loss and heat gain calculations in buildings using computers. Principles of energy-conserving building construction and insulation methods as to details and materials. Life-cycle costing of construction alternatives.

ART 476 Writing Construction Documents (3 cr.) Class 3. P: CNT 347. Purpose and intent of specifications for specific jobs, including development of the general conditions, adaptation of selected provisions from standard specifications, and delineation of special supplemental conditions.

ART 490 Senior Project (1-6 cr.) Final project aimed at combining the skills and knowledge gained from the various areas of study. The student will be expected to report graphically, orally, and in written form on a final project approved by the advisor. Presentation will be made to a representative board of the faculty determined by the advisor.

ART 499 Architectural Technology (1-4 cr.) Hours, subject matter, and credit to be arranged with staff. Course may be repeated for up to 9 credit hours.

Biomedical Electronics Technology (BMET)

BMET 105 Introduction to Biomedical Electronics Technology (1 cr.) Class 1. P: None. Students will dive into the field without getting wet. To explore BMET, participants will monitor BIOMEDTALK, an e-mail chat group used by Biomedical Electronics Technicians as a forum for discussion of equipment-related issues and concerns. Students will discuss and research posted topics. Samples of topics posted in the past include hospital cell phone use and medical equipment interference from children's toys and games. Included in this course will be a visit to area hospital BMETs.

BMET 220 Applied Human Biology for BMET (3 cr.) Class 3. This course presents the human biology, anatomy, physiology, and medical terminology essential for biomedical equipment technicians and the devices involved in patient care. Focus is on the vocabulary necessary for effective medical communication skills in the hospital environment as part of the health care team.

BMET 240 Introduction to Medical Electronics (3 cr.) Class 3. C: EET 154. An overview of human anatomy and physiology and introduction to physiological measurements, including

cardiovascular, pulmonary, and applicable pressure and temperature measurements. Operation of common biomedical electronic equipment is demonstrated. On-site hospital visits expose students to modern monitoring and intensive-care biomedical equipment.

BMET 290 Biomedical Equipment Technician Practicum (4 cr.) Class 4. P or C: BMET 320. Practice working in industry as a BMET. Students work on a variety of medical equipment and job tasks. Some training in the form of in-service and orientation programs. An employer evaluation, student report, and a minimum of 180 work hours are required.

BMET 320 Biomedical Electronic Systems I (4 cr.) Class 3, Lab 3. P: BMET 240. C: EET 204. Hands-on study of medical instrumentation. The origins of biopotentials, electrocardiograms, and electrical shock; study of patient-care equipment, including the electrocardiograph. A logical approach to troubleshooting, including unit-level troubleshooting.

BMET 330 Electronics for the Clinical Laboratory Equipment Technician (3 cr.) Class 3. P: EET 116 or equivalent (fundamental understanding of active, passive, and digital devices). This course provides a study of devices, circuits, computers, test equipment, transducers, and sensors which are specific to the clinical laboratory. This course includes the analysis of applied electronics circuits incorporated in this environment.

BMET 360 Applied Human Biology for the Clinical Laboratory (3 cr.) Class 3. P: BMET 330 or consent of instructor. This course provides an overview of human structure, function, and chemistry as they relate to the clinical laboratory environment. The class emphasizes the study of bodily fluids and commonly analyzed tissues under both normal and disease conditions. Fluids studied include blood components, urine, spinal fluid, and joint fluid. This class will also discuss medical terminology as well as the medical communication skills required to interface with hospital staff.

BMET 370 Safety and Regulations in the Clinical Laboratory (3 cr.) Class 3. P: BMET 360 or consent of instructor. This course studies the codes and standards of the College of American Pathologists (CAP), the Clinical Laboratory Improvement Amendment (CLIA), and other governing bodies. In addition, this course investigates the prevention and control of chemical, electrical, biological, and radiological human hazards.

BMET 380 Clinical Laboratory Equipment (3 cr.) Class 3. P: BMET 370 or consent of instructor. This course focuses on the theory of clinical laboratory instrumentation and the function, utilization, and problem-solving skills necessary for the support of laboratory equipment. Instruction emphasizes devices used for hematology, clinical chemistry, and microbiology. These devices include centrifuges, blood cell analyzers, immunochemistry analyzers, coagulation analyzers, and blood gas and co-oximetry machines. The course also presents fundamental pneumatics as a basis for clinical lab equipment.

Civil Engineering Technology (CET)

CET 104 Fundamentals of Surveying (3 cr.) Class 2, Lab 3. P or C: MATH 154 or equivalent. Fundamental concepts and practical applications related to measurement of vertical and horizontal distances and angles using the tape, level, transit, theodolite, and EDM (total stations, electronic workbooks, laser levels, etc.) Computations of grades, traverses, areas, and curves. Basic concepts of topography and its uses. Identification of contours and drawing of topographical maps.

CET 160 Statics (3 cr.) Class 3. P: MATH 154 or equivalent. Forces acting on bodies at rest, including coplanar, concurrent, and nonconcurrent systems. Includes centroids, moments of inertia, and friction.

CET 204 Land Survey Systems (3 cr.) Class 3. P: MATH 153. Development, history, elements of the U.S. Public Land System. Tiffin's Instructions. Methodology for the subdivision of sections, retracement survey concepts, related problems and solutions. Types of land descriptions and their plots. State Plane Coordinate System and its use in surveys. Records research of land. Modern land information system, implementation of such a system.

CET 210 Surveying Computations (3 cr.) Class 2, Lab 2. P: CET 104. Accuracy, precision, and error theory pertaining to surveying calculations. Includes manual lab sessions, as well as software use, if appropriate, related to calculations involving alignment, grade, route surveying, construction surveying, building layouts, areas, and earthwork.

CET 231 Soils Testing (3 cr.) Class 2, Lab 3. P: CET 160. P or C: TCM 220. The measurement of the engineering properties of soils in the laboratory and field. Identification and classification of soils by the Unified Soil Classification System and the American Association of State Highway and Transportation Officials System.

CET 260 Strength of Materials (3 cr.) Class 3. P: CET 160. C: CET 267. Stress-strain relationships of engineering materials; composite analysis; shear forces and bending moments in beams; analysis and design of steel and wood beams and columns, beam deflections, and statistically indeterminate beam analysis.

CET 267 Materials Testing (2 cr.) Class 1, Lab 3. C: CET 260. P or C: TCM 220. Laboratory and field testing of structural materials to determine their mechanical properties and behavior under load. Materials included are steel, aluminum, concrete, wood, and asphalt.

CET 275 Applied Civil Engineering Drafting (3 cr.) Class 2, Lab 3. P: ART 116 or ART 117 and ART 165 or ART 162, and ART 172, and CNT 105. Preparation of structural construction drawings for buildings, bridges, roads, and topographic drawings.

CET 299 Civil Engineering Technology (1-4 cr.) Hours and subject matter to be arranged with staff. Course may be repeated for up to 9 credit hours.

CET 302 Geodesy (3 cr.) Class 3. P: CET 104. This course is designed to provide an overview of geodesy and includes the following: a brief history of geodesy, the geometry of the ellipsoid, the two-dimensional

ellipse, the construction of an ellipse, the three-dimensional ellipsoid, geodetic transformations, geodetic datums, reduction of field observations to the ellipsoid, the geoid, and orthometric heights and leveling.

CET 304 Legal Descriptions for Surveyors (3 cr.) Class 3. P: CET 104 or equivalent. This course provides a foundation in basics necessary to write legal descriptions. Includes a brief history of surveying framework, supportive information, descriptive fundamentals, determining controls, general and water boundaries, interpretations, monuments, streets, occupations versus titles, easements, right-of-ways, and special shaped/section land. Participants will experience land description writing exercises.

CET 305 Control Surveying (3 cr.) Class 3. P: CET 104 and CET 210. Theoretical fundamental and practical applications of establishing survey control networks including open and closed traverses, route surveying networks, using GPS and EDM in control surveying, differential leveling and industry surveying standards.

CET 307 Property Surveying (3 cr.) Class 3. P: CET 204, CET 210, and CET 304. The land surveyor in the context of real estate development/transfer. The rules and classifications of evidence and their use. Transfers of real estate and role of title companies. The process for a legal survey in Indiana. Retracement survey of a subdivision, evidence gathered and optimum resolution for the boundaries on such surveys. Plats and reports.

CET 308 GPS and Geodesy for Surveyors (3 cr.) Class 2, Lab 2. P: MATH 221, CET 104, and CET 210. Practical application of GPS to land surveying, use of the GPS signal and receivers. Planning a GPS survey, conducting the observations, and analyzing GPS data processing procedures. The course also includes overview of geodesy, the geometry of the multi-dimensional ellipse and ellipsoids, geodetic transformations and datums and the Geodetic Reference System.

CET 312 Construction and Route Surveying (3 cr.) Class 2, Lab 3. P: CET 104. Field procedures for construction and route surveying, including highway, street, sewer, and bridge layout. Route surveying including vertical and horizontal curves, curve design, survey for streets and subdivisions, earthwork, and profiles/sections using both theodolite and electronic distance measuring (EDM) equipment. Computation of errors and coordinates and use of appropriate software.

CET 350 Structural Design for Construction (3 cr.) Class 3. P: CET 260. Overview of structural design for reinforced concrete, steel, and wood structures. Allowable and ultimate strength design methodologies are covered, including load factor design and load and resistance factor design. Structural design codes and design-construction interdependence in professional practice are emphasized.

CET 368 Experimental Stress Analysis Lab (2 cr.) Class 1, Lab 3. P: CET 267 and MATH 221. Determining the location, direction, and magnitude of stress and strain in full-size and scale-size structural systems and components.

CET 382 Steel Structures Design (3 cr.) Class 3. P: CET 260 and CET 267. Fundamentals of structural steel design, with particular attention to the design of beams, columns, and their connections.

CET 387 Reinforced Concrete Design (3 cr.) Class 3. P: CET 260 and CET 267. The fundamentals of reinforced concrete design and analysis, including beams, slabs, columns, footings, and retaining structures. Introduction to precast construction and prestressed concrete.

CET 402 Surveying Law (3 cr.) Class 3. P: CET 104 and CET 304 or equivalent. Surveying law defines the role and duties of a surveyor; rights and interests in land; the ownership and transfer of real property, land descriptions, statute law and common laws; sequential and simultaneous conveyances; easements and reversions; riparian rights; the public land system; and Rule 13.

CET 430 Soils and Foundations (3 cr.) Class 2, Lab 3. P: CET 260 and junior standing. Measurement of technical properties of soils in situ or in the laboratory, classification for engineering and construction purposes. Soil exploration, subsurface investigation, and soil reports; concept of bearing capacity; shallow and deep foundations and retaining wall, their analysis, and construction aspects. Soil-structure interaction in terms of construction, settlement, and structural service issues.

CET 452 Hydraulics and Drainage (3 cr.) Class 3. P: CET 260 and senior standing. Basic hydrostatics; fundamental concepts of fluid flow in pipes and open channels; methods of estimating storm-water runoff; sizing of culverts, storm and sanitary sewers, and open channels.

CET 484 Wood, Timber, and Formwork Design (3 cr.) Class 3. P: CET 260 and CET 267. Fundamentals of wood and timber design, including beams, columns, connections, and laminated structural members. The design of formwork for concrete structures, including walls, beams, columns, slabs, and forms for special shapes.

CET 490 Senior Project (1-6 cr.) Final project aimed at combining the skills and knowledge gained from the various areas of study. The student will be expected to report graphically, orally, and in written form on a final project approved by the advisor. Presentation will be made to a representative board of the faculty determined by the advisor.

CET 499 Civil Engineering Technology (1-4 cr.) Hours, subject matter, and credit to be arranged with staff. Course may be repeated for up to 9 credit hours.

Computer Graphics Technology (CGT)

CGT 100 Technical Graphics Lectures (1 cr.) Class 1. An introduction to the academic and professional opportunities available in the field of technical graphics. Lecture presentations cover a wide range of material by instructors from the technical graphics program and guests. Attendance at all lectures is important, and major assignments include writing a resume and professional goals paper, readings from course textbooks, development of a personal Web page, and weekly quizzes and lectures.

CGT 102 Graphic PC Basics (3 cr.) Class 2, Lab 4. This introductory course gives students hands-on experience in the graphics enhancement capabilities of standard productivity software. Students will learn and apply specialized graphics options that are often overlooked in standard Windows® office software. Emphasis will be on the efficient exploitation of the Windows® graphical user interface (GUI), the graphics capabilities of common productivity software, acquiring and linking graphical elements to documents, graphic file formats, and the implications of producing graphics-intensive documents.

CGT 110 Technical Graphics Communication (3 cr.) Class 2, Lab 2. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

CGT 111 Design for Visualization and Communication (3 cr.) Class 2, Lab 2. An introductory design course for computer graphics majors. Students develop an understanding of the basic design elements and principles, composition and typography through exercises and projects. The focus is on visual thinking, exploring the relationship between type and image, and developing multiple solutions to a given problem.

CGT 112 Sketching for Visualization and Communication (3 cr.) Class 2, Lab 2. This course applies fundamental computer graphics concepts of visualization, communication, and creativity within a sketching metaphor. Exercises and projects in graphic theory, problem solving, and sketching skill development provide students with activities that focus on further development within the discipline. A variety of sketching techniques are used to gather critical information and transform data into effective communication instruments.

CGT 116 Geometric Modeling for Visualization and Communication (3 cr.) Class 2, Lab 2. Core introductory applied computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication. Assignments apply graphics communication principles to problems involving visualization, coordinate systems, geometric constructions, projection theory, and database practices. (AutoCAD® software is used in this course.)

CGT 117 Illustrating for Visualization and Communication (3 cr.) Class 2, Lab 2. This foundation course stresses the use of pictorial illustration for visualization and communication. Various projection systems are introduced with discussion focusing on the appropriate use of view and system utilized to accentuate and provide clear communication. A variety of digital tools are used to construct, extract, and render pictorial views using vector and raster tools. (Illustrator® or Freehand® software is used in this course.)

CGT 120 Electrical and Electronic Drafting (2 cr.) Class 1, Lab 2. P: EET 154. A basic course in electrical and electronic drafting, utilizing multiview and isometric drawing, sectioning, and dimensioning practices. Documentation of design through schematic diagrams, wiring diagrams, and printed circuit board layout. Application of graphics standards for electronic, power, and industrial control circuitry.

CGT 155 Graphical Communication and Spatial Analysis (2 cr.) Class 1, Lab 2. The principles of engineering graphics are applied to the visualization, communication, and graphical analysis of problems. Included is the utilization of sketching and computer-aided design to create and analyze computer-generated geometric models. Manipulation of coordinate systems, methods for generating selected views, graphic and data base standards, and engineering drawing interpretation will be covered.

CGT 211 Raster Imaging for Computer Graphics (3 cr.) Class 2, Lab 2. P: TG 116 and TG 117. Digital images are produced using a variety of computer technologies. Advanced color theory, surface rendering, and light control are emphasized in relation to technical illustration, hardware characteristics, and software capabilities. (Photoshop[®], software is used in this course.)

CGT 216 Vector Imaging for Computer Graphics (3 cr.) Class 2, Lab 2. P: TG 211. Full-color vector illustrations for a variety of uses are produced using computer methods. Color theory, surface analysis, and rendering techniques are emphasized as they apply to vector-based illustrations.

CGT 221 Graphic Representation (3 cr.) Class 1, Lab 4. An introduction to 3D CAD modeling and rendering as applied to interior spaces and environments. Efficient 3D surface and solid geometric modeling strategies are emphasized in the creation of structures and furniture. Basic digital lighting issues are also addressed in relation to artificial lighting schemes and mechanisms.

CGT 226 Introduction to Constraint-based Modeling (3 cr.) Class 2, Lab 2. P: TG 116, TG 112, and MATH 151. Introduction to 2D and 3D geometry and techniques used in the construction of constraint-based models. Emphasis on the downstream applications of 3D solid modeling databases.

CGT 241 Introduction to Animation and Spatial Graphics (3 cr.) Class 2, Lab 2. P: TG 116, C: TG 211. This course introduces the knowledge base on which digital animation and spatial graphics are founded and developed. Emphasis will be placed on developing a working knowledge of the underlying process of 3D animation including mechanics of 3D geometric formats; spline, polygon mesh, and NURBS modeling; procedural mapping of raster images; simplified modeling, rendering methods; hierarchical linking; keyframe animation; thumbnail storyboarding and scripting fundamentals. (Course uses 3D Studio[®] software.)

CGT 242 Technical Graphics for Supervision (3 cr.) Class 1, Lab 2. An introduction to commonly encountered technical drawing practices; multiview representation, isometric pictorial, reading drawings, dimensioning practices, and working drawings. Emphasis is on technical graphics as technical communication through freehand sketching.

CGT 251 Principles of Creative Design (3 cr.) Class 2, Lab 2. P: TG 117. This course introduces the design of the human computer interface coupled with traditional graphical design concepts applied to the creation of dynamic digital tools. Concepts are applied to multimedia and hypermedia products and the related print-based materials normally associated with

them. Students learn graphic design, interface design, and information design to create effective and visually stimulating communication devices using multimedia and hypermedia tools. (QuarkXPress[®] or InDesign[®] software is used for this course.)

CGT 262 Introduction to Construction Graphics (3 cr.) Class 2, Lab 2. Study of graphic solutions to problems conditioned by traditional and emerging construction document standards. Students will produce graphics using sketching and computer-assisted processes.

CGT 267 Applications of Construction Documentation I (3 cr.) Class 2, Lab 2. P: TG 112 and TG 116. Principles of document standards applied to creation and distribution within the construction enterprise. Construction documents are created as products of a computer model database.

CGT 299 Selected Topics in Computer Graphics (1-3 cr.) Class 0-3, Lab 0-9. Hours and subject matter to be arranged by staff. Course may be repeated for up to 9 credit hours.

CGT 321 Advanced Pictorial Representation (3 cr.) Class 1, Lab 4. P: TG 221. The importance of tone, texture, color, and entourage is stressed in the rendering of architectural interiors and exteriors.

CGT 323 Introduction to 3D Surface Geometry (3 cr.) Class 2, Lab 2. P: MATH 221. Introduction to the visualization and creation of 3D computer-generated surface models and their applications in today's manufacturing, communications, and publishing industries. Emphasis on creating, editing, and manipulating 3D models. Efficient modeling strategies, data exchange, and orthographic view extraction is included. (Rhino[®] and Nendo[®] software are used for this course.)

CGT 326 Manufacturing Graphics Standards (3 cr.) Class 2, Lab 2. P: MET 242. Introduction to ANSI drawing standard practices including section views, dimensioning and tolerances, GDT, ISO 9000, fasteners, multiview drawings, working drawings, mechanisms, ECOs, symbols, and manufacturing processes as it applies to engineering drawings. (IronCAD[®] and/or SolidWorks[®] software is used in this course.)

CGT 340 Digital Lighting and Rendering (3 cr.) Class 2, Lab 2. P: TG 241. The development of a working knowledge of perspective display of three-dimensional models and the resulting effects of projected light sources on shade, shadow, color, texture, and atmospheric effects in architecture, product illustration, and animation. Emphasis will be placed on lighting design, analysis, and photorealistic simulation for commercial graphic applications.

CGT 341 Animation of Computer Graphics (3 cr.) Class 2, Lab 2. P: TG 340. An applied course covering three-dimensional computer graphic animation for graphics specialists and professionals involved in the use of technical design, time and motion study, surface texture mapping, digital lighting, color, and the technology required to produce computer animations for commercial applications in manufacturing design, marketing, and training. (3D Studio[®] software is used in this course.)

CGT 346 Digital Video and Audio (3 cr.) Class 2, Lab 2. P: TG 241. Covers the use of digital technologies for video and audio focused toward use in multimedia, hypermedia, and animation products. Students examine the methods for creating, sampling, and storing digital video and digital audio and the constraints placed on these media assets when used for media-based products. Emphasis is placed upon the technology of digital video and audio including formats, data rates, compressors, and the advantages and disadvantages of the different technologies. (Premiere[®], After Effects[®] and Sound Forge software is used in this course.)

CGT 351 Multimedia Authoring I (3 cr.) Class 2, Lab 2. P: TG 251. This course introduces the many facets of interactive multimedia design and production. Students are introduced to interaction-based authoring programs used for information delivery with special attention focused on the integration of various media assets for communication. Students also concentrate on the storage, management, and retrieval of media assets in a production environment. Considerable time is spent on the systematic design of interactive media products to meet specified goals of communication. (Director[®] and Flash[®] software is used in this course.)

CGT 356 Hypermedia Authoring I (3 cr.) Class 2, Lab 2. P: TG 251. A course focusing on the development of hypermedia for information distribution. The course stresses development strategies for managing the brief and rapidly changing information of corporations and organizations for just-in-time distribution. Topics include intranets, extranets, networks, the World Wide Web, development languages, and other newly developed technologies. (HTML, JavaScript, and other languages are utilized within this course.)

CGT 362 Applications of Construction (3 cr.) Class 2, Lab 2. P: TG 216, TG 266, and CPT 175. A further study of the creation, archiving, integrating, qualifying and utilization of a computer-generated three-dimensional architectural model within a construction enterprise. The three-dimensional model, as a database, is emphasized through numerous applications.

CGT 411 Contemporary Problems in Computer Graphics (3 cr.) Class 3, or Class 2, Lab 2. P: Senior Standing. Groups will identify, design, qualify, manage, create, and present a final project relative to existing or emerging issues within computer graphics. Activities and experiences will explore related topics such as project planning and management, user expectations, project politics, interpersonal communications skills, and quality management. The course concludes with faculty, peer, and practicing professional evaluation of oral, written, and media presentations.

CGT 415 Seminar for Senior Design Project (1 cr.) Arranged 1. P: Senior standing. Preliminary work toward the senior design project is carried out with guidance from faculty. This course includes background research, review of previous projects, definition of project requirements, and the successful creation of a formal project proposal. The course concludes with a proposal presentation to faculty.

CGT 416 Contemporary Problems in Computer Graphics (3 cr.) Class 3, or Class 2, Lab 2 P: TG 415. This capstone course requires students to engage in a substantive endeavor directed at solving problems related to computer graphics. Activities include the creation and management of graphic systems and media assets per the requirements of the senior design proposal. Students are required to demonstrate professional attitudes and attributes in the timely completion and presentation of their project.

CGT 423 Manufacturing Document Production and Management (3 cr.) Class 2, Lab 2. P: TG326. An overview of relevant topics which impact manufacturing document production and control technology with an emphasis on PDM, ASP's, and extranets. This course will explore the management and presentation of graphical Web databases. Attention will be given to data transfer, file conversions, techniques for storing and retrieving databases in a variety of formats, and editing databases. (Alibre, and/or other web-collaborative 3D modeling software will be used in this course.)

CGT 442 Advanced Computer Animation (3 cr.) Class 2, Lab 2. P: TG 341. An applied course covering advanced spline modeling techniques, lighting techniques, applied shading, motion dynamics and controllers, particle systems, application customization programming, and pre-production development and planning. In addition to developing a working knowledge of advanced techniques, a scholarly study of emerging advancements in computer animation and spatial graphic technology will be included. (3D Studio®, Lightwave®, or Maya® software is used in this course.)

CGT 446 Technical Animation Production and Direction (3 cr.) Class 3 or Class 2, Lab 2. P: Senior standing and consent of instructor. A variety of commercial applications of technical animation and spatial graphics are analyzed and produced with special emphasis upon client development, design, organization, scripting, storyboarding, technical production, management, and evaluation.

CGT 451 Multimedia Authoring II (3 cr.) Class 2, Lab 2. P: TG 356. As a continuation of TG 256, this course focuses on the use of authoring programs to create interactive multimedia products. Significant time is spent on intermediate to advanced programming and scripting as well as the synchronization of aural and graphical components. Students are required to plan, design, and implement a major project, and a final presentation is required.

CGT 456 Hypermedia Authoring II (2 cr.) Class 3, or Class 2, Lab 2. P: TG 351. This course presents the advanced technologies available for use on the World Wide Web and within corporate Intranet environments. Emphasis and discussion are focused on the advantages and disadvantages of these technologies as well as implementation to create unique solutions for business and industry. Strategies for planning, development, and implementation will be discussed and demonstrated. (Current technological tools are utilized in this course.)

Computer Integrated Manufacturing Technology (CIMT)

CIMT 100 Introduction to CIM Technology (1 cr.) Class 1. CIMT 100 presents students with a vision of how the techniques and tools of computer-integrated manufacturing (CIM) work together to support the operation of a manufacturing business.

CIMT 224 Production Planning and Control (3 cr.) Class 3. P: MATH 151 or equivalent. Preproduction consideration of the most economical methods, operations, and materials for the manufacture of a product. Includes planning, scheduling, routing, and detailing of production control procedures.

CIMT 243 Automated Manufacturing I (3 cr.) Class 2, Lab 2. P: EET 116 and CPT 140. Examination of how industrial controls, programmable logic controllers (PLCs), and industrial robots function in an automated manufacturing environment. Students learn the theory of operation, how to program, and the practical application of PLCs and electric robots. Introductory-level integration topics and commonly used industrial control devices are also addressed.

CIMT 244 Automated Manufacturing II (3 cr.) Class 2, Lab 2. P: MET 242 and CPT 140. Shop floor components of computer-integrated manufacturing are introduced. Emphasis is focused on current applications and programming practices of various computer automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming, computer-assisted quality control, and automatic identification.

CIMT 245 CAD Tool and Fixture Design (3 cr.) Class 2, Lab 3. P: MET 102. Tool design methods; tooling materials and heat treatment; design of cutting tools; gage design; design of jigs and fixtures; design of tools for CNC machines; tool design using CAD systems. Tool design term projects using CAD systems required. Not open to students who have credit in MET 245.

CIMT 260 Robotics and Automated Material Handling (3 cr.) Class 2, Lab 2. P: MATH 153 and MET 105. A survey of the types of industrial robots and their applications in manufacturing. Safety, application limitations, and economic justification will be considered. Automated material-handling equipment will be reviewed. Laboratory exercises will involve programming an educational robot using a teach pendant and microcomputers.

CIMT 310 Plant Layout and Material Handling (3 cr.) Class 3. P: MET 102. A study and analysis of material flow in a manufacturing facility; material-handling equipment; plant layout principles for manufacturing service, storage, and office areas; and industrial packaging techniques. Emphasis is on application to manufacturing problems. Not open to students who have credit in IET 310.

CIMT 360 CIM in Electronics Manufacturing (4 cr.) Class 3, Lab 2. This course covers the manufacture and assembly of electronic printed

circuit boards from component selection and board layout to soldering and test. Special emphasis is placed on high volume manufacturing techniques and state-of-the-art processes, such as surface mount technology (SMT). Laboratory projects include CAD circuit board layout, using automatic placement and soldering equipment, investigating thermal characteristics of circuit boards, process design, and evaluation using SPC techniques. Effects of manufacturing processes on electrical characteristics are considered.

CIMT 460 Motion and Time Study (3 cr.) Class 2, Lab 3. P: Junior standing. Techniques of motion and time study, process charts, operation charts, multiple activity charts, micromotion study, therbligs, and stopwatch time study.

CIMT 481 Integration of Manufacturing Systems (3 cr.) Class 2, Lab 2. P: Senior standing in CIMT program. This is a capstone course that emphasizes the integration of traditional manufacturing activities such as planning, facilities, materials handling, production control, etc. Students will analyze case studies and complete directed projects. Field trips may be required.

CIMT 497 Senior Project (3 cr.) Class 2, Lab 2. Directed work on individual projects for senior computer-integrated manufacturing technology students.

CIMT 499 Computer Integrated Manufacturing Technology (1-4 cr.) Class 0-4, Lab 0-9. Hours and subject matter to be arranged by staff. Course may be repeated for up to 9 credit hours.

CIMT Employment Enrichment Programs

CIMT C198, C298, C398, C495 and C498 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the practice is required.

CIMT I198, I298, I398, I495, and I498 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's preparedness for entering an initial or a second career. A comprehensive written report on the internship experience is required.

CIMT E198, E298, E398, E495, and E498 Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full- or part-time, related employment enrichment experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

Computer Technology (CPT)

CPT 102 Discovering Computer Technology (1 cr.) Class 1. This course introduces students to computer technology and campus resources. It is designed to help students develop essential writing and thinking skills along with the study and time-management skills needed for academic success in computer technology. Teaching/learning strategies will use campus technology and library resources as tools for completion of course requirements.

CPT 106 Using a Personal Computer (3 cr.) Class 2, Lab 2 or Class 3. This course explores the use of personal computer software. Students solve problems through hands-on experience with word processing, spreadsheets, data management, and presentation graphics. The course also surveys Internet tools including electronic mail, World Wide Web, gopher, FTP, Telnet, and strategies for resource discovery.

CPT 112 Information Technology Fundamentals (3 cr.) Class 3. P: Consent of instructor. This course provides students with a working knowledge of the terminology, processes, and components of information systems and the application development process. Students will receive hands-on experience with the Internet and the World Wide Web.

CPT 115 Computer Information Systems Fundamentals (3 cr.) Class 3. P: None. This course provides students with a working knowledge of the terminology, processes, and components of information systems, information systems development, and hands-on experience with the Internet and World Wide Web as well as state-of-the-art hardware and software.

CPT 120 Quantitative Analysis I (3 cr.) Class 3. P: MATH 111. An introduction to both qualitative and quantitative problem solving featuring a systems approach that relies on graphic models to describe such concepts as relations, sequences, and logic patterns. Course includes a brief introduction to set theory, logic, and descriptions of data.

CPT 123 Internet Skills (3 cr.) Class 2, Lab 2 or Class 3. P: None. This course is designed to be taken via the Internet. It uses the Internet both as the message and the media for presentation. It is designed to increase an individual's competency in the global communication environment. All assignments, examinations, and quizzes are structured so they may be executed via the Internet.

CPT 140 Programming Constructs Laboratory (3 cr.) Class 2, Lab 2. P: CPT 106 and course in problem solving or consent of course coordinator. Application of problem-solving techniques, programming logic, program design, and development.

CPT 188 Microcomputer Applications Packages (variable title) (3 cr.) P: Varies with course content. Introduction to the topics and skills associated with a selected microcomputer applications package. Because various applications packages may be offered under this title, this course may be repeated for up to 9 credit hours.

CPT 212 Web Site Design (3 cr.) Class 3. P or C: CPT 112. This course is designed to give the students basic understanding of the proper process to be used for developing an effective commercial Web site. This course will cover the full development cycle including analysis, design, and construction components.

CPT 213 Web-based Analysis and Design (3 cr.) Class 3. P or C: CPT 215. Concepts, processes, and tools of systems analysis and system design. Object-oriented methods and tools are utilized. Web-based user interfaces and prototypes are developed by students.

CPT 214 Web Data Management (3 cr.) Class 3. P or C: CPT 212. Introduction to Web database concepts. Extensive exploration of data manipulation using a relational DBMS and SQL in a Web environment. Students will create a database with a Web interface.

CPT 215 Web Programming (3 cr.) Class 3. P or C: CPT 214. This course will provide students with the knowledge and techniques of a variety of Web programming languages. Both client and server side languages will be examined and will include Perl, ASP, and JavaScript.

CPT 220 Quantitative Analysis II (3 cr.) Class 3. P: CPT 120 or EET 105, MATH 153. Continued investigation into problem-solving tools and techniques including functions and relations, Boolean algebra and switching theory, probability, statistical distributions (with emphasis on the normal and Poisson), and the use of appropriate software.

CPT 223 Web Page Design (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 106. This course is designed to give students a basic look at World Wide Web page and site creation. The course involves current HTML fundamentals, design concepts, links, anchors, use of color, placing graphics, utilization of tables, image maps, site structures, and the use of search engines.

CPT 233 Hardware/Software Architecture (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 115. This course presents a detailed investigation of computer hardware and software. Looking at hardware and software components, along with several operating systems, students should enhance their knowledge of the interrelations between these components. In addition, through the use of programming examples, the student will learn about the structure of the microprocessor and microcomputer basics.

CPT 242 Introduction to ASP.Net Programming (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 115 and CPT 140 or consent of instructor. This course will provide students with the tools and techniques to build dynamic Web sites using the ASP.Net programming environment. Students gain hands-on experience building a database-driven Web site.

CPT 254 Analysis and Design (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 140, CPT 223, and CPT 288. Concepts, processes, and tools of systems analysis and systems design. Object-oriented methods and tools are utilized. Web-based user interfaces and prototypes are developed by students.

CPT 262 Problem Solving and Programming (3 cr.) Class 3 or Class 2, Lab 2. P: CPT 115 and CPT 140. An introduction to object-oriented programming with emphasis on object design, construction, use, modification, and reuse.

CPT 270 Java Programming (3 cr.) Class 3. P: CPT 115 and 140. This course is an introduction to the Java programming language. Students will learn the syntax of the language, how to use objects, classes, and methods, and will perform programming exercises that illustrate how Java is used in stand-alone applications and applets.

CPT 286 Operating Systems and Administration (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 233 or EET 205, and CPT 262 or CPT 265 or CPT 270. An introduction to computer operating systems and other systems software, with emphasis on both microcomputers and mainframes. Hardware architecture, multiprogramming and timesharing, command and control languages, memory management, scheduling, and interrupt handling.

CPT 288 Using a Database Management System (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 106, CPT 115, and CPT 120. Introduction to basic database development concepts. Extensive exploration of data manipulation using a relational DBMS and SQL. Students develop a microcomputer database application using Web database technology.

CPT 290 Computer Project (1-4 cr.) Independent study for sophomore students wanting to execute a complete computer-oriented project. Course may be repeated for up to 6 credit hours.

CPT 299 Computer Technology (1-4 cr.) Hours, credit, and subject matter to be arranged by staff.

CPT 303 Communications Security and Network Controls (3 cr.) Class 3. P: CPT 307 and CPT 341. Conventional encryption, and many hardware, software, and managerial controls needed to operate a data communication network in a safe and secure manner. Emphasis is on security attacks, malicious programs, authentication, and availability. In addition, legal and ethical issues are covered.

CPT 307 Data Communications (4 cr.) Class 4. P: Sophomore standing. This course provides the foundation for the understanding of data communication systems and computer networks. Topics include information representation and transmission, medium types and configuration, telephony, error handling, TCP/IP and internetworking, and diagnostic techniques.

CPT 312 Advanced Web Site Design (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 212 or 223 and CPT 213 or 254. This course will cover both internal Web site design issues such as security, reusability, and architecture and external design issues such as user interfaces, load times, and multi-media.

CPT 313 Commercial Web Site Development (3 cr.) Class 3. P or C: CPT 213. This course will provide students with the opportunity to work directly with local companies by developing a Web site to support the company's business activities. Students will be required to utilize many of the skills and techniques learned in the prior certificate courses.

CPT 315 Introduction to Multimedia

Programming (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 223 or CPT 212. An introduction to computing concepts in multimedia development. An integration of the science behind multimedia including compression algorithms, analog/digital conversions, media filtering, streaming media, and XML-based languages. Lecture and laboratory.

CPT 316 Introduction to Virtual Reality (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 223 or CPT 212. Explore concepts of 3D imaging and design including primitive shapes, transformations, extrusions, facesets, texture mapping, shading, and scripting. Lecture and laboratory.

CPT 317 System and Network Administration

(3 cr.) Class 2, Lab 2 or Class 3. P: CPT 307 and CPT 286. Fundamental concepts of system administration. Design and administration of network servers and workstations. Focus on basic network concepts such as user account administration, resource allocation, security issues, and Internet service management. Lecture and laboratory.

CPT 320 Quantitative Analysis III (3 cr.)

Class 3. P: CPT 220 and junior standing. A continuation of statistical inference introduced in Quantitative Analysis II with emphasis on confidence intervals, hypothesis testing, analysis of variance, forecasting including linear regression and correlation, and quality control as they apply to information technology.

CPT 323 Multimedia (3 cr.)

Class 2, Lab 2 or Class 3. P: Junior standing. This course covers contemporary, interactive multimedia technology systems, focusing on types, applications, and theories of operation. Students learn how to digitize and manipulate images, voice, and video materials.

CPT 325 Human-Computer Interaction (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 223 or CPT 212. Human-computer interaction (HCI) focuses on understanding how humans interact with computers and how they can use this knowledge to improve the design and evaluation of computer systems, particularly the user interface. This course will examine the development, evaluation, and testing of effective and efficient computer interfaces.

CPT 329 Java Server Pages (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 270. This course will cover the development of Java Server Pages (JSP) and Java Servlets in an e-commerce environment.

CPT 336 Data Communications Lab (2 cr.)

Class 1, Lab 2. P or C: CPT 307. This course is a companion to CPT 307 and emphasizes hands-on lab work. In this course, students will implement hardware and software configurations to meet specific requirements of a data communications system. In addition, students will explore tools and network troubleshooting.

CPT 347 Advanced ASP.Net (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 242. This course will apply the ASP.Net framework to e-commerce applications. Advanced ASP.Net techniques will be covered such as Web services, ADO, and reusable components.

CPT 352 Decision Support and Information

Systems (3 cr.) Class 3. P: CPT 254. Definition of support and management information systems—similarities and differences. Use of decision support systems (DSS) and management information systems (MIS) in organizations. Tools for modeling and simulation. Application of system analysis and system design concepts to DSS and MIS situations.

CPT 362 Object-Oriented Programming (3 cr.)

Class 3 or Class 2, Lab 2. P: CPT 262 after fall 2000 or CPT 362 prior to fall 2000 or equivalent C++ programming course. This course continues the study of object-oriented programming by introducing visual components. Students complete exercises and programs using an object oriented programming language in a visual environment.

CPT 374 Systems and Database Analysis (4 cr.)

Class 2, Lab 4. P: CPT 254, CPT 288. Intensive exploration of application and database analysis in a synergistic environment. Students engage in collaborative, project-based activities to learn about project management, requirements analysis, modeling, prototyping, employing problem solving, and team-building skills.

CPT 384 Systems Design (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 374. Application of tools and techniques for system designs through a semester project. Software selection decisions, conversion and implementation planning, post-operational review planning, and maintenance considerations are also discussed.

CPT 388 Topics in Programming Languages

(variable title) (3 cr.) Class 3 or Class 2, Lab 2. P: One 200-level programming language course. Varies with course content (prerequisites will be included in the semester class schedule). Since various languages may be offered under this title, this course may be used for a maximum of 9 hours of credit.

CPT 402 Design and Implementation of Local

Area Networks (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 307 or CPT 341. The design, implementation, and configuration of local area networks. Working in groups, students install the necessary hardware and software to set up a LAN server with several clients. Students will explore topics including inter-networking, network management, network performance, and security.

CPT 407 Fundamentals of Intelligent Agents

(3 cr.) Class 2, Lab 2 or Class 3. P: CPT 254, CPT 288, and 300-level programming language. This course covers the concepts, applications, and theories of operations of intelligent agent technology. An intelligent agent is a software program that uses communication protocols to exchange information for automatic problem solving. Students will perform an in-depth analysis of an intelligent agent for a specific application and construct a prototype of it.

CPT 410 Information Technology Ethics and

Leadership (3 cr.) Class 3. P: Junior standing. This course provides participants with ability to understand and analyze ethical and leadership issues

in a highly dynamic IT environment. Participants also learn about legal, management, moral and social issues of IT in a global society. It supports the growing need to sensitize individuals concerning ethical utilization of information technology.

CPT 412 XML-Based Web Applications (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 214 or CPT 288 and CPT 212 or 223, and 200-level programming course. This course covers how to build Web applications using XML. Students will learn how to create and validate data in XML documents and how to display XML documents using Cascading Style Sheets (CSS), XSL Transformations (XSLT), data binding and the Document Object Model.

CPT 419 Streaming Media Technology Design

(3 cr.) Class 2, Lab 2 or Class 3. P: CPT 323. This course focuses on the technology that allows the transmission of audio, video, and multimedia type content over the Internet or private network. Topics will focus on the understanding, design, and development of efficient and effective multimedia programs.

CPT 420 Advanced Multimedia (3 cr.)

Class 2, Lab 2 or Class 3. P: CPT 323 and 200-level programming language. This course provides an intensive opportunity to develop and produce interactive multimedia instructional-based projects. Topics will focus on using Lingo Scripts and functions of interactive branching in a multimedia environment.

CPT 423 Electronic Commerce (3 cr.)

Class 2, Lab 2 or Class 3. P: Junior standing. Overview of current electronic commerce applications and the related legal and policy issues. Coverage of electronic payment systems, authentication, and security. Topics such as privacy, content selection and rating, and intellectual property rights are discussed.

CPT 426 Enterprise Networks (3 cr.)

Class 2, Lab 2, or Class 3. P: CPT 402 or CPT 440. An introduction to enterprise networks and the issues related to their design and implementation. This course examines the need for corporate networks and the role they play in the business environment. Students will learn how to integrate various technologies to meet the needs of an organization. Topics covered include network security, interoperability, performance, and integration.

CPT 436 Advanced E-Commerce Development

(3 cr.) Class 2, Lab 2 or Class 3. P or C: CPT 347 or CPT 329. This course will allow students the opportunity to develop a data driven e-commerce site for a small- to medium-size company.

CPT 440 Communication Network Design

(3 cr.) Class 2, Lab 2 or Class 3. P: CPT 307 or CPT 341. An introduction to wide area networking, which is a technology used to extend telecommunications connectivity for information distribution over large geographic regions. Topics include architecture, design including Frame Relay and ATM, and implementation, as well as the influence of the state and federal regulatory environments.

CPT 479 Database Implementation and Administration (3 cr.) Class 2, Lab 2 or Class 3. P: CPT 288 and CPT 286. Extends knowledge of database concepts. Topics include physical database design, client/server implementation, and database administration. Given logical database design, students develop physical database structures and implement a database application. Students carry out database design, construction, and programming activities using client/server technology.

CPT 484 Systems Analysis and Design Project (3 cr.) Class 3. P: CPT 384. This is a seminar-styled course utilizing a collaborative learning approach to analyze and design a realistic information system of moderate complexity. Synthesis of system analysis and design concepts, principles, and practices are the major content components. Project management, group dynamics, and conflict resolution are experienced and discussed by the course participants.

CPT 490 Senior Project (1-4 cr.) Independent study for seniors wanting to execute a complete computer-oriented project. Course may be repeated for up to 7 credit hours.

CPT Employment Enrichment Programs

CPT C198, C298, C398, C494, and C498 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the practice is required.

CPT I198, I298, I398, I494, and I498 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's readiness for entering an initial or a second career. A comprehensive written report on the internship experience is required.

CPT E198, E298, E398, E494, and E498 Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full- or part-time related experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

Construction Technology (CNT)

CNT 105 Introduction to Construction Technology (3 cr.) Class 2, Lab 2. A survey of the opportunities available within the construction industry. The laboratory is utilized to learn the basics of computers, the library, and e-mail systems available on campus, and the basics of word processing, spreadsheets, and computer programming. No previous computer knowledge is necessary.

CNT 110 Construction Accounting (3 cr.) Class 2, Lab 2. Accounting fundamentals as utilized in the construction industry with a special emphasis on basic design of construction cost accounting systems as used to manage a construction company. Use of construction cost indices for labor and materials, as well as use of construction accounting for estimating and bidding purposes. Use of accounting management software as appropriate.

CNT 280 Quantity Survey (3 cr.) Class 2, Lab 3. P or C: ART 155 or CET 275 or consent of instructor. A study of methods to estimate quantities of materials required in construction. Practice in making quantity surveys.

CNT 302 Construction Law and Ethics (3 cr.) Class 3. P: Junior standing. Practical focus on key legal and ethical issues applicable to the construction industry and how to manage them. Laws related to construction work, contractual relationships and strategies, torts, liabilities, bonding, insurance, risk management, dispute avoidance and resolution, liens, partnering, and ethics are among topics covered.

CNT 330 Construction Field Operations (3 cr.) Class 3. P: Junior standing or consent of instructor. Study of types and uses of construction equipment and machinery in relation to diverse field operations. Analysis of equipment productivity and costs.

CNT 341 Construction Scheduling and Project Control (3 cr.) Class 2, Lab 3. P: CNT 280 and CNT 347. A study of the use of computers for creating, presenting, revising, and updating construction schedules, and in using the schedule and other programs to assist in managing a construction project.

CNT 342 Construction Cost and Bidding (3 cr.) Class 2, Lab 3. P: CNT 280 or consent of instructor. Course includes a study of the methods of estimating costs for labor, material, equipment, and direct overhead for construction projects; how to establish markups for indirect overhead and profit; procedures for setting up a computerized estimating system; and conceptual estimating procedures.

CNT 344 Construction Inspection (3 cr.) Class 3. P: Junior standing or consent of instructor. Inspection procedures as applied to contracted construction, and the role inspection plays in the execution of the completed contract. The laboratory period is for field trips to construction sites.

CNT 347 Construction Contract Administration and Specifications (3 cr.) Class 2, Lab 2. P: Junior standing or equivalent. Relationship between all parties involved in the construction process. Analysis of contracts, the general and special conditions of the contract, specifications and their purpose/intent, standard specifications, adaptation of selected provisions from standard specifications, and delineation of special supplemental conditions.

CNT 390 Construction Experience (1 cr.) Consent of instructor. Minimum of 10 weeks' work experience in the construction industry, with at least five weeks' experience in the field. Written report of this experience.

CNT 446 Construction Financing (3 cr.) Class 3. P or C: CNT 347. Principles and sources of

construction funding for contracting firms and projects during all phases of construction. Mortgage and construction loans, market and feasibility studies for construction projects, effects of company organizational structure on funding, overhead and project cost control, and financial management.

CNT 447 Construction Project Management (3 cr.) Class 3. P: CNT 341 and CNT 342. A study of construction organizations, their forms and functions, project management procedures and documents, and financial management within a construction organization. Subjects appropriate for those working within a construction organization will be emphasized. Role playing may be incorporated.

CNT 452 Construction Safety and Inspection (3 cr.) Class 3. P: CNT 347 and junior standing. A study of safety and inspection requirements for construction sites and projects. Accident record keeping, reporting; requirements of the OSHA code; inspection for safety and hazards, environmental issues, and quality; risk control; and management issues related to these. Development and implementation of company safety and hazard communication and inspection programs.

CNT 470 Site Development (3 cr.) Class 3. P or C: CET 452 or consent of instructor. Principles and practices of land development, with consideration of market analysis, site selection, restrictions imposed by covenants and governmental regulations, costs, and financing. Collection of data and preparation of drawings for site development.

CNT 488 Construction Structures (3 cr.) Class 3. P: CET 382 and CET 484 or consent of instructor. Design of construction structures and erection procedures for use during construction, including temporary bridges, scaffolding, sheeting, bracing, and underpinning; erection stresses in bridges and buildings.

CNT 490 Senior Project (3 cr.) P: Senior standing. The development of a project that will combine the skill and knowledge gained from various areas of study. The student will be expected to present a project that has been approved by the faculty advisor to a panel of faculty chosen by the advisor. This presentation should include graphical material as well as oral and written communication.

CNT 492 Value Management for Construction (3 cr.) Class 3. P: Senior standing or consent of instructor. Value engineering and value management theory and procedures as applied to buildings and construction projects. Life-cycle cost theory with regard to construction prices, from conception through the total life expectancy of a structure.

CNT 494 Engineering Economics for Construction (3 cr.) Class 3. P: Senior standing. Introduction to engineering economy and its methods related to time value of money. Economical evaluation and comparison of alternatives considering costs, returns, interest, taxes, and probability in a time span; determining feasibility, break-even points, and rate of return. Cost indices for construction.

CNT 499 Construction Technology (1-4 cr.) Hours, subject matter, and credit to be arranged by staff. Course may be repeated for up to 9 credit hours.

CNT Employment Enrichment Programs

CNT C198, C298, C398, C496, and C498

Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the practice is required.

CNT I198, I298, I398, I496, and I498 Career Enrichment Internship I-V (1-5 cr.)

P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's readiness for entering an initial or a second career. A comprehensive written report on the internship experience is required.

CNT E198, E298, E398, E496, and E498

Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full- or part-time, related employment enrichment experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

Electrical Engineering Technology (EET)

EET 102 Electrical Circuits I (4 cr.) Class 3, Lab 3. P or C: MATH 153. A study of DC electrical circuits, Ohm's law, Kirchhoff's laws, series and parallel circuits, network theorems, mesh and nodal analysis, power, introductory magnetism, ammeters, voltmeters, ohmmeters, inductance, capacitance and transients.

EET 103 Topics in Electrical Technology (1-4 cr.) Class 1. P: None. This course includes specialized topics and skills associated with electrical technology. The level of coverage varies according to the audience. Since various electrical/electronics topics may be offered under this title, this course may be repeated.

EET 105 Digital Fundamentals I (3 cr.) Class 2, Lab 3. P: None. A study of logic gates, binary arithmetic codes, Boolean algebra, mapping, adders, comparators, decoders, encoders, multiplexers, and demultiplexers. Small Scale (SSI) and Medium Scale (MSI) integrated circuits and programmable logic devices are used in combinatorial and sequential circuits.

EET M105 Introduction to Electronics (2-3 cr.) Class 2-3, Lab 2. P: None. Lecture and laboratory will cover basic circuit elements and circuit analysis, analog and digital components, DC and AC circuits, electrical measuring techniques, and materials and processes in electronics manufacturing, including printed circuit board layout and fabrication, through-hole and surface-mount manufacturing processes, test, inspection, and cleaning.

EET 112 How Electrical Things Work (3 cr.) Class 3. P: None. This engineering science course

explains how electrical things work to offer an understanding into the complexities of today's technology. The goal of this course is to demystify modern technology, and to explain the theory and scientific principles behind the electrical and physical devices that exist in our everyday lives. May not be used for credit by EET majors.

EET 114 Introduction to Microcomputers (3 cr.) Class 2, Lab 2. P or C: MATH 153. Problem solving and computing with emphasis on electrical engineering technology applications. Introduction to microcomputing basics and C language as applied to solving electrical technology problems.

EET 116 Electrical Circuits (4 cr.) Class 3, Lab 2. P or C: MATH 154. A study of DC, AC, and digital circuits. Circuit components; R,L,C; voltage; current; power; Ohm's law; Kirchhoff's laws; series and parallel circuits; electrical measurements; sinusoidal voltages; currents; impedances; RL, RC, RLC; transformers; motors; polyphase systems; the National Electrical Code; and combinational and sequential logic circuits. May not be used for credit by EET majors.

EET M150 Electronics Manufacturing I (3 cr.) Class 2, Lab 2. An introduction to the fabrication of electronic products. Topics include components, printed-circuit board layout and fabrication, PCB assembly and inspection, chassis hardware and assembly, and harness and cable fabrication. Students will fabricate and assemble a working prototype in the laboratory.

EET 152 Electrical Circuits II (4 cr.) Class 3, Lab 3. P: EET 102, P or C: MATH 154. A study of AC electrical circuits, the j operator, phasors, reactances, impedances, phase relationships, power, network theorems, resonance, frequency response, and transformers.

EET 154 Analog Electronics I (4 cr.) Class 3, Lab 3. P: EET 114, P or C: EET 152. A study of the characteristics and applications of transistors, integrated circuits, and other solid-state devices. Includes rectifier circuits, waveform interpretation, AC and DC load lines, biasing techniques, and operational amplifiers.

EET 155 Digital Fundamentals II (3 cr.) Class 2, Lab 3. P: EET 105. A continuation of EET 105. Sequential logic circuits, flip-flops, counters, programmable device logic, shift registers, logic families, and introductory computer concepts.

EET M200 Electronics Manufacturing II (4 cr.) Class 2, Lab 2. P: EET M150 or EET 154. Techniques for high volume manufacturing of printed circuit boards. Both through-hole and surface-mount assemblies are included. Topics include computer-aided circuit design, printed-circuit board layout, board fabrication, assembly, and test. System integration of the entire process and statistical quality control are stressed.

EET 204 Analog Electronics II (4 cr.) Class 3, Lab 3. P: EET 154. A study of the applications of transistors, integrated circuits, and other solid-state devices. Feedback principles as applied to amplifiers, oscillators, and regulated power supplies. Includes large-signal power amplifiers, special-purpose amplifiers, and simulation software.

EET 205 Introduction to Microprocessors (4 cr.) Class 3, Lab 3. P: EET 114, P or C: EET 155. A study of microprocessor architecture, interfacing, software, arithmetic, memory devices, programming peripherals, and applications. Real-time programming techniques are stressed.

EET 212 Electrical Power and Machinery (4 cr.) Class 3, Lab 3. P: EET 152. P or C: PHYS 218. Power transformers and single and polyphase circuits; d-c machines and a-c single and polyphase synchronous and induction machines. An introduction to power electronics.

EET 234 PC Systems I (4 cr.) Class 3, Lab 2. P: EET 105, CPT 140. Personal computer hardware and software. Components of the computer including CPU, memory, ports, drives and cards. Setup, operation and troubleshooting. Labs include topics within A+ certification and hardware/software interfacing using Visual Basic.

EET 284 Computer Communications (4 cr.) Class 3, Lab 2. P: EET 234. An introductory course in data communication systems. The hardware and software issues in computer communications are studied. Emphasis on hands-on experience in computer communications, such as cabling, use of communication devices and media, choice of networking topologies, protocols, and platforms.

EET M290 Projects in Electronics Manufacturing (4 cr.) Class 2, Lab 4. P: EET M200. A capstone course in electronics manufacturing. Students will be given a printed circuit board to lay out and assemble using automated techniques. They will develop test strategies and implement statistical process control. At the end of the course, each student will present written and oral reports on his or her part of the project. Students will evaluate each step of the manufacturing process.

EET 302 Introduction to Control Systems (4 cr.) Class 3, Lab 2. P: EET 105 and EET 152 or EET 116. Control systems commonly used in industrial and commercial facilities; relay control systems, programmable control systems, automatic control systems. Laboratories provide hands-on experience with relay control, PLCs, and feedback control.

EET 303 Communications I (4 cr.) Class 3, Lab 2. P: EET 204 and MATH 222. A study of AM and FM modulation and detection, receivers, transmitters, networks, filters, antennas, and transmission lines through VHF frequency spectrum.

EET 305 Advanced Microprocessors (4 cr.) Class 3, Lab 3. P: EET 205. Use of microprocessors and related components in the design of microprocessor-based systems. Hardware and software design of microprocessor-based system. High-level programming languages and real-time operating systems are utilized.

EET 307 Analog Network Signal Processing (4 cr.) Class 3, Lab 3. P: EET 204 and P or C: MATH 222. An advanced course in network analysis that stresses network theorems and solutions of time-domain and frequency-domain problems.

EET 331 Generation and Transmission of Electrical Power (4 cr.) Class 3, Lab 2. P: EET 212.

A study of the generation and transmission of electrical energy. Includes techniques used by electric utilities for the protection of generating equipment and transmission lines, an introduction to the economic considerations of power plant operation and three-winding transformers, and methods of solving unbalanced three-phase systems.

EET 357 Real-Time Digital Signal Processing (4 cr.) Class 3, Lab 3. P: EET 205. Architecture, instruction set, and hardware and software development tools associated with a fixed-point general-purpose DSP processor. Fundamental principles associated with the processing of discrete-time signals. Common applications such as waveform generation, FIR and IIR digital filtering, and DFT- and FFT-based spectral analysis and filtering.

EET 360 CIM in Electronics Manufacturing (4 cr.) Class 3, Lab 2. P: EET 204. Manufacture and assembly of electronic printed circuit boards, from component selection and board layout to soldering and testing. Special emphasis on high-volume manufacturing techniques and state-of-the-art processes, such as surface-mount technology (SMT). Laboratory projects include CAD circuit board layout, using automatic placement and soldering equipment, investigating thermal characteristics of circuit boards, process design and evaluation using SPC techniques. Effects of manufacturing processes on electrical characteristics are considered.

EET 371 Automation, Instrumentation, and Process Control (4 cr.) Class 2, Lab 4. P: EET 204, EET 205, and EET 302. A project-oriented course combining three areas of EET: microcontrollers, instrumentation, and process control. Covers automatic testing, computer interfacing, data collection, robotics, programmable logic controllers, and graphical process control software. A final project is an integrated system.

EET 381 Electrical Distribution Systems (4 cr.) Class 3, Lab 2. P: EET 212. Design and operation of industrial electric distribution systems. Estimated-demand calculations, faults on power systems, power factor improvement, electric rates, voltage drops, protective devices, illumination, and the applicable portions of the National Electrical Code.

EET 403 Data- and Telecommunications (4 cr.) Class 3, Lab 2. P: EET 284 or EET 303. Focus on techniques and applications in data- and telecommunications. Topics include telecommunication networks, various digital communication systems, noise performance, data networks, and protocols. Also included are serial and parallel transmission, multiplexing, modems, interfacing, and trouble-shooting techniques. The laboratory covers both analog and digital/data communications circuits.

EET 417 Analog and Digital Circuits (4 cr.) Class 3, Lab 3. P: EET 155 and EET 204. A study of analog and digital devices: memory systems, multiplexing, finite-state machine analysis and design, A/D and D/A conversion, field programmable gate arrays (FPGA), and complex programmable logic using VHDL. An overview of EMC compliances is also discussed.

EET 434 PC Systems II (4 cr.) Class 3, Lab 2. P: EET 234, CPT 262. Real-time PC-based operating systems. Programming Graphical User Interface in C++. Embedded PC hardware, busses, and peripheral programming. Writing and integrating device drivers.

EET 453 Topics in Telecommunications (4 cr.) Class 3, Lab 2. P: EET 403. An advanced course in telecommunications that introduces and evaluates state-of-the-art systems, services, and applications for current and emerging networking technologies.

EET 472 Automatic Control Systems (4 cr.) Class 3, Lab 2. P: EET 302 and EET 307. The transfer function approach to the study of feedback control systems. Feedback control system performance and stability. Routh, Nyquist, Bode, and root-locus methods of analysis and design including cascade and feedback compensation. Analog and digital simulation. An introduction to state-space analysis and to digital control systems.

EET 483 Industrial Local Area Networks (4 cr.) Class 3, Lab 2. P: EET 204 and EET 205. A study of computer networks and industrial network applications. Network protocols, media, and software are examined. Laboratory assignments consist of using utilities to examine network protocols, configuring network software, using test equipment for analyzing and troubleshooting networks, and writing programs in C programming language that interface with networks.

EET 490 Senior Design Project, Phase I (2 cr.) P: Two EET 300-level or above technical electives. P or C: TCM 220. Extensive individual design and development performed in consultation with faculty. Collaboration with industry is encouraged. Evidence of extensive and thorough laboratory work is required. Capstone experiences are required.

EET 491 Senior Design Project, Phase II (2 cr.) P: EET 490. A continuation of EET 490.

EET 499 Electrical Engineering Technology (1-9 cr.) Class 0-4, Lab 3-9. Hours and subject matter to be arranged by staff.

EET Employment Enrichment Programs

EET C291, C292, C393, C394, and C395 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the practice is required.

EET I291, I292, I393, I394, and I395 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's readiness for entering an initial or a second career. A comprehensive written report on the internship experience is required.

EET E291, E292, E393, E394, and E395 Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full- or part-time, related employment enrichment experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

Industrial Engineering Technology (IET)

IET 104 Industrial Organization (3 cr.) Class 3. A detailed survey of organizational structure: operations, finances, marketing, accounting, management, planning, control, personnel, quality, safety, wages, policy, and the human factors necessary for effective management.

IET 150 Quantitative Methods for Technology (3 cr.) Class 3. P: MATH 151. Application of statistical techniques to typical problems in technology. Topics include data collection, descriptive statistics calculation, hypothesis testing, sampling, continuous and discrete distribution, probability, ANOVA, and related topics. The course also introduces the use of spreadsheet and other software to solve statistical calculations. Introduction to SPC is included. Basic metrology, concepts of gage and meter calibration calculations, instrument linearity, repeatability, reproducibility, sensitivity, precision, and instrument control are included.

IET 204 Maintaining Quality (3 cr.) Class 2, Lab 2. P: MATH 153 and MATH 154, or MATH 151. An analysis of the basic principles of quality control. Includes statistical aspects of tolerances; basic concept of probabilities; frequency distribution; X and R charts; and uses of mechanical, electronic, air, and light devices for checking and measuring levels of quality acceptance.

IET 240 Quality Techniques for Electronics Manufacturing (3 cr.) P: IET 150. Survey of contemporary quality concepts and techniques. Topics include total quality management philosophy, process improvement, vendor certification, quality systems, ISO 9000 documentation, electronics industry quality applications, SPC, introduction to design experiments, basic reliability concepts, testing, and related topics. Team approaches to quality improvement and the application of the basic quality tools to improve processes are covered.

IET 300 Metrology for Quality Assurance (3 cr.) Class 2, Lab 2. P: MET 105 and MATH 151 or equivalent. An analysis of the basic principles of linear and geometric dimensional metrology. Topics include basic measuring instruments; mechanical, electronic, pneumatic, and optical measuring instruments; quality data acquisition systems; coordinate measuring machines; attribute gaging; geometric functional gaging; surface integrity determination; and geometric profile measurement.

IET 301 Cost Evaluation and Control (3 cr.) Class 3. Designing, installing, and improving standard cost systems in industry, including the establishment of basic standards. Development of the mechanics of operating control reports using principles of management by exception. Emphasis on use of electronic data processing for establishing and analyzing production cost standards.

IET 340 Industrial Procurement (3 cr.) Class 3. The study of modern purchasing in a manufacturing firm, with emphasis on industrial organization, quantity and quality analysis, sources, legal requirements, and related topics. Includes case discussion and analysis.

IET 350 Engineering Economy (3 cr.) Class 3. P: MET 105. Examines the concepts and techniques of analysis useful in evaluating the worth of systems, products, and services in relation to their cost. The objective is to help students grasp the significance of the economic aspects of engineering and to become proficient in the evaluation of engineering proposals in terms of worth and cost. Project analysis will require computer proficiency. Not open to students who have credit for IET 250.

IET 364 Total Quality Control (3 cr.) Class 3. The course is aimed at determining customer needs and wants, interpreting these into a design during production, follow-up on field performance, and feeding back quality information to further improve the quality system.

IET 374 Nondestructive Testing (3 cr.) Class 2, Lab 2. Study of industrial X-ray and ultrasonic inspection, surface penetrant inspection, magnetic particle and holography applications, and laser interferometry.

IET 454 Statistical Process Control (3 cr.) Class 3. P: IET 150. Design and analysis of statistical process control charts and industrial sampling plans. Not open to students who have credit for IET 354.

IET 474 Quality Improvement of Products and Processes (3 cr.) Class 3. P: IET 454 or consent of instructor. Introduction to experimental design to improve products or processes. Topics include fractional factorial experiments, response curves, experimental noise, orthogonal arrays, and ANOVA. DOE using classical and Taguchi techniques. Introduction to QFD, FEMQ, and Six Sigma for quality improvements.

Interior Design (INTR)

INTR 103 Introduction to Interior Design (3 cr.) Class 3. An overview of the field of interior design, its history, and theory. An application of the principles and elements of interior design. Basic hand drafting is included.

INTR 124 Space Planning for Interiors (3 cr.) Class 2, Lab 2. P: INTR 103. Introduction to the fundamentals of design for human activity, standards for space, programming, and graphic communication. Requirements for ADA and Universal Design will be included.

INTR 125 Color and Lighting of Interiors (3 cr.) Class 2, Lab 2. Exploration of the physiological, psychological, and phenomenal aspects of color and light in interior spaces. Application includes specification and selection of lighting fixtures and light sources.

INTR 151 Textiles for Interiors (3 cr.) Class 3. C: INTR 103. An extensive study of textiles: fiber types, yarn production, fabric construction, finishing, coloring, and printing. Application of textiles for use in residential and commercial interiors.

INTR 202 Interior Materials and Applications (3 cr.) Class 2, Lab 2. P: INTR 103 and INTR 151. Analyzes information related to use of surfacing materials applied as interior finishes in interior design

projects. The role of green design is introduced, and ecological issues are integrated into each category of materials analyzed.

INTR 204 History of Interiors and Furniture (3 cr.) Class 3. P: INTR 103. A survey of historical development of interiors, furniture, and decorative arts from early history to the present. Emphasis is on design motifs, ornamentation, and furniture styles. Adaptation and use of period styles within contemporary design are included.

INTR 224 Residential Interior Design Studio (3 cr.) Class 2, Lab 2. P: INTR 124. C: INTR 202. This studio class will emphasize the design of residential space, recognizing design development as a process. Space design, working drawings, plans, and client presentations also will be covered. The course will utilize computer-aided drafting and design (CAD).

INTR 225 Three-Dimensional Interior Design Studio (3 cr.) Class 1, Lab 4. C: INTR 202. This studio class includes the fundamentals of three-dimensional design and drawing. Model building techniques will be taught as students design a piece of furniture that is functional, ergonomic, and aesthetic.

INTR 226 Commercial Interior Design Studio (3 cr.) Class 2, Lab 2. P: INTR 202. C: INTR 252. This studio course emphasizes the elements used in development of nonresidential space. Studies include technological and building requirements; building and life-safety codes; square footage and space planning standards.

INTR 228 Interior Design for Contemporary Issues and Needs (3 cr.) Class 1, Lab 4. P: INTR 224. C: INTR 226. A capstone course offered in the fourth semester of the program. Design projects will include green or sustainable design; design for elderly and disabled clients, homeless and abused persons, and others.

INTR 252 Interior Building Systems (3 cr.) Class 3. P: INTR 202. A survey course of building systems that covers the design implications of heating, air-conditioning, plumbing, and electrical systems of both residential and commercial buildings.

INTR 253 Business Practices of Interior Design (3 cr.) Class 3. P: INTR 202 and INTR 224. Introduction to business principles and practices as they relate to the interior design profession. Includes business formation and management, professional ethics and organizations, certification and licensing issues, design liability, and project management.

INTR 290 Interior Design Experience (1 cr.) P: Consent of instructor. Minimum of 10 weeks of work experience in the interior design field. Written report of the experience.

Mechanical Engineering Technology (MET)

MET 102 Production Design and Specifications (3 cr.) Class 1, Lab 5. P: TG 110. The design, evaluation, and documentation of engineering specifications required for manufacturability and assembly are introduced. Emphasis is on CAD-based

details, assemblies, design layouts, equipment installations, and related industrial practices.

MET 105 Introduction to Engineering Technology (3 cr.) Class 2, Lab 3. This course provides beginning engineering technology students with the basic tools necessary for success in their chosen technology degree program. Topics include survey of engineering technology careers, technology laboratories and report writing, use of calculators, engineering calculations, metrology, technology computer applications, use of spreadsheets for engineering calculations. Major emphasis on computer applications and QBASIC.

MET 111 Applied Statics (3 cr.) Class 3. P: MATH 151 and MET 105 or equivalent. A study of force systems, resultants and equilibrium, trusses, frames, centroids of areas, center of gravity of bodies.

MET 112 Applied Mechanisms (3 cr.) Class 3; or Class 1, Lab 5. P: TG 110 and MATH 151 or equivalent. An analysis of motions, displacements, velocities, instant centers, cams, linkages, and gears.

MET 141 Materials I (3 cr.) Class 2, Lab 2. An overview of structures, properties, and applications of metals, polymers, ceramics, and composites commonly used in industry is presented. Problem-solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

MET 142 Manufacturing Processes I (3 cr.) Class 2, Lab 3, or Class 3. P: MET 141. Basic casting, forming, and joining processes are surveyed. The course emphasizes the selection and application of various processes.

MET 211 Applied Strength of Materials (4 cr.) Class 3, Lab 2 or Class 4. P: MET 111, and MET 163 or MET 160. C: MATH 221. The principles of strength, stiffness, and stability are introduced and applied primarily to mechanical components.

MET 212 Applications of Engineering Mechanics (4 cr.) Class 4. Does not carry credit toward graduation in mechanical engineering technology. P: MATH 154. Applications of engineering mechanics are introduced, based on an elementary expansion of Newtonian physics as applied to static and dynamic force systems. Internal stresses and strains produced by these forces in selected machine elements are considered. Work, energy, and power are discussed.

MET 213 Dynamics (3 cr.) Class 2, Lab 2 or Class 3. P: MET 111. C: MATH 221. Kinematics and kinetics principles of rigid-body dynamics are introduced. Emphasis is on the analysis of bodies in plane motion.

MET 214 Machine Elements (3 cr.) Class 3. P: MET 211 and PHYS 218. The theories and methods of statics, dynamics, and strength of materials applied to the selection of basic machine components. The course will develop the fundamental principles required to select the individual elements making up a machine.

MET 220 Heat/Power (3 cr.) Class 2, Lab 2 or Class 3. P: PHYS 218. Heat/Power is an introduction to the principles of thermodynamics and heat transfer. Basic thermodynamic processes are used to evaluate the performance of energy-based systems such as internal combustion engines, power plants, and refrigeration equipment.

MET 230 Fluid Power (3 cr.) Class 2, Lab 2 or Class 3. P: MET 111 or PHYS 218. This course consists of the study of compressible and incompressible fluid statics and dynamics as applied to hydraulic and pneumatic pumps, motors, transmissions, and controls.

MET 240 Basic Foundry (3 cr.) Class 2, Lab 2. P: MET 141 and MET 142. Casting processes of the past, present, and future. Special emphasis on developing problem-solving skills in using cast parts in manufacturing. Lectures, reading assignments, audiovisual presentations, demonstrations, and field trips. Assignment sheets with study questions are used in preparing students for discussion sessions and tests. Each student must also research and write a five-page paper on some aspect of the foundry industry or give a demonstration in the laboratory.

MET 242 Manufacturing Processes II (3 cr.) Class 2, Lab 2 P: MET 141, MATH 151 or 154 or MET 162, CPT 135 or MET 163. This course surveys the manufacturing processes and tools commonly used to convert cast, forged, molded, and wrought materials into finished products. It includes the basic mechanisms of material removal, measurement, quality control, assembly processes, safety, process planning, and automated manufacturing. Not open to students having credit for MET 135 or MET 281.

MET 271 Programming for Numerical Control (3 cr.) Class 2, Lab 2. P: MET 242 and MATH 151 or consent of instructor. An introduction to manual, conversational, and computer-aided programming. Incremental and absolute programming systems. Machine-based conversational languages and computer-aided programming languages.

MET 282 Introduction to Plastics (3 cr.) Class 2, Lab 3. P: MET 141 and MET 142. A survey of the plastics industry, including a study of materials with reference to their properties, processing, and uses. Fabrication, finishing, and fastening methods; plastic product design.

MET 299 Mechanical Engineering Technology (1-3 cr.) Class 0-3, Lab 0-9. Hours and subject matter to be arranged by staff. Primarily for third- or fourth-semester students with special aptitudes. Course may be repeated for up to 9 credit hours.

MET 310 Computer-Aided Machine Design (3 cr.) Class 2, Lab 2. P: MET 214 and MET 105. Introduction to the use of specialized programs to analyze machine components such as shafts, linkages, springs, and cams. Use of finite element analysis to analyze mechanical systems.

MET 320 Applied Thermodynamics (3 cr.) Class 3. P: MET 220 and MATH 221. Following a review of fundamental concepts, advanced power and refrigeration cycles are analyzed. Applications such as gas mixtures, air-vapor mixtures, and chemical reactions of combustion processes are presented.

MET 328 CAD/CAM for Mechanical Design (3 cr.) Class 2, Lab 2 plus 3 arranged. P: TG 110 and MET 105 or equivalent. Basic operation of mechanical design-drafting. A PC CAD (2D and 3D) laboratory-centered course introducing the basic steps involved in the geometric design of mechanical parts. This class provides an overview and continues into a

detailed investigation of parametric modeling. Parametric modeling concepts will be applied to problems using standard industrial practices. Students must possess a solid background in engineering or technical graphics.

MET 340 Piping and Plumbing Design (3 cr.) Class 3. P: MET 220. Design of plumbing systems, including losses in pipes, fittings, nozzles, orifices, etc. Includes steam, water, and oil systems. Piping handbooks and catalogs are used in conjunction with the State of Indiana Plumbing Code.

MET 344 Materials II (3 cr.) Class 3. P: MET 141 and CHEM 111. Metals and polymers are studied. Topics include the bonding of atoms; the structures of crystals and polymers; the coldworking, alloying, and heat treating of metals; and the physical behavior of plastics. Course emphasis is on the development and control of material properties to meet engineering requirements and specifications.

MET 350 Applied Fluid Mechanics (3 cr.) Class 3. P: MET 220 and MET 111. The fundamentals of fluid mechanics, including properties of fluids; pressure; hydrostatic force on submerged areas; kinematics and dynamics of fluid flow; friction and sizing of pipes; selection of pumps.

MET 360 Heating, Ventilating, and Air Conditioning I (3 cr.) Class 3 or Class 2, Lab 2. P: MET 220. Investigation of basics required to design heating and ventilating systems. Heat loss, humidification, duct design, equipment selection, and solar heating. Codes and standards emphasized.

MET 374 Technical Sales (3 cr.) Class 3. A study of the principles and practices of selling technical products and/or services. The course covers product knowledge, buying motives, the phases of a sale, ethical and legal aspects, synergistic selling, and career opportunities in technical sales. Utilizes role playing.

MET 384 Instrumentation (3 cr.) Class 2, Lab 3. P: MATH 221, PHYS 219, IET 150, and MET 350. Introduction to the basic concepts and terminology of instruments. Procedures and techniques essential to industrial measurement and transmission of data. Emphasis on pressure, flow, temperature, level measurements, and computer control.

MET 414 Design of Mechanical Projects (3 cr.) Class 1, Lab 4. P: MET 102, MET 214, MET 230, and EET 302. Application of the fundamental principles of mechanical, hydraulic, and electrical technology to the design of mechanical systems. Discussion of the design process and continuation of topics in the design of machine elements. A semester design project is required.

MET 426 Internal Combustion Engines (3 cr.) Class 2, Lab 3. P: MET 220. A study of the spark ignition, compression ignition, and continuous-burning internal combustion engines.

MET 428 Advanced CAD for Mechanical Design and Drafting (3 cr.) Class 2, Lab 3. P: MET 328 or equivalent. Mechanical and geometric modeling of

complex surfaces, with manufacturing emphasis using wire-frame and shaded imaging techniques.

MET 497 Senior Project (3 cr.) Class 2, Lab 2. Directed work on individual projects for senior mechanical technology students.

MET 499 Mechanical Engineering Technology (1-4 cr.) Class 0-4, Lab 0-9. Hours and subject matter to be arranged by staff. Course may be repeated for up to 9 credit hours.

MET Employment Enrichment Programs

MET C198, C298, C398, C496, and C498 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the practice is required.

MET I198, I298, I398, I496, and I498 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's readiness for entering an initial or a second career. A comprehensive written report on the internship experience is required.

MET E198, E298, E398, E496, and E498 Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full or part-time, related employment enrichment experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

Organizational Leadership and Supervision (OLS)

OLS 100 Introduction to Organizational Leadership and Supervision (1 cr.) Class 1. This class offers a general introduction to the OLS program. It also covers the purposes and practices relevant to front-line supervisors, managers, and leaders at all organizational levels. Students are given an opportunity to meet the OLS faculty, learn about OLS degrees, related technology courses, and other general education and elective classes.

OLS 110 Supervisory Leadership: Story Problems (1 cr.) Class 1. This course develops skills in leadership. Specific areas covered include planning and change, problem analysis and decision making, motivation, interpersonal communication, giving and receiving feedback on performance, organizational values, and human relations.

OLS 252 Human Behavior in Organizations (3 cr.) Class 3. Study of individual and group behavior in organizations. Special emphasis on typical supervisory relationships.

OLS 263 Ethical Decisions in Leadership (3 cr.) Class 3. P: ENG W131 or equivalent. This class is for students interested in discussing and contemplating the difficult legal and ethical situations facing managers in all sizes and types of organizations. Students in this class will read and discuss a variety of writings on ethics in the workplace and also analyze both written and videotaped legal/ethical scenarios.

OLS 274 Applied Leadership (3 cr.) Class 3. Introduction to and overview of the fundamental concepts of supervision. Emphasis on the supervisor's major functions and essential areas of knowledge, relations with others, and personal development.

OLS 327 Leadership for a Global Workforce (3 cr.) Class 3. P: OLS 252, OLS 274, ENG W131, COMM R110 or consent of the OLS department. This course is for present and future leaders interested in the increasingly diverse global workforce. The course will present a variety of leadership issues including expatriate assignments, international business strategies and their cultural and managerial impact, and a review of business practices around the world.

OLS 328 Principles of International Management (3cr.) Class 3. P: OLS 327. This course is a survey of issues relating to international management and international enterprise. The goal is to help students understand the principles and practices involved in managing across national boundaries so that they can be more effective leaders and managers—both domestically and internationally.

OLS 331 Occupational Safety and Health (3 cr.) Class 3. Aspects of occupational safety and health that are essential to the first line supervisor. Emphasis on economic, legal, and social factors related to providing a safe and healthful working environment.

OLS 368 Personnel Law (3 cr.) Class 3. This course covers topics such as discrimination based on sex, age, national origin, or handicap; recruitment and selection; affirmative action; rights of union and nonunion employees; Fair Labor Standards Act; Equal Pay Act and comparable worth; employee benefits plans; unemployment compensation; and right to discharge.

OLS 371 Project Management (3 cr.) Class 3. P: ENG W131. This course provides the basics of the project management discipline and allows the student to apply these skills in team-based situations.

OLS 373 Case Studies in Leadership (3 cr.) Class 3. P: OLS 252 or consent of instructor. Analysis of selected case studies with emphasis on attitudes, philosophies, and responsibilities of leaders in relationship to peers, followers, and superiors.

OLS 375 Training Methods (3 cr.) Class 3. P: OLS 252 and OLS 274, or consent of department chair. This course teaches the fundamentals of the design facilitation and evaluation of formal training and development programs. Understanding the way people learn jobs skills is emphasized.

OLS 376 Personnel Supervision (3 cr.) Class 3. P: OLS 374 or consent of instructor. Analysis of selected case problems, with emphasis on attitudes, philosophies, and responsibilities of supervisory personnel in relationship to the worker.

OLS 378 Labor Relations (3 cr.) Class 3. This course teaches the regulations concerning management, labor, the collective bargaining agreement, and grievance and arbitration procedures.

OLS 383 Human Resource Management (3 cr.) Class 3. This course teaches an overview of the human resource function in organizations today. Case studies are used to explore applications of human resource principles.

OLS 390 Leadership Theories and Processes (3 cr.) Class 3. P: OLS 100, OLS 252, OLS 263, OLS 274; ENG W131. C: OLS 327, 378; COMM R110, TCM 220. This course integrates knowledge and skills from all associate level OLS courses and allows students to define, reflect upon, and improve their leadership abilities.

OLS 399 Special Topics (1-9 cr.) Hours and subject matter to be arranged by staff. Primarily for upper-division majors with specific interests and aptitudes. May be repeated for up to 6 credit hours.

OLS 410 Survival Skills in Organizational Careers (3 cr.) Class 3. P: Within 30 credit hours of a bachelor's degree or consent of instructor. Focuses on the organization as a social system within which careers develop through the reciprocal influences of organization and people. Examines how occupations are chosen, the stages of an unfolding career, and factors that influence successful careers. Emphasizes coping with change and developing personal strategies.

OLS 476 Compensation Planning and Management (3 cr.) Class 3. Focuses on the management of employee compensation. Examines the current state of compensation management and implications of recent theoretical and research developments related to compensation decisions. Gives each student the opportunity to develop a compensation package.

OLS 479 Staffing Organizations (3 cr.) Class 3. A detailed look at the recruiting function of organizations to give the student a sense of the challenges of recruiting qualified employees.

OLS 487 Leadership Philosophy (3 cr.) Class 3. P: OLS 252, OLS 274/374. This course facilitates the understanding and practice of various leadership roles required in supervisory situations. Students, through applying group dynamics and leadership theory, will develop new skills, capabilities, and understandings. Students will have fundamental shifts in their thinking about traditional leadership and in their ability to function in new leadership styles.

OLS 490 Senior Research Project (3 cr.) P: Senior standing. Individual members of this seminar-type class study problems or areas of their own choosing in the field of leadership.

OLS Employment Enrichment Programs

OLS C196, C198, C298, C398, and C498 Cooperative Education Practice I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's academic program and intended career with a

business, industry, or government agency. A comprehensive written report on the practice is required.

OLS 1196, 1198, 1298, 1398, and 1498 Career Enrichment Internship I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full-time, related career experiences designed to enhance the student's readiness for entering an initial or a second career. A comprehensive written report on the internship experience is required.

OLS E196, E198, E298, E398, and E498 Employment Enrichment Experience I-V (1-5 cr.) P: Sophomore standing and program advisor approval. A semester or summer of external, full- or part-time, related employment enrichment experiences designed to enhance the student's academic program and intended career with a business, industry, or government agency. A comprehensive written report on the enrichment experience is required.

OLS 327 Leadership for a Global Work Force (3 cr.) Class 3. P: None. This course is for present/future managers interested in the increasingly diverse global workforce. The course will present a variety of leadership issues including expatriate assignments, international business strategies and their cultural and managerial impact, and a review of business practices around the world.

Other Technology Courses

Technical Communications (TCM)

TCM 220 Technical Report Writing (3 cr.) Class 3. P: ENG W131 or equivalent. Extensive application of the principles of clear writing in industrial reporting, with emphasis on adaptation to the audience; organization of ideas; and a concise, objective writing style.

TCM 320 Written Communication in Science and Industry (3 cr.) Class 3. P: ENG W131 or equivalent; junior standing or consent of instructor. Analysis of current writing practices in technology and science, especially in organizational settings. Practice in designing and preparing reports for a variety of purposes and audiences.

TCM 340 Correspondence in Business and Industry (3 cr.) Class 3. P: ENG W131 or equivalent. The development and application of strategies and skills for writing letters for business and industry in technology and engineering. Applications may include resumes and letters of application, informational and persuasive letters, and in-house memoranda.

TCM 350 Visual Elements of Technical Documents (3 cr.) Class 3. P: TCM 220, TCM 320 or consent of instructor. Methods and principles of illustrating technical reports and manuals, the role of the technical writer in the company, basics of visual design, visuals for manuals, visualization of technical data, and modern technology available to technical writers.

TCM 360 Communication in Engineering Practice (2 cr.) Class 1, Recitation 2. P: ENG W131 and COMM R110 or equivalents; junior standing or

consent of instructor. The application of rhetorical principles to written and oral communication in the engineering professions. Planning, drafting, and revising professional engineering reports; planning and delivering oral presentations; organizing information; developing persuasive arguments.

TCM 370 Oral Practicum for Technical Managers (3 cr.) Class 3. P. COMM R110 with a grade of C or better. The practical application of effective listening and speaking skills in situations typical for managers and supervisors in technology and engineering. Applications may include one-to-one conversations in supervisory management, such as hiring interviews and performance reviews; technical training programs; group discussions in work units, committees, and task forces; informal presentations, including program and status reports; formal technical presentations; communication in international industrial environments.

TCM 399 Issues in Technical Communication (1-6 cr.) Hours and subject matter to be arranged by staff. May be repeated for up to 6 credit hours.

TCM 460 Engineering Communication in Academic Contexts (2 cr.) Class 1, Recitation 2. P. ENG W131 and COMM R110 or equivalents; senior or graduate standing or consent of instructor. Analysis of situations and genres of written and oral communication of engineering information in academic contexts. Application of rhetorical principles in preparing and delivering written and oral presentations of engineering information.

School of Engineering and Technology Faculty

Administrative Officers

H. Öner Yurtseven, Dean

Nasser Paydar, Associate Dean for Academic Programs

Patricia L. Fox, Assistant Dean for Administration and Finance

Thomas I. M. Ho, Chair of the Department of Computer Technology

Erdogan Sener, Chair of the Department of Construction Technology

Russ Eberhart, Chair of the Department of Electrical and Computer Engineering

Marvin A. Needler, Chair of the Department of Electrical and Computer Engineering Technology

Hasan Akay, Chair of the Department of Mechanical Engineering

Kenneth E. Rennels, Chair of the Department of Mechanical Engineering Technology

Clifford Goodwin, Chair of the Department of Organizational Leadership and Supervision

Edward Berbari, Director of Biomedical Engineering Program

Resident Faculty

Acheson, Douglas, *Assistant Professor of Computer Graphics Technology* (1997); B.S. *Technical Graphics*, 1993, *Purdue University*; M.S. *Educational Computing*, 1995, *Purdue University*
Afolabi, Dare, *Associate Professor of Mechanical Engineering* (1985); B.S. *Mechanical Engineering*, 1976, *Thames Polytechnic, United Kingdom*; M.S. *Acoustics and Vibration Technology*, 1978, Ph.D. *Mechanical Engineering*, 1982, *Imperial College, United Kingdom*

Akay, Hasan U., *Professor of Mechanical Engineering and Chair of the Department of Mechanical Engineering* (1981); B.S. *Civil Engineering*, 1967, *Middle East Technical University, Turkey*; M.S. *Civil Engineering*, 1969, Ph.D. *Civil Engineering*, 1974, *University of Texas at Austin*

Ben-Miled, Zina, *Assistant Professor of Electrical Engineering* (1998); B.S. *Computer Engineering*, 1988, *Oregon State University*; M.S. *Computer Engineering*, 1990, Ph.D. *Computer Engineering*, 1997, *Purdue University*

Berbari, Edward, *Professor of Electrical Engineering, Director of Biomedical Engineering Program, and Professor of Medicine* (1994); B.S.E.E. *Electrical Engineering*, 1971, *Carnegie-Mellon University*; M.S. *Biomedical Engineering*, 1973, *University of Miami*; Ph.D. *Electrical Engineering*, 1980, *University of Iowa*
Bluestein, Maurice, *Associate Professor of Mechanical Engineering Technology* (1991); B.S. *Mechanical Engineering*, 1962, *City College of New York*; M.S. *Mechanical Engineering*, 1964, *New York University*; Ph.D. *Biomedical Engineering*, 1967, *Northwestern University*

Boje, Carmen, *Assistant Professor of Computer Technology* (2001); M.S., *Electronics and Telecommunications Engineering*, 1985, *Polytechnic Institute of Bucharest, Hungary*; M.S., *Telecommunications and Multimedia Applications*, 1998, *Polytechnic Institute of Turin, Italy*

Botner, Ron, *Lecturer in Architectural Technology* (1997); B.A. *Architecture*, 1960, *University of Illinois*; M.S. *Indiana Wesleyan University*; *Registered Architect, Indiana*

Chen, Jie, *Professor of Mechanical Engineering, Associate Professor of Orthodontics, School of Dentistry* (1990); B.S. *Mechanical Engineering*, 1982, *Tianjin University, China*; M.S. *Biomedical Engineering*, 1984, *Shanghai Second Medical College, China*; Ph.D. *Mechanical Engineering*, 1989, *Drexel University*

Chen, Yaobin, *Professor of Electrical Engineering* (1990); B.S. *Electrical Engineering*, 1982, *Nanjing Institute of Technology, China*; M.S. *Electrical Engineering*, 1986, Ph.D. *Electrical Engineering*, 1988, *Rensselaer Polytechnic Institute*

Chien, Y. P. Stanley, *Professor of Electrical Engineering* (1989); B.S. *Electrical Engineering*, 1984, *University of Wisconsin*; M.S. *Electrical Engineering*, 1985, Ph.D. *Electrical and Computer Engineering*, 1989, *Purdue University*

Christe, Barbara, *Assistant Professor of Electrical Engineering Technology* (1998) and *Director of Biomedical Electronics Technology Program* (1998); B.S. *Engineering*, 1984, *Marquette University*; M.S. *Clinical Engineering*, 1986, *Rensselaer at Hartford*

Clark, Jerome A., *Lecturer in Computer Technology* (1999); B.S. *Computer Technology*, 1992, *IUPUI*; M.S. *Management* 1996, *Indiana Wesleyan University*

Coles, Elizabeth A., *Assistant Professor and Coordinator of Interior Design* (1997); B.S. *Textiles*, *University of Maryland*, 1968, M.S. *Adult Education and Gerontology*, *Iowa State University*, 1975, M.S. *Interior Design*, *Colorado State University*, 1997

Conrad, William, *Professor of Electrical Engineering Technology* (1991); B.S.E.E., 1966, *Purdue University*; M.Eng., *General Engineering*, 1968, *Pennsylvania State University*; P.E., *Indiana*

Cooney, Elaine, *Associate Professor of Electrical Engineering Technology* (1988); B.S.E. *Electrical Engineering*, 1984, *General Motors Institute*; M.S.E.E. 1986, *Purdue University*

Cyr, Daphene E. *Assistant Professor of Construction Technology* (2001); B.S. *Building Construction Management*, 1990, Ph.D. *Education*, 2001, *Purdue University*

Defazio, Joseph M., *Assistant Professor of Computer Technology and Informatics* (1999); B.A. *Music Performance*, 1995, B.S. *Applied Computer Technology*, 1993, M.S. *Applied Computer Technology*, 1995, *Indiana State University*

Eberhart, Russell, *Professor of Electrical Engineering and Chair of the Electrical and Computer Engineering Department* (2001); B.S. *Electrical Engineering*, 1965, M.S. *Electrical Engineering*, 1969, Ph.D. *Electrical Engineering*, 1972, *Kansas State University*

Ecer, Akin, *Professor of Mechanical Engineering* (1979); B.S. *Civil Engineering*, 1966, M.S. *Civil Engineering*, 1967, *Middle East Technical University, Turkey*; Ph.D. *Engineering*, 1970, *University of Notre Dame*

El-Mounayri, Hazim, *Assistant Professor of Mechanical Engineering* (1997); B.S. *Mechanical Engineering*, 1989; M.Sc. *Material Science*, 1992, *The American University in Cairo*; Ph.D. *Mechanical Engineering*, 1997, *McMaster University, Canada*

El-Sharkawy, Mohamed, *Professor of Electrical Engineering* (1992); B.S. *Electrical Engineering*, 1974, M.S. *Electrical Engineering*, 1979, *Alexandria University, Egypt*; Ph.D. *Electrical Engineering*, 1985, *Southern Methodist University*

Feldhaus, Charles, *Assistant Professor of Organizational Leadership and Supervision* (2001) B.A. *Radio and Television*, 1979, *University of Southwestern Louisiana*; M.S. *Secondary Education*, 1985, *Indiana University*; Ed.D. *Educational Administration/Supervision*, 1999, *University of Louisville*

Fernandez, Eugenia, *Assistant Professor of Computer Technology* (1996); B.S. *Mechanical Engineering*, 1979, *Worcester Polytechnic Institute*; M.S.E. *Computer, Information and Control Engineering*, 1984, *University of Michigan*; Ph.D. *Management Information Systems*, 1988, *Purdue University*

Fox, Patricia L., *Assistant Dean for Administration and Finance and Assistant Professor of Organizational Leadership and Supervision* (1983); B.S. *Accounting*, *Indiana University*, 1980; M.B.A., 1985, *Butler University*

- Frettinger-Devor, Sally A., Assistant Professor of Industrial Engineering Technology (2001); B.S. Industrial Engineering, 1991, Purdue University
- Gee, Patrick, Lecturer in Freshman Engineering; B.S. Mechanical Engineering, Purdue University, 1992; M.S. Mechanical Engineering, 1998, Purdue University
- Gokhale, Sanjiv, Assistant Professor of Construction Technology (1991); B.S. Civil Engineering, Indian Institute of Technology, India 1981; M.S. Structural Engineering, Vanderbilt University, 1984; M. Phil. Applied Mathematics, 1990, Doctorate, Engineering Mechanics, 1991, Columbia University
- Goodwin, Clifford, Associate Professor and Chair of the Department of Organizational Leadership and Supervision (1979); A.A.S. Aviation Technology, 1969; B.S. Supervision, 1970, Purdue University; M.S. Education, 1980, Ball State University; Ed.D., 1997, Indiana University
- Ho, Thomas I. M., Professor of Computer Technology and Chair of the Department of Computer Technology (1995); B.S. Computer Science, 1970, M.S. Computer Science, 1971, Ph.D. Computer Science, 1974, Purdue University
- Hovde, Marjorie Rush, Assistant Professor of Technical Communications and Assistant Professor of English (1996); B.A. English Education, 1979, Eastern Mennonite College; M.A. English Expository Writing, 1984, University of Iowa; Ph.D. English Rhetoric and Composition 1994, Purdue University
- Hsu, Andrew T., Associate Professor of Mechanical Engineering (1999); B.S., Hydraulic Engineering, 1978, North China Institute of Hydro-Electrical Engineering, China; M.S., 1981, Tsinghua University, China; M.S. Aerospace Engineering, 1982, Ph.D. Aerospace Engineering, 1986, Georgia Institute of Technology
- Hundley, Stephen P., Assistant Professor of Organizational Leadership and Supervision (1997); B.S. Business Management, 1992, Virginia Commonwealth University; M.S. Human Resource Administration, 1994, Central Michigan University; M.Ed. Adult Education, 1995, Virginia Commonwealth University; Ph.D. Education/Organization Development, 1998, American University
- Jafari, Ali, Professor of Computer Technology (1995); B.S. Business Administration, 1978, University of Esfahan, Iran; M.S. Media Technology, 1981, University of Wisconsin-Stout; Ph.D. Telecommunication, 1988, Indiana University
- Katona, Thomas R., Associate Professor of Mechanical Engineering, School of Engineering and Technology, and Associate Professor of Orthodontics, School of Dentistry (1990); M.S. Mechanical Engineering, 1972, Ph.D. Mechanical Engineering, 1981, D.M.D. Dentistry, 1982, University of Pennsylvania
- Kim, Chul Soo, Assistant Professor of Construction Technology (2001); B. Architectural Engineering, 1982, Yonsei University, Korea; B.P.S. in Architecture, 1985, State University of New York; M. Architecture, 1987, University of Illinois; M.S. Civil Engineering, 1997, University of Illinois; Ph.D. Civil Engineering, 2001, University of Illinois
- King, Brian, Assistant Professor of Electrical and Computer Engineering (2001); B.A. Mathematics, 1982, University of Wisconsin; M.S. Mathematics, 1984, University of Wisconsin; Ph.D. Mathematics, 1990, University of Wisconsin; Ph.D. Computer Science, 2000, University of Wisconsin
- Kinsey, Brian D., Assistant Professor of Construction Technology (1980); B.S. Engineering Sciences, 1972, M.S.E. Mechanical Engineering, 1975, Purdue University; P.E., Indiana
- Kovach, Keith, Assistant Professor of Computer Graphics Technology (1999); B.A. Photography, Painting, Drawing, 1984, M.F.A. Photography 1986, University of South Florida
- Lamm, Nancy, Assistant Professor of Engineering and Director of Freshman Engineering (1987); A.B. Microbiology, 1969, Indiana University; B.S.E. Bioengineering, 1983, M.S.E. Interdisciplinary Engineering, 1989, Purdue University
- Lin, William, Associate Professor of Electrical Engineering Technology (1999); B.Ed. Science Education (Physics), 1976, National College of Education Taiwan; M.S., Physics, 1981, University of Southern Mississippi; Ph. D. Electrical Engineering, 1987, The Pennsylvania State University
- Lucas, Laura, Lecturer of Architectural Technology (1999); B.S. Architecture, 1981, Ball State University; M.B.A. Management, 1990, Indiana University, Registered Architect, Indiana
- Lyshevski, Sergey, Associate Professor of Electrical Engineering (1998); M.S. Electrical Engineering, 1980, Ph.D. Electrical Engineering, 1987, Kiev Polytechnic Institute, Ukraine
- McRobbie, Michael A. Professor of Computer Technology and Vice President for Information Technology (1997); B.A. 1975, University of Queensland, Australia; Ph.D. 1979, The Australian National University, Australia
- Nalim, Razi, Assistant Professor of Mechanical Engineering (1997); B.Tech. Mechanical Engineering, 1983, Indian Institute of Technology, India; M.S. Mechanical Engineering, 1985, Ph.D. Aerospace Engineering, 1994, Cornell University
- Needler, Marvin A., Professor of Electrical Engineering Technology and of Electrical Engineering, Chair of the Department of Electrical and Computer Engineering Technology (1964); B.S. Electrical Engineering, 1963, M.S. Electrical Engineering, 1964, Purdue University; Ph.D. Systems Science, 1971, Michigan State University; P.E., Indiana
- Orr, Robert H., Professor of Computer Technology (1985); B.S. Engineering Sciences, 1964, United States Military Academy; M.S. Information and Computer Science, 1973, Georgia Institute of Technology
- Paydar, Nasser, Associate Dean for Academic Programs, Professor of Mechanical Engineering, School of Engineering and Technology, and Professor of Preventive and Community Dentistry, School of Dentistry (1985); B.S. Mechanical Engineering, 1979, M.S. Mechanical Engineering, 1981, Ph.D. Mechanical Engineering, 1985, Syracuse University
- Pfife, Richard E., Professor of Electrical Engineering Technology (1983); B.S. Chemistry, 1974, B.S. Electrical Engineering, 1976, University of Louisville; M.S.E. Computer, Information, and Control Engineering, 1980, University of Michigan
- Pidaparti, Ramana M., Professor of Mechanical Engineering (1989); B.S. Civil Engineering, 1980, Andhra University, India; M.S. Aeronautical Engineering, 1982, Indian Institute of Science, India; M.S. Aerospace Engineering, 1985, University of Maryland; Ph.D. Aeronautics and Astronautics, 1989, Purdue University
- Price, Tim, Associate Professor of Computer Technology (1985); B.S. Electrical Engineering, 1978, Illinois Institute of Technology; M.S. Electrical Engineering, 1979, Georgia Institute of Technology
- Ramos, José A., Associate Professor of Electrical Engineering (1995); B.S.C.E. Civil Engineering, 1978, University of Puerto Rico at Mayaguez; M.S.C.E. Civil Engineering, 1979, Ph.D. System Theory and Control, 1985, Georgia Institute of Technology
- Reid, Kenneth, Assistant Professor of Electrical Engineering Technology (1996); B.S. Computer and Electrical Engineering, 1988, Purdue University; M.S.E.E., 1994, Rose Hulman Institute of Technology
- Rennels, Kenneth E., Associate Professor of Computer Integrated Manufacturing Technology, and Chair of the Department of Mechanical Engineering Technology (1986); B.S. Industrial Engineering, 1975, Purdue University; M.S.B.A. Management and Administrative Studies, 1979, Indiana University; P.E., Indiana
- Rizkalla, Maher E., Professor of Electrical Engineering (1986); B.S. Electrical Engineering, 1975, Assiut University, Egypt; M.S. Electrical Engineering, 1980, Cairo University, Egypt; Ph.D. Electrical Engineering, 1985, Case Western Reserve University

Administration of Graduate Programs at IUPUI

Indiana University–Purdue University Indianapolis (IUPUI), a comprehensive campus made up of 19 Indiana University and Purdue University schools, is a dynamic place where new degree initiatives are fostered. Involvement with society at large and the community in particular is a hallmark of this campus, which changes the flavor of new degree programs. Thus, students will find innovative programs in public health, philanthropy, public history, and social work as well as developing programs in informatics and visual communications. These new and developing programs enrich the solid foundation of traditional graduate programs available at IUPUI. Please see: www.iupui.edu/~resgrad/grad/academics_content2.htm for a complete listing of the graduate degree programs at IUPUI.

There are three types of post-baccalaureate programs at IUPUI: (1) programs leading to graduate degrees and certificates administered by Indiana University Graduate School, (2) programs leading to graduate degrees and certificates administered by Purdue University Graduate School, and (3) other programs that are administered mainly by individual schools such as the Schools of Medicine, Dentistry, Law, Public and Environmental Affairs, Education, Library and Information Science, Allied Health Sciences, Music, Nursing, the Kelley School of Business, Informatics, and the Herron School of Art. For information about applying to one of the degree programs within these schools, please contact the school or department offering the degree.

At IUPUI, the vice chancellor for research and graduate education/associate vice president for research acts in conjunction with the IUPUI executive vice chancellor/dean of faculties to administer graduate programs. The vice chancellor for research and graduate education carries out all graduate program–related assignments made by the chancellor of IUPUI and the Indiana University vice president for research/dean of the Graduate School, and is the liaison to Purdue University for graduate affairs and research. The vice chancellor for research and graduate education collaborates with the associate dean of the Indiana University Graduate School who is also director of the IUPUI Graduate Office.

IUPUI Graduate Office

The IUPUI Graduate Office is the administrative center for graduate and graduate/professional programs on the Indianapolis campus. Although no graduate degrees are granted by IUPUI itself, more than 7,000 students pursue one of the 127 graduate-level certificates and degrees offered on the IUPUI campus by the Indiana University Graduate School, the Purdue University Graduate School, and Indiana University individual schools. The director serves as dean of students for all IUPUI post-baccalaureate students in collaboration with the IUPUI dean of students. In

addition to the director, the Graduate Office has an assistant director, an assistant dean, a graduate non-degree counselor, and other support staff.

As the locus of graduate administrative activity, the IUPUI Graduate Office has many responsibilities, including the processing of applications and GRE scores and the deposit of theses and dissertations for the Graduate Schools of both IU and PU. The office provides staff support for all graduate administrative committees, sponsors student organizations (e.g., the Graduate Student Organization, and the Postdoctoral Organization), counsels post-baccalaureate students and prospective students, conducts workshops, holds orientation sessions, and organizes Graduate School commencement activities. The IUPUI Graduate Office also connects IUPUI to a wider graduate community through organizations such as the Council of Graduate Schools (CGS), the Committee on Institutional Cooperation (CIC), and the Midwest Association of Graduate Schools (MAGS). Perhaps most importantly, the IUPUI Graduate Office is the answer center for a wide range of questions pertaining to graduate study, graduate programs, and graduate student life. In addition, the IUPUI Graduate Office supports other offices, such as the Enrollment Center and the Community Learning Network, in providing information and documents for general inquiries. The IUPUI Graduate Office, under the primary direction of the assistant dean, also carries out recruiting for campus graduate programs.

IUPUI Graduate Affairs Committee

The Graduate Affairs Committee at IUPUI is charged with overseeing the development of new programs, quality control, recruitment, and other issues related to graduate education on the campus. Membership of this committee includes the graduate deans or their designee from both Indiana University and Purdue University as well as deans, associate deans, president of the Graduate Student Organization, and faculty from all of the schools with post-baccalaureate programs on the IUPUI campus. New initiatives and directions are discussed and appropriate issues are shared with the respective schools for further development and comment. New program proposals are reviewed by assigned members of the Graduate Affairs Committee and are discussed and approved by the full committee. The Curriculum Subcommittee, which is appointed by the Indiana University Graduate School associate dean, has the responsibility of reviewing all new course or course change requests and providing recommendations to the Graduate Affairs Committee. Approved program or course proposals are referred to either the IU Graduate Council or to the Purdue Graduate School for final action before going to ICHE, if necessary. The Fellowship Subcommittee reviews nominations and selects the recipients of graduate fellowships.

The following pages outline general regulations for graduate and professional programs on the IUPUI campus. For specific information about the

admissions process, degree requirements, prerequisites, etc., please contact the school or department offering the degree.

Integrity in Graduate Education

Students are expected to adhere to the highest ethical standards in all their course work and research. Individuals violating that code of conduct are subject to disciplinary action; such breaches could lead to expulsion of the student from the university or to rescission of a degree already granted. To acquaint students more fully with the range of issues relating to academic integrity, a document entitled “Integrity in Graduate Study” is available, which deals with topics such as plagiarism, fraud, and conflicts of interest, among others. Copies of that document may be obtained from departmental offices or from the IUPUI Graduate Office, Union Building 518. Every student should be familiar with its contents. Graduate students are also subject to the provisions outlined in the *Code of Student Rights, Responsibilities, and Conduct*. Copies of this document are available at the Office of Student Life and Diversity, as well as at the IUPUI Graduate Office.

General Graduate Regulations and Information

Social Security Number

In accordance with the Privacy Act of 1974 and Indiana PL22 of 1977, students or applicants are advised that the requested disclosure of the Social Security number to an office is voluntary. A student has the right to refuse disclosure of this number or request its removal from records without penalty. A special, nine-digit student identification will then be assigned for use throughout the duration of a student's involvement with the university. The Social Security number will be used to: identify a student's records, such as permanent transcript, registration, grade reports, transcript requests, and certification requests; as an identifier for grants, loans, and other financial aid programs; and to determine eligibility, certify school attendance, and report student status. A student's Social Security number is not disclosed to individuals or agencies outside Indiana University, except in accordance with the Indiana University policy on release of student information.

English as a Second Language (ESL) Placement Test

The IUPUI ESL Program and the Office of International Affairs have joined together to administer the required English as a Second Language (ESL) Placement Test for students whose native language is not English. All international students must take this test prior to registration for classes even if the TOEFL test has been taken. Because this is a placement test used to accurately determine English language skill level, students do not need to "prepare" for it. The scores are used to assign the ESL classes that best meet students' academic needs and that will provide the favorable English experiences necessary for a successful career at IUPUI. Students are required to begin the assigned ESL courses within their first or second semester on campus. The ESL Placement Test takes approximately three (3) hours to complete and consists of three parts:

1. Objective test (1.25 hours): this test consists of grammar, vocabulary, and reading comprehension sections that test knowledge and understanding of the English language.
2. Written essay (30 minutes): this test assesses the student's ability to write in an organized fashion about a specific topic in a limited time period. Each topic allows a student to use personal experience and observations for information, examples, and generalizations. The essay test does not require outside source information or specific knowledge in a certain area, but requires clear and effective writing.
3. Listening test (20 minutes): this test evaluates the student's listening comprehension. The test is presented in the form of an audio tape, which includes questions and statements.

Students register in advance for the ESL Placement Test and pay a testing fee. Students must either be admitted to study at IUPUI or have filed an admission application in order to register for the test. To register, contact the Office of International Affairs, at (317) 274-7000, between the hours of 8:30 a.m. and 4:30 p.m., Monday through Friday.

English Proficiency

Applicants, except those whose native language is English, are expected to submit results of the Test of English as a Foreign Language (TOEFL). The TOEFL is given worldwide throughout the year. Information on testing dates, availability of computer-based tests, locations, and costs may be obtained by writing to:

TOEFL/TSE Services
P.O. Box 6151
Princeton, NJ 08541-6151
USA

IUPUI's school code number for the TOEFL application is 1325. All Purdue University and Indiana University Graduate School graduate teaching assistants/instructors whose native language is not English must demonstrate adequate oral English proficiency before being assigned duties involving direct instruction of students.

GRE (Graduate Record Examination)

Applicants may be required to take the Graduate Record Examination General Test, Subject Test, or both (see departmental requirements). Information concerning this exam may be obtained from:

Graduate Record Examinations
Educational Testing Service
CN 6000
Princeton, NJ 08541-6000

Students may also call a Sylvan Learning Center to schedule the computer-based version of the GRE. It is particularly important that the GRE be taken if the applicant:

1. is seeking admission to a department that requests it (see individual departmental requirements);
2. wishes to be considered for a fellowship;
3. feels that the previous academic record does not adequately reflect the applicant's ability;
4. received the baccalaureate degree from an unaccredited institution;

GRE booklets are available in the IUPUI Graduate Office.

International Students

There are special application procedures for those who are not citizens of the United States or who have had their previous schooling outside the United States. Such individuals should obtain the International Application packet from the Office of International Affairs (Union Building, Room 207). Information and an international application may be obtained on the Web.

Once enrolled, international students who wish to change their program of study must first obtain the approval of the Office of International Affairs. When such approval is granted, application for formal change of status may then be made to the appropriate school according to the same procedures governing United States citizens.

International students must enroll in at least 8 credit hours each fall and spring semester in order to meet visa requirements. Any exceptions to this regulation must be approved in advance by the Office of International Affairs.

Enrollment/Registration

The courses in which a graduate student enrolls should reflect the nature and amount of the student's study and research activities as accurately as possible. Research includes literature reviews and thesis writing. A candidate for any advanced degree (excluding Indiana University Graduate School master's students) must be registered during the session in which he or she expects to receive the degree.

Proper registration is the responsibility of the student, the major professor, and the student's department. The IUPUI Graduate Office staff does not (except in unusual cases) counsel individual graduate students relative to their programs and progress. Necessary contacts should, in general, be made through the student's department.

Financial Aid

Graduate students interested in obtaining an Indiana University or Purdue University degree at the Indianapolis campus should contact IUPUI's financial aid office:

Office of Student Financial Aid Services
425 University Blvd.
Cavanaugh Hall 103
Indianapolis, IN 46202
Phone: (317) 274-4723

Associate Instructorships, Graduate Assistantships, and Research Assistantships

A large number of associate instructorships, graduate assistantships, and research assistantships are available in departments and schools. Some of these positions are accompanied by fee scholarships, which defray the cost of tuition and fees with the exception of special fees and those fees dedicated to debt retirement on physical facilities. Application for such positions should be made to the department or school in which the student wishes to work. Early application is advisable.

Fellowships

A number of fellowships are available to students enrolled full time; among them are Graduate School fellowships, fee scholarships, and various privately and federally funded awards. Students should indicate their interest in these fellowships directly to the major department. Information on, and preliminary application materials for, the National Science Foundation Graduate Fellowships may be obtained from:

Fellowship Office
National Research Council
2101 Constitution Avenue N.W.
Washington, DC 20418

In all cases, early application is advisable. It should be noted that all such award holders are required to devote full time to their studies.

Foreign Language Requirements

There is no general requirement of competency in any foreign language. Each department determines requirements, if any, and options for satisfying them are obtained from the department.

Grades

Grade points are assigned at IUPUI according to the following scale; in calculating grade point averages, any plus or minus accompanying a letter grade is taken into account.

A	=	4.0
A-	=	3.7
B+	=	3.3
B	=	3.0
B-	=	2.7
C+	=	2.3
C	=	2.0
C-	=	1.7
D+	=	1.3
D	=	1.0
D-	=	0.7
F	=	0

Courses completed with grades below C (2.0) are not counted toward degree requirements, but such grades will be counted in calculating a student's grade point average. Some departments may require an average grade in graduate courses higher than B (3.0), while others may count no courses completed with grades below B (3.0) toward degree requirements. No work may be transferred from another institution unless the grade is a B (3.0) or higher.

The school dean may review a grade record at any time and may place a student on academic probation if the record justifies such action. When the grade point average of a student falls below 3.0, or the student is not making sufficient progress toward the degree, the dean will notify the student that he or she has been placed on probation. Unless the student brings this record up to a 3.0 grade point average, or begins making satisfactory progress in the next semester of enrollment, the student will not ordinarily be allowed to continue study at the university.

Standards of Work

Success in graduate study requires performance of a high quality. Pass/not-pass grades are unacceptable. A student's progress will be reviewed each semester by the department. Any student who fails to perform on a level satisfactory to the advisory committee or the dean may be asked to discontinue graduate study. The same scholastic requirements in effect during the regular university year apply to graduate study during the summer sessions and to work taken at all Indiana University or Purdue University campuses. The same grade standards also apply to prerequisite courses.

Thesis

A master's or doctoral thesis is a document authored by a student that describes results of original research undertaken by that student and asserts a position which that student is willing to defend. This position should not be construed to prohibit joint or collaborative research endeavors. It is expected, however, that in such a situation, unique aspects of the broad problem will be explored by each individual and that the thesis written and presented to the final examining committee will be a personal document describing the student's creative effort and contribution. Students should speak with their advisor early in their graduate careers when considering a collaborative thesis project.

Visiting/Transient Students

Visiting students in good standing in any accredited graduate school who wish to enroll for one semester or summer session and who plan to return thereafter to their former institution may be admitted as visiting/transient students if their enrollment can be accommodated. Visiting/transient students should register as Graduate Non-Degree Program students. Information about the Graduate Non-Degree Program may be obtained from:

IUPUI Graduate Office
620 Union Drive
Union Building, Room 518
Indianapolis, IN 46202
Phone: (317) 274-1577
Fax: (317) 278-2380
www.iupui.edu/~resgrad/grad/grad_menu.htm

Indiana University Graduate School

Degree Information

The Indiana University Graduate School confers the following degrees: M.A. in History, M.A. in English, M.A. in Sociology, M.A.T. in Spanish, M.A. in Economics, M.A. in Philanthropic Studies, M.S. and Ph.D. in Anatomy, Biochemistry, Dental Science, Medical Biophysics, Medical Genetics, Medical Neurobiology, Microbiology and Immunology, Pathology, Pharmacology and Toxicology, Cellular and Integrative Physiology, and the M.S. in Geology. It also confers the Ph.D. in Nursing and Social Work and several graduate level certificates.

For complete information (including admissions procedures) about all of the programs listed above, please contact the department or school directly. Information about these programs may also be obtained through the following URL:
www.iupui.edu/~resgrad/grad/academics_content2.htm

Policies, procedures, and degree and graduation requirements of the Indiana University Graduate School are published in the Indiana University Graduate School Bulletin. Copies of this bulletin may be obtained from the IUPUI Graduate Office or at the following URL:
www.indiana.edu/~grdschl/grdblt/bltcont.html

Purdue University Graduate School

Admission

Undergraduate Requirements

Correspondence about admission to the Graduate School should be addressed to the Graduate Studies Office of the department or program to which an applicant wishes to be admitted or to the Graduate School, Purdue University, West Lafayette, IN 47907. Applicants ordinarily will be expected to hold baccalaureate degrees from colleges or universities of recognized standing prior to registration as graduate students. Applicants for a master's or doctoral degree program should have achieved a 3.0 (out of 4.0) grade point average or higher for the baccalaureate degree or have other indicators of outstanding academic performance.

For additional information concerning requirements for admission, please consult the specific departments or programs at IUPUI to which you wish to apply. Some departments have requirements for admission that exceed the general Graduate School requirements.

Classification and Admission

Degree-seeking applicants are those who seek to study for a doctoral or master's degree.

Degree-seeking graduate students must show promise, as judged by academic performance and experience, of ability to perform advanced study and research and must have adequate preparation in their chosen fields of study. Applicants must submit an official transcript from each college or university attended. If these transcripts are not in English, the official original-language transcripts must be accompanied by certified English translations.

For unconditional admission to a degree program, a B or better average in prior study is required. Individual departments may set higher grade requirements and may require the submission of additional evidence of academic performance.

A minimal score of 550 on the Test of English as a Foreign Language (TOEFL) is required for admission to the Graduate School for all international applicants whose native language is not English. See "International Students" in the "General Regulations" section at the beginning of the "IUPUI Graduate Office" section for more information about TOEFL.

Nondegree-seeking applicants are those who wish to attend graduate school for professional and personal enrichment without seeking an additional degree. See the "Graduate Non-Degree" section for more information about nondegree-seeking applicants.

Financial Aid and Admissions

Students who are interested in earning a Purdue degree while taking classes should contact IUPUI's financial aid office.

Any student who is not a full admit to a program may enroll in classes as a Graduate Non-Degree student (see Graduate Non-Degree Program below). Students who are not fully admitted to a program should contact their department to verify their admission status. In many cases, students who are Graduate Non-Degree or Special Students do not qualify for financial aid.

Application

Deadlines

Application materials to Purdue graduate programs at IUPUI are available from the department in which the student is interested in taking classes. See departmental listings in this bulletin or departmental Web sites for contact information. All materials for Purdue graduate programs should be submitted to the school from which the applicant wishes to obtain a degree (e.g., IUPUI School of Engineering and Technology or IUPUI School of Science).

The standard deadlines are given below. However, students should check with the department and program to which they are applying, as departmental deadlines may differ:

Degree-seeking applicants: Deadlines for applications for admission and for graduate assistantships and most fellowships are established by each department. In order to receive full consideration for available graduate appointments, it is generally recommended

that applications for August entry be received no later than February and that those for January entry be received no later than August.

Nondegree-seeking applicants: Applications for Nondegree study should be submitted at least two (2) weeks prior to the first day of classes. Applications may be picked up for the Graduate Non-Degree Program in the IUPUI Graduate Office (please see above contact information for the IUPUI Graduate Office).

International applicants: All applications from outside the United States should be received at least six (6) months prior to the month of entry.

Academic Regulations

Enrollment/Registration

A candidate for any advanced degree must be registered during the session in which he or she expects to receive the degree. Students in the last semester of the thesis option master's program or a Ph.D. program must be registered for a minimum of 3 credit hours of research unless specifically excused through the Purdue University Graduate School's approval to register for "exam only" or "degree only."

Registration Limitations/Full-Time Study

A graduate student normally will register for no more than 18 credit hours per semester. Graduate students holding graduate-staff appointments should note the following limitations applicable to each semester's registration:

1. those carrying full-time staff duties may register for not more than 6 credit hours;
2. those carrying three-quarter-time staff duties may register for not more than 9 semester hours;
3. those carrying half-time duties may register for not more than 12 semester hours;
4. those carrying quarter-time staff duties may register for not more than 15 semester hours; the minimum allowable total registration is 3 semester hours.

The maximum loads are to include all courses, whether undergraduate or graduate level.

The above regulations are stated for a 16-week semester and must be adjusted for the summer session.

Residence Study Requirements

The total number of hours of academic credit used to satisfy residency requirements consists of all course credit hours that appear on the plan of study, other graduate course credit hours with grades of C or better that appear on the Purdue transcript, and research hours that appear on the Purdue transcript.

1. Master's Degree:
 - At least one-half of the total credit hours used to satisfy degree requirements must be earned in residence at IUPUI.
 - At least 30 total credit hours are required.
2. Doctoral Degree:
 - At least one-third of the total credit hours used to satisfy degree requirements must be earned (while registered for doctoral study) in continuous residence on the IUPUI campus.
 - At least 90 credit hours are required.

- A master's degree from any accredited university may contribute 30 credit hours to satisfy this residency requirement.

In fulfilling these requirements, a maximum of 15 credit hours will be allowed from any one semester (maximum hours proportional to the length of summer session).

Transfer Credit

Credits earned for graduate study at other universities may be applied toward an advanced degree. Only credit hours associated with graduate courses for which grades of B or better were obtained will be eligible for transfer. The various departments determine transfer courses for which an applicant will receive credit in a particular degree program and any additional conditions under which credit transfers may be made.

Candidacy

Master's Degree

Admission to candidacy for the master's degree is granted after approval of a plan of study by the student's advisory committee, head of the graduate program, the school dean, and by the Graduate School dean as described below.

Ph.D. Degree

Admission to candidacy for the degree of Doctor of Philosophy takes place only after the student has passed a preliminary examination, which is usually administered near the close of the second year of graduate study or when substantially all of the course work has been completed.

Master's Degree Regulations

Advisory Committee

For each prospective candidate for the master's degree, an advisory committee shall be appointed, consisting of at least three members of the graduate faculty. The duties of this committee are to assist the student in the preparation of a plan of study and to advise him or her during the period of graduate work. In the case of the thesis option, the committee also advises the student regarding research and writing of the thesis. The student, with the approval of the head of the graduate program, shall select a major professor. The major professor/student relationship must be a mutually acceptable one. When selected, the major professor will act as the chair of the student's advisory committee and be in charge of his or her research. The advisory committee as agreed upon by the major professor and the student, with the approval of the head of the graduate program, shall be presented to the dean of the Graduate School for approval and formal appointment.

Plan of Study

A tentative plan of study should be drawn up in advance of registration for the first semester of graduate work, and the formal plan of study must be submitted to the dean of the Graduate School before the final session, preferably during the first semester in residence.

The plan of study shall be appropriate to meet the needs of the student in his or her chosen field, as determined by the advisory committee and approved

by the head of the graduate program, the school dean, and the Graduate School dean. It shall include the specific courses the student is expected to complete and all other requirements of the particular master's degree being sought. Neither 100- nor 200-level courses may appear on a plan of study. Otherwise, requirements for the numerical level (300 through 600) of courses are determined by each department or administrative unit subject to the restriction that not more than a total of six 300- or 400-level course credit hours may appear on a plan of study. Research credits are not to appear on the plan of study. The quantitative aspects of research registration are controlled by departmental requirements and/or by residence requirements, registration limits, and thesis requirements. Course credits earned by a student whose graduate study and/or professional activity has been inactive for five years or more cannot be used on a plan of study for an advanced degree. A plan of study approved prior to such a period of inactivity is invalid. Requirements for the specific number of credit hours will be determined by each department or administrative unit that supervises master's degree programs. For specific requirements, the student should consult the introductory sections of the departmental course offerings under the general heading "Descriptions of Programs and Courses" in this bulletin and request, from the department, information about any additional requirements.

Non-Thesis Master's Degree

The Graduate School has no general requirement for oral and written examinations for the non-thesis master's degree. In any department, the final examination may be waived if the student meets the minimum requirements of the department. In some departments, a final examining committee is appointed for each candidate for the non-thesis master's degree and a final examination report is filed with the Graduate School before the end of the session in which the student is to receive a degree. The committee must certify to the Graduate School either that the student has passed the required examinations of the department or that the committee is satisfied with the accomplishment of the student as determined by a committee conference. In other departments, neither a final examining committee nor a final examination is required. In these departments, the student is certified for the degree by satisfying established graduation requirements of the department.

Thesis Master's Degree

Every candidate whose plan of study follows the thesis option must prepare an acceptable thesis in residence. Research in absentia is not allowed for the master's degree. In general, the thesis will be based on work done in connection with the primary area. The work will consist of assigned research, which shall be recorded with no grades given except "satisfactory" and "unsatisfactory."

The general schedule for submitting the master's thesis is similar to the schedule cited on the following pages for the Ph.D., except that only three members of the graduate faculty are required for the final examining committee, and no microfilming fee is required.

After the research has been completed and the thesis written, the candidate shall be given a final examination in which he or she defends the thesis and demonstrates to the examining committee that he or she has all of the capabilities for which the master's degree is awarded. The dean of the Graduate School reserves the right to appoint additional committee members.

Multiple Master's Degrees

A student may earn two (2) Purdue master's degrees provided there is no overlap in the two plans of study. Where the requirements for two advanced degrees are of a nature requiring some overlap, instead of waiving the requirements for one of these degrees, (e.g., by dual listing of courses on the plans of study), the departments concerned may involve the student in alternate educational activities. As an alternative to multiple master's degrees, departments may wish to offer advanced degrees involving joint areas of study.

A program of study involving the Ph.D. degree and two or more master's degrees may be approved, provided it meets all of the existing requirements and provided that any overlap between courses listed on the plan of study for the Ph.D. degree and those listed for the master's degrees involves only one of the master's plans of study.

Ph.D. Degree Regulations

The degree of Doctor of Philosophy is the highest earned degree conferred by Purdue University and is awarded only to those who have demonstrated superior ability in a recognized academic discipline. Each student's doctoral program must specify course work that is rationally related, should be highly research oriented, and should culminate in a thesis of literary and scholarly merit that is indicative of the candidate's ability to conduct original research in a recognized field of specialization.

Doctoral programs are composed of formal courses, guided individual study in a chosen field or discipline, study in such cognate subjects as may be required by the candidate's advisory committee, and original research that serves as the basis of a scholarly thesis.

Before being admitted to candidacy for the Ph.D. degree, each student is required to pass a series of comprehensive examinations. Individual departments may require both qualifying and preliminary examinations and may require competence in one or more foreign languages.

A second Ph.D. degree program generally is not permitted at Purdue, but exceptional circumstances may be considered by the Graduate Council.

Advisory Committee

Each prospective candidate for the Ph.D. degree, with the approval of the head of his or her graduate program, shall select a major professor who will act as the chair of the advisory committee and who will direct the research. An advisory committee of not fewer than three members of the graduate faculty will then be appointed. The composition of this committee must be mutually acceptable to the student and the committee and should be representative of the general field of study in which the student expects to do work. The advisory committee as agreed upon by the major professor and the student, with the approval of the

head of the graduate program, shall be presented to the dean of the Graduate School for approval and formal appointment. The dean may appoint additional members if it seems advisable.

Plan of Study

A plan of study should be prepared by the student and the advisory committee at the earliest practicable time. It is recommended that the plan of study be submitted before the end of the first semester following the acceptance of the student to work toward the Ph.D. degree, and all plans of study must be filed with the Graduate School before the preliminary examination is requested.

The plan of study shall specify the area or field of interest in which the student proposes to study and to conduct research. It shall meet the needs of the student as determined by the advisory committee by including the specific courses that the student is expected to complete and all specific course, seminar, language (if any), and research requirements of the department in which the student is a doctoral candidate, indicating the manner in which these requirements are to be met. Neither 100- nor 200-level courses may appear on a plan of study. Otherwise, requirements for the numerical level (300 through 600) of courses are determined by each department or administrative unit subject to the restriction that not more than a total of six 300- or 400-level course credit hours may appear on a plan of study. Research credits are not to appear on the plan of study. The quantitative aspects of research registration are controlled by departmental requirements and/or by residence requirements, registration limits, and thesis requirements. Course credits earned by a student whose graduate study and/or professional activity has been inactive for five years or more cannot be used on a plan of study for an advanced degree.

A plan of study approved prior to such a period of inactivity is invalid. A preliminary examination passed prior to such a period of inactivity is invalid. Requirements for the specific number of credit hours will be determined by each department or administrative unit that supervises doctoral programs.

The plan of study must be approved by the head of the graduate program, the school dean, and the Graduate School dean. The dean of the Graduate School reserves the right to refer any or all plans of study to the Graduate Council for review and approval when deemed advisable. The Graduate Council has the final authority to supervise the quality of all graduate programs.

Qualifying Examinations

Qualifying examinations for the Ph.D. degree are required in some departments. These examinations are for the purpose of determining the student's qualifications to continue graduate study toward the Ph.D. degree.

Preliminary Examinations

After the student has completed most of the formal study to the satisfaction of the advisory committee and met the language requirement(s), if any, he or she becomes eligible to take the preliminary examinations. The results of these examinations, written and/or oral, will be reported to the Graduate

School by the examining committee with an appropriate recommendation for the student's admission to candidacy, continued preparatory study, or discontinuation of study. The dean of the Graduate School reserves the right to appoint additional members to the preliminary examining committee. The dean must be informed of the date and place of the examination and the membership of the examining committee at least two weeks before the examination. No examining committee shall have fewer than three members of the graduate faculty.

The preliminary examination will be conducted by the examining committee. In some cases, parts of the examination may be delegated to certain other staff members, but the final responsibility for the examination rests with the student's examining committee.

Departments need not offer written preliminary examinations more than once a semester, and it will be the responsibility of the student to learn in advance when these examinations are to be given.

If the student does not pass the preliminary examinations, at least one semester must elapse before reexamination is permitted. Should the preliminary examinations be failed twice, the student may not be given a third examination, except upon the recommendation of the examining committee and with special approval of the Graduate Council.

After admission to candidacy, the candidate must devote at least two semesters to research before taking the final examination.

Thesis

The special research carried on as part of the doctoral work is expected to make a definite contribution to the candidate's chosen field of knowledge a contribution of sufficient importance to merit publication. The candidate must, therefore, prepare a thesis showing the results of his or her research. Following is the schedule that should be adhered to with regard to the submission of the dissertation and final examination:

1. A first draft of the thesis should be in the hands of the major professor at least six weeks before the end of the session in which the degree is to be granted.
2. The thesis must be prepared according to departmental format requirements (available in departmental graduate studies offices) and university format requirements as described in the Manual for the Preparation of Graduate Theses, a copy of which may be obtained in departmental offices. The thesis must bear the written approval of the professor who has directed the research before it is submitted to the final examining committee.
3. The final examining committee for the doctoral candidate shall consist of a minimum of four members of the graduate faculty. The formal request for the appointment of the examining committee must be received in the Graduate School not later than two weeks preceding the final examination. This formal request must specify the time and place of the examination.
4. Generally, each member of the examining committee must receive a copy of the thesis at

least two weeks before the date of the final oral examination.

5. Approval of departmental format requirements must be obtained before the thesis is delivered to the Library Thesis Deposit Office. University format requirements will be checked in the Library Thesis Deposit Office at the time the thesis is deposited.
6. The final examination must be taken and passed, and the report of the examination must be filed in the Graduate School before the last week of classes.
7. The completed and corrected deposit copy of the thesis, along with an extra copy of the title page and the abstract, must be deposited in the Library Thesis Deposit Office and a receipt thereof delivered to the Graduate School before the end of the first working day following the last day of classes of the session in which the degree is expected. Doctoral students must also submit one unbound copy of the thesis to the Library Thesis Deposit Office. The unbound copy will be sent to University Microfilms International for microfilming.
8. The sum of \$65 must be paid to the bursar of the university before the end of the session to pay for the cost of microfilming.

Final Examination

After the research has been completed and the dissertation written, the candidate shall be given a final examination in which he or she defends the thesis and demonstrates to the examining committee that he or she has all of the capabilities for which the Doctor of Philosophy degree is awarded. The examining committee shall consist of no fewer than four members of the graduate faculty. The dean of the Graduate School reserves the right to appoint additional committee members.

Publication and Use of Theses

The results obtained and the thesis prepared for an advanced degree are the property of the university. Except for the standard arrangement for the publication of Ph.D. theses on microfilm (see the following paragraph), no part of the thesis may be reproduced or published without the authorization of the president of the university or his designee. Unless otherwise named, the head of the department supervising the work shall act for the president. No part of the thesis may be used, directly or indirectly, in support of or in condemnation of any product or procedure referred to therein.

Purdue University has an agreement with University Microfilms International, Ann Arbor, Michigan, for microfilming Ph.D. theses. The availability of the dissertation in film form will be announced by a listing of the title and a reproduction of the thesis abstract in *Dissertation Abstracts International*, a monthly journal distributed to leading libraries here and abroad. The thesis fee covers the cost of microfilming and the publication and distribution of the abstract. A film copy or paper enlargement of all or part of the thesis may be ordered by anyone from the publishers of *Dissertation Abstracts International*. The original thesis and one unbound microform copy will be deposited in the University Library. Publication by microfilm does not preclude the printing of a

dissertation in whole or in part in a journal or monograph.

Graduate Non-Degree Program (GND)

Students who have a bachelor's degree can enroll for credit in a wide variety of undergraduate, graduate, and professional courses throughout the university as a GND student. Some courses students are interested in taking may require authorizations from the instructor or department prior to registration; this is particularly true for math and business courses. GND students may not take any graduate-level courses in law, medicine, social work, business, or informatics.

This program is for the student who:

1. wants to supplement his/her academic background by taking graduate, professional, or undergraduate courses;
2. wants to take courses for personal development;
3. is unsure about a graduate or professional program and would like to sample available programs;
4. is awaiting final approval of graduate admission and is taking courses with the guidance and approval of a degree program advisor;
5. wants to enhance skills utilized in a current career; or
6. wants to prepare for a change in careers.

Students who want to take course work for teachers license renewal, endorsements, certification for Indiana Teacher's License, or master's program should contact the:

School of Education
ES 31331
902 W. New York Street
Indianapolis, IN 46202-5154
Phone: (317) 274-6868

for direct admission to their program.

The address for the Graduate Non-Degree Program is:
Graduate Non-Degree Program
620 Union Drive, Room 518
Indianapolis, IN 46202
Phone: (317) 274-1577
Fax: (317) 278-2380

Application Information

To be eligible for the Graduate Non-Degree Program, students must have a bachelor's degree from an accredited institution and be a U.S. citizen or a student who does not need an I-20 or an IAP-66 for a student visa. Under most circumstances, Graduate Non-Degree is not an appropriate enrollment status for persons requiring a student visa to enter the country.

Students who are interested in taking courses as a Graduate Non-Degree student will need to apply to the Graduate Non-Degree Program and be admitted prior to being able to register for courses. The application process includes completing an application and paying an application fee. Please see the following URL for the online application and more

information about the Graduate Non-Degree Program: www.iupui.edu/~resgrad/grad/non/gnd-opening.htm.

Students previously admitted to the Graduate Non-Degree Program may not need to complete another application. Please see the above URL for directions on how to register for courses if you were previously admitted to the Graduate Non-Degree Program.

Graduate Non-Degree Policies

1. Graduate Non-Degree students must maintain a minimum GPA of at least 2.5.
2. Graduate Non-Degree students may not take more than 18 credit hours in a single subject area without written permission from the department to the GND advisor.
3. Graduate Non-Degree students must register for at least one course every two years to maintain active admission status. Reactivation may require re-application.
4. Admission to the Graduate Non-Degree program will not guarantee admission to a graduate degree program.
5. A maximum of 12 credits earned as a Graduate Non-Degree student may be applied to a certificate, master's degree, or Ph.D. Some departments allow less than 12 credits.
6. Graduate Non-Degree students may not register for any medical research course.
7. If Graduate Non-Degree students need advice about specific course issues or authorizations for designated courses, they can be obtained through the department that offers the course.
8. Graduate Non-Degree students may not enroll in graduate course work in medicine, social work, law, or business.

English as a Second Language Proficiency Policy for Graduate Non-Degree Students Who Are Nonnative Speakers of English

Effective August 1, 1997, the English language proficiency policy for Graduate Non-Degree applicants who are nonnative speakers of English is as follows:

Satisfactory English language skills are necessary for enrollment as a Graduate Non-Degree student. Nonnative English speakers must take the IUPUI ESL Placement test or the TOEFL unless they have received a U.S. bachelor's or higher degree. Individual schools and programs may have policies for documentation of English ability which are different from the GND policy. Students who anticipate pursuing a graduate degree on this campus are encouraged to take the ESL Placement Test, even if they are not required to take it for GND admission, since their academic unit will most likely require it at a later date.

GND students, who do not need an I-20 or IAP-66, are given a one-semester grace period in which to satisfy the testing requirement. If the student is subject to this policy, the student must take the ESL test before registration for a second semester will be permitted. To register for the test, call or visit the IUPUI Office of International Affairs (Union Building, Room 207, phone (317) 274-7000). There is a fee for this test.

To receive an exemption from the ESL test requirement under the terms of this policy, the student must submit an official transcript with the

GND application. Students who do not have official transcripts available upon application may submit them to the Office of International Affairs at a later date. Documents submitted to International Affairs after the GND application has been processed will be reviewed within two months of submission.

Any applicant who wishes to enroll in ESL courses must take the ESL Placement Test before course registration.

Application to a Graduate or Professional Program

Graduate Non-Degree students who later decide to pursue a certificate, master's degree, or a Ph.D. must apply and be admitted by a degree-granting program in order to receive a degree. For information about applying to one of the degree programs at IUPUI, please contact the school or department offering the degree.

Financial Aid for Graduate Non-Degree Students

A Graduate Non-Degree student who is taking prerequisites for a second bachelor's or graduate degree program may qualify for financial aid.

Graduate Non-Degree students may be eligible if:

1. the courses are being taken because an IUPUI graduate or undergraduate department or school has required the courses as prerequisites for admission to a graduate or undergraduate program here at IUPUI, and
2. those prerequisite courses being taken for any semester equal at least half-time enrollment (6 hours of undergraduate courses); all of which are prerequisites.
3. they did not max out their aid at the undergraduate level.

Questions regarding this information should be directed to the graduate area of the Office of Student Financial Aid Services at (317) 278-4723.

IUPUI Employees and Their Spouses

If the student or the student's spouse is employed full time at IUPUI, the Fee Courtesy Request Form, available from the Office of Student Financial Aid Services, Cavanaugh Hall 103, must be completed. If the student has been classified as a nonresident of Indiana for tuition purposes, the student should note that tuition is assessed at the out-of-state rate. Completing this form enables the student to receive the fee and reductions available to full-time IUPUI employees and their dependents.

The School of Informatics/ New Media Program

Moore's Law says that computing power doubles every 18 months. Regardless of whether that law is literally correct, it illustrates the rapid changes in information technology that will continue throughout the foreseeable future. The School of Informatics prepares students to meet the increasing demand for information technology professionals. The curriculum combines knowledge of a specific subject area (or cognate area) with the concepts in informatics that will help students adapt to technological changes throughout their careers. The proverb says that if you give people fish, you've fed them for a day, but if you teach them how to fish, you've fed them for a lifetime. Like the proverb, informatics teaches students how to adapt to technological changes while preparing them for lifelong learning in their careers and in their lives.

The undergraduate curriculum looks at information technology from a liberal arts perspective. It goes well beyond a "technical school" approach to educate students in the underlying science of information and information technology and to explore their human implications. The School of Informatics educates students in the technical, psychological, and social aspects of information technology and, at the same time, educates them in the application of information technology to another discipline or "cognate area."

The curriculum is designed in two axes. One axis is the technical dimension, running from the logical and mathematical foundations of information technology to the issues of distributed information and knowledge systems. The other axis represents the human dimension, from the individual working with a computer and the area of human computer interaction to groups interacting via computers with each other and the areas of social and organizational informatics. Where these two axes cross, we have the intersection of the human and the technical, of art and science. Also at that intersection we have "New Media"—the use of computers and the Internet as multimodal communication devices that allow the expression of the human spirit through the visual arts, music, voice, and text. Thus we have the five areas of the informatics curriculum: mathematical foundations, distributed information, human computer interaction, social/organizational informatics, and new media.

The curriculum gives students a solid foundation in the five areas while encouraging them to specialize their training through informatics electives and by applying their informatics skills in a cognate area. Bridging the specialization and cognate areas is a year-long senior capstone project in which they will not only further specialize but learn practical skills, including teamwork. Central to the informatics major is the idea that students learn how information technology relates to a traditional discipline in the liberal arts or the professions. Therefore, students take 15-18 credit hours in a cognate area that both

grounds students in the discipline and emphasizes some combination of applications, implications, and foundations of information technology.

In addition to knowledge of core informatics and of informatics in the context of a traditional discipline, students also must take a set of general education courses to ensure that they can communicate clearly in both written and spoken English, read effectively, and reason quantitatively. They must be able to raise and rationally debate ethical concerns suggested by information technologies and their interactions with other people. Students also must have some knowledge of the world and its peoples, and their cultural, artistic, and scientific achievements. To this end, the general education requirement exposes students to the arts and humanities, social and historical studies, and the natural sciences.

The school offers a Bachelor of Science degree, four specialized professional master's degrees, and a variety of undergraduate and graduate programs in new media. Degrees in informatics not only combine existing course offerings, but also create innovative courses and curricula in new and emerging aspects of information technology. Informatics research is conducted at the Informatics Research Institute, which provides expanded educational opportunities for both undergraduate and graduate students.

The Development of the School of Informatics

The School of Informatics has grown out of years of planning and discussion, both at IUB and IUPUI. In the fall of 1997, a Task Force on Informatics, chaired by Richard Shiffrin (director of the Cognitive Science Program, IUB), was formed to study ways in which the university could capitalize on its strengths in information technology and to make a recommendation for further development. The membership of that task force came from both the IUB and IUPUI campuses and represented a wide range of disciplines involved in information technology. This task force report recommended that IU establish the School of Informatics.

In the summer of 1998, President Myles Brand created an Informatics Planning Committee chaired by Dennis Gannon (chair of computer science, IUB). The committee was charged with developing a detailed implementation plan for this metaschool. The committee document outlined how an undergraduate degree in informatics could fruitfully require a substantial number of courses in an area outside of the core informatics courses. It also called for the creation of a research institute and for a small core faculty. The Informatics Planning Committee gave the following motivation for the new school:

The movement of society into the information age involves developments in information science and technology, distributed information processing, computer and cognitive science, social aspects of dealing with distributed information, knowledge retrieval, distributed teaching and learning, information dissemination, and many related themes. All academic and research programs at IU are (or

shortly will be) affected by these developments. This task force recommends that a new school, tentatively titled "School of Informatics," be formed to promote teaching, training, and research in these areas, and thereby play a catalyzing role in this ongoing evolutionary process.

On January 1, 1999, President Brand appointed an interim dean, J. Michael Dunn (computer science and philosophy, IUB) and an interim associate dean, Darrell Bailey (music and new media, IUPUI). With the guidance of a multidisciplinary faculty advisory committee of more than 50 members, the school began to take shape. The Indiana Commission for Higher Education formally approved the school in November, authorizing IU to admit its first informatics majors in the fall of 2000.

One School, Two Campuses

The School of Informatics spans the IU Bloomington (IUB) and Indiana University Purdue University Indianapolis (IUPUI) campuses. By combining the strengths of these two campuses, the School of Informatics is able to create a unique environment that enables students to earn degrees with strong information technology components in arts, humanities, science, and the professions. The expert faculty and excellent technological resources foster a synthesis of academic disciplines and cultures. Faculty from several departments share developments in the fast-moving information technology areas through the School of Informatics and its degree programs. The school is actively forging cooperative arrangements with employers in the state and region and creating internships, cooperative education programs, and opportunities for learning through service.

Informatics Research Institute

Research and theory in informatics move rapidly to application and development. The faculty teaching in the School of Informatics participates in research activities and new applications of technology. As a result, faculty can transmit state-of-the-art knowledge to students. Indiana University is capitalizing on this great research strength in informatics with the formation of an Informatics Research Institute (IRI). IRI will conduct research in areas of emphasis shared with the School of Informatics, including: fundamental research in human computer interaction; fundamental research in capturing, managing, analyzing, and explaining information and making it available for its myriad uses; and expanding research into policy and socioeconomic issues arising from information technology.

Undergraduate Programs

The School of Informatics offers a Bachelor of Science in Informatics, a Bachelor of Science in Media Arts and Science, and an Associate of Science in Media Arts and Technology.

The very nature of these degrees, with the changing technologies and applications, requires that the content of each degree be continuously assessed and revised. Therefore, the faculty of the School of Informatics will periodically review and revise the curricula to ensure that students are prepared to meet contemporary workplace and intellectual demands. Please contact the School of Informatics office or

refer to our Web site at www.informatics.iupui.edu or newmedia.iupui.edu to confirm current program requirements.

Probationary Admission to New Media

Individuals who do not qualify for a direct admission or whose college grade point average is lower than 2.0 (C) may petition the New Media Program for probationary admission. Special consideration is given to adult learners and students returning after five or more years. Petitions are available from the New Media Program Office, SI 115, (317) 278-7666.

Deadline to enroll for the fall semester: July 15

Deadline to enroll for the spring semester: November 15

Deadline to enroll for the summer session: April 15

At the discretion of the associate dean, the New Media Program may admit on a probationary basis those students who do not meet the minimum requirements for direct admission. To be considered for probationary admission, students must be in the upper two-thirds of their high school graduating class and have combined SAT I scores of at least 650. Such students are counseled through the New Media Program Office and remain on probation until they have successfully raised their cumulative grade point average to 2.0 (C) and satisfied any other limitations set. Students admitted on probationary status become eligible for dismissal if they fail to achieve a minimum GPA of 2.3 during each semester until they have reached a minimum cumulative GPA of 2.0 (C). Students who do not achieve a cumulative grade point average of 2.0 (C) after two semesters, or 24 credit hours, will be dismissed.

Academic Regulations

Absences

From Final Examinations Students are required to adhere to the policies regarding final examinations as published in the *Schedule of Classes*.

From Scheduled Classes Illness is usually the only acceptable excuse for absence from class. Other absences must be explained to the satisfaction of the instructor, who will decide whether missed work may be made up.

Credit for Correspondence Courses

With prior approval, the School of Informatics will accept a maximum of two courses (6 credit hours total) by correspondence study to count toward the degree requirements. Only General Elective courses may be taken by correspondence. Distance learning courses and courses conducted online are not considered correspondence courses and, therefore, do not have a credit hour limit associated with them.

Degree Application

Candidates for graduation must file an application with the school by March 1 for December graduation and October 1 for May, June, or August graduation. Credits for all course work, except that of the current semester, must be recorded on the candidate's

Indiana University transcript at least one month prior to the date of graduation.

Statute of Limitations

Candidates for the bachelor's degree in informatics have the right to complete the degree requirements specified by the bulletin in effect at the time they entered Indiana University, provided that the required courses are available and that no more than eight calendar years have elapsed since the date of entry.

Grading Policies

The School of Informatics follows the official grading system of Indiana University, which is as follows:

A+ = 4.00	C+ = 2.30
A = 4.00	C = 2.00
A- = 3.70	C- = 1.70
B+ = 3.30	D+ = 1.30
B = 3.00	D = 1.00
B- = 2.70	D- = 0.70
F = 0.00	

The following grades carry no grade points: I (Incomplete), NC (No Credit), NR (No Report Filed by Instructor), P (Passing), R (Deferred), S (Satisfactory), and W (Withdrawn).

Grade Point Average

The cumulative grade point average is computed by dividing the total number of grade points earned by the total number of credit hours completed in which grades of A through F are assigned. Credit earned at another institution may be applied toward degree requirements, but the grades earned at other institutions will not be calculated in the Indiana University cumulative grade point average.

Change of Grade

A student desiring a change of grade should discuss the situation with the instructor. A change of grade must be justified. If the instructor agrees, the faculty member will file a Grade Change Authorization Form. If the instructor and student do not agree on a changed grade or if the instructor cannot be located, the student should discuss the matter with the chairperson or director of the department offering the course. Appeals unresolved at this level may be referred to the academic deans. Appeals of grades or requests for other actions normally will not be considered after one calendar year from the end of the semester in which the course in question was taken.

Incomplete Courses

A temporary grade of Incomplete (I) on the transcript indicates that the course work is mostly completed, generally 75 to 80 percent, and of passing quality.

It is the student's responsibility to contact the instructor to have a grade of Incomplete assigned. The instructor specifies the work to be done to remove the grade of Incomplete and the period of time allowed for completion. If the student fails to remove the Incomplete within one calendar year, the Office of the Registrar will change the grade to an F. The dean (or instructor) authorizes adjustments of this period in exceptional circumstances. A student who has

received a grade of Incomplete should not register for the course a second time but should arrange with the instructor to have the I changed to a letter grade upon completion of requirements, provided that it is done within the year.

Pass/Fail Option

Students in the School of Informatics may elect to take a maximum of 12 credit hours (4 courses) total under the Pass/Fail option. The procedure for declaring this option may be found in the *Schedule of Classes*. Special regulations affecting the Pass/Fail option for School of Informatics students are as follows:

1. Only one course per semester or one course per summer session may be taken under the Pass/Fail option.
2. School of Informatics students may not take any informatics course Pass/Fail. In addition, the Pass/Fail option may not be used for any course that satisfies admission or general-education electives requirements or the student's cognate area. Only university elective courses may be taken on a Pass/Fail basis.
3. A grade of P is not counted in the grade point average; a grade of F is included. Grades of P cannot be changed to any other letter grade.
4. Pass/Fail forms are available in the School of Informatics Office and the New Media Program Office.

R Grade

The R grade (Deferred) on the final report indicates that the nature of the course is such that the work of the student can be evaluated only after two or more terms. Courses in which an R grade is assigned will be announced as deferred grade courses in the *Schedule of Classes*.

FX Option

FX denotes an undergraduate level course originally failed and subsequently retaken.

The School of Informatics will calculate FX grades as grades of F for internal purposes and degree requirements. This calculation will apply to all categories of academic standing: good standing, probation and dismissal, class rank, and all grade point average requirements in the degree, including cumulative, semester, and major concentrations.

A student may use the FX option for purposes of the university transcript. An undergraduate student who has repeated a course previously failed may request to have only the second grade in that course counted in the student's grade point average as entered on the student's transcript. A student may exercise this FX option for no more than three courses, totaling no more than 10 credit hours. A student may use the FX option on the transcript only once for a given course. Requests for approval of FX courses should be made in consultation with the student's advisor or the New Media Program recorder.

Withdrawals

A grade of W (Withdrawn) is given automatically to the student who withdraws from courses during the automatic withdraw period as specified in the *Schedule of Classes*. After the automatic withdrawal period a student may withdraw only with the

permission of the dean. This approval is given only for urgent reasons related to extended illness or equivalent distress. The desire to avoid a low grade is not an acceptable reason for withdrawal from a course.

A grade of W does not affect the overall grade point average. A grade of F will be recorded on the official transcript if a student stops attending but does not officially withdraw from class. Students who alter their schedules, whether at their own initiative or by departmental directive, must follow withdrawal procedures. Students who do not assume this responsibility are jeopardizing their records because they will incur a failing grade in a course not properly dropped and will not receive credit for work done in a course not properly added.

To withdraw from any or all courses, students must submit to the registrar's office a schedule adjustment form that has been signed by the advisor. If forms are turned in no later than the beginning of classes, the course will be deleted from student records, except for complete withdrawals, which result in the grade of W (Withdrawal) on student records. If withdrawals are turned in by the end of the first half of the semester or summer session, the grade of W is automatically given and recorded on the official transcript. Thereafter, but prior to the end of the third quarter of classes, both the advisor's and the instructor's signatures are required for withdrawal, and the instructor designates the grade of W or F.

Upon notification from the IUPUI registrar's office that a student has accumulated eight (8) or more W's, the School of Informatics will send a letter of concern to the student, requesting an explanation. This notification will likewise remind students that their record of withdrawals from courses may jeopardize financial aid. Students with 10 W's may be regarded as not making the "reasonable academic progress" required to maintain eligibility for financial aid, and lack of such progress constitutes grounds for denying further financial aid.

Academic Standing

A student is in good academic standing for an Indiana University bachelor's degree when his or her semester grade point average is a minimum of 2.0 (C) for the last semester's course work, and when his or her cumulative grade point average is at least 2.0 (C). Students must be in good academic standing to graduate.

Class Standing

Class standing is based on the number of credit hours completed:

Freshman, fewer than 26 credits

Sophomore, 26 to 55 credits

Junior, 56 to 85 credits

Senior, 86 or more credits

Semester Load

A typical full-time academic load is 12 to 17 credit hours per semester, with the average load being approximately 15 credit hours. Students who expect to carry more than 17 credit hours a semester should have a cumulative grade point average of at least

3.0 (B) and have the approval from an academic advisor or dean.

Academic Probation

Students will be placed on academic probation if their cumulative or semester grade point average (semester grade index) is below 2.0. After one semester on probation, students who fail to return to good academic standing will be placed on critical probation. At the discretion of the dean, these students can be dismissed. If a student is given the opportunity to enroll under critical probation, the School of Informatics will establish strict conditions that must be met before that student will be allowed to register for future classes.

Dismissal

Students can be dismissed if they fail to return to good academic standing after one semester on critical probation. Students may also be dismissed if, in the opinion of the dean, they are not making satisfactory progress toward their degree.

Students eligible for dismissal will be notified in writing that they have been dismissed and will be withdrawn from classes for which they have registered.

Readmission

Dismissed students must petition the dean of the School of Informatics for readmission. A Petition for Readmission form must be filed by July 15 for fall, November 15 for spring, and April 15 for summer readmission. A student who has been dismissed for the second time is eligible to return to school only after being out of school for one regular semester and having petitioned successfully. A third dismissal is final. Dismissed students whose petitions are denied will not be allowed to register.

Academic Misconduct

Cheating

Cheating is dishonesty of any kind with respect to course assignments, alteration of records, or examinations. It is the student's responsibility not only to abstain from cheating, but also to avoid the appearance of cheating and to guard against making it possible for others to cheat. Any student who helps another student cheat is as guilty of cheating as the student who cheated. The student also should do everything possible to induce respect for the examining process and for honesty in the performance of assigned tasks in or out of class.

Plagiarism

Plagiarism is assuming credit for someone else's work, words, or ideas—whether or not the ideas are expressed in the borrower's own words. Honesty requires that any ideas or materials taken from another source for either written or oral use must be fully acknowledged. Plagiarism includes language or ideas taken from isolated formulas, sentences, or paragraphs; entire articles copied from books, periodicals, speeches; the writings or created works of other students; and materials assembled or collected by others in projects or collections without acknowledgement.

A faculty member who has evidence that a student is guilty of cheating or plagiarism will initiate the

process of determining the student's guilt or innocence. No penalty will be imposed until the student has been informed of the charge and of the evidence on which it is based and has been given an opportunity to present a defense. If the faculty member finds the student guilty, the faculty member assesses a penalty within the course and promptly reports the case in writing to the dean of the school or comparable head of the academic unit. The report should include the names of any other students who may be involved in the incident and recommendations for further action. The dean, in consultation with the faculty member if the latter so desires, will initiate any further disciplinary proceedings and inform the faculty member of any action taken. In every case, a record of the offense remains on file.

For further regulations, please refer to the *IU Code of Student Rights, Responsibilities, and Conduct*.

Student Grievance Procedures

All academic personnel (faculty, part-time instructors, and advisors) are expected to conform to the Code of Academic Ethics published in the *Indiana University Academic Handbook*. Students who feel that a faculty member has treated them unfairly may lodge a complaint by following these steps: (1) Discuss the matter with the faculty member or instructor. (2) If step 1 fails to resolve the situation, discuss the matter with the chairperson of the department or the coordinator of the program in which the faculty member is employed. The departmental chairperson will discuss it with the faculty member and seek some resolution. (3) If step 2 fails, the student may discuss the matter or file a written, signed complaint with the dean. Anonymous complaints will not be entertained. A copy of any written complaint will be forwarded to the faculty member, who may respond in writing. (4) When warranted, the dean may refer a written complaint and the faculty member's response to the Faculty Affairs Committee for further investigation and review. (5) The Faculty Affairs Committee will evaluate the complaint on the basis of university policy and may recommend to the dean that the instructor be sanctioned. If the committee finds the complaint to be unfounded, a letter to that effect may be placed in the student's file.

Informatics Degree Programs

Prior to each semester's enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation. Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

Bachelor of Science in Informatics

Degree Requirements

Students must successfully complete a minimum of 122 credit hours for the Bachelor of Science degree. The campus at which a student is admitted will award the degree. Students may transfer no more than 60 credit hours toward a Bachelor of Science degree. Students must complete the specific degree requirements of the School of Informatics as listed below.

1. Students must complete a minimum of 30 credit hours in courses at the 300-400 (junior-senior) level.
2. Students must have a minimum cumulative grade point average of 2.0 (C). Any course taken to satisfy the requirements of the major must be completed with a minimum grade of C-.
3. Students are expected to complete the requirements for their undergraduate degree within eight years of admission to the School of Informatics. Students are allowed to continue beyond this time period only at the discretion of the dean. If a student has not taken classes for three years or more, that student must satisfy program requirements of the School of Informatics in effect at the time of reactivation. Requests for deviation from requirements listed in the bulletin must be approved in writing by the dean, whose decision is final.
4. Courses that fulfill the requirements for a cognate area may also meet the general education distribution requirements.
5. Cognate area courses cannot count as informatics core courses or informatics elective courses.
6. If cognate area courses are equivalent to informatics core courses, students should substitute additional informatics elective courses in place of informatics core courses to meet the 30 credit hour requirement.
7. Courses that fulfill the requirements for a bachelor's degree in informatics also may apply to a minor outside of the School of Informatics.
8. Students must file a degree application with the School of Informatics office by March 1 for December graduation and October 1 for May, June, or August graduation. Failure to file by the deadline may delay the official date of graduation.

Course Requirements

The course work required for the B.S. in Informatics consists of five parts:

- Informatics Core Courses
- Informatics Electives
- Cognate Area Courses
- General-Education Requirements
- General Electives

Informatics Core Courses (30 cr.)

INFO I101 Introduction to Informatics (3 cr.)
 INFO I200 Information Representation (3 cr.)
 INFO I201 Mathematical Foundations of Informatics (4 cr.)
 INFO I202 Social Informatics (3 cr.)
 INFO I210 Information Infrastructure I (4 cr.)
 INFO I211 Information Infrastructure II (4 cr.)
 INFO I303 Organizational Informatics (3 cr.)

Capstone Project (6 cr.) INFO I450/I451 Design and Development of an Information System (3-3 cr.) (senior standing), two semesters **or** INFO I460/I461 Thesis (3-3 cr.) (senior standing), two semesters.

With prior approval from the dean, a student may substitute INFO I450/I451 and INFO I460/I461 with an equivalent capstone experience in another department, or complete 6 credit hours of INFO I420, Internship in Informatics Professional Practice, to fulfill the capstone experience. Internships require students to be at a junior or senior standing. A project or report must be submitted after the internship is completed.

Recommended Courses The following course is recommended for students who lack a strong computing background. This course is considered a general elective course.

INFO I112 Basic Tools of Informatics—Programming and Database Concepts (3 cr.)

Informatics Electives (9 cr.)

Select 9 credit hours from the following courses:
 BUS S302 Management Information Systems (3 cr.)
 BUS S305 Business Telecommunications (3 cr.)
 BUS S307 Data Management (3 cr.)
 BUS S310 Systems Analysis and Design (3 cr.)
 BUS S405 Alternative Development Methods and Systems (3 cr.)
 BUS S410 Systems Implementation (3 cr.)
 INFO I300 Human Computer Interaction (3 cr.)
 INFO I310 Multimedia Arts and Technology (3 cr.)
 INFO I320 Distributed Systems and Collaborative Computing (3 cr.)
 INFO I400 Topics in Informatics (3 cr.)
 JOUR J300 Journalism/Communications Law (3 cr.)
 JOUR J414 Globalization of Information (also International Newsgathering Systems) (3 cr.)
 SOC S319 Science, Technology, and Society (3 cr.)
 TEL T321 Telecommunications Policymaking (3 cr.)
 TEL T421 Economics of Communications (3 cr.)
 TEL T427 International Telecommunications (3 cr.)

Any course at the 300 level or above in computer technology, computer and information science, or new media may count as an elective.

Note: All of the above courses are subject to the successful completion of prerequisites or approval of the instructor. This list is expanding. Students should consult the School of Informatics office or refer to our Web site at informatics.indiana.edu or informatics.iupui.edu for the most current list of informatics electives. Students also may count other courses with informatics content as informatics electives upon approval of the dean.

Cognate Area Courses (15-18 cr.)

Departments offering informatics cognate courses are listed in the appendix. Students should, in consultation with their academic advisors, chose cognate areas before their sophomore year. Students should contact the School of Informatics office or refer to our Web site at [www.informatics.iupui.edu](http://informatics.iupui.edu) for the most current list of cognate areas.

General-Education Requirements (38-41 cr.)

English Composition (3 cr.)

This writing requirement may be fulfilled in any one of the following ways:

ENG W131 Elementary Composition I (3 cr.) with a grade of C (2.0) or better.

Writing (3 cr.)

ENG W231 Professional Writing Skills, an approved substitute (3 cr.), or completion of one intensive writing course at the 200 level or above after completing the English requirement.

Students must check the listings for courses in the *Schedule of Classes* each semester to make certain the course section they have chosen fulfills the requirement.

Oral Communication (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

Quantitative and Analytical Skills (6 cr.)

IUPUI:

1. Select one of the following: MATH M118 Finite Mathematics, M119 Brief Survey of Calculus I, M163 Integrated Calculus and Analytic Geometry I, or M164 Integrated Calculus.
2. Required: STAT 311 Introductory Probability (3 cr.) or MATH M368 Statistics for Informatics (3 cr.)

Natural Sciences (8 cr.)

Select a minimum of 8 credit hours from the courses listed below. At least one of the courses must be a laboratory course.

Anthropology ANTH A103 Human Origins and Prehistory (3 cr.)

Astronomy AST A100 The Solar System (3 cr.), A105 Stellar Astronomy (3 cr.)

Biology BIOL K101 Concepts of Biology I-Plants (5 cr.), K103 Concepts of Biology II-Animals (5 cr.), N100 Contemporary Biology (3 cr.), N107 Introduction to Zoology (4 cr.), N200 The Biology of Women (3 cr.), N212 Human Biology (2 cr.), N213 Human Biology Laboratory (1 cr.), N214 Human Biology (2 cr.), N215 Human Biology Laboratory (1 cr.), N217 Human Physiology (5 cr.), N251 Introduction to Microbiology (3 cr.), N322 Introductory Principles of Genetics (3 cr.)

Chemistry CHEM C100 The World of Chemistry (3 cr.), C101 Elementary Chemistry I (5 cr.), C102 Elementary Chemistry II (5 cr.), C105 Principles of Chemistry I (3 cr.), C106 Principles of Chemistry I (3 cr.)

Geography GEOG G107 Physical Systems of the Environment (3 cr.), G108 Physical Systems of the Environment: Laboratory (2 cr.), G185 Global Environmental Change (3 cr.), G303 Weather and Climate (3 cr.), G307 Biogeography: the Distribution of Life (3 cr.)

Geology GEOL G107 Environmental Geology (3 cr.), G117 Environmental Geology Laboratory (1 cr.), G109 Fundamentals of Earth History (3 cr.), G119 Fundamentals of Earth History Laboratory (1 cr.), G110 Physical Geology (3 cr.), G120 Physical Geology Laboratory (1 cr.), G206 Advanced

Physical Geology Laboratory (2 cr.), G115 Introduction to Oceanography (3 cr.), G132 Environmental Problems (3 cr.), G180 Dinosaurs (3 cr.)

Physics PHYS 100 Physics in the Modern World (5 cr.), P152 Mechanics (4 cr.), P200 Our Physical Environment (3 cr.), P218 General Physics (4 cr.), P219 General Physics (4 cr.), P251 Heat, Electricity, and Optics (5 cr.), P201 General Physics I (5 cr.), P202 General Physics II (5 cr.)

Psychology PSY B105 Psychology as a Biological Science (3 cr.)

Arts, Humanities, and Social Sciences (15 cr.)

Informatics students must have basic training in the arts, humanities, and social sciences, which will assist them in their lives and give them a broader perspective from which to approach the applications of information technology. The requirements for each campus are as follows:

Select one arts and humanities course (3 cr.) from the following:

AFRO A150 Afro-American Studies (3 cr.)
AMST A103 Topics in American Studies (3 cr.)
CLAS C205 Classical Mythology (3 cr.)
CMLT C190 Introduction to Film (3 cr.)
COMM T130 Introduction to Theatre (3 cr.)
ENG L105 Appreciation of Literature (3 cr.)
ENG L115 Literature for Today (3 cr.)
FLAC F200 World Cultures through Literature (3 cr.)
FOLK F101 Folklore (3 cr.)
HER H100 Art Appreciation (3 cr.)
HER H101 History of Art I (3 cr.)
HER H102 History of Art II (3 cr.)
HIST H105 American History I (3 cr.)
HIST H106 American History II (3 cr.)
HIST H108 Perspectives on the World to 1800 (3 cr.)
HIST H113 History of Western Civilization I (3 cr.)
HIST H217 The Nature of History (3 cr.)
PHIL P110 Introduction to Philosophy (3 cr.)
PHIL P120 Ethics (3 cr.)
REL R133 Introduction to Religion (3 cr.)
REL R173 American Religion (3 cr.)
REL R180 Introduction to Christianity (3 cr.)
REL R212 Comparative Religions (3 cr.)
MUS M174 Music for the Listener (3 cr.)
WOST W105 Women's Studies (3 cr.)

Select one social science course (3 cr.) from the following:

AFRO A150 Afro-American Studies (3 cr.)
ANTH A104 Culture and Society (3 cr.)
COMM C180 Interpersonal Communication (3 cr.)
ECON E101 Economics (3 cr.), ECON E201, or ECON E202
ENG G104 Language Awareness (3 cr.)
FOLK F101 Introduction to Folklore (3 cr.)
GEOG G110 Introduction to Human Geography (3 cr.)
GEOG G130 World Geography (3 cr.)
HIST H117 Introduction to Historical Analysis (3 cr.)
POLS Y101 Principles of Political Science (3 cr.)
POLS Y103 Introduction to American Politics (3 cr.)
POLS Y213 Introduction to Public Policy (3 cr.) or
SPEA V170 Introduction to Public Affairs (3 cr.)
POLS Y219 International Relations (3 cr.)
PSY B104 Psychology (3 cr.)

PSY B310 Life Span Development (3 cr.)
SOC R100 Sociology (3 cr.)
SOC R121 Social Problems (3 cr.)
WOST W105 Introduction to Women's Studies (3 cr.)

Select one comparative world cultures course (3 cr.) from the following:

ANTH A104 Culture and Society (3 cr.)
CLAS C205 Classical Mythology (3 cr.)
FLAC F200 World Cultures through Literature (3 cr.)
GEOG G110 Introduction to Human Geography (3 cr.)
HIST H108 Perspectives on the World to 1800 (3 cr.)
POLS Y217 Introduction to Comparative Politics (3 cr.)
REL R133 Introduction to Religion (3 cr.)
REL R212 Comparative Religions (3 cr.)

Select one ethics course (3 cr.) from the following:

REL R283 Religion, Ethics and Values (3 cr.)
REL R293 Ethics and World Religions (3 cr.)
REL R393 Comparative Religious Ethics (3 cr.)
PHIL P120 Ethics (3 cr.)
PHIL P325 Social Philosophy (3 cr.)
PHIL P326 Ethical Theory (3 cr.)
PHIL P393 Biomedical Ethics (3 cr.)
PHIL P494 Topics in Biomedical Ethics (3 cr.)

In addition, students must take a junior/senior integrator course (3 cr.). (See academic advisor.)
HIST H114 History of Western Civilization II (3 cr.)

General Electives (24-30 cr.)

The individual student, in consultation with an advisor, will decide courses for the remaining credits to fulfill additional career and/or personal interests. Students may take a maximum of 4 credit hours of HPER elective physical education courses numbered Exxx.

Dual Baccalaureate Degrees

In certain circumstances students may be permitted to pursue a B.S. in Informatics and complete an undergraduate degree in another degree-granting school of the university. Check with your academic advisor for more details.

Second Baccalaureate Degree

In certain cases the dean may admit bachelor's degree holders to candidacy for a second bachelor's degree. When such admission is granted, the candidates must earn at least 60 additional credit hours and meet the requirements of the School of Informatics. Students seeking second-degree candidacy should review the guidelines available from the informatics office. Students with a bachelor's degree who wish to further their education should also consider becoming qualified for admission to a graduate program.

Certificate and Minor in Informatics

The undergraduate minor or certificate allows a student majoring in another subject to get appropriate training in informatics and obtain certification as

someone who knows how to apply informatics tools to that subject area.

Certificate in Informatics

1. Minimum grade of 2.0 (C) in all courses taken for the certificate.
2. Students are required to complete 26 credit hours from the following list:
INFO I101 Introduction to Informatics (3 cr.)
INFO I200 Information Representation (3 cr.)
INFO I202 Social Informatics (3 cr.)
INFO I210 Information Infrastructure I (4 cr.), cross-listed with CSCI A201 Introduction to Programming I (IUB), and CSCI N331 Visual Basic Programming (IUPUI)
INFO I211 Information Infrastructure II (4 cr.), cross-listed with CSCI A202 Introduction to Programming II (IUB), and CSCI N345 Advanced Programming, Java (IUPUI)
INFO I300 Human Computer Interaction (3 cr.)
INFO I303 Organizational Informatics (3 cr.)
3. In addition students must take an additional course (3 cr.) from the informatics curriculum. These additional courses can be chosen from the listed electives for informatics and can therefore be taken in another department.

Minor in Informatics

1. Minimum grade of 2.0 (C) in all courses taken for the minor.
2. Students are required to take three courses from the following list:
INFO I101 Introduction to Informatics (3 cr.)
INFO I200 Information Representation (3 cr.)
INFO I202 Social Informatics (3 cr.)
INFO I210 Information Infrastructure I (4 cr.), cross-listed with CSCI A201 Introduction to Programming I (IUB) and CSCI N331 Visual Basic Programming (IUPUI)
INFO I211 Information Infrastructure II (4 cr.), cross-listed with CSCI A202 Introduction to Programming II (IUB) and CSCI N345 Advanced Programming, Java (IUPUI)
3. Students are required to take two courses from the following list of upper-level courses:
INFO I300 Human Computer Interaction (3 cr.)
INFO I303 Organizational Informatics (3 cr.)
4. Students must select one course from the list of approved informatics elective courses.

Minor in Business

Students pursuing a bachelor's degree in the School of Informatics may obtain a minor in business by successfully fulfilling the following requirements:

BUS A100 Basic Accounting Skills (1 cr.)
BUS A201 Introduction to Financial Accounting (3 cr.)
BUS A202 Introduction to Managerial Accounting (3 cr.)
ECON E201 Introduction to Microeconomics (3 cr.)
ECON E202 Introduction to Macroeconomics (3 cr.)
ECON E270 Introduction to Statistical Theory in Economics (3 cr.)
MATH M118 Finite Mathematics (3 cr.)
MATH M119 Brief Survey of Calculus I (3 cr.)

In addition, BUS K201 The Computer in Business, or its equivalent, must be completed with a minimum

grade of C prior to starting the integrative core. Students are required to take the integrative core, which is 9 credit hours taken together as a single educational unit (BUS F301 Financial Management, M301 Introduction to Marketing Management, and P301 Operations Management).

In addition to the 12 required courses listed above, BUS X204 Business Communications, BUS L302 Commercial Law I, and BUS Z302 Managing and Behavior in Organizations are recommended.

New Media Degree Programs, IUPUI

The New Media Program at IUPUI offers an Associate of Science in Media Arts and Technology, a Bachelor of Science in Media Arts and Science, and a Certificate in Internet Application Development; all provide an integrated approach to the study of new media. Focused on applied research and application, these degrees are oriented toward professional practice. Together, they encompass the design, development, management, integration, application, assessment, and deployment of new and digital media to communication.

The programs and requirements described apply in the New Media Program at IUPUI.

Associate of Science in Media Arts and Technology

Course Requirements

The course work required for the A.S. in Media Arts and Technology consists of three parts:

New Media Core Courses
General-Education Requirements
General Electives

Required New Media Core Courses (18 cr.)

CPT 115 Computer Information Systems Fundamentals (3 cr.)
CPT 140 Programming Constructs Lab (3 cr.)
CSCI N241 Introduction to Web Design (3 cr.)
ENG W131 English Composition I (3 cr.)
NEWM N100 Introduction to Digital Media Principles (3 cr.)
NEWM N101 Topics in Interactive Multimedia (3 cr.)

General-Education Requirements (6 cr.)

Communication Skills

COMM R110 Fundamentals of Speech (3 cr.)
ENG W132 English Composition II (3 cr.) **or** JOUR J200 Reporting, Writing, and Editing I (3 cr.)

Foreign Language (6 cr.)

Students must complete 6 credit hours in a foreign language. Chinese or Japanese is recommended.

Quantitative and Analytical Skills (6 cr.)

Select from the following:

MATH M111 Algebra (4 cr.) or higher-level course (excluding MATH 130, MATH 131, MATH 132)
MATH M153 Algebra and Trigonometry I (3 cr.)
PHIL P162 Practical Logic (3 cr.)
PHIL P265 Elementary Symbolic Logic (3 cr.)

Arts and Humanities (6 cr.)

Select from the following:

CMLT C190 Introduction to Film (3 cr.)
COMM T130 Theatre Appreciation (3 cr.)
HER H100 Art Appreciation (3 cr.)
MUS M174 Music for the Listener (3 cr.)
PHIL P120 Personal and Social Ethics (3 cr.)

Sciences (6 cr.)

Choose 6 credit hours from the courses offered in the following departments: astronomy, biology, chemistry, computer science, geography, physics, and/or psychology (PSY B105 Psychology only).

General Electives (12 cr.)

Select courses from the following schools or departments: art, computer science, computer technology, journalism, library and information science, music, and/or new media.

Bachelor of Science in Media Arts and Science

All students must meet the requirements as established by the faculty of the New Media Program and applied to all IUPUI New Media students. The New Media Program, Office of Student Affairs, Mary Cable Building 117, can answer questions about general-education courses and distribution requirements.

Degree Requirements

1. All IUPUI students must fulfill the following undergraduate requirements:
6 credit hours of Communication Skills (written and oral)
10 credit hours of Foreign Language
6 credit hours of Quantitative and Analytical Skills
6 credit hours of Arts and Humanities
6 credit hours of Social Sciences
2. A minimum of 122 credit hours is required for a New Media degree.
3. A minimum cumulative grade point average of 2.0 (C) is required for graduation.
4. A minimum of 36 credit hours must be at the 300-400 level. Courses taken at other institutions at the freshman and sophomore levels, regardless of title or description, will not be accepted in satisfaction of this requirement.
5. At least 12 credit hours of 300-400 level courses must be taken outside the major program as electives.
6. A maximum of 12 credit hours may be taken using the Pass/Fail option and applied to university electives only.
7. A minimum of 24 credit hours must be taken in the concentration/specialization area. For requirements in the concentration/ specialization area, refer to the plan of study, available from your advisor.

8. Any course in which a student receives a grade below C (2.0) may not be used to fulfill any requirement (a C- will not count).
9. A minimum of 26 credit hours of the work of the senior year must be completed at IUPUI except in the case of students transferring within the campuses of Indiana University. (See academic advisor for specific residency requirements.)
10. Credit to the degree will not be accepted for remedial courses.
11. Once a course has been applied toward one requirement, it cannot be used to satisfy a second requirement, except where explicitly stated otherwise. No course will be counted more than once toward graduation with the exception of variable titled courses, seminars, independent study, internships, and other special courses.

Course Requirements

The course work required for the B.S. in Media Arts and Science consists of six parts:

Required New Media Core Courses
Web-Based Computer Programming
Concentration/Specialization Courses
New Media Electives
General-Education Requirements
University Electives

The New Media Program recommends that students complete English W131 or Honors W140 during the first semester or as soon afterward as placement test scores and course availability allow. Students whose placement test scores indicate a need to take English W001 should enroll in that course their first semester. Students must earn a minimum grade of C in English W001 to advance to English W131. It also is recommended that English W132, W150, or JOUR J200 be taken the semester following successful completion of English W131.

Speech Communication R110 (3 cr.) Students with previously acquired competency in public speaking may be eligible for special credit and exemption from the requirement; contact the chairperson of the Department of Communication Studies, Cavanaugh Hall 309, or call (317) 274-0566.

Foreign Language Requirement Placement Test Students with previous experience in a foreign language should take the Foreign Language Placement Test at the Testing Center to assess their level of language preparation. Students who complete the course into which they were placed with a minimum grade of C are eligible for special credit at a reduced fee for the appropriate lower-division course(s) that precede the course taken. Foreign language special credit counts toward graduation and toward the foreign language requirement.

Courses numbered 117 are reserved for students who have never studied the language before. Students who have had two or more years of formal study in a language may take a 117-level course in that language as a refresher course before enrolling in a more advanced course. Their work will be graded on a Satisfactory/Fail (S/F) basis. A grade of S is equivalent to a minimum grade of C.

Nonnative Speakers Students for whom English is not a first language may be exempted from the foreign language requirement, without credit, by completion of English W131 and W132 with a minimum grade of C or better.

Native speakers of English who have achieved elementary or intermediate proficiency in a foreign language by studying or living in a country where the language is spoken should confer with the foreign languages and cultures department for placement in the correct level of that foreign language.

Advanced Courses In addition to advanced courses in one's major, the new media student should conduct in-depth study in other areas. Courses at the 300 level or above must be completed in five areas: Required Core (6 cr.), Web-Based Programming (9 cr.), Concentration or Specialization (12 cr.), New Media Electives (12 cr.), and University Electives (12 cr.).

Required New Media Core Courses (18 cr.)

CSCI N241 Introduction to Web Design (3 cr.)
CSCI N301 Fundamental Computer Science Concepts (3 cr.)
ENG W131 English Composition I (3 cr.)
NEWM N100 Introduction to Digital Media Principles (3 cr.)
NEWM N101 Topics in Interactive Multimedia (3 cr.)
NEWM N499 Capstone: Portfolio or Project (3 cr.)

Web-Based Computer Programming (9 cr.)

Select from the following:

CSCI N305 C Language Programming (3 cr.)
CSCI N331 Visual Basic Programming (3 cr.)
CSCI N341 Web Programming (3 cr.)
CSCI N345 Advanced Programming, Java (3 cr.)
CSCI N351 Introduction to Multimedia Programming (3 cr.)
CSCI N355 VRML (3 cr.)

Concentration/Specialization Courses (24 cr.)

Select from one of the following areas (of which 12 credits must be at the 300 level or above):

Area 1 Computer science, computer technology, library information and science, and/or new media

Area 2 Art, journalism, music, and/or new media

New Media Electives (12 cr.)

Students must complete 12 credit hours of media arts and science electives at the 300 level or above.

General-Education Requirements

Communication Skills

COMM R110 Fundamentals of Speech Communication (3 cr.)
ENG W132 English Composition II (3 cr.) **or** JOUR J200 Reporting, Writing, and Editing I (3 cr.)

Foreign Language (10 cr.)

Students must complete 10 credit hours in a foreign language. Asian languages are recommended.

Quantitative and Analytical Skills (6 cr.)

Select from the following:

MATH M111 Algebra (4 cr.) or higher level course (excluding MATH 130, MATH 131, MATH 132)
MATH M153 Algebra and Trigonometry I (3 cr.)
PHIL P162 Logic (3 cr.)
PHIL P265 Introduction to Symbolic Logic (3 cr.)

Arts and Humanities (6 cr.)

Select from the following:

CMLT C190 Introduction to Film (3 cr.)
COMM T130 Introduction to Theatre (3 cr.)
FOLK F101 Introduction to Folklore (3 cr.)
HER H100 Art Appreciation (3 cr.)
MUS M174 Music for the Listener (3 cr.)
PHIL P120 Personal and Social Ethics (3 cr.)
REL R133 Introduction to Religion (3 cr.)
WOST W105 Introduction to Women's Studies (3 cr.)

Social Sciences (6 cr.)

Select from the following:

AFRO A150 Afro-American Studies (3 cr.)
AMST A103 American Studies (3 cr.)
ANTH A104 Anthropology (3 cr.)
ECON E101 Economics (3 cr.), E201 Introduction to Microeconomics (3 cr.), or E202 Introduction to Macroeconomics (3 cr.)
GEOG G110 Geography (3 cr.)
LING G104 Linguistics (3 cr.)
POLS Y101 Principles of Political Science (3 cr.) or POLS Y103 Introduction to American Politics (3 cr.)
PSY B104 Psychology (3 cr.)
SOC R100 Sociology (3 cr.)

University Electives (25 cr.) of which 12 hours must be completed at the 300 level or above:

Suggested electives:

COMM C228 Discussion and Group Methods (3 cr.)
COMM M373 Film and Video Documentary (3 cr.)
COMM C380 Organizational Communication (3 cr.)
HER E101 Beginning Drawing (3 cr.)
HER E105 Beginning Painting (3 cr.)
HER E201 Basic Photography (3 cr.)
JOUR J210 Visual Communication (3 cr.)
JOUR J300 Communication Law (3 cr.)
PSY B366 Concepts and Applications in Organizational Psychology (3 cr.)
STAT B305 Statistics (3 cr.)

or

Any course from the following schools or departments: art, computer science, computer technology, journalism, library and information science, music, and/or new media.

Certificate in Internet Application Development

1. Minimum grade of 2.0 (C) in all courses taken for the certificate.
2. Students are required to complete 27 credit hours from the following list:

Design Courses

HER A371 Introduction to Interactive Design (3 cr.)
HER R201 Visual Research Web Basics (3 cr.)

Writing Courses

JOUR J100 Computer Methods for Journalists (3 cr.)
JOUR J200 Reporting, Writing, and Editing I (P: ENG W131) (3 cr.)

Audio Courses

MUS Z320 Foundations of Music Production (3 cr.)
MUS Z320 Multimedia Design Applications (3 cr.)

Programming Course

CSCI 241 Introduction to Web Design (3 cr.)

Application Development Courses

CPT 323 Multimedia Systems (3 cr.) **or**
CPT 423 Electronic Commerce (3 cr.)

Elective (3 cr.)

Students complete 3 credit hours in an internship, independent guided study application project, or an approved elective course from one of the following academic departments or schools: art, computer science, computer technology, journalism, library and information science, music, and/or new media.

Graduate Program

Given the rapid and apparently unlimited growth of this new field at all levels of competence, each master's degree program serves students who need education in the use of information technologies to enhance their job performance or employment prospects.

The School of Informatics offers five master's degrees:

Master of Science in Bioinformatics
Master of Science in Chemical Informatics
Master of Science in Health Informatics
Master of Science in Human Computer Interaction
Master of Science in Media Arts and Science (see the "Media Arts and Science" section in this bulletin for policies, regulations, and requirements).

Bioinformatics, Chemical Informatics, Health Informatics, and Human Computer Interaction require 36 credits, including the completion of two common graduate core courses. Media Arts and Science requires 30 credits, including the completion of 18 credit hours of core courses.

Application Procedures

Students holding a bachelor's degree from an accredited four-year collegiate institution are eligible to apply for admission. Admission is selective. The Admission Committee evaluates applicants' abilities to succeed academically and their potential to contribute to the program. The master's degree is designed for students who seek additional professional education in informatics to complement knowledge in such diverse disciplines as computer science and technology, graphics, visualization, electronic networking and media communication, library and information science, telecommunications, psychology, cognitive science, journalism, medicine, health and nursing, biology, and chemistry. Most graduates of the School of Informatics will emerge as highly sought-after employees in a burgeoning information industry.

The master's degrees are focused on developing specialized skills and knowledge in information and

information technology, with particular application to a specific field of study or practice. Each degree is an interdisciplinary endeavor that combines course work and field experiences from a traditional subject area or discipline with intensive study of information and technology. Because these specialized skills are developed and applied differently in these different fields, specific requirements are established for each degree and have a content-specific rationale.

Application Procedures for U.S. Citizens

Requests for domestic applications should be directed to the School of Informatics.

Completed applications should be sent to
Graduate Admissions Committee
School of Informatics

IUPUI
Mary Cable Building, Room 115
525 N. Blackford Street
Indianapolis, IN 46202-3120
E-mail: info@informatics.iupui.edu
www.informatics.iupui.edu

Application Procedures for International Students

Requests for information and completed applications should be sent to

Office of International Affairs
IUPUI
Union Building, Room 207
620 Union Drive
Indianapolis, IN 46202-5167
Phone: (317) 274-7294
E-mail: oia@iupui.edu
www.iupui.edu/~oia/admissions

Application Deadlines

Applications will not be acted upon until all required documents have been received, including transcripts, letters of recommendation, application fee, GRE scores, and TOEFL scores for all nonnative English speakers. Admission to the School of Informatics, excluding the New Media Program is decided on a rolling basis. In order to allow time for processing and making financial aid decisions, applicants must meet the following deadlines for matriculation in fall:

Informatics	January 15
New Media	
<i>Fall</i>	March 15
<i>Spring</i>	November 15

Financial aid decisions will be made at the same time that admission decisions are made. Students must submit all application materials by the deadline to be considered for financial support.

Admission to the Master's Programs

Successful applicants for admission to the master's programs must demonstrate skills and knowledge in an academic field relevant to the particular master's program (e.g., biology for bioinformatics). Promising applicants who have deficiencies may, with faculty help, select courses that will provide instruction to overcome deficiencies and meet admission

requirements. However, the courses will not count toward the total number of credits required for the advanced degree.

- Degree requirement: bachelor's degree with demonstrated technical skills from an accredited college or university.
- Minimum overall GPA of 3.0, on a 4.0 point scale.
- Three letters of recommendation from individuals in positions to evaluate the applicant's professional promise. Indiana University reserves the right to validate the source of the letters received.
- Scores from the general Graduate Record Examination (GRE), taken within the last five years. Subject tests are recommended if appropriate to the degree.
- Personal statement or sample of creative work.

Each application for admission is carefully evaluated by the admissions committee for the appropriate degree. Applicants to all degree programs must do the following:

1. Submit applications to the School of Informatics, or, if necessary, to the Office of International Affairs.
2. Pay a nonrefundable graduate application fee to Indiana University.
3. Submit three Application Reference Forms completed by individuals familiar with the applicant's activities and potential to succeed in graduate work. These forms are included in the application packet.
4. Arrange for official transcripts to be sent from all colleges and universities attended by the applicant. Transcripts indicating "issued to student" are not considered official. An official transcript bears the original signature of the registrar and/or original seal of the issuing institution. Transcripts should be mailed directly by a registrar, or given to the applicant by the registrar in a sealed and signed envelope. International applicants should refer to the guidelines outlined in the International Graduate Application for Admission form. If the student has not completed all undergraduate course work at the time of application, the admission decision will be based on information available at the time of application. However, a final transcript showing graduation must be submitted before enrollment. Students who have taken course work on any Indiana University campus do not need to submit an Indiana University transcript.
5. Submit scores from the Graduate Record Examination (GRE). Only the General Exam is required; however, an appropriate subject exam (e.g., chemistry for chemical informatics) may be helpful in determining the applicant's potential.
6. The school does not specify minimum scores, preferring instead to use the full information available in the applicant's dossier. The Media Arts and Science Program does not require GRE scores. Information concerning these examinations may be obtained from Graduate Record Examinations, Educational Testing Service, CN 6000, Princeton, NJ 08541-6000; www.gre.org.
7. If your native language is not English, you must submit results of the Test of English as a Foreign

Language (TOEFL). The TOEFL is required of all nonnative English speakers. A minimum TOEFL score of 600 is required. The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States. Registration information can be requested from TOEFL/TSE Publications, P.O. Box 6154, Princeton, NJ 08541-6154; www.toefl.org.

8. Submit a personal statement (300-500 words) describing the your educational background and reasons for pursuing graduate study. In addition, some programs may require a sample of creative work or professional accomplishment, which may include written work, a computer program, multimedia presentation, portfolio, etc. Submitted materials should support the applicant's career intentions and plans. Contact the Office of Informatics for further information.

Financial Assistance

Graduate Assistantships

Students may compete for a limited number of graduate assistantship appointments. Assistantships are awarded solely on the basis of merit. These appointments constitute the most common type of financial assistance offered through the School of Informatics. Graduate assistantships include a stipend and a fee scholarship. Students will be assigned to work in areas supporting the mission of the School of Informatics. Students applying for admission to the program should complete the financial aid form if they wish to be considered for a graduate assistantship.

Fellowships and Scholarships

Although the majority of financial aid is in the form of assistantships, a limited number of fellowships and scholarships are also available. Those receiving fellowships and scholarships are not required to perform any duties in return for the stipend. These awards are also made solely on a merit basis. Students applying for admission to the program are considered for fellowships and scholarships; there is no additional application to complete. Awards are normally granted for an academic year. The school is developing new sources of funding, and students are encouraged to review the Informatics Web site for up-to-date information or call the School of Informatics.

Grants

The GradGrants Center (GGC) is a free service available to all enrolled graduate students on all campuses of Indiana University. The GGC provides information and training to assist graduate students in their search for funding to further graduate study at Indiana University. The Indianapolis campus has a center to provide these services for IUPUI graduate students located in the Union Building, Room 518; (317) 274-4023.

Loans

Domestic students who need financial assistance not provided by any of the awards already mentioned are eligible to apply for need-based financial aid. For graduate students, most need-based aid is in the form of student loans. For further information, contact the Office of Student Financial Aid, IUPUI, Cavanaugh Hall 103, 425 University Blvd., Indianapolis, IN 46202; (317) 274-4162.

Academic Regulations

Applicability of Degree Requirements

Students may choose to complete either the specific degree requirements published in the appropriate bulletin at the time of entry into the university or those in the bulletin current at the time of graduation.

Residency Requirements

The campus at which a student is admitted will certify and award the degree.

Intercampus Transfer

Students enrolled in the School of Informatics at any campus of Indiana University may transfer to the School of Informatics on another campus, provided they are in good standing.

Transfer of Credit

A maximum of 8 credit hours of graduate course work with grades of B (3.0) or better may be transferred from other accredited colleges and universities and applied to the School of Informatics degree programs. The transfer must be approved by the dean, and is not an automatic occurrence. (See "Revalidation" section below).

Revalidation

Normally, a course may not be counted toward degree requirements if it has been completed more than five years prior to the awarding of the degree for master's students. The advisor may recommend to the dean that course work taken prior to the deadline be revalidated if it can be demonstrated that the knowledge contained in the course(s) remains current. Currency of knowledge may be demonstrated by: (a) passing an examination specifically on the material covered by the course; (b) passing a more advanced course in the same subject area; (c) passing a comprehensive examination in which the student demonstrates substantial knowledge of the content of the course; or (d) publishing scholarly research demonstrating knowledge of the content of the course.

Courses taken while an undergraduate and counted toward the requirements of a baccalaureate degree may not also be counted toward a graduate degree.

Grading System

The official grading system is as follows:

A = 4.0	D+ = 1.3
A- = 3.7	D = 1.0
B+ = 3.3	D- = 0.7
B = 3.0	F = Failed
B- = 2.7	I = Incomplete
C+ = 2.3	W = Withdrawn
C = 2.0	R = Deferred
C- = 1.7	NR = No grade reported

A minimum of a B (3.0) average in graduate work is required for continuance in graduate study. Courses completed with grades below C (2.0) are not counted

toward degree requirements, but such grades will be counted in calculating a student's grade point average. Note that no work may be transferred from another institution unless the grade is B (3.0) or higher.

Incomplete

Incomplete may be given only if the completed portion of a student's work is of passing quality. It is the responsibility of the student to satisfy the requirements of that course within one calendar year from the date on which the Incomplete is recorded. The student is expected to finish all necessary work in time for the instructor to assign a regular grade before the expiration of this time period. If the student is unable to do so, it is the student's responsibility to notify the instructor of the course and the graduate advisor within the year to request an extension of time. Every overdue Incomplete will be changed to a grade of F after one calendar year.

Withdrawals

Because deadlines for withdrawal from courses may vary by campus and/or school, students should check with the current campus *Schedule of Classes* to verify deadlines and procedures.

Course Waivers

Requests for waiver of specific courses or requirements on the basis of previous course work are to be submitted in writing to the dean.

Credit Earned in Nondegree Status

Not more than 9 hours of graduate credit completed as a nondegree student may be credited toward a School of Informatics graduate degree. Deficiency courses do not apply to the 9 credit hours.

Academic Standing

Students are considered to be in good standing during any semester in which their academic grade point average is at least 3.0 (B) for both their last semester's course work and for the cumulative average of all course work completed. Only courses with grades of C (2.0) or above may be counted toward degree requirements. However, grades below C are used in computing the cumulative grade point average, even if a course is repeated and a higher grade is earned.

Academic Probation

Students are placed on probation following a semester in which their graduate cumulative or semester grade point average falls below 3.0.

Students on probation are required to attain an average of at least 3.0 for all graduate course work completed by the end of the next semester of full-time enrollment or its equivalent (9 credit hours). Failure to do so is cause for dismissal.

Academic Integrity

Academic integrity requires that students take credit only for their own ideas and efforts. Misconduct, including cheating, fabrication, plagiarism, interference, or facilitating academic dishonesty, are prohibited because they undermine the bonds of trust and cooperation among members of this community

and between us and those who may depend on our knowledge and integrity. Complete details are contained in the Indiana University *Code of Student Rights, Responsibilities, and Conduct*.

Thesis

Depending on particular degree requirements, students will complete either a capstone project or a research-based thesis under the guidance of an advisor. More details are given in the appropriate section for each program.

Degree Conferral

For all students seeking a master's degree, an application for the degree must be filed with the School of Informatics at least 60 days before the date anticipated for degree conferral. All degree requirements must be completed at least 30 days prior to the date of expected degree conferral, including submission of the bound copies of the master's thesis (if required for degree).

Time Requirements

All requirements for the M.S. degrees must be met within five consecutive calendar years from the date of completion of the first credited (i.e., nondeficiency) course.

Master of Science Degrees

Master of Science in Bioinformatics (36 cr.)

Bioinformatics is a pure and applied science dealing with the collection, management, analysis, and dissemination of biological data and knowledge, especially with respect to genetics and molecular biology. A Master of Science in Bioinformatics addresses needs for education in this rapidly growing field of bioinformatics. This is an interdisciplinary program at the Bloomington and Indianapolis campuses, involving faculty from the Departments of Biology, Chemistry, Computer Science, Library and Information Science, and others.

The end of the twentieth century saw an explosion of data discovered from living organisms, especially in areas of molecular biology and genetics. The goal of bioinformatics is to deal with this flood of data, organize it as comprehensible information, and turn it into useful knowledge. For example, the flow of information from the Human Genome Project will revolutionize medical practice and biological research in this century and enable an understanding of most inherited diseases. Study of the genomic code, coupled with new understanding of its organization, regulation, and function in cells, and in development of organisms, is forming the basis for designing new treatments for many diseases and for understanding and modulating health problems associated with aging. Genome information is quickly becoming the basis for designing new drugs. It is also central to the improvement of genomes of economically important crops and animals.

Experienced bioinformaticians are limited in number, while the need for them in industry, academe, and government has grown rapidly. Full understanding and application of this new data requires a large body

of intelligent, creative, and experienced scientists with a firm understanding of both computation and biology. There is a current and projected shortage of such people and a pressing need for educational institutions to teach bioinformatics. In the mid-1990s, bioscience industries discovered the importance of bioinformatics to their goals and quickly stripped academic centers of many experts who would normally serve to educate a new generation of students. New directions following the unraveling of the genomic code also point to greatly increased information flow and an increasing scale in the application of computing methods to biosciences.

The Department of Computer and Information Science and the Department of Biology in the School of Science collaborate closely with the Department of Biochemistry and Molecular Biology and other departments in the School of Medicine. Many ongoing projects funded by federal agencies need the knowledge and technology of bioinformatics. The Department of Computer and Information Science has obtained funds from the Research Laboratories at Eli Lilly and Company for research in bioinformatics. Individual faculty members in the Department of Computer and Information Science and the Department of Biochemistry and Molecular Biology are also engaged in a research initiative in bioinformatics.

Degree Requirements

This curriculum includes a set of core and elective courses covering concepts and training in bioinformatics, biosciences and informatics, and computer sciences. A primary goal of this curriculum is to provide scientists with a strong foundation in the areas of computation/informatics and biology, though their primary focus may be in one or the other area. The integration of knowledge from biology, computing, mathematics, and related areas will receive particular emphasis. Students with different levels of background in biology, computing, and informatics sciences are encouraged to apply. Students with academic deficiencies will address these through individually planned programs of suggested course work. Students will gain experience in the applications of computing methods to biology information by completing course work and non-classroom original research projects. Informatics and biosciences faculty will supervise these projects jointly.

Prerequisites Prospective students for graduate study in bioinformatics will be expected to have introductory background in both informatics and biology. Students need approximately 6 undergraduate credit hours of course work in biology, covering areas of molecular biology, genetics, and evolution. Students need approximately 6 undergraduate credit hours of computer science or informatics course work, covering areas of programming, discrete structures, and data structures. Students not having completed these prerequisites may need to take appropriate undergraduate courses to ensure regular progress through the program.

To receive the master's degree, the applicant must be admitted as a graduate student and complete 36 credits in bioinformatics-related courses accepted for graduate credit, including 9 credit hours of core

courses, 21 credit hours of electives, and 6 credit hours of project or thesis credit.

Core Courses (9 cr.)

CSCI 548 Topics: Introduction to Bioinformatics (3 cr.)

INFO I501 Introduction to Informatics (3 cr.)

INFO I502 Information Management (3 cr.)

Electives (21 cr.)

Select from the following:

BIOL 484 Cellular Biochemistry (3 cr.)

BIOL 507 Molecular Biology (3 cr.)

BIOL 540 Topics in Biotechnology (3 cr.)

BIOL 548 Techniques in Biotechnology (3 cr.)

BIOL 641 Microbial Genetics (2 cr.)

CSCI 503 Operating Systems (3 cr.)

CSCI 504 Concepts in Computer Organization (3 cr.)

CSCI 506 Management of the Software Development Process (3 cr.)

CSCI 507 Object-Oriented Design and Programming (3 cr.)

CSCI 520 Computational Methods in Analysis (3 cr.)

CSCI 536 Computer Networks (3 cr.)

CSCI 541 Database Systems (3 cr.)

CSCI 542 Distributed Database Systems (3 cr.)

CSCI 565 Programming Languages (3 cr.)

CSCI 580 Analysis of Algorithms (3 cr.)

CSCI 590 Artificial Intelligence (3 cr.)

CSCI 590 Data Mining (3 cr.)

GRAD G865 Fundamental Molecular Biology (2-5 cr.)

MGEN Q580 Basic Human Genetics (3 cr.)

MGEN Q630 Genetics of Populations (3 cr.)

STAT 511 Statistical Methods I (3 cr.)

STAT 514 Designs of Experiments (3 cr.)

Project/Thesis (6 cr.)

Students must perform an independent research project and produce a report or thesis for public defense. The project might consist of a research paper, a designed artifact, or other appropriate deliverable format.

INFO I692 Thesis/Project in Bioinformatics (1-6 cr.)

Master of Science in Chemical Informatics (36 cr.)

The size of the information problem in chemistry is staggering. It can be judged from the fact that Chemical Abstracts Service adds over 700,000 new compounds to its database annually. Massive amounts of physical and chemical property data are generated each year for new and existing chemical substances. The avalanche of data can bury a chemical research project unless chemists find ways to cope with it. Fortunately, those trained in chemical informatics provide the tools to acquire, organize, and evaluate data, yielding new insights for further chemical research. Chemical informatics companies combine molecular simulation and data analysis techniques with high-quality graphical visualization to obtain stunning results. Chemical informatics thus helps chemists investigate new problems and organize and analyze scientific data to develop novel compounds, materials, and processes through the application of information technology.

The curriculum for a Master of Science in Chemical Informatics in the School of Informatics educates students in the following major aspects of chemical informatics:

- **Information Acquisition:** Methods used for generating and collecting data empirically (experimentation) or from theory (molecular simulation)
- **Information Management:** Storage and retrieval of information
- **Information Use:** Data analysis, correlation, and application to problems in the chemical and biochemical sciences

Degree Requirements

Prerequisites Prospective students for graduate study in chemical informatics will be expected to have training in both informatics and chemistry. If academic background is insufficient, some additional course work may be necessary to ensure progress through the program.

Students with a Bachelor's Degree in Computer Science, Informatics, or Other Information Fields

Students with a B.S. in any information-based field will need approximately 22 undergraduate credit hours of course work in chemistry to provide sufficient background for course work required to study for the M.S. in Chemical Informatics. This includes:

General Chemistry with laboratory (two semesters)
Organic Chemistry (two semesters)
Biological Chemistry or Biochemistry (one semester)
Physical Chemistry (one semester)

Students with a Bachelor's Degree in Chemistry (B.A. or B.S.)

Students with undergraduate degrees in chemistry (typically 25 or more credits in chemistry or biochemistry courses) will need some preparative work in informatics. Four or more credits in formal informatics course work, computer science courses relevant to informatics, or bioinformatics or chemical informatics course work will provide the necessary background for graduate study. Students not having completed this study may need to take appropriate undergraduate courses to ensure regular progress through the program.

Core Courses (12 cr.)

CHEM 696 Special Topics in Chemistry (3-3 cr.), course content changes each semester. Students register for 3 credit hours for two semesters.

INFO I501 Introduction to Informatics (3 cr.)

INFO I502 Information Management (3 cr.), P: INFO I501

Electives (18 cr., at least 6 of which must be in chemistry or biochemistry)

Biochemistry

BIOC B807 Enzyme Chemistry (3 cr.)

BIOC G865 Fundamentals of Molecular Biology (3 cr.)

BIOL K484 Cellular Biochemistry (3 cr.)

BIOL 507 Molecular Biology (3 cr.)

CHEM 533 Introduction to Biochemistry (3 cr.)

CHEM 636 Biochemistry (3 cr.)

CSCI 548 Introduction to Bioinformatics (3 cr.)

Analytical Chemistry

CHEM 621 Advanced Analytical Chemistry (3 cr.)

CHEM 629 Chromatography (3 cr.)

CHEM 696 Chemometrics (3 cr.)

Organic Chemistry

CHEM 651 Advanced Organic Chemistry (3 cr.)

CHEM 652 Synthetic Organic Chemistry (3 cr.)

Physical Chemistry

CHEM 575 Intermediate Physical Chemistry (3 cr.)
 CHEM 672 Quantum Chemistry (3 cr.)
 CHEM 675 Chemical Kinetics (3 cr.)
 CHEM 696 Introduction to Computational Chemistry (3 cr.)

Computer Science

CSCI 542 Distributed Database Systems (3 cr.)
 CSCI 590 Artificial Intelligence (3 cr.)
 CSCI 590 Data Mining (3 cr.)

New Media

NEWM N502 Digital Media Motion and Simulation Methods (3 cr.)
 NEWM N504 Advanced Interactive Design Application (3 cr.)

Project/Thesis or Internship (6 cr. taken in the second year)

As a capstone experience, students will complete 6 credits of research, a project, or an internship under the guidance of a chemistry faculty member.

INFO I693 Informatics Thesis/Project (1-6 cr.)

Master of Science in Health Informatics (36 cr.)

The School of Informatics offers a Master of Science in Health Informatics to address needs emanating from the changing health care environment. Research and educational programs in medical, nursing, and health informatics are growing at a rapid rate nationally. This can be attributed in large part to the increasing complexity and importance of health care reimbursement, which has created a need for improved classification, storage, and analysis of medical information to establish best clinical practice and cost efficiency. Users of health informatics include clinicians, researchers, health care educators, health organization administrators, health policy analysts, health information administrators, quality improvement directors, and chief information officers. Those who are professionally involved in health informatics work in a variety of settings, including acute care hospitals, managed care organizations, consulting firms, claims and reimbursement organizations, accounting firms, home health care agencies, long-term care facilities, corrections facilities, pharmaceutical companies, behavioral health organizations, insurance companies, state and federal health care agencies, and health computing industries.

The IUPUI campus is uniquely suited to conduct graduate education in health informatics through its health schools, research centers, and affiliated academic units. The School of Medicine has a long history of fellowship training and research in medical informatics. The School of Allied Health Sciences offers an undergraduate degree in health information administration. This baccalaureate program prepares professionals to plan and manage health information systems. The curriculum is grounded in computer systems, health law, medical documentation, and organizational management. The School of Nursing, which is the largest in the country, is in the forefront of the development of nursing informatics, with a particular emphasis on consumer health informatics. The School of Library and Information Science offers

master's and doctoral degrees in information science, which are distinguished by their sociotechnical orientation. The school also has a broad research thrust exploring the interconnection of social, behavioral, and technological issues associated with the use of information and communication technologies. The Department of Computer and Information Science offers a master's degree in computer science with a specialization in databases and data mining. The department supports the computer science requirements of the M.S. in Health Informatics. Faculty in the department are externally funded to conduct research in medical informatics and bioinformatics. Other academic programs at Indianapolis and Bloomington in public health, applied health sciences, and hospital administration offer important supporting course work.

Degree Requirements

To receive the Master of Science in Health Informatics, students must complete 36 credit hours of prescribed courses. In addition to core courses, students choose, in consultation with advisors, a set of concentration electives. Examples of concentration areas include: 1) knowledge-based health care information, 2) health services informatics, and 3) clinical databases.

Knowledge-based health care information focuses on the storage, organization, evaluation, and dissemination of health and medical knowledge (e.g., textbooks, journals, other media, and information) to support evidence-based practice and patient education. End-users of knowledge-based health care information include clinicians, patients, health educators, and health planners.

Health services informatics focuses on information management in health care systems and addresses such diverse needs as patient flow, resource allocation, billing, and compiling and reporting of data. This involves developing information systems for processing and storing clinical data, complying with medical documentation requirements of accrediting and governmental agencies, and setting health information policies.

Study of clinical databases focuses on the storage of medical data and linkage of electronic systems. Study in this concentration would be based on an electronic medical record system that would include existing standards and coding, links between health-related databases, and data extraction for clinical care and management. Research would be oriented to using such databases to learn more about disease and health maintenance (e.g., clinical epidemiology, pharmacoepidemiology, public health informatics, and nursing informatics).

Prerequisites (12 cr.)

All students applying for the M.S. in Health Informatics should have prerequisite courses or equivalencies in the following areas:
 Anatomy, biology, or physiology at the 200-level or higher (3 cr.)
 Computer Science CSCI N301 (3 cr.) or equivalent Medical Terminology (3 cr.)
 Statistics (3 cr.)

To receive a master's degree, the applicant must be admitted as a graduate student and complete 36 credits in health informatics-related courses

numbered 500 or above as listed below. The following courses are offered at IUPUI; courses may also be taken at IUB with approval of the advisor.

Core Courses (15 cr.)

All of the following are required:

INFO I501 Introduction to Informatics (3 cr.)
 INFO I502 Information Management (3 cr.), P: INFO I501
 INFO I503 Social Impact of Information Technologies (3 cr.)
 INFO I530 Seminar in Health Informatics Applications (3 cr.)

Choose one of the following:

PBHL G651 Biostatistics for Public Health (3 cr.)
 NURS R505 Measurement and Data Analysis (3 cr.)
 SPEA H518 Public Health Statistics (3 cr.)

Electives (15 cr.)

Electives may be selected from existing graduate courses in numerous schools and other academic units, depending on student need. Of these 15 credit hours, 9 credit hours must be selected from the list of informatics and computer science courses. (This list is neither exhaustive nor exclusive.) In consultation with their advisors, students will have wide latitude in choosing appropriate courses.

Informatics and Computer Science

CSCI 503 Operating Systems (3 cr.)
 CSCI 504 Concepts in Computer Organization (3 cr.)
 CSCI 536 Computer Networks (3 cr.)
 CSCI 541 Database Systems (3 cr.)
 CSCI 542 Distributed Database Systems (3 cr.)
 CSCI 565 Programming Languages (3 cr.)
 CSCI 590 Topics: Artificial Intelligence (3 cr.)

 SLIS I571 Information Networking (3 cr.)
 SLIS I574 Communication in Electronic Environments (3 cr.)
 SPEA H628 Health Care Information Systems (3 cr.)
 SPEA V516 Public Management Information Systems (3 cr.)
 SPEA V519 Database Management Systems (3 cr.)
 SPEA V613 Implementation of Information Systems (3 cr.)

Design, Measurement, and Evaluation

AHLT W520 Research Methodology for Allied Health (3 cr.)
 AHLT W570 Research Communication in Allied Health (3 cr.)
 ECON E528 Economic Analysis of Health Care (3 cr.)
 NURS L650 Data Analysis for Clinical and Administrative Decision Making (3 cr.)
 NURS R500 Nursing Research Methods I (3 cr.)
 NURS R600 Nursing Research Methods II (3 cr.)
 NURS R601 Instrument Development for Health Behavior I (2 cr.)
 NURS R602 Instrument Development for Health Behavior II (2 cr.)
 NURS R720 Metanalysis of Health/Illness or Disease/Illness (3 cr.)
 NURS T617 Evaluation in Nursing (3 cr.)
 PBHL G652 Biostatistics II (3 cr.)
 SPEA H517 Managerial Epidemiology (3 cr.)

SPEA H521 Management Sciences for Health Services Administration (3 cr.)
 SPEA H615 Strategic Management, Decision Making, and Evaluation II (3 cr.)
 SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)

Health Sciences

AHLT W510 Trends and Issues in Allied Health (3 cr.)
 AHLT W560 Topics: Patient-Centered Outcomes Research (3 cr.)
 HPER C501 Program Planning in Public Health Education (3 cr.)
 HPER C515 Health Education in Clinical Settings (3 cr.)
 NURS M560 Teaching Strategies to Promote Client Functioning (3 cr.)
 PBHL P503 Public Health Community Project (3 cr.)
 SOC R515 Sociology of Health and Illness (3 cr.)
 SPEA H501 Introduction to Health and Medical Care Organization (3 cr.)
 SPEA H503 Health Systems Organization and Management (3 cr.)

Project/Thesis (6 cr.)

As a capstone experience, students will complete either a project, planned in conjunction with their advisor, or a research-based thesis, supervised by a research advisor and a thesis committee. Core and support faculty from the participating schools will have a wide range of research interests that will provide graduate students with choices relevant to their concentration areas.

INFO I691 Thesis/Project in Health Informatics (1-6 cr.)

Master of Science in Human Computer Interaction (36 cr.), Fall 2003

Human Computer Interaction (HCI) is the branch of informatics that studies and supports the design, development, and implementation of humanly usable and socially acceptable information technologies. The goal of the field is to shape new media and develop tools that will support human use, augment human learning, enhance communication, and lead to more acceptable technological developments at the individual and the social levels.

Research on HCI draws extensively on mainstream informatics concerns with cognition, communication, representation, and computation. HCI professionals seek to identify the nature and parameters of human information processing at the interface, design forms of representation that support human interpretation and use of information, reliably and validly test new technologies for usability and acceptability, and determine how information technologies change working practices and social activities.

Regular job postings for HCI personnel express a desire for professionals with suitable scientific training in design and evaluation, and increasingly, applied social scientists with technological skills are finding employment in the software industry as HCI professionals. At Indiana University, the HCI program draws faculty campuswide to provide the appropriate blend of multidisciplinary expertise required to study this new field.

Degree Requirements

To receive the master's degree, the applicant must be admitted as a graduate student and complete 36 credits of graduate study in HCI.

Core Courses (12 cr.)

INFO I501 Introduction to Informatics (3 cr.)
 INFO I502 Information Management (3 cr.), P: INFO I501
 SLIS L542 Introduction to HCI (3 cr.)
 EDUC Y502 Intermediate Statistics (or equivalent) (3 cr.)

Electives (18 cr.)

Students may choose from among the following and must take courses from at least two departments.

BUS S601 MIS Research Topics in Applications Systems Design (3 cr.)
 BUS S602 MIS Research Topics in Administration and Technology (3 cr.)
 CSCI A546 User Interface Programming (3 cr.)
 CSCI B581 Advanced Computer Graphics (3 cr.)
 CSCI B582 Image Synthesis (3 cr.)
 CSCI B665 Software Engineering Management (3 cr.)
 CSCI B666 Software Management Implementation (1-3 cr.)
 CSCI B669 Topics in Database and Information Systems (1-6 cr.)
 CSCI B689 Topics in Graphics and Human-Computer Interaction (1-6 cr.)
 CSCI P565-P566 Software Engineering I-II (6 cr.)
 EDUC P544 Applied Cognition and Learning Strategies (3 cr.)
 EDUC P600 Topical Seminar in Learning Cognition and Instruction (3 cr.)
 EDUC R685 Human Computer Interface Design (1-3 cr.)
 JOUR J530 Issues in New Communication Technologies (3 cr.)
 PSY P450 Human Factors (graduate credit available) (3 cr.)
 SLIS L576 Digital Libraries (3 cr.)
 SLIS L578 User Interface Design for Information Systems (3 cr.)
 SLIS L642 Information Usage and the Cognitive Artifact (HCI II) (3 cr.)
 SLIS L697 Advanced Topics in Information Systems (1-4 cr.)
 SPHS S522 Digital Signal Processing (3 cr.)
 TEL T541 Processes and Effects: Individual Level Theory and Research (3 cr.)
 TEL T571 Applied Emotional and Cognitive Psychology Theory (3 cr.)

Project/Thesis (6 cr.)

Students will perform an independent research project and produce a report or thesis, a designed artifact, or other appropriate deliverable format for public defense.

INFO I694 Thesis/Project in Human-Computer Interaction (1-6 cr.)

Master of Science in Media Arts and Science

This master's degree develops specialized skills and knowledge in new media with the purpose of preparing students to manage and conduct research on Internet and Web environments and multimedia

production techniques. Like all new media programs, the master's degree is focused on applied research and application. The course of study is oriented toward professional practice and relies on a theory base drawn from fundamental disciplines that study communication as sight, sound, and motion.

Skills and knowledge embedded in this degree program include: Web site and multimedia research design, computer programming and database programming, multimedia authoring language skills and data collection, software, multimedia development of audio and video impact on users, digital graphics assessment techniques, and writing and editing of materials for multimedia evaluation and assessment.

The Master of Science in Media Arts and Science includes required courses in new media with specific emphasis on the philosophy and principles of the field as well as techniques using technology in communication and cybernetic/human interaction theory. Graduates will be prepared to conduct research in the development and effects of using communication technology in academic, social, and vocational settings. Opportunity will exist within the field for students to conduct applied research in media-related disciplines. Career options include 2D/3D artist, animator, creative technologist, multimedia producer, director of software development, electronic publisher, hypermedia specialist, Internet developer, graphic artist, interactive trainer, music producer, multimedia developer, composer, techno-artist, video/audio editor, webmaster, and Web site designer.

Admissions Requirements

In addition to those requirements outlined above (see "Admission to Master's Programs"), students who apply for the Master of Science in Media Arts and Science must attend an interview to demonstrate their computer literacy, personal skills, and professional experience; and present a portfolio. The portfolio can include a multimedia application and/or an original computer software program.

Degree Requirements

The Master of Science in Media Arts and Science is a 30 credit hour program that includes a core of 18 hours and a specialization area of 12 hours. Electives will be available which allow students to specialize in "major field" areas within the new media graduate curriculum.

Core Courses (18 cr.)

N500 Foundations of Media Arts Production (3 cr.)
 N501 TPCS: Principles of Multimedia Technology (3 cr.)
 N502 Digital Media Motion and Simulation Methods (3 cr.)
 N503 Multimedia Design Applications (3 cr.)
 N504 Advanced Interactive Design Applications (3 cr.)
 N505 Internship in Media Arts and Technology (3 cr.)
 N506 Media Arts and Technology Major Project (3 cr.)
 N510 Web Database Concepts (3 cr.)

Specialization Core Courses (12 cr.)

Specialization courses must be selected from the 400- and 500- level courses offered in the Schools of Informatics, Art, Journalism, Music, Library and Information Science, or the Departments of Computer Science and Computer Technology.

Area 1: Computer science, computer technology, library information and science, and new media

Area 2: Art, journalism, music, and new media

Prior to enrollment in the courses, the School of New Media academic advisor and the head of graduate studies must approve the specialization core.

A minimum of B+ in each course of the new media graduate core is required for continuance in graduate study. Courses in the specialization area must be completed with the minimum grade of B. Courses below a B are not counted toward degree requirements, but such grades will be counted in calculating a student's grade point average.

Undergraduate Course Descriptions

School of Informatics (INFO)

The abbreviation "P" refers to the course prerequisite or prerequisites. The number of hours of credit given for a course is indicated in parentheses following the course title.

I101 Introduction to Informatics (3 cr.)

P: computer literacy. Emphasis on topics in human computer interaction and human factors; collaborative technologies; group problem solving; ethics, privacy, and ownership of information and information sources; information representation and the information life cycle; the transformation of data to information; and futuristic thinking.

I110 Basic Tools of Informatics I—

Programming Concepts (1.5 cr.) P: CSCI A110, CSCI A111, or equivalent computing experience. Introduction to programming for users of computer systems. Emphasis on problem-solving techniques. An eight-week lecture and laboratory course. Cross-listed with CSCI A112. Credit given for only one of the following: INFO I110, CSCI A112, or INFO I112.

I111 Basic Tools of Informatics II—

Introduction to Databases (1.5 cr.) P: CSCI A110, CSCI A111, or equivalent computing experience. Introduction to database design concepts. Entering and modifying data, accessing data using visual tools and SQL, building database applications using forms and application development tools. Emphasis on problem-solving techniques. An eight-week lecture and laboratory course. Cross-listed with CSCI A114. Credit given for only one of the following: INFO I111, CSCI A114, or INFO I112.

I112 Basic Tools of Informatics—Programming and Database Concepts (3 cr.) Introduction to programming and database design concepts. Emphasis on problem-solving and information-gathering techniques. The lecture will discuss general concepts and syntax. The lab will focus on the use of software, including a programming language, modifying and accessing data using visual tools, and building database applications using forms and development tools. Lecture and laboratory. Offered on the IUPUI campus only. Equivalent to the combination of INFO I110 and INFO I111. Credit given for INFO I112 and either INFO I110 or INFO I111.

I200 Information Representation (3 cr.)

P: knowledge of a programming language as can be obtained from INFO I110, INFO I210, or similar courses. Recommended prerequisite or concurrent: INFO I201. The basic structure of information representation in social and scientific applications. Representational structures and approaches from many disciplines are introduced: philosophical theories of classification and categorization; information access and representation on the World Wide Web; object-oriented design and relational databases; AI knowledge representation and discovery. Cross-listed with COGS Q200. Credit given for either INFO I200 or COGS Q200.

I201 Mathematical Foundations of Informatics (4 cr.)

Recommended prerequisite or concurrent: INFO I101. An introduction to the suite of mathematical and logical tools used in information sciences, including finite mathematics, automata and computability theory, elementary probability and statistics, and basics of classical information theory. Cross-listed with COGS Q250. Credit given for either INFO I201 or COGS Q250.

I202 Social Informatics (3 cr.)

P: INFO I101. Introduces the social and behavioral foundations of informatics. Theoretical approaches to how technology is used from psychological and sociotechnical perspectives. Examples of how current and emerging technologies such as games, e-mail, and electronic commerce are affecting daily lives, social relations, work, and leisure time.

I210 Information Infrastructure I (4 cr.)

Recommended prerequisite or concurrent: INFO I101. The software architecture of information systems. Basic concepts of systems and applications programming. Cross-listed with CSCI A201. Credit given for only one of the following: INFO I210, CSCI N331 (IUPUI), or CSCI A201 (IUB).

I211 Information Infrastructure II (4 cr.)

P: INFO I210. The systems architecture of distributed applications. Advanced programming, including an introduction to the programming of graphical systems. Cross-listed with CSCI A202. Credit given for only one of the following: INFO I211, CSCI N345 (IUPUI), CSCI A202 (IUB), or CSCI C212 (IUB).

I300 Human Computer Interaction (3 cr.)

P: INFO I211. The analysis of human factors and the design of computer application interfaces. A survey of current best practices with an eye toward what future technologies will allow.

I303 Organizational Informatics (3 cr.)

P: INFO I101. Examines the various needs, uses, and consequences of information in organizational contexts. Topics include organizational types and characteristics, functional areas and business processes, information-based products and services, the use of and redefining role of information technology, the changing character of work life and organizational practices, sociotechnical structures, and the rise and transformation of information-based industries. Credit given for either INFO I303 or SPEA V369.

I310 Multimedia Arts: History, Criticism, and

Technology (3 cr.) This course studies how the paradigm shift to a digital world will affect humanity. The course will consider the evolution of media arts and its underlying principles of communications.

Students will study application development paradigms in current practice. Readings, lectures, class discussions, and research papers.

I320 Distributed Systems and Collaborative Computing (3 cr.)

P: INFO I211. An introductory treatment of distributed systems and programming. Topics range from the distributed and object models of computation to advanced concepts, such as remote method invocations, object brokers, object services, open systems, and future trends for distributed information systems.

I400 Topics in Informatics (1-3 cr.) P: at least junior standing or permission of instructor. Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice for credit when topics vary, subject to approval of the dean.

I420 Internship in Informatics Professional

Practice (3-6 cr.) P: approval of dean and completion of 100- and 200- level requirements in informatics. Students gain professional work experience in an industry or research organization setting, using skills and knowledge acquired in informatics course work.

I450/451 Design and Development of an

Information System (3-3 cr.) P: senior standing and approval of the dean. System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

I460/461 Senior Thesis (3-3 cr.)

P: senior standing and approval of the dean. The senior student prepares and presents a thesis: a substantial, typically multichapter paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

I499 Readings and Research in Informatics

(1-3 cr.) P: consent of instructor and completion of 100- and 200- level requirements in informatics. Independent readings and research related to a topic of special interest to the student. Written report required.

New Media Program, IUPUI (NEWM)

The abbreviation "P" refers to the course prerequisite or prerequisites. The number of hours of credit given for a course is indicated in parentheses following the course title.

N100 Introduction to Digital Media Principles

(3 cr.) The development of interactive multimedia requires principles garnered from a variety of disciplines. Through readings, critiques, exercises and discussion, students will explore what makes an interactive multimedia application successful and what types of applications are best suited to interactive multimedia. This course provides an introduction to the design of interactive multimedia drawing upon user interface design, task analysis, analysis of audience characteristics, and usability testing, as well

as design and editing principles from animation and video production.

N101 Topics in Interactive Multimedia (3 cr.) P: NEWM N100. Interactive multimedia is a rapidly evolving field that is significantly influenced by changes in theory, storage media, computing hardware, authoring/presentation software and communication capabilities in disciplines such as music, art, and journalism. Students will be exposed to recent trends through the development of interactive media projects for use on multiple platforms, the Internet, and CD-ROM.

N110 Visualizing Information (3 cr.) A course to sketch visualization: perspective, projection, and actually "seeing" the world around us. The projects will be using traditional media in the beginning and then computer shading, shadows, and lighting.

N175 Digital Media I: Vector Imaging (3 cr.) P: NEWM N101. Vector graphics are produced using traditional visualization (sketches) and computer methods. Color theory, geometric construction, and rendering techniques are utilized in vector-based graphic creation for use in new media applications (Illustrator).

N180 Digital Media II: Raster Imaging (3 cr.) P: NEWM N101. Raster graphics are produced using traditional visualization (sketches) and computer methods. Topics will include image composition, realistic representation, digital imaging for new media, color mode and palette usage, material and value representation (PhotoShop).

N200 Desktop Tools for Digital Media (3 cr.) P: NEWM N101. An introduction to the principles of multimedia creation and digital effects. The class will focus on a number of different software programs including Adobe Premiere, Director Authorware, Adobe PhotoShop, SoftImage 3D, Houdini, Kodak Cineon, and 3D Studio Max. Authoring, video, and sound editing computer applications, as well as cyberspace protocols and language, are engaged.

N201 Design Issues in Digital Media (3 cr.) P: N101. Introductory course that will equip students with strategies in assembling visuals applicable to any medium. It will explore composition strategies; visual literacy and awareness; and principles of the visual display of quantitative information. The course will begin with traditional visual media and move into digital forms to give the student an awareness and sensibility to work in any medium. Projects, lectures, discussion, and writing assignments serve as a survey of best practice.

N204 Introduction to Interactive Media (3 cr.) P: NEWM N101. The creation of interactive multimedia products for multiplatform delivery. Topics include: the multimedia production process, audience analysis, hardware and software requirements, authoring tools, scripting, content development, interface design, distribution, and development strategies. Concentration will be on practical applications for interactive multimedia (Director).

N210 Introduction to Digital Sound (3 cr.) P: NEWM N101. An introduction to digital sound creation and editing. Topics will focus on analog sound techniques and equipment, analog to digital conversion, basic editing, formats and conversions, digital to analog conversion, and basic sound effect

techniques for new media (Soundforge and Cool Edit 16).

N215 Online Document Development (3 cr.) P: NEWM N101. An introductory course for the creation, publication, and management of documents and images for online distribution. Topics include an introduction to Web site development, portable document formats, online publishing, document conversion, file exchanges, and image preparation (Dreamweaver).

N230 Introduction to Game Design and Development (3 cr.) P: NEWM N101, NEWM N175, NEWM N180. An introduction course to "video" game design and development for entertainment. Topics include game theory, design and development of computer-based games, current game delivery systems and software, the commercial development cycle, case studies of current games, ethical issues including the current game rating system, emerging technical developments in game development, and current game trends. Students will develop new levels of existing games.

N235 Introduction to Computer Simulation/Animation (3 cr.) P: NEWM N101. An introductory course covering applied three-dimensional computer graphic animation for students interested in the use of design, time, and motion study; surface texture mapping; lighting; color; and the technology required to produce computer animations for commercial applications in manufacturing design, marketing, training, gaming, Web creation, and entertainment (3D Studio Max).

N240 Introduction to Digital Video (3 cr.) P: NEWM N101. An introductory course covering applied video techniques for digital media production and introducing the basics of equipment associated with analog and digital video production. Designed for students interested in the use of design, time, and motion study; lighting; color; and the technology required to produce video for commercial applications in manufacturing design, marketing, training, gaming, Web creation, and entertainment (Adobe Premiere).

N250 Team Building in Technology (3 cr.) P: NEWM N101. This methods course helps students improve their effectiveness in solving problems and expand their critical thinking when working in groups. This course is practical in orientation, including the interpersonal process, decision-making styles, problem-solving concepts and procedures, the creative effort, conflict resolution, leadership, and assessment. Students develop projects with objectives, requirements, and constraints; client requests and implementation of the design solution. They execute the design plan and evaluate the final project.

N295 Career Enrichment Cooperative (3 cr.) P: sophomore standing and approval of the dean. A semester of external career experiences designed to enrich the student's preparedness for entering the workforce. Periodic meetings with faculty advisors and a comprehensive written report on the experience detailing the intern's activities and reactions is required.

N300 Digital Media Production (3 cr.) P: NEWM N101. This is an advanced course demanding

innovational design and technical skills to meet systematic studio work on complex computational undertakings. From this base, students conceive, observe, and analyze multimedia and cyber-communication projects. Students learn digital skills and tools through lectures and hands-on experimentation, including creative process and evaluation. Combines the production of journalism, music composition, and animation/simulation, with computer transmission of imaging, sound, and video.

N302 Media Simulation Methods (3 cr.) P: NEWM N101. A study of the fundamentals and methods of building and using computer-based simulation models, including the utility of simulation as a decision support tool; representing queuing systems in a computer model; simulated sampling from distributions of input variables; point and interval estimates of expected values of output variables; and the design of simulation sampling experiments.

N304 Interactive Media Applications (3 cr.) P: NEWM N204. Digital design methodology and techniques, control and timing, machine organization, instruction sequencing, and data flow control; control unit implementation by means of hardware and microprogramming; synchronization of input/output operations with interface design (Director 2).

N311 The Digital Paradigm Shift: Effects in International Cultures and Society (3 cr.) This course teaches how the paradigm shift to a digital world will affect international cultures and societies. A study of the major paradigm shifts in reference to culture and society as well as the effect for the future for humanity as a culture. Readings, lectures, class discussions, and papers with supported citations.

N315 Online Document Development II (3 cr.) P: NEWM N215. Advanced creation, publication, and management of interactive publications for online distribution with the inclusion of emerging technologies for a media-rich experience. Topics include interactive Web site development, animations for the Web, online interactive design, document conversion, file exchanges, and digital media development for online usage (Dreamweaver, Flash, DeBabilizer, Fireworks).

N330 Game Design, Development, and Production (3 cr.) P: NEWM N230. Advanced game development by producing interactive computer-based games. The process learned in N230 will be put into practice by developing a story, characters, programming, and an interactive game based on current trends in game development. Use of actual game development systems for current console gaming systems.

N335 Computer-Based Character Simulation/Animation II (3 cr.) P: NEWM N235. This course takes the basics of computer animation to the next level by including character animation. Topics include character development, modeling for character animation, 3D painting for custom texture, character animation techniques, and more advanced topics in relation to animation, such as particle systems (3D Studio Max, Bryce, 3D Painter).

N340 Digital Video Production (3 cr.) P: NEWM N240. An advanced course covering applied video techniques for digital media production. More

features for creating, editing, and producing digital video will be explored through collaborative production. Designed for students interested in the use of more advanced techniques utilizing video (After Effects).

N400 Imaging and Digital Media Seminar (3 cr.) Variable titled course designed to bring guest speakers from industry as well as other disciplines on campus to expose students to the wide realm of new media and how it can be utilized in each discipline. Class discussions, assigned readings, and research papers.

N410 History and Theory of Digital Media (3 cr.) Examines the history of computer-based media, technologies, and the digital information age. Topics include studying historical components and developments, current digital media, and research speculation towards the future of digital media and technologies.

N420 Multimedia Project Development (3 cr.) This course will focus on total project design and development of interactive multimedia applications. Topics to be covered include system design and development, selection of appropriate hardware and software platforms, use of productivity tools, project management, dynamics of team-based project development, cost analysis, prototyping, pilot testing, and other evaluation techniques. Students will work in teams to develop large-scale projects.

N435 Computer Simulation/Animation III Production (3 cr.) P: NEWM N335. An advanced class in working with computer animation. This class will focus more on greater story development and on a commercially finished product. Topics will include outputting techniques for broadcast usage, incorporation of digital sound and music, good story and character development, and development process with focus on end product.

N440 DV and CGI Special Effects (3 cr.) P: NEWM N340 and CSCI N345. An advanced course covering computer-generated imagery and special effects techniques for video production as utilized in the industry. Techniques for creating special effects, video shooting for effects, and the use of effects to aid in the telling of a story. Topics include the integration of text, graphics, sound, video, and animation into video development software. Editing and producing special effects will be explored through projects (After Effects, Elastic Reality, Boris FX).

N450 Usability Principles for New Media Interfaces (3 cr.) Principles of HCI and use experience modeling through a focused study of theory and application design, usability, and usability testing in the context of new media product development. Methods to validate new media design solutions are applied.

N475 Research in Design Methods (3 cr.) This course is designed to give students an understanding of the advanced concepts of theoretical topics, simulation modeling, and analysis concepts. Investigate applications of simulation in systems characterized by probabilistic behavior and where artists compete for scarce resources.

N485 Seminar in New Media (3 cr.) Current trends, problems, best practices, and developments in new media. Students pursue a special interest and share information and experience with the group.

This course is an in-depth exploration of topics and issues at the forefront of new media. Seminar format with research papers and class discussion/presentations.

N490 Independent Study (1-6 cr.) Research and practical experience in various areas of new media as selected by the student prior to registration, outlined in consultation with the instructor and approved by the program advisor. Total credit of Internship/Independent Study cannot exceed 9 credit hours.

N495 Enrichment Internship (3 cr.) P: junior standing and approval of program advisor. Industry, corporate, or similar experience in new media-oriented employment. Projects jointly arranged, coordinated, and evaluated by faculty and industrial supervisors. Apply during the semester prior to desired internship.

N499 Capstone Experience (3 cr.) The capstone experience culminates the student's major and integrates the student's learning across the field. Students select a particular area of interest in new media and may elect an internship or project in media arts and technology in collaboration with their academic advisor. Requirements vary depending upon choice of internship or project. To be taken during the senior year.

Graduate Course Descriptions

School of Informatics

The abbreviation "P" refers to the course prerequisite or prerequisites. The number of hours of credit given for a course is indicated in parentheses following the course title.

INFO 1501 Introduction to Informatics (3 cr.) Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO 1502 Information Management (3 cr.) P: INFO 1501. Survey of information organization in medical-, health-, chemical-, and biology-related areas; basic techniques of the physical database structures and models, data access strategies, management, and indexing of massively large files; analysis and representation of structured and semistructured medical/clinical/chemical/biological data sets.

INFO 1503 Social Impact of Information Technologies (3 cr.) An overview of important social, legal, and ethical issues raised by information technology.

INFO 1590 Topics in Informatics (1-3 cr.)

Bioinformatics

BIOL 1519 Bioinformatics: Theory and Application (3 cr.) Biosequence analysis, sequence alignment and assembly; RNA structure, protein, and molecular modeling; genomics and proteomics; gene and function discovery above the sequence level; phylogenetic analysis including parsimony, maximum

likelihood, and related concepts; information and machine learning; artificial intelligence, neural networks, hidden Markov models; visual and graphical analysis in bioinformatics; worldwide biologic databases (use, management, analysis, federation, and access); experimental design and data collection techniques; scientific and statistical data analysis; database and data mining methods; network and Internet methods.

BIOL 1529 Bioinformatics in Molecular Biology and Genetics: Practical Applications (4 cr.) P: two semesters of programming experience or equivalent, knowledge of Unix operating system. Emphasis on problem solving with molecular biology data; biosequence analysis methods; practical software engineering in bioinformatics; methods in data collection, management, analysis and distribution; Internet client-server methods applied to genomic databases; lecture and laboratory.

CSCI 548 Introduction to Bioinformatics (3 cr.) Analysis of biological data employing various computational methods to obtain useful information in the emerging area of bioinformatics. Topics include: structures, functions, and evolution of proteins and nucleic acids; and retrieval and interpretation of bioinformation from the Internet. Learning principles, algorithms and software for sequence alignment, similarity search of sequence databases, estimation of phylogenetic trees, structural prediction, and functional inference.

INFO 1532 Seminar in Bioinformatics (1-3 cr.) Presentation and discussion of new topics in bioinformatics as seminar by students. Concentration on a particular area each semester to be announced before registration.

INFO 1552 Independent Study in Bioinformatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit.

INFO 1692 Thesis/Project in Bioinformatics (1-6 cr.)

Chemical Informatics

C571 Chemical Information Technology (3 cr.) Chemical structure and data representation and search systems, bioinformatics, chemical information and database systems, laboratory information management systems, spectral and crystallographic databases, chemical reaction databases, patent information management systems, commercial chemical information databases, electronic chemical publishing systems.

C572 Computational Chemistry and Molecular Modeling (3 cr.) Molecular modeling: computer models of molecules and their behavior in gas and condensed phases; implicit and explicit solvation models; quantum and molecular mechanics; search strategies for conformational analysis, geometry optimization methods; information content from Monte Carlo and molecular dynamics simulations. Statistics and chemometrics, multivariate statistics and experimental design, numerical methods, calibration and chemical analysis, optimization methods, artificial intelligence; molecular design, de novo design techniques; quantitative structure activity relationships (QSAR); comparative molecular field analysis; docking; molecular diversity and combinatorial libraries.

INFO 1533 Seminar in Chemical Informatics (1-3 cr.) Presentation and discussion of new topics in chemical informatics. Concentration on a particular area each semester to be announced before registration.

INFO 1553 Independent Study in Chemical Informatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit.

INFO 1693 Thesis/Project in Chemical Informatics (1-6 cr.)

Health Informatics

INFO 1530 Seminar in Health Informatics Applications (3 cr.) Presents an overview of the various professional applications and research directions taken in health informatics. Requires directed laboratory experience.

INFO 1531 Seminar in Health Informatics (1-3 cr.)

INFO 1551 Independent Study in Health Informatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit.

INFO 1691 Thesis/Project in Health Informatics (1-6 cr.)

Human Computer Interaction (Fall 2003)

INFO 1534 Seminar in Human Computer Interaction (1-3 cr.) Topics vary yearly and include the following: information visualization, immersive technologies, designing hypermedia for educational applications, user-centered design techniques and tools, formal methods and cognitive modeling in HCI.

INFO 1554 Independent Study in Human Computer Interaction (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit.

INFO 1694 Thesis/Project in Human Computer Interaction (1-6 cr.)

New Media Program

The abbreviation "P" refers to the course prerequisite or prerequisites. The number of hours of credit given for a course is indicated in parentheses following the course title.

NEWM N500 Foundations of Digital Arts Production (3 cr.) Examines foundations and principles of digital media production. Topics include: publishing electronic print media, written composition, methods, textbooks, multimedia, computer transmission of imaging, sound, and video. Other aspects covered are network and broadband media transmission, television and computer graphics, background audio, script credit approval, clearances, recording, and audio and video sampling. Also included is reproduction of sound and images, tools for digital media application development. Legal and ethical aspects regarding the protection of intellectual property, copyright, name-branding, business affairs, and live performances for the commercial media industry will be assessed.

NEWM N501 TPCS: Principles of Multimedia Technology (3 cr.) Examines current practices in the use of digital media technology with special emphasis in computer technology, library science, computer science, music, journalism, and art and design. Paradigms of applied research; implementation and resource allocation; assessment designs for specific production models; assessment of database-backend; study of current applications and concepts.

NEWM N502 Digital Media Motion and Simulation Methods (3 cr.) Applications in animation/simulation design and creation using computer desktop tools. Animation models for Web design, Internet applications, composite techniques, and instructional sequences will be developed. Skills will be developed through design and modeling of individual or team multidisciplinary projects.

NEWM N503 Digital Media Application Design Processes (3 cr.) Presents the principles and fundamentals of design techniques using authoring tools on PC, Macintosh and emerging computer platforms. Included are storyboarding, planning and organization of scripts, use of current technology, computers, video and digital arts equipment; computer-assisted design and project planner software tools and management of design team concepts.

NEWM N504 Advanced Interactive Design Applications (3 cr.) P: NEWM N502. Incorporates extensive analysis and use of computer and multimedia authoring tools intended for distributed learning applications. Project management and programming team organization; media management and selection criteria for digital arts media development; task analysis and instructional sequencing applied to training and instruction; assessment modeling and feedback schedules for intrinsic motivation of students and trainees are examined.

NEWM N505 Internship in Media Arts and Technology (3 cr.) An internship program for students to work with and learn from experts in media (digital arts) technology fields who are developing and using new applications in commercial and educational settings. Requirements for interns include the development of a technology project proposal; interview, resume, and project presentation; on-site intern residency; project report; oral and media presentation of project outcomes.

NEWM N506 Media Arts and Technology Project (3 cr.) Students create and orally present a multimedia teaching/training project combining elements of digital media technology including CD-ROM, videodisc, digital audio and video, MIDI, and Internet applications. Requirements include technology project proposal development, oral presentation of proposal, research and development of project, project final report, and the presentation of project. Final project to be submitted in digital form for a permanent archive.

NEWM N510 Web-Database Concepts (3 cr.) P: NEWM N503. Addresses diverse issues arising when designing World Wide Web interfaces. Basic database concepts will be presented, but the course will focus

on discussion of interface issues specific to Web databases, technologies for linking databases to Web servers for delivery, discussion of various Web-database applications, case studies, and industry trends.

School of Informatics Administration, Faculty and Staff 2002-04

Administration

Dunn, J. Michael, *Dean, Oscar R. Ewing Professor of Philosophy, Professor of Computer Science*
Bailey, Darrell L., *Executive Associate Dean, Director of Office of New Media, Associate Professor of Music*

Perry, Douglas G., *Associate Dean for Graduate Studies and Research, Associate Professor of Respiratory Therapy, Adjunct Associate Professor of Medicine*

Faculty

Baldwin, Daniel, *Assistant Professor*

Defazio, Joseph, *Assistant Professor*

Faiola, Anthony, *Associate Professor*

Hook, Sara A., *Professor of Dental Informatics, Associate Dean of the Faculties, and Librarian*

Huang, Jeffrey, *Assistant Professor of New Media and Assistant Professor of Computer and Information Science*

Huckleberry, Donald, *Research Associate*

Koch, Clinton, *Lecturer*

Koch, Keith, *Assistant Professor*

Lipkowitz, Kenny B., *Associate Director of Chemical Informatics and Professor of Chemistry*

Mannheimer, Steve, *Professor*

McDaniel, Anna M., *Director of Health Informatics, Associate Professor of Nursing, and Adjunct Associate Professor of Public Health*

McDaniel, Matt, *Lecturer*

Milosevich, Sam A. Falk, *Associate Professor of Informatics*

Mukhopadhyay, Snehasis, *Associate Director for Bioinformatics and Associate Professor of Computer and Information Science*

Reed, Mary Ellen, *Lecturer*

Tennant, Susan, *Clinical Assistant Professor*

Staff

Hamilton, Tia, *Senior Administrative Assistant*

LeFevre, D.C., *Webmaster and Media Designer*

McCreary, W. Mark, *Assistant Dean*

O'Neill, Mary, *Senior Administrative Assistant*

Ratts, David, *Recorder*

Ray, Dale, *Administrative Assistant*

Rondeau, Molly, *Administrative Support Specialist*

The Mission of the School of Journalism

The mission of the School of Journalism is to explore and to help students explore the institutions, procedures, professional skills, and audiences of journalism and mass communication. Our subject is how the media mediate, and what this process of mediation means for public life in America and around the world. This mission is both an academic and a professional one; it is about learning, teaching, and doing. To this end, we are committed to scholarly research in journalism and mass communication, to liberal education in the arts and sciences, and to professional training in media work.

The Mission of the Baccalaureate Program

The mission of the baccalaureate program of the School of Journalism is to help students learn to read, think, and communicate clearly, critically, and creatively. The school is committed to liberal education in the arts and sciences as well as to professional training in the skills of journalism and mass communication. The school believes that both breadth and depth of learning must characterize the undergraduate experience. To this end, the Bachelor of Arts in Journalism degree emphasizes:

- development of basic skills in writing, critical thinking, independent learning, mathematics, foreign language, computers, and new information technologies;
- exposure to a broad range of course work in the disciplines of the liberal arts and sciences, both in the College of Arts and Sciences (COAS) and in the liberal arts courses within the School of Journalism;
- study of human cultures outside the United States and of selected minority cultures within the United States;
- training in statistical analysis and quantitative and qualitative research methods; training in the professional skills of journalism and mass communication, including reporting, writing, editing, visual communication, new communications technology, and collaborative group work;
- study of the institutions, processes, and effects of mass media in society;
- study in depth of a field or discipline in the arts and sciences, other than journalism and mass communications; and
- preparation for a lifetime of learning.

Because its mission coincides with the philosophy and goals of the Accrediting Council on Education in Journalism and Mass Communications (ACEJMC), the school seeks accreditation every six years from this national body. ACEJMC accredited the school most recently in 1996.

A History of the School of Journalism at Bloomington and Indianapolis

Indiana University, established in 1820 as a tiny seminary in Bloomington, eventually became one of the first state universities to teach journalism. Instruction began in 1893 with three students in the first class. Classes in writing and reporting were taught at intervals during the next few years, supplementing the students' liberal arts background in English, history, and economics.

A Department of Journalism was established in the College of Arts and Sciences in 1911, although students could not major in journalism until 1932. Professor Joseph Piercy was named as the first head of the department; he served until 1938. In 1911 the Department of Journalism took over administration of the *Indiana Daily Student*, the campus newspaper established in 1867 as a student-owned enterprise.

Among the prominent alumni of the Piercy years were Don Mellett, '13, killed in Canton, Ohio, while investigating crime in the city, a campaign that won a Pulitzer Prize; Ernie Pyle, '23, famed correspondent in World War II; Nelson Poynter, '24, publisher of the *St. Petersburg Times* and cofounder of *Congressional Quarterly*; and Mark Ferree, '26, who rose to top management in Scripps Howard.

John E. Stempel, an alumnus of the program and a formidable teacher of reporting and editing, served as head of the Department of Journalism from 1938 until his retirement in 1968. It was in the Stempel years that journalism, after moving through various offices on campus, found its home in Ernie Pyle Hall in 1954. Also during his leadership, the High School Journalism Institute began in 1946, directed by Professor Gretchen Kemp. Stempel graduated many distinguished journalists. Frank Bourgholtzer, '40, had a successful career at NBC News in radio and television. Robert E. Thompson, '49, became a White House correspondent, and then head of the Hearst Newspapers Washington Bureau. Gene Miller, '50, won two Pulitzer Prizes for the *Miami Herald*. Kenneth Olshan, '54, became head of Wells Rich and Greene Worldwide, one of the country's top advertising agencies. Dan Thomasson, '57, directs the Washington Bureau of Scripps Howard Newspapers. George Gill, '57, is publisher of the *Louisville Courier Journal*.

The Department of Journalism began an M.A. program in the late 1920s and a Ph.D. program in mass communication in 1966. Graduates from these programs have become leaders in journalism education. Del Brinkman, M.A. '64, Ph.D. '71, has served as dean of the University of Kansas School of Journalism and vice chancellor for academic affairs at Kansas. Brinkman is presently the Journalism Program director for the John S. and James L. Knight Foundation. Tom Bowers, B.A. '64, Ph.D. '71, became associate dean of the School of Journalism at the University of North Carolina. Both Brinkman and Bowers served as president of the Association for Education in Journalism and Mass Communication. So

also did David Weaver, B.A. '68, M.A. '69, Ph.D. '74, now the Roy W. Howard Research Professor in Indiana University's School of Journalism.

Under the leadership of Richard G. Gray, who became chairman of the Department of Journalism in 1968, the school's curriculum changed its emphasis. Since 1969 journalism majors have had to study a core curriculum that balances instruction in the skills of writing, visual communication, reporting, and editing with instruction in the history, economics, law, responsibilities, and ethics of journalism. The *Indiana Daily Student* was separated from the curriculum; it and the *Arbutus*, the campus yearbook, were established as independent publications administered by a publisher selected by the journalism faculty. To provide a modern, technological environment for research and teaching in journalism, Gray led a national fundraising campaign for the renovation of Ernie Pyle Hall, completed in 1976.

Graduates have since distinguished themselves academically and professionally. Paul Tash, '76, won a Marshall Scholarship to the University of Edinburgh and now is executive editor of the *St. Petersburg Times*. Bill Foley, '76, won a Pulitzer Prize for photography. Michel du Cille, '81, has won two for the *Miami Herald* and now is a picture editor at the *Washington Post*. Barbara Toman, '83, won a Rhodes Scholarship to Oxford University and works in the London bureau of the *Wall Street Journal*. Wendy Weyen, '85, and Jennifer Orsi, '88, won the Wells Award, the highest award for academic and leadership excellence that students can win at Indiana University, and both work for the *St. Petersburg Times*.

The school and its alumni pay tribute to the achievements of many of these outstanding graduates through undergraduate scholarships named in their honor.

In 1974 the Department of Journalism became a school with Richard Gray as director. In 1982 it became a systemwide school, responsible for the coordination of journalism education on all eight campuses of Indiana University. Gray became dean and presided over the founding of an undergraduate major at IUPUI in an independent School of Journalism. Before 1974 journalism courses had been taught at Indianapolis in the Department of English, mainly by Professor Shirley Quate, who also advised the student-run campus newspaper, *The Sagamore*, which first appeared in 1971. Acting Associate Dean Floyd Arpan established the School of Journalism in Cavanaugh Hall. As the program grew under the leadership of Associate Dean James Brown, the school moved in 1984 to offices in the Education-Social Work building. The school took over administration of *The Sagamore*, appointing its first publisher in 1985.

In 1989 the School of Journalism in Bloomington separated from the College of Arts and Sciences and became independent. Since 1990, students in the School of Journalism on both campuses have enrolled in a new degree program, the Bachelor of Arts in Journalism (B.A.J.).

Campus Life at Indianapolis

The journalism curriculum helps students prepare to be effective communicators regardless of their chosen profession. Careers in newspapers, magazines, broadcast and electronic journalism, public relations, and advertising are as vital as ever. The Bachelor of Arts in Journalism degree also prepares students for related careers and for graduate studies. For example, strong communication skills are essential for careers in law, business, and public affairs.

The urban setting of the Indianapolis campus enables students and faculty to work closely with public and private agencies, government, business, and industry. Its urban orientation enables the university to be directly involved in metropolitan concerns and aspirations. The state capitol is only a short walk from the school's offices. Internships available from Indianapolis media organizations allow students to enhance their classroom skills with work experiences in a major media market. Classroom experiences are also enriched by part-time instructors who are media professionals.

The School of Journalism operates administratively and practically as one school for the Indianapolis and Bloomington campuses. Because the degree program is unified, students who meet all admission requirements may start in Bloomington and transfer to IUPUI or vice versa. Students who have not met all admission requirements may transfer to the University Division at Bloomington or the University College at Indianapolis. The school is nationally accredited on both campuses.

The IUPUI campus emphasizes computer-based journalism. Students are taught how to use online information (LEXIS® and NEXIS®) in J100 Computer Methods for Journalism class. NEXIS, a massive database that contains full text of many newspapers, magazines, news services, and government documents, is very useful as background research on story ideas. Students are given free computer access accounts so that they may connect to the world of electronic information and, by e-mail, to their professors. Owning a computer is not necessary, but students who have their own computer in their homes or offices can turn in assignments electronically without coming to campus.

Two journalists from *The Indianapolis Star* won the Pulitzer prize for investigative journalism using computer skills learned in IUPUI journalism courses.

The Journalism Library

Books, journals, trade publications, and newspapers used by faculty and students in journalism are housed in the University Library, 755 W. Michigan Street. The IUPUI University Library is a beautifully designed building. It features computer databases that help students, faculty, and staff in their academic and professional work.

Campus Media

Students may work for *The Sagamore*, the campus newspaper administered by the School of Journalism in accordance with principles established in the Articles of Operation. The newspaper is a state-of-the-art desktop-published weekly that gives students a full range of opportunities in writing, editing, photography, ad sales, production, graphics, and page design. Students have full responsibility for the news-editorial content and may also gain management and marketing experience. Most student staff positions are paid. Students are also encouraged to explore opportunities in the communications market in print, broadcast, public relations, and advertising in Indianapolis. *The Sagamore* is often recognized as the top campus weekly in the state, having won numerous state, regional, and national awards.

Honors and Scholarships

The school recognizes and rewards the academic and professional accomplishments of its majors with a program of awards and scholarships on both campuses.

The school places its outstanding students on the Dean's List each semester, based on their grade point average for that semester. In addition, the school annually awards approximately \$130,000 in scholarships ranging in value from \$500 to \$6,500 to its majors. Indianapolis students compete with Bloomington students for these scholarships. Approximately \$5,000 is earmarked for Indianapolis students. Applicants are interviewed for these scholarships in spring semester by a faculty-student committee. The school announces the awards at an annual ceremony for students and parents in April.

Student Organizations

The Journalism Student Organization helps students prepare to enter the media market by organizing a spring job fair and sponsoring occasional workshops and guest speakers throughout the year. Students may also join the professional chapters of Society of Professional Journalists, for students interested in careers in news; Women in Communications, for women interested in careers in journalism and mass communications; or Public Relations Society of America, for students interested in careers in public relations.

Internships and Placement

The IU School of Journalism at Indianapolis has a placement director in Indianapolis to help students prepare for internships and full-time employment. Indianapolis students are also encouraged to take advantage of recruiting visits, available through the Bloomington campus. Information about these opportunities is posted regularly on the school's bulletin board outside Cavanaugh Hall 001G or through the Journalism Web site at www.journalism.iupui.edu. Job opportunities are also listed in *Deadline*, a weekly newsletter from the Bloomington campus.

The school's placement director advises students in preparing resumes, clips, cover letters, and interviews, as well as arranging for recruiters and employers to visit the IUPUI campus. For more information, contact Patrick McKeand, Education/Social Work Building 4104, (317) 274-5934.

Students may earn up to 3 credit hours in journalism for properly supervised internships, as long as they arrange to meet the school's requirements in advance of taking the internship. Students may not apply the credit to the minimum of 30 credit hours required for the journalism major.

Admissions

Admission to the School of Journalism

Students wishing to major in journalism may declare themselves journalism majors in the University Division at Bloomington or the University College at Indianapolis during their first year at IU and may take J110 Foundations of Journalism and Mass Communication. At the Indianapolis campus, students may also take J100 Computer Methods in Journalism during their first year. Before seeking admission as a major in the School of Journalism, students must complete a minimum of 26 credit hours of undergraduate course work, including the following:

- J110 Foundations of Journalism and Mass Communication with a grade of C– or better
- English Composition with a grade of C– or better or exemption
- One semester of a foreign language
- One fundamental skills mathematics course or exemption. Recommended: Math M118, A118 or D116-D117.

Students wishing to become journalism majors are expected to have computer literacy, but there is no course or competency exam required for admission. Those who cannot demonstrate competency with word processing may be required to take a jump-start course before advancing in JOUR J200 or J210.

Students meeting these requirements with a cumulative grade point average of 2.20 (FX will be calculated as F) will be considered for admission to the School of Journalism. Each year the school will admit students, based on their grade point average, as the school's physical space, instructional equipment, and faculty/staff resources permit.

At Bloomington, applicants will be permitted to register conditionally for the next required core course if they submit a completed application. Conditional registrations in journalism courses may be canceled if those applicants are denied admission to the School of Journalism.

Application Deadlines

The School of Journalism will consider applications three times a year: May 15, August 20, and December 15. Application forms are available in Ernie Pyle 200 at Bloomington and in the Education–Social Work Building 4104 at Indianapolis.

All summer transfer course work must be entered on the student's transcript prior to the first day of classes in fall semester. For admission to the Bloomington campus, transcripts from other colleges and universities should be sent to the Office of Admissions, 300 N. Jordan Avenue, Bloomington, IN 47405. For admission to the Indianapolis campus, transcripts from other colleges and universities should be sent to the Office of Admissions, Cavanaugh Hall 129, Indianapolis, IN 46202-5143.

Transfer Students

Transfers from other Colleges and Universities

Students who wish to transfer to IUPUI should contact the Office of Admissions, Cavanaugh Hall 129, Indianapolis, IN 46202-5143, (317) 274-4591. Students who wish to transfer to Bloomington should contact the Office of Admissions, 300 N. Jordan Avenue, Bloomington, IN 47405, (812) 855-0661.

Transfer students are first admitted to the University Division at Bloomington. They may then apply to the School of Journalism when they have completed the application requirements. Because transfer courses are not calculated in the cumulative grade point average for Indiana University students, transfer students must complete a minimum of one semester at Indiana University before they can be considered for admission to the school.

Acceptance of credit from other institutions will be determined by the Office of Admissions, and the applicability of credit toward degree requirements in the School of Journalism will be determined by the dean. No more than 12 transfer credit hours of mass communications courses may be counted in the journalism major. Only credits earned at Indiana University will count toward a student's grade point average. Courses from other colleges and universities transfer as credit only.

Transfers within the School of Journalism on the Bloomington and Indianapolis Campuses

Students admitted to the school on the Bloomington campus who are transferring to the school on the Indianapolis campus should complete an Inter-Campus Transfer form available on the Web at www.iupui.edu/~moveiu. Students admitted to the school on the Indianapolis campus who are transferring to the school on the Bloomington campus must have completed all admission requirements as defined by the Bloomington campus and complete the same Web form. See "Admission to the School of Journalism" in this bulletin. Students who have not met all admission requirements may transfer to the University Division. Inter-campus transfer applications will be accepted throughout the year. However, students may take advantage of Continuing Student Registration by filing for an inter-campus transfer by March 1 for summer and fall semesters, and October 1 for spring semester.

Transfers from other Indiana University Campuses

Students who have completed the admission requirements should submit an application to the School of Journalism by the published deadlines. Students who have not completed the admission requirements should complete the Inter-Campus Transfer form at the Web site www.iupui.edu/~moveiu

for admission to the University Division at Bloomington or the University College at Indianapolis.

Transfers from the School of Journalism to other Indiana University Campuses

Students enrolled in the School of Journalism who wish to attend another Indiana University campus should complete the Inter-Campus Transfer form on the Web at www.iupui.edu/~moveiu.

The Bachelor of Arts in Journalism Degree, Indianapolis and Bloomington

Academic counseling for each student in the School of Journalism is provided by a faculty member or an academic advisor prior to each semester's enrollment. Although academic counseling is intended to provide effective guidance, **students are responsible for planning their own programs and for meeting the following degree requirements for graduation.** Students are advised to read IU bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

The Indiana University Course Analysis and Record Evaluation (IUCARE), a computerized degree-audit system, is available to all students. Students may use IUCARE to monitor their completed and remaining requirements for the Bachelor of Arts in Journalism (B.A.J.) degree. See an academic advisor for details.

Degree Requirements

The School of Journalism offers the B.A.J. degree on the Bloomington and Indianapolis campuses. Students on either campus must complete the following for the B.A.J. degree:

Journalism major (30 credit hours)

Second concentration (24 credit hours)

Fundamental skills

Writing, two courses

Mathematics, one college-level course

Foreign language, two years of one language at the college level or equivalent

Statistics, one course

Library research skills, one course

Distribution

United States history, one course

American political science, one course

Economics, one course

Literature or fine arts history/appreciation, one course

Arts and Humanities, two courses

Social and Historical Studies, two courses

Natural and Mathematical Sciences, four courses total, two from one department

Culture Studies, three courses

123 credit hours total

Journalism courses from either campus will satisfy requirements for the journalism major. Courses used to satisfy all other degree requirements will be determined by each campus. For the most part, the school will defer to the College of Arts and Sciences for the B.A.J. at Bloomington and the Schools of Liberal Arts and Science for the B.A.J. at Indianapolis to define which courses are acceptable.

Students who intend to receive their degree from the Bloomington campus must satisfy all nonmajor requirements with courses as defined by the College of Arts and Sciences. Students who intend to receive their degree from the Indianapolis campus must satisfy all nonmajor requirements with courses as defined by the Schools of Liberal Arts and Science. Students who plan to transfer permanently to either the Indianapolis or Bloomington campus and receive the degree from that campus should consult with an academic advisor concerning course equivalencies. The school maintains a list of Bloomington and Indianapolis courses that will satisfy nonmajor requirements on both campuses.

Credit Hour and Grade Point Requirements

- 123 credit hours required for graduation, including the following minimums:
 - At least 30 but no more than 36 credit hours of mass communications courses (journalism, telecommunications, and selected communication and culture)
 - At least 65 credit hours from the College of Arts and Sciences or School of Liberal Arts and School of Science at Indianapolis, excluding Linguistics L100, all telecommunications courses, and selected communication and culture courses
 - At least 98 credit hours combined from journalism and the College of Arts and Sciences or School of Liberal Arts and School of Science at Indianapolis
 - At least 24 credit hours in a second concentration selected from one academic discipline outside of journalism, telecommunications, and selected communication and culture courses
 - At least 36 credit hours at the 300 and 400 level
 - At least 10 credit hours of journalism from the Bloomington or Indianapolis campuses
 - At least 26 credit hours of course work during the senior year from the Bloomington or Indianapolis campuses
- Credit hour limits
 - No more than 36 credit hours of mass communication courses (journalism, telecommunications, and selected communication and culture). The limit may be increased to 39 credit hours if the credit hours include at least one course from JOUR J414, J438, J450, J470, or J475
 - No more than 12 transfer credit hours of mass communications (journalism, telecommunications, and selected communication and culture)
 - No more than 3 credit hours total of internship credit, either from JOUR J492 or any other academic unit

- d. No more than 60 transfer credit hours from a community college
 - e. Optional electives—10 or fewer credit hours outside the School of Journalism and the College of Arts and Sciences or School of Liberal Arts and School of Science at Indianapolis
 - f. Optional electives—15 or fewer credit hours of approved courses outside the School of Journalism and the College of Arts and Sciences or the School of Liberal Arts and the School of Science at Indianapolis
 - g. For students satisfying the requirements for a secondary teaching certificate, no more than 29 credit hours of approved education courses
3. Grade Point Average
 - a. A minimum 2.0 cumulative grade point average in all course work
 - b. A minimum 2.0 grade point average in all major course work (journalism, telecommunications, and selected communication and culture), C– or better in each course
 - c. A minimum 2.0 grade point average in all course work for the second concentration, C– or better in each course
 - d. A grade of FX will be calculated as an F

Journalism Major Requirements

Students must complete a minimum of 30 credit hours of journalism courses with a grade of C– or better in each course from the following categories:

At Indianapolis, students are required to take J100 Computer Methods in Journalism in addition to the following required journalism courses:

1. Core courses, 18 credit hours:
 - J110 Foundations of Journalism and Mass Communication
 - J200 Reporting, Writing and Editing I
 - J201 Reporting, Writing and Editing II
 - J210 Visual Communication
 - J300 Communications Law
 - J410 The Media as Social Institutions
2. One course from the approved list of advanced skills courses, 3 credit hours:
 - J315 Feature Writing
 - J335 Retail and Direct Advertising
 - J341 Newspaper Reporting
 - J342 Magazine Reporting
 - J343 Broadcast News
 - J344 Photojournalism Reporting
 - J351 Newspaper Editing
 - J352 Magazine Editing
 - J354 Photojournalism Editing
 - J420 Advertising as Communication
 - J429 Public Relations Campaigns
 - J455 News Analysis and Opinion Writing
 - J463 Computerized Publication Design I
3. One course from the approved list of research courses, 3 credit hours:
 - J409 Media Management
 - J414 International News-Gathering Systems

- J423 Public Opinion
- J428 Public Relations Management
- J438 Problems in Advertising
- J450 History of Journalism
- J470 Broadcast Media Analysis

4. Journalism electives, 6 credit hours:

Courses may be selected from any other journalism courses open to undergraduates except JOUR 'C' courses and JOUR J492. Students may include other advanced skills and research courses in addition to the courses taken to satisfy the advanced skills and research course requirements above.

Students have the option of taking additional mass communications courses (journalism, telecommunications, and selected communication and culture), but no more than 36 credit hours total of mass communications courses may be counted in the total 123 credit hours required for the degree. The limit of 36 credit hours of mass communications courses may be increased to 39 credit hours if one of the courses includes J414, J438, J450, J470, or J475.

The grade point average of all journalism, telecommunications, and selected communication and culture courses must be at least a 2.0.

Transfer Credit in Journalism

In order to comply with accreditation standards set by the Accrediting Council on Education in Journalism and Mass Communications (ACEJMC), no more than 12 credit hours of communications courses from any other journalism program will be accepted for credit toward the 123 credit hours required for graduation.

All transfer communications courses must be evaluated by the associate dean in order to be accepted in fulfillment of requirements for the journalism major.

The Certificate in Journalism

The Certificate in Journalism is offered on both the Bloomington and Indianapolis campuses. See “The Certificate in Journalism” later in this section for details.

The Certificate in Public Relations

The Certificate in Public Relations is offered on the Indianapolis campus. See “The Certificate in Public Relations” later in this section for details.

The Indianapolis Campus Degree Requirements

See “Credit Hour and Grade Point Requirements”

Journalism Major Requirements

See “Journalism Major Requirements”

The Second Concentration

Students must complete a second concentration of at least 24 hours in an academic discipline outside of journalism and telecommunications. Students must earn a C– or better in each course and a grade point average of at least 2.0 in all courses taken for the second concentration. The selection of courses by the student should indicate evidence of a goal and must be approved by an academic advisor or faculty counselor. No more than 12 credit hours may be taken in professional skills courses outside the School of Liberal Arts and the School of Science.

Students may complete any of the certificates offered by the School of Liberal Arts for the second concentration requirement. Students completing certificates in other schools must obtain approval from an advisor for that school. Students must complete a minimum of 24 credit hours of courses approved for the certificate. The School of Journalism requires that students pursuing this option meet with an advisor of the department offering the certificate, obtain the advisor's signature on a planned program, and submit a copy of the program to the School of Journalism advisors.

With the approval of the dean of the School of Journalism, students have the option to complete a split-second concentration, incorporating two or more departments. Students must propose selected courses in consultation with their faculty counselor and complete a written explanation of the educational value or goal of their choice. The selection of courses should show evidence of a coherent body of knowledge. The faculty counselor must sign the application and submit it to the dean for final approval.

The Second Concentration in Business Foundations

Required courses:

Economics

- E201 Introduction to Microeconomics (S&H)
- E202 Introduction to Macroeconomics (S&H)

Business Foundations Core

- X100 Business Administration: Introduction
- F260 Personal Finance
- A200 Foundations of Accounting (May substitute A201 Introduction to Financial Accounting or A202 Introduction to Managerial Accounting)

Choice of courses from the following list to total 24 credit hours with the previous required courses:

- L203 Commercial Law I
- K201 The Computer in Business
- X204 Business Communications
- M300 Introduction to Marketing
- N300 Principles of Risk and Insurance
- R300 Principles of Real Estate

G300 Introduction to Managerial Economics
 D301 The International Business Environment
 L408 Real Estate Law

Students interested in earning a minor in business should consult with their advisor.

Following are additional conditions for the second concentration in specific areas:

Education—Secondary Teacher Certification

Courses are limited to those required for teacher certification. Students should be aware of limits on elective hours. The School of Journalism cooperates with the School of Education in preparing students to teach journalism in high school. Interested students should contact Deborah Perkins, Education/Social Work Building 4104, (317) 274-2776, e-mail: dperkins@iupui.edu

Fine Arts (Herron)

Twelve credit hours of art history or appreciation are required.

The Second Concentration in French

F203 Second-Year French I
 F204 Second-Year French II
 F300 Lectures et analyses littéraires
 F328 Advanced French Grammar and Composition
 F360 Introduction socio-culturelle à la France
 F495 Individual Readings in French
 Two elective courses from 300 or 400 levels

General Science

Selection of courses and departments must show evidence of guided study in one subject. Premedical and pre dental course work is allowed, as designated.

Languages

No 100-level courses are allowed.

Music

At least 14 credit hours of E, M, or Z courses are required. Applied music courses must be in private instruction in one instrument. No ensemble work may apply. Students should be aware of limits on elective hours.

Public and Environmental Affairs

Students must complete the official minor offered by SPEA and additional courses to total 24 credit hours. Students should be aware of limits on elective hours. No more than 12 credit hours of the following courses may apply:

E325	V346
E326	V348
E475	V372
H352	V442
H460	V449
K300	V461

Fundamental Skills

Students may test out of all but 3 credit hours of the fundamental skills requirement. Requirements completed in one area may, under certain conditions, also fulfill requirements in other areas.

Cross-listing policy: Courses used for English composition and 100-level fundamental skills foreign language may not be used to fulfill any other

requirement. Only math courses listed as both fundamental skills and natural and mathematical science may cross-list. One-hundred-level foreign language courses from departments that allow 100-level courses to fulfill major requirements may be applied to other appropriate requirements.

Writing (2 courses)

English Composition

Students may fulfill this requirement in any one of the following ways:

1. Exemption without credit. One of the following scores required: SAT Verbal 670 or above; ACT English 32 or above; or Advanced Placement English 4 or 5.
2. Exemption with credit. Scores required: English Composition Achievement Test 600 or above and one of the following: SAT Verbal 670 or above; ACT English 32 or above; or Advanced English Placement 4 or 5. Students must also apply for exemption with credit to the Department of English, Cavanaugh Hall Room 501, Indianapolis, IN 46202.
3. Completion of English W131 or English W140 with a grade of C– or better.

Advanced Composition

Students must complete, with a grade of C– or better, one advanced composition or intensive writing course at the 200 level or above after completing the English composition requirement. Courses that fulfill this requirement are listed in the appendix section “Indianapolis Course Lists—Approved Advanced Composition Courses by Departments” in this bulletin.

Mathematics (one course)

Students may satisfy this requirement in one of three ways:

1. Complete one course from mathematics M118*, M119, 151, 153, 163, or 221 with a grade of C– or better. Credit for these courses may count toward the 123 credit hours required for the degree.
2. Students with a mathematics SAT score of 650 or higher or a mathematics ACT score of 29 or higher are exempt from this requirement.

NOTE: Students who plan to transfer to Bloomington should take M118, M119, 163, or 221.

Foreign Language

Students must complete the study of a single foreign language through the second semester of the second year of college-level course work. All or part of this requirement may be fulfilled by performance on placement examinations. Students may fulfill the entire foreign language requirement by placing into the third-year level.

Students who have studied foreign language in high school should take the foreign language placement examination. Contact the Foreign Language Department for more information.

International Students

Students whose native language is not English may demonstrate required proficiency in their native language. They may not, however, earn credit for any course at the first- or second-year level in their native language.

Statistics

One course selected from: ECON 270, PSY B305, SOC R359, STAT 301, SPEA K300.

Distribution Requirements (12 courses)

Approved courses that will fulfill Arts and Humanities, Social and Historical Studies, and Natural and Mathematical Sciences are listed in the appendix section “Indianapolis Course Lists—Approved Distribution Courses by Departments” in this bulletin. Note: Students are advised to read carefully course descriptions in School of Liberal Arts and School of Science bulletins for prerequisites and conditions concerning awarding of credit. Distribution courses may be cross-listed to Culture Studies and Second Concentrations when they are included on these requirements’ approved lists.

To ensure a rich and varied general education, the School of Journalism requires students to complete the distribution requirements as follows:

U.S. History (one course)

Students may select from History H105, H106, A221, A301, A302, A303, A304, A347, or any history course listed within “United States History” course descriptions in the School of Liberal Arts Bulletin.

Political Science (one course)

Students may select from Political Science Y103, Y301, Y302, Y304, Y305, Y306, Y307, Y308, Y311, Y313, Y319, Y324, Y394, and approved topics for Y200.

Economics (one course)

Students may select from approved distribution courses in the School of Liberal Arts economics department. See the appendix section “Indianapolis Course Lists—Approved Distribution Courses by Departments” in this bulletin.

Literature or Fine Arts History or Appreciation (one course)

Literature courses must be devoted entirely to print literature. Fine arts (Herron) courses must be selected from courses with an “H” preceding the course number. Courses must be approved distribution courses in the School of Liberal Arts. See the Appendix section “Indianapolis Course Lists—Approved Distribution Courses by Departments” in this bulletin.

Arts and Humanities (two courses)

See the appendix section “Indianapolis Course Lists—Approved Distribution Courses by Departments” in this bulletin.

Social and Historical Studies (two courses)

See the appendix section “Indianapolis Course Lists—Approved Distribution Courses by Departments” in this bulletin.

*Math M118 is recommended for students who want to prepare for the required statistics course.

Natural and Mathematical Sciences (four courses)

See the appendix section "Indianapolis Course Lists—Approved Distribution Courses by Departments" in this bulletin. At least two courses must come from the same department. Students are advised to read all course descriptions in the School of Liberal Arts and School of Science bulletins regarding awarding of credit.

Culture Studies

Students must observe the following guidelines in fulfilling the culture studies requirement:

1. Students are required to complete three approved courses for the culture studies requirement.
2. Students must complete one of the three courses from list A.
3. Students must take another course, either from list A or from list B.
4. Students must complete a **third** course from list C. See the appendix section "Indianapolis Course Lists—Approved Culture Studies Courses by Departments" in this bulletin.
5. Students who successfully complete an academic year abroad in a program sponsored by the Indiana University Office of Overseas Study will partially satisfy the culture studies requirement of one course from List A and a second course from List A or B through the course work they will take on the year-long program. Students participating in academic year-long programs sponsored by other universities may petition for a similar exception, providing materials from courses taken and evidence of the general cultural emphasis of the program.

Approved Courses Outside the School of Journalism

Students must complete a minimum of 98 credit hours offered by the School of Liberal Arts and the School of Science and the School of Journalism. School of Music courses in history, literature, composition, appreciation, and theory of music may be counted among the 98 credit hours.

Students may select the remaining 25 credit hours in the School of Liberal Arts and the School of Science, or from the list of approved courses below. Students also have the option of including in these 25 credit hours up to 15 credit hours from the list of approved courses below and 10 credit hours of courses from any other degree-granting units of the university. The school will not accept engineering, technology, restaurant and hotel management, or self-acquired competency credit.

Students satisfying requirements for a teaching certificate may take a maximum of 29 credit hours outside the School of Journalism, the School of Liberal Arts, or the School of Science in Indianapolis, if the courses selected are from the School of Education section in the list below.

Kelley School of Business

Business G330 Principles of Urban Economics may be counted among the 65 credit hours within the College of Arts and Sciences.

- A200 Foundations of Accounting (Nonmajors) or A201-A202 Introduction to Accounting I-II
- F301 Financial Management
- G406 Business Enterprise and Public Policy
- G460 Business in Its Historical and Social Settings
- J401 Administrative Policy
- K201 The Computer in Business
- L201 Legal Environment of Business or L203 Commercial Law I
- L405 The Corporation in America Today
- M300 Introduction to Marketing or M301 Introduction to Marketing Management
- M411 Transportation Carrier Management
- P301 Operations Management
- Z300 Organizational Behavior and Leadership or Z302 Managing and Behavior in Organizations

School of Education

- M201 Laboratory Field Experience
- M300 Teaching in a Pluralistic Society
- M314 General Methods in Senior High/Junior High/Middle School Education
- M457 Methods of Teaching Senior High/Junior High/Middle School Subjects (one course to be taken in each major area)
- M480 Student Teaching
- P254 Educational Psychology for Teachers at All Grades
- P255 Educational Psychology for Senior High/Junior High/Middle School Teachers

School of Physical Education

- D332 Dance and the Allied Arts II
- P397 Kinesiology

School of Library and Information Science

- L504 Information Sources and Services
- L508 Principles of Library Collection Building
- L510 Organization of Materials and Information I
- L533 Library Materials for Children and Young Adults
- L553 School Library Media Center
- L596 Library Practice Work

School of Public and Environmental Affairs

- E200 Environment and People
- E300 Introduction to Environmental Sciences
- E400 Topics in Environmental Studies
- H316 Introduction to Environmental Health Management Orientation
- V170 Introduction to Public Affairs
- V264 Urban Structure and Policy
- V366 Managing Human Resources
- V376 Law and Public Policy Issues in America I
- V447 Federal Budget Policy
- V450 Contemporary Issues in Public Affairs

Military Science

- G301 Basic Leadership Training
- G302 Advanced Military Subjects
- G401 Advanced Leadership Theory
- G402 Officer Preparation and Development

Program Planning and Counseling Guidelines

The Student's Responsibility

Students are responsible for planning their programs and meeting all graduation requirements. Students should be thoroughly familiar with all sections in this bulletin regarding admission, degree requirements, major requirements, course requirements, academic regulations, and academic standing. Students are also responsible for policy information and meeting all deadlines as published in the *Schedule of Classes* and for keeping their local and permanent addresses up to date with the Office of the Registrar. Faculty advisors, academic counselors, and the recorder can assist students in planning their programs and explain requirements and policies. Students also have access to the computerized degree-audit system in the advising section of insite.indiana.edu.

Advising

The School of Journalism assigns each journalism major a faculty advisor. Students are encouraged to meet with their faculty advisor as necessary to discuss academic and career planning. In addition, professional staff are available every day for advising.

Indianapolis

Deborah Perkins, Assistant to the Dean, Education-Social Work 4103, (317) 274-2776, e-mail: dperkins@iupui.edu

Journalism majors are required to meet with their faculty advisor prior to each registration. For this purpose, the school administers an advising process each semester. During this advising period, journalism majors may preregister in journalism courses for the next semester.

Advising for registration in fall courses usually occurs in March and for registration in spring courses in October. In these advising conferences students should, as a minimum objective, make certain that they understand the requirements for successful completion of the area requirements and that they have made an appropriate plan for the coming semester.

Access to Journalism Courses at Indianapolis

All journalism courses are open to nonmajors. Nonmajors should have completed appropriate prerequisites for advanced courses or have obtained permission from the instructor.

The Certificate in Journalism

Students in good academic standing at Indiana University who are not majoring in journalism,

telecommunications, sports communication program—broadcast emphasis, or any other major or program that requires a substantial number of mass communications courses are eligible to apply to the certificate program. Students must file an application with the School of Journalism.

To be considered for admission, students must have completed 26 credit hours with a minimum 2.2 cumulative grade point average (FX will be calculated as F), including:

- J110 Foundations of Journalism and Mass Communication with a grade of C– or better
- English Composition with a grade of C– or better or exemption
- One semester of a foreign language
- One fundamental skills mathematics course or exemption.

Students wishing to be admitted to the certificate program are expected to have computer literacy, but there is no course or competency exam required for admission. Those who cannot demonstrate competency with word processing may be required to take a jump-start course before advancing in JOUR J200 or J210.

Required courses

1. Core courses, 21 credit hours:
 - J100 Computer Methods for Journalism
 - J110 Foundations of Journalism and Mass Communication
 - J200 Reporting, Writing and Editing I
 - J201 Reporting, Writing and Editing II
 - J210 Visual Communication
 - J300 Communications Law
 - J410 The Media as Social Institutions
2. One course from the approved list of advanced skills courses, 3 credit hours:
 - J315 Feature Writing
 - J335 Retail and Direct Advertising
 - J341 Newspaper Reporting
 - J342 Magazine Reporting
 - J343 Broadcast News
 - J344 Photojournalism Reporting
 - J351 Newspaper Editing
 - J352 Magazine Editing
 - J354 Photojournalism Editing
 - J420 Advertising as Communication
 - J429 Public Relations Campaigns
 - J455 News Analysis and Opinion Writing
 - J463 Computerized Publication Design I
3. One 3 credit hour elective, selected from journalism, or a College of Arts and Sciences (Bloomington), School of Liberal Arts, or School of Science (Indianapolis) advanced composition or statistics course.

The Certificate in Public Relations

Indianapolis Campus

The Certificate in Public Relations serves students not majoring in journalism by providing a coherent program of study. This certificate also provides the student's current or prospective employer with tangible evidence of a student's training in public relations. The certificate program is of interest to students in a wide variety of fields.

The Certificate in Public Relations is also beneficial to working professionals who are either currently in the public relations field or are considering a career change to public relations and desire formal credentials.

Students in good academic standing at Indiana University's Indianapolis campus, who are not majoring in journalism or telecommunications, are eligible to apply to the certificate program. Students must file an application with the School of Journalism.

To be considered for admission, students must have completed 26 credit hours with a minimum 2.2 cumulative grade point average (FX will be calculated as F), including:

- J110 Foundations of Journalism and Mass Communication (with a grade of C– or better)
- English Composition (with a grade of C– or better or exemption)
- One fundamental skills mathematics course or exemption (M118 recommended)

Required courses for the certificate include:

- J100 Computer Methods for Journalism
- J110 Foundations of Journalism and Mass Communication
- J200 Reporting, Writing and Editing I
- J201 Reporting, Writing and Editing II
- J210 Visual Communication
- J219 Introduction to Public Relations
- J300 Communications Law
- J410 Media as Social Institutions

In addition, *two* of the following three courses must be taken:

- J428 Public Relations Management
- J429 Public Relations Campaigns
- J460 Research Skills in Public Relations

Academic Regulations

Absences from Final Examinations

Students are required to adhere to the policies regarding final examinations as published in the *Schedule of Classes*.

Absences from Scheduled Classes

Illness is usually the only acceptable excuse for absence from class. Other absences must be explained to the satisfaction of the instructor, who will decide whether omitted work may be made up.

Addition of Courses

No course may be added by an undergraduate student after the first week of a semester or a summer session unless the instructor of the course approves and the request is approved by both the chairperson of the department in which the course is offered and the dean.

Change of Grade

Requests for a change of grade must be made no later than the last day of classes of the next regular semester.

Confidentiality of Records

Indiana University, in compliance with the General Education Provisions Act, Section 438, titled Family Educational Rights and Privacy Act, and the university's Policy on Access to Institutional Data, provides that all student records are confidential and available only to eligible employees of the university for use in the conduct of university business (as determined by data stewards), the student, and the parents, if the student is under 21 and dependent as defined by IRS standards. Students may review their records upon request and may ask for deletions or corrections of the record in a hearing process described in detail in the *Code of Student Rights, Responsibilities, and Conduct*, distributed at fall registration or available in Bloomington at the Office of Student Ethics, Assistant Dean of Students Annex, or the School of Journalism office, Education–Social Work 4104 in Indianapolis.

References, recommendations, and other similar documents may carry a voluntary waiver relinquishing the student's right to review this specific material. The student may also release the record to others by signing a written release available in the offices that maintain records. Further details regarding the provisions of the Privacy Act and a list of offices where student records are kept may be found in the *Code of Student Rights, Responsibilities, and Conduct*.

Correspondence Courses

With the approval of an academic advisor, students may take a limit of two Independent Study university courses offered through the School of Continuing Studies for the B.A.J. degree.

Credit by Examination

The school will apply credit earned by departmental examination, College Board Achievement Placement Tests, College Board Advanced Placement Tests, and language placement tests offered by the Bureau of Evaluative Standards and Testing toward appropriate degree requirements. Such credit must be entered on the student's transcript. At Indianapolis, students wishing special language credits through the credentialing process must file an application for special credit and pay a fee or charge per credit for additional credits. Indianapolis students should contact the Foreign Language Office, (317) 274-2817, for complete information.

Degree Applications

Candidates for the B.A.J. must file an application for a degree in the school recorder's office, Ernie Pyle Hall 200B at Bloomington or Education–Social Work 4104 at Indianapolis. Deadlines to apply: June 1 for May graduation; December 1 for June or August graduation; February 1 for December graduation.

Candidates must have all credits on record at least six weeks prior to the conferring of degrees, except for credits of the current semester.

Dual Bachelor's Degree

In certain cases the dean may permit undergraduate students who have not yet completed a first bachelor's degree to complete a second bachelor's degree. Such students must complete all requirements for the B.A.J. and the second degree. Students with a bachelor's

degree should consider applying for admission to a graduate program.

Exceptions to Degree Requirements

Requests for deviation from school requirements may be granted only by written approval from the dean of the school (or the dean's administrative representative).

Incomplete Courses

A grade of Incomplete (I) may be given only when the work of the course is substantially completed and when the student's work is of passing quality. All incomplete (I) grades must be removed within the time specified by the instructor of the course or they will automatically change to an F one calendar year after the end of the semester/session the grade of I was given. It is the student's responsibility to obtain from the instructor the requirements and deadline for the removal of the incomplete. Students who receive a grade of I should not register for the course a second time.

Language Placement for International Students

Students whose native language is not English may demonstrate required proficiency in their language. Students are required to take a proficiency exam from the department of their native language. Students must place at or above the fifth semester. They cannot earn credit for courses at the first- or second-year level in their native language.

Pass/Fail Option

Students in good academic standing may take up to eight elective courses, maximum two courses per academic year, for a grade of P (pass) or F (fail). No courses used to fulfill major requirements, second concentration, fundamental skills, distribution, or culture studies requirements may be taken under the Pass/Fail option.

During the freshman year, students may take two HPER "E" classes under the Pass/Fail option in addition to the two other courses permitted.

Students must meet the deadlines to enroll in courses under the Pass/Fail option as listed each semester in the *Schedule of Classes*. A grade of P is not calculated in the grade point average; a grade of F is calculated in the grade point average. A grade of P cannot be changed subsequently to any other letter grade.

Public Information

Upon request, certain information is made available to the public by the Office of the Registrar: Bloomington, Franklin 100, tel. (812) 855-0121; Indianapolis, Cavanaugh Hall 133, (317) 274-1501.

Release of Information in Student Records

An implicit and justifiable assumption of trust is placed in the School of Journalism as custodian of personal data submitted by students entering the school or generated during their enrollment. This mutual relationship of trust between the school and the individual student requires that such data be held in confidence. More information on the confidentiality

and access to student records appears in the front portion of the bulletin.

Statute of Limitations

BLOOMINGTON

Course work for the B.A.J. degree must be completed within eight years from the time the student first registers in the university. Students who do not meet this requirement must apply in writing to the dean to have their programs updated to meet the degree requirements currently in effect.

INDIANAPOLIS

Permission must be obtained from the office of the associate dean to use any course that was completed 10 or more years previously as credit toward the B.A.J. degree.

Withdrawal from Courses

The school permits withdrawal from courses with the automatic grade of Withdrawn (W) within the deadlines of the current campus as published in the *Schedule of Classes*.

Petitions for withdrawal after the periods specified in the *Schedule of Classes* will be considered by the dean only for urgent reasons related to extended illness or equivalent distress. Documentation of extended illness or equivalent distress will be required.

If students withdraw with the dean's consent, their mark in the course shall be W if they are passing at the time of withdrawal and F if they are not passing. The grade will be recorded on the date of withdrawal. Failure to complete a course without authorized withdrawal will result in the grade F.

Academic Standing of Candidates for the Bachelor of Arts in Journalism Degree

Degrees Awarded with Distinction

The school recognizes outstanding performance in course work by awarding the Bachelor of Arts in Journalism degree with three levels of distinction: Distinction, High Distinction, and Highest Distinction depending upon the student's cumulative grade point average. Students must have a minimum of 60 graded credit hours at Indiana University to be considered for distinction degrees. No more than 10 percent of the graduating class may receive distinction.

FX Policy

The School of Journalism will calculate FX grades as F's for internal purposes and degree requirements. This calculation will apply to all categories of academic standing: good, probation and dismissal, class rank, and all grade point average requirements in the degree, including cumulative, semester, major, and second concentration.

A student may use the FX option for purposes of the university transcript. An undergraduate student who has repeated a course previously failed may request to have only the last grade in that course counted in the

student's grade point average as entered on the student's transcript. A student may exercise this FX option for no more than three courses, totaling no more than 10 credit hours. A student may use the FX option on the transcript only once for a given course. Requests for approval of FX courses should be made to the school's recorder.

Good Standing

Students are considered to be candidates in good standing for an Indiana University bachelor's degree when they have been regularly admitted by the Office of Admissions; when their academic grade point average is not less than a 2.0 (C) for the last semester's work; and when their cumulative grade point average is at least 2.0 (C).

Students' eligibility to continue as journalism majors is subject to a periodic review of their progress toward a degree.

Academic Probation

Students are on academic probation when any one or more of the following conditions occur:

1. Students are on academic probation when their cumulative grade point average is below 2.0 (C).
2. Students are on academic probation for the duration of the regular semester following one in which they failed to attain a 2.0 (C) grade point average.
3. Students are on academic probation when they receive a D+ or less in any one journalism, telecommunications, or selected communication and culture course.

Students on academic probation must comply with such restrictions as the Office of the Dean of Students or the Dean of the School of Journalism may deem necessary.

Dismissal

Students are dismissed from the school when, in the judgment of the dean, they have ceased to make progress toward their degree. When students have failed to attain a 2.0 (C) grade point average in any two semesters and when their cumulative grade point average is below 2.0 (C); or they have received a D+ or less in two or more journalism, telecommunications, or selected communication and culture courses, they are automatically considered to be making insufficient progress toward their degree.

Students whose record reveals failing or near-failing performance or lack of clear progress in any semester, regardless of their previous cumulative grade point average, or whose cumulative grade point average falls below 2.0 (C) are always carefully evaluated with a possibility of dismissal.

Re-admission

The dean considers petitions for re-admission from students who have been dismissed. A student dismissed for the first time may petition for re-admission to any division of the university.

Students dismissed for the first time may petition to the School of Journalism for re-admission within the deadlines stated in the dismissal letter. Students dismissed for the second time may not be admitted for the next regular semester but are eligible to submit a

petition for re-admission after a period of at least one regular semester.

To ensure that petitions for re-admission after a second dismissal are considered by the dean, students eligible to submit them must do so before August 1 for fall semester, December 1 for spring semester, and April 15 for summer sessions.

Academic Dishonesty

Indiana University and the School of Journalism expect that students will follow the fundamental principles of academic and professional integrity in the pursuit of learning and of professional practice. Academic and professional integrity requires that students take credit for their own work and ideas only. Violation of these principles is considered an act of academic dishonesty.

Academic dishonesty is defined in *Code of Student Rights, Responsibilities, and Conduct*, the student handbook given to all Indiana University students. The School of Journalism strictly follows the handbook's guidelines and the Policy on Academic Dishonesty printed each semester in the Bloomington *Schedule of Classes*.

Course Descriptions

Graduate Courses

The following graduate-level courses are open to seniors and count for undergraduate credit toward the major:

- J501 Public Affairs Reporting
- J520 Seminar: Visual Communication
- J551 Seminar: Reporting the Law
- J552 Seminar: Reporting the Arts
- J553 Education and Media
- J554 Seminar: Science Writing
- J556 Seminar: Urban Affairs Reporting

Undergraduate Courses

C190 Perspectives on Communication (1 cr.)

Students are introduced to college learning within a journalism and mass communications environment. Classroom instruction, library activities, and projects are designed to introduce technology and information resources, develop teamwork, and sharpen analytical and evaluative skills. Topics include career planning, study techniques, time management, data collection, and presentations.

C201 Topics in Journalism (3 cr.) Topical course dealing with changing subjects and material from semester to semester. May be repeated once for credit with a different topic. **Will not count toward journalism major requirements.**

C300 The Citizen and the News (3 cr.) A study of the institutions that produce news and information about public affairs for the citizen of American mass society. The problems about the selection of what is communicated. Case studies. International comparisons. **Will not count toward journalism major requirements.**

C327 Writing for Publication (3 cr.) A workshop for nonmajors to improve writing skills and learn basic requirements of writing for publication. Instruction in market analysis and interpreting specific editorial requirements, in gathering and

researching background materials, and in preparing manuscripts. Examination of various types and styles of published writing. **Will not count toward journalism major requirements.**

J100 Computer Methods for Journalism (3 cr.)

An introduction to computing uses in journalism. Hands-on experience with computer software packages commonly used in journalistic research and expression. Experience with using the Internet, Nexis/Lexis, and other library resources for research. This course is for students on the Indianapolis campus only. Bloomington students take SLIS L155 Information Resources in Journalism.

J110 Foundations of Journalism and Mass Communication (3 cr.) Survey of the institutions of journalism and mass communication, their philosophical foundations, history, processes, economic realities, and effects. I Sem., II Sem.

J200 Reporting, Writing, and Editing I (3 cr.)

P: W131 or its equivalent and fundamental computer skills. P or C: SLIS L155 in Bloomington, J100 in Indianapolis. Working seminar stressing the creation of journalistic stories for diverse audiences. Students will learn to develop story ideas, gather information, combine visual and verbal messages, and to write and edit news.

J201 Reporting, Writing, and Editing II (3 cr.)

P: J200. Working seminar focused on the strengthening of basic journalism skills, including in-depth reporting, editing, and multimedia presentations. Creativity, cooperation, and critical thinking are used to shape effective messages for diverse audiences.

J210 Visual Communication (3 cr.) Theories of visual communications including human perception, psychology of color, and principles of design. Application of those theories to photography, video, and graphic design in news communication. I Sem., II Sem., SS.

J219 Introduction to Public Relations (3 cr.)

Provides an overview of public relations and introduces theory and practice of the field. Topics include the relationship between public relations and marketing, the history and development of public relations, media relations, measurement and assessment methods, ethics, and law.

J300 Communications Law (3 cr.) P: sophomore standing. History and philosophy of laws pertaining to free press and free speech. Censorship, libel, contempt, obscenity, right of privacy, copyright, government regulations, and business law affecting media operations. Stresses responsibilities and freedoms in a democratic communications system. I Sem., II Sem., SS.

J315 Feature Writing (3 cr.)

P: J200, J201, J210. Emphasis on developing story ideas, identifying sources, organizing materials, planning and outlining the story. Techniques for capturing the reader's interest.

J320 Principles of Creative Advertising (3 cr.)

Analysis of strategy employed in developing creative advertising, with emphasis on role of the copywriter. Research, media, legal aspects, ethical standards as they apply to the copywriting functions. Place of the

creative function within the advertising agency and the retail business. I Sem., II Sem.

J321 Integrated Marketing Communications (3 cr.)

Students are introduced to the creative integration of advertising and public relations as a mass media campaign tool. Topics include the role of integrated communications in marketing and media, an examination of current practice, and the creative process of a campaign, including planning strategies and media characteristics.

J335 Retail and Direct Advertising (3 cr.)

P: J200, J201, J210, J320. Role of advertising in retail and service establishments. Forms of retail and direct media advertising, including production and distribution. Procedures, requirements, and techniques of newspaper advertising departments and broadcast stations; in-store promotions; budgeting; evaluation.

J337 Media Economics (3 cr.) This course explores how economic forces influence production of media content, particularly at U.S. organizations. It examines basic economic concepts, such as market and competition, as they relate to commercial media organizations. Special attention is paid to the effect of advertising and market considerations on news decision making.

J341 Newspaper Reporting (3 cr.)

P: J200, J201, J210. Techniques of gathering, analyzing, and writing news and features for newspapers. Practice in interviewing, observation, and use of documentary references that include computer information retrieval and analysis skills. I Sem., II Sem.

J342 Magazine Reporting (3 cr.)

P: J200, J201, J210. Techniques of gathering, analyzing, and writing material for specialized and general circulation magazines. Practice in interviewing, observation, and use of documentary references that include computer information retrieval and analysis skills. I Sem., II Sem.

J343 Broadcast News (3 cr.)

P: J200, J201, J210. Techniques of gathering, analyzing, and writing news and features for broadcast. Practice in interviewing, observation, and use of documentary references that include computer information retrieval and analysis skills. I Sem., II Sem.

J344 Photojournalism Reporting (3 cr.)

P: J200, J201, J210. This is an introductory photojournalism course focusing on the basics of light, camera operation, and the use of chemical and digital darkrooms. It includes instruction in spot news and feature photography as well as instruction in ethics, privacy, and law.

J351 Newspaper Editing (3 cr.)

P: J200, J201, J210. Workshop in fundamentals of editing newspapers, including both individual and team projects. Emphasis on news judgment, fairness, accuracy, editorial balance, and language usage. Practice in writing news summaries, editing copy, writing headlines, laying out pages, and using computer editing technology. I Sem., II Sem.

J352 Magazine Editing (3 cr.)

P: J200, J201, J210. Workshop in fundamentals of editing specialized and general interest publications. Individual and team

functions are stressed. Attention is given to editorial voice and judgment, fairness, accuracy, and language usage. Practice in writing headlines and titles, layout, design, and use of computer editing technology. I Sem., II Sem.

J353 Advanced Broadcast News (3 cr.) P: J200, J343. Continuing workshop in reporting, writing, and editing for broadcast. Individual and team functions are stressed. Emphasis on news judgment, fairness, accuracy, editorial balance, and language usage. Practice in editing copy, audio, and video tape. I Sem., II Sem.

J354 Photojournalism Editing (3 cr.) P: J344, or permission of the instructor. Workshop on the role and function of the print media picture editor. Theory and practice of picture editing skills including assigning, selecting, cropping, writing captions and blurbs, producing informational graphics, designing photo pages, editing by computer, and managing.

J385 Television News (3 cr.) P: J343 and J353, or consent of instructor. Preparation and presentation of news for television. Practice in writing, reporting, filming, and editing news for TV. TV writing problems; use of photographs, film, and videotape; problems of sound in TV news; ethical problems of the TV film reporter and editor.

J390 Corporate Publication (3 cr.) A comprehensive survey of corporate publications from newsletters to corporate magazines, tabloids, and annual reports with an emphasis on layout and design. Includes refreshing writing skills with review on interviewing and editing.

J401 Depth Reporting and Editing (3 cr.) P: one 300-level reporting course and one 300-level editing course. Study and practice in using techniques of social science and traditional methods of investigative reporting. Class will plan, write, and edit news stories in depth.

J407 Newsgathering and the Law (3 cr.) Students study the law relating to the content of news media and the processes by which that content is created. Discussion includes the legal issues triggered by story framing, selection of sources, interviewing, photography, and access to information. The course involves reading and research using primary legal materials.

J409 Media Management (3 cr.) Research seminar that examines techniques and processes used in managing media organizations. Through discussions, case analysis, and group projects, the course explores organizational missions and social responsibilities, market analysis techniques, personnel management issues, and budgeting.

J410 The Media as Social Institutions (3 cr.) P: J300, senior standing. Examination of the functions and impact of the mass media in society with primary focus on the United States. Discussion of the values of media organizations and the professional and ethical values of journalists. Critical analysis of the relationship of the media and society and the

effect of political, economic, and cultural factors on the operation of the media. I Sem., II Sem., SS.

J414 International News-Gathering Systems (3 cr.) Structure and function of international communication systems and barrier to flow of information among nations. Emphasis on gathering and disseminating information around the world. Study of the major newspapers of the world, international news agencies, and international broadcasting and satellite networks.

J415 Literary Journalism (3 cr.) A study of literary forms and techniques used in journalism. Topics to be considered include formal considerations such as voice and structure, reporting methods, and ethical issues. Students will supplement reading with writing experimental pieces of their own.

J420 Advertising as Communication (3 cr.) P: J200, J201, J210, J320. Lectures and practice in copywriting, graphics, layout, and production. Incorporates psychological, social, legal, and marketing aspects of creativity for mass media. I Sem., II Sem.

J423 Public Opinion (3 cr.) Behavioral study of nature, operation, molding, and influence of public opinion, with practice in its measurement and evaluation. Discussion of major political, social, economic, and cultural problems.

J425 Supervision of School Publications (3 cr.) P: 12 credit hours of journalism. Lectures and discussion on designing, producing, and financing school newspapers, magazines, and yearbooks. Management of school news bureau. I Sem.

J427 Public Relations in a Democratic Society (3 cr.) Lectures and discussion on dissemination of public information by industry and institutions. Examination of procedures and policies and evaluation of public relations efforts. Contrasts public relations practices in America with those in other nations and cultures. I Sem., II Sem.

J428 Public Relations Management (3 cr.) P: J319 or J427. Theories and principles relevant to public relations practices in agency, corporate and nonprofit organizations, including development of goals and objectives, client relationships, budgets, and research methods.

J429 Public Relations Campaigns (3 cr.) P: J319 or J427. Development and execution of a public relations campaign for a nonprofit organization. Public relations theory and in-depth case study analysis.

J431 Public Relations for Nonprofits (3 cr.) This seminar focuses on how a nonprofit organization creates images and how it shapes its programs and goals to gain public support. Assignments and readings are designed to foster a practical understanding of promotional techniques and campaigns using journalistic and other media.

J438 Problems in Advertising (3 cr.) P: J320, permission of the instructor. Seminar on current

developments and problems concerning advertising as an economic and social force. Stresses independent investigation on topics such as politics and advertising and advertising and public taste.

J444 Advanced Photojournalism (3 cr.) P: J344. Advanced techniques of reporting and interpreting news with photography. Practice in news, sports, features, photographic essays, color photography, electronic imaging, and studio illustration.

J450 History of Journalism (3 cr.) American social-intellectual history integrated with the story of news media development, emphasizing the historical relationship of the mass media to American social, economic, and cultural patterns and developments. Origin, growth, shortcomings, and achievements of media. Impact of society on the media and vice versa.

J455 News Analysis and Opinion Writing (3 cr.) P: J200, J201, J210. Techniques for understanding, analyzing, and reporting on complex events and issues. Development and refinement of skills and techniques for writing news analysis, editorials, and opinion articles.

J460 Topics Colloquium (1-3 cr.) P: junior or senior standing. Topical seminar dealing with changing subjects and material from semester to semester. May be repeated once for credit with a different topic.

J463 Computerized Publication Design I (3 cr.) P: J200, J201, J210. This publishing design course incorporates typesetting, electronic photo editing, graphics, and page design. Students are instructed in design theory, computer publishing skills, and creative problem solving.

J465 Computerized Publication Design II (3 cr.) P: J463. This publishing design course incorporates typesetting, electronic photo editing, graphics, and page design. Students are instructed in design theory, computer publishing skills, and creative problem solving.

J470 Broadcast Media Analysis (3 cr.) Seminar on problems of communicating news through aural and visual channels. Application of communications theory to broadcast news and public affairs presentations. Study of effects of format, verbal content, nonverbal content, and presenter on communications process.

J475 Race, Gender, and the Media (3 cr.) Survey and analysis of how news and entertainment media represent issues of race and gender. History of women and people of color as media professionals and media consumers. Discussion of contemporary problems and potential solutions.

J492 Media Internship (S/F grading) (1 cr.) P: prior approval of faculty member; journalism majors only. Supervised professional experience in communications media. Does not contribute to 30 credit hours of required course work in journalism major, but will count toward 36 credit hours maximum allowed in journalism and telecommunications. May be repeated, but a student

may take no more than 3 credit hours total of internship credit for the B.A.J. degree, either through journalism or any other academic unit.

J493 Journalism: Off-Campus Registration (0 cr.) This noncredit course is for journalism students studying off campus temporarily as part of the Bachelor of Arts in Journalism degree program.

J496 Foreign Study in Journalism (3-8 cr.)
P: consent of the dean of the School of Journalism. Planning of research project during year preceding summer abroad. Time spent in research abroad must amount to at least one week for each credit hour granted. Research paper must be presented by end of semester following foreign study. I Sem., II Sem., SS.

J499 Honors Research in Journalism (1-3 cr.)
Opportunity for independent reading, research, and experimentation on relevant issues in mass communications. Work with faculty member on individual basis. I Sem., II Sem., SS.

School of Law— Indianapolis

Located in the dynamic heart of Indiana, the Indiana University School of Law—Indianapolis operates in synergy with government, business, and the community to foster an environment where education flourishes. Founded as the Indiana Law School in 1894, the school has today emerged as a premier educational institution.

At its inception, the school's purpose was to provide a place where those individuals who were engaged in building Indiana's vibrant, young state capital could seek out the kind of quality legal education otherwise unavailable without great travel and expense. That same vision of excellence remains at the core of the law school today.

Opportunity

The IU School of Law—Indianapolis prepares students for a wide range of diverse and exciting careers. From practicing law to managing corporations, graduates of the law school excel not only in Indiana, but also across the country and around the world. Law school alumni have served in the highest offices in government, including the U.S. Vice Presidency, the Senate, and the House of Representatives.

The Indianapolis legal and business communities offer opportunities for connections that no other law school in the state can provide. Many of the school's adjunct professors come from some of the most prestigious law firms in the state. Additionally, an attorney-student mentor program allows students to meet a variety of area attorneys, judges, and business and government leaders in an informal setting.

Internships are available in a vast array of institutions, including banks, corporations, and government offices. Many internships also are available with local, state, and federal courts. Because of its location in an urban setting, the school is able to offer clinical programs designed to complement traditional legal education with experience beyond the classroom. With faculty supervision, students represent real clients in actual cases before Indiana courts through the Criminal Defense, Civil Practice, and Disability Clinics.

Faculty and Curriculum

Faculty members hold Doctor of Jurisprudence, master's and doctoral degrees from nearly 50 different schools, offering students extensive and diverse views on the law and its career possibilities. Assembled from across the country, the faculty has distinguished itself with a wide variety of scholarly publications related to state, national, and international legal matters.

Relevant to the needs of today's law students, the school's curriculum is traditional in philosophy, yet flexible in content and structure. The curriculum offers numerous elective courses in addition to the basic core of introductory courses in civil procedure,

contracts, criminal law, property, torts, and legal research and writing.

A student may pursue a J.D. degree on a full-time basis in the school's day division or on a part-time basis through the evening program. Typically, a full-time student will complete the 90 required hours within three years, while a part-time student will do so within four years.

Joint Degree Programs

Joint degree programs are offered in cooperation with the IU School of Business, the School of Public and Environmental Affairs, and the Department of Public Health within the IU School of Medicine. These include:

- J.D. and Master of Business Administration
- J.D. and Master of Public Affairs
- J.D. and Master of Public Health
- J.D. and Master of Science in Health Administration

Research Centers and International Programs

The school's Center for Law and Health is one of the few law school programs in the country offering interdisciplinary opportunities for students of law and the health care industry. The center, which serves as an information resource on health care issues for the law and medical community, also provides students with an avenue for researching health law reform issues facing Indiana and the nation.

The Program on Law and State Government enhances the ties between the academic community and state government offices, providing a means of exchange of ideas on issues facing state governments, as well as creating opportunities for internships for students within Indiana state government.

The Program in International Human Rights Law is designed to promote legal study and scholarship in international human rights and to facilitate the placement of students as legal interns at international human rights organizations in this country and overseas. Since 1997, the program has coordinated 42 student placements in 33 countries.

The China Summer Program at Renmin (People's) University of China School of Law in Beijing includes comparative aspects of Chinese and American law and features trips to local courts and nearby points of interest.

The Program in European Law, offered in Lille, France, at the Université de Lille II, includes course work in European Union law, English law, and continental legal systems. Students participate in field trips to legal institutions in four countries.

Additionally, the school's LL.M. Program in American Law for Foreign Lawyers provides attorneys from other countries with an opportunity to learn about law and legal institutions in the United States. The program, established in 2002, further enhances the school's ties to the international community.

Student Programs

The school's two law reviews, the *Indiana Law Review* and the *Indiana International and Comparative Law Review*, provide invaluable opportunities for training in the analysis of legal problems and presentation of legal issues.

The Moot Court Program encourages the development of skills in oral advocacy. The Order of Barristers is composed of the best students in the program, and its members serve on regional and national teams, where they have achieved prominence in competitions.

The school also sponsors a variety of student organizations that focus on a number of discrete legal areas of interest to students. Additionally, the school invites a number of distinguished and well-known speakers to the school. Students hear lectures by legal scholars, historians, distinguished practicing attorneys, and jurists from around the country.

Campus Visits and Additional Information

We encourage you to visit us and meet with our staff and students. To arrange for a visit or request an application, please write or call our Admissions Office, IU School of Law—Indianapolis, 530 W. New York Street, Indianapolis, IN, 46202-3225; telephone (317) 274-2459; or e-mail khmiller@iupui.edu. Web: indylaw.indiana.edu. We look forward to hearing from you.

School of Liberal Arts

A liberal arts education begins with the premise that one's world and one's self are at the core of the pursuit of knowledge. It leads to viewing the world from more than one perspective and learning something about its social, cultural, intellectual, and spiritual dimensions. Those different perspectives within the liberal arts encompass two major groups of academic disciplines: the humanities, which explore the history and experience of human culture, and the social sciences, which examine the social and material foundations of human life. Regardless of the perspective, the focus in the liberal arts is on knowledge itself, on both its substance and the tools for pursuing it, on what is known and what is worth knowing. Skills for acquiring and generating knowledge, as well as the preservation of knowledge, are enfolded within the School of Liberal Arts curriculum.

Liberal arts graduates are expected to read and listen effectively, to speak and write clearly and persuasively. They learn how to think critically and creatively. As perceptive analysts of what they read, see, and hear, liberal arts students are expected to be able to reason carefully and correctly and to recognize the legitimacy of intuition when reason and evidence prove insufficient. They learn to use various analytical tools, such as mathematics and statistics, to enable them to undertake quantitative analysis when such a strategy is appropriate.

Furthermore, students in the liberal arts, by developing communication skills in both English and at least one foreign language, equip themselves to communicate with others within their own culture and different cultures. This ability to communicate requires insights into diverse patterns of thought and modes of expression. Such insights allow students to identify universal, as well as unique, aspects of their culture, their community, and themselves.

Students in the liberal arts spend a substantial amount of time studying local and international human communities. Students cultivate an informed sensitivity to global and environmental issues by exploring the range of social, geographic, economic, political, religious, and cultural realities influencing world events.

Liberal arts students do not limit their studies to the here and now. A liberal arts education requires the development of a historical consciousness, so that students can view the present within the context of the past, can appreciate tradition and what the preservation of knowledge implies, and can understand the critical forces that influence the way we think, feel, act, and speak.

In the midst of discussions of theoretical frameworks and appropriate methods of gathering and verifying data, liberal arts students consider social problems such as poverty, pollution, crime, racism, and sexism. Such consideration leads to an even greater appreciation of the dynamics of change and of what different perspectives have to offer.

A quality liberal arts education also includes an appreciation of literature and the arts and the cultivation of the aesthetic judgment that makes possible the enjoyment and comprehension of works of the creative imagination.

The liberal arts curriculum helps students examine ethical perspectives, so that they can formulate and understand their own values, become aware of others' values, and discern the ethical dimensions underlying many of the decisions that they must make. The issues discussed and the individuals and points of view studied help define the citizen as an informed and responsible individual.

This course of study implies that to be educated is to be tolerant, open to others and their ideas, and willing to admit the validity of alternative approaches. Interdisciplinary courses in which students are asked to consider the same subject from varied perspectives enhance that aspect of the liberal arts education.

General knowledge of the liberal arts provides a firm foundation for productive and responsible citizenship. When professional and personal decisions and actions are informed by knowledge, rationality, and compassion, they make the greatest contribution to a better world.

The broad knowledge and course of study described above as characteristic of a good liberal arts education is coupled with an in-depth exploration of at least one particular academic discipline, a major. Liberal arts students acquire a coherent, sophisticated understanding of a major body of knowledge with all its complexities, unique methodologies, power, and limitations. The major provides a foundation for additional academic study or for advancement within a chosen career. But because of the demanding general requirements, a liberal arts course of study protects students from the pitfalls of overspecialization too early in their postsecondary education.

A liberal arts education is an ideal preparation for professional life, encouraging students to pursue subsequent specialization within a framework of intellectual breadth and creativity. More than just training for today's occupations, however, the humanities and social sciences offer students the skills and flexibility they will need as they move on to careers and occupations not yet known or imagined.

Whether just out of high school or returning to college after being away for decades, students will discover a liberal arts course of study prepares them for the present and the future, for the personal and the professional.

Who Should Use This Bulletin

The 2002-2004 *Bulletin* presents the degree requirements for the School of Liberal Arts effective June 1, 2002. Students admitted to the School of Liberal Arts must satisfy degree requirements as described herein. Students accepted to the School of Liberal Arts prior to fall semester 2002 and continuously enrolled since then (excluding summer sessions) either may meet the school's requirements at the time they were initially accepted as a liberal arts major or they may elect the requirements as described below. Students who are not continuously

enrolled or who take more than eight years of classes to complete their degrees should confer with the dean of student affairs in the school to determine the requirements applicable to their degrees.

Admission and Transfer

All students entering the School of Liberal Arts (SLA) must be admitted officially to IUPUI by the Office of Admissions or by another Indiana University campus as a degree-seeking student.

After students have been admitted by IUPUI, they must also be admitted by the specific school in which they intend to pursue a degree. The School of Liberal Arts welcomes nontraditional students and recent high school graduates if they wish to pursue a liberal arts degree and meet the school's requirements for admission. Students can be admitted before they have selected a major if their general interests lie in the humanities or social sciences.

Many liberal arts students are transfer students coming from another college or university, another Indiana University campus, or another division of IUPUI. Procedures for transferring into the School of Liberal Arts and special arrangements for transfer students are described below.

Dual Admission

The School of Liberal Arts encourages the dual admission of qualified IUPUI freshmen and transfer students into the school as well as into University College. Completion of the Indiana Academic Honors diploma while in high school is highly encouraged and an excellent preparation for a liberal arts degree. Students who know which major they wish to pursue may be admitted to the respective department while undecided applicants are admitted to the school as undecided majors.

To be eligible for dual admission, applicants must meet the general university and campus requirements. Applicants who have been out of high school two or more years are not required to submit test scores, although the standardized tests are highly recommended; evaluation of students who request admission without presenting test scores will be made on an individual basis.

Transfer Students

The School of Liberal Arts welcomes transfer students and is committed to making their transition and transfer of credit as smooth as possible. At any time thereafter, a student with a minimum grade point average of 2.0 (C) may transfer to the School of Liberal Arts by filing a Change of Record form. Transfer students who have questions about how their previous course work will apply to their degree, or who encounter difficulties in the process of transferring credit or records, should contact the School of Liberal Arts Office of Student Affairs, Cavanaugh Hall 401, or call (317) 274-3976.

Probationary Admission

Individuals interested in transferring to the School of Liberal Arts whose college grade point average is lower than 2.0 (C) may petition for probationary admission. Special consideration is given to adult learners and students returning after five or more years.

Petitions are available from the School of Liberal Arts Office of Student Affairs, Cavanaugh Hall 401, (317) 274-3976. Transfer students, either within IU or from other colleges or universities, should attach a copy of their college transcript. Petitions are reviewed by the School of Liberal Arts Associate Dean and should be submitted by the following deadlines:

To enroll for the fall semester July 15

To enroll for the spring semester November 15

To enroll for summer session April 15

At the discretion of the Associate Dean, the school will ordinarily admit transfer students whose past performance, experience, or current situation show reasonable potential for successfully completing a degree. Such students are counseled through the Office of Student Affairs or their major department and remain on probation until their cumulative grade point average is raised to at least 2.0 (C).

Undergraduate Degree Programs

The School of Liberal Arts offers a four-year Bachelor of Arts degree, a Bachelor of Science in American Sign Language degree, a two-year Associate of Arts degree, and a variety of structured minors and certificate programs for students pursuing liberal arts or other degrees. The programs and requirements described below apply in the School of Liberal Arts at Indianapolis.

Statement of Goals

Graduates of the School of Liberal Arts (SLA) should exemplify the ideals of a liberal arts education. They should be broadly educated across the disciplines and well trained in a particular major. They should have (1) proficiency in reading, writing, and speaking skills; (2) competence in quantitative, language, and analytic skills; (3) a broadly based experience in the humanities, social sciences, and natural sciences; and (4) a major area of study. Although faculty and counselors are available to help students acquire these proficiencies and attitudes, learning must be self-motivated. To be taught, one must first be interested in learning. A liberal arts education, therefore, is the responsibility of the individual student.

By graduation, SLA students should have developed

1. appreciation of the personal and public value of knowledge;
2. ability to acquire and use knowledge;

3. awareness of their own values and commitments and an understanding of different values held by others;
4. adequate mastery of the skills of both interpersonal and public communication;
5. concern for and responsiveness to contemporary events, issues, and problems, as seen and interpreted through the perspectives of the humanities and social sciences;
6. qualifications for meaningful employment and ability to master the specific skills required by that employment;
7. appreciation of the cultural significance of science and technology and their impact on our natural and social environment.

Thereby, they become discerning and responsible citizens of this nation and the world.

Bachelor of Arts Requirements

All students admitted to the School of Liberal Arts after June 1, 2002, must fulfill the requirements described below. Students admitted before that date may elect these requirements by informing their advisor and the Office of Student Affairs or may obtain their degree under the requirements in effect at the date they were admitted to the School of Liberal Arts.

All students must meet three types of requirements: general-education requirements, distribution requirements, and major requirements. Questions about general-education and distribution requirements can be answered by the School of Liberal Arts Office of Student Affairs, Cavanaugh Hall 401, (317) 274-3976. Questions about major requirements should be directed to a faculty advisor or the chairperson of the major department.

General Education Requirements

1. A minimum of 122 credit hours is required for a B.A. degree in the School of Liberal Arts. The B.S. requires 134-135 credit hours.
2. A minimum cumulative grade point average of 2.0 (C) is required for graduation.
3. A minimum of 30 credit hours must be at the 300-400 level.
4. A minimum of 26 credit hours must be completed after formal admission to the School of Liberal Arts. This requirement may be waived by petitioning the Academic Affairs Committee. Petitions are available in Cavanaugh Hall 401.
5. Students must complete a minimum of 12 credit hours of their major course work in residence in the appropriate department in the School of Liberal Arts. Some departments have more restrictive residency requirements. Check with your advisor.
6. Courses taken using the Pass/Fail option can be applied *only* as electives or toward the 300 to 400 level requirements (Area III of the distribution

requirements for the bachelor's degree). A maximum of eight courses, with no more than two per year, may be taken.

7. With permission from the departmental advisor and the Office of Student Affairs, a maximum of 12 credit hours may be taken by correspondence through the School of Continuing Studies.
8. All candidates for degrees in May and August must file an application for the degree by December 1 of that year. All candidates for December degrees must file an application for the degree by September 1 of that year. Candidates for degrees in December, May, or August may participate in the May commencement.
9. Credit hours from the following courses will not count toward the 122 hours needed for graduation: English E010, W001, G010, G011, G012, and G013; Math M130, M131, M132, and any math course lower than M118; Business C221, C222, and C225.
10. Once a course has been applied toward one requirement, it cannot be used to satisfy a second requirement, except where explicitly stated otherwise. In addition, except in cases of variable title courses, internships, and other special courses, no course will be counted more than once toward graduation.
11. A maximum of 9 credit hours in unapproved electives can be counted toward the degree.

Distribution Requirements

The requirements for SLA's baccalaureate degree programs include the common general education core approved by the faculties of both the School of Liberal Arts and the School of Science, and is a curriculum based on the IUPUI Principles for Undergraduate Education.

Candidates for the B.A. and B.S. degrees must complete the following requirements:

Core Course Requirements

A. First-Year Experience (1-3 cr.)

This course introduces students to IUPUI's culture and values; familiarizes them with campus resources, especially academic uses of technology; provides them with skills in dealing with life at IUPUI; and introduces them to an overview of the humanities and the social and natural sciences. Transfer students with 18 or more credit hours are not required to take this course. This course is cross-listed as follows:

School of Liberal Arts: S100

University College: UC110

B. Junior/Senior Integrator (3 cr.)

This course shows how the humanities and social and natural sciences are interrelated and interdependent. It examines the philosophical relationships among the areas of science, politics, and social policy as well as the crucial interplay among science and technology, the social order, and political decisions. Students must complete the following: one course in the major, English Composition W131 and W132, History H114, one science course, one math course (M118 or above), and one course from two of the following areas: humanities, social science, or comparative

world cultures. Ideally, students should complete one course from each of the three lists before taking the integrator course. This course may be used in Area III.

Lists of approved courses will be available in the *Schedule of Classes* and in the Office of Student Affairs (Cavanaugh Hall 401).

C. Capstone Experience (1-3 cr.)

The capstone course is generally taken in a student's major as a cumulative integrating experience that addresses the principles of undergraduate education as well as values and ethics as they relate to a student's major. The capstone may be an independent research project or study, a practicum, or a seminar or field experience building on students' previous work. Special interdisciplinary capstones may also satisfy this requirement. Check with your advisor about which courses satisfy this requirement.

Area I. Communications Core (19 cr.)

The courses in the communications core provide work in English and foreign language to help students organize and present their thoughts in an effective manner. Students should enroll in these courses as early in their college careers as possible.

English Composition (6 cr.) Competency in English composition is required. This requirement may be satisfied in the following ways:

1. by completing W131 (or W140) and W132 (or W150) with a grade of C (2.0) or better;
2. by becoming eligible for the W131 exemption portfolio through the English Placement Exam and receiving special credit for W131 after submitting a portfolio, and completing W132 (or W150) with a grade of C (2.0) or better; or
3. for transfer students, by completing course work equivalent to W131 (or W140) and W132 (or W150) with a grade of C (2.0) or better at another campus or institution.

The School of Liberal Arts strongly recommends that students complete English W131 (or W140) during their first semester or as soon afterward as placement test scores and course availability allow. Students should also take W132 as quickly as possible after becoming a Liberal Arts major.

Note: Special English as a Second Language (ESL) sections of W001 and W131 have been designated for students whose first language is not English.

Speech Communication R110 (3 cr.) Students with previously acquired competency in public speaking may be eligible for special credit and exemption from this requirement; contact the chairperson of the Department of Communication Studies, Cavanaugh Hall 309, (317) 274-0566.

Foreign Languages Requirement First-year competency is required and second-year competency is strongly recommended. This requirement may be satisfied in one of the following ways:

1. by completing first-year (10 credit hours) courses in a single language with passing grades;
2. by completing a second- or third-year course with a grade of C or better;¹

3. by taking a placement test and placing into the 200 level or higher; this waives the 100 level requirement but does not carry with it credit toward graduation.

This requirement may be met with first-year proficiency in American Sign Language.

Placement Test Students with previous experience in French, German, or Spanish should take the Foreign Language Placement Test at the Testing Center to assess their level of language preparation.

Students who have achieved elementary or intermediate proficiency in any other foreign language should confer with the Foreign Languages and Cultures department for placement in the correct level of that foreign language.

Students who complete the course into which they were placed with a grade of C or better are eligible for special credit at a reduced fee for the appropriate lower-division course(s) that precede the course taken. Foreign language special credit counts toward graduation and toward the foreign language requirements.

117 Courses Courses numbered 117 are reserved for students who have never studied the language before. Students who have had two or more years of formal study in a language may take a 117-level course in that language as a refresher course before enrolling in a more advanced course, but they must recognize that their work will be graded on a Satisfactory/Fail (S/F) basis. A grade of S is equivalent to a minimum grade of C.

Non-Native Speakers Students for whom English is not a first language may be exempted from the foreign language requirement, without credit, by completion of English W131 and W132 with the required grade of C or better.

Students whose native language is not English may demonstrate proficiency in their native language and earn 3 to 6 hours of 298/299 special credit by successfully completing an appropriate 300 level course. They may not, however, receive credit for taking first- and second-year courses in their native language.

Area II. Basic Courses

Analytic Skills (6 cr.) These courses provide the student with insight into the process of logical reasoning. Each student must complete 3 credit hours in mathematics (Math M118 or above) plus 3 credit hours in one of the following: mathematics², a statistics course (Economics E270, Geography G488, Psychology B305, Sociology R359, Statistics 301), a computer programming course (N201, N211), a course in logic (Philosophy P162 or P265), Sociology R251, Political Science Y205, or Computer Science N207. A logic or statistics course in a student's major can be applied toward the second requirement.

Computer science and computer technology courses that develop the student's problem-solving ability and promote the understanding and use of logical structures of thought are appropriate for the analytical skills requirement. Computer courses must focus on programming.

Natural Science (9-11 cr.) This area allows for a choice of courses exploring the natural phenomena of the world according to models of scientific thought. The credit hours are to be selected from at least two of the following areas:

Anthropology: A103

Astronomy: A100, A105

Biology: K101, K103, N100, N107, N200, N212, N213 (lab), N214, N215 (lab), N217, N251, N322

Chemistry: C100, C101, C102, C105, C106

Geography: G107, G108 (lab), G185, G303, G307

Geology: G107, G117 (lab), G109, G119 (lab), G110, G120 (lab), G206 (lab), G115, G132, G180

Physics: 100, 152, 200, 218, 219, 251, P201, P202

Psychology: B105

At least one of these courses must be a laboratory course.

Up to 5 credit hours in geography (G107, G108, G303, or G307) may be counted toward this requirement, but they cannot be counted toward the major as well. G108 may be counted as the laboratory component for this requirement.

History (6 cr.) These courses explore patterns and processes of history essential for making decisions in the present and give the background necessary for students to assume their responsibility as citizens. This requirement is fulfilled by taking H114 and either H108* or H113.*

Arts and Humanities (6 cr.) This area presents insights into aesthetics, ideas, and value systems.

The 6 credit hours must come from two of the areas below. Courses in one's major cannot be used to fulfill this requirement; however, one course taken as part of a minor may be used. Creative writing, drawing, performance, or studio courses will not satisfy the arts and humanities requirement.

American Studies A103

Afro-American Studies: A150*

Classics: C205*

English Literature: L105, L115

Fine Arts: Communication Studies (theatre) T130;

English (film) C190; Herron H100, H101, H102;

Music M174

Folklore: F101*

Foreign Languages and Cultures: F200, German G265, EALC E231 (Japanese)

History: H105, H106, H108*, H113*, H217

Philosophy: P110, P120

Religious Studies: R111, R120, R133*, R173, R180, R212*

Women's Studies: W105*

¹Students interested in receiving credit for lower-division language courses, see the section "Special Credit for Foreign Language Study."

²Additional mathematics courses for this requirement must be above M118 and may not include M130, M131, and M132.

*This course appears on more than one list or in more than one section. However, this course may be used to satisfy only one requirement unless specifically stated.

Social Sciences (6 cr.) This area uses procedures and information developed in the social sciences to examine the complexities of societies and human interaction. The 6 credit hours must come from two of the areas following. Courses in one's major cannot be used to fulfill this requirement; however, courses taken as part of a structured minor may be used to fulfill this requirement.

Afro-American Studies: A150*
 Anthropology: A104
 Communication Studies: C180
 Economics: E101, E201, E202
 Folklore: F101*
 Geography: G110*, G130
 History: H117
 Language Awareness: G104
 Political Science: Y101, Y103, Y213, Y219
 Psychology: B104, B310
 Public and Environmental Affairs: V170
 Sociology: R100, R121
 Women's Studies: W105*

Comparative World Cultures (3 cr.)** This area presents culture in a comparative and conceptual manner and includes material from several cultures.

Students must take one course from one of the areas below:

Anthropology: A104
 Classics: C205
 Foreign Languages and Cultures: F200
 Geography: G110
 History: H108
 Political Science: Y217
 Religious Studies: R133, R212

Transfer Credits Students with transfer work from other universities may have some of their work counted toward the distribution requirements, even if their courses, when transferred in, were not designated as matching the courses listed previously. The Office of the Associate Dean for Student Affairs and the departments, when appropriate, will determine whether transfer courses satisfy the distribution requirements.

Area III. Advanced Courses (15 cr. at 300-400 level)

In addition to advanced courses in one's major, the SLA student should conduct in-depth study in other areas of the liberal arts or sciences. Ordinarily, at least 15 credit hours of one's 300 to 400 level courses must be taken outside the major department and in four different departments or interdisciplinary programs within the School of Liberal Arts or the School of Science. However, when students believe that advanced courses outside the School of Liberal Arts or the School of Science or concentrated in fewer than four departments would strengthen their academic program, they may petition the Academic Affairs Committee in advance for permission to count non-SLA/School of Science courses and/or courses concentrated in fewer than four departments toward this requirement. For a list of approved courses outside the liberal arts and sciences, see an advisor or the Office of Student Affairs. Up to four junior- or senior-level courses in a second major will count

*This course appears on more than one list or in more than one section. However, this course may be used to satisfy only one requirement unless specifically stated.

**These courses may be used for Comparative World Cultures and one other requirement if they appear on the Arts and Humanities or the Social Sciences lists (see above).

toward this requirement. Three courses at the 300 or 400 level in a structured minor, including the business structured minor, can also be counted. The Junior/Senior Integrator course can be used to satisfy one of the Area III requirements.

Major Requirements

The requirements for each major in the School of Liberal Arts are described, along with course descriptions, in the section of this bulletin entitled "Departments and Programs." A minimum of 24 credit hours must be taken in the major subject area. Any course in which the student receives a grade below C (2.0) may not be used to fulfill the major area requirement (a C- does not qualify). However, courses in which the student receives below C, but above an F, will count toward the 122 credit hour total provided that the student does not repeat the course.

Electives

Candidates for a degree in the School of Liberal Arts must complete their general-education requirements and the requirements of their major department. Of the remaining credit hours, known as *electives*, up to 9 credit hours of course work may be elected from any degree-granting university. The remaining electives must come from courses within the School of Liberal Arts, the Herron School of Art, the School of Journalism, the School of Science, or from a list of courses approved by the faculty of the School of Liberal Arts.

If students wish to use courses that do not appear on the list, they must petition the Academic Affairs Committee before taking the course. A current list of approved elective courses is available in Cavanaugh Hall 401.

Second Bachelor's Degree

Normally holders of bachelor's degrees seeking further education are encouraged to enter graduate programs; in certain cases, however, students may prefer to work toward a second bachelor's degree. If admitted by the dean to candidacy for a second degree, students must earn at least 26 additional credit hours in residence and meet the requirements of the School of Liberal Arts and of the department in which they are candidates.

Minors and Certificate Programs

School of Liberal Arts students may complete one or more minors and/or certificate programs. *Minors will not appear on the student's transcript until graduation.* Students in other schools of IUPUI may complete minors in the School of Liberal Arts.

Only courses in which students receive a C (2.0) or better can be applied to the minors and certificates. Specific requirements are described in the section of this bulletin entitled "Departments and Programs."

Courses required for minors and certificates may also be used in fulfilling other requirements, including distribution requirements.

School of Liberal Arts minors are presently offered in the following areas:

Afro-American Studies
 American Studies
 Anthropology
 Business and Professional Writing
 Classical Studies
 Communication Arts
 Cultural Diversity
 Economics
 English
 Film Studies
 French
 Geography
 German Culture
 Germanic Language Skills
 Global Economics
 History
 Japanese Studies
 Legal Studies
 Media Studies
 Medical Humanities and Health Studies
 Medical Sociology
 Organizational Communication
 Philanthropic Studies
 Philosophy
 Political Science
 Religious Studies
 Sociology
 Spanish
 Theatre
 Urban Studies
 Women's Studies
 Writing

The following certificate programs are also available:

International Studies
 Museum Studies
 Paralegal Studies
 Technical Communication
 Translation Studies

Students must receive departmental or program approval for the courses to be used for minors as well as approval for courses not taken at IUPUI that they wish to count in a minor. Special credit may be applied to minor requirements with departmental approval.

Minor in Business

A special minor in business, consisting of 34 credit hours, has been established between the School of Business and the School of Liberal Arts. Specific requirements are described in the "Department of Economics" section of this bulletin.

Other Options

The School of Liberal Arts allows students to complete double majors and double degrees. For further information, see the section in the front of this bulletin.

Associate of Arts

The Associate of Arts (A.A.) is a 62 credit hour program that is essentially the first two years of the Bachelor of Arts program. Students are expected to meet the degree requirements in effect at the date of their admission to the School of Liberal Arts. However, should the requirements change after that date, students have the option of choosing the new requirements with the approval of the Office of Student Affairs.

Students intending to use the A.A. degree as the first two years of a B.A. degree should work with the A.A. counselor, whose office is located in the Office of Student Affairs (Cavanaugh Hall 401), to select courses that will also apply to the B.A. degree.

Requirements

Candidates for the Associate of Arts must satisfy three types of requirements: general-education, distribution, and concentration.

I. General-Education Requirements (62 cr.)

1. 62 credit hours of regular university courses,
2. a minimum grade point average of 2.0 (C),
3. completion of at least 30 credit hours in residence at any Indiana University campus with at least 15 credit hours of the concentration at IUPUI,
4. courses taken under the Pass/Fail option do not apply toward the A.A. degree,
5. by special permission from the Office of Student Affairs, a maximum of 6 credit hours may be taken by correspondence through the Independent Study Division.

II. Distribution Requirements (44 cr.)

All students must complete the following:

First-Year Experience (1-3 cr.)

See B.A. distribution requirements for acceptable courses. (Transfer students with 30 hours are not required to take this course.)

English Composition (6 cr.)

Competency in English composition is required. Each course for this requirement must be completed with a minimum grade of C (2.0). This requirement may be satisfied in the following ways:

1. by completing W131 and W132 (or Honors W140 and W150);
2. by testing out of W131 through the IUPUI English Placement Exam and completing W132;
3. for transfer students, by completing course work equivalent to W131 and W132 at another campus or institution.

Speech Communication R110 (3 cr.)

Students with previously acquired competency in public speaking may be eligible for special credit and exemption from this requirement; contact the chairperson of the Department of Communication Studies in Cavanaugh Hall 309, or call (317) 274-0566.

Foreign Language (10 cr.)

This requirement may be satisfied by completing first-year courses with a passing grade or by completing a second- or third-year course.

Analytic Skills (3 cr.)

See B.A. distribution requirements for acceptable courses.

Natural Sciences (9 cr.)

See B.A. distribution requirements for acceptable courses.

(One course should be a laboratory course. No more than 5 credit hours should be in geography if students plan to complete the B.A. degree.)

Arts and Humanities (6 cr.)

See B.A. distribution requirements for acceptable courses.

Social Sciences (6 cr.)

See B.A. distribution requirements for acceptable courses.

III. Concentration Requirements (18 cr.)

The purpose of the concentration is to provide students with a focus in a single discipline/area, but it should not be confused with a major, which students would take in the third and fourth years if they choose to pursue a Bachelor of Arts.

The student may concentrate in either Option I, the arts and humanities, or Option II, the social and behavioral sciences, explained below.

Courses counted toward the distribution requirements cannot be counted toward the 18 credits in the concentration area.

Option I: Arts and Humanities: Complete both A and B below.

A grade of C or better is required in each course.

- A. Students choose one discipline in the arts and humanities (see the disciplines listed under "Arts and Humanities" in the "Distribution Requirements"—students cannot concentrate in fine arts for the A.A. degree) and take 12 credit hours in that discipline.
- B. Students complete 6 credit hours of course work in other disciplines listed under "Arts and Humanities." These courses may be in a single discipline or in more than one discipline. However, no specific course can be used to satisfy both basic curriculum requirements and the concentration requirements.

Total 62 credit hours.

Option II: Social Sciences: Complete both A and B below.

A grade of C or better is required in each course.

- A. Students choose one discipline in the social sciences (see the disciplines listed under "Social Sciences" in the "Distribution Requirements"—students cannot concentrate in psychology or linguistics for the A.A. degree) and take 12 credit hours in that discipline.
- B. Students complete 6 credit hours of course work in other disciplines listed under "Social Sciences." These courses may be in a single discipline or in more than one discipline.

However, no specific course can be used to satisfy both basic curriculum requirements and the concentration requirements.

Total 62 credit hours.

Graduate Degree Programs

Graduate Programs and Courses in the School of Liberal Arts

Economics, English, history, philanthropy, sociology, and Spanish presently offer master's degrees. In addition, virtually all School of Liberal Arts departments offer graduate courses, including certain 300 and 400 level courses that may be taken for graduate credit in programs in the Indiana University Graduate School or the Indiana University School of Education. Students will not receive graduate credit without the written approval of a graduate advisor and the instructor of the course. Obviously, acceptable performance in the courses is also a condition for receiving graduate credit. In addition, other departments offer graduate course work. See sections on IU graduate programs.

Academic Policies

Program Planning and Counseling

The School of Liberal Arts provides counseling services to assist students in planning their program of study. Students pursuing an Associate of Arts and those who have not yet chosen a major area of study are counseled through the School of Liberal Arts Office of Student Affairs, Cavanaugh Hall 401, (317) 274-3976. Students who have chosen a major are assigned a departmental faculty advisor and should make an appointment with that advisor before each registration period in order to discuss long-term goals as well as specific course work for the upcoming semester. Students are expected to consult with their advisors on a regular basis to ensure ongoing progress toward a degree.

However, students—not their advisors—are responsible for their programs. They should be thoroughly familiar with the general requirements for an SLA degree as well as with those of the department they plan to major in. Students are urged to complete most, if not all, of their general-education requirements during the freshman and sophomore years.

In planning a program, students should refer to both the *Schedule of Classes* and this bulletin. Special attention should be paid to course descriptions and prerequisites. This bulletin identifies prerequisites with a "P," corequisites with a "C," and recommended courses with an "R." Students should not enroll in courses for which they do not have the prerequisites. Instructors may require a student to

drop a class if the student has not fulfilled the prerequisites.

Pass/Fail (P/F) Option

Any School of Liberal Arts undergraduate in good standing (not on probation) may enroll in a maximum of eight *elective courses* to be taken with a grade of P (pass) or F (fail). The Pass/Fail option can be used for a maximum of two courses per year, including summer sessions. The course selected for Pass/Fail must be an elective. It may not be used to satisfy any of the major or school distribution requirements, with the exception of the 300 to 400 level course requirement (Area III).

Final Examinations

Final examinations or other activities in lieu of a final are to be scheduled during finals week at the time indicated in the *Schedule of Classes*.

Students scheduled for three or more finals in a 24-hour period may have their examination schedule adjusted. They should notify the instructors involved by midsemester to determine if they are willing to schedule an alternate examination. Students having problems with an instructor may consult the chair of the department or the Office of Student Affairs, Cavanaugh Hall 401, (317) 274-3976.

Forgiveness Policy

The School of Liberal Arts has adopted a modified version of the IUPUI forgiveness policy for students who have been out of school for three years. For more information about the policy, call (317) 274-3976 or come to Cavanaugh Hall 401.

Petition for Grade Change

Either students or faculty members may petition for a change in course grade.

A student desiring a change of grade shall first discuss the situation with the instructor. If the instructor agrees, and no more than one full semester has elapsed since the course was finished, the faculty member shall file a Grade Change Authorization Form with the Office of the Dean of Student Affairs. If more than one full semester has elapsed, the faculty member still files the Grade Change Authorization Form, but the form may be sent to the SLA Academic Affairs Committee, depending on the reason given for the change of grade.

If the instructor and student do not agree on a changed grade, or if the instructor cannot be located, the student should discuss the matter with the chairperson, director, or coordinator of the department or program in which the course was offered. Following that, the student may petition the SLA Academic Affairs Committee directly, using the Change of Grade Petition Form; these forms are available in the Office of the Dean of Student Affairs. The petition must include (1) a statement of an attempted but unsuccessful interview with the faculty member and chair, and (2) supporting evidence for the petition.

Academic Standing

Academic Probation

Students are placed on academic probation when their cumulative grade point average falls below 2.0 (C), and they remain on probation until the cumulative grade point average is 2.0 (C) or better. Note: Only IUPUI grades will be considered in determining probation and dismissal. Students on probation are encouraged to talk with their faculty advisor or with a counselor in the Office of Student Affairs (Cavanaugh Hall 401), (317) 274-8304, or IUPUI Counseling and Psychological Services, (317) 274-2548, to determine how they may become more successful in their studies. Students on probation must go to their faculty advisors before registering. Students without a faculty advisor should go to the Office of Student Affairs.

Students who have two semesters with a grade point average below 2.0 (C) may be placed on probation at the discretion of the School of Liberal Arts Dean of Students regardless of their cumulative grade point average, since they are failing to make progress toward a degree.

Dismissal

Students will be dismissed from the School of Liberal Arts when they have a cumulative grade point average lower than 2.0 (C) and grade point averages of lower than 2.0 (C) for two semesters. (For part-time students, 12 credit hours or fewer may be considered equivalent to one semester.) Students eligible for dismissal will be notified in writing that they have been dismissed and that they must remain out of school at least one semester. The letter will also inform such students that they will be withdrawn from classes for which they have registered. Once dismissed, students must petition for readmission. (See "Readmission.")

Students who have been dismissed a second time must remain out of school for at least two semesters and petition for readmission. (See "Readmission.")

A third dismissal is final.

Readmission

Any student who has been dismissed from the School of Liberal Arts (or its equivalent on another IU campus) must petition for readmission. A Petition for Readmission form may be obtained from the Office of Student Affairs (Cavanaugh Hall 401).

Petitions for readmission must be filed by the following deadlines:

To enroll for the fall semester	July 15
To enroll for the spring semester	November 15
To enroll for summer session	April 15

Special Opportunities

Self-Acquired Competency

Credit may be granted for learning experiences acquired through means other than normal college course work. Credit is available for course-specific learning or for non-course-specific learning in (1) arts and humanities, and (2) social sciences.

Faculty will evaluate the experience and determine whether credit should be awarded and the amount of credit to be granted. Students may be asked to prepare a portfolio, take examinations, or document their learning in other suitable ways so that the faculty can make such judgments. Only 12 credit hours of self-acquired competency can be applied toward a degree. A brochure providing additional information is available in the Office of Student Affairs.

Special Study Programs

Professional Practice Program

The School of Liberal Arts faculty has approved a Professional Practice Program involving full-time or part-time internships and co-ops related to academic objectives, for the following purposes:

1. to provide interested and qualified SLA students with career training within an academic setting;
2. to assist in the development of appropriate liberal arts skills and capabilities that are applicable in jobs and careers;
3. to facilitate student involvement in work experiences related to the chosen academic curriculum;
4. to facilitate development of occupational alternatives;
5. to facilitate students' self-confidence with regard to the marketability of their liberal arts training;
6. to foster community awareness of SLA-trained students and their capabilities.

Participating departments will work in conjunction with the IUPUI Professional Practice Program in accordance with university guidelines to provide experiences for majors. For further information, students should contact departmental advisors, or the Professional Practice Program, Business/SPEA Building 2010, or call (317) 274-2554.

Extracurricular Activities

A wide variety of activities is available to School of Liberal Arts students, both activities sponsored by the School of Liberal Arts and those open to all students. Students seeking involvement in campuswide activities, such as the IUPUI Student Government,

should contact the Office of Student Life and Diversity Programs of University College, Room 002, or call (317) 274-3931.

Clubs and Organizations

The following organizations are of particular interest to students in the School of Liberal Arts:

SLA Student Council This council, composed of student representatives from each liberal arts department, advises the dean and the School of Liberal Arts on matters of concern to students. It decides how the activity fee will be used in the school, produces a school newsletter, and coordinates Liberal Arts student involvement in campus and community events.

Department Clubs Most departments sponsor clubs and other activities for majors and interested students. Activities include guest lectures and presentations, poetry and fiction readings, visits to museums and exhibits, film viewings, an Oscar party, white-water rafting, a tour of Indiana, production of plays and special performances, debates, international cultural activities, Model United Nations, Model European Union, and more.

Students may find a list of clubs and their activities on the Web at liberalarts.iupui.edu/studentaffairs/extracurricularactivities.html or contact specific departments for more information.

Awards and Scholarships

The School of Liberal Arts recognizes its students' accomplishments at a special Honors Convocation and Celebration of Scholarship held each spring. More detailed information about the following awards and scholarships may be found on the Web at liberalarts.iupui.edu/Scholarships, or by contacting the Office of Student Affairs or the individual department or program.

School-Level Awards and Scholarships

Peter Bassett Barlow Prize This award is for the best paper submitted by a student enrolled in the Department of English master's degree program. The award honors the memory of a man who served the community as a physician; his passionate humanism and great intellect bore witness to the lifelong value of a liberal education.

Arminda B. and Jean C. Bepko Scholarship in Women's Studies This award provides a scholarship for an outstanding student obtaining a minor in women's studies at IUPUI.

Margaret A. Cook Foreign Study Award Each year an award will be made to one or more students majoring in the liberal arts at IUPUI to assist in participating in a study-abroad program sponsored by Indiana University. Priority will be given to junior or senior students majoring in a modern foreign language. Selection will be based on cumulative grade point average, language ability, and the applicants'

plans for continued study of modern foreign languages. The award has been established in honor of Professor Margaret A. Cook, who helped establish the first foreign language programs at IUPUI and who devoted her life to improving our understanding of foreign cultures.

Mary F. Chrisler Scholarship These \$3,000 scholarships encourage collaboration between Liberal Arts faculty and students on academic or course-related research. The purpose is to provide opportunities for students to gain research experience while an undergraduate and thereby strengthen the community of scholarship. Eligible students must have at least a 3.7 GPA in their major.

Preston Eagleson Award The Preston Eagleson Award is presented to an IUPUI student for outstanding achievement in a paper written on the Afro-American experience. The prize honors Preston Eagleson, the first black American to receive an advanced degree from Indiana University.

The James R. East Scholarship This scholarship will be awarded annually to an alumnus or alumna of the Boys and Girls Clubs of Indianapolis.

Faculty Medal for Academic Distinction This award is presented to a graduating senior who, in the judgment of the Faculty Affairs Committee of the School of Liberal Arts, is clearly outstanding in scholastic achievement, interdisciplinary interests, and extracurricular activities.

Marius J. Fauré Family Scholarship The Marius J. Fauré Family Scholarship is awarded each year by the faculty in French to an outstanding student with junior status who has a declared major in French language and literature. The Fauré scholarship honors Mr. and Mrs. Marius J. Fauré, and was established by their daughter Louise Fauré, who was a devoted student of French at IUPUI. Marius Fauré was an immigrant from Sète, France, and was for many years a landscape architect in the Indianapolis area.

Sidney W. Houston Memorial Scholarship An annual scholarship is awarded in honor of Professor Sidney W. Houston, who served from 1963 to 1975 in the departments of English in the Indianapolis regional campuses of both Purdue University and Indiana University. The recipient shall be an outstanding student in the language and literature departments of the Indiana University School of Liberal Arts or in the area of technical communications in the IUPUI Purdue School of Engineering and Technology. The recipient must have completed at least 56 credit hours, but no more than 90, with a minimum cumulative grade point average of 3.5 and must be considered a person of moral responsibility and high professional potential.

Sarah Jamison Keller Scholarship A scholarship for tuition is annually open to a senior majoring in English language or literature at IUPUI who is a resident of the state of Indiana and who has achieved a minimum cumulative grade point average of 3.3 for all undergraduate courses and not less than a 3.5 cumulative average for all courses in English language and literature. The winning candidate will have submitted as part of his or her candidacy a scholarly or critical essay in English on any aspect of English language or literature; the essay is to be

judged by a committee of the English department faculty. The scholarship pays the tuition for no more than 15 credit hours in the fall semester of the student's senior year and is renewable for the following spring semester for no more than 15 credit hours provided the student achieves a minimum cumulative grade point average of 3.7 for all courses in English language and literature taken in the preceding fall semester.

Robert V. Kirch Scholarship An annual scholarship is awarded to an outstanding political science student in honor of Robert V. Kirch, the first chairperson of the IUPUI Department of Political Science and a lifelong student of state and local politics.

Loretta Lunsford Scholarship These \$3,000 scholarships have been established by the family of Loretta Lunsford to assist outstanding Liberal Arts students who demonstrate an interest in educating others and a willingness to volunteer five hours a week in an educational institution. Students must have an overall GPA of 3.4 or higher.

Sam Masarachia Scholars Program Award These full-tuition and fees scholarships are presented to full-time Liberal Arts undergraduate students interested in working in the fields of labor, senior citizens, and community organizations. This program is made possible through the generosity of Sam Masarachia, a representative for the Steelworkers Union in Indiana and an effective advocate for the fields studied in this program.

Museum Studies Award The Museum Studies Certificate program recognizes with its award an outstanding student whose record reflects both academic excellence and a commitment to the museum field.

Rebecca E. Pitts Fiction and Poetry Award An annual competition in fiction writing and poetry is held in honor of Professor Rebecca E. Pitts, who served from 1966 to 1976 in the Department of English. Applicants must be currently enrolled at IUPUI or have been enrolled during the last 18 months before each spring's competition.

Rebecca E. Pitts Scholarship A scholarship is awarded annually to one or more students majoring in the liberal arts at IUPUI who has completed at least 90 credit hours and who plans to seek a graduate degree in a liberal arts discipline. The scholarship is intended to assist an outstanding student in attaining an extraordinary educational experience that will enhance her or his opportunity for advanced study. Applicants must propose uses for the scholarship and describe how the opportunity would make a difference in their respective education; applications will be evaluated by a faculty committee along with information about educational plans, past academic performance, and potential for future achievement. The scholarship has been established in honor of Professor Rebecca E. Pitts, whose lifelong study of literature instilled in many students a desire for learning at the highest levels of excellence.

Clara Margaret Powell Award This award is presented to an undergraduate student with exceptional research skills. The scholarship is intended to support the recipient's research project or to support attendance at a conference.

Mary Louise Rea Short Story Award An annual award is presented in recognition of Professor Mary Louise Rea, who served from 1946 to 1985 in the departments of English in the former Indianapolis regional campus of Purdue University and the Indiana University School of Liberal Arts. The recipient shall be the winner of the annual competition in short story writing. Applicants must be currently enrolled in the following IUPUI creative writing courses or have been enrolled during the preceding 18 months before each spring's competition: W103, W203, W301, W401, and W411.

Frances Dodson Rhome Scholarship This scholarship goes to support a student excelling in women's studies or English. It was established through gifts honoring Professor Frances Dodson Rhome.

John M. Riteris Award This scholarship is awarded annually to a philosophy student who demonstrates a commitment to the study of philosophy and the potential for high quality work in the discipline. The recipient is selected by the faculty of the Department of Philosophy.

Ray Russo Faculty/Student Technology Scholarship This scholarship is awarded to students who work with faculty on new teaching technologies. Recipients are selected based on faculty nominations. The scholarship was established in memory of Professor Ray Russo.

Thelander Memorial Prize The Thelander Memorial Prize is awarded to an IUPUI student for superior achievement in a paper on a historical subject. The prize is presented by the Department of History faculty in memory of a former member of that department, Theodore Thelander Jr.

SLA Student Council Outstanding Awards

Outstanding Advisor Award The SLA Student Council, in recognition of the role of advisors in enhancing students' growth, has created an award to be given to an outstanding advisor in SLA. Any student may nominate an advisor; the final decision will be made by a subcommittee of the council.

Outstanding Club Advisor The SLA Student Council, in recognition of the importance of extracurricular activities related to the majors or minors, presents an award to the faculty member who has gone out of the way to assist in strengthening an SLA club.

Departmental/Program Secretary Award The SLA Student council, in recognition of the critical role of departmental secretaries in providing information, advice, and sympathy—lifelines for students majoring in liberal arts—has created a special award for them.

Departmental and Program Awards

Afro-American Studies Academic Achievement Award This award is presented by the Afro-American Studies Program to the outstanding graduating senior in the program and to students for demonstrated academic excellence in Afro-American studies.

American Studies Award The Center for American Studies presents an annual award, on the basis of nominations from the faculty, to an upper-division minor in the academic program who has demonstrated excellent abilities in the interdisciplinary study of American culture.

Anthropology Award The Department of Anthropology honors an outstanding departmental major whose academic record reflects both scholastic excellence and intellectual breadth.

Classical Studies Awards

The Arete Award is presented as occasion demands to a senior student with a record of excellence in the field of Classical Studies.

The P. Ovidius Naso Living Myth Prize is awarded annually for the best creative retelling, in any medium, of a Classical Greek or Roman myth by a student in an IUPUI classical mythology course.

Communication Studies Awards

The Academic Achievement Award is presented to the communication studies graduating senior who has demonstrated excellence in the field of communication studies, made outstanding contributions to the department, achieved a superior grade point average, and has the recommendations of the faculty.

Outstanding Research or Creative Project This award is made in recognition of a superior research paper or creative project upon the recommendation of faculty in the Department of Communication Studies. Up to four awards may be given.

The Service Award This award is given to a student, upon recommendation of the faculty in the Department of Communication Studies, in recognition of outstanding service to the department, school, and/or university.

Economics Awards

This award is presented to the senior economics major with the highest cumulative grade point average above 3.4.

Robert Kirk Outstanding New Economics Major Award The Kirk Award is presented annually to an outstanding student in his or her first year as an economics major. The award recognizes Professor Kirk's dedication to students during his 28 years with the department.

The Department of Economics gives a one-year subscription of the *Wall Street Journal* to the outstanding junior economics major.

English Awards

Academic Achievement These awards are presented to students who have demonstrated consistent excellence in their work with language and literature. The Department of English bases its selection on superior scholastic achievement, faculty recommendations, and special contributions to the English program.

Creative Writing Award This honor is presented to the student who has submitted the best work of literary art—fiction or poetry—in a creative writing class during the academic year.

Film Studies Award This award is presented to a student who has done exceptional work in film criticism and research in upper-level film studies courses during the past year.

Hal Tobin Outstanding First-Year Writing Award This award is presented to the student who has submitted the best essay in English W131 or W140 in the preceding calendar year.

The Upper-Division Literature Outstanding Student Award This award recognizes an outstanding achievement by a student in advanced literature courses during the past year.

Linguistics Award This award goes to the student considered by the linguistics faculty of the Department of English to be the most outstanding student of linguistics. Candidates must be students who have taken at least three linguistics courses. Students may nominate themselves for the award.

The Nonfiction Writing Award This award is presented to a declared English major for the best portfolio of nonfiction pieces submitted for anonymous judging by a faculty committee. Papers are judged on effectiveness of expression in a variety of writing genres.

French Award The Margaret A. Cook Award is presented to a student who has demonstrated outstanding achievement in the study of French language and literature. This award is named in honor of Professor Margaret A. Cook, who for 26 years provided the leadership in promoting foreign language study at Indiana University's operations in Indianapolis.

Beaudry Summer Scholarship for French and Francophone Studies This scholarship is awarded to an IUPUI student participating in a summer French language and culture study program in a French-speaking country. This scholarship is made possible through the generosity of James G. Beaudry, Professor Emeritus of French.

Geography Award This award is presented to graduating seniors for demonstrated excellence in geographic studies and a high grade point average.

Geography Alumni New Major Scholarship Established by alumni of the department, this scholarship recognizes the most promising new geography major.

German Award This award is presented to students who have attained a high grade point average and demonstrated academic excellence in the field of German language and literature.

IUPUI Max Kade German-American Study Abroad Scholarship The Max Kade German-American Center at IUPUI awards two scholarships for studying German in approved overseas study programs that will apply to student's degree. Applicants must be working toward a German major, minor, or any other IUPUI degree.

History Award This award is presented to the senior judged to exhibit greatest overall competence and accomplishment in history.

Medical Humanities Student Essay Award This award is presented to an IUPUI student whose writing is judged to be the best on a topic in medical humanities. The award is sponsored by the Center for Law and Health, the John Shaw Billings History of Medicine Society, and the Medical Ethics Program of the IU School of Medicine.

Philosophy Awards An award is presented to the outstanding philosophy major.

Political Science Awards

Academic Achievement Award This award honors the graduating seniors who have achieved an outstanding grade point average and demonstrated the greatest potential for intellectual growth.

The Political Science Intern Award This award recognizes the student in the Applied Politics Internship Program who has demonstrated superior academic accomplishment, diligent service to the intern agency, and promise in career plans.

Religious Studies Award This award is granted to the religious studies student who has displayed consistent excellence in scholarship.

Sociology Awards

The Sociology Award This award is presented to the outstanding student in the department for distinguished achievement in sociology.

The Gnosis Award This award is presented to a student who demonstrates breadth and application of knowledge and has become proficient in the diverse styles of knowledge that personify the achievements of sociology and the goals of a liberal arts education.

Spanish Award This award is presented to the outstanding student in the Spanish program.

Women's Studies Awards

The Senior Award This honor is presented to the senior with a minor in women's studies who has made an outstanding contribution to women's studies.

The Anne Donchin Graduate Essay Award This award is presented to the graduate student who submits the most outstanding essay on a topic in women's studies.

The Dolores Donchin Memorial Service Award This award honors an IUPUI student who has made a substantial contribution to women's studies related service. It is made possible through gifts in memory of Dolores Donchin.

The Indianapolis Women's Rotary Club Scholarship Fund Award This award assists adult returning women students at IUPUI.

The Friends of Women's Studies Scholarship Fund This award aids outstanding students in the women's studies program. Students must have taken a minimum of 6 credit hours in the program.

The Outstanding Essay Award This award is presented to the student who submits the most outstanding essay on a topic in women's studies.

School Resources and Centers

Scholarly Editions

The School of Liberal Arts is home to three scholarly edition projects: the Peirce Edition Project, a contributor to the school's research culture since 1976; and two recent arrivals, the Frederick Douglass Papers Project and the Santayana Edition. This remarkable concentration of major editions establishes IUPUI as a world center for scholarly editing and provides unique opportunities for our students and faculty.

Peirce Edition Project

Charles S. Peirce (1839-1914) was a scientist and philosopher. He is the founder of pragmatism and is considered one of America's greatest thinkers. The primary mission of the Peirce Edition Project is to produce a 30-volume critical edition of Peirce's writings, many never before published. The Peirce Project, supported by the National Endowment for the Humanities, is assisted by an internationally renowned team of advisors and contributors. The resources of the project, which include an extensive photocopy and microform collection of Peirce's manuscripts and the Max H. Fisch Library (a large private collection on classical and American philosophy and on nineteenth- and early twentieth-century American culture), serve a wide community of students and researchers. The Peirce Project, with its resources and its academic staff, gives Indiana University students an opportunity to study modern critical editing and the many historical and philosophical subjects related to Peirce's life and thought.

Frederick Douglass Papers

A runaway slave, Frederick Douglass became a leading orator and author of the abolitionist movement. Modern historians regard Douglass as the most influential African American of the nineteenth century, yet most Americans know little about this great humanitarian. The Frederick Douglass Papers Project already has published a five-volume series of the edited texts of Douglass's principal speeches, interviews, and debates. Editors currently are working on a five-volume series of Douglass's correspondence and a three-volume critical edition of his autobiographical writings. The Frederick Douglass Papers Project started at Yale University and moved to West Virginia University before locating at IUPUI. It is supported by the National Historical Publications and Records Commission and the National Endowment for the Humanities.

The Santayana Edition

George Santayana (1863-1952) is considered a classical American philosopher. Born in Spain, he became one of the widest-read American philosophers of his time. His naturalistic philosophy is explicated in his extensive philosophical works, but he also was a best-selling novelist, poet, and critic of culture and literature. The plan of the Santayana

Edition is to produce a 20-volume critical edition. Each volume is published by MIT Press and simultaneously published in a CD-ROM format. The Santayana Edition, formerly located at Texas A & M University, is the latest arrival at IUPUI and rounds out the profile of the consortium of scholarly editions in the School of Liberal Arts, making the combined editions a real center for the study of American thought and culture. The Santayana Edition is supported by the National Endowment for the Humanities.

Public Opinion Laboratory

The Public Opinion Laboratory (POL) is the interdisciplinary survey research center at IUPUI that provides data-gathering and data-analysis services to a wide variety of private, governmental, and university organizations. It is a research center of the School of Liberal Arts but serves clients as diverse as the School of Medicine, other universities, local and national businesses, local and national media, municipal and state agencies, and the Indiana University system.

All employees are students, who gain experience in all aspects of survey research, including face-to-face, telephone, and mail surveys. The POL also conducts focus groups. The POL has a fully operational computer-assisted telephone interviewing (CATI) system with 20 stations. The POL gives students the opportunity to participate in ongoing survey research in a variety of topics, including political behavior, consumer behavior, media impact, and evaluation of programs such as medical delivery and company personnel policies.

Visit the POL's Web site at polecat.iupui.edu/pol.

Sussman Research Library

The Sussman Research Library, established through a contribution of the books, journals, and papers of Marvin B. Sussman, an internationally known family sociologist, is located in Cavanaugh Hall 316. The library contains an extensive collection of family science and sociology books and journals with emphasis on population/demography, aging, family violence, sexuality, medical/health, law, history, race/ethnicity, and deviance. The library is available to students, staff, and faculty for research use. Materials do not circulate.

Departments and Programs

Afro-American Studies

Director Associate Professor Monroe Little, *History*

Professors Richard Fredland, *Political Science*; Missy Kubitschek, *English*; John McKivigan, *History*; Joseph T. Taylor (Emeritus), *Sociology*

Associate Professors Robert Aponte, *Sociology*; Monroe Little, *History*; Obioma Nnaemeka, *French/Women's Studies*

Assistant Professors Jovier Evans, *Psychology*; Didier Gondola, *History*; Una Okonkwo Osili, *Economics*

Adjunct Professors Alvin Bynum (Emeritus), *Sociology*; William Taylor; Addisu Tolesa, *Folklore*

Afro-American studies encompasses the scholarly exploration of African and African American life and culture from an interdisciplinary perspective. Courses in Afro-American studies are offered in many departments of the School of Liberal Arts.

Minor in Afro-American Studies

The minor in Afro-American studies has four distinct, yet interrelated, objectives: first, to provide instruction in a wide range of empirical research and scholarship related to the life and culture of African Americans; second, to provide an additional academic base of students who wish to pursue graduate or professional training in the arts and humanities, the behavioral and social sciences, law, medicine, education, and public or business administration; third, to provide information that will be helpful to students in occupations that devote increased attention to the concerns of African Americans, such as community development, paralegal training, probation work, journalism, archival and library work, telecommunications, historic preservation, elementary and secondary teaching, counseling, and marketing; and finally, to prepare students to live successfully and responsibly in a multiracial, multiethnic, and multicultural world.

Requirements The minor in Afro-American studies requires 15 credit hours, distributed as follows:

Courses

Required Courses (9 cr.)

A150 Survey of the Culture of Black Americans (3 cr.) An introduction to the life and experience of Africans in the United States utilizing resources from history, literature, and the social sciences.

HIST A364 History of Black Americans (3 cr.) A survey of the historical origins and development of the African community in the United States. Topics include kingdoms of ancient Africa, the Atlantic slave trade, New World slave systems, antebellum free African American protest, the Civil War and Reconstruction, nationalism and Pan-Africanism, the Harlem Renaissance, and the Civil Rights and Black Liberation movements of the 1960s.

A402 Seminar in Afro-American Studies (3 cr.)

P: junior standing, with 9 credit hours in Afro-American studies, or permission of the program director. Advanced seminar devoted to discussion and analysis of the political, social, and economic status and prospects of the African American community.

Elective Courses (6 cr.)

Students may elect up to 6 credit hours from the following courses offered by the Afro-American Studies Program or SLA departments listed.

Program Electives:

A202 The West and the African Diaspora (3 cr.)

An introduction to Western Europe's and America's perception of Africa and Africans. Emphasis is on the image of Africans and their New World descendants, as constructed by European and American intellectuals.

A303 Topics in Afro-American Studies

(1-3 cr.) Study of selected topics or issues in Afro-American studies occasionally, but not always, coordinated with symposia and/or conferences sponsored by the Afro-American Studies Program.

A352 Afro-American Art II: Afro-American Artists (3 cr.) A survey of the artistic traditions of the Africans in the New World, from the period of slavery in North and South America through contemporary and expatriate African American artists.

A495 Individual Readings in Afro-American Studies (1-3 cr.)

By arrangement with instructor. Investigation of topics of special interest to students that are not covered in the regular program curriculum or that students wish to pursue in greater detail. May be repeated once for credit.

Department Electives:

Anthropology A337 African American Health Care
Anthropology E300 African American Culture
Arabic A131-A132 Beginning Arabic I and II
English G310 Social Speech Patterns
English L370 Black American Writing
English L406 Topics in African American Literature
Folklore F394 Afro-American Folklore
Geography G424 Geography of Africa
History E432 History of Africa II
Music M393 History of Jazz
Music M394 Black Music in America
Political Science Y338 African Politics
Sociology R461 Race and Ethnic Relations
Spanish S117-S118 Beginning Spanish I and II
Women's Studies W300 Black Women Writers

American Sign Language/English Interpreting

Director Associate Professor Cynthia B. Roy, *English*

Academic Advising: Cavanaugh Hall 503U, (317) 274-8930

The ASL/English Interpreting program is undergoing revisions. Please check all course information online for current status of the program.

Increasing numbers of Deaf people seek the communicative access that interpreters provide, and this access is mandated by legislators, yet there is a shortage of qualified interpreters nationally and locally. IUPUI's American Sign Language (ASL)/English Interpreting Program is one of very few baccalaureate degree programs available in the country. It prepares students to become capable and flexible participants in the rewarding profession of interpreting.

The ASL/English Interpreting Program introduces students to the theory and practice of interpreting. It provides a strong foundation in language, culture, interpreting, and linguistics. Students develop their abilities in ASL and English, analyze features of ASL and English, discuss ethical issues, and perform guided practice with both simultaneous and consecutive interpreting. The combination of this background with a broad liberal arts education prepares students to enter the profession of interpreting, which serves diverse populations and encompasses a wide range of subjects and settings.

Major in ASL/English Interpreting

The Bachelor of Science degree in ASL/English Interpreting is for students who have achieved fluency in American Sign Language and English and wish to focus on theoretical and applied issues in interpreting. The program is a continuation of the Associate of Arts degree in American Sign Language Studies offered by Vincennes University at its regional campus in Indianapolis at the Indiana School for the Deaf. The program is also open to students who demonstrate equivalent competence in ASL, Deaf culture, and linguistics. Interested students who have not completed the Vincennes University degree should contact the program director at IUPUI.

The major consists of 24 credit hours at IUPUI (see below) and 9 credits from Vincennes University (HDI 206 American Sign Language Grammar, HDI 207 American Deaf Culture, HDI 220 Linguistic Structure of American Sign Language). Required courses at IUPUI are ASL I301, I303, I361, I363, I365, I405, I340, and I342. Enrollment in interpreting classes is limited to students who have been admitted to the program or have received permission from the director.

Certificate Program in American Sign Language/English Interpreting

The certificate program is intended for students who already have a baccalaureate degree and would like to go beyond their original undergraduate major by

completing the course work for the major in ASL/English Interpreting. The course work will be part of their preparation for national certification through the National Registry of Interpreters for the Deaf. We believe that the proposed program is appropriate for a certificate in that there is a clear course of study and body of college-level material to be mastered in preparation for a particular profession. Completion of a four-year degree is crucial preparation for the numerous settings in which interpreters work. Thus, the certificate is designed for students who have already completed a baccalaureate degree and do not wish to work toward a second undergraduate degree.

The certificate program would include 24 hours of course work. To earn the certificate, students would be required to complete the following courses with a grade of C or better:

- ASL I301 Introduction to Interpreting Theory and History (3 cr.)
- ASL I303 Interpreter Ethics and Responsibilities (3 cr.)
- ASL L340 Contrastive Analysis in ASL and English (3 cr.)
- ASL L342 Discourse Analysis and Sociolinguistics for Interpreters (3 cr.)
- ASL I361 ASL/English Interpreting I (3 cr.)
- ASL I363 ASL/English Interpreting II (3 cr.)
- ASL I365 ASL/English Interpreting III (3 cr.)
- ASL I405 Practicum (3cr.)

Undergraduate Courses

I301 Introduction to Interpreting Theory and History (3 cr.) Provides an overview of the field of ASL/English interpreting. Emphasis is on exploring a progression of philosophical frames in the development of the profession; exploring models of the interpreting process; and identifying requisite responsibilities, skills, and aptitudes for interpreters.

I303 Interpreter Ethics and Responsibilities (3 cr.) Focuses on ethical decision-making practices in the interpreting profession. Codes of ethical conduct from other professions will be analyzed and compared to codes within the interpreting profession. Role playing will be used to allow students to learn about their own ethics and morals with regard to interpreting.

I361 ASL/English Interpreting I (3 cr.) Covers both the principles and skill development of ASL-to-English interpreting. Special emphasis is placed on interpreting ASL texts into equivalent English texts. The course will focus on the development of proficiency in consecutive interpreting and simultaneous interpreting.

I363 ASL/English Interpreting II (3 cr.) Focuses on English-to-ASL interpreting. Emphasis is placed on interpreting English texts into equivalent ASL texts. This course will continue the development of proficiency in consecutive interpreting and simultaneous interpreting.

I365 ASL/English Interpreting III (3 cr.) Focuses on English-to-ASL interpreting and ASL-to-English interpreting. It will continue the development of proficiency in simultaneous interpreting.

I405 Practicum (3 cr.) An extensive practicum experience. Students will be placed at two or more sites to experience several interpreting settings during the 15-week course. Students will be required to maintain a journal of their experiences and to meet with onsite practicum supervisors and program faculty regularly throughout the semester.

L340 Contrastive Analysis in ASL and English (3 cr.) Involves the contrastive study of the major linguistic features of ASL and English. This study includes an exploration of the similarities and differences in phonology, morphology, syntax, and semantics. It will also contrast some major features of American Deaf culture with other world cultures by exploring values, beliefs, and norms.

L342 Discourse Analysis and Sociolinguistics for Interpreters (3 cr.) In this course, students will become acquainted with the analysis of signed and spoken language discourse and sociolinguistic theory with an emphasis on applications to signed languages and interpretation. Topics covered include conversation structure, pragmatics, discourse models, diglossia, language contact, language attitudes, language policy, bilingualism, and pidgins and creoles.

A117-A118-A119 Beginning American Sign Language I-II-III (3-3-4 cr.) Introductory language sequence of courses designed for students with no prior exposure to American Sign Language. Emphasis on developing basic conversational skills as well as awareness of Deaf culture. Credit not given for A117-A118-A119 and A131-A132.

A131-A132 Intensive Beginning American Sign Language I-II (5-5 cr.) Intensive introductory language sequence of courses. Recommended for students with prior experience in American Sign Language or for prospective majors in Interpreting. Emphasis on developing basic conversational skills as well as awareness of Deaf culture. Credit not given for A117-A118-A119 and A131-A132.

American Studies

Director Professor Rowland A. Sherrill, *Religious Studies*

Professors David Bodenhamer, *History*; Jonathan Eller, *English*; Carol Brooks Gardner, *Sociology*; Nathan Houser, *Philosophy*; Christian Kloesel, *English*; Missy Dehn Kubitschek, *English*; John R. McKivigan, *History*; Herman J. Saatkamp Jr., *Philosophy*; Rowland A. Sherrill, *Religious Studies*

Associate Professors Karen R. Johnson, *English*; Samuel A. Roberson, *Herron*; Jane Schultz, *English*; Marianne Wokeck, *History*

Assistant Professors Annie G. Coleman, *History*; Thomas Marvin, *English*; Nancy Robertson, *History*

Program of the Center for American Studies

The field of American studies operates on the principle that the sum of culture is more than its separate parts. It works across a broad spectrum of disciplines to offer integrating perspectives on American experience, thought, and expression. In this respect, American studies is decidedly interdisciplinary in its approaches, but at the same time it is very much a field to itself, generating its own lines of inquiry concerning the American cultural mosaic.

Minor in American Studies

The minor in American studies offers its students the opportunity to understand the American experience in a broader context than is usually possible through the study of a single discipline. More specifically, it provides students with courses that focus on matters that have been traditionally at issue in the study of American civilization and culture. Required are two general courses (A301 and A302) that examine the broad questions of American identity and American community. These will provide underpinnings for the remaining 9 credit hours of course work. A special feature of this program is the senior tutorial, which gives students the opportunity to engage in in-depth research under the guidance of an American studies faculty member.

Students enrolled in the American studies minor program will be required to complete 15 credit hours of upper-level course work, including the senior tutorial, which attempts to synthesize the other courses and the student's particular interests in the field of American studies. As a prerequisite, students must complete History H105 and H106 or provide evidence of knowledge of a general outline of the history of the United States; however, these courses do not count toward minor credit. A student's minor program will be developed in consultation with American studies faculty members and the student's American studies advisor. The student will be required to complete the following program:

1. A301 The Question of American Identity (3 cr.)
2. A302 The Question of American Community (3 cr.)
3. Two additional courses at the 300 or 400 level offered under the American studies rubric or cross listed in American Studies (6 cr.)
4. A499 Senior Tutorial (3 cr.)

Courses

A103 Topics in American Studies (1-3 cr.)

Interdisciplinary consideration of various American studies topics sometimes coordinated with symposia and/or conferences sponsored by the IUPUI Center for American Studies. A103 cannot be counted as credit toward an American studies minor.

A301 The Question of American Identity (3 cr.)

Is American culture unified or does it consist of a potpourri of more or less distinct cultures? Beginning with the 1600s but emphasizing the nineteenth and twentieth centuries, this course explores classic texts in American culture, seeking to locate the terms of American unity in the midst of obvious diversity.

A302 The Question of American Community (3 cr.)

What are the varieties and forms of American social life? This course will explore the manner in which Americans, from Puritan times through the later decades of the twentieth century, have structured and experienced social life in rural, urban, and suburban settings.

A303 Topics in American Studies (1-3 cr.)

Interdisciplinary consideration of various American studies topics.

A304 The Transformation of America 1960-1980 (3 cr.)

America in the years from John F. Kennedy to Ronald Reagan. An examination of such topics as the myth of Camelot, the civil rights movement and the subsequent black uprising, Vietnam and its aftermath, the rise of counterculture, campus unrest and the student movement, the road to Watergate and the retreat into narcissism, the pervasive influence of television, and the rise of neo-conservatism. Also, consideration of the literature: modernism and fabulism in fiction, social and cultural criticism, and the new journalism in nonfiction.

A499 Senior Tutorial in American Studies (3 cr.)

This course provides students with the opportunity to pursue particular interests in American studies on topics of their choosing and to work in a tutorial relationship with an American studies faculty member. In this course of directed study, students will be required to produce research projects for filing in the library.

Anthropology

Chair Professor Richard Ward

Professors Ken Barger, Susan Sutton, Richard Ward

Associate Professors Jeanette Dickerson-Putman, Barbara Jackson

Assistant Professors Elizabeth Kryder-Reid, Paul Mullins, Gina Sanchez

Adjunct Professors Associate Professor Janis Beckstrand, *Nursing*; Professor David Burr, *Anatomy*; Professor Della Cook, *Anthropology, IU Bloomington*; Associate Professor Eleanor Donnelly, *Nursing*; Professor Paul Jamison, *Anthropology, IU Bloomington*; Carol Jolles, *University of Washington*; Assistant Professor James R. Jones, *Indiana Department of Natural Resources*; Robert Kasberg, *Assistant Dean, University Graduate School*; Professor Robert Meier, *Anthropology, IU Bloomington*; Elizabeth Moore, *Visiting Assistant Scientist, IU School of Dentistry*; Associate Professor Susan Shepherd, *English*; April Sievert, *Research Associate, IU Bloomington*; Baldemar Velasquez, *Farm Labor Organizing Committee*

Academic Advising: Cavanaugh Hall 413, (317) 274-8207

Anthropology is the study of human cultural and biological diversity across a broad span of time and space. It includes the archaeological study of past societies; ethnographic investigations of contemporary cultures around the world; research into human evolution and genetic variation; and analyses concerning the development, structure, and social use of language.

The IUPUI anthropology program emphasizes the application of anthropological concepts and methods to current issues and concerns. Applied anthropology investigates such topics as how socioeconomic change affects migrant farmworkers, how African American health concepts are related to rates of hypertension, how museum programs can best represent Native Americans, how archaeologists can uncover and preserve the cultural heritage of a group, and how studies of human genetic variation can be used in the detection and counseling of children with genetic disorders.

The anthropology curriculum contributes to student growth in three ways: by broadening their understanding of the human experience across ethnic groups and across time, by encouraging learning and inquiry skills, and by providing practical learning experiences such as community internships and guided student research projects. A major in anthropology can lead to careers in a wide variety of social service organizations, health fields, museums, and businesses. A minor in anthropology can provide a base in human diversity to complement such careers as nursing, social work, education, and urban planning.

The anthropology program has laboratories that assist faculty and students with research in archaeology, biological anthropology, and ethnography. Frequent summer field courses provide further opportunities for students to gain cross-cultural and research experience in settings as diverse as Greece, Belize,

Mexico, and archaeological sites in Indiana. The Anthropology Club serves as a forum for students to exchange ideas and hear public speakers.

Major in Anthropology

A major in anthropology provides training in several areas: an overview of anthropological inquiry, an awareness of the wide variety of human cultures, intensive investigation of selected conceptual topics, research skills, and the application of anthropology outside the university setting. Requirements for a major include a minimum grade of C in 36 credit hours of anthropology courses. A student's particular program is selected in consultation with an anthropology faculty advisor from the following:

9 credit hours in overview of anthropology: A103 (or A303), A104 (or A304), and A360.

3 credit hours in internship in applied anthropology: A494.

3 credit hours in issues and methods in applied anthropology: selected from A201, A337, A361, A403, A485, E391.

6 credit hours in comparative human experience, selected from E300, E310, E316, E320, E326, E335, E336, E356.

6 credit hours in conceptual topics, selected from A337, A401, A403, A454, B370, B371, B480, E380, E391, E402, E411, E421, E455, E457, E470, L300, L401, P220.

3 credit hours in research methodology, selected from E404, P402.

6 credit hours in anthropology electives, selected from any course offered by the department.

The variable title courses A395, A460, A485, and A495 may sometimes be used to fulfill the above requirements if departmental approval is obtained.

Upper-level anthropology courses should be distributed to include at least 3 credits in three of the areas of archaeology, cultural anthropology, bioanthropology, and linguistics. A494 (Practicum) serves as a capstone experience for anthropology majors.

The major in anthropology is currently under revision. Current information may be obtained from the departmental chair or secretary and by consulting the departmental Web site.

Minor in Anthropology

A minor in anthropology provides basic training in three areas: an overview of anthropological inquiry, understanding of ethnic and cultural behavior, and understanding of a selected conceptual area in anthropology. Requirements for a minor include a minimum grade of C in 15 credit hours of anthropology courses, selected in consultation with an anthropology faculty advisor from the following:

6 credit hours in introductory anthropology: A103 (or A303) and A104 (or A304).

3 credit hours in comparative human experience: E300, E310, E316, E320, E326, E335, E336, E356.

3 credit hours in conceptual topics: A201, A360, A361, A401, B371, B466, B480, E380, E391, E402, E411, E421, E455, E457, E470, L300, L401, P220.

3 credit hours in an anthropology elective, selected from 300 level and 400 level courses offered by the department.

The variable title courses A395, A460, A485, and A495 may sometimes be used to fulfill the above requirements, if departmental approval is obtained.

As the anthropology program continues to develop, requirements for a minor will be periodically updated. Current information may be obtained from the departmental chairperson or secretary.

Minor in Cultural Diversity

This minor is oriented toward two groups of students. First, it provides a comparative framework for liberal arts and science majors for whom the study of culture, race, ethnicity, or gender overlaps their own disciplines. Second, it serves students in such fields as education, nursing, social work, business, medicine, public affairs, and law who wish to build a multicultural perspective into their professional practice.

Courses for the minor explore the genesis and transformation of racial and ethnic categories; the relationship of culture and biology; processes of acculturation and pluralism; the evolution of scholarly thought on human diversity; and ultimately, how it is that any of us comprehends others.

Requirements for the minor are a minimum grade of C in 15 credit hours of course work as follows:

6 credits hours of introductory anthropology: A103 and A104.

6 credits hours of general courses on diversity, through any two of the following courses: B370, E402, and E457.

3 credit hours of electives chosen in consultation with the minor advisor from a list of approved courses. This list is on file in the departmental office and includes courses from both anthropology and many other disciplines that concern diversity in general, or specific gender, ethnic, cultural, or other such groups.

Introductory Courses

A103 Human Origins and Prehistory (3 cr.) A survey of human biological and cultural evolution from early pre-Pleistocene hominids through the development of urbanized state societies, with the goal of better understanding our human heritage. (Not open to students who have had A303.)

A104 Culture and Society (3 cr.) A survey of cultural and social processes that influence human behavior, with comparative examples from different ethnic groups around the world, with the goal of better understanding the broad range of human behavioral potentials and those influences that shape the different expressions of these potentials. (Not open to students who have had A304.)

A201 Survey of Applied Anthropology (3 cr.) P: A103 or A303 and A104 or A304, or authorization of the instructor. A survey of such issues in applied anthropology as cultural resource management, community development, cross-cultural communication, Third World development, museum studies, archaeological ethics, and the impact of

human diversity on health care, education, and social programs.

A303 Evolution and Prehistory (3 cr.) P: junior standing. An advanced survey of human biological and cultural evolution from pre-Pleistocene hominids through the development of urbanized state societies. (Not open to students who have had A103.)

A304 Social and Cultural Behavior (3 cr.) P: junior standing. An advanced survey of cultural and social processes that influence human behavior, with comparative examples from different ethnic groups around the world. (Not open to students who have had A104.)

Advanced Courses

A337 African American Health Care (3 cr.) An anthropological perspective on the study of African American health beliefs and practices. This course examines the major theories for African American health as well as the relevant issues for understanding these health-care practices in delivering health services. Local and national health-care issues will be examined.

A360 The Development of Anthropological Thought (3 cr.) An overview of the major theoretical developments within anthropology, as the discipline has attempted to produce a universal and unified view of human life based on knowledge of evolution and prehistoric and contemporary cultures.

A361 Applied Cultural Change (3 cr.) A survey of major concepts of cultural and social change, and an evaluation of different models of applied change. The course emphasizes both a sound understanding of change and its practical application in developmental change.

A395 Field Experiences in Anthropology (1-3 cr.) P: authorization of the instructor. A supervised field experience in a selected area of anthropology. (May not be repeated for more than 6 credit hours.)

A401 Cultural Resource Management (3 cr.) The concept of cultural resource management as a theoretical and functional tool to effect the conservation and protection of archaeological resources. Law, project review, site registration, and preservation strategies will be addressed.

A454 Human Ecology (3 cr.) A survey of the biological and cultural means by which humans adapt to their environment. This course emphasizes the unique nature of human adaptation, focusing on specific human groups and on the general processes of adaptation.

A460 Topics in Anthropology: (variable title) (1-3 cr.) A conceptual examination of selected topics in the field of anthropology. (May not be repeated for more than 6 credit hours.)

A485 Topics in Applied Anthropology: (variable title) (1-3 cr.) An examination of a selected topic where the concepts, principles, and methods in anthropology are utilized to address a particular community or social issue. (May not be repeated for more than 6 credit hours.)

B370 Human Variation (3 cr.) Variation within and between human populations in morphology, gene frequencies, and behavior. Biological concepts of race, race classification, along with other taxonomic considerations and evolutionary processes acting on humans in the past, present, and future.

B371 The Anthropology of Human Nature (3 cr.) An examination of the foundations of human behavior as viewed from the biocultural and evolutionary perspective of anthropology. This course strives to provide the student with a rational middle ground in the nature/nurture debate by demonstrating that human behavior is innately plastic.

B426 Human Osteology (3 cr.) This course explores the types of information that can be recovered from bones, including age, sex, size, pathology, diet, and demography as well as how this information can be utilized to obtain an integrated picture of an individual. The skills learned are applicable to forensic anthropology, archaeology, human evolution, and anatomy.

B466 The Primates (3 cr.) The study of our closest living relatives—the prosimians, monkeys, and apes—from the perspective of evolutionary and environmental influences on morphology and complex social behavior.

B480 Human Growth and Development (3 cr.) The study of human growth and development from a biocultural perspective including the physical mechanisms, and social, cultural, and environmental factors that lead to normal growth and development throughout the human life cycle. Causal factors, patterns of expression, and methods of assessment are stressed. Also available for graduate credit.

E300 Culture Areas and Ethnic Groups: (variable title) (1-3 cr.) An ethnographic survey of a selected culture area or ethnic group. (May not be repeated for more than 6 credit hours.)

E310 Cultures of Africa (3 cr.) An ethnographic survey of culture areas and societies of sub-Saharan Africa.

E316 Prehistory of North America (3 cr.) This course will introduce students to the cultural variety and complexity of prehistoric native North Americans. The course focuses on the various environmental adaptations, lifeways, social systems, and material culture that have been revealed through archaeological research.

E320 Indians of North America (3 cr.) An ethnographic survey of native North American culture areas and ethnic groups.

E326 Modern Greek Society (3 cr.) This course examines modern Greek life from an anthropological perspective. Recent Greek history, and the changing circumstances of both village and urban dwellers are explored. The complexity of cross-cultural understanding emerges as the various images that outsiders hold of modern Greece are compared to the realities of contemporary life there.

E335 Ancient Civilizations of Mesoamerica (3 cr.) Historical ethnography of the major pre-Columbian civilizations, especially the Aztec, the Maya,

and the Zapotec and Mixtec. Emphasis on the social life, cultural achievements, religion, world view and political systems to illustrate the diversity and richness of Amerindian life before the Spanish conquest.

E336 African American Culture (3 cr.) This course provides an anthropological and comprehensive approach to the study of African American culture. It will focus on the ethnohistory, culture, politics, gender, language, health care, and values of African Americans. A secondary aim of this course is to examine the contemporary issues that affect the African American family.

E356 Cultures of the Pacific (3 cr.) This course examines the varied peoples and adaptations of the three main culture areas in the Pacific region (Micronesia, Polynesia, Melanesia) and explores such topics as male/female relations, sorcery, exchange, colonialism, and economic development.

E380 Urban Anthropology (3 cr.) An examination of urban social organization in cross-cultural perspective, including theoretical perspectives on urbanization, kinship and social networks, economic and political factors, and cultural pluralism.

E384 The African Diaspora (3 cr.) This course examines the cultural formation of the African Diaspora in the Americas. The course focuses specifically on the development of African diasporic populations in the Caribbean, Central America, and South America, in comparative perspective. Students will develop a critical understanding of the African Diaspora as a geographical displacement, as an assemblage of cultural groups, and as a process of political identification.

E391 Women in Developing Countries (3 cr.) This course explores the nature of women's roles in developing countries. Particular emphasis is placed on examining how development and cultural change have affected the lives of women.

E402 Gender in Cross-Cultural Perspective (3 cr.) This course considers the meaning and social implications of gender in human society. Cultural definitions of "male" and "female" gender categories as well as associated behavioral and structural differentiation of gender roles will be analyzed using current anthropological concepts and theories.

E403 Women of Color in the U.S. (3 cr.) This course examines the concepts of race, class, and gender as inextricably tied analytical categories, and how they have structured the lives of African American, Latina, Native American, and Asian American women, both U.S. born and immigrant. Themes of oppression, identities, and activism figure prominently throughout the course.

E404 Field Methods in Ethnography (3 cr.) Introduction to the methods and techniques anthropologists use to study other peoples. Preparation of a research proposal, interviewing, and the use of life histories and case studies.

E411 Wealth, Exchange, and Power in Anthropological Perspective (3 cr.) This course examines cultural patterns of production, exchange, and consumption, with an emphasis on non-Western societies and how these factors influence economic development in the Third World.

E421 The Anthropology of Aging (3 cr.) This course explores age and the aging process cross-culturally by looking at the specific cultural context in which individuals age and by analyzing similarities and differences across cultures.

E445 Medical Anthropology (3 cr.) A cross-cultural examination of human biocultural adaptation in health and disease, including biocultural epidemiology; ethnomedical systems in the prevention, diagnosis, and treatment of disease; and sociocultural change and health. Also available for graduate credit.

E455 Anthropology of Religion (3 cr.) Critical evaluation of current approaches to the analysis of religious myth, ritual, and symbolism. Problems in understanding religious beliefs of other cultures. Modern development of anthropology of religion.

E457 Ethnic Identity (3 cr.) A cross-cultural analysis of the nature of ethnic groups and identity, including the effects of colonialism and nationalism on ethnic groups, stereotyping groups, ethnic symbols and styles, and persistence and change in ethnicity.

E470 Psychological Anthropology (3 cr.) A cross-cultural examination of human behavior in its ethnic context, including selected topics such as socialization, sex roles, altered states of consciousness, and personality and sociocultural change.

L300 Language and Culture (3 cr.) This course explores the relationships between language and culture, focusing on research methodology and surveying various theoretical frameworks. Topics to be discussed include linguistic relativity (the Sapir-Whorf Hypothesis), ethnographies of communication, interview techniques, and methods of data collection and analysis.

L401 Language, Power, and Gender (3 cr.) This course investigates sociocultural aspects of language use, focusing on the interaction of power and gender with language. Topics include differences in men's and women's language use, discourse patterns and power relationships, and identity and language use. To what extent does the language we speak sustain the dominance of certain groups in our society?

P220 The Rise of Civilization (3 cr.) Covers the development of complex societies in several regions of the world. The material is approached from an anthropological perspective, with emphasis on archaeological methods of data collection and analysis. Early civilizations in Iraq, India, Egypt, Rome, China, Peru, and Central America will be discussed.

P402 Archaeological Method and Theory (3 cr.) This class is concerned with how archaeologists know what they know about the past. Methods of data collection are reviewed and theoretical interpretations are discussed. The focus of the course is on evaluation of archaeological research and explanation, with special emphasis on critical thinking.

Independent Study Courses

A494 Practicum in Applied Anthropology (1-4 cr.) P: authorization of the instructor. An arranged experience in applied anthropology,

appropriate to individual career goals. The student will work with an approved community group or organization on a specific project that facilitates the integration of previous course work and experience in a practical application. (May not be repeated for more than 6 credit hours.)

A495 Independent Studies in Anthropology (2-4 cr.) P: authorization of the instructor. A supervised, in-depth examination through individual research on a particular topic selected and conducted by the student in consultation with an anthropology faculty member.

A594 Independent Learning in Applied Anthropology (3 cr.) P: authorization of the instructor. Independent research/training using the anthropological perspective/methods in addressing social issues. The project must be a discrete activity with a concrete product, conducted in conjunction with the student's anthropology advisor and a member of the organization where she or he will be located. (May not be repeated for more than 6 credit hours.)

Graduate Minor in Anthropology and Health

The graduate minor in anthropology and health is an integrated field of 12 credit hours of study designed to supplement the graduate training of students with an interest in careers in the health field. The program has three goals: to provide students a holistic perspective on the anthropology of health, which integrates human biology, ecology, and culture in a systems model of health; to develop students' anthropological inquiry skills in understanding health in human groups; and to develop students' abilities to apply anthropological concepts and skills to health interventions in the areas of their career focus. The graduate minor in anthropology and health will provide students with training that will add greater depth and breadth to their qualifications in their major field. They will be able to use the cross-cultural and biocultural perspectives of anthropology to supplement their primary graduate training to better prepare them for a career in the health fields. This focused training will enable students to use anthropological concepts and skills to identify biocultural factors in the occurrence of disease, to understand ethnic behavior related to illness, and to identify where health programs across social and ethnic lines can be made more effective.

Course Requirements

Twelve credit hours approved for the minor in anthropology and health with a grade point average of at least 3.25, including E445, A594, one course selected from B521, B523, B525, E404, E606, and L605, and one elective.

Courses

E445 Medical Anthropology (3 cr.) A cross-cultural examination of human biocultural adaptation in health and disease, including biocultural epidemiology, ethnomedical systems in the presentation, diagnosis, and treatment of disease, and sociocultural change and health.

A594 Independent Learning in Applied Anthropology (3 cr.) P: authorization of instructor. Independent research/training using anthropological perspectives/methods in addressing social issues. The project must be a discrete activity with a concrete

product, conducted in conjunction with the student's anthropology advisor and member of the organization where she or he will be located. (May not be repeated for more than 6 credit hours.)

Research Methods in the Anthropology of Health

B521 Bioanthropology Research Methods (3 cr.)

B523 Anthropometry (3 cr.)

B525 Genetic Methods in Anthropology (3 cr.)

E404 Field Methods in Ethnography (3 cr.)

E606 Research Methods in Cultural Anthropology (3 cr.)

L605 Field Methods in Anthropological Linguistics (3 cr.)

Electives

Electives in the anthropology of health (3 cr.)

Electives will be selected from approved anthropology courses offered at IUPUI and IU Bloomington in consultation with the minor advisor.

Folklore

F101 Introduction to Folklore (3 cr.) A view of the main forms and varieties of folklore and folk expression in tales, ballads, gestures, beliefs, games, proverbs, riddles, and traditional arts and crafts. The role of folklore in the life of human beings.

F111 World Folk Music and Culture (3 cr.) The course explores the role of music in human life. It introduces students to ethnomusicology and the cross-cultural study of music, performance, and culture.

F131 Introduction to American Folklore (3 cr.)

Folklore and traditional expressive behavior within the context of American culture. Art and traditional philosophies of folk groups found in America, including ethnic groups, occupational groups, regional groups, religious groups, etc. The function of folklore within the lives of American people.

F312 European Folklore/Folklife/Music (3 cr.)

This course is a comparative survey of the genres of the folklore of Europe, emphasizing especially the study of worldview and folk religion. The interrelationships of the folk cultures of Europe that allow us to speak of "European folklore" will also be examined.

F354 African American Folklore/Folklife/Folk Music (3 cr.)

African American culture in the United States viewed in terms of history and social change. Folklore, folk music, and oral history as means of illuminating African-American culture and history. May be repeated once when topics vary.

F356 Chicano Folklore/Folklife/Folk Music (3 cr.)

The folk traditions of Mexican Americans as a reflection of the historical experience and cultural identity of this people within the United States. Mexican heritage, Anglo and black influences, and the blending of these elements into a unique cultural entity. May be repeated once when topics vary.

F360 Indiana Folklore/Folklife/Folk Music (3 cr.)

Survey of folklore, folklife, or folk music of Indiana with particular attention to the persistence into the present of preindustrial culture. Students are encouraged to do fieldwork in the state. May be repeated once when topics vary.

F363 Women's Folklore/Folklife/and Music (3 cr.)

This course identifies key issues in women's folklore and examines the ways in which women have been represented in myths, legends, and folktales, past and present. The various ways in which visions of womanhood inform, reflect, and challenge gender roles will also be analyzed.

Museum Studies

MSTD A403 Introduction to Museum Studies (3 cr.)

This survey of museology introduces students to the history of museums and to debates on the philosophical nature of museums and their roles in society. The course covers the types and definitions of museums, traces the history of museums, discusses contemporary museum practice, and examines current issues in the museum profession.

MSTD A405 Museum Methods (3 cr.) This survey of museum practice introduces students to methods, skills, and resources in three areas of museum work: artifacts, interpretation, and organizational administration, as well as to the ethical ramifications of these methods.

MSTD A408 Museum Internship (1-6 cr.) P:

A403 and A405, or consent of instructor. An arranged learning experience in museum work appropriate to individual career goals focusing on an aspect of museum practice and working with a museum mentor. May be repeated.

MSTD A410 Museum Education (3 cr.)

This survey of museum education introduces students to a variety of professional skills through exercises, projects, museum visitor observation, and in-museum classes. It covers education theory most central to museum practice, the duties of museum educators, and current issues in museum education.

MSTD A412 Exhibit Planning and Design (3 cr.)

This course offers a survey of museum exhibit planning and design through an integration of theory and practice. The class introduces students to exhibit development, including exhibit administration, design, and evaluation, and to a variety of professional skills through hands-on exercises, exhibit critiques, museum observations, and in-museum classes.

MSTD A414 Museums and Technology (3 cr.)

This course surveys the growing use of technology in museums. It examines applications for information management in collections, conservation science, and archives. It examines critically the use of technology in the service of education both in exhibit contexts and in the variety of educational programs and Web-based methods of knowledge dissemination.

Classical Studies

See "Foreign Languages and Cultures."

Communication Studies

Chair John Parrish-Sprowl

Professors Richard K. Curtis (Emeritus), Robert C. Dick, James R. East (Emeritus), John Parrish-Sprowl, Dorothy L. Webb (Emerita), J. Edgar Webb (Emeritus)

Associate Professors David G. Burns (Emeritus), Catherine A. Dobris, Elizabeth M. Goering, Kristine B. Karnick, B. Bruce Wagener (Emeritus), Gail G. Whitchurch, Kim White-Mills

Assistant Professor Stuart M. Schrader

Adjunct Professors Professor Ken Davis, *English*; Nancy Eddy, *Lilly Theatre Children's Museum*; Associate Professor Beverly E. Hill, *Medical Education Resources Program*; Assistant Professor Janet Allen, *Indiana Repertory Theatre*; Assistant Professor Kathleen Zoppi, *Family Medicine*

Lecturers Al Atkins, Jennifer Cochrane, Jan DeWester, Harold Donle, Maureen Minelli, Charles Reyes, Ronald M. Sandwina, Kate Thedwall

Professional Staff Assistant to the Chair, Martha Vaughn

Academic Advising: Cavanaugh Hall 309, (317) 274-0566

Communication Studies is an integral part of the liberal arts. The curriculum focuses on communication theories, methods, and competencies from a variety of contexts: rhetorical symbolism, public address, organizations, family, health, media, and theatre.

The department offers a diverse curriculum for majors, minors, and service courses for other departments and units within the University. Students learn about the communication process inherent in the areas of: interpersonal, group, organizational, public, and media studies. Communication course work assists students in enhancing their critical inquiry, oral performance, media and message design, problem-solving, and relational conversation skills. A foundation is provided for graduate work in various areas of communication studies, humanities, and/or social science and in professional programs such as law, business, health, and social work. Course work also assists those students pursuing career fields that apply communication principles: public relations, marketing, video or film production, corporate media production, training and development, human resources, public affairs, and special events planning.

The department sponsors the biennial Waldo M. and Grace C. Bonderman IUPUI National Youth Theatre Playwriting Workshop and Symposium. Winning playwrights spend a week in residency developing their scripts and are spotlighted at the symposium held at the end of the workshop.

Major in Communication Studies

Requirements

Every major must complete a minimum of 33 credit hours. The following are a list of additional requirements to successfully complete the major:

- Each student must successfully complete the following 3 courses: G100 (Introduction to Communication Studies), C201 (Introduction to Communication Theory), and C299 (Introduction to Communication Research).
- Each student must take 6 hours in cluster one (Oral Performance). At least 3 hours must be at the 300 level or above.
- Each student must take 6 hours in cluster two (Theoretical/Historical Foundations). At least 3 hours must be at the 300 level or above.
- Each student must take 3 hours in cluster three (Research/Capstone Experience).
- At least 15 credit hours in the major must be in courses at the 300 level or above.
- The student must take at least 3 credit hours in each of the four designated prefixes of C, M, R, and T: Communication, including Organizational Communication ("C" courses), Media Studies ("M" courses), Rhetoric and Public Address ("R" courses), and Theatre ("T" courses).
- No more than 12 credit hours may transfer. At least 21 hours must be taken in the Department of Communication Studies at IUPUI.
- The student must earn a C or better in all major course work.
- At least 21 credit hours of the major must be in courses offered solely or cooperatively by the department.

No student may count more than 9 credits of G300 (Independent Study) and G491 (Internship) toward graduation.

The faculty highly recommends that G100, C201, and C299 be taken early in the student's academic career.

Core Courses (These classes are essential; they are the first classes you must take.)

G100 Introduction to Communication Studies
C201 A First Look at Communication Theory
C299 Introduction to Communication Research

Cluster I: Each of the following courses has significant units designed to help the student enhance oral performance skills. Majors will select 6 hours. At least 3 credit hours must be at the 300 level or above.

C104 Voice and Diction	3 cr.
C228 Discussion and Group Methods	3 cr.
C325 Interviewing Principles and Practices	3 cr.
M150 Mass Media and Contemporary Society	3 cr.
R227 Argumentation and Debate	3 cr.
R320 Advanced Public Communication	3 cr.
T133 Acting I	3 cr.
T205 Oral Interpretation	3 cr.

Cluster II: Each of the courses in this cluster is designed to provide students with experiences in theory, history, and/or methodologies appropriate to the discipline. Majors will select 6 hours. At least 3 credit hours must be at the 300 level or above.

C180 Interpersonal Communication (This course may count toward your major or School of Liberal Arts requirements, but NOT both.)	3 cr.
C380 Organizational Communication	3 cr.
G375 Topics in Nonverbal Communication	1-3 cr.
M462 Television Aesthetics and Criticism	3 cr.

R309 Great Speakers: American Public Address	3 cr.
R310 Rhetoric and Public Address	3 cr.
R321 Persuasion	3 cr.
R330 Communication Criticism	3 cr.
T337 History of the Theatre I	3 cr.
T338 History of the Theatre II	3 cr.
T339 Play Directing	3 cr.

Cluster III: These courses are designed to provide students with a capstone experience. Students must take 3 credit hours.

C322 Advanced Interpersonal Communication	3 cr.
C328 Advanced Topics in Small Group Comm.	3 cr.
C392 Health Communication	3 cr.
C482 Intercultural Communication	3 cr.
G499 Research Seminar	3 cr.
M462 Television Aesthetics and Criticism (Prereq: M150, or permission of instructor)	3 cr.
R330 Communication Criticism	3 cr.

Other Cluster III courses might include:

G300 Independent Study
G391 Seminar

(Permission must be granted by your advisor).

Communication Studies Honors Degree Requirements

A list of communication studies courses approved for H-Options is available in the Honors Program office or in the department's office. Other courses may be arranged by departmental approval. Students graduating with departmental honors will receive a certificate and a letter of acknowledgment.

Teacher Certification

Students seeking a certificate for teaching speech and theatre in secondary schools should review requirements found in the School of Education section of this bulletin and seek academic advising from the School of Education.

Minors in Communication Studies

Note: Students selecting any of the minors below must consult with a department academic advisor.

Communication Arts: A generalist minor for anyone wishing an acquaintance with liberal arts from a communication perspective.

Required: G100, plus 12 elected credit hours. The 12 credit hours should be elected in consultation with, or approved by, a departmental academic advisor; the credit hours must be from at least two areas within the department curriculum (areas prefixed C, M, R, T); and, at least 6 credit hours must be from the 300 level or above.

Media Studies: Designed to accommodate students interested in media production and/or media aesthetics. In both options students will gain an understanding and appreciation of media as conveyors of meaning, cultural artifacts, and art forms.

Students wishing to minor in media studies will choose 15 credit hours from one of the two options outlined below. Both options require M150, plus 12 credit hours from one of the two groups, of which 6 credit hours must be at the 300 level or above:

Media Production

M210 Media Message Design	3 cr.
M220 Electronic Graphic Production	3 cr.
M221 Electronic Media Production	3 cr.
M290 Video Production Workshop	1 cr.
M461 Production Problems in Communication Media	1-3 cr.

Media Aesthetics

G391 Seminar	1-3 cr.
M370 History of Television	3 cr.
M373 Film and Video Documentary	3 cr.
M462 Television Aesthetics and Criticism	3 cr.

Up to 6 credit hours from other courses approved by the departmental Media Studies Committee.

Organizational Communication: Provides students with the opportunity to develop knowledge and communication competencies applicable in a wide variety of profit and nonprofit organizations.

Required (15 credit hours): C380 and 12 credit hours elected from C180, C223, C227, C228, R320, R321, C325, C392, C480, and G499. Prerequisite is R110 or equivalent.

Theatre: Provides knowledge and skills for teaching and lays the basis for further study in acting, theatre directing, youth theatre, and playwriting.

Required for General Theatre Minor (15 credit hours): 12 credit hours elected from T130, T133, T337, T338, and T339. Remaining 3 elective credit hours in theatre courses at the 300 level or above.

Required for Youth Theatre Minor (15 credit hours): T130, T133, T336, T437, and T440.

Courses

C104 Voice and Diction (3 cr.) Directed primarily toward the improvement of normal speech patterns, with emphasis on normal production, resonance, and articulation.

C108 Listening (1 cr.) P: reading placement score of at least 80, and placement in W131. Designed to increase listening efficiency by improving comprehension and listening skills.

C180 Introduction to Interpersonal Communication (3 cr.) P: reading placement score of at least 80. The study of human dyadic interaction, including topics such as perception processes, verbal/nonverbal communication, theoretical models of communication, conflict, and interpersonal communication in various relationships. Course covers applications of interpersonal communication theory/research, including communication competence.

C201 Introduction to Communication Theory (3 cr.) A survey of theories in the field of human communication. Consideration is given to theories that explain communication behavior between pairs of people, within groups, in organizations, and in societies.

C223 Business and Professional Communication (3 cr.) P: R110 or equivalent. Preparation and presentation of interviews, speeches, and oral reports appropriate to business and professional organizations; group discussion and parliamentary procedure. This is an intermediate skills course with survey characteristics.

C228 Discussion and Group Methods (3 cr.)

Theory of and practice in effective participation in and leadership of group, committee, conference, and public discussion; application to information-sharing and problem-solving situations.

C299 Introduction to Communication Research (3 cr.) Methodologies and types of data analyses for investigating communication phenomena. Students will acquire knowledge and competencies that will allow them to understand and address the process of communication research and relevant communication research issues.

C322 Advanced Interpersonal Communication (3 cr.) P: C180 or permission of instructor. Covers core components of the study of interpersonal communication: perception, systems, exchange theoretical approaches; methods of research in interpersonal communication; content (topic) areas such as intimate relationships and friendships. Includes applications of interpersonal communication theory/research.

C325 Interviewing Principles and Practices (3 cr.) P: R110 or equivalent. Emphasizes verbal and nonverbal communication in pre-interview background research preparation, interview schedule design, question construction, and post-interview self-analysis in several interviewing contexts. Course includes significant assignments designed to help the student enhance oral performance competencies.

C328 Advanced Topics in Small Group-Communication (3 cr.) P: C228 or permission of instructor. Theories of small group communication processes. Explores group communication across cultures, groups in organizations, group decision making, conflict management in groups, and assessing competence in group communication.

C380 Organizational Communication (3 cr.) The application of communication theory and research to the study of communication in various types of organizations. Explores reciprocal influence between communication and organizational structures and between communication and managerial styles. Discusses communication designs, superior/subordinate communication, conflict, information management, networks; communication vis-à-vis employee motivation, satisfaction, and productivity; and communication effectiveness in organizations.

C392 Health Communication (3 cr.) P: 3 credit hours of communication or consent of instructor. Exploration of the communication competencies needed by health-care professionals. Emphasizes interviewing; verbal and nonverbal skills; group interaction; and intercultural, interprofessional, therapeutic, and organizational communication. Analyzes communication problems encountered in health care and the development of coping strategies.

C393 Family Communication (3 cr.) P: C180 or permission of instructor. Theory/research on the role of communication in creating and maintaining marriages and families. Topics include communication and family life cycles, different family forms, family race/ethnicity, power, and conflict. Covers applications of family communication theory/research.

C394 Communication and Conflict (3 cr.)

Analyzes conflict as a form of interaction. Examines approaches/perspectives to the study of conflict, the nature of power, face saving, and contentious behaviors. Specific contexts include relational, marital, group, and organizational. Special attention to bargaining and mediation.

C401 Speech Communication of Technical Information (3 cr.) P: R110 or equivalent.
