Organization and presentation of information of a practical, technical nature. Emphasis is placed on the study, preparation, and use of audiovisual materials. For nonmajors only.

C402 Interview and Discussion for Business and Professions (3 cr.) Principles of communication as related to the information-gathering interview, the employment interview, and problem-solving discussion; practice in using these principles. For nonmajors only.

C481 Current Issues in Organizational Communication (3 cr.) P: C380 or permission of instructor. In-depth exploration of topics and issues at the forefront of research and theory in organizational communication. Topics may include gender issues in organizational communication, sexual harassment, crisis management, organizational culture. Seminar format with research papers and class discussion/presentations.

C482 Intercultural Communication (3 cr.) P: C180 or permission of instructor. Cognitive, affective, and behavioral learning about intercultural and intracultural communication to increase understanding of the centrality of communication in the social, psychological, and environmental aspects of culture.

G100 Introduction to Communication Studies (3 cr.) P: reading placement of at least 80, and placement in W131. Survey course of history, theory, and practice in each of six major areas: Rhetoric and Public Address, Theatre Arts, Interpersonal/Organizational Communication, Small Group Dynamics, Public Communication, and Mass Media Studies. For each of the areas examined, students will apply theory to practice, thereby learning to become more effective communicators.

G125 Topics in Communication Studies (1-3 cr.) Select introductory theory and practice in specialized and/or consolidated areas of communication and theatre not directly covered by current curricular offerings. Topics will vary from one semester to another. A student may register for a total of no more than 6 credit hours under this course number.

G300 Independent Study (1-8 cr.) Research or practical experience in various departmental areas as selected by student prior to registration, outlined in consultation with the instructor, and approved by the department. If a practicum experience, it must represent a minimum of 45 clock hours practical application per credit hour. A student shall take no more than a total of 9 credit hours of G300 and G491.

G375 Topics in Nonverbal Communication (1-3 cr.)

Course examines the influences of nonverbal communication cues: interpersonal dynamics, media, environmental dimensions, and rhetorical strategies. Cross-cultural and gender difference in nonverbal codes will also be explored.

G390 Honors (1-5 cr.) P: junior standing and departmental approval. Individualized readings and/or project work devised by the student; regular meetings with faculty supervisor.

G391 Seminar (1-3 cr.) P: permission of instructor. Topic announced in prior semester; oriented to current topics in communication and theatre; readings, projects, and papers as indicated by the topic and instructor. May be repeated for a total of 8 credit hours.

G400 Health Provider-Consumer

Communication (3 cr.) This course is designed to teach communication skills and practices related to health-care discourse, by examining transactional communication within health-care contexts. Topics covered in this course focus directly upon interpersonal dialogue between health-care providers and patients.

G491 Internship (3-6 cr.) P: permission of instructor; seniors and majors only. Internship in rhetoric and public address, theatre arts, interpersonal/organizational communication, or media studies permitted under the auspices of a qualified cooperating organization. Periodic meetings with faculty advisors and term paper detailing intern's professional activities and reactions. Apply during semester prior to desired internship. Total credit applicable to graduation shall not exceed 9 credit hours of G300 and G491.

G499 Research Seminar (3 cr.) P: upper-division standing or permission of instructor. A survey of the methods used by communication researchers for gathering and interpreting information, emphasizing the relationship between theory and research. The seminar will explore important issues such as ethics and naturalistic vs. laboratory approaches.

M150 Mass Media and Contemporary Society (3 cr.) P: reading placement score of at least 80. A critical overview of the role of electronic mass media in contemporary society. Provides an introduction to such issues as industry structure, organization, and economics; regulation, public interest, and media ethics; impact of programming on individuals; media construction of social institutions; media issues in the global village.

M210 Media Message Design (3 cr.) P: W132. Examines the process of message design in the context of institutional media use. Analyses of media messages and communication theory; employs quantitative and qualitative audience research methods. Semester project involves planning and writing of script for use in organizational/ institutional media context.

M215 Media Literacy (3 cr.) Fundamentals and a general understanding of communication technologies are surveyed and discussed in a non-technical and non-engineering manner. This course

will introduce students to basic terminology and to various types of communication technology systems. It will also help students understand new and traditional communication systems and their theories of operation and application (including advantages and limitations).

M220 Electronic Graphic Production (3 cr.)

Principles of visual aesthetics and critical visual literacy applied to the production of mediated messages. Basic typographic, graphic, and photographic skills are examined and practical techniques in different media are discussed. Several hands-on projects are used to develop individual competencies.

M221 Electronic Media Production (3 cr.)

Principles of visual and aural aesthetics and critical visual literacy applied to the production of mediated messages. Basic animation, video, and audio skills are examined and practical techniques in different media are discussed. Several hands-on projects are used to develop individual competencies.

M290 Video Production Workshop (1 cr.) P or C: M221.

The practical application of video production techniques. In a production center atmosphere, students are instructed in and practice equipment operation and crew responsibilities creating video productions for outside clients. Students may register for more than one section in one semester. May be repeated for a maximum of 3 credit hours.

M370 History of Television (3 cr.)

The development of television as an industry, technology, and cultural commodity from its roots in other forms of popular culture to the present, paying particular attention to the social and aesthetic contexts within which programs have been viewed.

M373 Film and Video Documentary (3 cr.)

P: M150, C190, or permission of instructor. A historical survey of documentary film and video and a consideration of specific problems in documentary theory and practice.

M450 Video Production (3 cr.) (for nonmajors)

Television production principles and practices for students in other disciplines. Emphasis on practical studio experiences with special attention to the roles of the writer, producer, and director. No prior knowledge of media required. May not be counted for credit in the media major emphasis. Lab arranged.

M461 Production Problems in Communication

Media (1-3 cr.) P: permission of instructor. Topic announced during preceding semester. Specialized study and application of advanced production techniques in audio, video, photography, or graphics. Readings, research, papers, and project as indicated by the topic and instructor. May be repeated for different topics.

M462 Television Aesthetics and Criticism

(3 cr.) P: M150 or permission of instructor. Aesthetic and critical approaches to modes of television expression. Aesthetics of picture composition, audiovisual relationships, visual narrative, and program content. Analysis of selected television criticism.

M463 Advanced Graphic Technique (3 cr.)

P: M220 or permission of instructor. Analysis of problems, methods, and technology in graphics. Consideration of advanced techniques in digital image and illustration manipulation including compositing, lighting effects, and different compression formats for video, multimedia, and the World Wide Web.

M464 Advanced Audio Technique (3 cr.)

P: M221 or permission of instructor. Analysis of field and studio recording technique with an emphasis on multitrack production. Electronic editing, mixing and signal processing are considered. Group and individual projects.

M465 Advanced Video Technique (3 cr.)

P: M221 or permission of instructor. Analysis of electronic field production and editing with an emphasis in advanced video editing techniques. Both linear and non-linear editing systems are considered. Individual and/or group projects.

M466 Television Direction (3 cr.)

P: M221, M290, or permission of instructor. Creative management of production elements to translate a program idea into medium requirements. Advanced course in which the experienced student produced substantive programs combining several formats. Emphasis on design and production from first request by client through program distribution.

R110 Fundamentals of Speech Communication

(3 cr.) P: reading placement score of at least 80. Theory and practice of public speaking; training in thought process necessary to organize speech content for informative and persuasive situations; application of language and delivery skills to specific audiences. A minimum of six speaking situations.

R224 Parliamentary Procedure (1 cr.)

P: reading placement of at least 80, and placement in W131. Modern concepts of parliamentary forms in legislative assemblies and business meetings; practice in the use of parliamentary procedures.

R227 Argumentation and Debate (3 cr.)

Analysis, evidence, and argument in logical discourse; study of debate forms; practice argumentative speaking in class, campus, and intercollegiate debate.

R309 Great Speakers: American Public Address

(3 cr.) Course introduces students to historical and contemporary public address. Students will study the speechmaking of notable American speakers. The study will include speeches from a wide range of established genres and will include campaign rhetoric, debates, historical celebrations, lectures, legislative speaking, presidential speaking, public meetings, movement, rhetoric, and sermons.

R310 Rhetoric and Public Address (3 cr.)

P: R110 or equivalent. Development of theory of oral discourse; the influence of public address; historical and current problems in rhetoric of conflict, in freedom of speech, and in propaganda and persuasion.

R320 Advanced Public Communication (3 cr.)

P: R110 or equivalent. Development of a marked degree of skill in preparation and delivery of various types of speeches, with emphasis on depth of research, clarity of organization, application of proof, and felicitous style.

R321 Persuasion (3 cr.) P: R110 or equivalent. Motivational appeals in influencing behavior; psychological factors in speaker-audience relationship; principles and practice of persuasive speaking.

R330 Communication Criticism (3 cr.) P: G100 or R110 and reading placement of at least 80. Course will introduce students to criticism as a method of studying persuasive messages in speeches, fiction, mass media, music, political campaigns, art, and other modes of communication in contemporary culture.

T100 Rehearsal and Performance (3-6 cr.) Emphasizes learning through the preparation and performance of plays and non-dramatic literature adapted for performance. Various approaches may include but are not limited to performance studies, the study and preparation of a short play, and an original play for young audiences. The various steps and processes involved in the preparation and rehearsal will be based on appropriate theoretical concepts. A student may enroll in no more than 6 credits under this course number.

T130 Introduction to Theatre (3 cr.) P: reading placement score of at least 80. An introduction to the study of theatre; the wide range of critical, historical, aesthetic, and practical interests necessary for a well-rounded view; emphasis on theatre as an art form and elements of dramatic construction.

T133 Introduction to Acting (3 cr.) Acting I, a study of the theories and methods of acting, basic techniques, character analysis, interpretation, and projection. Class scenes.

T205 Introduction to Oral Interpretation (3 cr.) P: reading placement score of at least 80. Basic principles and practice in analysis and reading of selections from prose, poetry, and drama. Public presentation of programs.

T305 Advanced Oral Interpretation (3 cr.) P: T205 (C104 suggested). An advanced approach to analysis and oral presentation of literature. Emphasis on group work. Analysis, development, and presentation of readers' theatre or chamber theatre materials.

T333 Acting II (3 cr.) P or C: T133 or permission of instructor. Advanced scene study. Laboratory in body movement and vocal techniques; participation in laboratory theatre.

T336 Children's Theatre (3 cr.) P: junior standing or instructor's approval. Historical development of children's theatre, with emphasis on scripts appropriate to young audiences: designed to assist future teachers, parents, librarians, and others in understanding theatre as an art form for children ages 6-12, and in selecting appropriate theatre experiences for various periods of the child's life.

T337 History of the Theatre I (3 cr.) Significant factors in primary periods of theatre history through the Renaissance and the effect on contemporary theatre; emphasis on trends and developments; review of representative plays of each period to illustrate the theatrical use of dramatic literature.

T338 History of the Theatre II (3 cr.) Continuation of C337. May be taken separately.

T339 Play Directing (3 cr.) P: T130; T133 or permission of the instructor. Introduction to theatre, methodology, and techniques: strong emphasis upon play analysis, actor-director communication, stage compositions. Students will direct scenes.

T430 Theatre Management (3 cr.) P: C130 or C141 or permission of instructor. Theatre Management is based on the concept that theatre is a business and must be operated on sound business principles. Students study the business aspects of operating various types of theatres. The study of the theoretical basis of management is augmented by practical projects.

T431 Playwriting (3 cr.) P: permission of instructor. Introduction to playwriting theories, methodology, and skills; principles of dramatic structure; practice in writing, culminating in a one-act play manuscript; class evaluation and conferences. Credit not given for both T431 and T453 (taught on the Bloomington campus).

T437 Creative Dramatics (3 cr.) Laboratory course in informal dramatics, emphasizing the child rather than the production; includes methods of stimulating the child to imaginative creation of drama with the materials of poetry, stories, choral readings, and music. Available for graduate credit in summer sessions.

T440 The Art and Craft of Puppetry (3 cr.) Theory and practice of puppetry as an art form and as an educational tool. Students will create a wide variety of hand puppets, scripts, and stages as well as master basic techniques of puppet performance. Produced substantive programs combining several formats. Emphasis on design and production from first request by client through program distribution.

Economics

Chair Associate Professor Robert Sandy

Professors Subir Chakrabarti, Robert Harris, Peter Rangazas, Martin Spechler, Richard Steinberg

Associate Professors Mark Bilodeau, David Bivin, Jonathan Burke, Paul Carlin, Partha Deb, Patrick Rooney, Steven Russell, Robert Sandy, Mark Wilhelm

Assistant Professors Gwendolyn Morrison, Una Okonkwo Osili, Anne Royalty, Geoffrey Warner

Adjunct Professors Charalambos Aliprantis, Ann Holmes, Frank Kelly

Academic Advising: Cavanaugh Hall 516, (317) 274-4756

Economics is the social science in which one studies human behavior in consuming, producing, exchanging, and distributing goods and services. It provides a framework for understanding how decisions of individuals affect the national economy. It helps explain how the economy and how politicians' and government regulators' decisions are affected by their own interests.

Major in Economics

The economics major has the option of pursuing a general track or a quantitative track. The general track provides a firm grounding in economic theory and exposure to problems and techniques the student is likely to encounter in a business, nonprofit, or government agency environment. The quantitative track supplements the general track with extensive training in mathematical and statistical techniques required for graduate course work. This track is also recommended for those students who prefer a more quantitative approach to problem solving. Completion of this track fully prepares the student for entrance into the department's Master of Arts in Economics program at IUPUI as well as graduate programs at other universities.

All majors must complete 18 credit hours in economics to include E201, E202, E270, E321, E322, and E406. These courses should be completed by the end of the junior year. Note that E201 is a prerequisite for E202 and E321 and that E202 is a prerequisite for E322. E321 and E322 are prerequisites for E406.

A. General Track

The general track requires an additional six courses, consisting of the following:

1. two courses (6 credit hours) in mathematics, including finite mathematics and calculus (typically M118 and M119). Additional work in mathematics, computer science, and accounting is recommended.
2. three 300 or 400 level electives from economics.

The total number of credit hours is 33 (34 if E335 is taken as an elective).

B. Quantitative Track

The quantitative track requires an additional six courses (or seven courses, depending on the math sequence) consisting of the following:

1. either
 - a. M163 and M164 (10 credit hours), or
 - b. M118, M119, and E335 (10 credit hours).
2. E470.

3. one 300 or 400 level elective (excluding E335 and E470).

The total number of credit hours is 34.

To satisfy the department's residency requirement, at least 12 credit hours of economics must be taken at IUPUI.

A grade of C (2.0) or better must be received in each course required for the major (a C- does not count).

Minor in Economics

A minor in economics is a logical supplement to programs in business, engineering, technology, health services, science, and the social sciences. A knowledge of economic theory, economic institutions, and how economic policy is formed is necessary for students preparing for careers in law, science, government, or any area that uses the scarce resources of our society.

Requirements

The requirements for a minor in economics are as follows:

1. 15 credit hours in economics courses to include E201 and E202 and three 300 or 400 level courses. (E270 may be substituted for one of the 300 to 400 level courses.)
2. Residency requirements: 9 credit hours of the minor must be completed at IUPUI.
3. Grade requirement: The grade in each course submitted for the minor must be C (2.0) or higher.

Minor in Business

Students are required to meet course prerequisites and entrance requirements, which include completion of the following eight courses or equivalents with a minimum GPA of 2.0 to ensure admission into the business integrative core classes.

BUS A100 Basic Accounting Skills
 BUS A201 Introduction to Financial Accounting
 BUS A202 Introduction to Managerial Accounting
 ECON E201 Introduction to Microeconomics
 ECON E202 Introduction to Macroeconomics
 ECON E270 Introduction to Statistical Theory in Economics
 MATH M118 Finite Mathematics
 MATH M119 Brief Survey of Calculus I

In addition, BUS K201 The Computer in Business, or its equivalent, must be completed with a minimum grade of C before starting the integrative core. Business minors are required to take the integrative core, which is 9 credit hours taken together as a single educational unit (BUS F301 Financial Management, M301 Introduction to Marketing Management, P301 Operations Management), and must apply for space in the three core classes. Application periods are January 15 to March 1 for the fall semester and August 15 to October 1 for the spring semester. Applications are available in Business/SPEA Building 3020.

In addition to the 12 required courses listed above, BUS X204 Business Communications (3 cr.), BUS L203 Commercial Law I (3 cr.), and BUS Z302 Managing and Behavior in Organizations (3 cr.) are recommended. As with all courses listed above, the

Kelley School of Business will impose essentially the same standards for students minoring in business who are enrolled in the integrative core (BUS F301, M301, and P301) as for business majors.

The above minor requires 15-18 credit hours outside of business and 16-18 credit hours of business courses to make up the 34 credit hours required for the minor. Students are encouraged to seek academic advising from their major department to ensure that program planning is accurate. Descriptions of these business courses can be found in the Kelley School of Business section of this bulletin.

Master of Arts Degree

The Master of Arts program has a two-fold objective: (1) to provide students with analytical capabilities and research skills for careers in business, government, and the nonprofit sector, and (2) to prepare those who wish to pursue the Ph.D. at another university or Indiana University Bloomington.

Admission Requirements

Applicants should have completed a bachelor's degree from an accredited institution. Ordinarily, applicants should have a minimum grade point average of 3.0 on a 4.0 scale in their undergraduate course work and in their previous economics courses. Before undertaking graduate study in economics, a student should have knowledge of intermediate-level undergraduate economic theory (E321 and E322), statistics (E270), multivariate differential and integral calculus (the IUPUI equivalents are M163 and M164 offered by the mathematics department or E335 Introduction to Mathematical Methods in Economics with a grade of B or better), and finite mathematics (M118). Students with deficiencies in economics and/or mathematics may be admitted on a conditional basis.

The verbal, quantitative, and analytical portions of the Graduate Record Examination (GRE) are required, and applicants are urged to complete the examination by December of the year before admission.

Three letters of recommendation are required. For students with English as a second language, a minimum TOEFL score of 550 is recommended.

Course Requirements

Students must complete a minimum of 30 credit hours of graduate course work, which may include up to 6 credits of thesis. Twelve credit hours are devoted to the following required core courses: E504 Mathematics for Economists, E521 Theory of Prices and Markets, E522 Theory of Income and Employment, and E570 Fundamentals of Statistics and Econometrics. These core courses serve as prerequisites for some of the 500-level field courses. No more than 9 of the remaining 18 credits may be earned in courses numbered below 500. If a thesis is written, it must be defended. If a thesis is not written, there will be a comprehensive written examination with an oral defense in an area of specialization within economics.

Students have the option of replacing the thesis with reading proficiency in a foreign language or with 6 credit hours of course work in the tool skills of mathematics or computer science. Consult the department's graduate study guide for a list of acceptable research-skill courses. Courses taken to

meet the language or tool skill options are not counted toward the 30 credit hours required for the degree.

Grades

The student must receive at least a C (2.0) in each course and must average at least a B (3.0 on a 4.0 scale) for all courses taken.

Undergraduate Courses

Honors Courses

S201 Introduction to Microeconomics: Honors (3 cr.) Designed for students of superior ability. Covers the same core materials as E201.

S202 Introduction to Macroeconomics: Honors (3 cr.) Designed for students of superior ability. Covers the same core materials as E202.

S270 Introduction to Statistical Theory in Economics and Business: Honors (3 cr.) P: Mathematics M118. P or C: Mathematics M119 or M163. Covers the same core materials as E270 but with more involved applications in economics.

Non-Honors Courses

E100 Current Economic Topics (1 cr.) Discussion of socioeconomic issues from applied point of view through investigation and analysis of current topics of interest such as bank regulations, foreign policy, economics of defense, international trade and finance, ethics and economics, economics of crime, and economics of discrimination. Not open to those with previous college-level economics courses.

E101 Survey of Current Economic Issues and Problems (3 cr.) (For nonmajors) Basic economic principles applied to current social issues and problems. Topics covered will typically include inflation, unemployment, wage and price controls, welfare, social security, national debt, health programs, food prices, pollution, crime, mass transit, revenue sharing, multinationals, population, and energy. Not open to those with previous college-level economics courses.

E111-E112 Topics in the Economic History of Western Civilization I-II (3-3 cr.) Selected topics in the economic history of Western civilization, including the growth of the market organization, industrialization, institutional growth and change, imperialism, and labor.

E201 Introduction to Microeconomics (3 cr.) P: sophomore standing. E201 is a general introduction to microeconomic analysis. Discussed are the method of economics, scarcity of resources, the interaction of consumers and businesses in the marketplace in order to determine price, and how the market system places a value on factors of production.

E202 Introduction to Macroeconomics (3 cr.) P: E201. An introduction to macroeconomics that studies the economy as a whole; the levels of output, prices, and employment; how they are measured and how they can be changed; money and banking; international trade; and economic growth.

E270 Introduction to Statistical Theory in Economics (3 cr.) P: MATH M118. Analysis and interpretation of statistical data in business and economics. Discussion of frequency distribution,

measures of central tendency and variability, statistical inference, hypothesis testing, correlation, regression, and time series.

E303 Survey of International Economics (3 cr.)

P: E201-E202. Survey of international economics. Basis for and effects of international trade, commercial policy and effects of trade restrictions, balance of payments and exchange rate adjustment, international monetary systems, and fixed vs. flexible exchange rates. Students who have taken E430 may not enroll in E303 for credit.

E304 Survey of Labor Economics (3 cr.)

P: E201. Economics problems of the wage earner in modern society; structure, policies, and problems of labor organizations; employer and governmental labor relationships.

E305 Money and Banking (3 cr.)

P: E201-E202. Money and banking system of the United States, including problems of money and the price level, proper organization and functioning of commercial banking and the Federal Reserve System, monetary standards, and credit control. Recent monetary and banking trends.

E307 Current Economic Issues (3 cr.)

P: E201 or permission of instructor. Current economic issues, problems, and research methods. Designed to explore in depth an economic issue currently before the public or to examine a particular aspect of the methodology of economics. Examples would be a study of the economic aspects of discrimination, a study of urban economic policy, or a study of simplified models in economics.

E308 Survey of Public Finance (3 cr.)

P: E201-E202. Analysis of government expenditures and revenue sources, taxation and capital formation, public debt and inflation, growth in government spending, and intergovernmental fiscal relations.

E321 Intermediate Microeconomic Theory (3 cr.)

P: E201-E202, Mathematics M119. Theory of demand, theory of production, pricing under different market conditions, allocation and pricing of resources, partial and general equilibrium theory, and welfare economics. Analysis of current economic problems and technology changes in firms and industries.

E322 Intermediate Macroeconomic Theory (3 cr.)

P: E201-E202. Theory of income, employment, and price level. Study of countercyclical and other public policy measures. National income accounting.

E323 Urban Economics (3 cr.)

P: E201-E202. Introduction to basic concepts and techniques of urban economic analysis to facilitate understanding of urban problems, urban growth and structure, poverty, housing, transportation, and public provision of urban services.

E325 Comparative Economic Systems (3 cr.)

P: E201-E202. Essential economic theories and features of economic systems, including private enterprise, authoritarian socialism, and liberal socialism.

E326 Applied Research in Urban Economics (3 cr.)

P: E201-E202 or permission of instructor. Field research in urban economics. Topics to be selected by students, covering such areas as human

resource problems, transportation and housing surveys, demographic shifts, and income distribution issues.

E335 Introduction to Mathematical Methods in Economics (4 cr.)

P: E201-E202, Mathematics M118-M119. Introduction to quantitative techniques used in economics, and instruction in the application of these techniques to the analysis of economics problems.

E337 Economic Development (3 cr.)

P: E201, E202, and junior standing or consent of instructor. Characteristics of economically underdeveloped countries. Obstacles to sustained growth; planning and other policies for stimulating growth; examination of development problems and experience in particular countries.

E355 Monetary Economics (3 cr.)

P: E305 or E322 or equivalents. Supply and demand functions for money in the context of models of the U.S. economy. Formulation of Federal Reserve policy decisions and effects on interest rates, prices, output, and employment. Current problems in monetary policy and theory.

E363 Environmental and Natural Resource Economics (3 cr.)

P: E201-E202. Basic theory and policy of such topics as pollution, resource depletion, environmental risk, and resource conservation. Issues covered include limits to growth, quality of life, and the appropriate roles for the private market and federal control. Credit not given for both E363 and E463.

E380 Law and Economics (3 cr.)

P: E201 or permission of instructor. The application of economic method to legal institutions and legal issues. Examples would be the optimum use of resources to prevent crime, the economic value of a human life, the economic consequences of regulating business, the economics of property rights, torts and contracts.

E385 Economics of Industry (3 cr.)

P: E201 or permission of instructor. A theoretical and empirical analysis of the structure, conduct, and performance of major American industries. Emphasized is the degree of competition in various markets, how markets operate under conditions of competition or monopoly, and competition as a dynamic process over time.

E387 Health Economics (3 cr.)

P: E201. This course applies economic theory to the study of policy issues in health economics. Specific issues include: determinants of demand for medical services and insurance; training and pricing behavior of physicians; pricing behavior and costs of hospitals; market and regulative approaches.

E406 Senior Seminar (3 cr.)

P: E321 and E322 or permission of instructor. Assessment of the current state of economic knowledge and discussion of how economics is applied to study the problems facing modern society.

E408 Undergraduate Readings in Economics (3 cr. maximum)

P: permission of instructor. Individual readings and research.

E410 Selected Topics in U.S. Economic History (3 cr.)

P: E201-E202. Analysis of selected topics, including transportation developments, government

intervention, systems of property rights, slavery, economic growth, income distribution, economic stability, technical change, and others.

E414 Economics of the Nonprofit Sector (3 cr.)

P: E201. The role of nonprofit organizations (universities, churches, hospitals, orchestras, charities, day care, research, nursing homes) in mixed economics. Public policy controversies such as regulation of fundraising, antitrust against universities, "unfair" competition with for-profit firms, and the tax treatment of donations.

E420 History of Economic Thought (3 cr.)

P: E201-E202. Examination of main theoretical developments since the beginning of the systematic study of economics. Theoretical propositions and structures of the earlier writers will be interpreted and evaluated in terms of modern economic analysis.

E430 Introduction to International Economics (3 cr.)

P: E201-E202. Forces determining international trade, finance, and commercial policy under changing world conditions; theory of international trade; structure of world trade; tariff and trade control policies; the balance of payments problem; evolution of international economic institutions; and monetary relations.

E441 Economics of Labor Markets (3 cr.)

P: E201, E321, and E270 or equivalent. Analysis of the functioning of labor markets with theoretical, empirical, and policy applications in determination of employment and wages in the U.S. economy.

E447 Economics of the Labor Market (3 cr.)

P: E201. Analysis of the functioning of the U.S. labor market. Labor force concepts, unemployment, mobility, wages, and current manpower problems and policies. Analysis of wage determination, wage policy, and their interaction with institutional factors.

E450 Business Conditions Analysis and Forecasting (3 cr.)

P: E201-E202. This course examines sources of instability in industrialized economies. Various theories of the business cycle are examined and critiqued. In addition, the empirical determinant of aggregate demand, prices, and interest rates are discussed. Alternative forecasting techniques are considered and the use of these techniques is demonstrated.

E470 Introduction to Econometrics (3 cr.)

P: E270, Mathematics M119. Application of regression analysis to economic and business data. Estimation and hypothesis testing of classical regression model. Heteroscedasticity, collinearity, errors in observation, functional forms, and autoregressive models. Estimation of simultaneous equation models. Credit will not be given for both E470 and E472.

E485 Economic and Social Control of Industry (Antitrust) (3 cr.)

P: E201 or permission of instructor. This course is a study of the economic reasoning behind and consequences of the application of antitrust laws aimed at altering the structure, conduct, and performance of the American economy. Specific legal cases that have been brought under the Sherman Act, the Clayton Act, as amended, and the Federal Trade Commission Act are analyzed.

Graduate Courses

E504 Mathematics for Economists (3 cr.) Topics in mathematics that are particularly useful in the application of microeconomic theory, macroeconomic theory, and econometrics. Topics covered include: matrix algebra, comparative-static analysis, constrained optimization, difference equations in discrete time, game theory, and set theory as applied to general equilibrium analysis.

E513 Special Topics in Economic History (3 cr.) Explicit methodology and economic analysis applied to major issues in American and European economic history.

E514 The Nonprofit Economy and Public Policy (3 cr.) P: E201. The role of nonprofit organizations (universities, churches, hospitals, orchestras, charities, day care, research, nursing homes) in mixed economies. Public policy controversies such as regulation of fundraising, antitrust against universities, “unfair” competition with for-profit firms, and the tax treatment of donations. (This course may not be taken for credit by anyone who has received credit in ECON E414.)

E519 Regional Economics (3 cr.) Regional economics is the study of economic behavior in space. The course examines the internal and interregional determinants of growth and decline of a region from supply and demand perspectives. Public policies to influence these determinants are considered.

E521 Theory of Prices and Markets (3 cr.) P: E504 or consent of the instructor. Pure theory of consumer behavior, competitive exchange, theory of production; resource allocation, Pareto optimum, monopoly and monopsony, imperfect competition, moral hazard, adverse selection, and market signaling.

E522 Theory of Income and Employment I (3 cr.) P: E504 or consent of the instructor. Intensive study of intermediate income theory; emphasis on construction and empirical significance of aggregative economic models of the determination of income, employment, and price level.

E528 Economic Analysis of Health Care (3 cr.) A graduate introduction to health economics. Applications of economic theory and econometric techniques to problems in various areas in health care. Topics include how physicians, institutions, and consumers respond to economic incentives and what policies contribute maximally to efficiency and welfare.

E541 Labor Market Analysis (3 cr.) P: consent of instructor. An analytical approach to the labor market. Theoretical underpinning and statistical testing of issues on demand and supply of labor, household decision making, human capital, contract theories, unionism, minimum wages, and discrimination.

E545 Applied Labor Economics (3 cr.) P: E321 or E470 or equivalents. Discussion of wage rates and working conditions, searches by workers or firms, investment in training, quits and layoffs, shirking, discrimination, the division of household labor, retirement, and implicit contracts. The course also

examines the impact of institutions such as unions and the government on the efficiency of the labor market.

E551 Monetary Theory and Control (3 cr.) P: consent of instructor. Theory of portfolio allocation with specific reference to commercial banking; theory and practice of central bank control instruments and models of Federal Reserve behavior; role of money in determining equilibrium and growth.

E568 Public Finance I (3 cr.) P: E308 and E470. Partial equilibrium, microeconomic analysis of how tax and subsidy policies affect various types of individual and firm behavior. Theoretical models are introduced to assess and develop quantitative studies of fiscal policy. Summaries of the empirical impact of policy will be formed for the purpose of becoming an “input” in the complete general equilibrium analysis conducted in Public Finance II.

E569 Public Finance II (3 cr.) P: E568. Empirical examination of the general equilibrium effects of major tax and subsidy programs, such as personal income taxation, corporate profit taxation, income maintenance, social security, and government provision of education. In addition, proposed reforms to these programs will be analyzed using empirically based simulation models.

E570 Fundamentals of Statistics and Econometrics (3 cr.) Mathematical overview of statistics and econometrics at graduate level. Topics covered include probability and probability distributions, sampling distributions, tests of hypotheses, estimation, simple regression, multiple regression, generalized linear model and its applications, simultaneous equation system.

E574 Applied Econometrics and Forecasting (3 cr.) P: E570. An overview of techniques employed in economic model building, estimation, and usage. Topics covered include single and multi-equation system estimation, limited dependent variable regression techniques, hypothesis testing, policy analysis, and forecasting. Various forecasting techniques are discussed, including smoothing and decomposition methods and time series analysis. A number of projects are assigned throughout the semester in order to give the student hands-on experience with the different techniques.

E581 Topics in Applied Microeconomics I (3 cr.) P: E521. This course is a graduate-level introduction to theoretical and empirical applications in two areas of microeconomics. Applications to problems in the subdiscipline under study will be discussed. From an empirical standpoint, appropriate estimation techniques will also be discussed. Further discussion will consider how the system of firms, institutions, and consumers respond to economic incentives as well as normative issues—in determining which policies will contribute maximally to economic efficiency and social welfare.

E582 Topics in Applied Microeconomics II (3 cr.) P: E521. As in E581, this course will apply theoretical and empirical applications in two areas of microeconomics. Problems from a number of areas will be selected for demonstrating solutions. Theoretical model building and prediction, numerical

model solving, and hypotheses testing empirically with real data will be included in the course.

E583 Introduction to Applied Macroeconomics (3 cr.) P: E522. This course is a graduate-level introduction to theoretical and empirical applications in two areas of macroeconomics. Applications to problems in the subdiscipline under study will be discussed. Application of estimation and calibration techniques appropriate for the problems in the area will be discussed.

E585 Industrial Organization and Control (3 cr.) P: consent of instructor. Analysis of interrelated structure, behavior, and performance in industrial markets and multimarket corporations; multidimensional nature of competitive processes. Public controls. Topics include patterns of oligopoly, vertical integration, entry barriers, “cartelized” coalescence, limit pricing, price discrimination, long-term contracts, capacity expansion and utilization, resource reallocation and innovation.

E600 Research in Economics (cr. arr.)

E808 Thesis (M.A.) (cr. arr.)

English

Chair Professor Christian J. W. Kloesel

Professors Barbara Cambridge, Ulla M. Connor, Kenneth W. Davis, Jonathan R. Eller, Sharon Hamilton, Christian J. W. Kloesel, Missy Dehn Kubitschek, Claude McNeal, William M. Plater, Helen J. Schwartz, Judith Spector (Columbus), William F. Touponce, Richard C. Turner

Associate Professors Dennis Bingham, Frederick J. DiCamilla, Stephen Fox, Susanmarie Harrington, David Hoegberg, Karen R. Johnson, Kim Brian Lovejoy, Cynthia B. Roy, Jane E. Schultz, Susan C. Shepherd, Harriet Wilkins

Assistant Professors Peter Bloom, Karen Kovacic, Thomas Marvin, Robert Rebein, Marjorie Rush-Hovde, Jennifer Thorington Springer, Mary Trotter, Thomas A. Upton

Lecturers David Albin, John Barna, David Beck, Mary Boyd, Aye-Nu Duerksen, Kate Duffy, Julie Freeman, Teresa Hogue, Sally Hornback, Michal Hughes, Terry Kirts, Brian McDonald, James E. Powell, Mary Jo Pride, David Sabol, Mary J. Sauer, Nancy Stahl, Lynne Stallings, J. J. Stenzoski, Scott Weedon, Anne C. Williams, Wanda Worley

Academic Advising: Cavanaugh Hall 502L, (317) 274-2258 or (317) 274-3824. English department faculty advise majors under the coordination of Professor Stephen Fox, Associate Chair for Students, Cavanaugh Hall 502E, (317) 278-2054.

The Department of English offers introductory and advanced instruction in the methods and traditions of literary analysis, writing, and language study. Its programs are in five areas: linguistics, literature, writing, creative writing, and film studies.

The department administers programs in American Sign Language/English Interpreting and English as a Second Language. The Department of English and the Department of Communication Studies are working to create a program in theatre, film, and media arts.

Through its courses and other activities in linguistics, writing, creative writing, film, and literature, the Department of English works to create and sustain evolving communities of learners interested in the contributions of language to what has been called the examined life—a thoughtful, morally aware, and civically and personally responsible existence. Faculty and students aim for excellence in analyzing, understanding, and communicating about language and its beauties.

For more information, visit the English department's Web site: www.iupui.edu/~english/home.html

Contact the department office (274-2258, english@iupui.edu) with messages, questions, and announcements, or to subscribe to the department's email list for announcements and news.

Major in English

The major requires completion of one of the following six concentrations: Creative Writing, Film Studies, Linguistics, Literature, Writing and Literacy, and Individualized Studies. Each concentration requires 33 credit hours in English with a minimum grade of C in each course. All English majors must complete at least 15 hours in English at the 300-400

level. Each concentration (except Individualized Studies) begins with a gateway course that may be used to fill distribution requirements in other concentrations. Therefore, students should feel free to take more than one gateway course before deciding on a concentration. All majors take the capstone course, E450. Any course, unless specified as repeatable for credit, may be used only once to fill requirements within a concentration.

CONCENTRATION IN CREATIVE WRITING

Gateway Course (3 cr.) Choose one:

W206 Introduction to Creative Writing
W207 Introduction to Fiction Writing
W208 Introduction to Poetry Writing

Distribution Courses (9 cr.) One 3-credit course each, at the 200 level or above, in linguistics (including W310 Language and Study of Writing), literature, and writing (excluding W396 Writing Fellows Training Seminar, E398 Internship in English, and creative writing courses)

Workshop Courses (12 cr.) At least 3 credits must be at the 400 level. Choose from the following courses, only one of which may be repeated for credit:

W301 Writing Fiction
W302 Screenwriting
W303 Writing Poetry
W305 Writing Creative Nonfiction
W401 Advanced Fiction Writing
W403 Advanced Poetry Writing

English Electives (6 cr.) One additional 200-400-level literature course and one additional 200-400-level writing (excluding creative writing), linguistics, or film course or E398 Internship in English

Capstone Seminar (3 cr.) E450

CONCENTRATION IN FILM STUDIES

Gateway Course (3 cr.) C292 Introduction to Film Studies

Distribution Courses (9 cr.) One 3-credit course each, at the 200 level or above, in linguistics (including W310 Language and Study of Writing), literature, and writing or creative writing (excluding W260 Film Criticism, W302 Screenwriting, W396 Writing Fellows Training Seminar, and E398 Internship in English)

Film Theory Course (3 cr.) C391 The Film: Theory and Aesthetics

Culture and Film History Courses (6 cr.)

Choose two of the following three courses:
C390 The Film and Society: Topics
C393 History of European and American Films I
C394 History of European and American Films II

Genres and Authorship Courses (6 cr.)

C392 Genre Study in Film
C491 Authorship and Cinema

Film, Writing, and Literature Course (3 cr.)

Choose one:
W260 Film Criticism
W302 Screenwriting
C493 Film Adaptations of Literature

Capstone Seminar (3 cr.) E450

CONCENTRATION IN LINGUISTICS

Gateway Course (3 cr.) G205 Introduction to the English Language

Distribution Courses (9 cr.) One 3-credit course each, at the 200 level or above, in literature, writing (excluding W396 Writing Fellows Training Seminar, E398 Internship in English, and creative writing courses), and either creative writing or film studies

Core Course (3 cr.) G206 Introduction to Grammar

General Linguistics (6 cr.) Choose two of the following general linguistics courses:

G301 History of the English Language
G302 Structure of Modern English
G310 Social Speech Patterns
G432 Second Language Acquisition
Anthropology L300 Language and Culture
Anthropology L401 Language, Power, and Gender

Applied Linguistics (6 cr.) Choose two of the following applied linguistics courses:

W310 Language and Study of Writing
G400 Teaching English for Specific Purposes
G434 TESOL Methods
G441 Materials Preparation

English Elective (3cr.) One additional 200+ level course elective from linguistics, literature, writing, creative writing, or film, or E398 Internship in English

Capstone Course (3 cr.) E450

CONCENTRATION IN LITERATURE

Gateway Course (3 cr.) L202 Literary Interpretation

Distribution Courses (9 cr.) One 3-credit course each, at the 200 level or above, in linguistics (including W310 Language and the Study of Writing, G205 Introduction to the English Language, G206 Introduction to Grammar, or G301 History of the English Language is recommended), writing (excluding W396 Writing Fellows Seminar, E398 Internship in English, and creative writing courses), and either creative writing or film studies

Literary Traditions Courses (6 cr.) Choose one of the following four options:

Surveys of British Literature

L301 Critical and Historical Survey of English Literature I
L302 Critical and Historical Survey of English Literature II

Surveys of American Literature (choose two of the following)

L351 Critical and Historical Study of American Literature I
L352 Critical and Historical Study of American Literature II
L354 Critical and Historical Study of American Literature III

Literary Masterpieces

L213 Literary Masterpieces I
L214 Literary Masterpieces II

Genre Courses (choose two of the following)

L203 Introduction to Drama
L204 Introduction to Fiction
L205 Introduction to Poetry

Diversity Course (3 cr.) Choose one of the following:

L370 Recent Black American Writing
L376 Literature for Adolescents
L378 Studies in Women and Literature
L379 American Ethnic and Minority Literature
L382 Fiction of the Non-Western World
L384 Topics: Comics and American Culture
L385 Science Fiction
L406 Topics in African American Literature
ANTH L401 Language, Power, and Gender
or another course approved by the department chair

Intertextuality Course (3 cr.)

L433 Conversations with Shakespeare

Literature Electives (6 cr.) Two literature courses at the 300-400 level; one must be at the 400 level

Capstone Seminar (3 cr.) E450

CONCENTRATION IN WRITING AND LITERACY

Gateway Course (3 cr.) W210 Literacy and Public Life

Distribution Courses (9 cr.) One 3-credit course each, at the 200-level or above, in linguistics (including W310 Language and the Study of Writing), literature, and either creative writing or film studies

Language (3 cr.) Choose one of the following courses:

G204 Rhetorical Issues in Grammar and Usage
G310 Social Speech Patterns
ANTH L300 Language and Culture
ANTH L401 Language, Power, and Gender
W390 Topics in Writing (as appropriate)

History and Theories of Language (3 cr.)

Choose one of the following courses:

G301 History of the English Language
W310 Language and the Study of Writing
W396 Writing Fellows Seminar
W400 Issues in the Teaching of Writing
W412 Technology and Literacy
Communication Studies R350 Womenspeak: American Feminist Rhetoric
Communication Studies R310 Rhetoric, Society, and Culture
W390 Topics in Writing (as appropriate)

Writing in Different Genres (12 cr. covering at least two areas)

Business and Organizational Writing

W231 Professional Writing Skills
W315 Writing for the Web
W331 Business and Administrative Writing
W365 Theories and Practices of Editing
W390 Topics in Writing (as appropriate)
TCM 320 Written Communication in Science and Industry
TCM 340 Correspondence in Business and Industry
TCM 350 Visual Elements of Technical Documents
E398 Internship in English

Nonfiction Writing

W290 Writing in the Arts and Sciences
W305 Writing Creative Nonfiction
W313 The Art of Fact: Writing Nonfiction Prose
W390 Topics in Writing (as appropriate)

Creative Writing

W301 Writing Fiction
W302 Screenwriting
W303 Writing Poetry
W401 Advanced Fiction Writing
W403 Advanced Poetry Writing

Capstone Seminar (3 cr.) E450

INDIVIDUALIZED CONCENTRATION

An individualized concentration must be a coherent plan, proposed in writing after consultation with an advisor, and approved by the department chair, before more than 18 credits in the concentration have been earned. It must include:

1. At least 33 credits at the 200 level or above, with at least 15 of these credits at the 300-400 level
2. One 3-credit course each, at the 200 level or above, in three of the following four areas: linguistics (including W310 Language and Study of Writing), literature (excluding L490), writing (excluding W396 Writing Fellows Training Seminar, E398 Internship in English, and creative writing courses), and either creative writing or film studies
3. **Capstone Seminar:** E450

Certificate in Technical Communication

The Certificate in Technical Communication is offered by the School of Engineering and Technology in cooperation with the Department of English, the Department of Communication Studies, and the Society for Technical Communication. Students who earn the Certificate in Technical Communication will have demonstrated that they have the core competencies necessary for entry-level positions as technical communicators. They will have demonstrated their ability to gather and translate technical information for a variety of audiences. They will have designed, developed, and edited effective documents using rhetorical principles and current technology.

Any student formally admitted to IUPUI may be a candidate for the certificate. To receive the certificate, students must have a technical specialty (major, minor, or 9 credit hours of course work), successfully complete 18 credit hours of required and selected courses, and present a portfolio of work that is judged professionally competent by representatives of the local chapter of the Society for Technical Communication. Courses taken at other universities may be recognized as the equivalent of the required or selected courses. The Technical Communications coordinator in the School of Engineering and Technology must approve candidates' selection of courses.

Minors in English

The English department offers minors in these areas:

Literature
Writing
Creative Writing
Business and Professional Writing
Linguistics
Film Studies

Students intending to pursue a minor should declare such an intention in a letter to Associate Chair for Students Stephen Fox, and arrange for a conference with a departmental advisor to plan the program of

study and a second conference to establish a rationale for elective courses. As with the major, students need to maintain a 2.0 grade point average for certification of the minor by the Department of English.

Minor in Literature

The minor in literature introduces students to the skills of interpretation and critical thinking and provides some familiarity with British and American literature.

Prerequisite: L115 with a grade of C or above

Requirements: a total of 15 credit hours (five courses)

One course from the following: L202, L203, L204, or L205

One survey of British literature (L301 or L302) and one survey of American literature (L351, L352, or L354)

Two elective courses in literature, at least one of which must be at the 300 or 400 level

Minor in Writing

The minor in writing attracts students interested in nonfiction writing. Through study of the rhetoric and techniques of English expression, the minor increases students' abilities to handle the language logically and creatively.

Prerequisites: W131 and W132 or W231 with grades of C or better.

Students select any 15 credit hours of English courses in writing (courses with a W prefix, W206 and above).

Students need to keep in close touch with an English advisor while choosing appropriate classes.

Minor in Creative Writing

The minor in creative writing will be of particular interest to students who are contemplating careers in writing or the teaching of writing. It is designed to serve, in addition, the needs of those who believe that one good way to study literature is to learn to produce it. Students choose 15 credit hours from the courses listed under Creative Writing in this bulletin and/or the schedule of classes.

Minor in Business and for Professional Writing

The minor in business and for professional writing equips students to function effectively as writers within occupations ranging from business and industry to applied sciences, education, environmental affairs, government, health fields, and law.

This minor represents cooperation among the School of Liberal Arts, the School of Engineering and Technology, the Kelley School of Business, and the School of Journalism. Nine of the required 15 credit hours must be taken in the Department of English, with the remaining 6 credit hours in the school that best serves the student's needs.

Required and Recommended Courses

Prerequisite: W131 with a grade of C or better

Required:

W231, W350, W331 (or TCM 320)

Electives:

Students take one of the following courses: W315, W355, W365, TCM 350, X204

Students take one of the following courses: English W398 (internship), W411 (directed writing); Communication Studies G391 (when offered as Speech Composition); Journalism J200 or J341.

Students should stay in close touch with an English advisor while choosing appropriate courses.

Minor in Linguistics

The minor in linguistics is intended for students who wish to expand their knowledge of language structure and use. Courses provide a background in linguistic theory and practice.

Required: G205

Electives: Twelve credit hours from the following courses:

English G206, G301, G302, G310, W310
Anthropology L300, L401

In consultation with an advisor, advanced students may request permission to take a graduate course in linguistics in partial fulfillment of the requirements for the minor.

Minor in Film Studies

The minor in film studies provides the skills for understanding film in its aesthetic, popular, and ideological dimensions. Students with a minor in film studies will have a knowledge of film history, theory of film, genres and authorship, interpretive approaches to films, and film as a cultural artifact.

The minor in film studies requires 15 credit hours in the following courses:

Comparative Literature C292 Introduction to Film (3 cr.)

A minimum of 12 credit hours of course work must be selected from the following courses:

Comparative Literature and Film
C290, C390, C391, C393-C394, C491, C493, C494;
English W260; *German* G370, G371.

Internship in English

An internship is an on-the-job learning opportunity designed to supplement students' course work with practical, hands-on experience. IUPUI's Department of English offers two general internship opportunities: W398 Internship in Writing and L490 Professional Practices in English.

Interested students must meet eligibility requirements of junior or senior standing, maintain a grade point average of at least 2.5, and furnish writing samples or have successfully completed advanced writing courses. They must register with the Professional Practices Program (PPP) in Business/SPEA Building 2010, (317) 274-3211, and meet with Department of English internship coordinator Professor Ken Davis, (317) 274-0084, kdavis@iupui.edu.

The Department of English also offers W396, an undergraduate tutoring internship in the University Writing Center (for more information, contact Writing Center Coordinator Tere Molinder-Hogue, Cavanaugh Hall 504K, [317] 274-5650 or tmhogue@iupui.edu).

Other Activities

The English Club The department sponsors an English club, which plans programs on topics of interest to English majors, under the sponsorship of a faculty member.

genesis A semiannual literary journal, *genesis* publishes the work of student authors and artists.

The Film Studies Club The Film Studies Club is a group of students interested in film screenings during the fall and spring semesters. Interested students should contact the faculty advisor, Professor Dennis Bingham, (317) 274-9825 or dbingham@iupui.edu.

The Rufus Reiberg Creative Reading Series

Named for a former chair of the English department, the Reiberg Series brings to campus each year an array of well-known and emerging fiction writers and poets for readings. Past writers have included Maxine Hong Kingston, Edward Hirsch, Catherine Bowman, David Citino, and Calvin Forbes.

Student Readings Each semester, the Creative Writing Program sponsors a series of monthly student readings at a local coffee house. For times and venues, or to be a featured reader, contact Terry Kirts, tkirts@iupui.edu, (317) 274-8929.

Undergraduate Courses

The department offers courses in five areas: linguistics, literature, writing, creative writing, and film studies.

The 100 level courses meet general degree requirements, but do not satisfy those of the major. The 200 level courses introduce basic areas of study and provide cultural and intellectual development for the nonmajor; these courses also provide a firm foundation for students who wish to continue advanced studies in English. The 300 level courses specialize in subjects of particular interest to English and education majors; they are open to juniors and seniors (or others with consent of the instructor). Usually conducted as seminars, the 400 level courses are intensive studies of special subjects.

Although the English department does not have prerequisites indicated for most courses, it is highly recommended that students complete W131 before taking any other English courses. In general, 100 level courses are designed for freshmen, 200 level courses for sophomores, etc.

Internship

E398 Internship in English (3-6 cr.) P: consent of instructor. A supervised internship in the use of English in a workplace. Apply during semester before desired internship.

Capstone Course

E450 Capstone Seminar (3 cr.) This senior capstone for all English majors integrates students' undergraduate study through writing and reading projects, faculty and student presentations, and creation of capstone portfolios. Students apply linguistic, literary, and rhetorical knowledge in culminating projects and learning portfolios. The course looks back at accomplishments and forward to post-graduation planning.

Linguistics

G104 Language Awareness (3 cr.) A nontechnical introduction to the study of linguistics, this course takes an interdisciplinary approach to language behavior. Particular attention is paid to cultural, social, and psychological aspects of language use. Topics vary and may include language origin, child language acquisition, gender and language, dialects, and slang, among others.

G204 Rhetorical Issues in Grammar and Usage (3 cr.) An introduction to English grammar and usage that studies the rhetorical impact of grammatical structures (such as noun phrases, prepositional phrases, different sentence patterns). This course considers language trends and issues, the role of correctness in discourse communities, and the relations between writing in context and descriptive and prescriptive grammars and usage guides.

G205 Introduction to the English Language (3 cr.) An introduction to the English language and to the principles and methods of linguistics, this course is designed to be the first course in English linguistics. The course examines the phonology, morphology, syntax, and semantics of English and discusses a range of applications of these basic concepts in areas such as first and second language acquisition and language education.

G206 Introduction to Grammar (3 cr.) R: G205. This course examines topics such as the systematic way in which information is encoded in discourse, the various functions of speech, the structure of conversation, and the comparison of spoken and written language. Emphasis is also placed on varieties of English and how they are used and perceived in our society.

G301 History of the English Language (3 cr.) P: G205, G206, or consent of instructor. The historical and structural analysis of the English language is surveyed through the stages of its development. Background provided in G205 would be useful in this course.

G302 Structure of Modern English (3 cr.) P: G205, G206, or consent of instructor. This course examines in some depth the syntax (i.e., the principles and rules that govern the structure of sentences) and semantics (i.e., meaning encoded in language) of the English language.

G310 Social Speech Patterns (3 cr.) P: G205, G206, or consent of instructor. This course explores the relationships among language, society, and culture. The influence of such social factors as age, sex, status, class, and education on language use are discussed within the framework of various theoretical and methodological approaches. Reasons for positive and negative evaluations of several high- and low-prestige varieties of English are investigated.

ENG G400 Teaching English for Specific Purposes (3 cr.) P: G205. Provides learners with historical and theoretical background of English for Specific Purposes. Participants will study the characteristics of specific language use situations and their effect on learning and use. The course is especially useful for those interested in teaching English in the workforce.

ENG G432 Second Language Acquisition (3 cr.) An introduction to a broad range of issues in the field of second language acquisition, providing the student with an overview of the most important approaches to the fundamental questions of how people learn a second language. Provides students with basic knowledge of theories of second language acquisition, and an understanding of how theoretical perspectives inform practical application.

ENG G434 TESOL Methods (3 cr.) P: G432 or consent of instructor. The course examines recent theories of teaching English as a second or foreign language. Students will get a chance to examine theories and methods and develop knowledge of linguistic resources available to new and/or practicing teachers.

ENG G441 Materials Preparation for ESL Instruction (3 cr.) P: G205. Students learn about materials preparation, syllabus design, and test preparation by applying a variety of theories to books and other ESL (English as a Second Language) teaching devices (e.g. ESL tapes, videotapes, and software programs) in order to evaluate their usefulness. Students will learn to evaluate ESL materials for adequacy.

Literary Study

L105 Appreciation of Literature (3 cr.) Stresses the enjoyment and humane values of literature. It will provide workshop experiences and programmed exercises as well as experience in listening to and studying visual adaptations of poems, novels, and dramas.

L115 Literature for Today (3 cr.) P: W131. Poems, dramas, and narratives pertinent to concerns of our times: e.g., works concerning values of the individual and society, problems of humanism in the modern world, conflicts of freedom and order.

L200 Popular Culture (3 cr.) Critical and historical study of trends in popular culture, especially American, and its significance in the formation of national character.

L202 Literary Interpretation (3 cr.) Close analysis of representative texts (poetry, drama, fiction) designed to develop art of lively, responsible reading through class discussion and writing of papers. Attention to literary design and critical method. May be repeated once for credit by special arrangement with Department of English.

L203 Introduction to Drama (3 cr.) Representative significant plays to acquaint students with characteristics of drama as a type of literature. Readings may include plays from several ages and countries.

L204 Introduction to Fiction (3 cr.) Representative works of fiction; structural technique in the novel, theories and kinds of fiction, and thematic scope of the novel. Readings may include novels and short stories from several ages and countries.

L205 Introduction to Poetry (3 cr.) Kinds, conventions, and elements of poetry in a selection of poems from several historical periods.

L206 Introduction to Nonfictional Prose (3 cr.) Genre, structure, or other literary aspects of selected works of nonfictional prose.

L207 Women and Literature (3 cr.) Issues and approaches to critical study of women writers in British and American literature.

L208 Topics in English and American Literature and Culture (3 cr.) Selected works of English and/or American literature in relation to a single cultural problem or theme. Topics vary from semester to semester. May be repeated once for credit.

L213-L214 Literary Masterpieces I-II (3-3 cr.) Literary masterpieces from Homer to the present. Aims at thoughtful, intensive analysis, appreciation of aesthetic values, and enjoyment of reading.

L220 Introduction to Shakespeare (3 cr.) Rapid reading of at least a dozen major plays and poems. May not be taken concurrently with L315.

L301 Critical and Historical Survey of English Literature I (3 cr.) Representative selections with emphasis on major writers from the beginnings to Swift and Pope.

L302 Critical and Historical Survey of English Literature II (3 cr.) Representative selections with emphasis on major writers from the rise of romanticism to the present.

L305 Chaucer (3 cr.) Chaucer's works with special emphasis on *The Canterbury Tales*.

L315 Major Plays of Shakespeare (3 cr.) A close reading of a representative selection of Shakespeare's major plays.

L346 Twentieth-Century British Fiction (3 cr.) Modern fiction, its techniques and experiments, particularly Joyce, Lawrence, and Woolf; some later novelists may be included.

L348 Nineteenth-Century British Fiction (3 cr.) Forms, techniques, and theories of fiction as exemplified by such writers as Scott, Dickens, Eliot, and Hardy.

L351 Critical and Historical Study of American Literature I (3 cr.) American writers to 1865: Emerson, Hawthorne, Melville, Whitman, and two or three additional major writers.

L352 Critical and Historical Study of American Literature II (3 cr.) American writers, 1865-1914: Twain, Dickinson, James, and two or three additional major writers.

L354 Critical and Historical Study of American Literature III (3 cr.) Study of modernist and contemporary American writers in various genres, 1914 to the present, including Frost, Stein, Faulkner, O'Connor, Baldwin, Morrison, and others.

L355 American Novel: Cooper to Dreiser (3 cr.) Representative nineteenth-century American novels.

L358 Twentieth-Century American Fiction (3 cr.) Study of major trends in American fiction since 1900, including such topics as experimentalism and the development of minority literatures.

L363 American Drama (3 cr.) Main currents in American drama to the present.

L365 Modern Drama: Continental (3 cr.) Special attention to Ibsen, Strindberg, Chekhov, Hauptmann, Pirandello, Brecht, and Sartre and to the theatre of the absurd.

L366 Modern Drama: English, Irish, and American (3 cr.) Twentieth-century drama, from Bernard Shaw and Eugene O'Neill to Samuel Beckett, Harold Pinter, David Mamet, Marsha Norman, and August Wilson.

L370 Black American Writing (3 cr.) A study of the major black American writers, with special emphasis on recent writing.

L372 Contemporary American Fiction (3 cr.) Examination of representative American fiction since 1955 in its social, cultural, and historical contexts. Topics include such issues as the representation of truth in fiction, intertextuality, and the transgressions of genre boundaries.

L373-L374 Interdisciplinary Approaches to English and American Literature I-II (3-3 cr.) Social, political, and psychological studies in English and American literature. Topics may vary and include, for example, Freud and literature, responses to revolution, the literature of technology, and literature and colonialism.

L376 Literature for Adolescents (3 cr.) An examination of the nature and scope of adolescent literature. Wide reading of contemporary literature, with emphasis on the value of selections for secondary school students and appropriate modes of study.

L378 Studies in Women and Literature (3 cr.) British and American authors such as George Eliot or Gertrude Stein; groups of authors such as the Brontë sisters or recent women poets; or genres and modes such as autobiography, film, or criticism. Topics will vary by semester.

L379 American Ethnic and Minority Literature (3 cr.) Analysis of literature by and about immigrants from diverse cultures as well as ethnic literature about groups such as African Americans, Appalachians, Hispanics, and Native Americans, from a historical and thematic perspective.

L381 Recent Writing (3 cr.) Selected writers of contemporary significance. May include groups and movements (such as black writers, poets of projective verse, new regionalists, parajournalists and other experimenters in pop literature, folk writers, and distinctly ethnic writers); several recent novelists, poets, or critics; or any combination of groups. May be repeated once for credit by special arrangement with the Department of English.

L382 Fiction of the Non-Western World (3 cr.) An in-depth study of selected narratives from the fiction of the non-Western world. Focus and selections vary from year to year. May be repeated once for credit.

L385 Science Fiction (3 cr.) A survey of British and American science fiction from the nineteenth to the twentieth century with an emphasis on the latter.

L390 Children's Literature (3 cr.) Historical and modern children's books and selections from books; designed to assist future teachers, parents, librarians, or others in selecting the best in children's literature for each period of the child's life.

L406 Topics in African American Literature (3 cr.) Focuses on a particular genre, time period, or theme in African American literature. Topics may include 20th century African American women's novels, black male identity in African American literature, or African American autobiography. May be repeated once for credit with different focus.

L431 Topics in Literary Study (3 cr.) Study of characteristics and development of literary forms or modes (e.g., studies in narrative, studies in romanticism). Topics vary from year to year. May be repeated once for credit.

L433 Conversations with Shakespeare (3 cr.) An interdisciplinary and intertextual study of Shakespeare's work and its influence down to the present day. Students will compare Shakespeare texts with latter-day novels, plays, poems, and films that allude to or incorporate some aspect of Shakespeare's art.

L440 Senior Seminar in English and American Literature (3 cr.) P: one 200-level and four 300-400 level literature courses. Detailed study of one or more major British and American writer or of one significant theme or form. Subject varies each semester. May be repeated once for credit.

L495 Individual Readings in English (1-3 cr.) P: consent of instructor and departmental director of undergraduate studies. May be repeated once for credit.

Writing

The School of Liberal Arts requires English W131 or W140, and W132 or W150 for graduation for both the A.A. and the B.A. degrees. Any entering student who does not have credit for English W131 must take the IUPUI English Placement Test before enrolling in W131 or W140. Qualified students may test out of English W131 but must take English W132.

W130 Principles of Composition (3 cr.) P: Placement in W130. Practice in writing papers for a variety of purposes and audiences, with attention to reading/writing connections.

W131 Elementary Composition I (3 cr.) P: W131 placement or W001 (with a grade of C or better). Fulfills the communications core requirement for all undergraduate students and provides instruction in exposition (the communication of ideas and information with clarity and brevity). The course emphasizes audience and purpose, revision, organization, development, advanced sentence structure, diction, development within a collaborative classroom. Evaluation is based upon a portfolio of the student's work.

W132 Elementary Composition II (3 cr.) P: W131 (with a grade of C or better). Stresses argumentation and research concurrently, with a secondary emphasis on critical evaluation in both reading and writing. Evaluation is based upon a portfolio of the student's work.

W140 Elementary Composition/Honors (3 cr.) P: W140 placement or permission of the instructor. Offers an introductory writing course for advanced freshmen writers. Requirements, including number and type of assignments, are parallel to W131. W140 offers greater intensity of discussion and response to writing. Evaluation is based upon a portfolio of the student's work. Students' eligibility for W140 is determined by the IUPUI English Placement Exam scores.

W150 Elementary Composition II/Honors (3 cr.) P: W140 (with a grade of C or better) or W131 and permission of the instructor. Allows an honors student to explore the investigative methods used within a chosen discipline as an introduction to academic writing. Individual projects using these various methods combine primary and secondary skills. Evaluation is based upon a portfolio of the student's work. Replacing W132 or W231 for honors students, this course follows W140.

W210 Literacy and Public Life (3 cr.) An introduction to the uses of literacy in public and civic discourse, with connections made to theories of writing and professional prospects for writers; serves as the required gateway course for the Concentration in Writing and Literacy and as an exploration of this concentration for other English majors and students considering the possibility of an English major.

W231 Professional Writing Skills (3 cr.) P: W131 (with a grade of C or better). Focuses on expository writing for the student whose career requires preparation of reports, proposals, and analytical papers. Emphasis on clear and direct objective writing and on investigation of an original topic written in report form, including a primary research project. Evaluation is based on a portfolio of student's work.

W250 Writing in Context (1-3 cr.) Offers instruction in intermediate-level expository writing. Students study a contemporary issue and write papers on that issue. Topics will vary from year to year. May be repeated once for credit.

W251 Introductory Business Writing (1 cr.) An introduction to business writing, with an emphasis on developing an effective writing process. (Does not count toward the major in Writing and Literacy.)

W260 Film Criticism (3 cr.) Viewing and critiquing current films, with emphasis on the quality of production and direction. Contemporary films viewed; papers serve as a basis for discussion during class. Students will be expected to pay for their movie admissions.

W290 Writing in the Arts and Sciences (3 cr.) Studies academic writing as a means of discovery and record. Study of and practice in the procedures, conventions, and terminology of the humanities, social sciences, and natural sciences.

W310 Language and the Study of Writing (3 cr.) Designed as an introduction to the logical foundation and rhetorical framework of effective writing. May be used for linguistics credit in the English major or linguistics minor.

W313 The Art of Fact: Writing Nonfiction Prose (3 cr.) P: at least one 200-level writing course or excellent performance in W131 and/or W132 (contact the instructor if you are unsure of your readiness for this course). Students will read and analyze professional and student work as they prepare to practice the art of fact by combining the tools of a researcher with the craft of a novelist. The final portfolio includes a stylistic analysis of the student's and others' nonfiction works as well as two illustrated nonfiction texts based on the student's primary and secondary research.

W315 Writing for the Web (3 cr.) Introduces students to new forms of writing (beyond word processing and desktop publishing) made possible by computers—hypertext, electronic mail, and computer conferencing—and explores what impact these new forms have on literacy skills for writers and readers of such computer-delivered texts.

W331 Business and Administrative Writing (3 cr.) Instruction and practice in writing for business, government, the professions, and the nonprofit sector. The course emphasizes principles that can be applied in a wide variety of documents.

W365 Theories and Practices of Editing (3 cr.) Instruction and practice in the mechanical, stylistic, and substantive editing of English nonfiction prose, from a wide variety of genres and on a wide variety of subjects.

W390 Topics in Writing (3 cr.) Topics will vary each time this course is offered, and the department will specify which area of the concentration in Writing and Literacy each offering will count toward. May be repeated once for credit.

W396 Writing Fellows Training Seminar (3 cr.) P: W131 and permission of instructor. Internship in University Writing Center. Focuses on the writing of IUPUI students. Emphasis on questioning, strategies, problem solving, and self-analysis. Apply in spring for fall enrollment.

W400 Issues in Teaching Writing (3 cr.) Focuses on the content of rhetoric and composition and considers fundamental theoretical and practical issues in the teaching of writing. Reviews rhetorical and compositional principles that influence writing instruction, textbook selection, and curriculum development.

W411 Directed Writing (1-3 cr.) P: Consent of instructor. Individual projects worked out with instructor. Credit varies with scope of project.

W412 Literacy and Technology (3 cr.) Literacy and technology have multifaceted relationships with each other. This course explores the effects of technologies (ranging from clay tablets to the printing press to computers) on literate practices and the teaching of reading and writing. It prepares students to think critically about the possibilities and limitations associated with different technologies and their impact on literacy over time, the impact of technology on their own literacies, and to analyze educational uses of technology connected with literacy.

Creative Writing

W206 Introduction to Creative Writing (3 cr.)

An introduction to the techniques and principles of creative writing. Written assignments, independent work, and workshop discussions of the fundamentals of fiction, poetry, and drama. This course is a prerequisite for all other courses in creative writing.

W207 Introduction to Fiction Writing (3 cr.)

An introduction to the techniques and principles of fiction writing. Written assignments, workshop discussions of student work in progress, seminar study of classic and contemporary examples of the genre. This course may be used as a prerequisite for W301.

W208 Introduction to Poetry Writing (3 cr.)

W208 offers students an introduction to the craft and practice of poetry writing: how to find subjects for writing; to create images, similes, and metaphors; to make rhyme sound natural; to produce both metered and free-verse poetry. Part of the class will be a workshop in which students will learn to revise their poems and those of fellow students. This course can serve as a prerequisite for W303.

W301 Writing Fiction (3 cr.) P: W206 or W207 or submission of acceptable manuscript to instructor in advance of registration. An intermediate course in the theory and practice of fiction writing with seminar study of relevant materials and criticism of student work in class and conference. May be repeated once for credit.

W302 Screen Writing (3 cr.) P: W206 or W207 or W208, or permission of instructor. A practical course in basic techniques of writing for film and television. Covers the essentials of dramatic structure, story development, characterization and theme, scene construction, dialogue, and, briefly, the practicalities of working as a screenwriter today.

W303 Writing Poetry (3 cr.) P: W206, or W208 or submission of acceptable manuscripts to instructor in advance of registration. An intermediate course in the theory and practice of poetry writing with seminar study of relevant materials and criticism of student work in class and conference. May be repeated once for credit.

W305 Writing Creative Nonfiction (3 cr.)

P: W206 or submission of acceptable manuscript to instructor in advance of registration. An intermediate course in the theory and practice of creative nonfiction prose, with seminar study of relevant materials and workshop discussion of student work in progress. May be repeated once for credit.

W401 Writing Fiction (3 cr.) P: W301. Study and practice in the writing of fiction. Analysis of examples from contemporary literature accompanies class criticism and discussion. May be repeated once for credit.

W403 Advanced Poetry Writing (3 cr.) P: W303. Study and practice in the writing of poetry. Analysis of examples from contemporary poets accompanies class criticism and discussion. May be repeated once for credit.

W411 Directed Writing (1-3 cr.) P: Consent of instructor consenting to direct it. Individual projects worked out with instructor. Credit varies with scope of project. May be repeated once for credit.

English as a Second Language (ESL)

International students are placed into appropriate ESL courses according to their scores on the ESL placement test. The classes are open to both undergraduate and graduate students. Except for W131, credits from these courses will not count toward a degree; however, grades awarded will be included in the student's grade point average.

The English as a Second Language sequence—G009, G010, G011, and G012—focuses on fundamental language skills. It is designed to correct pronunciation problems, to improve listening comprehension, and to improve the student's ability to participate actively and effectively in a range of communication situations, from simple conversation to seminar discussion. Although emphasis is on speaking proficiency in English, basic reading, writing, and study skills are essential components of these courses.

Students must complete all other required ESL courses before enrolling in G013 or ESL W131, with the exception of G012, which may be taken simultaneously with those two courses.

G009 Intermediate Aural/Oral Skills for ESL Students (2-4 cr.)

Intensive practice of basic speaking and pronunciation skills, as well as listening comprehension skills, to develop language proficiency required for study at the university level. Students will make extensive use of the Multimedia Language Resource Center.

ENG G010 ESL for Academic Purposes I (4 cr.)

This course introduces and reviews basic English grammatical structures; presents basic reading strategies and vocabulary development; provides practice in pronunciation of English consonant and vowel sounds, stress, rhythm, and intonation; and focuses on functional language use and study skills.

ENG G011 ESL for Academic Purposes II (4 cr.)

This course provides practice in and clarification of difficult grammatical structures; improves spoken language skills, emphasizing group discussion; focuses on pronunciation skills: word stress, intonation, and difficult sounds; encourages development of reading strategy skills: skimming, scanning, and summarizing; and augments the student's understanding of American culture and functional language use.

ENG G012 Listening and Speaking for Academic Purposes (3 cr.)

This course focuses on developing speaking and listening skills that are essential to academic life, encouraging participation in group discussion, improvement in presentation strategies, and development of questioning and answering skills. It provides community involvement to help students better understand American culture and language use. Reading skills and vocabulary development for the academic context are emphasized.

G013 Reading and Writing for Academic Purposes (3 cr.)

This course is designed primarily for graduate ESL students. Its purpose is to develop reading comprehension skills through the use of academic subject area materials and to teach the writing skills necessary to complete academic work.

Assignments are completed using materials from the students' academic disciplines.

G015 Pronunciation Skills (1 cr.) This course focuses on American English pronunciation and stresses active learner involvement in small groups and self-tutorials. Practice in a contextualized format includes drills and multimedia listening and speaking activities. Classwork emphasizes stress and intonation patterns and vowel and consonant production. Individualized instruction focusing on specific needs is a component of the course.

ENG G020 Communication Skills for Graduate Students and International Teaching Assistants (3 cr.)

This course for graduate International Teaching Assistants provides instruction on basic teaching strategies and helps students develop the oral language skills necessary to present academic materials in English to a student audience. Pronunciation, listening comprehension, and classroom interaction skills are practiced. Regular conferences focus on individual pronunciation needs.

ESL W001 Fundamentals of English (3 cr.)

This course develops fluency and amplitude in writing through in-class instruction in invention, focus, development, and revision. Grammar instruction is individualized, and students have practice in English sentence patterns, word choice, and idiomatic expressions. Evaluation is based upon a portfolio of the student's work.

ESL W131 Elementary Composition I (3 cr.) This course, which fulfills part of the communication core requirement for all undergraduate students, is designed to help students improve their English writing skills.

Film Studies

CMLT C292 An Introduction to Film (3 cr.)

Nature of film technique and film language; analysis of specific films; major historical, theoretical, and critical developments in film and film study from the beginnings of cinema to the present.

CMLT C390 The Film and Society: Topics (3 cr.)

P: C190 or consent of instructor. Film and politics; race and gender; social influences of the cinema; rise of the film industry. May be repeated once with different topic.

CMLT C391 The Film: Theory and Aesthetics (3 cr.)

P: C190 or consent of instructor. Film form and techniques; aesthetic and critical theories of the cinema; relationships between film movements and literary and artistic movements; relationships of word and image; analysis of significant motion pictures.

CMLT C392 Genre Study in Film (3 cr.)

P: C190 or consent of instructor. Problems of definition; the evolution of film genres such as criminal or social drama, comedy, the western, science fiction, horror, or documentary film; themes, subject matter, conventions, and iconography peculiar to given genres; relationship of film genres to literary genres. Focus on one specific genre each time the course is offered. May be repeated once with different topic.

CMLT C393-C394 History of European and American Films I-II (3-3 cr.)

P: C190 or consent of instructor. C393 is a survey of the development of cinema during the period 1895-1926 (the silent film

era); C394 is a survey of European and American cinema since 1927. Particular attention paid to representative work of leading filmmakers, emergence of film movements and development of national trends, growth of film industry, and impact of television.

CMLT C491 Authorship and Cinema (3 cr.) P: C190 or consent of instructor. Study of the work of one or more film artists. Attention paid to the style, themes, and methods that make the filmmaker's work unique. Filmmakers studied in the contexts of film traditions, ideologies, and industries which informed their work. May be repeated one time with a different topic.

CMLT C493 Film Adaptations of Literature (3 cr.) P: C190 or consent of instructor. Analysis of the processes and problems involved in turning a literary work (novel, play, or poem) into a screenplay and then into a film. Close study of literary and film techniques and short exercises in adaptation.

ENG W260 Film Criticism (3 cr.) Viewing and critiquing current films, with emphasis on the quality of production and direction. Contemporary films are viewed; papers serve as a basis for discussion during class. Students will be expected to pay for their movie admissions.

Master of Arts Degree

The graduate English program has been designed to prepare students for careers in the analysis and production of texts. The program covers issues and skills in reading and writing, in the richest sense of these words—in order to prepare students to address these issues and to teach these skills. Graduates of the program should be prepared for such careers as teaching writing and literature, teaching English as a second language, and writing for business, government, and other professions. In contrast to traditional M.A. programs, which place heavy emphasis on literary history, the IUPUI program focuses on the application of English studies to contemporary situations and problems.

Admission Requirements (1) Applicants should have a bachelor's degree from an accredited college or university, with a minimum grade point average of 3.0 (on a 4.0 grading scale) in the student's undergraduate major, documented by an official transcript. Applicants are expected to have been English majors, but admission also is considered for those who otherwise demonstrate the competency necessary for successful graduate work in English. (2) The Graduate Record Examination (GRE) General Test with a minimum score of 600 in at least one of the three areas. Applicants are encouraged to take the examination by December of the year before admission. (3) Three letters of recommendation. (4) Two years of foreign language as an undergraduate with appropriate level of achievement.

Grades M.A. students must maintain a minimum grade point average of 3.0 (B).

Course Requirements The M.A. in English requires 36 credit hours, including 12 credit hours of "core" courses, 12-16 credit hours of "area" courses, 4-8 credit hours of internship, and 4 credit hours of thesis work. The three core courses provide

an introduction to three major areas in the discipline of English: Language: G500 Introduction to the English Language; Writing: W500 Teaching Composition: Theories and Applications; Literature: L506 Issues and Motives of Literary Studies. These courses, which carry 4 credit hours each, should be taken at the beginning of the graduate program.

Foreign Language Requirements There is no foreign language requirement, but M.A. students going on for the Ph.D. are encouraged to validate their reading proficiency in a foreign language according to University Graduate School standards.

Graduate Courses

Graduate courses commonly offered are as follows.

Graduate Linguistics Courses

G500 Introduction to the English Language (4 cr.) An introduction to English linguistics, the course covers the principal areas of linguistic inquiry into the English language: sounds (phonetics and phonology), words, (morphology), sentences (syntax), and meaning (semantics).

G525 ESL Practicum (3 cr.) Students will be able to put into practice methods and principles of linguistics, second language acquisition, and language teaching. Under supervision, they will teach ESL classes either at IUPUI or in a local school system.

L532 Second Language Acquisition (3 cr.) An introduction to a broad range of issues in the field of second language acquisition, providing the student with an overview of the most important approaches to the fundamental question of how people learn a second language. Provides students with basic knowledge of theories of second language acquisition, and an understanding of how theoretical perspectives inform practical application.

L534 Linguistic Resources for TESOL (3 cr.) The course examines recent theories of teaching English as a second or foreign language. Students will get a chance to examine theories and methods and develop knowledge of linguistic resources available to new and/or practicing teachers.

G541 Materials Preparation for ESL Instruction (4 cr.) Students learn about materials preparation, syllabus design, and test preparation by applying a variety of theories to books and other teaching devices (e.g., tapes, videotapes, computer and software programs) in order to evaluate their usefulness and will learn to evaluate ESL materials for adequacy.

G625 Introduction to Text Linguistics/Discourse Analysis (4 cr.) This course introduces students to current approaches to text and discourse coherence, including recent theories of cognitive and interactional text modeling.

G652 English Language Sociolinguistics (4 cr.) This course investigates sociocultural aspects of language use and explores the relationships between language and society. The course provides background in various theoretical and methodological approaches to sociolinguistics. Other topics to be covered include gender and language, ethnicity and language, social factors in language acquisition, and bilingualism. Familiarity with basic issues and concepts in linguistics would be useful.

Graduate Internship

L590 Internship in English (4-8 cr.) A supervised internship in the uses of language in the workplace. (For prospective teachers, the workplace may be a classroom.) Each intern will be assigned a problem or new task and will develop the methods for solving the problem or completing the task. Interns will complete a portfolio of workplace writing and self-evaluation; they will also be visited by a faculty coordinator and evaluated in writing by their on-site supervisors.

Graduate Thesis

L699 M.A. Thesis (4 cr.)

Graduate Literature Courses

L501 Professional Scholarship in Literature (4 cr.) Materials, tools, and methods of research. Includes work with standard bibliographical sources (both traditional and electronic), bibliographical search strategies, scholarly documentation, accessing special collections, preparing bibliographical descriptions of subject texts. Historical case studies reinforce coverage of professional standards of conduct, verification of sources, and thoroughness of research methodology.

L502 Introduction to Literacy Studies (4 cr.) Explores how and why people in our society—including children and adults—learn to read and write texts; investigates how literacy is defined, acquired, measured, and used in our society.

L506 Issues and Motives of Literary Studies (4 cr.) An examination of the importance of the notion of the *text* for contemporary literary theory.

L553 Studies in Literature (4 cr.) Primarily for secondary school and college teachers of English. Emphasis on thematic, analytic, and generic study. With consent of instructor, may be repeated once for credit.

L560 Literary Studies in England and Scotland (4 cr.) Provides on-site opportunities in England and Scotland to explore the literary landscapes of British authors in relation to the English and Scottish school systems. Designed primarily for education majors and continuing certification credits.

L573 Interdisciplinary Approaches to English and American Literature (3 cr.) Social, political, and psychological studies in English and American literature. Topics may vary and include, for example, literature and colonialism, literature and psychoanalysis, or literature and gender. May also include other world literatures.

W600 Topics in Rhetoric and Composition (4 cr.) Topics will vary each time the course is offered.

L606 Topics in African American Literature (4 cr.) Focuses on a particular genre, time period, or theme of African American literature. Examples: twentieth-century African American women's novels, black male identity in literature, kinship in African American literature, African American autobiography. May be repeated twice for credit with different focuses.

L625 Shakespeare (4 cr.) Critical analysis of selected tragedies, comedies, history plays, and poetry.

L645 English Fiction, 1800-1900 (4 cr.)

Intensive historical and critical study of nineteenth-century prose fiction, especially the novel.

L655 American Literature since 1900 (4 cr.)

Intensive historical and critical study of all genres from the time of Theodore Dreiser to the present.

L680 Special Topics in Literary Study and Theory (4 cr.)

Reading in sociological, political, psychological, and other approaches to literature.

L681 Genre Studies (4 cr.)

A variable title course, Genre Studies examines the specific characteristics of individual genres. May be repeated once for credit.

L695 Individual Readings in English (1-4 cr.)**Graduate Writing Courses**

W500 Teaching Composition: Issues and Approaches (4 cr.) Considers major issues involved in the teaching of composition at elementary, secondary, and college levels, and explores the pedagogical approaches inherent in these issues.

W510 Computer in Composition (3 cr.) Proceeds from current theories about writing processes and surveys the use of computer programs (such as word processing) as writing tools, computer-assisted instruction as a teaching aid, and computer programs as research aids to study writing.

W511 Graduate Fiction Writing (4 cr.)

A graduate-level fiction writing workshop. Seminar study of advanced techniques in the writing of fiction, both short stories and the novel. Workshop discussion of advanced student work in progress.

W513 Graduate Poetry Writing (4 cr.)

W513 offers graduate students an intensive experience in reading and writing poetry. Part workshop and part seminar in poetic practice and technique, W513 provides an opportunity for graduate students to expand their poetic range and hone their craft.

W553 Theory and Practice of Exposition (4 cr.)

Explores the writing and analysis of exposition, especially for high school or college teachers.

W590 Teaching Composition: Theories and Applications (4 cr.) Explores current theories of composition inherent in current classroom practices and considers their pedagogical implications.

W600 Topics in Rhetoric and Composition (4 cr.) Topics will vary each time this course is offered.

W609 Individual Writing Projects (1-4 cr.)

Enables students to work on a writing project which they initiate, plan, and complete under the direction of an English department faculty member. Credit hours dependent upon scope of project.

Film Studies

For information on film studies, see the description of the film studies minor included in the “English” section of this bulletin. For course descriptions, consult the “English” and “German” sections in this bulletin. For English majors, film studies courses are considered part of the major.

Comparative Literature

C190 An Introduction to Film (3 cr.)

C290 Survey of Film History (3 cr.)

C390 The Film and Society: Topics (3 cr.)

C391 The Film: Theory and Aesthetics (3 cr.)

C392 Genre Study in Film (3 cr.)

C393-C394 History of European and American Films (3-3 cr.)

C491 Authorship in Cinema (3 cr.)

C493 Film Adaptations of Literature (3 cr.)

C494 Film Criticism: Theory/Practice (3 cr.)

English

W260 Film Criticism (3 cr.)

G371 Der deutsche Film (3 cr.)

Foreign Languages and Cultures

(Arabic, Chinese, Classical Studies, French, German, Italian, Japanese Studies, Spanish)

Chair Professor Larbi Oukada

Academic Advising Cavanaugh Hall 405, (317) 274-0062, www.iupui.edu/~flac. See specific program advisors listed below.

Foreign languages taught for credit at IUPUI include the courses offered by the three degree-granting programs of French, German, and Spanish; courses offered by Japanese Studies and Classical Studies (which offer minors); and all other foreign language courses for languages that have not yet developed into programs that include Arabic, Chinese, and Italian. The programs offered in Classical Studies, French, German, Japanese Studies, and Spanish can be found under those programs listed alphabetically below; other courses are listed together at the end of the Foreign Languages and Cultures section.

Study Abroad

Students interested in completing part of their course work overseas should contact the department or the Office of International Affairs early in their studies. The International Studies Coordinator may be reached at 274-7000 or 274-2081, Union Building Rm. 203, international.iupui.edu.

Foreign Languages and Cultures (FLAC)**F200 World Cultures through Literature (3 cr.)**

P: W131. This course develops intercultural awareness and understanding through comparative study of the relationship between selected texts and their specific cultural context. One theme is examined in literature and other media by a team of experts in a variety of literatures from around the world.

Certificate in Translation Studies—English to/from French/German/Spanish

Program Description

The Department of Foreign Languages and Cultures offers a Certificate in Translation Studies with an emphasis in French, German, or Spanish. The certificate requires completion of 27 credit hours focusing on grammar, professional writing skills, culture, translation history and theory, nonliterary translation from English to French/German/Spanish and French/German/Spanish to English, and computer translation and terminology management. A minimum of 15 credit hours toward the certificate must be completed at IUPUI.

Admission Requirements

Certificate candidates must possess fluency in their language pair. To be admitted to the certificate program, students must have sophomore standing, and they must have completed English W132 or W150 with a grade of B or better; and S313, F328, G300, or equivalent with a grade of B or better. After meeting the basic requirements for admission, the student must complete certificate-related courses with an overall GPA of 3.0 or better before qualifying for the internship or directed study. Because sequencing is important, students should consult with the director as soon as possible.

Course Requirements

1. **Core Courses (9 cr.)**
 - a. **Advanced Professional Writing** (Dept. of English) (3 cr.)
W331 Business and Administrative Writing
W355 Business Correspondence
W365 Theories and Practices of Editing
 - b. **Advanced Grammar (3 cr.)**
F402 Introduction to Linguistics or F421 Fourth Year French
G445 Advanced Grammar
S421 Advanced Spanish Grammar
 - c. **Culture Course (3 cr.)**
F461 La France contemporaine
G365 Deutsche Kultur Heute
S411 Culture and Civilization of Spain **or**
S412 Culture and Civilization of Latin America
2. **Courses in Translation (15 cr.)**
 - a. **History and Theory of Translation (3 cr.)**
FLAC F350 Introduction to Translation Studies
 - b. **Translation Practice (6 cr.)**
F330 Introduction to Translating French and English
F423 The Craft of Translation
G333 German Translation Practice
G423 The Craft of Translation
S323 Introduction to Translating Spanish and English
S423 The Craft of Translation
 - c. **Computers in Translation (3 cr.)**
FLAC F450 Computers in Translation
 - d. **Terminology Studies (3 cr.)**
F326 French in the Business World
G331 Business German I **or**
G431 Advanced Business German
S315 Spanish in the Business World **or**
S319 Spanish for Health Care Personnel **or**
S419 Spanish for Law Enforcement
3. **Internship or Directed Study (3 cr.)**
 - a. **Internship**
F493 Internship Program in French
G493 Internship Program in German
S493 Internship Program in Spanish
 - b. **Directed Study**
F495 Individual Readings in French
G498 Individual Studies in German
S494 Individual Readings in Hispanic Studies

For an application form, call Dr. Enrica Ardemagni, Director, Certificate in Translation Studies Program, 274-8957, or visit www.iupui.edu/~flac.

Classical Studies

Coordinator Associate Professor Robert F. Sutton Jr.

Associate Professor Robert F. Sutton Jr.

Academic Advising Cavanaugh Hall 501B, 274-2497, or Cavanaugh Hall 405, 274-0062

Classical Studies is an interdisciplinary field, examining the vanished civilizations of ancient Greece and Rome and their languages. Although the study of the Greek and Latin languages no longer holds a central place in a university curriculum, the art, literature, and intellectual traditions of the classical world remain basic to Western civilization. Today's student may encounter the classical world through the many fine translations available, the physical evidence of art and archaeology, and the study of the Greek and

Latin languages themselves. Courses are offered in four areas: classical archaeology; classical civilization; and the classical languages, ancient Greek and Latin.

Classical Archaeology

These courses study the art and archaeology of Greece and Italy, as well as the nearby lands affected by their civilization from earliest times through the end of the Roman world. Advanced work in the field leads to careers in archaeological research, museums, and teaching. These interdisciplinary courses may be of special interest to students in anthropology, history, and the history of art. Courses in classical archaeology require no knowledge of the Greek and Latin languages.

Classical Civilization

These general courses in the literature, history, culture, and intellectual traditions of ancient Greece and Rome require no knowledge of Greek or Latin. Such courses provide valuable background to students in a number of fields, and may be especially attractive to those planning to teach English, history, and related areas. In addition to the courses listed below, other relevant courses include History C386 and C388 and Philosophy P307.

The Classical Languages

The study of ancient Greek or Latin, like that of any foreign language, provides the most direct means for understanding and appreciating the thought of another culture. The traditional emphasis on formal grammar and vocabulary in teaching the classical languages has long proven valuable for students wishing to improve their English language skills.

Ancient Greek

Study of ancient Greek allows students direct access to masterpieces of Greek literature, historical sources, and the New Testament, while opening up a limited number of careers in teaching, mostly at the university level. For ancient Greek literature in translation, see the listings in "Classical Civilization."

Latin

Studying Latin allows students direct access to masterpieces of Latin literature and ancient historical sources, as well as ecclesiastical and other materials of post-classical age. Knowledge of Latin is useful for students of English, modern languages and history, and can lead to careers in teaching at various levels. A shortage of Latin teachers at the secondary level may make this an attractive second area for students in education. For Latin literature in translation, see the listings in "Classical Civilization."

Study Abroad

Students have the opportunity to study in Greece through an arrangement between Indiana University Overseas Study and College Year at Athens (CYA). Students may receive IU credit for study in Greece at CYA for a semester, an entire academic year, or during the summer. Faculty at IUPUI and Bloomington alternate offering a three-week summer course in Athens; in some years students may stay on to take a second three-week anthropology course on modern Greece taught on the island of Paros. For information, contact the IUPUI Office of Overseas Study or consult its Web page at www.indiana.edu/~overseas. Scholarships and grants are available to help students participate in these programs.

Majors

Although IUPUI does not offer a major in Classical Studies, students may devise a major program in the field through the School of Liberal Arts Individualized Major Program. Such a major, if properly designed, should allow good students to gain admission to graduate programs in classical studies or classical archaeology and to pursue careers in the field. Students interested in planning an Individualized Major in classical studies should consult the coordinator of the Classical Studies Program and the Director of the Individualized Major Program as early as possible in their academic careers.

Minors in Classical Studies, Ancient Greek, and Latin

A minor in classical studies, ancient Greek, or Latin can be an attractive complement to many majors, particularly history, English, and other foreign languages.

The minor in **Classical Studies** consists of at least 15 credit hours in classical archaeology, classical civilization, ancient Greek, Latin, or related courses approved by the program coordinator. Students may wish to design concentrations in areas of particular interest (e.g., classical art and archaeology, or Greek or Roman civilization). At least 6 credit hours must be taken at the 300 level or higher; no more than 3 credit hours of ancient Greek or Latin at the 100 level may be counted. Up to 6 credit hours may be taken in related fields, including History C386, C388, and Philosophy P307.

Minors in **ancient Greek** or **Latin** should include at least 12 credit hours in the language at the 200 level or higher, and 3 credit hours in a related culture or history course. Students interested in graduate study in Classical Studies are encouraged to learn to read French and German prior to beginning graduate work.

Courses in Classical Archaeology

A301 Classical Archaeology (3 cr.) The material remains of the classical lands from prehistoric through Roman times and a variety of approaches by which they are understood. Archaeological theory and methods are illustrated through select sites, monuments, works of art, and other remains of cultural, artistic, and historical significance. (Equivalent to Herron H310 and Bloomington Classical Studies C206/Fine Arts A206; students may not receive credit for both courses.)

A418 Myth and Reality in Greek Art (3 cr.) An introduction to Greek iconography (the study of images) that explores contemporary approaches to narration and representation. The course examines the illustration of myth, history, and everyday life in Greek art in relation to ancient society. (Equivalent to Herron H418; students may not receive credit for both courses.)

C413 The Art and Archaeology of Greece (3 cr.) Art and archaeology of Greece from about 1000 B.C. through the Hellenistic period. Special attention given to the development of Greek architecture, sculpture, and vase painting. (Equivalent to Herron H413; students may not receive credit for both courses.)

C414 The Art and Archaeology of Rome (3 cr.) Development of Roman architecture, sculpture, and

painting from the beginning through the fourth century A.D. Consideration given to the major archaeological sites. Continuation of C413, but C413 is not a prerequisite. (Equivalent to Herron H414; students may not receive credit for both courses.)

Courses in Classical Civilization

C205 Classical Mythology (3 cr.) Introduction to Greek and Roman myths, legends, and tales, especially those that have an important place in the Western cultural tradition.

C209 Medical Terms from Greek and Latin (2 cr.) Basic knowledge of some 1,000 words, together with materials for formation of compounds, enables student to build a working vocabulary of several thousand words. Designed for those intending to specialize in medicine, dentistry, or microbiology. Does not count toward the foreign language requirements or the distribution requirement.

C310 Classical Drama (3 cr.) Masterpieces of ancient Greek and Roman theater studied in relation to literary, archaeological, and artistic evidence for their production and interpretation.

C311 Classical Epics (3 cr.) The development of Greek and Latin epic from the rich oral tradition of Homer to the strictly literary form exemplified by Vergil's *Aeneid*. Epic masterpieces are read with reference to relevant historical and archaeological background.

C351 The Golden Age of Athens (3 cr.) Literary and artistic masterpieces of classical Greece viewed against the intellectual, cultural, and political background of democratic Athens.

C361 The Golden Age of Rome (3 cr.) Literary and artistic masterpieces of the Augustan age viewed in connection with the foundation of the Roman Empire.

C396 Classical Studies Abroad (1-9 cr.) P: Acceptance into an approved Indiana University overseas study program. Credit for foreign study in Classical languages, civilization, and archaeology when no specific equivalent is available among departmental offerings. Credit in C396 may be counted toward a minor in classical studies or classical civilization with approval of undergraduate advisor. May be repeated for a maximum of 9 credit hours.

C491 Topics in Classical Studies (3 cr.) A detailed examination of a particular aspect of classical civilization using a variety of literary and archaeological evidence.

C495 Individual Reading in Classics (1-3 cr.) P: consent of department. May be repeated to a maximum of 6 credit hours.

Courses in Ancient Greek

G131-132 Elementary Ancient Greek I-II (5-5 cr.) P: G131 or equivalent. The essentials of ancient Greek grammar, vocabulary, and syntax that will allow students to begin study of classical and Biblical texts

G200 Greek Reading and Composition (3 cr.) P: G132 or equivalent. Readings from Greek writers such as Aesop, Xenophon, Thucydides, and Plato. Review of syntax and grammar through regular practice in prose composition.

G407 Greek Historians (3 cr.) Selections from Herodotus and Thucydides, with attention to the authors' literary style, their conception of history and the causation of events, and their portrayal of individuals and states.

G495 Individual Reading in Greek (1-3 cr.) P: consent of department. May be repeated once for credit.

Courses in Latin

L131-L132 Beginning Latin I-II (5-5 cr.) Fundamentals of the language; develops direct reading comprehension of Latin. P for L132: L131 or equivalent.

L200 Second-Year Latin I (3 cr.) P: L132 or placement. Reading from select authors, emphasizing the variety of Latin prose. Examination of the concept of genre. Grammar review and/or prose composition.

L250 Second-Year Latin II (3 cr.) P: L132 or placement. Reading from Vergil's *Aeneid* with examination of the epic as a whole. Prosody of dactylic hexameter and study of poetic devices. Grammar review.

L495 Individual Reading in Latin (1-3 cr.) P: consent of department. May be repeated once for credit.

The Major in French

Requirements for a major in French include 29 credit hours in courses above the 100 level. The departmental course offerings permit majors to emphasize either language or literature. The major with language emphasis includes F203, F204, F300, F328, F331, F402; and three courses from the following: F307, F326, F330, F360, F380, F451, F480. The major with literature emphasis includes F203, F204, F300, F328; and five courses from the following: F307, F360, F402, F410, F428, F430, F443, F444, F450, F452, F453, F454, F460, F495. Provided one has the proper prerequisites, one may elect a combination of the above courses for the major.

The Minor in French

14 credit hours: F203, F204, F328, and F300 or F360.

Teacher Certification in French Teaching Major Requirements

The teaching major in French requires the completion of a minimum of 36 credit hours beyond the 100 level, including 30 credit hours in 300 and 400 level courses. F300, F307, F328, F331, F360, and F402 are required. A year of a second foreign language is advisable. See also requirements of the School of Education. Students working toward certification are urged to work with the School of Education's advisor as well as their department advisor.

Teaching Minor Requirements

The teaching minor in French requires the completion of a minimum of 24 credit hours beyond the 100

level, including 18 credit hours in 300 and 400 level courses. F300, F307, F328, F331, F360, and F402 are required. See also requirements of the School of Education.

Departmental Honors Program

To provide recognition to outstanding students in French, the department offers an Honors Program as well as H-Option courses. The program is open to all majors in the department who carry a minimum grade point average of 3.3 overall and 3.5 in the major. Courses above F204 that are approved by the department may be taken for honors credit or for the H-Option. For further information, contact the department.

Foreign Study

Programs abroad are open to students majoring in all academic disciplines and are not restricted to language majors. There is a year-long program at the Université d' Aix-en-Provence that is open to juniors and seniors who have had three years of college French and one-semester programs at the Université de Rennes and at the Université de Paris. For students with two years of college French, there is a summer program in Paris. Students with at least one year (10 credit hours) of college French may participate in a summer program in Québec, Canada. Indiana University credit is granted for work that is satisfactorily completed in these programs. Students interested in studying abroad should discuss their options with the French program coordinator or with the Office of International Affairs as soon as possible.

Undergraduate Courses

F117-F118-F119 Beginning French I-II-III (3-3-4 cr.) Introductory language courses designed for students with no prior training in French. Emphasis on developing basic speaking, writing, listening, and reading skills, as well as awareness of French and Francophone cultures. Three semesters are required to fulfill the foreign language requirement. Credit not given for F117-F118-F119 and F131-F132.

F131-F132 Intensive Beginning French I-II (5-5 cr.) Accelerated introductory language courses. Recommended for students with prior training in French or other Romance languages. Emphasis on developing basic speaking, writing, listening, and reading skills, as well as awareness of French and Francophone cultures. Credit not given for F131-F132 and F117-F118- F119.

F203 Second-Year Composition, Conversation, and Reading I (4 cr.) P: 8-10 credit hours of college-level French or placement by testing. A continuation of practice in the listening, reading, speaking, and writing of French.

F204 Second-Year Composition, Conversation, and Reading II (4 cr.) P: 11-14 credit hours of college-level French or placement by testing. Continuation of F203.

F296 Foreign Study in France (1-6 cr.) P: acceptance in an overseas study program in France. Credit for foreign study in French language and/or literature done at second-year level when no specific equivalent is available among departmental offerings.

F299 Special Credit (3-6 cr.) Francophones may, upon successful completion of F328 and another

upper-division French course, apply to the department for special credit.

F300 Lectures et analyses littéraires (3 cr.) P: F204 or equivalent. Preparation for more advanced work in French literature. Readings and discussion of one play, one novel, short stories, and poems as well as the principles of literary criticism and “explication de texte.”

F307 Masterpieces of French Literature (3 cr.) P: F300 or equivalent. Includes material from both classical and modern periods.

F326 French in the Business World (3 cr.) P: F204 or equivalent. Introduction to the language and customs of the French-speaking business world. Designed to help prepare students to take the examination for the *Certificat pratique de français commercial et économique* offered by the Paris Chamber of Commerce.

F328 Advanced French Grammar and Composition (3 cr.) P: F204 or equivalent. Study and practice of French thinking and writing patterns.

F330 Introduction to Translating French and English (3 cr.) P: F328 or consent of the department. A comparative study of the style and grammar of both languages, with focus on the difficulties involved in translating. Introduction to the various tools of the art of translation.

F331 French Pronunciation and Diction (3 cr.) P: F204 or equivalent. Thorough study of French phonetics and intonation patterns. Corrective drill. Includes intensive class and laboratory work. Oral interpretation of text.

F360 Introduction socio-culturelle a la France (3 cr.) P: F328 or equivalent. A study of France and its people through an examination of France's political and cultural development.

F371 Topics in French (3 cr.) Topics in French literature and culture will be explored from a variety of perspectives. The course will be given in English. It may be taken twice.

F380 French Conversation (3 cr.) P: F204 or equivalent. Designed to develop conversational skills through reports, debates, and group discussions with an emphasis on vocabulary building, mastery of syntax, and general oral expression. Both F380 and F480 may be taken for credit.

F396 Foreign Study in France (1-6 cr.) P: acceptance in an overseas study program. Credit for foreign study in French language or literature when no specific equivalent is available among departmental offerings. May be repeated for a maximum of 6 credit hours.

F402 Introduction to French Linguistics (3 cr.) P: F328 or consent of the instructor. Introduction to the structure of the French language: phonology, morphology, and syntax.

F410 French Literature of the Middle Ages (3 cr.) P: F300 or consent of the department. Introduction to Old French language and literature.

F421 Fourth-Year French (3 cr.) P: F328 or consent of the department. Advanced work in language with a focus on syntax.

F423 Craft of Translation (3 cr.) P: F328 or consent of instructor. Advanced course in translation. The problems and techniques of translating French/English and English/French using a variety of texts and concentrating on the use of various stylistic devices.

F428 Seventeenth-Century French Literature (3 cr.) P: F300 or consent of the department. Classical writers of prose, poetry, and plays such as Descartes, Pascal, Corneille, Moliere, La Fontaine, Racine, Mme. de Lafayette.

F430 Modern Short Narratives (3 cr.) P: F300 or consent of the department. Structural and interdisciplinary approaches to short French narratives of the modern period, eighteenth-century fiction (short stories, tales, etc.), and nonfiction (essays, commentaries, etc.).

F443 Nineteenth-Century Novel I (3 cr.) P: F300 or consent of the department. Stendhal, Balzac, and others.

F444 Nineteenth-Century Novel II (3 cr.) P: F300 or consent of the department. Flaubert, Zola, and others.

F450 Colloquium in French Studies (2-3 cr.) P: F300 or consent of the instructor. Emphasis is on topic, author, or genre.

F451 Le français des affaires (3 cr.) P: F326 or consent of the instructor. Investigates in depth some of the topics touched on in F326. Designed to help prepare students to take the examination for the *Diplôme supérieur de français des affaires* offered by the Paris Chamber of Commerce.

F452 La Civilisation et littérature québécoises (3 cr.) P: F300 or consent of the instructor. The study of the history of French Canadian literature and civilization from its origins down to the present leading to the “Quiet Revolution” as seen through the contemporary poetry, novel, and drama of Quebec.

F453 Littérature contemporaine I (3 cr.) P: F300 or consent of the department. Twentieth-century writers such as Gide, Proust, etc.

F454 Littérature contemporaine II (3cr.) P: F300 or consent of the department. Twentieth-century writers such as Camus, Sartre, etc.

F460 French Fiction in Film (3 cr.) P: F300 or consent of the department. Involves reading works of French fiction and studying them as works of literature, followed by the viewing of a film version of each work and the preparation of a comparative analysis of the two versions.

F461 La France Contemporaine (3 cr.) P: F328 or equivalent. France since 1945: political, social, economic, and cultural aspects.

F480 French Conversation (3 cr.) P: F328 or consent of instructor. Designed to develop conversational skills through intensive controlled conversation with an emphasis on the use of linguistic devices and the mastery of oral expression. Both F380 and F480 may be taken for credit.

F495 Individual Readings in French (1-3 cr.) P: consent of the instructor. For majors.

F496 Foreign Study in France (3-8 cr.) P: consent of chairperson. Course involves planning for research project during year preceding study abroad. Time spent in research abroad must amount to at least one week for each credit hour granted. Research paper must be presented by end of semester following foreign study. May be taken once only. Does not count as a 400 level course in residence for major or minor.

Graduate Courses

F507 Foreign Language Institute (1-6 cr.) Intensive interdepartmental course involving work or literature in contemporary civilization (in the foreign language), language practice, and discussions and demonstrations of important developments and concepts in methodology. Intended primarily for Master of Arts for Teachers degree students and for high schools teachers.

F575 Introduction to French Linguistics (3 cr.) An introduction to phonological, morphological, and syntactic structures of French, and to recent linguistic developments.

F580 Applied French Linguistics (3 cr.) Evaluation of language teaching methods according to recent claims in learning theory.

Courses for Graduate Reading Knowledge

F491 Elementary French for Graduate Students (3 cr.) Introduction to structures of the language necessary for reading, followed the reading in graded texts of a general nature. Open with consent of the instructor to undergraduates who have already completed the language requirement for the B.A. in another language. Credit not given for both F491 and any French course at the 100 level.

F492 Readings in French for Graduate Students (3 cr.) P: F491 or consent of instructor. Credit not given for both F492 and any French course at the 100 or 200 level.

German

Coordinator Professor Gabrielle Bersier

Professors Gabrielle Bersier, Giles R. Hoyt, John Barlow (Emeritus)

Lecturers Claudia Grossmann, Shirley Maggio

Adjunct Assistant Professor Ruth Reichmann

Academic Advising Cavanaugh Hall 501H, (317) 274-8246

The IUPUI German program trains students to achieve linguistic proficiency and intercultural competency in German. Linguistic proficiency is the ability to communicate orally and in writing about subjects of common knowledge in the target language. A step-by-step systematic progression of language courses aids students to achieve fluency in German and allows them later to concentrate on chosen areas of linguistic specialization.

To gain intercultural competency, students acquire a solid knowledge of contemporary life in the German-speaking countries and learn to compare their institutions, customs, and mentalities with contemporary U.S. culture. Students also gain intercultural competency through critical knowledge

of the historical and cultural movements and personalities that have had the most impact on contemporary culture in the German-speaking countries, especially Germany.

In addition, all students in the program have the option to study in a German-speaking country, Germany or Austria, for a limited or extended period of time, or to gain practical career experience in business or technology by working as an intern overseas or in a local international corporation.

Courses in German not only broaden students' cultural horizons by giving them immediate access to a key region of central Europe, but also prepare students for a variety of careers in international business communication, translation, travel, education, and technology exchange. By combining the study of another discipline with specialization in German, students can also prepare more thoroughly and adequately for interdisciplinary graduate studies.

Major in German

In addition to the area distribution requirements for the School of Liberal Arts, the major in German requires the following:

29 credit hours above 100 level, including at least one capstone language course (G431, G445, G465), one contemporary culture course (G365), at least one 400 level historical culture and literature course (G407, G408, G409, G410) and a student portfolio (G498). Other courses may also be selected on the basis of level of placement by test or course work, and/or focus of interest. They include ALL 200, 300 and 400 level courses, except courses taught in English.

Major Course Requirements

1. A minimum of one 400-level language course:
G423 The Craft of Translation (3 cr.)
G431 Advanced Business German (3 cr.)
G445 Fortgeschrittenes Deutsch: Grammatik (3 cr.)
G465 Fortgeschrittenes Deutsch: Kommunikation (3 cr.)
2. One contemporary culture course:
G365 Deutsche Kultur Heute (3 cr.)
3. A minimum of one 400-level historical culture and literature course:
G407 Mittelalter/Reformation/Barock (3 cr.)
G408 Deutsche Klassik und Romantik (3 cr.)
G409 19. Jahrhundert: Kultur und Literatur (3 cr.)
G410 20. Jahrhundert: Kultur und Literatur (3 cr.)
4. Student portfolio
G498 Individual Studies in German (1 cr.)

To help assess and showcase academic progress in German while at IUPUI, graduating majors will assemble and present a portfolio including a minimum of one written project completed for each of the major courses above the 100 level taken in residence at IUPUI.

International Study or Work Internship Option

G498 Individual Studies in German (1-5 cr.) 1-5 credit hours toward the major in German may be earned through individual study or international work internship abroad or locally. There is a 3-credit limit for one individual study or work project.

Minor in German

The minor in German language skills is for students who are interested in the German language as a tool of communication. Its emphasis is on competence in the skills of reading, writing, and understanding spoken German, as well as on conversational proficiency in German.

Requirements consist of 14 credit hours, to include G225 and G230 or G299, plus a minimum of 6 credit hours from courses at the 300 or 400 level taught in German.

Teacher Certification

Secondary School with a Major in German

The teaching major requires the completion of at least 36 credit hours, 30 credit hours in 300 and 400 level. For a detailed description of all requirements, see the German program coordinator and refer to the School of Education Undergraduate Program Bulletin.

Secondary School with a Minor in German

The teaching minor requires the completion of at least 24 credit hours, of which 18 credit hours must be in courses at the 300 and 400 level. For a detailed description of all requirements, see the German program coordinator and refer to the School of Education Undergraduate Program Bulletin.

Junior High/Middle School Certification

For details concerning certification with the primary area in German, or the supporting area in German for junior high/middle school teaching, see the German program coordinator.

Honors Program

Honors in German can be achieved either through an honors degree or through the H-Option in individual courses. The German program coordinator must be contacted before enrolling in honors work.

Honors Degree

Requirement A cumulative grade point average of 3.3, and a 3.5 grade point average in German courses. A total of 24 credit hours of course work must be earned with honors. At least 18 credit hours (out of the total 24) must be earned in German courses above the G119 or G132 level, and 6 credit hours must be in electives.

H-Option

Honors credit through the H-Option may be earned in (a) upper-division language courses (i.e., above G132), as well as (b) upper-division literature, film, culture, and topics courses offered for German credit.

Foreign Study

Any form of foreign study is highly recommended, and the department gives credit for such study wherever possible. Outstanding students with a substantial command of German, a GPA of 3.0 and a B average in German may apply for the Overseas Study academic year program in Freiburg, Germany, during their junior year. Up to 30 IU credit hours may be earned through the program. Semester programs are also available in Freiburg and a summer program is offered in Graz, Austria, for students who have completed through G225. In addition, students who completed first-year German may earn transfer credits

through an intensive three-week program in Oldenburg, Germany. Contact the German program or International Affairs.

Internship in Baden-Württemberg

Students in the Schools of Liberal Arts; Science, Engineering, and Technology; and Business may apply for a two-month internship with a German firm in southwestern Germany through the Department of German's Advanced Trainee Exchange Program, which is run in cooperation with the Ministry for Art and Science of Baden-Württemberg. Advanced standing, a minimum overall grade point average of 3.0, and German language skills are required. Each area of the exchange has a specific language requirement.

Other Activities

Delta Phi Alpha A chapter of the national German honorary society, Delta Phi Alpha, was established in 1981. Students meeting the qualification requirements may become eligible for induction to the chapter, Iota Lambda.

German Club The department sponsors a German Club, open to ALL interested students. Various topics are discussed and events of cultural interest are presented during the academic year.

Max Kade German-American Center In cooperation with several community organizations, the department operates a center for German-related activities in the Deutsche Haus-Athenaeum.

Undergraduate Courses

G095-G096 German for Reading Proficiency

(3-3 cr.) These courses stress mastery of passive vocabulary and recognition of grammatical forms needed for reading skills. Designed for students of science, technology, the professional schools, and for those desiring sufficient proficiency in reading and translating German to enable them to work with German materials in their fields. These courses do not fulfill the foreign language requirement of the School of Liberal Arts.

G117-G118-G119 Beginning German I-II-III

(3-3-4 cr.) Introductory courses for students who have not had prior training in German or who desire to study German at a pace slower than G131-G132. Three semesters are required to fulfill the 10-credit hour foreign language requirement. Credit is given only for the sequence G117-G118-G119 or the sequence G131-G132.

G131-G132 Intensive Beginning German I-II

(5-5 cr.) Intensive introduction to present-day German and selected aspects of German life. Intensive drills for mastery of phonology, basic structural patterns, and functional vocabulary. Credit is given only for the sequence G131-G132 or the sequence G117-G118-G119.

G134-G135 Introductory German for Business

I-II (3-3 cr.) Introductory courses for students and professionals in business and engineering, who need basic communicative skills for the workplace. In addition to the four basic language skills, intercultural communication and basic technical, business, and scientific vocabulary are introduced.

G225 Intermediate German I (4 cr.) P: G119, G132, or equivalent or placement by testing. Intensive

review of grammar. Further development of oral and written use of the language. Selections from contemporary German readings and media.

G230 Intermediate German II (4 cr.) P: G225 or equivalent or placement by testing. Review of grammar. Readings of modern German with stress on discussion in German. Writing of descriptive and expository prose.

G265 German Culture in English Translation (3 cr.) A survey of the cultural history of German-speaking countries, as well as of contemporary civilization, with an emphasis on individual aspects of culture traced through several epochs.

G299 German for Advanced Credit (3 or 6 cr.) A special-credit designation for advance-placed students. A student who places at the third-year level on the CEEB placement test and completes a course at the third-year level will be eligible for 6 hours of special credit in G299. A student who places in the second semester of the second year and completes a course at this level will be eligible for 3 hours of special credit in G299. A student who skips a sequential course in German (e.g., G131 to G225, G132 to G230, G225 to G300, or equivalent) is eligible to receive 3 hours of special credit in G299. If the grade earned in the course at which the student placed (through the CEEB or by skipping a sequential course) is an A, he or she will receive the grade of A for special credit in G299. If the grade earned is B or C, the student will receive the grade of S for special credit in G299.

G300 Deutsch: Mittelstufe I (3 cr.) P: G230 or equivalent or placement by testing. Comprehensive review of grammatical points introduced in G117 through G230. Reading proficiency, systematic vocabulary building, composition, and discussion through the assignments of literary and nonliterary texts. Conducted in German.

G330 Deutsch: Mittelstufe II (3 cr.) P: G300 or equivalent. Advanced oral and written communication. Study of selected advanced grammatical topics. Reading of primarily nonliterary texts. Conducted in German.

G331 Business German I (3 cr.) P: third-year language proficiency or consent of instructor. Emphasis on acquisition and use of business vocabulary, idiom, and style. Translating, reading, and writing skills are developed using constructions common to business German, as well as current materials (reports, journals) in the field.

G333 German Translation Practice (3 cr.) P: third-year proficiency or consent of instructor. Introduction to the theory and practice of translation. Discussion of techniques and stylistic approaches. Emphasis on German/English translation using a variety of texts, including technical texts, business communication, and texts on current topics.

G340 Deutsch: Schreiben und Sprechen (3 cr.) P: G230 or equivalent. Further development of composition, conversation, and diction; review of grammar.

G355 Theater Spielen (3 cr.) P: third-year proficiency or consent of instructor. This combined

reading, discussion, pronunciation, and performance course provides an applied introduction to contemporary German theater and drama, along with intensive practice of oral language skills.

G365 Deutsche Kultur Heute (3 cr.) P: third-year proficiency or consent of instructor. A critical investigation of contemporary culture in the German-speaking countries, including institutions and major personalities, customs, traditions, changing mentalities, and lifestyles as they compare with contemporary U.S. culture. Taught in German.

G370 German Cinema (3 cr.) No knowledge of German required. Survey of the German cinema from the films of expressionism and the Weimar Republic through the Nazi period to the present. Emphasis on film as a form of narrative art and on the social and historical conditions of German film production. Offered in English concurrently with G371.

G371 Der deutsche Film (3 cr.) P: third-year proficiency or equivalent. Survey of the German cinema from the films of expressionism and the Weimar Republic through the Nazi period to the present. Emphasis on film as a form of narrative art and on the social and historical conditions of German film production.

G381 German Literature to 1750 in English Translation (3 cr.) No knowledge of German required. Major works and writers of German literature in the Medieval, Reformation, Renaissance, and Baroque periods. Offered in English concurrently with G407.

G382 Classicism and Romanticism in English Translation (3 cr.) No knowledge of German required. Major works and writers of German literature, 1750-1830, to include the periods of the Enlightenment, Storm and Stress, Classicism, and Romanticism; representative writers such as Schiller, Goethe, Kleist, and the Grimm brothers.

G383 Nineteenth-Century German Literature in English Translation (3 cr.) No knowledge of German required. Works and writers of German literature, 1830-1900. Analysis of such concepts as realism, naturalism, and neoromanticism, their theories and styles; exemplary writers such as Buechner, Heine, Nietzsche, Hauptmann, and others. Offered in English concurrently with G409.

G384 Twentieth-Century German Literature in English Translation (3 cr.) No knowledge of German required. Major works and writers of German literature from the turn of the century to the present, with emphasis on Rilke, Thomas Mann, Kafka, and Brecht. Offered in English concurrently with G410.

G391 German Colloquium in English Translation II (3 cr.) No knowledge of German required. May be taken as an elective by other students. Emphasis on one topic, author, or genre in German literature, or other aspect of German culture. No credit given toward German major.

G401 Deutsche Kultur in Amerika (3 cr.) P: third-year proficiency or consent of instructor. Advanced undergraduate course. Its purposes are to provide an overview of the cultural heritage of German-Americans and to assist students in

researching German heritage with a view toward developing research skills with original materials. The course will basically be in a seminar format with students actively participating in discussions and presentations.

G407 Knights, God, and the Devil (3 cr.) The purpose of this course is to provide insight into the development of early German cultural life by reading and analyzing texts of the periods covered. Lecture materials will cover historical and cultural background. Period texts will be placed in contexts of other cultural phenomena, including art and music. As much reference as possible will be made to the European context of the emerging German literacy language.

G408 Deutsche Klassik und Romantik (3 cr.) P: third-year proficiency or consent of instructor. Introduction to the cultural capital of courtly Germany, Weimar, and its relationship to German Romanticism, including readings and discussions of works by Goethe, Schiller, Kleist, Tieck, and the Grimm brothers. Literary examples are accompanied by pictorial, filmic, and musical illustrations. Taught in German.

G409 19. Jahrhundert: Kultur und Literatur (3 cr.) P: third-year proficiency or consent of instructor. Introduction to the age of modernization and unification of the German states during the 19th century, including discussions of works by authors and personalities of major cultural influence, such as Heine, Büchner, Marx, Wagner, Nietzsche, and Schnitzler. Literary examples are expanded with pictorial, filmic, and musical illustrations. Taught in German.

G410 20. Jahrhundert: Kultur und Literatur (3 cr.) P: third-year proficiency or consent of instructor. Survey of cultural and intellectual life of the German-speaking countries of the 20th century, through the reading of exemplary literary works. Discussion of literary movements from the turn of the century until the present. Texts will be analyzed within the context of other cultural phenomena, including film and music. Conducted in German.

G423 The Craft of Translation (3 cr.) P: G333 or consent of the instructor. Advanced course in German-English translation providing intensive translation practice in many text categories: commercial and economic translations, scientific, technical, political, and legal texts. Applied work combined with study of theory and methodology of translation, comparative structural and stylistical analysis and evaluation of sample translations. Use of computer-assisted translation management.

G431 Advanced Business German (3 cr.) P: fourth-year proficiency or consent of the instructor. Focus is on the contemporary business idiom and current economic issues facing Germany. Active practice of specialized business language, both for oral and written communication.

G445 Oberstufe: Grammatik (3 cr.) P: fourth-year proficiency or consent of instructor. Survey and practice of complex grammatical structures; systematic expansion of vocabulary. Discussion and writing based on current materials, such as newspapers, films, and radio programs.

G465 Oberstufe: Kommunikation (3 cr.) P: fourth-year proficiency or consent of instructor. Systematic development of writing and speaking skills, proceeding from exercises to specific forms, such as *Brief, Aufsatz, Referat, Vortrag*. Focus on usage and style.

G490 Das deutsche Kolloquium (3 cr.) P: fourth-year German language proficiency or consent of instructor. Concentration on a specific topic, genre, or author in German literature, film, or other aspect of culture.

G491-G492 Elementary German for Graduate Students I-II These courses are taught concurrently with G095-G096 and prepare students for the German reading proficiency exam.

G498 Individual Studies in German (1-5 cr.) P: consent of the program coordinator.

Graduate Courses

G507 Foreign Language Institute (1-6 cr.) Intensive interdepartmental course involving language laboratory and other audiovisual equipment and techniques, lecture, assignments in contemporary civilization (in the foreign language), and discussions of classroom use of applied linguistics. May be repeated for a maximum of 6 credit hours.

G563 German Culture Studies I (3 cr.) The formation of cultural traditions in the German-speaking countries prior to the twentieth century.

G564 German Culture Studies II (3 cr.) Culture of the German-speaking countries in the twentieth century.

V605 Selected Topics in German Studies (2-4 cr.; 12 cr. Max.)

Japanese Studies

Coordinator Associate Professor Reiko Yonogi
Academic Advising Cavanaugh Hall 501K, (317) 274-8291

Japanese studies is an interdisciplinary field that includes the study of language, culture, and literature of Japan. Courses are offered in language, literature, and culture. The major objectives of the program are (1) to provide students with adequate ability to understand, speak, read, and write Japanese and (2) to give students a general introduction to Japanese culture, literature, and society. Courses offered in English provide students who have little or no knowledge of Japanese with an introduction to various facets of Japanese studies.

Minor in Japanese

The minor in Japanese studies may be of particular interest to students in business, social sciences, and other languages and interdisciplinary subjects. It includes both language and literature and other Japanese area studies courses.

The minor in Japanese studies consists of 15 credit hours in Japanese studies or related courses approved by the program coordinator, excluding courses at the 100 level. At least 6 credit hours taken toward the minor must be at the 300 level or above. The following courses fulfill the requirements. Prerequisite: completion of first-year college Japanese or equivalent.

E231 Japan: The Living Tradition (3 cr.)

E351 Studies in East Asian Culture (3-6 cr.)

E472 Modern Japanese Fiction (3 cr.)

G367-G368 History of Japan I-II (3-3 cr.)

J201-J202 Second-Year Japanese I-II (3-3 cr.)

J301-J302 Third-Year Japanese I-II (3-3 cr.)

J393-J394 Japanese Literature in Translation I-II (3-3 cr.)

J401-J402 Fourth-Year Japanese I-II (3-3 cr.)

Foreign Study

Indiana University offers mature and motivated undergraduates direct IU credit for study for an academic year at the Center for Japanese Studies at Nanzan University in Nagoya, Japan. This program emphasizes intensive study of Japanese in combination with courses in English on various aspects of Japanese culture and society and the applied arts. This program is open to students of all majors who have completed at least fourth-semester Japanese and have attained a 3.0 GPA. In addition, students with first-year proficiency may apply to the semester program at Kanda University of International Studies in Tokyo.

Courses in Japanese Studies

J117-J118-J119 Basic Japanese I-II-III (3-3-4 cr.) Introductory courses for students who have not had prior training in Japanese or who desire to study Japanese at a pace slower than J131-J132. Three semesters are required to fulfill the 10 credit hour foreign language requirement. Credit is given only for the sequence J117-J118-J119 or the sequence J131-J132. Students are introduced to present-day Japanese with drills for mastery of phonology, basic structural patterns, and functional vocabulary.

J131-J132 Beginning Japanese I-II (5-5 cr.) Introductory language courses designed for students who have not had any prior training in Japanese. Drills for basic skills in listening, speaking, reading, and writing of Japanese.

J201-J202 Second-Year Japanese I-II (3-3 cr.) P: J131-J132 or equivalent. A continuation of practice in the listening, speaking, reading, and writing of Japanese.

J301-J302 Third-Year Japanese I-II (3-3 cr.) P: J201-J202 or equivalent. Review of grammatical points acquired in the first and second year of Japanese. More advanced level of speaking, reading, writing, and listening proficiency.

J310 Japanese Conversation (3 cr.) P: J202 or equivalent. Designed to develop conversational skills through controlled linguistic patterns, reports, and group discussion. More advanced level of oral communication.

J330 Business Japanese (3 cr.) P: J202 or equivalent. Emphasis on acquisition and use of business vocabulary, idiom, and style. Oral practice is emphasized.

J393-J394 Japanese Literature in Translation I-II (3-3 cr.) Survey of the classical genres of Japanese literature. I: Ancient period to end of Momoyama. II: Tokugawa and modern periods.

J401-J402 Fourth-Year Japanese (3-3 cr.) P: J301-J302 or equivalent. Advanced level of communications skills in speaking and writing. Study

of advanced grammar and reading of newspaper articles.

J498 Individual Studies in Japanese (1-3 cr.) P: consent of department. May be repeated up to a maximum of 6 credit hours.

E231 Japan: The Living Tradition (3 cr.) An introduction to the patterns of Japanese culture: society, history, visual arts, literary masterpieces, performing arts, and living religious traditions.

E351 Studies in East Asian Culture (3 cr.) Selected issues and problems of importance to the understanding of East Asian culture, taught within one of the humanistic disciplines. May be repeated once for credit.

E472 Modern Japanese Fiction (3 cr.) The novels, short stories, and theories of fiction of prominent Japanese writers of the modern period.

Spanish

Coordinator Associate Professor Enrica Ardemagni

Associate Professors Marta Antón, Enrica Ardemagni, Herbert Brant, Nancy Newton

Assistant Professor Gustavo Garcia

Associate Professor Emerita Lucila Mena

Lecturers Ellen Brennan, Sarah Carrig, Amy Bomke-Keating

Academic Advising Cavanaugh Hall 501 E, (317) 274-0062

Mission

The mission of the Spanish program at IUPUI is to assist students in achieving proficiency in the Spanish language and to lead them to an understanding and an appreciation of the wide range of Hispanic cultures. To meet this goal, the Spanish Program offers introductory and advanced instruction in language, linguistics, culture and civilization, literature, and applied language studies.

The introductory and intermediate sequences of courses are designed to provide non-majors with an exploration into Spanish language and Hispanic culture as an essential component of a liberal arts education. The sequences aim to develop an interest in the language and the peoples who speak it, as well as to prepare students for a variety of careers with international dimensions.

The advanced curriculum prepares students to communicate orally and in writing about subjects in the target language, giving them the foundation for their future career experiences and to prepare them for graduate study. Through investigation into the different content areas that comprise the study of Spanish, the program contributes to the academic and personal development of students in multiple ways. The study of Spanish gives students the ability 1) to communicate with Spanish-speakers in the United States and abroad; 2) to understand better the cultural manifestations of other peoples; 3) to gain greater insight into the nature of language itself as well as their own language; 4) to reinforce knowledge gained from other disciplines and connect it with the study of a second language; and, 5) to develop a sense of a multilingual international community of which they form an integral part. The Spanish program

curriculum incorporates the Principles in Undergraduate Learning and culminates in the capstone experience.

Considering the rapidly growing Spanish-speaking population in the United States, a major in Spanish is becoming increasingly desirable in the workplace. The major in Spanish can prepare students for a wide variety of careers in such fields as education, social services, international business and finance, government service, international communications and information services, and the travel and hospitality industry.

For detailed information about the program, visit the Department of Foreign Languages and Cultures homepage on the Web: www.iupui.edu/~flac.

Major in Spanish

In addition to fulfilling the general group requirements for a B.A. degree established by the School of Liberal Arts, the Spanish major must complete 30 credit hours in courses at the 300 and 400 level (12 of which must be completed at IUPUI) with a grade of C (2.0) or better. Required courses at the 300 level are: S311, S313, S320, S360, and S363. Required courses at the 400 level are: one course in literature, one course in culture and civilization, one course in linguistics, one elective, and the senior capstone seminar. Students must have senior status to register for the capstone seminar.

Capstone Course

Majors must register for S498, Capstone Seminar in Spanish. Working with a director, students will prepare a learning portfolio integrating their students' undergraduate study through writing and reading projects and oral presentations.

Minor in Spanish

The minor in Spanish requires 13 credit hours of course work (6 credit hours must be completed at IUPUI), with a grade of C (2.0) or better. Required courses are: S204, S313, S317, and 3 additional credit hours from the 300-400 level.

Teacher Certification

Students who wish to obtain certification on the secondary level must complete all professional courses required by the School of Education and should work with the School of Education advisor as well as with the Spanish program advisor.

Teaching Major Requirements

The teaching major in Spanish requires the completion of a minimum of 36 credit hours beyond the 100 level, including 30 credit hours in 300 and 400 level courses. The following courses are required: S311, S313, S317, S320, S360, S363, S428. Native speakers may receive a waiver for S317. Please consult with the Spanish program advisor.

Teaching Minor Requirements

The teaching minor in Spanish requires the completion of a minimum of 24 credit hours beyond the 100 level, including the following required 21 credit hours in 300 and 400 level courses: S311, S313, S317, S320, S360, S363, and S428.

Master of Arts in Teaching Spanish

Description

This graduate program is a collaboration between IUPUI and the University of Salamanca in Spain. It leads to the M.A.T. in Spanish, awarded by IUPUI, and to a distinctive international degree entitled *Máster Interuniversitario Hispano-Norteamericano en la Lengua Española y las Culturas Hispanas*, awarded by the University of Salamanca. The University of Salamanca has a well-developed curriculum for foreign students who aspire to teach Spanish, and its *Cursos para profesores* enjoy a high level of academic prestige around the world.

Objectives

This international course of study has been designed specifically for teachers of Spanish. It provides graduate level course work in the Spanish language, Hispanic cultures, teaching methodology, applied linguistics, and Hispanic art and literature. It provides for the professional development of Spanish teachers through the improvement of their language and teaching skills, and it will enable their career advancement. Graduates of the program will in turn contribute to better teaching of Spanish in Indiana schools, improving the language skills and the cultural awareness of Indiana students.

Design

The degree program consists of 36 credits and requires two July summer programs at the University of Salamanca. The remainder of the course work must be completed in residence at IUPUI. The M.A.T. may be completed in three academic semesters and two summer sessions.

Course Work at IUPUI (to be completed during the academic year)

- S513 Introduction to Hispanic Sociolinguistics (3 cr.)
- S515 Acquisition of Spanish as a Second Language (3 cr.)
- S517 Methods of Teaching College Spanish (3 cr.)
- S518 Studies in Latino and Spanish American Culture (3 cr.)
- S519 Practicum in the Teaching of Spanish (2 cr.)
- S680 Topics in Contemporary Spanish American Literature (3 cr.)
- S685 M.A.T. Thesis (4 cr.)

Course Work at the University of Salamanca (to be completed in 2 July sessions)

- S521 Teaching Spanish Grammar and Vocabulary (4 cr.)
- S522 Teaching the Four Language Skills (3 cr.)
- S523 Teaching Spanish Culture (3 cr.)
- S524 Teaching Contemporary Spanish Literature and the Other Arts (3 cr.)
- S525 Spanish Linguistics for Teachers (2 cr.)

Admission Requirements

- 1) A bachelor's degree from an accredited college or university, with a minimum grade point average of 3.0 (on a 4.0 grading scale) in the student's undergraduate major, documented by an official transcript. Applicants are expected to have a B.A. in Spanish, but admission is also considered for those who otherwise demonstrate the competency

necessary for successful graduate work in Spanish. Students must have knowledge of Spanish phonetics, linguistics, and literary genres and periods. Students with deficiencies may be admitted on a conditional basis until they complete the relevant undergraduate courses in these areas.

- 2) a. Personal statement in Spanish explaining why the applicant wants to pursue this degree.
b. Tape including applicant's oral sample of 10-15 minutes of spontaneous speech in Spanish.
c. An essay on some aspect of Spanish culture, literature, linguistics, or pedagogy.
- 3) Proficiency in the Spanish language, which may be demonstrated by the Basic Diploma in Spanish issued by the Spanish Ministry of Education, Culture and Sport. The official exam determining this proficiency is offered once a year at IUPUI.
- 4) The Graduate Record Examination (GRE) General Test with a minimum score of 600 in at least one of the three areas. Applicants are encouraged to take the examination by December of the year before admission.
- 5) Three letters of recommendation. At least two of these should be from professors.
- 6) For foreign students, the university requires a minimum TOEFL score of 550. Students who do not achieve this score may be admitted to the university conditionally and may be required to take English as a Second Language courses through the Department of English. While taking these courses they will be allowed to register for a maximum of 6 credit hours in the M.A.T. in Spanish.

Teacher Certification

Students seeking teacher certification for teaching Spanish in elementary or secondary school must complete the professional education courses required in the School of Education.

Financial Assistance

Various sources of financial assistance are available to graduate students at IUPUI. Applicants should contact the Office of Scholarships and Financial Aid, 103 Cavanaugh Hall, IUPUI, 425 University Boulevard, Indianapolis, IN 46202-5140, Tel. (317) 274-4162.

Study Abroad Programs

Indiana University administers or co-sponsors a variety of programs that permit students to live and study in a Spanish-speaking country as part of their normal degree programs. Students receive IU credit and grades for program participation and can apply most financial aid to program costs. These include an academic-year program in Madrid, Spain, and semester programs in the Spanish cities of Alicante, Madrid, and Seville, and in Santiago, Chile, and a spring semester program for business majors in Monterrey, Mexico. Six-week summer programs are offered in Cuernavaca, Mexico, for intermediate students; in Salamanca, Spain, for students who have completed two years of Spanish; and in Guanajuato, Mexico, for advanced students. In addition, IUPUI offers an exchange opportunity with the University of Costa Rica for a semester or year-long exchange (students receive transfer credits for the Costa Rica program). Graduate credit is available through the Salamanca program.

Students majoring in any discipline are encouraged to study abroad. All programs require applicants to have an overall B average. Some programs require as little as one semester's previous study of Spanish, while others are appropriate for students in advanced Spanish courses.

Students interested in study opportunities in Spanish-speaking countries should visit the Office of International Affairs, Union Building 203, IUPUI, (317) 274-7000 or the Department of Foreign Languages and Cultures office in CA405.

The Spanish Resource Center at IUPUI

The Spanish Resource Center is sponsored by the Embassy of Spain Education Office in order to assist and further Spanish education in the United States, primarily in central Indiana. It is open for use by professors, teachers, and students of Spanish, along with the general public. Materials and resources available to check out are books, films, magazines, slides, and cassettes. The Spanish program and the Spanish Resource Center also sponsor several activities throughout the academic year, such as a free conversation hour, a film series in Spanish, and an Immersion Day for teachers that focuses on the culture of Spanish-speaking countries. The center is located at Cavanaugh Hall 408 on the IUPUI campus, (317) 278-1210 or (317) 278-1211.

DELE Exams

IUPUI is an official testing site for the DELEs, Diplomas of Spanish as a Foreign Language, issued by Spain's Ministry of Education. They offer official accreditation of mastery of the Spanish language for citizens of countries in which Spanish is not the official language. The examinations are offered at three levels (intermediate, high intermediate, and advanced), and consist of five sections: reading comprehension, written expression, listening comprehension, grammar and vocabulary and oral expression. The diplomas are recognized by official institutions of Spanish-speaking countries, by corporations, chambers of commerce, and educational institutions in the United States. Applicants must provide proof of citizenship in a country in which Spanish is not the official language (anyone with a United States passport is eligible). Applicants for the advanced level must be sixteen years of age or older; there is no minimum age for the intermediate or the high intermediate levels. For more information, contact 274-0062, or manton@iupui.edu. General information on the exams and sample test formats and prices may be found at www.cervantes.es or cvc.cervantes.es/aula/dele.

Other Activities

Sigma Delta Pi A chapter of the national Spanish honorary society, Sigma Delta Pi, was established in 1990. Students meeting the qualification requirements may be eligible for induction into the IUPUI chapter, Sigma Epsilon.

Spanish Club The Spanish program sponsors a Spanish Club, open to all interested students. Various events of cultural and academic interest are presented during the academic year.

Undergraduate Courses

S117-S118-S119 Beginning Spanish I-II-III (3-3-4 cr.) Introductory language sequence of courses designed for students with no prior training in Spanish. Emphasis on developing basic speaking, writing, listening, and reading skills as well as awareness of Hispanic culture. Credit not given for S117-S118-S119 and S131-S132.

S131-S132 Intensive Beginning Spanish I-II (5-5 cr.) Intensive introductory language sequence of courses. Recommended for prospective majors and for students with prior training in Spanish or other Romance languages. Emphasis on developing basic speaking, writing, listening, and reading skills as well as awareness of Hispanic cultures. Credit not given for S117-S118-S119 and S131-S132.

S203 Second-Year Spanish I (4 cr.) P: 8-10 credit hours of college-level Spanish or placement by testing. A continuation of training in the four skills: listening, reading, speaking, and writing.

S204 Second-Year Spanish II (4 cr.) P: 10-14 credit hours of college-level Spanish or placement by testing. Continuation of S203.

S298 Second-Year Spanish (3 or 6 cr.) Non-native students may receive a maximum of 16 special credits by completing a 300-level course with a C or better (S298 plus 10 hours at 100 level). Native speakers are eligible for a maximum of 6 hours of "S" credit (S298) upon completion of S313 with a C or better.

S311 Spanish Grammar (3 cr.) P: S204 or equivalent. This course is designed to integrate the four basic language skills into a review of the major points of Spanish grammar. Course work will combine grammar exercises with brief controlled compositions based on reading assignments and class discussion in Spanish. Spanish exercises will be corrected and discussed in class.

S313 Writing Spanish (3 cr.) P: S204 or equivalent. Grammar review, composition, and themes in Spanish.

S315 Spanish in the Business World (3 cr.) P: S204 or equivalent. Introduction to the technical language of the business world with emphasis on problems of style, composition, and translation in the context of Hispanic mores.

S317 Spanish Conversation and Diction (3 cr.) P: S204 or equivalent. Intensive controlled conversation correlated with readings, reports, debates, and group discussions, with emphasis on vocabulary usage, word order, tense relationships, and linguistic devices. Class time is the same as for a 5 credit hour course. May be repeated once for credit.

S319 Spanish for Health Care Personnel (3cr.) P: S204 or equivalent. A course specifically designed for those interested in learning Spanish in the context of material related to health care systems. Emphasis placed on vocabulary necessary for communicative competence in the medical fields.

S320 Spanish Pronunciation and Diction (3 cr.) P: S204 or equivalent. Thorough study of Spanish phonetics and intonation patterns. Corrective drills.

Includes intensive class and laboratory work. Oral interpretation of texts.

S360 Introduction to Hispanic Literature (3 cr.) P: S204 or equivalent and S313. Using fiction, drama, and poetry from both Spain and Latin America, this course introduces strategies to increase reading comprehension and presents terms and concepts useful in developing the critical skills of literary analysis.

S363 Introduction to Hispanic Culture (3 cr.) P: S204 or equivalent. Introduction to the cultural history of Spanish-speaking countries with emphasis on its literary, artistic, social, economic, and political aspects.

S407 Survey of Spanish Literature I (3 cr.) P: S360 or equivalent. A historical survey that covers major authors, genres, periods, and movements from the Spanish Middle Ages through the Baroque period of the seventeenth century. Readings include prose works, poetry, and drama.

S408 Survey of Spanish Literature II (3 cr.) P: S360 or equivalent. A historical survey of Spanish literature that covers the main current of Spain's literary history in the eighteenth, nineteenth, and twentieth centuries. Readings in prose, poetry, and drama by Larra, Pérez Galdós, Unamuno, García Lorca, and other representative writers.

S411 Spanish Culture and Civilization (3 cr.) P: S204 or equivalent. A course to integrate historical, social, political, and cultural information about Spain.

S412 Latin American Culture and Civilization (3 cr.) P: S204 or equivalent. A course to integrate historical, social, political, and cultural information about Spanish America.

S419 Spanish for Law Enforcement (3 cr.) This course is designed to help students in the specialized vocabulary that law enforcement professionals need in the course of their daily work. It includes sight and written translation of legal documents, court records, and the language of the courtroom and courtroom procedures. Intensive classroom practice and language laboratory exercises focus on use of specialized vocabulary to help prepare students for communicative competence in this terminology. This course also provides students with information about how to become certified court interpreters, and reviews the federal standards for interpreters.

S421 Advanced Grammar and Composition (3 cr.) Selected grammar review and intensive practice in effective use of the written language.

S423 The Craft of Translation (3 cr.) P: S313 or consent of instructor. Basic introductory course in translation. The problems and techniques of Spanish/English and English/Spanish translation using a variety of texts and concentrating on such critical areas as stylistics, tone, rhythms, imagery, nuance, allusion, etc.

S426 Introduction to Spanish Linguistics (3 cr.) P: S320. This course presents general aspects of Spanish linguistics: traditional, descriptive, historical, and dialectal. It is conducted entirely in Spanish.

S428 Applied Spanish Linguistics (3 cr.) P: S320 or consent of instructor. General aspects of Spanish

phonology, morphology, syntax, and semantics as they bear on teaching.

S431-S432 Survey of Spanish Poetry I-II (3-3 cr.) P: S360 or equivalent. Spanish poetry from its beginnings to contemporary times. Works of medieval, Renaissance, romantic, and contemporary roots.

S445 Major Dramatists of the Golden Age I (3 cr.) P: S360 or equivalent. Lectures outlining the development of the theater during the Golden Age. Readings selected from the works of Lope de Vega, Tirso de Molina, Juan Ruiz de Alarcón, Calderón.

S450 Cervantes' *Don Quixote* I (3 cr.) P: S360 or equivalent. Intensive reading of *Don Quixote*, with account of the author's life and thought and discussions of the development of the novel to Cervantes' time.

S455 Modern Spanish Drama I (3 cr.) P: S360 or equivalent. Selected readings from the works of representative authors of the eighteenth, nineteenth, and twentieth centuries, with lectures on development of the Spanish theater.

S457 Modern Spanish Novel I (3 cr.) P: S360 or equivalent. Reading of representative nineteenth- and twentieth-century novels and study of development of the novel.

S461 Contemporary Spanish Literature I (3 cr.) P: S360 or equivalent. Selected twentieth-century novels, plays, and essays. Historical background and literary movements.

S470 Women and Hispanic Literature (3 cr.) P: S360 or equivalent. The Hispanic woman within her cultural context through literary texts. Topics such as women authors, characters, themes, and feminist criticism.

S471-S472 Spanish-American Literature I-II (3-3 cr.) P: S360 or equivalent. Introduction to Spanish-American literature.

S477 Twentieth-Century Spanish-American Prose Fiction (3 cr.) P: S360 or equivalent. Close readings of representative novelists and short story writers, including established authors (Borges, Asturias, Arreola, Carpentier) and promising young writers.

S491 Elementary Spanish for Graduate Students (3-4 cr.; 3 cr. graduate; 4 cr. undergraduate) Introduction to the structure of the language necessary for reading in graded texts of a general nature. Open with consent of the instructor to undergraduates who have already completed the language requirement for the B.A. in another language.

S493 Internship Program in Spanish (3 cr.) P: junior standing with consent. Students work in businesses, organizations, or institutions applying their skills in Spanish in order to gain awareness of the uses of Spanish in the workplace. They record and analyze their experiences through logs and meetings with the internship director and write a paper.

S494 Individual Readings in Hispanic Studies (1-3 cr.) Topic to be selected by the student with the consent of the department. May not be taken for graduate credit.

S495 Hispanic Colloquium (3 cr.) Topic to be selected by the department member offering the course. May be taken twice for credit as long as the topic is different.

S496 Foreign Study in Spanish (3-6 cr.) P: consent of chairperson. Planning of a research project during the year preceding the summer abroad. Time spent in research abroad must amount to at least one week for each credit hour granted. Research paper must be presented by the end of the semester following foreign study.

S498 Capstone Seminar in Spanish (3 cr.) A senior-level course for all Spanish majors that integrates students' undergraduate study. Students showcase academic progress through a portfolio, a reflective journal, discussions with the faculty capstone director, and a final presentation to students and faculty.

Courses in Literature in Translation

Literature-in-translation courses will be offered if the need for more Foreign Culture Option courses becomes evident.

S230 Cervantes' *Don Quixote* in Translation (3 cr.) Detailed textual analysis of Cervantes' masterpiece, with readings and class discussion on its relationship to the Renaissance and the development of the world novel.

S231 Spanish-American Fiction in Translation (3 cr.) Representative prose fiction of Spanish America. Background lectures on the evolution of the short story and novel. Readings and discussions will concentrate on the fiction of the twentieth century.

S240 Modern Spanish Literature in Translation (3 cr.) Readings from authors such as Unamuno, Cela, García Lorca, Jiménez, Pérez de Ayala, and Ortega y Gasset.

S241 Golden Age Literature in Translation (3 cr.) Masterpieces of Spanish literature of the sixteenth and seventeenth centuries. Representative authors will include: Lope de Vega, Cervantes, Garcilaso, Quevedo, Fray Luis de León, San Juan de la Cruz, and Góngora.

Graduate Courses

S507 Foreign Language Institute (3 cr.) Intensive interdepartmental course involving language laboratory and audiovisual equipment and techniques, lecture, assignments in contemporary civilization (in the foreign language), and discussion of classroom use of applied linguistics. Taught only in the summer. Intended primarily for teachers. May be repeated for a maximum of 6 credit hours.

S513 Introduction to Hispanic Sociolinguistics (3 cr.) P: S320, S426, or instructor's consent. This course examines the relationship between language and society in the Spanish-speaking world. It surveys a wide range of topics relevant to Spanish: language as communication, the sociology of language, and linguistic variation. The course is conducted entirely in Spanish.

S515 The Acquisition of Spanish as a Second Language (3 cr.) P: S426, S428, or instructor's consent. This course is an introduction to the acquisition of Spanish as a second language. We will

survey a selection of studies exploring topics that range from the development of second language (Spanish) grammars, to second language production and comprehension, input processing, and the acquisition of pragmatic and sociolinguistic competence.

S517 Methods of Teaching College Spanish (3 cr.) P: S428 or instructor's consent. This course on communicative language teaching takes as its point of departure the body of research on second language development. We extrapolate from this base principles and parameters to guide classroom instruction. We cover a full range of topics from grammar and input to spoken and written language.

S518 Studies in Latino and Spanish American Culture (3 cr.) Advanced study of cultural phenomena produced in Latin America and among U.S. Hispanics. The course focuses on belief systems, artistic production, laws, customs, and other socially determined behaviors. Topics such as colonization, popular culture, communication, art, religious syncretism, and native indigenous cultures will be explored.

S519 Practicum in the Teaching of Spanish (2 cr.) P: S517 or instructor's consent. Practical application of the teaching methodology explored in S517, Methods of Teaching College Spanish. Students will undertake teaching projects supervised by a graduate faculty member in Spanish and meet with their mentors to assess their teaching objectives, techniques, materials and outcomes.

S521 Teaching Spanish Grammar and Vocabulary (4 cr.) This course reviews the fundamental issues of Spanish grammar from the perspective of teaching the language to non-native speakers and analyzes concepts and methods for learning and teaching vocabulary. Teaching strategies will be discussed and classroom materials will be provided.

S522 Teaching the Four Language Skills (3 cr.) This course addresses the four language skills of listening, speaking, reading and writing as methodological issues in the teaching of Spanish to non-native speakers. Specific learning strategies will be discussed and classroom materials will be provided.

S523 Teaching Spanish Culture (3 cr.) This course offers an analysis of cultural themes of daily life in contemporary Spain and an overview of the historical trajectory of the nation. It also provides a complete panorama of the social, political and economic characteristics of contemporary, democratic Spain.

S524 Teaching Contemporary Spanish Literature and the Other Arts (3 cr.) This course introduces tendencies and authors of contemporary Spanish literature and focuses on the analysis of literary texts when used in Spanish classes for non-natives. It also provides a broad introduction to recent contributions in the fields of Spanish film, theater, painting, architecture, etc.

S525 Spanish Linguistics for Teachers (2 cr.) This course provides an overview of the evolution of Spanish from Latin so that Spanish teachers can better understand and explain numerous aspects of

contemporary Spanish to their students. It also provides an overview of geographical and social varieties of Spanish in the world.

S528 Translation Practice and Evaluation (3 cr.) A graduate course in the problems and techniques of Spanish/English and English/Spanish translation. Includes the practical aspects of translation from various texts (literary, technical, scientific, commercial, social) and evaluation of professional translations. Translation theory will be studied.

S680 Topics in Contemporary Spanish American Literature (3 cr.) Topics include poetry, drama, short story, novel and essay.

S685 M.A.T. Thesis (4 cr.) Students will identify a research theme and develop it under the guidance of a Director (IUPUI professor) and a Co-Director (University of Salamanca professor). The topic will be related to the teaching of Spanish language or to the teaching of an aspect of Hispanic culture. Minimum extension: 40 pages.

NOTE: All 400 level courses may be used for graduate credit, with the exception of S493, S494 and S498, which carry undergraduate credit only.

Additional Foreign Languages and Cultures Courses

Arabic

A117-A118-A119 Basic Arabic I-II-III (3-3-4 cr.) Introductory language course in modern standard Arabic as in contemporary literature, newspapers, and radio. Focus on grammar, reading, script, conversation, elementary composition, and culture.

A200-A250 Intermediate Arabic I-II (3-3 cr.) P: A131-A132. Grammar, reading, composition, conversation, and translation, using materials from classical, medieval, and modern literary Arabic.

Chinese

C117-C118-C119 Basic Chinese I-II-III (3-3-4 cr.) Introductory language course in Chinese with emphasis on comprehension and oral expression, grammar, reading, script, elementary composition, and culture.

C201-C202 Second-Year Chinese I-II (3-3 cr.) Both spoken and written aspects stressed.

C301-C302 Third-Year Chinese I-II (3-3 cr.) P: C201-C202. Intensive reading of modern Chinese writings. Course conducted in Chinese.

Italian

M117-M118-M119 Basic Italian I-II-III (3-3-4 cr.) Introductory language course in contemporary Italian. Focus on grammar, reading, conversation, elementary writing, and culture.

M200 Intermediate Italian (3 cr.) Intermediate study of contemporary Italian conversation, grammar, reading, and writing. Introduction to brief literary texts.

French

See "Foreign Languages and Cultures."

Geography

Chair Associate Professor Catherine Souch

Professor Frederick L. Bein

Associate Professors Timothy Brothers, Thomas Fedor, Catherine Souch

Assistant Professor Owen Dwyer, Jeffrey Wilson

Adjunct Professors Associate Professor James Baldwin, Assistant Professor Robert Beck, Associate Professor Greg Lindsey, Associate Professor John Ottensmann

Lecturer Nadine Martin

Academic Advising: Cavanaugh Hall 213, Phone: (317) 274-8877; fax: (317) 274-2347; e-mail: geogdept@iupui.edu. Department Web address: www.iupui.edu/~geogdept

Geography, like history, is a way of looking at the world. Whereas historians study variation through time, geographers study variation through space: how and why the earth's natural and human features vary from place to place. Underlying this spatial approach are such recurring themes as spatial diffusion of people, goods, and ideas; the significance of relative location in human interaction; the power of place in human conscience; and the interaction of physical and human processes to create characteristic landscapes. Geographers work at the intersection of social and natural sciences, using the concepts and methods of both to examine human-environmental relationships in their full complexity. This integrative approach is a hallmark of geography and one of its main attractions. Geographers can be found in a great variety of positions, often not specifically identified as geographic: environmental management, urban planning, conservation, recreation and tourism, transportation planning, international affairs, and many others.

Major in Geography

The Bachelor of Arts degree in geography provides a general introduction to the philosophy, content, and methods of the discipline. The department is also developing an applied emphasis in environmental analysis, including courses in field methods, remote sensing, cartography, and geographic information systems. Students can thus select a broad academic program or emphasize acquisition of job-related skills.

Students must complete the School of Liberal Arts graduation requirements and a minimum of 30 credit hours in geography, as detailed below. The core courses are intended to provide a foundation for more specialized upper-division courses, and thus should be taken at the beginning of the major program. Geography G309 is normally offered every fall semester and G311 every spring.

Four core courses:

- G107 Physical Systems of the Environment (3 cr.)
- G110 Introduction to Human Geography (3 cr.)
- G309 Frontiers in Geographic Thought (3 cr.)
- G311 Introduction to Research Methods in Geography (3 cr.)

Two Geographic Techniques courses:

- G300 The World of Maps (3 cr.)
- G336 Introduction to Remote Sensing and Air Photo Interpretation (3 cr.)

- G337 Cartography and Graphics (3 cr.)
- G338 Introduction to Geographic Information Systems (3 cr.)
- G436 Advanced Remote Sensing (3 cr.)
- G438 Advanced Geographic Information Systems (3 cr.)
- G439 Seminar in Geographic Information Science (3 cr.)
- G465 Field Methods in Physical Geography (6 cr.)
- G488 Applied Spatial Statistics (3 cr.)

A total of three courses in environmental and human geography, to include at least one course from each area:

Environmental Geography:

- G303 Weather and Climate (3 cr.)
- G305 Environmental Change (3 cr.)
- G307 Biogeography (3 cr.)
- G310 Human Impact on Environment (3 cr.)
- G315 Environmental Conservation (3 cr.)
- G390 Topics: Environmental Focus (3 cr.)
- G404 Soils Geography (3 cr.)
- G446 Cultural Biogeography (3 cr.)
- G475 Climate Change (3 cr.)

Human Geography:

- G314 Urban Geography (3 cr.)
- G331 Economic Geography (3 cr.)
- G312 Gender and Geography (3 cr.)
- G355 Political Geography (3 cr.)
- G390 Topics: Human Geography Focus (3 cr.)
- G410 Medical Geography (3 cr.)

One of the following Regional Geography courses:

- G321 Geography of Europe (3 cr.)
- G322 Geography of Russia and Adjacent Lands (3 cr.)
- G323 Geography of Latin America (3 cr.)
- G326 Geography of North America (3 cr.)
- G327 Geography of Indiana (3 cr.)
- G328 Rural Landscapes of North America (3 cr.)
- G330 North American House Types (3 cr.)
- G390 Topics: Variable Regional Focus (3 cr.)
- G421 Environments of Tropical Lands (3 cr.)

Minor in Geography

The minor requires 15 credit hours in geography. All minors must take G107 and either G110 Introduction to Human Geography or G130 World Geography. The remaining 9 credit hours may be selected from any geography course at the 200 level or above.

Lower-Division Courses

G107 Physical Systems of the Environment

(3 cr.) Physical environment as the home of humans, emphasizing the distribution and interaction of environmental variables (landforms, vegetation, soils, weather, and climate).

G108 Physical Systems of the Environment:

Laboratory (2 cr.) Laboratory session to complement G107 Physical Systems of the Environment. Practical and applied aspects of meteorology, climatology, vegetation, soils, and landforms. This laboratory session is optional for students enrolling in G107. G107 must be taken prior to or concurrently with G108.

G110 Introduction to Human Geography (3 cr.)

An introduction to the principles, concepts, and methods of analysis used in the study of human geographic systems. Examines geographic

perspectives on contemporary world problems such as population growth, globalization of the economy, and human-environmental relations.

G111 Hurricanes (1 cr.) Introduction to processes involved in the initiation and development of hurricanes, forecasting and modeling tools used to predict their effects, and impacts on the natural environment and humans.

G112 Thunderstorms and Tornadoes (1 cr.)

Introduction to the processes involved in the initiation and development of thunderstorms and tornadoes, forecasting and modeling tools to predict their spatial pattern and effects, and impacts on the natural environment and humans.

G113 The Ozone "Hole" (1 cr.) Introduction to the role and significance of the stratospheric ozone layer and the nature and extent of its depletion. Attention will focus on the development of our understanding, human intervention, and major points of controversy.

G114 The Greenhouse Effect and Global Warming (1 cr.)

Introduction to the greenhouse effect and global carbon cycle. Attention will be directed to how, when, and where humans have altered this cycle and the implications for future climates. Methods for monitoring climate change will be studied and areas of greatest uncertainty identified. Particular attention will be directed to the spatial pattern of projected effects produced by global climate models.

G123 Soil Survey (1 cr.) An introduction to soil geography. Soil development processes, USDA soil survey map interpretation, physical and mechanical soil properties, and land use analysis.

G130 World Geography (3 cr.) An analysis of the existing and emerging geographic patterns in the world and of the processes and trends producing such patterns. An examination of the global scale of human activities and interaction with the environment and the linkages tying the various regions of the world into a single, global system.

G185 Global Environmental Change (3 cr.) The scientific basis behind natural and human-induced global environmental changes. Geological perspective of the formation of the earth. Human activities influencing the natural system, including population, deforestation, water usage, acid rain, ozone depletion, smog, and global warming. Subsequent human reactions. Co-taught in Departments of Geography and Geology.

Upper-Division Courses

Upper-division courses generally presuppose that students have at least introductory course preparation in human and environmental geography (G107 and G110).

G300 The World of Maps (3 cr.) Acquaints students with the practical use and evaluation of various types of maps and charts and introduces the basic analysis and interpretation of this medium of communication. Attention to the history of maps; types, compilation, and presentation of information on maps; mapping the earth; and cognitive and thematic mapping.

G303 Weather and Climate (3 cr.) Systematic study of atmospheric processes and interrelationships, with a focus on understanding the physical basis of weather and climate. Emphasis on components of radiation and energy balances, atmospheric circulation, global weather systems, human effects on climate, and climate change.

G305 Environmental Change: Nature and Impact (3 cr.) An integrated systems approach to examining the forcing, systems response, and impacts of environmental change. Key scientific areas: climate variability, sensitivity, and prediction; environmental chemistry; and ecosystem and anthropogenic response.

G307 Biogeography: The Distribution of Life (3 cr.) A survey of the present and past distributions of the world's plants and animals, emphasizing ecological explanation of species distributions. Topics include evolution and distribution of major plant and animal groups, world vegetation, plant and animal domestication, introduction of plant and animal pests, destruction of natural communities, and extinction.

G309 Frontiers in Geographic Thought (3 cr.) Provides a survey of the development of philosophical frameworks and theories used in physical and human geography.

G310 Human Impact on Environment (3 cr.) A systematic examination of how people have altered patterns of climate, hydrology, land forms, soils, and biota. Course emphasizes that understanding human impacts requires knowledge of both the sociocultural forces that drive human activity and the natural processes that determine environmental patterns.

G311 Introduction to Research Methods in Geography (3 cr.) Introduction to geographic research questions and methodologies. Focus on special characteristics of geographic problems in the realms of both physical and human geography. Study of scientific versus nonscientific methods, the nature of geographic data, methods of data analysis, interpretation, and presentation.

G312 Gender and Geography (3 cr.) Covers major themes of human geography with a focus on women and gender relations. The spatial variations in the economic and social situations of women both globally and within the North American context will be documented. A survey of gender differences in urban areas, in access to facilities, in political participation, and in environmental perception will be provided.

G314 Urban Geography (3 cr.) Study and interpretation of urban spatial structures, design, policies, and problems with an emphasis on the geographic perspective. Topics include urban housing markets, racial segregation, homelessness, and urban crime.

G315 Environmental Conservation (3 cr.) Conservation of natural resources including soil, water, wildlife, and forests as interrelated components of environmental quality.

G321 Geography of Europe (3 cr.) Geographical analysis of the physical features of the European environment and the spatial patterns and interrelationships of the cultural, economic, and

political landscapes. Emphasis placed on human impact on the environment through long-term occupation.

G322 Geography of Russia and Adjacent Lands (3 cr.) Spatial analysis of the economic, social, and political structure of Russia and the other new countries of the former Soviet Union. Examination of the physical environment and its potential for human utilization. Special emphasis on problems regarding the stability of these new states, current efforts at political and economic reform, and environmental pollution.

G323 Geography of Latin America (3 cr.) National and regional variations in terrain, climate, natural resources, and economic and social life in Mexico, Central America, the West Indies, and South America.

G326 Geography of North America (3 cr.) Continental and regional variations in terrain, climate, and economic and social life of the United States and Canada, with emphasis on geographical principles, sources of data, and techniques of investigation.

G327 Geography of Indiana (3 cr.) A geographical analysis of the state of Indiana. Emphasis placed on the interrelationship of the state's physical and human geography.

G328 Rural Landscapes of North America (3 cr.) Rural geography of the United States and Canada, focusing on rural settlements, culture, economic activities, and land subdivision. The spatial impacts of economic and technological changes on land use are considered through an examination of relict structures and urban expansion into rural areas.

G330: North American House Types (3 cr.) Houses are a visible semi-permanent record of human values, political ideas, historical settlement, and community development. This record is reflected in the types of houses built during a particular time period, by certain groups of people, or in a certain area of the country. This course examines house types for the purpose of identifying and analyzing geographic patterns that occur in North America.

G331 Economic Geography (3 cr.) An examination of the spatial dynamics and locational patterns of economic activities, behavior, and systems. The study of the spatial organization of resource utilization, agricultural production, manufacturing, business, transportation, and trade.

G336 Introduction to Remote Sensing and Air Photo Interpretation (3 cr.) Nature and interpretation of remotely sensed data collected from field, airborne, and space-borne sensors. Data from the visible, infrared, and microwave portions of the electromagnetic spectrum are discussed and analyzed from a geographic applications perspective. Visual, photogrammetric, digital image processing, and GIS interpretation approaches are presented. Lecture and laboratory.

G337 Computer Cartography and Graphics (3 cr.) Compilation, design, production, and evaluation of maps and related graphic materials. Includes cartometric procedures, symbolization, color use guidelines, map typography, photographic

manipulations, computer animation, and geographic visualization techniques. Hardcopy and internet-based outputs. Lecture and laboratory.

G338 Introduction to Geographic Information Systems (3 cr.) Overview of the principles and practices of Geographic Information Systems (GIS). The course will deal with issues of spatial data models, database design, introductory and intermediate GIS operations, and case studies of real-world GIS applications. Laboratory exercises will provide significant hands-on experience. Lecture and laboratory.

G345 Field Study in Geography (3 cr.) P: 12 credit hours in geography and consent of instructor. Faculty-supervised fieldwork in selected areas of geography. May be repeated up to a maximum of 6 credit hours.

G355 Political Geography (3 cr.) An examination of the spatial organization of political systems and the interaction of geographical area and political processes. Emphasis on the geographical characteristics of states and the geographical dimensions of international relations.

G390 Topics in Geography (1-3 cr.) An examination of selected problems and issues in geography or from a geographic perspective. Topics vary from semester to semester. Recent offerings include the Caribbean, Wine, and Italy.

G404 Soils Geography (3 cr.) Soil genesis, morphology, and classification; soil's physical, chemical, mechanical, and biological properties. Soil maps and related data in land use analysis and the planning process.

G410 Medical Geography (3 cr.) An examination of the spatial patterns of human disease and related social and environmental factors. An analysis of inequalities in the access to and use of health care.

G421 Environments of Tropical Lands (3 cr.) A geographical analysis concerned with developing countries and focusing on issues related to development and the environmental consequences. Concern for the natural environment is expressed with regard to how it is affected by population pressures, economic advancement, and urbanization. An understanding of Third World people and their cultures is presented.

G436 Advanced Remote Sensing: Digital Image Processing (3 cr.) P: G336 or consent of instructor. Advanced remote sensing theory and digital image processing techniques with an emphasis on environmental applications. Hands-on computer exercises provide significant experience in introductory digital image processing for extraction of qualitative and quantitative information about Earth's terrestrial environments. Lecture and laboratory.

G438 Advanced Geographic Information Systems (3 cr.) P: G338 or consent of instructor. Intermediate and advanced topics in geographic information science and spatial analysis techniques using GIS software. This advanced course is for upper-division undergraduates and graduates who seek a greater understanding of this rapidly developing field and to learn how to construct, manage, and analyze

their own GIS data and models. Lecture and laboratory.

G439 Seminar in Geographic Information Science (3 cr.) P: G336, G338, and G436 or G438. Applications of geographic information science principles in the collection and analysis of spatial data. Integration of GIS, remote sensing, and/or GPS technologies. Review of current literature on techniques, theory, technology, and applications with an emphasis on environmental issues. Discussions, laboratory, and research project.

G446 Cultural Biogeography (3 cr.) R: G307. Examines human alterations of natural plant and animal distributions. Topics include deforestation, extinction, plant and animal domestication, and introduction of alien organisms. Seminar format.

G450 Undergraduate Readings and Research in Geography (1-3 cr.) Research in selected problems: papers are ordinarily required.

G460 Geography Internship (1-6 cr.) P: 12 credit hours of geography and departmental approval. Supervised field experience in geography, normally in conjunction with approved work at a government agency or private firm. Requires 40 hours of work per 1 hour of credit.

G465 Field Methods in Physical Geography (6 cr.) P: G311 or consent of instructor. A survey of the methods and equipment basic to field research in physical geography, including climatology, hydrology, soil geography, and biogeography. Normally taught jointly by two instructors. May include a one-week field trip.

G475 Climate Change (3 cr.) R: G303. Advanced course on the evidence for and theories of climate change over a range of time scales, focusing on the period before the instrumental record.

G488 Applied Spatial Statistics (3 cr.) Extension of traditional statistical analysis to two-dimensional Earth space. Examination of centers, dispersion, nearest neighbor analysis, quadrat methods, and contiguity analysis. Problems of analyzing areally aggregated spatially distributed data.

G491 Capstone Experience in Geography (1 cr.) An independent project for senior-level students, applying geographic theory and techniques to a topic of geographic interest beyond the limits of the regular curriculum. Open to majors or nonmajors with appropriate preparation, including G309 and G311. May be taken alone or concurrently with another course.

Graduate Courses

G535 Introduction to Remote Sensing and Air Photo Interpretation (3 cr.) Nature and interpretation of remotely sensed data collected from field, airborne, and space-borne sensors. Data from the visible, infrared, and microwave portions of the electromagnetic spectrum are discussed and analyzed from a geographic applications perspective. Visual, photogrammetric, digital image processing, and GIS interpretation approaches are presented. Lecture and laboratory.

G536 Advanced Remote Sensing: Digital Image Processing (3 cr.) P: G535 or consent of instructor. Advanced remote sensing theory and digital image processing techniques with an emphasis on environmental applications. Hands-on computer exercises provide significant experience in introductory digital image processing for extraction of qualitative and quantitative information about the Earth's terrestrial environments. Lecture and laboratory.

G537 Computer Cartography and Graphics (3 cr.) Compilation, design, production, and evaluation of maps and related graphic materials. Includes cartometric procedures, symbolization, color use guidelines, map typography, photographic manipulations, computer animation, and geographic visualization techniques. Hardcopy and Internet-based outputs. Lecture and laboratory.

G538 Introduction to Geographic Information Systems (3 cr.) Overview of the principles and practices of Geographic Information Systems (GIS). The course will deal with issues of spatial data models, database design, introductory and intermediate GIS operations, and case studies of real-world GIS applications. Laboratory exercises will provide significant hands-on experience. Lecture and laboratory.

G539 Advanced Geographic Information Systems (3 cr.) P: G538 or consent of instructor. Intermediate and advanced topics in geographic information science and spatial analysis techniques using GIS software. This advanced course is for upper-division undergraduates and graduates who seek a greater understanding of this rapidly developing field and to learn how to construct, manage, and analyze their own GIS data and models. Lecture and laboratory.

G602 Graduate Seminar in Physical Geography (3 cr.) P: consent of instructor. Distribution, morphology, and human significance of selected phenomena of the physical environment.

G639 Seminar in Geographic Information Science (3 cr.) P: G535, G538, and G536 or G539. Applications of geographic information science principles in the collection and analysis of spatial data. Integration of GIS, remote sensing, and/or GPS technologies. Review of current literature on techniques, theory, technology, and applications with an emphasis on environmental issues. Discussions, laboratory, and research project.

G817 Seminar in Regional Geography (3 cr.) P: consent of instructor. Intensive study of an area well known to the staff member in charge.

G830 Readings in Geography (12 cr. max.) P: advanced course in geography or closely related fields. Supervised readings on selected topics.

History

Chair Associate Professor Philip V. Scarpino

Professors David J. Bodenhamer, Bernard Friedman (Emeritus), Ralph Gray (Emeritus), Miriam Z. Langsam, John R. McKivigan, William H. Schneider, Peter J. Sehlinger (Emeritus), Mary Seldon (Emerita), Scott J. Seregny, Jan Shipps (Emerita)

Associate Professors Robert G. Barrows, Kenneth E. Cutler, Wietse de Boer, Sabine Jessner (Emerita), Justin Libby, Monroe Little Jr., Elizabeth Brand Monroe, Berthold Riesterer (Emeritus), Kevin C. Robbins, Philip V. Scarpino, Marianne S. Wokeck, Xin Zhang

Assistant Professors Annie Gilbert Coleman, Sheila M. Cooper (Emerita), Kevin Cramer, Didier Gondola, Nancy Marie Robertson, Michael Snodgrass

Adjunct Professors Peter T. Harstad; Elizabeth Kryder-Reid, *Anthropology (Museum Studies)*; David Vanderstel, *POLIS Center and National Council on Public History*

Academic Advising Cavanaugh Hall 504M, (317) 274-3811

The Department of History offers students the opportunity to better understand the human social condition through the systematic study of the human past. A variety of courses is offered dealing with the history of the United States, Europe, Latin America, and some non-Western areas. The history major not only provides opportunities to serve the avocational interest of the liberal arts student but also provides a foundation for continued work at the graduate level. Courses in history serve the student admirably in fulfilling the tradition of a liberal education. They also provide a solid basis for professional training in such fields as law, business, environmental affairs, historic preservation, public administration, and government.

Undergraduate Major in History

Programs leading to the major in history should be carefully planned; department advisors are available, and each faculty member in the department can assist in answering student queries. Before submitting their requests for a senior audit (after 86 accumulated credit hours) to the recorder in the Office of the Dean of Student Affairs (CA 401), students must consult with one of the faculty advisors in the Department of History.

Requirements

Thirty-three credit hours of courses must be completed with a minimum grade of C in each course. Nine of the 33 credit hours of required courses must be taken in residence on the Indianapolis campus during two consecutive semesters (but not two consecutive summer sessions). Two semesters of History H108, H109, H113, H114, (but not H109-H114) must be completed to satisfy School of Liberal Arts distribution requirements, and are consequently omitted from the following department requirements: 6 credit hours: H105 and H106, United States History I and II

24 credit hours: Concentration and subconcentration courses (all courses here must be 200 level or higher). Select any one of the following:

1. United States History Concentration
12 credit hours U.S. History (A-prefix courses)

6 credit hours European History (B-C-D-prefix courses)

6 credit hours Non-U.S.—Non-European History (E-F-G-prefix courses) (Note: H-prefix courses are special topics, and their application to categories must be approved by advisors.)

2. European History Concentration
12 credit hours European History
6 credit hours U.S. History
6 credit hours Non-U.S.—Non-European History
3. Non-U.S.—Non-European History Concentration
12 credit hours Non-U.S.—Non-European History
6 credit hours U.S. History
6 credit hours European History
4. Thematic concentration
Thematic concentrations require 12 credit hours of courses in such fields as urban, family, science/technology/medical history, and two 6 credit hour support areas as specified in the theme description. Consult history advisors and the department office for lists of thematic concentrations currently available to majors.
- 3 credit hours: J495 Proseminar for History Majors
Seminar topics vary from semester to semester. Majors should plan to take the seminar during their senior year and sign up for a section that has the same focus as their concentration area.

Minor in History

Requirements

Fifteen credit hours of courses in history above the 200 level (6 credit hours completed at IUPUI), with a minimum grade of C in each course, is required. The course work must be distributed as follows:

- 9 credit hours in either U.S. History (A-prefix courses), European History (B-C-D-prefix courses), or Non-U.S.—Non-European History (E-F-G-prefix courses). H-prefix courses are special topics, and their application to the above categories must be determined individually.
- 3 credit hours in the second of the areas not selected above.
- 3 credit hours in the third of the areas not selected above.

Secondary History Teachers

The student who seeks to teach history at the secondary level may (1) major in history and obtain the necessary certification in addition, or (2) major in social studies education through the School of Education. In either instance, the student must arrange with the School of Education for a complete program; in the first instance, history majors consult history department counselors about the major and School of Education counselors concerning certification.

History H108 Perspectives on the World to 1800 and History H109 Perspectives on the World since 1800 are recommended for students seeking state certification in social studies.

Master of Arts Degree

Admission

To be admitted to the Master of Arts degree program, students must have (1) a bachelor's degree from an accredited college or university, with a minimum overall undergraduate grade point average of

3.0 (B) and a minimum grade point average of 3.0 (B) in the student's undergraduate major (an undergraduate major in history is not required, but applicants without such a background may be required to take additional course work in history at the undergraduate level as a condition for acceptance into the program); (2) an appropriate level of achievement on the Graduate Record Examination (GRE) General Test; (3) three letters of recommendation; and (4) two years of foreign language as an undergraduate with appropriate level of achievement.

Grades

No grade below B– (2.7) in history courses will be counted toward this degree.

Course Requirements

Students pursuing any one of the three concentration areas must take H500 or H501. Those electing United States history must take at least one graduate colloquium and one graduate seminar in United States history and at least one course in non-United States history. Students electing European history must take a graduate colloquium and seminar in that area and at least one course outside their concentration. With the consent of their faculty advisor, students may take as many as 6 credits outside the Department of History. Six credits will be granted upon successful completion of the required master's thesis. A total of 30 credit hours is required for students concentrating in United States and in European history.

Students choosing public history as their area of concentration must take H500 or H501, H542, a colloquium and seminar in United States history, and do an internship. Four credits will be granted upon satisfactory completion of the internship project. Public history students must also take at least one course outside United States history. With the consent of their faculty advisor, they may take as many as 6 credits outside the Department of History. A minimum of 36 credit hours is required for students concentrating in public history.

Foreign Language Requirement

There are no foreign language requirements for the degree. However, if a student has not met the foreign language admission requirement, that deficiency must be removed before the thesis defense. Students planning to go on for the Ph.D. are urged to validate their reading proficiency in a foreign language according to University Graduate School standards.

Combined Master of Library Science and Master of Arts in History

Study for these two degrees can be combined for a total of 50 credit hours rather than the 66 credit hours required for the two degrees taken separately. Students take 20 credit hours in history, which must include one graduate seminar and one graduate colloquium. No thesis is required for students earning an M.A. degree in history who are also earning a master's degree in library science under this dual degree program. However, they must satisfy the foreign language proficiency requirement as spelled out in the University Graduate School Bulletin. No area of concentration is required, but students wishing to focus on public history for the M.A. in history must also include History H542 among the required 20

credit hours of history course work. Such students may, if they wish, do a public history internship and count a maximum of 2 credit hours of History H543 toward the degree. (Students may enroll in H543 only after having taken or while taking H542).

The remaining 30 credit hours of library science include SLIS L501, L507, L520, L524, L528, L586 or HIST H547, L596, L625, plus 6 credit hours of electives in library science. Admission to each of the two master's programs is approved separately on the same basis as for other applicants not in the combined program.

Combined Master of Arts in History and Philanthropic Studies

The dual M.A. in history and philanthropic studies creates a unique opportunity to pursue critical inquiry into the historical, cultural, philosophical, and economic implications of voluntary action for the public good. Historians routinely study the role of nonprofit organizations, self-help groups, and philanthropic institutions. This dual-degree program offers an interdisciplinary focus on the past, present, and future. This degree will be attractive to students wishing to pursue: (1) careers that demand the skills and talents developed by cross-training in history and philanthropy; or (2) doctoral programs that encourage new and creative approaches to the historical study of philanthropy, broadly defined.

Admission requirements for the dual-degree program are identical to those for each program separately. A separate application must be made to each of the programs. Prospective students are expected to take responsibility for learning about and meeting the differing admission requirements and deadlines of each department. Students must make plans early with advisors in both programs to identify common courses and a thesis topic.

Study for these two degrees can be combined for a total of 51 credit hours (U.S. or European history concentrations) or 54 credit hours (public history) rather than the 66 or 72 credit hours that would be required if the two degrees were taken separately. For all concentrations, the required 700-level seminar for the M.A. in history may be selected as an elective to meet the philanthropic studies requirement for one of two theoretical electives. The required philanthropic studies course HIST H509 History of Philanthropy in the West may be taken to meet the history requirement for a history elective. Required course PHIL P542 Ethics and Values of Philanthropy, or PHST P512 Human and Financial Resources for Philanthropy, may be taken to meet 3 credits of the 6 credits of outside electives that may be taken in the history program. For public history students, HIST H543 Practicum meets the requirement for PHST P590 Internship for the philanthropic studies program. A common thesis meets the requirements of both departments.

Undergraduate Courses

History courses numbered 200 or above are usually taken by students with a background such as that provided in the 100 level courses; however, students who are mature and who have a good background in history may enroll in 200 to 400 level courses as their first courses in history. *Note:* There are several 300-level classes offered at Bloomington that have the

same content as 400-level classes offered at IUPUI. In such cases, both classes may not be taken for credit. See individual course descriptions for further information.

H105-H106 American History I-II (3-3 cr.)

I. Colonial period, Revolution, Confederation and Constitution, national period to 1865. II. 1865 to present. Political history forms framework, with economic, social, cultural, and intellectual history interwoven. Introduction to historical literature, source material, and criticism.

H108 Perspectives on the World to 1800 (3 cr.)

Emergence of civilizations in the Near East, Sub-Saharan Africa, pre-Columbian America. Role of revolutions, i.e., geographic, scientific, industrial, social, and political (American and French) in establishment of European hegemony in Asia and the Western Hemisphere.

H109 Perspectives on the World since 1800 (3 cr.)

Rise and fall of European imperial rule in Asia, the Middle East, and Africa. Special focus on impact of World War I, Chinese, Mexican, Russian revolutions. Independence movement in India, World War II, Cold War, new nations in Asia and Africa, struggle for solidarity in Latin America.

H113-H114 History of Western Civilization I-II (3-3 cr.)

I. Rise and fall of ancient civilizations; barbarian invasions; rise, flowering, and disruption of medieval church; feudalism, national monarchies. II. Rise of middle class; parliamentary institutions, liberalism, political democracy; industrial revolution, capitalism, and socialist movements; nationalism, imperialism, international rivalries, world wars.

H117 Introduction to Historical Studies (3 cr.)

An "assignment-intensive" course aimed at developing critical thinking skills by stimulating an awareness of history and its uses. How history is documented, evaluated, and written is considered. Students examine historical sources, study historical methods, analyze historical writings, and confront the question of objectivity through experimenting with history writing.

H217 The Nature of History (3 cr.)

An introductory examination of what history is, types of historical interpretation, common problems in history, and the uses of history.

H220 American Military History (3 cr.)

From settlement of colonies to present. European background, colonial militia. Principal foreign wars and their strategic objectives. Technological changes and effect of military on American society. Army is emphasized with some attention to other armed forces.

H221 Studies in African, Asian, or Latin

American History (3 cr.) Study and analysis of selected themes, topics, or problems in the history of Africa, Asia, or Latin America. The course will emphasize general and/or broad themes or topics; the themes or topics will vary from one semester to another. A student may register for only two courses with this number.

A301-A302 Colonial and Revolutionary America

I-II (3-3 cr.) European background of American history; discovery and exploration of New World by

Spain, France, and England. Colonization: motives, causes, types. Social and intellectual developments in English colonies in the seventeenth and eighteenth centuries. Birth of Republic, 1763-89.

A303-A304 United States, 1789-1865 I-II

(3-3 cr.) Political, economic, and social development of United States from Washington's presidency through Civil War. Growth of political, religious, educational, and other social institutions, and contributions of Hamilton, Jefferson, Jackson, Webster, Marshall, Lincoln. Agriculture, manufacturing, commerce, labor.

A313 Origins of Modern America, 1865-1917

(3 cr.) Social, economic, cultural, and political ways in which Americans accommodated and resisted changes introduced by large-scale industrialization. Populism and progressivism receive special attention.

A314 United States History, 1917-1945 (3 cr.)

Political, demographic, economic, and intellectual transformations of 1917-1945; World War I, the twenties, the Great Depression, New Deal, World War II.

A315 United States History since World War II

(3 cr.) Political, demographic, economic, and intellectual transformations of 1945-present: Cold War, problems of contemporary America.

A317 American Social History, 1865 to Present

(3 cr.) Development of modern American intellectual and social patterns since the Civil War. Social thought, literature, science, the arts, religion, morals, education.

A321-A322 History of American Thought I-II

(3-3 cr.) Ideas that have influenced American history. I. Image of New World to challenge of Jacksonian democracy. II. Transcendentalism to New Conservatism. Term papers and reports.

A325-A326 American Constitutional History I-II

(3-3 cr.) I: 1607-1865. II: 1865-present. Changing constitutional system from seventeenth-century colonies to contemporary nations. Structure of government: federalism, division of powers, political institutions. Relationship of government to society and economy. Civil liberties and democracy. Constitutional law and politics.

A337-A338 American Frontier I-II (3-3 cr.)

I. Spanish penetration into Greater Southwest; developments in Louisiana Territory and Oregon Country prior to 1850. II. Economic, political, and social developments in trans-Mississippi West, 1850 to present.

A345-A346 American Diplomatic History I-II

(3-3 cr.) I. American diplomacy from 1775 to 1823; diplomacy of American continental expansion to 1898. II. America as a world power. Involvement in Far Eastern affairs after 1898, diplomacy of World Wars I and II, developments to present.

A347 American Urban History (3 cr.)

Evolution of cities and urban life in the United States from colonial times to the present. Rise of cities (New York, Chicago, Indianapolis, Los Angeles, Miami, and others). Creation of modern urban districts (ghettos, suburbia), city planning, political and economic power structures, ethnic and race relations, law and order (crime, police, prisons).

A348 Civil War and Reconstruction (3 cr.) The era of the Civil War and its aftermath. Military, political, economic, and social aspects of the coming of the war, the war years, and the “reconstruction” era following the conflict.

A352 History of Latinos in the United States (3 cr.) Examines twentieth century history of immigration to the United States from Mexico, Puerto Rico, Cuba, and Central America. Compares causes of immigration and contrasts experiences of Latino immigrants in the United States.

A355-356 African-American History I-II (3-3 cr.) I. History of Africans in the United States from the colonial era to the Emancipation Proclamation. II. History of African Americans from the era of the Civil War to the present.

A363 Survey of Indiana History (3 cr.) Examination of Indiana history that focuses on significant persons, topics, and events from the earliest exploration and settlement of the state to the present day.

A364 History of Black Americans (3 cr.) A survey of black life in America: the Atlantic slave trade, slavery, Afro-American culture, racism, Civil War and Reconstruction, peonage, segregation, northern migration, urban ghettos, discrimination, Harlem Renaissance, black nationalism, civil rights, black revolt, contemporary setting.

A371-A372 History of Indiana I-II (3-3 cr.) I: The course deals with the development of a midwestern state, with emphasis on the French and British periods, the West in the American Revolution, the transition from territory to state, political, economic, and cultural patterns, and the sectional crisis. II: The period since 1865, tracing the development of a modern industrial commonwealth—agriculture, industry, politics, society, education, and the arts.

A390 Representative Americans (3 cr.) Explorations of the lives and works of selected American men and women for the purpose of better understanding the ideological and social forces at work in American history. The course will serve as both an introduction to the biographical literature of American history and as an exercise in the relevance of biography to history.

A402 Readings in American Environmental History (3 cr.) The roots of modern attitudes and actions toward the environment, focusing on major works in American environmental history and its European antecedents.

A410 American Environmental History (3 cr.) An examination of the environmental context for American history by analyzing the diverse and changing interaction between Americans and the environment in which they have lived.

A421 Topics in United States History (3 cr.) Intensive study and analysis of selected historical issues and/or problems in United States history. Topics will vary by semester.

B309-B310 Britain I-II (3-3 cr.) I: Britain before 1688. Development of Britain and its institution from Roman times to the Glorious Revolution, with special

emphasis on political and constitutional change. II: Britain since 1688. Examines important modern political, economic, social, and cultural developments including industrialization and imperialism and the emergence of ideologies like liberalism and socialism.

B341 History of Spain and Portugal (3 cr.) The Iberian, Roman, and Moorish backgrounds, with emphasis on the medieval Christian thought and institutions of the peninsula during the Reconquest; the political and cultural unity of Spain and of Portugal from the Renaissance through the Enlightenment; the nineteenth- and twentieth-century attempts to achieve political stability and economic progress.

B351 Barbarian Europe 200 1000 (3 cr.) The collapse of Roman authority in the West; the Germanic monarchies; the growth of the Western church and the development of German, Greek, and Moslem empires; the Viking invasions; feudalism and manorialism.

B352 The Age of Chivalry 1000-1500 (3 cr.) The revival of urban life in the West; the Crusading movement and the development of feudal states; the struggle between church and state and the decay of feudal institutions.

B353 The Renaissance (3 cr.) Italian Renaissance as a political and cultural phase in the history of Western civilization. Its roots in antiquity and the Middle Ages; its characteristic expression in literature, art, learning, social transformation, manners, and customs. Expansion of Renaissance into France, Germany, and England.

B354 The Reformation (3 cr.) Economic, political, social, and religious background of Protestant Reformation; Lutheran, Reformed, Anglican, and Anabaptist movements, with reference to their political and theological trends; Catholic Reformation.

B355 Europe: Louis XIV to French Revolution (3 cr.) Absolutism to enlightened despotism; the European state and its authority in fiscal, judicial, and military affairs; sources, content, diffusion of the Enlightenment; agriculture, commerce, and industry in preindustrial economies; Old Regime France.

B356 French Revolution and Napoleon (3 cr.) P: H114 or consent of instructor. Crisis of Old Regime; middle-class and popular revolt; from constitutional monarchy to Jacobin commonwealth; the terror and revolutionary government; expansion of revolution in Europe; rise and fall of Napoleonic Empire.

B357 Modern France (3 cr.) A social, political, and cultural survey of France in the nineteenth and twentieth centuries.

B359-B360 Europe—Napoleon to First World War I-II (3-3 cr.) I: Post-Napoleonic reaction; revitalized revolutionary forces, 1848; reform in England and Russia; bourgeois monarchy and Second Empire in France; unification movements in Italy and Germany; middle-class nationalism, romanticism, and realism. II: Bismarckian and Wilhelmian Germany; Gladstone, Disraeli, and modern Britain; the French Third Republic and the last days of Tsarist Russia; disintegration of Ottoman Empire; the Austro-Hungarian Empire in decline; European society and culture on the eve of World War I.

B361-B362 Europe in the Twentieth Century I-II (3-3 cr.) Diplomatic, economic, intellectual, military, political, and social developments within Europe from World War I to present; changing relationships between Europe and other parts of the world.

B383-B384 European Intellectual History I-II (3-3 cr.) Critical examination and analysis of the historical, psychological, social, and scientific roots of the thought of leading European thinkers from the sixteenth to the twentieth centuries. Thematic developments, as well as individual thinkers and particular problems, are emphasized. I. Sixteenth through eighteenth centuries. II. Nineteenth through twentieth centuries.

B385 European Thinkers and the “Meaning of Life”: A Historical Inquiry (3 cr.) Exploration of the European response to the breakdown of traditional notions of meaning since the sixteenth century. Particular attention is paid to the specific historical contexts within which the issue of meaning emerged and to the solutions proffered.

B393 German History: From Bismarck to Hitler (3 cr.) This course seeks to acquaint the student with the social, political, and cultural developments in Germany from the middle nineteenth through the middle twentieth century. Its basic theme is the tragic efforts made by liberalism and democracy to assert themselves against the opposing forces of militarism and nationalism. Not open to students who have had B377-B378.

B421 Topics in European History (3 cr.) Intensive study and analysis of selected historical themes and/or problems in European history. Topics will vary from semester to semester.

C386 Greek History (3 cr.) Political, social, and economic developments in the Greek world from the age of Mycenae and Troy until the Roman conquest (167 B.C.). Greek colonial world, Athens and Sparta, career and legend of Alexander the Great, the Hellenistic age. Archaeology as a source of political and social history.

C388 Roman History (3 cr.) The creation, organization, and government of the Roman Republic and Empire; literature and manners; the careers of Hannibal, Cato the Censor, Augustus, Seneca, Nero, and others; the growth of Christianity to the reign of Constantine.

D313 Russian Social and Cultural History, 1801-1917 (3 cr.) A topical examination of different social groups within Russia and their alteration over time as a result of industrialization, emancipation, and the urbanization of Russia. Among the groups covered will be the peasantry, the bureaucracy, the intelligentsia, the nobility, and the military. Changes in culture will also be reviewed.

D314 Soviet Social and Cultural History (3 cr.) Study of the history and dynamics of Soviet society and culture, their interaction, and their influence on Soviet politics. Among the specific topics covered will be the Party, women, dissidents, the Jews and other minorities, literature, and art.

D428 Eastern Europe: 1914 to Present (3 cr.) World War I; the peace settlements in Poland,

Czechoslovakia, Austria, Hungary, Yugoslavia, Bulgaria, Albania, Greece, Romania, and Turkey. Parliamentary democracy vs. military dictatorship; irredentism; economic transformation; Nazi domination; Munich; Soviet seizure of power. National communism of Tito, Gromulka, Kadar, Ceausescu, Dubcek, and Hoxha. Soviet and Western rivalry in Eastern Europe.

E432 History of Africa II (3 cr.) 1750 to present. Slave trade, European imperialism, impact of Islam and Christianity, new state formation, reassertion of African culture and identity. Credit awarded for only one of E432 and E332.

F341 Latin America: Conquest and Empire (3 cr.) The colonial period: Spanish, Portuguese, Indian, and African backgrounds; the discovery, conquest, and settlement; the economic, social, political, religious, and cultural life; the movement toward independence.

F342 Latin America: Evolution and Revolution since Independence (3 cr.) National period: the struggle for independence; the nineteenth-century attempts to achieve political stability and economic progress; the efforts to attain social justice in the twentieth century, with emphasis on common problems.

F346 Modern Mexico (3 cr.) Survey of Mexican history from the late 1800s to the present. Focuses on causes for and long-term consequences of Mexico's 1910 revolution.

F431 Nineteenth-Century Latin American Intellectual History (3 cr.) The intellectual and political foundations for independence; the creation of the nation-state; the continuing political and intellectual attempts to establish and safeguard liberty and order.

F432 Twentieth-Century Latin American Revolutions (3 cr.) Revolutionary desires and the forces for change; the Mexican, Bolivian, and Cuban revolutions; nonviolent attempts to restructure society in other Latin American states.

F444 History of Mexico (3 cr.) Brief survey of the colonial period, independence movement, and nineteenth century. Emphasis on the intellectual, political, and cultural history of the Mexican Revolution.

G451 Traditional Asia (3 cr.) This course offers a brief survey of the early civilization of Asia, which includes China, Japan, Vietnam, Korea, and India, in the traditional period.

G452 Modern Asia (3 cr.) This course offers a brief survey of the civilization of Asia that includes selected topics related to China, Japan, Vietnam, Korea, and/or India in modern times.

G467-G468 History of Japan I-II (3-3 cr.) From prehistoric times to present. Land and people, principal classes; Shintoism and divine emperor; feudalism; Tokugawa Shogunate; modern state and military expansion; population, agrarian, and industrialization problems; occupation and treaty. Students may not receive credit for G467 and G357 or for G468 and G358.

G485 Modern China (3 cr.) China from the Ch'ing period to the present. Social, political, and economic change in a largely agrarian society. International and intercultural relations as well as rebellion, war, and revolution during the unstable nineteenth and twentieth centuries. Students may receive credit for only one of G485 and G385.

H227 African Civilization (3 cr.) Survey of African history from the beginning of civilization in Egypt to the emergence of modern Africa. Using both broad themes (e.g., Islam, colonial changes) and specific cases studies (e.g., Empire of Mali), the course focuses on the continuities and changes that shaped African society.

H306 Sex Roles and Society in American History (3 cr.) What has it meant to be female or male in America? Examination of sex/gender roles, stereotypes, housewifery, family life, sexual mores, work patterns, popular culture, demographic change, politics, and violence. Special emphasis on utopias, frontiers, and wars. Readings in original sources and scholarly interpretations.

H364 History of Medicine and Public Health (3 cr.) History of medicine and public health in Europe and America, including ancient and medieval background, with focus on the development of modern health sciences since 1800.

H373-H374 History of Science and Technology I-II (3-3 cr.) I. Study of the development of pure and applied science from prehistoric times to the Scientific Revolution, with emphasis on principles, technical aspects, relationships between the sciences; the evolution of major scientific disciplines and the effects on other institutions and world views. II. An in-depth study of scientific and technological developments from the Scientific Revolution to the present. Special emphasis on transportation, communication, military and medical technology, physics, biology, and astronomy and on the figures involved in key breakthroughs. Consideration of governmental involvement in science.

H375 Machines and the Age of Invention (3 cr.) The history of invention and the industrialization of Britain during the eighteenth and nineteenth centuries, with the economic, social, demographic, and intellectual changes that resulted.

H409 Women in History (3 cr.) P: junior or senior standing. Women in their historical and contemporary situation in Western culture; survey of prehistoric and historic myths about women; status of women during the major eras of Western civilization; exceptional women and their influence; demands for the achievement of women's rights in modern times.

H410 Introduction to Archival Practice (3 cr.) Introduction to the history, theory, and practice of archival work, with intensive study and analysis of the principal issues in the preservation and use of historical records. Particular focus is on the issues relating to the historical records of organizations and individuals engaged in philanthropic work.

H411 Historical Editing (3 cr.) Introduction to the history, theory, and practice of historical editing, with emphasis on the processes of editing historical documents and the publications of history-related

organizations. Attention given to technical skills (copyediting, proofreading) as well as broader professional issues (ethics, the editor-author relationship, evolution of editorial standards).

H412 Historic Preservation (3 cr.) Introduction to the history, theory, and legal and ethical bases for preservation of the built environment. Attention will be given to architectural history, methodology (site-specific research, contextual research) as well as professional issues such as who preserves, what should be preserved, and the role of the historian in making choices.

H415 Philanthropy in the West (3 cr.) The history of the social act of philanthropy from the beginnings of the Christian era to modern times. "Philanthropy" is construed broadly to include ethical injunctions to benevolence, charitable acts of individuals and corporate bodies, high art patronage, urban planning, and state action to improve living conditions through schooling, health care, prisons, and police.

H421 Topics in African, Asian, or Latin American History (3 cr.) Intensive study and analysis of selected historical issues and/or problems in African, Asian, or Latin American history. Topics will vary from semester to semester.

H425 Topics in History (3 cr.) Intensive study and analysis of selected historical issues and problems of limited scope. Topics will vary but will ordinarily cut across fields, regions, and periods. May be repeated once for credit.

H432 Popular Cultures and African Cities (3 cr.) Focuses on the interdependence between the development of the colonial and postcolonial city and the emergence of popular cultures in Africa. Cultures such as music, fashion, and sports will be studied in their recreational aspects as well as for their social and political implications.

Special Purpose Courses

The following courses serve special purposes. Enrollments in them are not limited to history majors or minors, but others should check with the departmental chairperson or the instructor prior to registration.

J495 Proseminar for History Majors (3 cr.) Selected topics in history. Closed to freshmen and sophomores.

K493 Reading for Honors (1-3 cr.) P: approval of departmental honors committee prior to registration. Individual readings on selected topics.

K495 Readings in History (1-3 cr.) By arrangement with instructor. Permission of departmental chairperson required.

Graduate Courses

General and Professional Skills

G585 Modern China (3 cr.) China from the Ch'ing period to the present. Social, political, and economic change in a largely agrarian society. International and intercultural relations as well as rebellion, war, and revolution during the unstable nineteenth and twentieth centuries.

H500 History of Historical Thought (4 cr.)

Approaches to the historian's craft and reflections on history as a type of scholarly thinking.

H501 Historical Methodology (4 cr.) Discussion and application of the various methods and strategies used in historical research.

H509 Special Topics in European History (3 cr.) Study of topics in European history. May be repeated once for credit.

H511 Special Topics in American History (3 cr.) Study of topics in American history. May be repeated once for credit.

H521 Special Topics in African, Asian, or Latin American History (3 cr.) Intensive study and analysis of selected topics in African, Asian, or Latin American history. Topics will vary from semester to semester, e.g., Traditional Asia, Modern Asia.

H542 Public History (4 cr.) The application of history to public needs and public programs. Historic preservation, archival management, oral history, editing, public humanities programming, historical societies, etc.

H543 Practicum in Public History (1-4 cr.) Internships in public history programs, fieldwork, or research in the historical antecedents of contemporary problems.

H546 Special Topics in History of Science, Medicine, and Technology (3 cr.) Study of topics in the history of science, medicine, and technology. May be repeated once for credit.

H547 Special Topics in Public History (3 cr.) Intensive study and analysis of selected topics in public history. Topics will vary from semester to semester, e.g., historic preservation, archival practice, and historical editing. May be repeated once for credit.

H575 Graduate Readings in History (cr. arr.)**Colloquia**

These colloquia are of seminar size and involve oral and written study of the problems, bibliographies, interpretations, and research trends in the fields with which they respectively deal. They are the chief means by which a student becomes knowledgeable in history at a professional level. Any of them may be taken more than once, upon approval of the student's faculty advisor.

H615 Colloquium: Early Modern Western European History (4 cr.)

H620 Colloquium: Modern Western European History (4 cr.)

H630 Colloquium: British and British Imperial History (4 cr.)

H640 Colloquium: Russian History (4 cr.)

H650 Colloquium: United States History (4 cr.)

H665 Colloquium: Latin American History (4 cr.)

H699 Colloquium: Comparative History (4 cr.)

Seminars

These courses involve research at a mature level with primary sources in specialized topics and problems in the field with which they respectively deal. They train the student in historical scholarship. Any of them may be taken more than once upon the approval of the student's faculty advisor.

H715 Seminar: Early Modern European History (4 cr.)

H720 Seminar: Modern Western European History (4 cr.)

H730 Seminar in British and British Imperial History (4 cr.)

H750 Seminar in United States History (4 cr.)

Thesis

H898 M.A. Thesis (1-6 cr.)

Individualized Major Program

Director Associate Professor Robert F. Sutton, *Foreign Languages and Cultures, Classical Studies*

IMP Committee

Professors Miriam Langsam *History/Associate Dean, ex officio*; James Brown, *Journalism*; Barbara Jackson, *Anthropology*; N. Douglas Lees, *School of Science, Biology*; Monroe Little, *History/Afro-American Studies*; William Schneider, *History/Medical Humanities*; Rowland Sherrill, *Religious Studies/American Studies*; James Wallihan, *Political Science/Labor Studies*

Associate Professors Dennis Bingham, *English/Film Studies*; Stephanie Dickey, *Herron, Art History*; Greg Lindsey, *School of Public and Environmental Affairs*; Obioma Nnaemeka, *Foreign Languages and Cultures, French/Women's Studies*; Susan Shepherd, *English/Linguistics*

Assistant Professor Elizabeth Kryder-Reid, *Anthropology/Museum Studies*

Faculty All members of the IUPUI faculty are eligible to teach courses included in an Individualized Major.

Academic Advising Cavanaugh Hall 401, (317) 274-1460

Individualized Major Program

While the needs of most students are well served by existing majors offered on campus, some students have academic interests that do not fit well into existing programs or traditional disciplinary boundaries. The Individualized Major Program (IMP) in the School of Liberal Arts meets the needs of such students. It serves disciplined and self-motivated students who may wish to major in traditional disciplines or interdisciplinary areas for which majors are not available at IUPUI, as well as those who wish to fashion unique and original interdisciplinary majors that reflect their individual experience, interests, and needs. These include students whose work and life experience suggest the need for fresh ways of organizing existing courses into meaningful new majors, as well as innovative students who wish to bring together course work in several disciplines to focus on a thematic area or make unusual, yet valid connections between areas that are rarely studied together. The IMP can also serve transfer students who wish to continue work started elsewhere in areas in which IUPUI has faculty expertise but no organized majors.

Unlike other majors, which prescribe a fixed area of study, the Individualized Major provides a structure that allows such students, in consultation with faculty members, to design their own majors on various topics and fields of study. Each major course of study varies in accordance with the needs and interests of individual students. Students work closely with faculty advisors, and all individualized majors are overseen and approved by a faculty committee that ensures each student-designed major has intellectual integrity and rigor.

Admission and Academic Progress

The Individualized Major Program is administered through the School of Liberal Arts Office of Student Affairs, which supplies information and initial counseling to students who wish to consider designing an individualized major. All students seeking admission to the IMP must be admitted to the School of Liberal Arts and have a minimum cumulative GPA of 2.0. All liberal arts students, except those on academic probation, are eligible to apply for an Individualized Major Program. Before making formal application for admission to the Individualized Major Program, students must have completed at least 30 hours of general education requirements including English W132, Communication R110, and Mathematics M118 (or its equivalent).

Students desiring to pursue an individualized major should confer with the director of the IMP who will provide assistance in identifying and securing the agreement of a faculty member to serve as advisor. Under the supervision of this advisor the student will take I360, a 1-credit hour tutorial course in which he or she prepares a proposal for an individualized major. The student is accepted for admission to the major when this proposal is approved by the advisor and the faculty Individualized Major Program Committee. This committee may invite the participation of additional faculty with specific expertise to join in evaluating the plan. The major plan may subsequently be amended only in consultation with the advisor and with approval of the Individualized Major Program Committee.

After gaining admission to the IMP program, students must meet each semester with their advisors to register for courses and consider academic progress. A key component of the senior year is the variable credit capstone course I460, an independent study project in which students synthesize their work in the major. The project is approved and graded by the IMP Committee or a panel of experts appointed by the committee. The advisor and the IMP Committee certify students for graduation with the individualized major.

Requirements

The Individualized Major requires a minimum of 34 credit hours:

- 1) Two courses are required of all students (4-7 cr.):
 - I360 Individualized Major Plan (1 credit hour), a tutorial in which a student develops his or her plan for a major, including a list of courses, schedule, and rationale. This proposal must be more than a simple list of courses. Students proposing majors in traditional fields should discuss the history and nature of the discipline, describe its subfields and the methodologies it employs, and show how the proposed major fits within this framework. Those designing unique majors need to establish the intellectual unity of the proposed major and show appreciation of the different disciplinary traditions and methodologies on which it will draw. Upon approval of this plan by an advisor and the faculty Individualized Major Program Committee, the student is accepted into the Individualized Major Program.

- I460 Individualized Major Senior Project, a variable credit tutorial (3-6 cr.) normally taken over two semesters as a 6-credit hour course devoted to a capstone project that culminates and integrates the individualized major. Normally this is a major research paper with an oral presentation. Other options, such as a performance, multi-media product, work of literature, film, or work of art, may be approved if appropriate for a particular plan of study. Normally the project is presented to the Individualized Major Program Committee and defended through a seminar or colloquium. The grade for this course is recommended by the advisor and approved by the Individualized Major Program Committee; in some cases the Individualized Major Program Committee may instead appoint a committee of experts to assist the advisor in assigning the grade.
- 2) The remaining courses are selected from existing courses.
 - No lower- or upper-division courses applied to general education requirements may be included in the individualized major.
 - At least 15 credit hours in the major must be at the 300 or 400 level (in addition to I360 and I460).
 - No more than 6 credit hours of independent study may be counted in the major.
 - All courses counted in the major must be taken for letter grade; no course receiving a grade below C may be counted toward the major.

Undergraduate Courses (Required for all individualized majors)

SLA I360 Individualized Major Plan (1 cr.). P: Approval by advisor. A tutorial in which a student develops a plan for an individualized major. Upon approval of this plan, the student is admitted to the Individualized Major Program.

SLA I460 Individualized Major Senior Project (3-6 cr.). P: I360 (or admission to the Individualized Major Program) and approval by advisor. A variable credit tutorial devoted to a capstone project that culminates and integrates the individualized major. Normally taken in the senior year as a two semester 6-credit course.

International Studies

Director Associate Professor John McCormick, *Political Science*

Professors Kenneth Barger, *Anthropology*; Frederick Bein, *Geography*; Gabrielle Bersier, *German*; Ulla Connor, *English*; Sheila Cooper, *History*; Linda Haas, *Sociology*; Giles Hoyt, *German and International Programs*; William Schneider, *History*; Scott Seregny, *History*; Martin Spechler, *Economics*; Susan Sutton, *Anthropology*; Brian S. Vargus, *Political Science*; Rosalie Vermette, *Foreign Languages and Cultures*; James Wallihan, *Political Science*; Robert White, *Sociology*

Associate Professors Enrica Ardemagni, *Foreign Languages and Cultures*; Didier Bertrand, *Foreign Languages and Cultures*; Herbert Brant, *Foreign Languages and Cultures*; Wietse de Boer, *History*; Jeanette Dickerson-Putman, *Anthropology*; Thomas Fedor, *Geography*; Elizabeth Goering, *Communication Studies*; Claudia Grossman, *International Studies*; Ain Haas, *Sociology*; David Hoegberg, *English*; Barbara Jackson, *Anthropology*; William Jackson, *Religious Studies*; Justin Libby, *History*; John McCormick, *Political Science*; Lucila Mena, *Foreign Languages and Cultures*; Nancy Newton, *Foreign Languages and Cultures*; Obioma Nnaemeka, *Foreign Languages and Cultures*; Larbi Oukada, *Foreign Languages and Cultures*; Kevin Robbins, *History*; Robert Sutton, *Classical Studies*; Gail Whitchurch, *Communication Studies*; Marianne Wokeck, *History*; Reiko Yonogi, *Foreign Languages and Cultures*; Xin Zhang, *History*

Assistant Professors Peter Bloom, *English*; Didier Gondola, *History*; Jeffrey Kenney, *Religious Studies*; Scott Pegg, *Political Science*

The interdependence of our world is ever more vividly illustrated in our political, economic, and civic lives. To prepare students to function effectively in that world, particularly in a profession that may not be related to international concerns, the School of Liberal Arts offers two programs: a certificate and a minor.

Certificate in International Studies

A total of 27 credit hours is required for the Certificate in International Studies; of those 27 credits, 12 must be in core requirements and 15 in elective courses. Transfer courses will be accepted on the same basis as in other liberal arts programs, but at least half of the credit must be earned on this campus. Prerequisite courses add additional credit hours not counted in the 27.

Prerequisites

Foreign Language Students must complete at least the equivalent of two years of modern language study (16 credit hours minimum) or demonstrate competence at that level to the appropriate language department. Written notification must be provided to the director. The goal of this requirement will be for students to attain a working knowledge of a language that complements their focus of study.

Geographic Competence Not later than the first semester of enrollment in the certificate program, the student will be required to demonstrate geographic competence by one of two methods:

1. Completion of G355 Political geography or G331 Economic Geography with a grade of B or better.
2. Proof to the geography department by presentation of a paper, or another method to be prescribed by that department, that the student is geographically literate.

Writing Proficiency Students will be expected to have completed composition instruction or demonstrated their proficiency equivalent to English W132 prior to admission.

Requirements

Core Curriculum (12 cr.)

1. International economics: Economics E303 (3 cr.)
2. History (two semesters, 6 cr.) according to one of the following patterns:
 - a. Area courses consistent with an area emphasis, e.g., Western Europe, East Asia
 - b. U.S. diplomatic history.
3. Political Science Y219 Introduction to International Relations (3 cr.)

Elective Courses (15 cr.)

Elective courses are to be selected from an approved list, which follows this section. The remaining 15 credits should conform to the following specifications:

1. 12 credits with demonstrated focus, e.g., geographic area, comparative approach, etc.
2. At least one advanced course in each of anthropology, history, economics, and political science.

Overall Program

Half of all credit hours must be at the 300 level or above. This may include courses taken to satisfy foreign language or writing proficiency requirements.

Writing Requirement

A substantial paper, which may be in a research, analysis, report, or other format appropriate to the subject under study, is expected. This may be presented in conjunction with a course, as a part of the integrating seminar, or arise from another stimulus. Its style, focus, and extent must be approved in writing by the program director in advance.

Examples of papers that would be appropriate to present in satisfaction of this requirement might include

- an independent study that integrates perspectives from more than one discipline on a given topic
- a research paper prepared in conjunction with a standard course that offers a particularly broad focus
- a report produced as a consequence of study abroad that related to some previous academic study
- completion of a major paper—either in the context of a course or as an independent project, or in conjunction with an acceptable overseas study program

Minor in International Studies

A total of 15 credit hours is required for the minor in international studies. In addition, a student must have completed the second year of a foreign language.

Requirements

Political Science Y219 Introduction to International Relations.

12 credit hours from at least three departments focusing either on a single topic (e.g., comparative systems) or a single geographic area (e.g., Latin America).

Note: Other relevant courses may be accepted from other schools as well.

Topics

Legal Studies Minor

Law and the institutions associated with it are of great and growing importance in modern society. Law and legal institutions define relationships among individuals, shape and are shaped by public policies, and express cultural values and traditions as well as conflicts over those values and traditions.

The Minor in Legal Studies provides students with an opportunity to study law and its relationship to society from a variety of perspectives. Whether students are interested in law as a potential career or are interested in law only as an important aspect of modern society, the courses they take to satisfy the minor may help them satisfy that interest. The minor also provides official recognition of students' pursuit of this multidisciplinary field of study.

The minor consists of 15 credit hours and has to be satisfied by taking courses from more than one department or program. Students must complete 12 credit hours of upper-level course work chosen from the list of approved courses below, and 3 credit hours in a required introductory-level course. Each course must be completed with a semester grade of C or better in order to apply toward the minor.

Required Course

POLS Y211 Introduction to Law (3 cr.)

Additional Courses (12 credit hours from the following)

AMST A303 Topic: Law and American Culture (3 cr.)

HIST A325 American Constitutional History I (3 cr.)

HIST A326 American Constitutional History II (3 cr.)

HIST A421 Topic: American Legal History (3 cr.)

POLS Y304 Judicial Process and American Constitutional Law I (3 cr.)

POLS Y305 Judicial Process and American Constitutional Law II (3 cr.)

POLS Y320 Judicial Politics (3 cr.)

SPEA V376 Law and Public Policy (3 cr.)

WOST W300 Topic: Women and the Law (3 cr.)

Students who have questions about the legal studies minor, or who wish to declare and pursue the minor, should contact the advisor for legal studies, Professor William Blomquist, Cavanaugh Hall 503L, (317) 274-7547.

Medical Humanities and Health Studies

Director Associate Professor David Moller, *Sociology and Medicine*

Professors Carol Gardner, *Sociology*; Eleanor Kinney, *Law*; Eric Meslin, *Philosophy and Medicine*; Gary Mitchell, *Medicine*; David Orentlicher, *Law and Medicine*; Herman Saatkamp Jr., *Philosophy and Medical Genetics*; William Schneider, *History and Medical Genetics*; Richard Ward, *Anthropology and Dentistry*

Associate Professors Jeanette Dickerson-Putman, *Anthropology*; Margaret Gaffney, *Medicine*; Gregory Gramelspacher, *Medicine*; William Gronfein, *Sociology*; Jan Keffer, *Nursing*; Kimberly Quaid, *Medicine*; Eric Wright, *Sociology and Nursing*

Assistant Professors Richard Gunderman, *Philosophy and Radiology*; Stuart Schrader, *Communications*; Rebecca Sloan, *Nursing*; Kathleen Zoppi, *Family Medicine*

The Medical Humanities and Health Studies Program provides a unique opportunity for students in liberal arts, premedicine, allied health sciences, predentistry, and nursing, and for all those interested in the state of health care in America, to explore the concepts of health and illness from an interdisciplinary and multidisciplinary perspective.

Minor in Medical Humanities and Health Studies

The interdisciplinary minor in medical humanities and health studies seeks to promote an increased awareness of the humanistic, social, and cultural dimensions of health care and health care systems. It provides an exciting opportunity for students to work in close conjunction with faculty who have strong teaching and research interests in the area of health care. A survey of the relevant issues to be addressed during the course of study in the minor includes human values and ethics in decision making; the idea of preventive and holistic health and health care; patient care as an art form and scientific endeavor; the relation among ecology, economy, and health care; the relation between cultural and social systems and health and health care; the connection between health care systems and good health; the role of the provider-client relationship, especially in the areas of communications skills and the humanistic dimensions of patient care; the meanings of suffering, illness, and dying; the role of technology in improving care but creating a legacy of dehumanization of patients; and the role of the consumer in the health care system.

The minor entails successful completion of a minimum of 15 credit hours, distributed as follows:

Required Core Course

MH301 Perspectives on Health, Disease, and Healing (3 cr.) The course utilizes the perspectives of the humanities and social science disciplines to provide students with a broader understanding of the many facets of health and disease, suffering and dying, as well as the art and science of healing.

Electives

A minimum of 3 credit hours must be completed from *each* of the three following areas:

Humanistic Perspectives on Health Care

Communication Studies

C392 Health Communication (3 cr.)

G400 Health Provider-Consumer Communications (3 cr.)

Philosophy

P393 Biomedical Ethics (3 cr.)

History

H364 History of Medicine and Public Health (3 cr.)

Religious Studies

R385 Religion and Health (3 cr.)

Sociology

R327 Sociology of Death and Dying (3 cr.)

Social Scientific Perspectives on Health Care

Anthropology

A337 African American Health Care (3 cr.)

E421 The Anthropology of Aging (3 cr.)

E445 Medical Anthropology (3 cr.)

Economics

E387 Health Economics (3 cr.)

Geography

G410 Medical Geography (3 cr.)

Sociology

R285 AIDS and Society (3 cr.)

R321 Women and Health (3 cr.)

R381 Social Factors in Health and Illness (3 cr.)

R382 Social Organization of Health Care (3 cr.)

R410 Alcohol, Drugs, and Society (3 cr.)

R480 Sociology of Mental Illness (3 cr.)

R495 Topic: Women and Madness (3 cr.)

Other Electives

The remaining 3 credit hours of electives may come from the courses above or the following courses:

Medical Humanities and Health Studies

MH492 Topics in Medical Humanities and Health Studies (3 cr.)

MH498 Readings in Medical Humanities and Health Studies (1-3 cr.)

Nursing

K483 Bioethical Issues (3 cr.)

K492 Elective: Biomedical Ethics (3 cr.)

Z492 Human Sexuality and the Health Professional (3 cr.)

Political Science

Y200 Topic: U.S. Health Policy (1 cr.)

SPEA

H316 Introduction to Environmental Health (3 cr.)

H320 Introduction to Health Administration (3 cr.)

Women's Studies

W300 Topics: Perspectives in Women's Health (3 cr.)

Note: Other courses may be accepted upon approval of the Medical Humanities and Health Studies Committee. See the Medical Humanities and Health Studies Committee chairperson for information.

Required Exit Course**MH495 Independent Project Seminar in the Medical Humanities and Health Studies (3 cr.)**

Each student pursuing a minor degree in the Medical Humanities and Health Studies Program who has completed at least 9 credit hours toward the degree will take a seminar or be given the opportunity to

develop a research or applied project related to the interests of the Medical Humanities and Health Studies Committee. This seminar or project will allow the student to apply the knowledge gained from the course work taken in the Medical Humanities and Health Studies Program, serving to tie together the humanistic and social scientific bases of health care in a directed endeavor of interest to the student. The student should contact the chairperson to arrange the details of this independent project.

Museum Studies

Director Assistant Professor Elizabeth Kryder-Reid, *Anthropology/Museum Studies*

Professors Michael Cohen, *Education*; Susan Sutton, *Anthropology*

Associate Professors Jeanette Dickerson-Putman, *Anthropology*; Stephanie Dickey, *Art History*; Barbara Jackson, *Anthropology*; Elizabeth Brand Monroe, *History*; Kevin Robbins, *History*; Jean Robertson, *Art History*; Philip Scarpino, *History*; Robert Sutton, *Classical Studies*; Mary Tschirhart, *School of Public and Environmental Affairs*

Assistant Professors Paul Mullins, *Anthropology*

Adjunct Assistant Professors Jeffrey Bonner, *Indianapolis Zoological Society, Inc.*; Herminia Din, *The Children's Museum*; David Vanderstel, *The Polis Center, National Council on Public History*

Academic Advising: Cavanaugh Hall 419, (317) 274-1406

Department Web address: www.iupui.edu/~museum

Museum Studies provides an integration of museum history and theory with hands-on instruction in a variety of museum techniques and practices. It encompasses the scholarly exploration of museums, their history, operations, and role in society from an interdisciplinary perspective while also training students in the technical aspects of museum work such as collections care and management, administration, education, exhibit planning and design, and technology.

As an urban university, IUPUI is part of a community with a rich heritage of museums and cultural arts. The Museum Studies Program has developed collaborative relationships with area museums and developed an extensive network of adjunct faculty and guest lecturers who bring state-of-the-art museum practice to the curriculum. The program also offers extensive opportunities for learning through the resources of the museum community with experiences such as internships; collaboration on exhibit development and design; exhibition and collections focused courses; access to library, archival, study, and educational collections; collaboration with faculty on museum research projects; and participation in museum-sponsored seminars, lecturers, and professional meetings. The integral role of Indianapolis museums in the Museum Studies curriculum fosters a critical, reflective, and scholarly discourse on museums that is applied to current practices and issues in the field.

The program offers both an undergraduate and a graduate certificate. Students who are not pursuing the certificate are welcome in the classes.

Undergraduate Certificate in Museum Studies

The Museum Studies Program offers an 18 credit hour undergraduate certificate in Museum Studies designed to complement a baccalaureate degree and to prepare students for a career in museums or for further graduate study. Many of the courses take advantage of the excellent museum community in Indianapolis with behind-the-scenes tours of museums and guest lectures by experts in the field. The Museum Studies Program is interdisciplinary and draws students from the arts, humanities, and social sciences, as well as from the hard sciences.

The undergraduate core courses provide a firm introduction to the theory, methodology, and practice of museum work. A practicum in a museum provides the opportunity to apply skills, gain experience, and develop professional relationships. A range of electives are recommended to allow exploration of areas of interest, or to develop competency in a more specialized aspect of museum work.

The Undergraduate Museum Studies Certificate consists of a core of four courses (12 cr.) and a choice of two additional courses (6 cr.) from a list of Museum Studies courses. All of these courses must be passed with a grade of C or above in order to count for the certificate. Electives must be approved by the museum studies director prior to registration. Before enrolling in the Undergraduate Museum Studies Certificate program, IUPUI students must have completed 55 credit hours of university study with a minimum GPA of 2.0 and must have declared a major field of study.

A student's particular program is selected in consultation with the museum studies director. The following 18 credit hours of course work are designed to provide a firm introduction to the theory, methodology, and practice of museum work:

Museum theory (6 cr.): A403, H217

Museum methods (9 cr.): A405 and two of the following: A410, A412, A414, A416, A418 or an approved elective

Practical museum work (3 cr.): 3 credits required in a museum practicum (A408 or ANTH A494 as a museum-related project)

Graduate Certificate in Museum Studies (18 cr.)

The Graduate Certificate in Museum Studies provides students with interdisciplinary training in museum practice and a knowledge of contemporary issues in the museum field. It trains students in specialized aspects of museum practice such as education, exhibit planning and design, collections care, philanthropy, and non-profit management by combining Museum Studies course work with curriculum in other IU schools. Students are given an introduction to the history and philosophy of museums and an opportunity to focus on particular aspects of museum practice.

The graduate certificate may be taken as a freestanding credential or paired with graduate work in another related discipline. Because it offers an opportunity to specialize and does not require an internship, the graduate certificate is also a suitable credential for current museum professionals who wish to enhance their professional training or develop new specialties.

Undergraduate Museum Studies Core (12 cr.)

HIST H217 The Nature of History (3 cr.) An introductory examination of (1) what history is, (2) types of historical interpretation, (3) common problems in history, and (4) the uses of history.

MSTD A403 Introduction to Museum Studies (3 cr.) This survey of museology introduces students to the history of museums and to debates on the philosophical nature of museums and their roles in society. The course covers the types and definitions of

museums, traces the history of museums, discusses contemporary museum practice, and examines current issues in the museum profession.

MSTD A405 Museum Methods (3 cr.) This survey of museum practice introduces students to methods, skills, and resources in three areas of museum work: artifacts, interpretation, and organizational administration, as well as to the ethical ramifications of these methods.

MSTD A408 Museum Internship (1-6 cr.)

Authorization of the instructor required. An arranged learning experience in museum work appropriate to individual career goals focusing on an aspect of museum practice and working with a museum mentor. May be repeated. Prerequisites: A403 and A405, or consent of instructor. [Anthropology majors may register for ANTH A494 in lieu of this requirement.]

Museum Studies Undergraduate Courses (6 cr.)

Choose two of the following courses or from a list of approved electives. See program director for a current list of approved electives.

MSTD A410 Museum Education (3 cr.) This survey of museum education introduces students to a variety of professional skills through exercises, projects, museum visitor observation, and in-museum classes. It covers education theory most central to museum practice, the duties of museum educators, and current issues in museum education.

MSTD A412 Exhibit Planning and Design (3 cr.)

This course offers a survey of museum exhibit planning and design through an integration of theory and practice. The class introduces students to exhibit development, including exhibit administration, design, and evaluation, and to a variety of professional skills through hands-on exercises, exhibit critiques, museum observations, and in-museum classes.

MSTD A414 Museums and Technology (3 cr.)

This course surveys the growing use of technology in museums. It examines applications for information management in collections, conservation science, and archives. It examines critically the use of technology in the service of education both in exhibit contexts and in the variety of educational programs and web-based dissemination of knowledge.

MSTD A416 Collections Care and Management (3 cr.)

A survey of techniques for the management and care of collections in museums. It covers documentation, management of collections, processes, administrative functions, risk management, and ethical and legal issues. The course also covers the physical care and conservation of objects.

Graduate Core Curriculum (3 cr.)

MSTD A503 Introduction to Museum Studies (3 cr.) This survey of museology introduces students to the history of museums and to debates on the philosophical nature of museums and their roles in society. The course covers the types and definitions of museums, traces the history of museums, discusses contemporary museum practice, and examines current issues in the museum profession.

Museum Studies Graduate Courses (15 cr.)

Choose five of the following courses or from a list of approved electives. See program director for a current list of approved electives.

MSTD A505 Museum Methods (3 cr.) P: A503 or consent of instructor. This survey of museum practice introduces students to methods, skills, and resources in three areas of museum work: artifacts, interpretation, and organizational administration, as well as to the ethical ramifications of these methods.

MSTD A508 Museum Internship (1-6 cr.) P: A503 and two other Museum Studies graduate courses or consent of the instructor. Authorization of the instructor required. An arranged learning experience in museum work appropriate to individual career goals focusing on an aspect of museum practice and working with a museum mentor. May be repeated for a total of 6 credit hours.

MSTD A510 Museum Education (3 cr.) P: A503 or consent of the instructor. This survey of museum education introduces students to a variety of professional skills through exercises, projects, museum visitor observation, and in-museum classes. It covers education theory most central to museum practice, the duties of museum educators, and current issues in museum education.

MSTD A512 Exhibit planning and Design (3 cr.)

P: A503 or consent of the instructor. This course offers a survey of museum exhibit planning and design through an integration of theory and practice. The class introduces students to exhibit development, including exhibit administration, design, and evaluation, and to a variety of professional skills through hands-on exercises, exhibit critiques, museum observations, and in-museum classes.

MSTD A514 Museums and Technology (3 cr.)

This course surveys the growing use of technology in museums. It examines applications for information management in collections, conservation science, and archives. It examines critically the use of technology in the service of education both in exhibit contexts and in the variety of educational programs and web-based dissemination of knowledge.

AADM Y525 Museum Management (3 cr.) P: consent of instructor. Management of art and historical museums; the museum: its legal status, the building, management and staff, goals and objectives, fundraising and budgeting, collections and exhibition, education, and community outreach.

Emeritus Faculty Roger Hamburg, Paul Nagy, Robert Payton, Jan Shipp, Sheldon Siegel

Philanthropic studies at Indiana University is interdisciplinary, interprofessional, and systemwide. The field addresses voluntary contributions of service and funds, voluntary associations, and what has been called "the social history of the moral imagination." Areas of inquiry range from the history of philanthropy and philanthropy in literature, in the School of Liberal Arts at IUPUI, to fundraising management and legal issues, in other schools at IUPUI and IU Bloomington. Undergraduate and graduate degrees, minors, and certificates in various areas of philanthropic studies are currently available in the School of Liberal Arts and in other schools at IUPUI and IU Bloomington. For more information, visit the Center on Philanthropy Web site at www.philanthropy.iupui.edu.

Minor in Philanthropic Studies

The undergraduate minor in philanthropic studies provides students with a general knowledge of the

history, culture, and values of philanthropy. The minor provides an interdisciplinary framework for School of Liberal Arts majors for whom the study of history, culture, civil society, or values overlaps their own disciplines. It also attracts students from other majors who wish to incorporate an interdisciplinary component into their professional training. Students should declare their intention to pursue the minor in a letter addressed to the chair of the philanthropic studies faculty.

Requirements for the minor include 15 credit hours. A grade of C or higher must be earned in each course counted toward the minor. Because the subject of philanthropy is inherently interdisciplinary, no more than two courses may be taken in any one department.

Students may petition the chair of the philanthropic studies faculty to replace an existing course option.

Core Courses

Students are required to include at least two of the following five courses:

AMST P320 Philanthropy in American Culture
ECON E414 Economics of Nonprofit Organizations
HIST H415 History of Philanthropy in the West
HIST A421 History of American Philanthropy
POLS Y378 Problems in Public Policy: Civil Society and Public Policy in the United States

Elective Courses

ENG L431 Topics in Literary Study: Philanthropy and Literature
PHIL P327 Philanthropy and Social Welfare
PHST P430 Topics in Philanthropic Studies
REL R366 Religion and Civil Society
SOC R295 Topics in Sociology: Sociology of Altruism, Voluntarism, and Pro-Social Behavior

Certificate in American Humanics

The American Humanics Certificate (AH) prepares undergraduate students to become skilled professionals and leaders in human service (nonprofit) organizations. Students develop a network of professional contacts, obtain on-the-job experience through an extensive internship and site visits, and acquire leadership skills through the AH student association. In addition, they have opportunities to explore careers, participate in community service projects, and engage in social activities. This certificate program is open to students pursuing a baccalaureate degree in any major. To obtain more information, contact the Center on Philanthropy at IUPUI by calling (317) 274-4200.

Master of Arts

The Master of Arts in Philanthropic Studies focuses on the history, culture, and values of philanthropy. Its objectives are to enable students to gain the knowledge and skills either to pursue further graduate study in relevant fields or to pursue careers in the independent sector or in related fields; to enable students to investigate the broader theoretical issues of philanthropy and of their chosen areas of specialization from a variety of disciplinary and interdisciplinary perspectives; and to utilize the interdisciplinary base to maintain a thorough critical inquiry into the historical and cultural implications of philanthropy.

Admission

Requirements include a bachelor's degree from an accredited college or university, minimum grade point average of 3.0 on a scale of 4.0, and a minimum grade point average of 3.0 in the student's major field. In addition, students seeking admission to the program should demonstrate an appropriate level of achievement on the Graduate Record Examination (or comparable proficiency test), and must arrange for three letters of recommendation to be addressed to the M.A. Program Admissions Committee.

Applicants who do not meet all of the requirements listed above may be admitted to the program on a provisional basis, in which case their status will be reviewed after a fixed period of time to determine whether they may continue in the program.

Financial Aid

Fellowships, scholarships, and graduate assistantships are available. Please contact Student Services in the School of Liberal Arts for more information.

Curriculum

The M.A. in Philanthropic Studies requires a total of 36 credit hours. This includes 18 credit hours of core courses, 12 credit hours of elective courses, and 6 credit hours of thesis or additional courses. A minimum of 18 credit hours in core and elective courses combined must be in the School of Liberal Arts at IUPUI, and not more than 9 credit hours may be taken in courses numbered below 500. These 9 credit hours may come only from courses approved for Graduate School credit. In addition, the student earns 6 credit hours either for a thesis on a topic approved by the M.A. Program Advisory Committee or for graduate-level courses in a field in which future study is planned. The approval process for the thesis or its alternative normally takes place after a student has successfully completed 15 credit hours of course work.

In order to earn the M.A. in Philanthropic Studies, students must maintain a minimum GPA of 3.0 on a scale of 4.0. Grades in courses counting for credit toward this degree may be no lower than C (2.0 on a scale of 4.0).

The 18 credit hours of core courses normally include Philanthropic Studies P521 The Nonprofit and Voluntary Sector; Philanthropic Studies P523 Civil Society and Philanthropy; History H509 History of Philanthropy in the West; Philosophy P542 Ethics and Values of Philanthropy; Philanthropic Studies P512 Human and Financial Resources for Philanthropy; and Philanthropic Studies P590 Internship in Philanthropic Studies. In addition, students will take one of the following: American Studies P520 Philanthropy in American Culture; Anthropology A509 Cross-Cultural Dimensions; SPEA V524 Civil Society in Comparative Perspective; or Religion R590 Religion and Philanthropy. Also, students must take either Economics E514 The Nonprofit Economy and Public Policy or Education C595 Legal Aspects of Philanthropy, as well as P600 M.A. Thesis in Philanthropic Studies (6 cr.).

Dual Degrees

The Philanthropic Studies program has developed dual degree opportunities with several schools and

departments. When approved, a dual degree provides a student with a program of study that leads to the M.A. in Philanthropic Studies and a master's degree in another discipline. Students must apply separately and simultaneously for a dual degree.

Economics (M.A. in Economics)
History (M.A. in History)
Nursing (M.S. in Nursing Administration)
School of Public and Environmental Affairs
(M.P.A. in Nonprofit Management)

For more information, contact Student Services in the Center on Philanthropy at (317) 684-8911.

Executive M.A. in Philanthropic Studies Program

Many students interested in the M.A. program are unable to attend on a traditional residential basis because of the distance from Indianapolis and their ongoing job responsibilities. To provide access to the M.A. in Philanthropic Studies at Indiana University for this growing constituency, the executive master's program was established in 1996. A participant in the executive master's program can finish the requirements for the degree usually in three years by completing:

An orientation before the first day of classes; six intense one-week sessions of residential study at IUPUI; distance education and directed off-site course work; and elective study at a qualified institution near the student's home.

Each summer course requires one week of intense on-campus study and is preceded by a preresidential period of approximately six weeks that includes preparatory reading and assignments. Each session is followed by a postresidential period that includes evaluative experiences to be completed at home. During both the preresidential and postresidential periods, faculty work with students by telephone, e-mail, fax, and mail.

Applicants for the executive program must meet the same admission criteria as those applying for the residential program with the addition of three to five years of work experience in the nonprofit sector being required. Deadline dates for admission are January 1 for non-U.S. citizens and February 1 for U.S. citizens.

For more information, contact the Center on Philanthropy, (317) 684-8911, or visit the Web site at www.philanthropy.iupui.edu.

Courses

P330 Topics in Philanthropic Studies (3 cr.) In-depth study of selected topics and issues in philanthropic studies. Specific topics vary by semester. May be repeated once for credit with a different course topic.

P430 Topics in Philanthropic Studies (3 cr.) This course offers an in-depth study of selected topics and issues in philanthropic studies. Specific topics vary by semester. Course may be repeated for credit with a different course topic.

P501-P502 The Philanthropic Tradition I-II (3-3 cr.) P: permission of the instructor. These interdisciplinary courses examine the core values of

philanthropy and the principal patterns of philanthropic behavior and organization with particular emphasis on the Western tradition and the American adaptation of it.

P512 Human and Financial Resources for Philanthropy (3 cr.) This course is designed to familiarize beginning graduate students with the three major areas subsumed under resources of the independent sector: volunteers, grant making, and financial resources obtained through a fundraising program. The course is divided into four parts to include the theoretical framework for the sector; government, corporate, and foundation resources; charitable donations by individuals; and volunteer management.

P521 The Nonprofit and Voluntary Sector (3 cr.) Students examine issues of why people organize, give, and donate time, theories of the sector, policy formulation in the sector, etc., with the objective of becoming "philanthropically literate."

P523 Civil Society and Philanthropy (3 cr.) The course explores the relationship of civil society to the state, how the nonprofit sector affects the state, and how the state regulates the sector. A continuing theme is how and whether the state and philanthropic institutions make civil investments in strengthening civil society.

P530 Topics in Philanthropic Studies (3 cr.) In-depth study of selected topics and issues in philanthropic studies. Specific topics vary by semester. Course may be repeated once for credit with a different course topic.

P555 Readings in Philanthropic Studies (1-4 cr.) P: permission of director. A tutorial course involving in-depth study and analysis of a specific topic in philanthropic studies, by arrangement with instructor.

P590 Internship in Philanthropic Studies (3 cr.) A course for the advanced student of philanthropy. Students work 10 hours per week for a voluntary association, applying knowledge gained in earlier courses to practical situations. Requirements include a journal and a substantial term paper.

P600 M.A. Thesis in Philanthropic Studies (3-6 cr.)

P690 Research in Philanthropic Studies (3 cr.) P: one semester of M.A. course work. Students research specialized topics related to philanthropic studies agreed upon with the instructor from and in their chosen disciplinary perspective. In some instances team research may be carried out. The course may be repeated once with approval by the chair of philanthropic studies.

Undergraduate and graduate degrees, minors, and certificates in various areas of philanthropic studies and nonprofit management are available at IUPUI and IU Bloomington. These include American Humanics, nonprofit management, Museum Studies, and the philanthropic studies minor. New courses and degree programs are developing rapidly. For up-to-date information, please contact Student Services for the Philanthropic Studies Program, (317) 684-8911 or www.philanthropy.iupui.edu.

Philosophy

Chair Professor Michael B. Burke

Professors Myles Brand, Michael Burke, Edmund Byrne (Emeritus), Anne Donchin (Emerita), Nathan Houser, Laurence Lampert, Eric Meslin, Paul Nagy (Emeritus), Herman J. Saatkamp Jr.

Associate Professors Robert Frye (Emeritus), Ursula Niklas, John Tilley

Assistant Professors André De Tienne, Richard Gunderman

Adjunct Professor Arthur Burks

Adjunct Assistant Professors Cornelis de Waal, Scott Massey

Academic Advising Cavanaugh Hall 331, (317) 274-8082 or (317) 274-2667

Philosophic inquiry aims, ultimately, at a general understanding of the whole of reality. It draws on the insights of the great historical philosophers, on what has been learned in all other major fields of study, and on the rich perspective embodied within our ordinary ways of thinking. Philosophers address a diverse array of deep, challenging, and profoundly important questions. Examples include the nature of the self and of personal identity; the existence or nonexistence of God; the nature of such phenomena as time, mind, language, and science; the sources and limits of human knowledge; the nature of the good life; the foundations of state authority; the requirements of social justice; and the nature of art, beauty, and aesthetic experience. Philosophical questions are addressed not by reference to empirical information alone, but by means of analysis, synthesis, argument, and the construction and evaluation of philosophical theories.

What attracts students to philosophy is the intrinsic interest of its subject matter. But the study of philosophy has practical benefits as well. Philosophy majors are practiced in the close reading of complex texts, in the careful analysis and evaluation of arguments, in original and creative thinking, and in the clear, precise, and persuasive communication of ideas. The skills thus acquired are not only a source of deep personal satisfaction, but a strong asset in any profession. That the study of philosophy is highly effective in enhancing academic skills is evidenced by the fact that philosophy majors receive exceptionally high scores on the Law School Admissions Test (LSAT), the Graduate Record Exam (GRE), and other standardized admissions tests.

Since philosophy examines the presuppositions and the basic concepts and methods of all other disciplines, a minor in philosophy can be the perfect complement to a major in any other field of study. In addition to the perspective it offers on other fields, a minor in philosophy sharpens intellectual skills, opens a broad intellectual vista, and affords an opportunity to consider fundamental questions of human concern.

Undergraduate Major in Philosophy

Requirements

A minimum of 24 credit hours in philosophy, including:

- (a) Either a survey of philosophy (P110 Introduction to Philosophy, S110 Introduction to Philosophy—Honors) or a basic course in ethics (P120 Ethics, S120 Ethics—Honors, P237 Environmental Ethics, P326 Ethical Theory, or P393 Biomedical Ethics)
- (b) A basic course in logic (P162 Logic or P265 Introduction to Symbolic Logic)
- (c) A minimum of 9 credit hours at the 300–400 level

To assure a properly balanced program of study, courses are to be selected in consultation with a departmental advisor.

Double Majors

Students planning to major in a discipline other than philosophy are encouraged to consider philosophy as a second major. Students planning such a double major should consult the Department of Philosophy about philosophy courses most suitable to their academic interests and career goals.

Undergraduate Minor in Philosophy

Requirements

A minimum of 15 credit hours in philosophy, including:

- (a) One course from each of at least two of these three groups of basic courses: (1) P110, S110; (2) P120, S120, P237, P326, P393; (3) P162, P265
- (b) A minimum of 6 credit hours at the 300–400 level

Ph.D. Minor in Philosophy

To earn a doctoral minor in philosophy at IUPUI a student outside the department must earn a minimum grade point average of 3.0 (B) in 13 credit hours of graduate-level courses, including 3 credits in the core course (P500), 6 in philosophical area and/or applied philosophy courses, and 4 in the culminating seminar (P730). See the department chair for details.

Departmental Honors Program

To provide superior students the option of advanced work in philosophy, the department offers H-Options in all 200 to 500-level courses other than P265. To graduate with honors in philosophy, a student must complete at least 24 credit hours of honors work, including at least 12 credit hours in philosophy and at least 6 credit hours outside philosophy, and must satisfy the requirements for a major in philosophy. The student must maintain a minimum overall grade point average of 3.3, with a 3.5 in philosophy and a 3.5 in honors courses. For further information, contact the department chairperson.

Undergraduate Courses

Honors Courses

S110 Introduction to Philosophy—Honors (3 cr.) This course is an introduction to key philosophical concepts and issues as well as major thinkers and historical periods.

S120 Ethics—Honors (3 cr.) A study of ethical values in relation to such problems as personal and societal decision making, selection and justification of lifestyle, goal orientation, conflict resolution, freedom and creativity, commitment and responsibility.

S314 Philosophy and Modern Times—Honors (3 cr.) A study of one or more philosophical concepts, themes, or developments characteristic of the modern period.

Regular Courses

P110 Introduction to Philosophy (3 cr.) An introductory study of such philosophical concerns as existence, knowledge, meaning, and morality.

P120 Ethics (3 cr.) A study of ethics in relation to personal and societal decision making. Typically addresses such topics as abortion, world hunger, assisted suicide, sexual morality, animal rights, moral education, virtue and character, and environmental ethics.

P162 Logic (3 cr.) A study of the principles of logic. The course covers a variety of traditional topics, selected for their practical value, within formal and informal logic. Among the topics typically covered are fallacies, syllogisms, causal hypotheses, logic diagrams, argument analysis, and truth-functional reasoning.

P237 Environmental Ethics (3 cr.) An introductory consideration of philosophical views regarding the extent of human responsibility for the natural environment.

P265 Introduction to Symbolic Logic (3 cr.) A study of the most important and widely applicable parts of modern symbolic logic: propositional logic and predicate logic.

P280 Philosophical Problems: (variable title) (3 cr.) A concentrated study of important attempts to solve some philosophical problem, or set of problems, that confronts the contemporary world. May be repeated for credit.

P281 Philosophy of Religion (3 cr.) Philosophical views regarding such topics as the meaning and purpose of religion, religious experience, religious knowledge, and the existence and nature of God.

P307 Classical Philosophy (3 cr.) A study of the significant texts of ancient Greek and Roman philosophy, including the Presocratics, Plato, Aristotle, and the Hellenistic Thinkers.

P314 Modern Philosophy (3 cr.) A study of Western philosophy from the rise of science to the disenchantment with absolutism, including such philosophers as Bacon, Descartes, Berkeley, Hume, Leibniz, Kant, and others.

P316 Twentieth-Century Philosophy: (variable title) (3 cr.) A study of one or more twentieth-century approaches to philosophy, such as pragmatism, analytic philosophy, phenomenology, existentialism, deconstructionist philosophy, or neo-Marxism. May be repeated for credit.

P317 Nineteenth-Century Philosophy (3 cr.) A historical survey of philosophy in the nineteenth century from Hegel to Nietzsche, including utilitarianism, positivism, and philosophies of evolution.

P322 Philosophy of Human Nature (3 cr.) Theories of human nature and their philosophical implications.

P323 Society and the State in the Modern World (3 cr.) An analysis of the modern state in relation to changing concepts of knowledge, ethical ideas, human nature, social classes, the family, and property.

P325 Social Philosophy: (variable title) (3 cr.) Concentrated study of one or more major problems, positions, or authors. May be repeated for credit when topics vary.

P326 Ethical Theory (3 cr.) A variable title course. Advanced consideration of one or more ethical theories or theoretical issues about the nature and status of ethics.

P331 Philosophy of Science (3 cr.) An introductory study of theories with regard to the nature, purpose, and limitations of science.

P358 American Philosophy (3 cr.) A study of the philosophical tradition in the United States, emphasizing major thinkers such as Peirce, Royce, James, Dewey, and Whitehead.

P365 Intermediate Symbolic Logic (3 cr.) P: P265. Topics in metalogic, set theory, and modal logic.

P367 Philosophy of the Arts (3 cr.) A study of the philosophy of the arts, designed to show the relationship of human creativity to political, moral, aesthetic, and cognitive value.

P368 Philosophy of Language and Communication (3 cr.) Philosophical study of such topics as meaning and truth, interpretation, language and gender, representation, and speech acts.

P369 Epistemology (3 cr.) Knowledge and justified belief: their nature, structure, sources, and limits.

P382 Philosophy of History (3 cr.) An analysis of some of the philosophical problems implicit in the study of history, such as the possibility of historical objectivity, and a survey of influential interpretations of history from Augustine to Heidegger.

P383 Topics in Philosophy: (variable title) (3 cr.) An advanced study of special, experimental, or timely topics drawn from the full range of philosophical discussion and designed to pursue interests unmet in the regular curriculum. May be repeated for credit.

P385 Metaphysics (3 cr.) A study of several of the principal problems of metaphysics, such as identity through time, the self, the mind-body problem, freedom and determinism, fate, causation, the problem of universals, and the existence of God.

P393 Biomedical Ethics (3 cr.) A philosophical consideration of ethical problems that arise in current biomedical practice, e.g., with regard to abortion, euthanasia, determination of death, consent to treatment, and professional responsibilities in connection with research, experimentation, and health care delivery.

P394 Feminist Philosophy (3 cr.) An examination of philosophical problems embedded in feminist theories, particularly those relating to the nature/nurture distinction, the value of sex-specific experiences such as motherhood, and conditions for achieving a just social order.

P414 Philosophy and Culture (3 cr.) In-depth consideration of a topic involving the interrelationship between philosophy and culture. May be repeated for credit.

P418 Seminar in the History of Philosophy: (variable title) (3 cr.) A concentrated study of one major philosopher or philosophical school whose ideas have helped to form our age and contribute to an understanding of its problems. May be repeated for credit.

P448 Seminar in American Philosophy (3 cr.) An intensive study of a major American thinker, such as Edwards, Royce, James, Peirce, Dewey, or Whitehead, or of a leading theme, such as community, experience, or education. May be repeated for credit.

P468 Seminar in the Philosophy of Mind (3 cr.) An in-depth study of some particular problem of current concern in one of the following: theory of meaning, conceptual analysis, information theory, theory of action, artificial intelligence. May be repeated for credit.

P488 Research in Philosophy I (1-4 cr.) P: 9 credit hours of philosophy and consent of instructor. Independent research in philosophical theory approved by and reported to any member of the department. May be repeated for credit, but no more than 6 credit hours may be counted toward the major.

P489 Research in Philosophy II (1-4 cr.) P: 9 credit hours of philosophy and consent of instructor. Independent research in applied philosophy approved by and reported to any member of the department. May be repeated for credit, but no more than 3 credit hours may be counted toward the major.

Graduate Courses

P500 Philosophy Pro-Seminar (3 cr.) An advanced survey of areas and issues addressed in philosophy. Principal objective: to familiarize the post-baccalaureate student with the range and diversity of contemporary philosophical discourse.

P520 Philosophy of Language (3 cr.) Advanced study of selected topics.

P522 Topics in the History of Modern Philosophy (3 cr.) Selected topics from the philosophies of one or more of the following: Continental rationalists (Descartes, Spinoza, Leibniz), British empiricists (Locke, Berkeley, Hume), and Kant. May be repeated twice with consent of instructor(s).

P540 Contemporary Ethical Theories (3 cr.) Fundamental problems of ethics in contemporary analytic philosophy from G. E. Moore's *Principia Ethica* to present.

P542 The Ethics and Values of Philanthropy (3 cr.) An inquiry into the ethics and values of philanthropy rooted in a general understanding of philanthropy, as voluntary action for the public good, as an ethical ideal. A consideration of philanthropic activity in light of this ideal.

P543 Contemporary Social and Political Philosophy (3 cr.)

P560 Metaphysics (3 cr.) In-depth discussion of representative contemporary theories.

P562 Theory of Knowledge (3 cr.) Advanced study of selected topics.

P590 Intensive Reading (1-4 cr.) A tutorial course involving in-depth consideration of a specific philosophical area or problem or author. May be repeated for credit.

P694 Biomedical Ethics (3 cr.) A rigorous examination of bioethical theory and practice. Stress is placed on moral and conceptual issues embedded in biomedical research, clinical practice, and social policy relating to the organization and delivery of health care.

P730 Seminar: Contemporary Philosophy (4 cr.) Selected topics on the works of twentieth-century philosophers.

P748 Seminar in American Philosophy (3 cr.) Advanced study of a principal philosopher or a set of selected topics in classical American philosophy.

Political Science

Chair Professor William Blomquist

Professors John C. Buhner (Emeritus), Richard Fredland (Emeritus), Patrick McGeever (Emeritus), Stephen Sachs (Emeritus), Brian Vargus, James Wallihan

Associate Professors William A. Blomquist, John McCormick, Charles Winslow (Emeritus)

Assistant Professors Ellen Andersen, Margaret Ferguson, Scott Pegg

Adjunct Professors Leslie Lenkowsky, Sheila Suess Kennedy

Academic Advising Cavanaugh Hall 504J, (317) 274-7387

Politics is about power: who has it and how it is used. The goal of the Department of Political Science is to provide students with a superior program of study into the many different and intriguing ways in which power is given, taken, distributed, limited, manipulated, and used, and to help them better appreciate and understand the many different forms taken by systems of government around the world.

The department offers introductory courses in all the major subfields of the discipline: American politics, public policy, political theory, comparative politics, and international relations. We also offer a wide variety of advanced courses in which students can learn more about topics as varied as Indiana state government; national politics in Washington, D.C.; the political systems of Africa, Asia, and Europe; the mechanics of voting and public opinion; and critical policy issues of our time, such as welfare, crime, the environment, and women in politics. Our students also derive hands-on experience through internships and multicollge political simulations.

Our majors have gone on to careers in fields as diverse as politics, business, teaching, human services, the media, and working for interest groups, and many have gone on to graduate school in politics and law. Courses in political science help majors and nonmajors alike become critical observers of—and informed participants in—politics and government at the local, national, and international level.

Major in Political Science

In addition to the basic School of Liberal Arts requirements (listed elsewhere in this bulletin), the political science major must do the following:

1. Complete 30 credit hours in political science with at least a C grade in each course. Those 30 credit hours are part of the 122 credit hours needed for the B.A. degree in liberal arts.
2. Complete the following specific requirements:
9 credit hours: Y103, Y215, and Y217
6 credit hours chosen from Y205, Y211, Y213, and Y219
12 credit hours from 300 level and above (no more than 6 of these hours from Y480, Y481, and Y498)
3 credit hours: Y490

Transfer students only: Transfer students from either another Indiana University campus or from another institution must take a minimum of 9 credit hours of 300 to 400 level (junior-senior) political science courses at IUPUI. These courses must be of regular

classroom format (not readings or research); they may include a seminar, if needed.

Minor in Political Science

The political science minor consists of 15 credit hours with a concentration in one of three areas: American government, comparative politics, or international relations.

Only courses with a grade of C and above are acceptable. Six of the 15 credit hours must be completed in residence. Students must file with the Department of Political Science their declaration of intent to complete a minor. Records are kept nowhere else.

American Government

Required are:

Y103

6 credit hours from 300-level courses in American government or Y200, as appropriate

6 credit hours of political science electives

Comparative Politics

Required are:

Y217

6 credit hours from 300 level courses in comparative politics or Y200, as appropriate

6 credit hours of political science electives

International Relations

Required are:

Y219

6 credit hours from 300 level courses in international relations or Y200, as appropriate

6 credit hours of political science electives

Interdisciplinary Minors

There are three minor programs with a political science component that may interest political science students: the international studies minor, legal studies minor, and urban studies minor. Information about each of these minors can be found on their respective pages of this bulletin.

Certificate in Paralegal Studies

Advisor for Paralegal Studies Professor William Blomquist, Department of Political Science

The School of Liberal Arts offers a credit certificate in paralegal studies, which students may combine with any other degree programs or major. The credit certificate program parallels the noncredit program available through the School of Continuing Studies, and represents a partnership between the two schools.

The 27 credit hour certificate includes 9 credit hours of required course work and 18 credit hours chosen by the student from a set of elective courses listed below. Students must receive a grade of C or better in each course they intend to apply toward the certificate.

Because of the demands of the required courses for the certificate, there are prerequisites that students must satisfy prior to undertaking the course work for the certificate: they should have college-level writing proficiency, computing proficiency, and should have completed Y211: Introduction to Law.

Required Courses (9 credit hours):

PHIL P222 Legal Ethics (3 cr.)

POLS Y221 Legal Research and Writing for Paralegal Studies (3 cr.)

POLS Y222 Litigation for Paralegal Studies I (3 cr.)

Elective Courses (18 credit hours from the following):

POLS Y223 Litigation for Paralegal Studies II (3 cr.)

POLS Y224 Property Law for Paralegal Studies (3 cr.)

POLS Y225 Contract Law for Paralegal Studies (3 cr.)

POLS Y226 Tort Law for Paralegal Studies (3 cr.)

POLS Y227 Criminal Law for Paralegal Studies (3 cr.)

POLS Y228 Family Law for Paralegal Studies (3 cr.)

POLS Y229 Estate Law for Paralegal Studies (3 cr.)

POLS Y230 Bankruptcy Law for Paralegal Studies (3 cr.)

POLS Y231 Advanced Legal Writing (3 cr.)

BUS L203 Commercial Law I (3 cr.)¹

BUS L303 Commercial Law II (3 cr.)¹

Students who have questions about the Certificate in Paralegal Studies, or who wish to declare and pursue the certificate, should contact the advisor for paralegal studies.

Courses

Courses offered only occasionally are marked by an asterisk.

Y101 Principles of Political Science (3 cr.) For any student interested in better understanding the political world in which we live. The course explains some fundamental political concepts such as power, conflict, authority, and governments. It may also include an overview of the major subfields of political science: comparative politics, international relations, political theory, and public policy.

Y103 Introduction to American Politics (3 cr.) Introduction to the nature of government and the dynamics of American politics. Origin and nature of the American federal system and its political party base. (When offered, S103 Introduction to American Politics—Honors is an equivalent.)

Y200 Contemporary Political Topics: (variable title) (1-6 cr.) Involves an intensive analysis and discussion of selected contemporary political problems. The topics, which may vary from semester to semester, are listed in the class schedule. The course may be repeated up to a maximum of 6 credit hours. Recent topics have included problems of poverty, political protest, women in politics, citizens and the news, and problems of developing areas.

Y205 Elements of Political Analysis (3 cr.) Introduction to the major approaches to and techniques of the systematic study of political science. Includes introduction to analysis of quantitative political data.

Y211 Introduction to Law (3 cr.) An introduction to law as an aspect of government and politics, and as a means for dealing with major social problems. Students will study legal reasoning, procedures, and materials, and may compare other nations' legal systems. The course usually includes a moot court or other forms of simulation.

Y213 Introduction to Public Policy (3 cr.) Studies the processes and institutions involved in the formation of public policy with particular reference to the United States. The course will identify key policy actors, analyze the process of policy making, and

¹The Kelley School of Business requires students to have sophomore standing before taking L203 and junior standing before taking L303.

critically assess selected policy issues (such as foreign, defense, economic, welfare, and environmental policy).

Y215 Introduction to Political Theory (3 cr.) An introduction to major ideas and theories in Western political thought, including theories of democracy and the analysis of conflict and cooperation. The course also addresses the attempts made by prominent political philosophers—from Aristotle and Plato to Locke, Marx, and Rawls—to understand and describe the nature of politics.

Y217 Introduction to Comparative Politics (3 cr.) A course that introduces students to the major political systems of the world. Students will look at different system types, examine in depth particular countries as case studies such as Britain, Russia, and Mexico, and compare executives, legislatures, elections, political parties, interest groups, and key areas of public policy.

Y219 Introduction to International Relations (3 cr.) An introduction to the global political system, and issues that shape relations among countries. The course looks at problems of conflict resolution, the role of international law and organizations, the challenges of poverty and development, and the other major policy issues over which nations cooperate, argue, or go to war.

Y221 Legal Research and Writing for Paralegal Studies (3 cr.) P: Y211. Development of research and communication skills special to the area of law. Includes methods of organizing and conducting legal research, resources available for legal research, presentation of findings in memoranda and briefs, other forms of legal writing.

Y222 Litigation for Paralegal Studies I (3 cr.) P: Y211 and Y221. This course examines the processing of a case from initial client interviews to final disposition. It includes drafting of complaints, answers, counterclaims, interrogatories and other discovery tools, gathering of evidence, and motions and judgments. Both Indiana and federal rules of evidence are emphasized.

Y223 Litigation for Paralegal Studies II (3 cr.) P: Y211, Y221, and Y222. This elective course in advanced litigation focuses primarily on aspects of trial preparation not covered in depth in Y222. Topics may include jury selection, witness preparation and examination, preparation of evidence for use at trial, jury instructions, post-judgment relief.

Y224 Property Law for Paralegal Studies (3 cr.) P: Y211 and Y221. This course examines the legal rules governing various types of property and the ways in which human beings relate to property. Types of property include real and personal; relationships to property include both ownership and interest. Emphasis is placed on forms and procedures used in Indiana.

Y225 Contract Law for Paralegal Studies (3 cr.) P: Y211 and Y221. This course includes the basic elements and principles involved in the drafting, interpretation, and enforcement of contracts, including current trends in contract law in Indiana. Includes Uniform Commercial Code.

Y226 Tort Law for Paralegal Studies (3 cr.) P: Y211 and Y221. This course reviews current law and

recent trends in negligence and liability. Different dimensions of liability are covered. Emphasis on conduct of a tort case from initiation through relief, and on the responsibilities of legal assistants therein.

Y227 Criminal Law for Paralegal Studies (3 cr.)

P: Y211 and Y221. This in-depth review of criminal law in Indiana covers the Indiana Criminal Code—infractions, misdemeanors, and felonies. The course emphasizes real situations that legal professionals encounter throughout the process.

Y228 Family Law for Paralegal Studies (3 cr.)

P: Y211 and Y221. This course examines legal rules and procedures concerning domestic relations. Topics covered include separation and divorce, adoption, child custody and support, and other areas of domestic relations in Indiana.

Y229 Estate Law for Paralegal Studies (3 cr.)

P: Y211 and Y221. This course reviews legal rules and procedures concerning the transfer of property upon the owner's demise. Provides a practical approach to the language, procedures, forms, interpretation, and administration of wills and trusts. Emphasis on current trends in Indiana and federal law.

Y301 Political Parties and Interest Groups

(3 cr.) Theories of American party activity; behavior of political parties, interest groups, and social movements; membership in groups; organization and structure; evaluation and relationship to the process of representation.

Y302 Public Bureaucracy in Modern Society

(3 cr.) Examines public bureaucracy, with special emphasis on the United States, as a political phenomenon engaging in policy making and in the definition of the terms of policy issues. Considers the role of bureaucratic instruments in promoting social change and in responding to it.

***Y303 Formation of Public Policy in the United States (3 cr.)**

Processes and institutions involved in the formation of public policy in American society.

Y304-Y305 Judicial Process and American

Constitutional Law I-II (3-3 cr.) Nature and function of law and judicial process; selected Supreme Court decisions interpreting American constitutional system.

Y306 State Politics in the United States (3 cr.)

Comparative study of politics in the American states. Special emphasis on the impact of political culture, party systems, legislatures, and bureaucracies on public policies.

Y307 Indiana State Government and Politics

(3 cr.) Constitutional foundations, political development, organizational and functional process and growth, and current problems of Indiana government. Readings, case studies, problems.

Y308 Urban Politics (3 cr.)

Political behavior in modern American communities; emphasizes the impact of municipal organization, city officials and bureaucracies, social and economic notables, political parties, interest groups, the general public, and protest organizations on urban policy outcomes.

Y310 Political Behavior (3 cr.)

P: Y205. A research course in which students design and execute their own investigations into political phenomena.

Y311 Democracy and National Security (3 cr.)

Exploration of a basic dilemma of a democratic polity: How can demands for national security be reconciled with democratic practices and values? Concepts of civil-military relations, national security structure, professional and political commitments of the military, human resource utilization, popular control of policy, and the nature of individual liberty.

Y313 Environmental Policy (3 cr.)

Examines the causes of environmental problems and the political, economic, social, and institutional questions raised by designing and implementing effective policy responses to these problems.

Y314 Global Environmental Policy (3 cr.)

Examines the politics of global environmental problems. Assesses the causes, nature, and consequences of these problems, existing and potential institutional and legal responses, and the possibility of reconciling conflicts surrounding the management of shared resources and the global commons.

Y317 Voting, Elections, and Public Opinion

(3 cr.) Determinants of voting behavior in elections.

The nature of public opinion regarding major domestic and foreign policy issues; development of political ideology; other influences on the voting choices of individuals and the outcomes of elections; relationships among public opinion, elections, and the development of public policy.

Y319 The United States Congress (3 cr.)

This course offers students the opportunity to study the legislative branch of American national government. It includes the structure and processes of the Senate and House of Representatives, the role of parties, interest groups, and lobbyists, the legislative process, and the relations of Congress with the other branches of government.

Y320 Judicial Politics (3 cr.)

Examines the American judicial system in the contemporary context. Analysis of the trial and appellate courts with a focus on the United States Supreme Court. Topics include analyses of the structure of the judicial system, the participants in the system, and the policy-making processes and capabilities of the legal system. The course concludes with an assessment of the role of courts in a majoritarian democracy.

Y321 The Media and Politics (3 cr.)

Examines the contemporary relationship between the media and politics, including politicians' use of the media, media coverage of governmental activities, and media coverage of campaigns and elections. Course focuses primarily on the United States, but includes comparative perspectives.

Y322 The American Presidency (3 cr.)

This course examines the evolution of the presidency and its impact on the rest of the American political system. Students will study presidential selection, succession, and powers, the president's relationship to the rest of the government, and the legacy of presidents from George Washington to Bill Clinton.

***Y324 Women and Politics (3 cr.)**

Analysis of women in contemporary political systems, domestic or foreign, with emphasis on political roles, participation, and public policy. Normative or

empirical examination of how political systems affect women and the impact women have on the system(s). Topics vary by semester. May be repeated once for credit with a different topic.

***Y332 Russian Politics (3 cr.)**

Political process and government structure in the Russian state. Political institutions inherited from tsarist empire and the Soviet state (1917-1991), history of subsequent political reform. Political problems of ethnic conflict, creating democratic institutions, and transition from socialism to market economy.

Y335 West European Politics (3 cr.)

Development, structure, and functioning of political systems, primarily in France, Italy, and Germany. Political dynamics of European integration.

Y336 Southeast Asian Political Systems (3 cr.)

Covers the governmental organization, and the political behavior and traditions, of countries in the Southeast Asian region. Addresses regional issues of political and economic development, and international issues regarding the relationship of the region to the rest of the world.

***Y337 Latin American Politics (3 cr.)**

Comparative analysis of political change in major Latin American countries, emphasizing alternative explanations of national and international developments; examination of impact of political parties, the military, labor and peasant movements, Catholic church, multinational corporations, regional organizations, and United States on politics; public policy processes in democratic and authoritarian regimes.

Y338 African Politics (3 cr.)

Politics in contemporary sub-Saharan Africa. Topics include processes of nation building, dependency and underdevelopment; role of political parties, leadership, ideology, and military rule; continuing relevance of colonial heritage and traditional culture; network of international relations; and special situation of South Africa.

Y339 Middle Eastern Politics (3 cr.)

Political culture and change in selected Middle Eastern and North African countries. Topics include political elites, traditional cultures, modern political ideology, institutions of political control, conflict management, and social reform policies.

***Y341 Authoritarian Regimes (3 cr.)**

Comparative study of fascism, Nazism, and communism as institutional arrangements for governing modern societies. The political process in the one-party "movement regime."

***Y343 Developmental Problems of the Third**

World (3 cr.) Economic, political, and social change in less developed countries. Problems of measurement, control and explanation of economic development, and interrelated political-administrative change. Internal and external pressures on development.

***Y345 Contemporary Revolutions (3 cr.)**

A comparative study of revolutions and revolutionary movements in the twentieth century, incorporating (a) case studies, encompassing developing and defeated movements as well as victorious ones, and

(b) comparative treatment of selected “issues in revolution” (e.g., popular participation; organization and leadership; treatment of opposition; economic and cultural transformation).

Y350 European Integration (3 cr.) Study of the politics of the European Union (EU). This course assesses the process and dynamics of economic and political integration in Western Europe, the structure and work of EU institutions, and public policies of the EU.

Y351 Political Simulations (1-3 cr.) A course tied to simulations of political organizations such as the European Union, the United Nations, or the Organization of American States. May be taken alone or in conjunction with related political science courses. May be repeated for credit.

Y360 U.S. Foreign Policy (3 cr.) Analysis of institutions and processes involved in the formation and implementation of American foreign policy. Emphasis is on post–World War II policies.

***Y371 Workshop in International Topics and American Foreign Relations (3 cr.)** Sovereignty, nationalism, imperialism, collective security, race, culture, international trade, population, war.

Y373 American Politics through Film and Fiction (3 cr.) Recurrent themes of politics are explored in depth—by means of novels, short stories, and films. Subject matter varies by semester—check class schedule for current semester.

Y374 International Organization (3 cr.) Examines assumptions about the causes, functions, results, and structures of international (intergovernmental) organizations. Theory is combined with case study of the United Nations particularly. The European Community and regional organization examples provide a basis for understanding an evolving phenomenon.

Y376 International Political Economy (3 cr.) Theories about the interaction between the international economic and political systems are the subject of this course. Works from each of the main traditions—liberal, Marxist, and statist—will be assigned. Specific topics covered will include the politics of trade, aid, foreign investment, and international monetary affairs; theories of dependency and imperialism; the politics of international competition in specific industries; the stability/instability of international economic regimes.

Y378 Problems in Public Policy: (variable title) (3 cr.) Examines various substantive problems in the formulation of and conceptualization of public policy. Both the policy and its impact are considered in the context of the entire political environment in which it operates. Examples are selected from various levels of government, not always confined to the United States. May be repeated once for credit.

Y380 Selected Topics in Democratic Government: (variable title) (3 cr.) An examination of basic problems and issues in the theory and practice of democratic government. Specific topics vary by semester. May be repeated once for credit.

Y381 History of Political Theory I (3 cr.) An exposition and critical analysis of the major political philosophers and philosophical schools from Plato to Machiavelli.

Y382 History of Political Theory II (3 cr.) An exposition and critical analysis of the major philosophers and philosophical schools from Machiavelli to the present.

Y383 American Political Ideas I (3 cr.) American political ideas from the founding period to the Civil War.

Y384 American Political Ideas II (3 cr.) American political ideas from the Civil War to the present.

Y391 Political Decision Making (3 cr.) Survey of formal models of decision making in the political process: strategy, bargaining, and coalitions. Theories of rational choice in politics. Applications of game theory to the study of politics.

***Y394 Public Policy Analysis (3 cr.)** Place of theory and method in examining public policies in relation to programs, institutional arrangements, and constitutional problems. Particular reference to American political experience.

Y480 Undergraduate Readings in Political Science (1-6 cr.) Individual readings and research.

Y481 Field Experience in Political Science (3-6 cr.) P: certain internship experiences may require research skills. Faculty-directed study of aspects of the political process based on field experience. Directed readings, field research, research papers.

Y490 Senior Seminar (3 cr.) Open only to senior majors. Research paper required. Seminar sessions arranged to present papers for evaluation and criticism by fellow students.

Y498 Readings for Honors (1-6 cr.) Open only to senior majors in the department who have at least a 3.3 grade point average within the major; approval of department is required. Course involves an intensive individual program of reading and/or research.

Y570 Introduction to the Study of Politics (3 cr.) Problems of graduate study and professional scholarship; central organizing concepts and the use of theory in political science and related disciplines; specialized areas of research and scholarship in political science; conditions of scientific inquiry and methodological problems in the study of political phenomena; central importance of theory in explanation.

Y575 Political Data Analysis I (3 cr.) Basic quantitative analysis techniques applied to political science data: principles of measurement, tables, graphs, probability distributions, nonparametric statistics, matrix algebra, Markov chains, correlations and simple regression, tests of significance. Computer processing of data and applications of bivariate statistics to problems in political science emphasized.

Religious Studies

Chair Professor Rowland A. Sherrill

Professors William J. Jackson, E. Theodore Mullen Jr., Rowland A. Sherrill

Associate Professors Thomas J. Davis, Philip K. Goff

Assistant Professor David M. Craig

Academic Advising: Cavanaugh Hall 335, (317) 274-1465

Religious studies offers students opportunities to explore the patterns and dimensions of the many different religious traditions of the world from the perspectives of the academic study of religion. The courses are designed to help students develop basic understandings of the many ways in which religions shape personal views of the world, create and sustain the communities in which we live, and interact with politics, economics, literature and the arts, and other structures of society. Through this curriculum, students are provided the skills that will allow them to understand religions as a part of the study of human history and traditional and nontraditional values. The department offers both a major and a minor, allowing students to investigate religious phenomena in depth and encouraging connections with other areas of the humanities and social sciences.

Program Planning

In the degree programs, the Department of Religious Studies pays special attention to the student's expressed hopes and plans, and the faculty counsels its majors carefully toward that end. Thus, students can construct undergraduate programs of study that meet both personal goals and the faculty's sense of what constitutes a coherent and focused concentration in religious studies. With these possibilities in mind, students are encouraged to declare their intentions to major as early as possible in their college careers.

Those students who choose to major in the department are invited first to explore courses, designated by the faculty, to introduce the wide breadth of concerns that belong to the field—religious, social, and comparative ethics; scriptures and traditions; South Asian and comparative studies; religion and American literature and culture.

On the basis of these studies, students are then able to pursue more specialized courses of inquiry, depending on their personal interests and concerns. The faculty stands prepared to help in this regard by presenting more selective and rigorous options within the department, by helping to locate ties with cognate areas in other departments and schools, and by working with upper-level students in courses of independent study.

Major in Religious Studies

Requirements

Beyond the general distribution and credit hour requirements for the Bachelor of Arts degree, students who choose to major in religious studies will be asked to complete 30 credit hours of course work designated by the faculty as follows: 15 credit hours will be selected from the category of “Religious Traditions” and 12 credit hours from “Comparative

and Thematic Studies"; 3 credit hours in the departmental senior seminar (R433); and at least 18 credit hours are to be taken at the 300 level or above. For details concerning the designated courses and the junior-level courses, students should contact the departmental chairperson.

Double Majors

Students wishing to acquire double majors in religious studies and a second subject area will need to fulfill all of the above requirements, as well as those of the second subject area; will need an academic advisor for each major; and will need to file their plans for a double major with the recorder of the School of Liberal Arts.

Minor in Religious Studies

A minor in religious studies, recorded on a student's transcript, will ordinarily require that the student fulfill 15 credit hours in courses in the department, divided as follows: 15 credit hours from the departmental curriculum approved by the departmental advisor; at least 3 of these credits must be taken at the 100 level and 6 credit hours at the 300 level. For details, students should contact the departmental chairperson.

Courses

R100 Studies in Religion (3 cr.) Select introductory issues in religion. Interdisciplinary in emphasis. May be repeated for up to 9 credit hours under different titles.

R111 The Bible (3 cr.) A critical introduction to the major periods, persons, events, and literatures that constitute the Bible; designed to provide general humanities-level instruction on this important text.

R120 Images of Jesus (3 cr.) This course is designed to introduce students to the variety of traditions about the figure of Jesus. It will acquaint students with the wide array of images of the Jesus character through a historical analysis of these images portrayed in texts, art, music, film, and TV.

R133 Introduction to Religion (3 cr.) Introduction to the diversity of traditions, values, and histories through which religion interacts with culture. Emphasis on understanding the ways the various dimensions of religion influence people's lives.

R173 American Religion (3 cr.) A consideration of American religion, with particular emphasis on the development of religious diversity and religious freedom in the context of the American social, political, and economic experience. Special attention will be directed to changes in Roman Catholicism and Judaism as well as to alterations in the nature of American Protestantism.

R180 Introduction to Christianity (3 cr.) Survey of beliefs, rituals, and practices of the Christian community with a focus on the varieties of scriptural interpretation, historical experience, doctrine, and behavior.

***R200 Studies in Religion (3 cr.)** Select intermediate studies in religion. Interdisciplinary studies emphasized. May be taken for up to 9 credit hours under different titles.

R212 Comparative Religions (3 cr.) Approaches to the comparison of recurrent themes, religious attitudes, and practices found in selected Eastern and Western traditions.

R223 Religion and Imagination (3 cr.) Introductory studies of the nature, function, and significance of myths, symbols, and images in religious and cultural systems, with examples drawn from various traditions and with special attention devoted to their relationships to the contemporary imagination.

R283 Religions, Ethics, and Values (3 cr.) Cultural, historical, logical, psychological, and social relationships between religious and social as well as personal moral values and systems of ethics in traditional and contemporary Western culture.

R293 Ethics of World Religions (3 cr.) Key figures, literatures, movements, and changes in the world's major systems of religious ethics, with select illustrations drawn both from Asia (Hindu, Buddhist, Confucian, Taoist) and the West (Jewish, Christian, Muslim).

***R300 Studies in Religion (3 cr.)** Selected topics and movements in religion, seen from an interdisciplinary viewpoint. May be repeated twice under different titles.

R303 Religions in the Making (3 cr.) Examination within a broad historical and social-scientific framework of selected religions at the time of formulation and/or during periods of substantive change. Considered will be exemplary ancient and modern movements drawn both from literate and preliterate cultures and from Eastern and Western religious traditions.

R310 Prophecy in Ancient Israel (3 cr.) The prophetic movement and its relationship to religious, social, and political traditions and institutions in the ancient Near East. The thought of major prophetic figures in Israel, such as Hosea, Isaiah, Jeremiah, Ezekiel.

R312 American Religious Lives (3 cr.) A study of selected persons who shaped the religious ideas and practices of the American people. The course correlates the lives, ideas, and social contexts of influential religious leaders in the United States. Figures such as Jonathan Edwards, Abraham Lincoln, Dorothy Day, Isaac M. Wise, and Martin Luther King Jr. will be included.

R313 Religion and American Ideas (3 cr.) Studies of the major figures and works of the American literary and theological traditions, with focus on the ways the literary imagination has variously expressed, explored, and challenged the religious meanings of the American experience.

R315 Hebrew Bible (3 cr.) A critical examination of the literary, political, and religious history of Israel from the period of the Patriarchs to the Restoration, with emphasis on the growth and formation of the major traditions contained in the Hebrew Bible.

R316 New Testament (3 cr.) An examination of the history, culture, and literature of the New Testament period, with special emphasis on the emergence of early Christian beliefs.

R319 Origins of Israel (3 cr.) An investigation of the problems involved in the reconstruction of early Israelite history, religion, and society. Major emphasis on the ways in which modern scholarship has attempted to interpret the biblical traditions dealing with the Patriarchs, the exodus-Sinai events, and the settlement in the land.

R320 Development of the Jesus Traditions (3 cr.) Types of traditions about Jesus: their origins, development, and functions in early Christianity, compared with similar forms of traditions in non-Christian movements.

R325 Paul and His Influence in Early Christianity (3 cr.) Life and thought of Paul, in the context of first-century Christian and non-Christian movements. Development of radical Paulinism and anti-Paulinism in the second century; their influence on the formation of Christianity.

R326 Studies in Biblical Religion (3 cr.) Examination of selected major topics in the religious traditions contained in the biblical materials. Topics such as the following will be treated: early Hebrew traditions and heroes, the kings of Israel, the development of apocalyptic literature, the period between the testaments, the development of Christology, the Johannine School, and others. May be taken twice for credit under different topics.

R329 Early Christianity (3 cr.) This course introduces the religious world of early Christianity by examining its formation and development. The course emphasizes intellectual history while placing religious ideas in historical, cultural, social, and economical contexts. It underscores diversity and explores how ideas shape religious faith, how religious practice guides religious thinking, and how culture and religion interact.

R339 Varieties of American Religion (3 cr.) Approaches to the diversity and complexity of that part of American religion that has existed outside of the mainstream of U.S. church life. Emphasis on the origin, history, organizational structures, beliefs, and devotional practices of such groups as the Quakers, Shakers, Millerites and other millenarian sects, Mormons, Christian Scientists, Pentecostals, as well as groups whose orientation is Eastern rather than Western.

R343 Religion and Contemporary Thought (3 cr.) Contemporary religious and anti-religious thinkers, with emphasis on those whose writings have significantly influenced modern thinking about human beings, God, society, history, and ethics.

R344 Reformations of the Sixteenth Century (3 cr.) This course introduces students to the religious reformations of sixteenth-century Europe. It examines the historical background to the Reformation and surveys a number of reformation movements. While intellectual history is emphasized, the ideas of religious thinkers are placed in broad historical, cultural, social, and economic contexts.

R346 Religious Women in the United States (3 cr.) The study of women's roles in several different religions. Focus on women's religious roles in the U.S. today, women's efforts to interpret and revise their religions, and ideas about women that characterize

various religious traditions. Involves oral history interviewing as well as a formal regimen of scholarly study.

R352 Religion and Literature in Asia (3 cr.) The treatment of religious issues in Asian literature (Hinduism in the Epics) or the significance of the literary forms of religious texts (the genre of recorded sayings), showing how the interplay of religious realities and literary forms reveals the dynamics of religious development in India, China, or Japan.

R361 Hinduism and Buddhism (3 cr.)

Examination of the origins and cultural developments of classical Hinduism and Buddhism through studies of selected lives and writings, religious practices, and symbolism in the arts through explorations of these two worldviews as reflected in historical, literary, and ritual forms.

R366 Religion and Civil Society (3 cr.) An examination of religion as a social institution that operates in civil society—that public space where people come together to promote mutual interests, voice common concerns, and even protest against ruling authorities. The focus is on the operation of, and the problems arising from, religion and civil society in different cultural settings, notably the United States and Middle East.

R383 Religions, Ethics, U.S. Society (3 cr.) The foundations for and applications of religious ethical positions on social justice issues in education, economics, family life, government, and politics.

R384 Religions, Ethics, and Health (3 cr.) The positions of religious ethical traditions on issues such as the control of reproduction, experimentation with human subjects, care of the dying, delivery of health care, physical and social environments, and heredity. May be repeated once for credit under different focus.

R393 Comparative Religious Ethics (3 cr.)

Comparisons of key figures, issues, and themes in the social-ethical systems of the world religions. To include intracultural studies of American Jewish and Christian positions on social questions and cross-cultural studies of similar positions in Asian and Western traditions.

***R400 Studies in Religion (3 cr.)** Specialized and intensive studies in religion with an interdisciplinary emphasis. May be repeated twice under different titles.

R433 Senior Capstone Tutorial (3 cr.)

An integrative and summative course of study in which majors, in cooperation with a faculty member, shall develop a hypothesis about the interaction of several dimensions of religion and about the ways in which they both mirror and shape social and cultural forms.

R590 Directed Readings in Religious Studies (3 cr.)

Sociology

Chair Associate Professor David A. Ford

Professors Carol B. Gardner, Linda Haas, John T. Liell (Emeritus), Suzanne K. Steinmetz, Robert J. White, Colin Williams

Associate Professors Robert Aponte, David Ford, William Gronfein, Ain Haas, Jay Howard, David Moller, Peter Seybold, Patricia Wittberg, Eric Wright

Assistant Professor Wan-Ning Bao

Adjunct Professor J. Herman Blake

Adjunct Associate Professors Wolfgang Bielefeld, Betsy Fife, Timothy Owens, Gail Whitchurch

Lecturer James Hunter

Academic Advising: Cavanaugh Hall 303, (317) 274-8981

The Department of Sociology has a two-fold mission: (1) to provide courses in sociology to all segments of the university, thereby acquainting the general student with the unique perspective and uses of sociology; and (2) to prepare sociology majors for advanced study or careers in sociology or related fields.

Sociology courses are designed to take advantage of the unique resources of an urban campus. The curriculum emphasizes the applied aspects of sociology as well as those segments of sociology necessary for advanced study. Courses in sociology serve to broaden the understanding of all students and should be of particular interest to students preparing for careers in professional social science, education, government, law, criminal justice, urban affairs, social service, medical service fields, and business. In an ever-changing environment, the Department of Sociology strives to provide students with diverse educational experiences, including traditional education and fieldwork and/or survey research experience. Undergraduate majors are encouraged to participate in internships and research projects as part of their educational experience.

Major in Sociology

Requirements

The major requires 33 credit hours of sociology course work (12 of which must be completed at IUPUI), with a grade of C (2.0) or better:

R100 Introduction to Sociology (3 cr.)
R351 Social Science Research Methods (3 cr.)
R356 Foundations of Social Theory (3 cr.)
R357 Contemporary Sociological Theory (3 cr.)
R359 Introduction to Sociological Statistics (3 cr.)

Capstone course selected from one of the following:

R494 Internship Program in Sociology (3 cr.)
R497 Individual Readings in Sociology (3 cr.)
R493 Practicum in Sociological Fieldwork (3 cr.)
R490 Survey Research Methods (3 cr.)
R481 Evaluation Research Methods (3 cr.)

15 additional credit hours of other sociology courses

Minor in Sociology

A general minor in sociology will allow students in a variety of fields to expand their liberal arts education within an area that complements their general major or program of professional training.

Requirements

The minor requires 15 credit hours of course work (6 of which must be completed at IUPUI), with a grade of C (2.0) or better:

R100 Introduction to Sociology (3 cr.)

R351 Social Science Research Methods *or*

R356 Foundations of Social Theory *or*

R357 Contemporary Social Theory (3 cr.)

9 additional credit hours of sociology courses will be required, with 6 of those credit hours at the 200-400 level.

Minor in Medical Sociology

Considering the unique resources and needs of IUPUI, the Department of Sociology offers a minor in medical sociology. This program is designed to lead to a general understanding of the social context of health, health care, and the delivery of medical services and should be of special interest to all students majoring in health-related specialties.

Requirements

The minor requires 15 credit hours of course work (6 of which must be completed at IUPUI), with a grade of C (2.0) or better:

R100 Introduction to Sociology (3 cr.)

R381 Social Factors in Health and Illness (3 cr.)

R382 Social Organization of Health Care (3 cr.)

6 additional credit hours of sociology courses selected from the following:

R285 AIDS and Society, R320 Sexuality and Society, R321 Women and Health, R327 Sociology of Death and Dying, R415 Sociology of Disability, R485 Sociology of Mental Illness

Master of Arts Degree

The Master of Arts program is specifically designed to prepare its students for non-academic careers conducting applied and policy-oriented research, and to equip those already in the workforce with the critical skills necessary for assessing and applying sociological knowledge in their everyday responsibilities. Currently, the program features two formal areas of concentration—family studies and medical sociology.

Admission Requirements

Applicants must have a baccalaureate degree from an accredited U.S. institution, or a certifiable foreign equivalent, with a grade point average of 3.0 (on a scale of 4.0). Applicants should have completed five undergraduate sociology courses (or approved equivalents, with no more than two of the latter). They must have received Graduate Record Exam (GRE) scores at or above the 50th percentile. In addition, two samples of writing (a 500-word essay required by the IU Graduate School and a sole-authored report or term paper required by the sociology department) must accompany the application forms. Foreign applicants are required to score at least 550 on the Test of English as a Foreign Language (TOEFL). Students not meeting these requirements may be admitted on probation, or they may be required to enroll in courses as a graduate non-degree student to complete the prerequisites.

Degree Requirements

36 credit hours, distributed as follows:

12-credit core

R551 Sociological Research Methods (3 cr.)

R556 Advanced Sociological Theory I: The Classical Tradition (3 cr.) or R557 Advanced Sociological Theory II: The Modern Tradition (3 cr.)

R559 Sociological Statistics (3 cr.)

R593 Applied Fieldwork for Sociologists (3 cr.)

12 credits in an area of concentration (family studies, medical sociology, or other approved topic in applied sociology)

9 credits of electives

3 credit thesis

Grades

In order to earn the M.A. in Sociology, students must maintain a minimum GPA of 3.0 on a 4.0 scale. Grades in courses counting for credit toward this degree may be no lower than C (2.0 on a 4.0 scale).

Course Load

The normal course load for full-time students is 3 courses (9 credit hours) each semester. For part-time students it is 1-2 courses (3-6 cr.) each semester. Course loads may vary for students with assistantships and fellowships.

Transfer Credits

The Graduate School limits transfers from other institutions to 8 credits with a grade of B or above and will not accept correspondence courses. Graduate work with a grade of B or higher obtained from other IU locations may be applied toward an M.A. in Sociology. Requests for transfer credit from other graduate institutions will be evaluated for acceptance by the graduate committee after a student has been admitted into and completed 6 credits in the IUPUI sociology M.A. program. The department requires the last 18 credits be completed in its program.

Time Limit

Students must complete all requirements for the M.A. degree within five years.

Financial Aid

Stipends of various amounts for teaching and research assistantships are available. Please contact the Department of Sociology for more information.

Undergraduate Courses

R100 Introduction to Sociology (3 cr.) P: W131 or consent of the instructor. Consideration of basic sociological concepts, including some of the substantive concerns and findings of sociology, sources of data, and the nature of the sociological perspective.

R121 Social Problems (3 cr.) P: R100 or consent of the instructor. Selected current "problems" of American society are analyzed through the use of basic sociological data and the application of major sociological frameworks. Policy implications are discussed in light of value choices involved in various solutions.

R220 The Family (3 cr.) P: R100 or consent of the instructor. The family as a major social institution and how it relates to the wider society. Formation of

families through courtship, marriage, and sexual behavior; maintenance of families through childrearing and family interaction; and dissolution of families by divorce or death. Social change and the emergence of new familial patterns.

R234 Social Psychology (3 cr.) P: R100 or consent of the instructor. Sociological approach to human character, with emphasis on the psychology of the individual in social situations. Topics include socialization and the self, language and communication, interpersonal relations, attitude formation, conformity and social influence, and group processes.

R239 Alienation and Anxiety in Modern Society (3 cr.) P: R100 or consent of the instructor. A review of alienation as a concept of social criticism. Using classical thinking and contemporary literature, this course evaluates the sociological tradition that argues modern humans are alienated and desperate.

R240 Deviance and Social Control (3 cr.) P: R100 or consent of the instructor. An introduction to major sociological theories of deviance and social control, analyzes empirical work done in such areas as drug use, unconventional sexual behavior, family violence, and mental illness. Explores both "lay" and official responses to deviance, as well as cultural variability in responses to deviance.

R285 AIDS and Society (3 cr.) P: R100 or consent of the instructor. This course examines the HIV/AIDS epidemic from a sociological perspective. Students will explore how social factors have shaped the course of the epidemic and the experience of HIV disease. The impact of the epidemic on health care, government, and other social institutions will also be discussed.

R295 Topics in Sociology (3 cr.) P: R100 or consent of the instructor. Exploration of a topic in sociology not covered by the regular curriculum but of interest to faculty and students in a particular semester. Topics to be announced.

R305 Population (3 cr.) P: R100 or consent of the instructor. Focus on study of people in terms of relative numbers, geographic distribution, and factors influencing change. Included are considerations of population theory, values related to population questions, an overview of basic techniques of analysis, and mortality, fertility, migration, and growth trends.

R312 Sociology of Religion (3 cr.) P: R100 or consent of the instructor. Examination of religion from the sociological perspective. Religious institutions, the dimensions of religious behavior, the measurement of religious behavior, and the relationship of religion to other institutions in society are examined.

R315 Sociology of Power (3 cr.) P: R100 or consent of the instructor. Analysis of the nature and basis of political power on the macro level—the community, the national, and the international arenas. Study of formal and informal power structures and of the institutionalized and noninstitutionalized mechanisms of access to power.

R316 Society and Public Opinion (3 cr.) P: R100 or consent of the instructor. Analysis of the

formulation and operation of public opinion. Although the course may focus on all aspects of opinion and behavior (including marketing research, advertising, etc.), most semesters the course focuses on political opinion and behavior. Special attention will be given to two aspects of opinion in our society: its measurement through public opinion polls and the role of mass communication in manipulating public opinion. The distortions in the popular press's reports of the results of survey research are considered in depth.

R317 Sociology of Work (3 cr.) P: R100 or consent of the instructor. Analysis of the meaning of work, the dynamic social processes within work organizations, and environmental constraints on organizational behavior.

R320 Sexuality and Society (3 cr.) P: R100 or consent of the instructor. Provides a basic conceptual scheme for dealing with human sexuality in a sociological manner.

R321 Women and Health (3 cr.) P: R100 or consent of the instructor. A review of the relationships among cultural values, social structure, disease, and wellness, with special attention focused on the impact of gender role on symptomatology and access to health care. Selected contemporary health problem areas will be examined in depth. Alternative models of health care delivery will be identified and discussed.

R325 Gender and Society (3 cr.) P: R100 or consent of the instructor. A sociological examination of the roles of women and men in society, analysis of the determinants and consequences of these roles, and assessment of forces likely to bring about future change in these roles. Although focus will be on contemporary American society, cross-cultural variations in gender roles will also be noted.

R327 Sociology of Death and Dying (3 cr.) P: R100 or the consent of the instructor. This course examines inevitable and salient features of the human condition. Historical evaluation of images and attitudes toward death, the medicalization of death, the human consequences of high-tech dying, the role of the family in caring for dying loved ones, the emergence and role of hospices, the social roles of funerals, grief and bereavement, euthanasia and suicide, the worlds of dying children and grieving parents, and genocide are major issues that are addressed. Two of the major themes of the course revolve around the idea that the way we die is a reflection of the way we live; and, that the study of dying and death is an important way of studying and affirming the value of life.

R329 Urban Sociology (3 cr.) P: R100 or consent of the instructor. The social dynamics of urbanization, urban social structure, and urban ecology. Theories of urban development; the city as a form of social organization; macroprocesses of urbanization both in the U.S. and other countries.

R330 Community (3 cr.) P: R100 or consent of the instructor. Social, psychological, and structural features of community life. Topics include microphenomena such as the neighborhood, networks of friendship and oppositions, social participation, community power structure, and institutional framework.

R335 Sociological Perspectives on the Life Course (3 cr.) P: R100 or consent of the instructor. Focuses on the human life course as a product of social structure, culture, and history. Attention is given to life course contexts, transitions, and trajectories from youth to old age; work, family, and school influences; self-concept development, occupational attainment, and role acquisition over the life course.

R338 Comparative Social Systems (3 cr.) P: R100 or consent of the instructor. History and general theories of comparative sociology. Major focus on comparative analyses of social structure, kinship, policy and bureaucracy, economics and stratification, and institutionalized belief systems. Some attention is given to culture and personality and to cross-cultural methodology.

R344 Juvenile Delinquency and Society (3 cr.) P: R100 or consent of the instructor. Legal definition of delinquency, measurement and distribution of delinquency. Causal theories considered for empirical adequacy and policy implications. Procedures for processing juvenile offenders by police, courts, and prisons are examined.

R345 Crime and Society (3 cr.) P: R100 or consent of the instructor. Examination of the creation, selection, and disposition of persons labeled criminal. Emphasis on crime as an expression of group conflict and interest. Critique of academic and popular theories of crime and punishment.

R346 Control of Crime (3 cr.) P: R100 or consent of the instructor. History, objectives, and operation of the crime control system in relation to its sociopolitical context. Critical examination of philosophies of punishment and programs of rehabilitation.

R349 Practicum in Victimology (3 cr.) P: R100 or consent of the instructor. The role of the victim in the criminal justice system is examined through both course work and practical experience as a volunteer with the Marion County Prosecutor's Witness-Victim Assistance Program. Recommended for students with interest in deviance, criminology, law, criminal justice, and social service.

R351 Social Science Research Methods (3 cr.) P: R100 or consent of the instructor and sophomore standing. A survey of methods and techniques used by sociologists and other social scientists for gathering and interpreting information about human social behavior.

R356 Foundations of Social Theory (3 cr.) P: R100 or consent of the instructor. Examination of the fundamental issues and perspectives in classical theories. Special focus will be on analysis of the major nineteenth-century theories that influenced later sociological thought.

R357 Contemporary Sociological Theory (3 cr.) P: R100, R356, or consent of the instructor. Emphasis on theoretical developments of the twentieth century and the relationships of current theories to classical theories.

R359 Introduction to Sociological Statistics (3 cr.) P: R100, R351, or consent of the instructor. Measures of central tendency, dispersion,

standardizing and normalizing procedures, and simple index numbers. Simple notions of probability as related to statistical inference (means, proportions, binomial distribution, chi-square, simple regression).

R381 Social Factors in Health and Illness (3 cr.) P: R100 or consent of the instructor. Examines the social aspects of health and illness, including variations in the social meanings of health and illness, the social epidemiology of disease, and the social dimensions of the illness experience.

R382 Social Organization of Health Care (3 cr.) P: R100 or consent of the instructor. Surveys the nature of and recent changes in the health care delivery system in the United States. Patient and professional roles and the characteristics of different health care settings are explored. Current debates about the nature of the professions and professional work are emphasized.

R410 Alcohol and Society (3 cr.) P: R100 or consent of the instructor. This is a survey of the use and abuse of alcohol, including extent of use, history of use and abuse, "biology" of alcohol, alcoholism as a problem, legal actions, and treatment strategies.

R415 Sociology of Disability (3 cr.) P: R100 or consent of the instructor. An examination of current models of disability and of disability at the interpersonal and societal level. Topics include recent legal, social, and educational changes; the ways in which people with disabilities interact with the nondisabled; the role played by relatives and caregivers; and the image of people with disabilities in film, television, and other media. Recommended for students in nursing, education, physical and occupational therapy, and social work, as well as for the medical sociology minor. Available for graduate credit.

R420 Sociology of Education (3 cr.) P: R100 or consent of the instructor. A survey of sociological approaches to the study of education, covering such major topics as (a) education as a social institution, (b) the school of society, (c) the school as a social system, and (d) the sociology of learning.

R425 Gender and Work (3 cr.) P: R100 or consent of the instructor. This course examines the changing world of women's paid and unpaid work, primarily in the United States. The impact of race and social class on women's work will be covered, as will women's experiences as activists for social change.

R430 Families and Social Policy (3 cr.) P: R100 and R220 or consent of the instructor. This seminar explores how the state and labor market currently affect family structure and the quality of family life in the U.S. and the role the state and labor market could play in the future. Family policies in other parts of the world will be considered for possible applicability to the U.S.

R461 Race and Ethnic Relations (3 cr.) P: R100 or consent of the instructor. Comparative study of racial, ethnic, and religious relations. Focus on patterns of inclusion and exclusion of minority groups by majority groups. Discussion of theories of intergroup tensions—prejudice and discrimination—and of corresponding approaches to the reduction of tensions.

R463 Inequality and Society (3 cr.) P: R100 or consent of the instructor. Presentation of conservative and radical theories of class formation, consciousness, mobility, and class consequences. Relevance of social class to social structure and personality. Emphasis on the American class system, with some attention given to class systems in other societies.

R467 Social Change (3 cr.) P: R100 or consent of the instructor. Basic concepts, models, and individual theories of social change; historical and contemporary analysis of the structural and psychological ramifications of major social trends.

R476 Social Movements (3 cr.) P: R100 or consent of the instructor. Study of the origins and dynamics of contemporary social movements in American society, with some attention to cross-national movements. Coverage of progressive and regressive movements aimed at changing the social, economic, and political structure of the society. Case studies of expressive and ideological movements, including fads, cults, and revolts and revolutions.

R478 Formal Organizations (3 cr.) P: R100 or consent of the instructor. Sociological inquiry into the nature, origin, and functions of bureaucratic organizations. Emphasis on bureaucratic organizations as the predominant mode of contemporary task performance and on their social-psychological consequences. Theoretical and empirical considerations in organizational studies from Weber to contemporary findings.

R480 Sociology and Social Policy (3 cr.) P: R100 or consent of the instructor. This course is a broad review of the increasing use of sociology in the formulation and implementation of social policy. Specific case studies will be examined. Recommended for students with an interest in medicine, law, education, social service, urban affairs, etc.

R481 Evaluation Research Methods (3 cr.) P: R100, R351, R359, or consent of the instructor. A comprehensive study of research techniques and practical applications in the area of the evaluation of social programs. Recommended for students with an interest in social research concerning medicine, law, education, social service, urban affairs, etc.

R485 Sociology of Mental Illness (3 cr.) P: R100 or consent of the instructor. A survey of current problems in psychiatric diagnosis, the social epidemiology of mental illness, institutional and informal caregiving, family burden, homelessness, and the development and impact of current mental health policy. Cross-cultural and historical materials, derived from the work of anthropologists and historians, are used throughout the course.

R490 Survey Research Methods (3 cr.) P: R100, R351, R359, or consent of the instructor. In this practicum, students will design and conduct a survey, learn how to code survey results, enter data, and analyze data with the mainframe computer. A report will also be written. The advantages and disadvantages of survey methodology will be highlighted and ethical issues will be discussed.

R493 Practicum in Sociological Fieldwork (3 cr.) P: R100 and R351, senior standing or consent

of the instructor. Role of systematic observation as a sociological method. Training in fieldwork techniques and the application of sociological concepts to actual social situations. The core of this course will involve a supervised fieldwork research project in some area of social life.

R494 Internship Program in Sociology (3-6 cr.)

P: R100, 9 cr. of sociology with a C (2.0) or better, junior standing with consent of the instructor. This course involves students working in organizations where they apply or gain practical insight into sociological concepts, theories, and knowledge. Students analyze their experiences through work logs, a paper, and regular meetings with the internship director.

R495 Topics in Sociology (3 cr.) P: Variable with topic. Exploration of a topic in sociology not covered by the regular curriculum but of interest to faculty and students in a particular semester. Topics to be announced.

R497 Individual Readings in Sociology (3 cr.)

P: consent of instructor and 9 credit hours of sociology courses with at least a C grade. Investigation of a topic not covered in the regular curriculum that is of special interest to the student and that the student wishes to pursue in greater detail. Normally available only to majors through arrangement with a faculty member.

Graduate Courses

S500 Proseminar in Sociology (1 cr.) P: graduate standing and/or consent of the instructor.

Introduction to current sociological research interests and concerns through the work of departmental members.

R515 Sociology of Health and Illness (3 cr.)

Surveys important areas of medical sociology, focusing on social factors influencing the distribution of disease, help-seeking, and health care. Topics covered include social epidemiology, the health-care professions, socialization of providers, and issues of cost and cost containment.

R525 Gender and Work (3 cr.) P: graduate standing and 6 credit hours of sociology, or consent of the instructor. This course explores the historical and contemporary trends in women's paid and unpaid work, and the causes and consequences of sex segregation in the labor force and in the home. An emphasis will be placed on understanding and critically analyzing contemporary theory and research on the subject.

S526 The Sociology of Human Sexuality (3 cr.)

P: graduate standing and consent of the instructor. This is a one-semester graduate-level course on the sociology of human sexuality. This course will provide (a) a detailed examination of the development of sex research, (b) a sociological perspective on and critique of this corpus, and (c) an opportunity for students to develop research of their own.

R530 Families and Social Policy (3 cr.) P: R100, R220, graduate standing. This seminar will explore how the government and labor market affect family structure and the quality of family life. Students will study the implications of family research for social

policy and learn to develop theoretical frameworks for evaluating social policies affecting families.

S530 Introduction to Social Psychology (3 cr.)

P: graduate standing or consent of the instructor. Examines the broad range of work in social psychology. Emphasis is placed on the relation between the classic and contemporary literature in the field.

R551 Sociological Research Methods (3 cr.) P: graduate standing or consent of the instructor. This course surveys the major techniques for investigating current sociological problems. It emphasizes the relationship between theory and practice in understanding and conducting research. Although methods intended for rigorous hypothesis-testing through quantitative analysis will be of major concern, the course will also examine issues in field research essential to a full understanding of a research problem.

R556 Advanced Sociological Theory I: The

Classical Tradition (3 cr.) P: graduate standing or consent of the instructor. This is the first part of a two-semester graduate course in contemporary sociological theory and theory construction. The first semester will involve the student in detailed study and analysis of sociologists belonging to the positivist tradition in sociology. Students will be expected to comprehend contemporary sociology in terms of its historical roots and to demonstrate their understanding of theory construction.

R557 Advanced Sociological Theory II: The

Modern Tradition (3 cr.) P: graduate standing or consent of the instructor. Reading and exercises will involve the student in close analysis and criticism of sociologists belonging to the idealist tradition of sociology. In this second part of a two-semester course in theory and theory construction in sociology, students will be required to demonstrate their mastery of the theorists studied, as well as to demonstrate their own abilities in theory design and construction.

R559 Intermediate Sociological Statistics

(3 cr.) P: R359 or equivalent, graduate standing or consent of the instructor. Basic techniques for summarizing distributions, measuring interrelationships, controlling extraneous influences, and testing hypotheses are reviewed, as students become familiar with the computer system. Complex analytical techniques commonly applied in professional literature are examined in detail, including analysis of variance, path diagrams, factor analysis, and log-linear models.

S560 Graduate Topics (3 cr.) P: graduate standing or consent of the instructor, variable with topic.

Exploration of a topic in sociology not covered by the regular curriculum but of interest to faculty and students in a particular semester. Topics to be announced.

R585 Social Aspects of Mental Health and

Mental Illness (3 cr.) P: graduate standing or consent of the instructor. This is a graduate-level course on the sociology of mental illness and mental health. Provides a thorough grounding in the research issues and traditions that have characterized scholarly inquiry into mental illness in the past. Students will

become familiar with public policy as it has had an impact on the treatment of mental illness and on the mentally ill themselves.

R593 Applied Fieldwork for Sociologists (3 cr.)

P: graduate standing or consent of the instructor. This course will provide students with both a theoretical and methodological background in the different types of qualitative analysis used in sociological fieldwork. Students will have the opportunity to study and to evaluate representative examples of qualitative studies and to complete by themselves a project done with qualitative methods.

R610 Sociology of Health and Illness Behavior

(3 cr.) P: graduate standing or consent of the instructor. This seminar explores sociological and social scientific research on health and illness behavior. Special emphasis is placed on examining how social factors and conditions shape people's responses to disease, illness, and disability.

S610 Urban Sociology (3 cr.) P: graduate standing

or consent of the instructor. Historical and contemporary causes, trends, and patterns of urbanization throughout the world. Various approaches to studying the process of urbanization, including ecological, social organizational, and political perspectives. Current developments and problems in urban planning.

S612 Political Sociology (3 cr.) P: graduate standing or consent of the instructor. An analysis of the nature and operation of power in a political system. Topics may include classical theories of power, political behavior and campaigns, the role of mass media in sustaining power, the state as a social institution, and political movements.

S613 Complex Organizations (3 cr.) P: graduate

standing or consent of the instructor. Theory and research in formal organizations: industry, school, church, hospital, government, military, and university. Problems of bureaucracy and decision-making in large-scale organizations. For students in the social sciences and professional schools interested in the comparative approach to problems of organization and their management.

S616 Sociology of Family Systems (3 cr.) P:

graduate standing or consent of the instructor. Focus on the nature, structure, functions, and changes of family systems in modern and emerging societies, in comparative and historical perspective. Attention is given to relationships with other societal subsystems, and to interaction between role occupants within and between subsystems.

S632 Socialization (3 cr.) P: graduate standing or

consent of the instructor. The processes of development of the individual as a social being and societal member, focusing on childhood or socialization into adult roles.

R697 Individual Readings in Sociology (3 cr.)

P: graduate standing and consent of the instructor. Investigation of a topic not covered in the regular curriculum that is of special interest to the student and that the student wishes to pursue in greater detail. Available only to sociology graduate students through arrangement with a faculty member.

Minor in Urban Studies

The minor in urban studies offers students an opportunity to develop a well-rounded and basic understanding of the components of urban life and of the forces that are shaping its future. Further, it provides students with a basic knowledge and understanding of the major factors that not only have contributed to the present but will also affect the future of the physical, internal, and social structure of our cities and metropolitan areas.

To achieve this goal, the minor in urban studies must be interdisciplinary in nature. In such a program, the student approaches the complexity of urban life from the perspective of economics, geography, history, political science, sociology, anthropology, and general urban and regional planning analysis.

To complete the minor, the student must successfully complete 15 credit hours in School of Liberal Arts urban studies courses. The student may count any combination of approved urban studies courses toward the minor as long as no more than two courses are in the same department. The following courses are acceptable as urban studies courses.

Anthropology E380 Urban Anthropology (3 cr.)

Economics E323 Urban Economics (3 cr.)

Geography G318 Geography of Cities and Metropolitan Areas (3 cr.)

Geography G319 Internal Structure of the City (3 cr.)

History A347 American Urban History (3 cr.)

Political Science Y308 Urban Politics (3 cr.)

Sociology R329 Urban Sociology (3 cr.)

Sociology R330 Community (3 cr.)

Associate Librarian Martha McCormick

The Women's Studies Program at IUPUI provides undergraduate students the opportunity to pursue a sequence of courses in a growing academic discipline—the study of women and their changing role in society. The program is interdisciplinary because women's experiences encompass the full range of human activity and separate disciplines offer unique starting points in interpreting these experiences.

The importance of women's studies lies both in its interdisciplinary approach and in the timely opportunity it offers for the study of issues long neglected by scholarship.

Minor in Women's Studies

Completion of a women's studies minor may provide an additional basis for pursuing future training in law, psychology, history, literature, or public or business administration. For students who do not continue professional or graduate training in an academic discipline, a women's studies minor may provide a useful background in careers paying increasing attention to concerns of women, such as paralegal and probation work, secondary and elementary school counseling, journalism, and community agency service.

Requirements

The minor in women's studies requires 16 credit hours as follows:

1. W105 Introduction to Women's Studies (3 cr.)
2. At least 6 credit hours in women's studies courses (including cross-listed offerings) in the social sciences
3. At least 6 credit hours in women's studies courses (including cross-listed offerings) in the humanities

4. Up to 6 credit hours in women's studies courses approved by the director
5. W499 Colloquium in Women's Studies (1 cr.)
6. At least 6 credit hours of course work must be at the 400 level.

Courses

W105 Introduction to Women's Studies (3 cr.)

This introductory course examines both the relation of women's studies to other disciplines and the multiple ways in which gender experience is understood and currently studied. Beginning with a focus on how inequalities between women and men, as well as among women, have been explained and critiqued, the course considers the impact of social structure and culture on gender. The intersections of gender, race, class, sexual orientation, and age are investigated in both national and international contexts.

W300 Topics in Women's Studies: (variable title) (1-3 cr.) An interdisciplinary study of selected themes, issues, and methodologies in women's studies. May be repeated for up to 6 credit hours.

W480 Women's Studies Practicum (3-6 cr.) P: W105 and consent of instructor and program director. Internships in the Women's Studies Program are offered to provide opportunities for students to gain work experience while serving women's needs. This experience is combined with an academic analysis of women's status and experience in organizations.

W495 Readings and Research in Women's Studies (1-3 cr., 6 cr. max.) P: W105 and consent of instructor and program director. Individual readings and research. May be repeated twice for credit with a different topic.

W499 Senior Colloquium in Women's Studies (1 cr.) P: permission of instructor. This is a culminating interdisciplinary course for advanced students who are prepared to present the results of an original major research effort on a topic in women's studies. Participants will be expected to read and evaluate the presentations of other students and participating faculty.

W500 Feminist Theory (3 cr.) An examination of contemporary feminist analyses of gender relations, how they are constituted and experienced and how social structures maintaining sexist hierarchies intersect with hierarchies of race, class, and ethnicity. Rival theories are applied to particular issues to demonstrate connections between theory and practice.

W601 Survey of Contemporary Research in Women's Studies: The Social and Behavioral Sciences (3 cr.) An exploration of feminist perspectives in the social sciences. Theoretical frameworks and research styles used by feminist social scientists are examined, as are feminist critiques of traditional social scientific frameworks and research methods. Research reports by feminist researchers in social scientific disciplines are also read and analyzed.

W602 Contemporary Research in Women's Studies: The Humanities (3 cr.) Review of literature on sex roles, psychology of women,

socialization and politicization of women. Training in methodology of research on women; critique of prevailing and feminist theoretical frameworks for studying women.

W695 Graduate Readings and Research in Women's Studies (3-6 cr.) An opportunity for graduate students in various programs at IUPUI to explore specific issues within the field of women's studies, guided by faculty with particular expertise in these areas. The course is used to do readings and research that go beyond what is covered in other women's studies graduate courses offered on this campus. It also involves faculty not normally involved in the teaching of these other courses but who have skills and knowledge relevant to the issues being investigated.

W701 Graduate Topics in Women's Studies (3-4 cr.) Advanced investigation of selected research topics in women's studies. Topics to be announced.

Cross-listed courses include:

- Ziegler, Carl H., *Associate Professor of Germanic Studies and of Comparative Literature (IUB) and Adjunct Associate Professor of Philanthropic Studies* (1966); B.A., Valparaiso University, 1962; Ph.D., Vanderbilt University, 1966.

Faculty Emeriti

- Baker, Clayton, *Associate Professor Emeritus of Spanish* (1965-1992).
- Barlow, John D., *Professor Emeritus of English and of German* (1967-1998) and *Dean Emeritus of the School of Liberal Arts* (1988-1998).
- Beaudry, James G., *Assistant Professor Emeritus of French* (1976-1995).
- Blasingham, Mary V., *Assistant Professor Emerita of English* (1965-1986).
- Bogar, Bernerd, *Professor Emeritus of English* (1966-1996).
- Bourke, Leon H., *Professor Emeritus of French* (1970-1990).
- Brock, Marian S., *Associate Professor Emerita of English* (1966-1991).
- Buhner, John C., *Professor Emeritus of Political Science (School of Liberal Arts) and Professor Emeritus of Public and Environmental Affairs* (1948-1984).
- Burns, David G., *Associate Professor Emeritus of Communication Studies* (1965-1990).
- Byrne, Edmund, *Professor Emeritus of Philosophy* (1969-1998).
- Casebeer, Edwin P., *Professor Emeritus of English* (1963-1997).
- Cherry, C. Conrad, *Distinguished Professor Emeritus of Religious Studies* (1991-2001).
- Curtis, Richard K., *Professor Emeritus of Communication Studies* (1969-1993).
- Dauner, M. Louise, *Professor Emerita of English* (1963-1977).
- Dial, Donna Kay, *Associate Professor Emerita of Economics* (1969-1997).
- Donchin, Anne, *Professor Emerita of Philosophy and Adjunct Professor of Women's Studies* (1982-2001).
- East, James R., *Professor Emeritus of Communication Studies* (1967-1996).
- Fredland, Richard A., *Professor Emeritus of Political Science* (1970-2001).
- French, Warren G., *Professor Emeritus of English* (1970-1986).
- Friedman, Bernard, *Professor Emeritus of History* (1961-1989).
- Frye, Robert, *Associate Professor Emeritus of Philosophy* (1956-1988).
- Gray, Ralph D., *Professor Emeritus of History* (1964-1997).
- Jessner, Sabine, *Associate Professor Emerita of History and Adjunct Associate Professor of Women's Studies* (1968-1988).
- Juillerat, Monte E., *Professor Emeritus of Economics* (1966-1994).
- Keller, Joseph R., *Professor Emeritus of English* (1955-1987).
- Kinzer, Donald L., *Professor Emeritus of History* (1966-1983).
- Kirk, Robert, *Professor Emeritus of Economics* (1972-2001).
- Koo, Shou-Eng, *Professor Emeritus of Economics* (1967-1987).
- Liell, John T., *Professor Emeritus of Sociology* (1954-1988).
- McGeever, Patrick, *Professor Emeritus of Political Science* (1971-2001).
- Mena, Lucila, *Associate Professor Emerita of Spanish* (1978-2000).
- Nagy, Paul, *Professor Emeritus of Philosophy* (1968-2001).
- Payton, Robert, *Professor Emeritus of Philanthropic Studies* (1988-1998).
- Plotinsky, Melvin L., *Associate Professor Emeritus of English* (1986-1997).
- Rea, Mary Louise, *Professor Emerita of English* (1946-1985).
- Rhorne, Frances Dodson, *Professor Emerita of English* (1969-1986).
- Riesterer, Berthold, *Associate Professor Emeritus of History* (1967-1999).
- Scherle, Phyllis, *Assistant Professor Emerita of English* (1962-1993).
- Sehlinger, Peter, *Professor Emeritus of History* (1969-1999).
- Seldon, Mary Elizabeth, *Professor Emerita of History* (1949-1981).
- Shippis, Jan B., *Professor Emerita of History and of Religious Studies and Adjunct Professor of Philanthropic Studies* (1973-1994).
- Smurl, James, *Professor Emeritus of Religious Studies* (1973-1998).
- Taylor, Joseph T., *Professor Emeritus of Sociology* (1965-1983) and *Dean Emeritus of the School of Liberal Arts* (1967-1978).
- Wagner, B. Bruce, *Associate Professor Emeritus of Communication Studies* (1963-1998).
- Webb, Dorothy, *Professor Emerita of Communication Studies* (1973-2000).
- Webb, J. Edgar, *Professor Emeritus of Communication Studies* (1966-1993).
- Winslow, Charles H., *Associate Professor Emeritus of Political Science* (1967-1999).

School of Library and Information Science—The World of Information

For decades, scholars and futurists have predicted an information revolution. Those predictions have come to life dramatically in recent years. We live in an information age, an age in which the ability to generate and access new knowledge has become a key driver of social and economic growth. This conviction is powerfully reflected in the development of the information superhighway and in the feverish spate of takeovers and joint ventures in the telecommunications, cable, and computer industries, as the major players position themselves to be in the vanguard of the digital revolution. Such developments are transforming both scholarly and lay perceptions of the value of information.

In many developed nations, the information sector is among the fastest growing segments of the economy. The growth of a dynamic global information industry has created a wealth of opportunities for information professionals, but it has also thrown into relief a raft of complex public policy issues, such as privacy and cyber-surveillance, privatization of government-held information resources, the management of intellectual property rights, and the emergence of a digital divide, all of which call for rigorous and informed policy analysis.

The signs of a new age are everywhere: the World Wide Web and electronic commerce, personal computers in the classroom, interactive media in the home, virtual universities, electronic publishing, digital libraries. The statistics are irresistible; the amount of information produced in the last decade alone is greater than all the information created in past millennia. The rhetoric of the information age has finally become reality. And that reality translates into unprecedented career opportunities for information professionals who know how to organize, manage, and exploit knowledge assets; who combine analytic and technical skills with a sense of the strategic value of information to organizations of all kinds.

The economic and social well-being of nations depend increasingly on their ability to generate and access new knowledge. The "informatization" of society is creating demand for specialists who will function as information resource managers and act as guides, interpreters, mediators, brokers, and quality controllers for the ultimate user, who might be a corporate executive, a scientist, or a schoolchild. Today's information professionals do not merely store and locate information; they also analyze and synthesize raw data to produce customized, value-added services and products for a diverse clientele. The field offers a kaleidoscope of career tracks from which to choose: Web design, information systems analysis, database design and marketing, information brokering, medical informatics, systems librarianship,

competitor intelligence analysis, usability testing. In a sense, the opportunities are limited only by the imagination.

On one issue there is widespread agreement: the effective management of information systems and resources is critical to successful organizational performance. That is as true of a Fortune 500 corporation as of a hospital or a small liberal arts college. Information resources include, but are by no means synonymous with, the materials held in libraries, archives, and documentation centers. In the digital age, organizations of all kinds are waking up to the fact that intellectual capital is one of their most important resources—the basis of comparative advantage and superior service delivery. It is this awareness, as much as the highly visible information technologies that are responsible for transforming the ways in which business, commerce, professional affairs, and contemporary scholarship are being conducted.

Libraries, too, are changing. Librarians are active agents of social change and early adopters of new information and communication technologies. The range of materials and media they handle has diversified enormously in the last decade. Access to full-text databases, networked resources, and multimedia information systems has become the norm in a matter of years, fueled in no small measure by the prodigious growth of the Internet and the World Wide Web. The next few years promise even greater advances—global digital libraries, intelligent interfaces, interactive books, collaboratories, intelligent agents, virtual reality. Indiana University's School of Library and Information Science is responding to the challenge with a flexible and forward-looking curriculum, which stresses those social, behavioral, and cultural aspects of information design and use.

The School: American Library Association-Accredited Master of Library Science

The School of Library and Information Science (SLIS) at Indiana University ranks consistently in the top five or ten programs in North America, and its master's and doctoral enrollments are among the largest in the nation. In a recent six-year survey of scholarly productivity and impact, the school was ranked number one (in *Library Quarterly*, April 2000). The M.L.S. (Master of Library Science) degree has been accredited by the American Library Association continuously since 1953. The pioneering M.I.S. (Master of Information Science) degree, available at the Bloomington campus, adds another avenue of entry to the information professions. In addition to these two accredited programs, the school offers a Ph.D. in Information Science, a Specialist in Library and Information Science, specializations in African Studies Librarianship, Chemical Information, Music Librarianship, Special Collections, and a dual master's/Doctor of Jurisprudence program with the School of Law. There are also dual master's degree programs with the Schools of Fine Arts, Journalism,

Music, and Public and Environmental Affairs, and the Departments of Comparative Literature, History, History and Philosophy of Science, Latin American and Caribbean Studies, and Russian and East European Studies. Course work leading to certification in public libraries and in school media is also available.

At SLIS we bring fresh insights to bear on information design, access, and policy issues by looking at information and information technologies in diverse human contexts. We seek to understand the behaviors, cognitive factors, social practices, media, and tools that foster and hinder effective information use. We place a strong emphasis on the social and behavioral dimensions of information technology.

SLIS has a full-time faculty of 18, supplemented by a distinguished emeritus, visiting, and adjunct faculty.

The School of Library and Information Science is located on the Bloomington campus, and offers a full M.L.S. program at Indianapolis. All students have access to the extraordinary physical and human resources of Indiana University, including one of the largest university computing networks in the world and a university library system that ranks thirteenth in the nation in terms of its holdings. Included in this system is the prestigious Lilly Library, which is internationally known for its rare books, manuscripts, and special collections.

The IU School of Library and Information Science is a member of the Association for Library and Information Science Education, the American Library Association, the American Society for Information Science, and the Special Libraries Association. It maintains affiliation with a number of other national and international bodies in library and information science.

The History of SLIS at Indiana University

The School of Education offered the first organized library science curriculum at Indiana University, a program for the preparation of school librarians, in the summer of 1930. In 1938 this curriculum was expanded and made available in the regular school year as well as during the summer session.

In 1947 the Division of Library Science was established within the School of Education. A basic undergraduate curriculum in library science concerned with the fundamental processes common to all types of libraries was offered as a minor within the four-year program leading to the Bachelor of Arts or Bachelor of Science degree in the College of Arts and Sciences or to the Bachelor of Science degree in the School of Education.

Fifty Years of Graduate Education in Library and Information Science: 1949–99 A five-year program leading to the Master of Arts with a major in library science, granted by the graduate school, was created in 1949, and a Ph.D. program in library and information science was established in 1964.

In 1966 the Trustees of Indiana University established the Graduate Library School and the professional degree Master of Library Science (M.L.S.), replacing the Master of Arts degree granted by the graduate

school. The Specialist degree program was added to the curriculum in 1978. In 1980 the name of the school was officially changed to School of Library and Information Science (SLIS). In 1985 an extensive menu of graduate courses leading to the M.L.S. degree was added to the Indianapolis campus.

The Mission of SLIS

The school provides students with an understanding of the conceptual foundations of librarianship and information science and of the multifaceted nature of the wider information environment. It prepares students with a rich mix of knowledge, attitudes, and skills necessary to function as critical thinkers and effective communicators. Graduates should have a strong grounding in theory and the ability to translate theory into effective practice.

To provide a proper setting for the implementation of this mission, the school promotes the advancement of knowledge, both theoretical and applied, through active programs of research and scholarly publication. The school also provides service within the university and to the local, national, and international communities through contributions to, and leadership in, associations and organizations, and by assuming consulting, advising, publishing, and other professional roles. This leadership by example is considered essential in providing a framework in which the goals of the program can be pursued effectively.

The school also provides opportunities for students to seek educational experiences involving the development of the specialized skills currently emphasized in information-providing agencies. The development of these skills often highlights current trends in information systems and information management that serve to assist the student in career planning. Such educational experiences are gained through selection of elective courses from the School of Library and Information Science, through cooperation with other graduate programs of the university, and through seminars, workshops, conferences, group projects, internships, and practicum experiences.

Goals and Objectives of the M.L.S. Program

The M.L.S. 2001 degree option is innovatively designed to meet the new challenges of our profession. Students are introduced to the roles and functions of libraries in contemporary society. They become familiar with key policy issues and technological trends, and with how these issues and trends affect libraries and information centers of all kinds. Students learn to manage and evaluate collections, respond to the information needs of patrons, and to use technology to improve access to information. Students who complete the program are prepared for careers in library administration, public services, technical services, reference services, and collection development at public, school, academic, and special libraries. Students may complete the M.L.S. requirements on the Bloomington or Indianapolis campuses.

Upon completion of the M.L.S. program, graduates will be prepared to:

Assist and Educate Users of Libraries and Information Centers (L524) Analyze and identify information needs of a variety of age, academic, economic, and social groups, and apply appropriate search strategies for effective information retrieval in each situation.

Educate users and potential users of information systems to locate and evaluate information resources.

Analyze and evaluate the provision of information systems and services in a variety of library and information settings.

Develop and Manage Library Collections (L528) Prepare and apply policies and procedures that support the selection and acquisition of information resources, which will meet the information needs of an organization, institution, or community.

Manage, evaluate, and preserve collections of information resources.

Organize and Represent Information Resources (L505/L525 or L520) Understand and effectively apply principles of representation and systems of organization to provide access to resources in a variety of library and information environments.

Apply Management and Leadership Skills (L527, L550, L553, or L587) Understand a wide range of organizational structures and management and leadership styles; demonstrate positive attitudes and constructive actions, which characterize innovative leadership.

Recognize the value of collaborative planning and project management.

Apply the interpersonal and organizational skills necessary to manage and evaluate projects and personnel successfully.

Work effectively within and across a variety of organizational structures.

Communicate an organization's values and contributions, and identify sources that will support the organization's activities.

Conduct and Analyze Research (L509, L643, or L651) Understand and apply research and evaluation methods to investigate questions related to the acquisition, representation, organization, use, and/or dissemination of information.

Analyze and interpret findings of such research and evaluation.

Demonstrate Basic Technical Expertise (L401 or equivalent) Understand the basic applications of modern technology in today's libraries and other information environments.

Approach Professional Issues with Understanding (completion of M.L.S. degree electives) Comprehend the social, political, and legal aspects of information creation, access, and ownership. Engage in continuing learning in professional organizations in library and information science.

All courses leading to completion of the MLS may be taken through IUPUI.

Admission to Graduate Programs

Application Procedures for U.S. Citizens

A packet of application materials for the Master's or Specialist Degree Programs may be obtained from

School of Library and Information Science
Administrative Office
IUPUI
University Library 1110C
755 W. Michigan Street
Indianapolis, IN 46202-5195
(317) 278-2376
callison@indiana.edu

Application packets for both Indianapolis and Bloomington programs may be requested online. Please be sure to request the application packet for the appropriate degree program—Master of Library Science or Specialist. All applications must be submitted to the SLIS Admissions Office in Indianapolis.

www.slis.iupui.edu

Application to SLIS graduate programs requires a *minimum* of the following (additional requirements may be found under listings for individual degrees):

1. Completed application forms.
2. Three letters of recommendation that address the applicant's academic and professional capabilities should be submitted on letterhead and sent directly from the referring party to the SLIS admissions office in Indianapolis. It is the applicant's responsibility to ensure that letters of recommendation reach the admissions office by deadline dates.
3. A personal essay explaining academic and career objectives (minimum 500 words).
4. Official transcripts from *each* college attended (except Indiana University transcripts, which the school can obtain from the IU registrar's online system). From all other colleges and universities, applicants should arrange to have transcripts sent directly to SLIS.
5. Graduate Record Examination (GRE) scores for master's degree program applicants whose grade point average (GPA) in undergraduate college work is not at least 3.0 on a 4.0 scale, or whose GPA on work completed for a previous graduate degree is not 3.2 or higher. Master's program applicants are advised that GRE scores, if

provided, will be taken into account in the competitive admissions process and awarding of departmental financial aid. The test must have been taken within three years before application. GRE information and application forms may be obtained from the Educational Testing Service, P.O. Box 6000, Princeton, NJ 08541-6000. Scores are available about six weeks after the test is taken. It is the responsibility of the applicant to take the GRE test at such a time as will allow scores to arrive at the admissions office to meet all school deadlines.

6. An application fee. A check or money order must be sent *directly* to the bursar's office in the addressed envelope provided in the application packet.
7. Some programs have application requirements in addition to those listed above. For further information, see admission requirements for the degree in which you are interested.

When completed application forms are received, an applicant's individual file is established, and other elements of the application are added to the file as they are received. It is important that applicants send the completed application as early as possible. Admission, once granted, is good for a period of one year; however, such extended admission cannot be guaranteed unless the admitted student informs the school of intent to matriculate at a later date. Files of admitted students who neither matriculate nor request an extension may be purged soon after the beginning of the semester for which admission was granted. An individual may check on the status of an application file or request an extension to a later consideration date by calling SLIS at (317) 278-2375 or toll free within the United States at (888) 335-SLIS.

Application Deadlines for U.S. Citizens

Applications will not be acted upon until all required documents have been received. Ordinarily applications for master's and specialist degrees are processed within one month of their completion. In order to allow time for degree processing and financial aid decisions, applicants must meet the following deadlines:

For matriculation in: **Fall** **Spring** **Summer**

Applying for

SLIS financial aid: Jan. 15 Oct. 1 N/A

Not applying for

SLIS financial aid: May 15 Nov. 1 Mar. 15

Applicants who complete the financial aid form included with the SLIS application packet and who have a completed file by the financial aid deadlines given above will be considered for all aid for which they are eligible that is offered directly by the school. Financial aid opportunities from SLIS are detailed elsewhere in this bulletin. For information on financial aid not directly funded by SLIS, applicants to the Indianapolis program should contact:

Office of Student Financial Aid Services

IUPUI
Cavanaugh Hall 103
425 N. University Blvd.
Indianapolis, IN 46202-5140
(317) 278-4723
finaid5@iupui.edu

Application Procedures for International Students

International applicants to SLIS programs in Indianapolis may obtain application materials from

School of Library and Information Science
Administrative Office
IUPUI
University Library 1110C
755 W. Michigan Street
Indianapolis, IN 46202-5195
(317) 278-2376
callison@indiana.edu

Please be sure to request the application packet for the appropriate degree program—Master of Library Science or Specialist. International students and permanent residents attending IUPUI need to return completed forms and all supporting materials to

Office of International Affairs
IUPUI
Union Building 207
620 Union Drive
Indianapolis, IN 46202-5167
(317) 274-7294
intlaff@iupui.edu

Payment of an application fee is required.

Application packets for both Indianapolis and Bloomington programs may be requested online.

All international applicants for any SLIS degree program—Master's or Specialist—must submit a recent official Graduate Record Examination (GRE) General (aptitude) Test score report from the Educational Testing Service. The test must have been taken within three years before application. Scores on all three sections (verbal, quantitative, and analytical) will be considered. A minimum combined score of 1500 is required for an application to be processed further. The Educational Testing Service provides GRE information and application forms. Materials are available from the Educational Testing Service, P.O. Box 6000, Princeton, NJ 08541-6000

Scores are available about six weeks after the test is taken. It is the responsibility of the applicant to take the GRE test at a time that will allow scores to arrive at the SLIS admissions office to meet all school deadlines.

International applicants whose first language is not English must submit recent official scores from the Test of English as a Foreign Language (TOEFL). A minimum TOEFL score of 600 is required for admission to SLIS graduate programs. The Educational Testing Service administers the TOEFL once each month at locations throughout the world. Information about TOEFL administration schedules may be obtained from the Educational Testing Service at the address given with GRE information above.

Students whose first language is not English must also take an English language placement test upon arrival at Indiana University. The results of this test are used to determine what, if any, remedial English courses must be successfully completed before graduate study

begins. International students should understand that all admissions are granted conditionally, upon verification of English language proficiency, and that enrollment in graduate course work is not permitted, or is limited, until all language deficiencies have been removed.

Additional Indianapolis campus information for international applicants can be found at the IUPUI Office of International Affairs.

Application Deadlines for International Students

The SLIS admissions office will not act upon applications until all required documents have been received (including transcripts, letters of recommendation, application fee, and GRE and TOEFL test scores as required). Ordinarily, applications for master's and specialist degrees are processed within one month of being completed and received at SLIS from the Office of International Admissions. International applicants must comply with the deadline dates indicated in international application materials.

Admission Criteria

Master of Library Science Degree Program

Students holding a bachelor's degree from an accredited four-year collegiate institution are eligible to apply for admission. Applicants in the final year of their undergraduate program may apply and be granted admission conditional upon their being awarded the bachelor's degree.

An applicant must have a minimum grade point average of 3.0 (on a 4.0 scale) or its equivalent in the total undergraduate program or an average of 3.2 in the latest graduate degree or representative graduate hours (usually 30 semester hours) completed. The SLIS admissions committee makes individual judgments about the rigor of grading in the undergraduate or graduate course work presented and about the relative significance of course work completed at various times in an applicant's academic history. Students who do not meet the SLIS cumulative grade point average requirements may submit GRE scores for consideration. GRE scores of at least 1500 (500 in each area) are required. Students may also address circumstances of low academic performance in an attachment to their application.

A substantial number of credit hours of appropriate content-based course work must be included in the overall undergraduate and graduate course work previously completed. This appropriate background includes, but is not limited to, course work in the humanities and the social, biological, and physical sciences. If an applicant is judged deficient in background preparation, additional course work may be required to remove the deficiency. Such additional course work may be at the undergraduate or graduate

level, but it will not in any case count toward the credit hour requirements for the SLIS degree. Letters of recommendation should be submitted by three individuals who are familiar with the applicant's academic abilities. Letters from employers and information professionals who are familiar with the applicant's intellectual abilities and work habits are also acceptable.

A personal goals essay of at least 500 words is required (see M.L.S. application). The essay must indicate a student's academic and professional goals appropriate to the desired SLIS degree program. The writing skills indicated in this statement are also considered as part of the admission decision.

We welcome applications from students of all backgrounds. *Indiana University prohibits admission decisions being made on the basis of arbitrary consideration of such characteristics as age, disability, ethnicity, gender, marital status, national origin, race, religion, sexual orientation, or veteran status.*

Matriculation Applicants may enter SLIS master's degree programs at the beginning of fall semester, spring semester, and the second summer session.

Admission Categories

Admission—A student's *full admission* status is valid for one year, with an additional year available upon petition. If an admitted student fails to matriculate within the allowed time, the admission status is terminated, and the student must reapply.

Probationary Admission—The SLIS Admissions Committee may grant *probationary admission* to a student who fails to meet one or more of the admission requirements listed above, if, in the judgment of the committee members, there is sufficient other evidence of probable success in the degree program. Probationary admission carries a requirement that the student maintain a *minimum* GPA of 3.0 throughout the program. Other conditions of the probationary admission, if any, will be stated in the admission letter. The student's progress will be monitored throughout the program to ensure that the conditions are maintained. If, at any time in the program, the student does not meet the conditions of the probation, admission will be terminated.

Applicants who are denied admission to a SLIS graduate program may not take course work in SLIS without the permission of the dean of the school.

SLIS Non-Degree Student Status—Students with an undergraduate degree may be permitted to take up to 6 credit hours of SLIS graduate course work prior to admission that could count towards their degree if admitted. Nondegree students must complete all necessary prerequisites before taking any course. Nondegree students may be removed from any SLIS course if their place is required for an admitted degree-seeking student. SLIS L401 is a prerequisite course to our degree programs, and does not count towards the credits for the degrees offered.

Undergraduate and nondegree students may take SLIS L401.

Auditing—There are few SLIS courses available for auditing. Auditing is to be limited to nonparticipating courses. Lab-based courses may not be audited. Students who wish to audit a course must obtain

written permission from the instructor. A student is not permitted to audit courses without registering as an auditor and paying the current fee for auditing.

Advising

Upon admission, each student is assigned an official faculty advisor whose name is given in the admission letter. Students should meet with their faculty advisors to discuss academic course planning and professional goals. Advisor signatures are also required for various approval forms. Students should carefully plan their course selections, noting appropriate prerequisites and required sequences. The SLIS Web site offers projected long-range course schedules. In addition to the assigned initial faculty advisor, students may consult with any member of the faculty for professional and career guidance.

Degree Requirements

Master of Library Science Degree Program (36 credit hours + L401)

Note: Exceptions to degree requirements must be approved in writing by the student's faculty advisor and by the SLIS administrative office. Approval forms for course waivers, transfer credit, etc. are available in the SLIS office. Most forms are also available on our Web site. It is the student's responsibility to ensure that written approval for any program exception is submitted to the SLIS administrative office for placement in the student's academic file.

Computer-Based Information Skills

The School of Library and Information Science requires that students be computer, network, and information literate and be familiar with basic operations that will be used throughout the students' course work. This knowledge is prerequisite to many courses in the SLIS curriculum and will form the basis for further learning and skill development throughout the students' academic and professional careers. To acquire this base, each student must complete, or apply and receive a waiver for, the SLIS course L401 Computer-Based Information Tools. Normally, the course should be completed during the first semester of enrollment, and must be completed within the first 9 SLIS credits. This 3 credit undergraduate-level course is a prerequisite for many courses in the SLIS curriculum, although it does not count toward the credit hours required for a SLIS graduate degree.

Probation Policy

In addition to the probationary admission described earlier, a SLIS student may be placed on probation at any point in the program when failure to achieve a minimum cumulative grade point average (GPA) of 3.0 occurs. The student will be assigned a time frame in which the required 3.0 GPA must be restored. Failure to achieve 3.0 within the required time or to maintain the 3.0 GPA for the remainder of the degree program will result in dismissal from the graduate

program. In no case is a master's degree awarded for course work in which a cumulative grade point average of less than 3.0 has been achieved. Students will not be permitted to continue graduate course work beyond the number of credit hours required for the degree solely in an attempt to raise the grade point average to the required level. Students are expected to maintain a 3.0 GPA each semester.

Time Requirements

All requirements for the M.L.S. degree must be met within five consecutive calendar years from the date of completion of the first credited course. In some circumstances a one-year extension of the five-year time frame may be given, but in no case will a longer extension be granted. Application for the SLIS master's degree must be submitted early in the fall semester for candidates planning to graduate in December, and early in the spring semester for candidates planning to graduate in May, June, or August.

Foreign Language

Although language skills are recognized as significant and in some cases essential in the information professions, and although such courses may be taken through the university, credit earned for such courses may not be applied toward the M.L.S. degree.

Course Requirements

Note: All course selections, both foundation and elective, must be made in consultation with the faculty advisor. The abbreviation "P" refers to the course prerequisite or prerequisites.

L401 or waiver (www.slis.iupui.edu)

Foundations (15 credit hours)

A candidate for the Master of Library Science degree must complete one course from each of the following areas:

Assist and Educate Users of Libraries and Information Centers

L524 Information Sources and Services

Develop and Manage Library Collections

L528 Collection Development and Management

Organize and Represent Information Resources

L505/L525 Organization and Representation of Knowledge and Information

L520 Bibliographic Access and Control

Apply Management and Leadership Skills

L527 Management of Libraries and Information Centers

L550 Issues in the Management of Library Services and Programs

- L553 The School Media Specialist
L587 Rare Book Libraries and Librarianship

Conduct and Analyze Research

- L509 Introduction to Research and Statistics (P: completion of 9 hours)
L643 Evaluation of Information Systems
L651 Evaluation of Library Sources and Services (P: L528)

M.L.S. Elective Courses In addition to the five courses (15 credit hours) taken from the foundations, students must select a minimum of 21 credit hours of elective courses to complete the 36 credit hours required for the M.L.S. degree. These electives must be chosen in consultation with the student's faculty advisor in order to best satisfy the student's academic and professional goals. Elective courses for the M.L.S. degree may be chosen from the foundations or the large pool of other SLIS courses available to all master's degree students.

M.L.S. Degree Requirements

A candidate for the Master of Library Science degree must complete 36 semester credit hours of graduate course work, all of which must be taken from the IU School of Library and Information Science. A maximum of 6 graduate credit hours from another ALA-accredited master's degree program may, with the permission of the dean, be applied to the M.L.S. degree. The transferred courses must have a grade of B or higher and must be taken within the five-year time frame allowed for completion of the degree. Only within recognized joint programs, as outlined in this bulletin, may other non-SLIS courses be applied toward the M.L.S. degree.

M.L.S./Specialization in Library Technology Management

M.L.S./L.T.M. Specialization (45 credit hours + L401)

Prerequisite:

- L401 Computer-Based Information Tools (3 credits)
or
Waiver (www.slis.indiana.edu/upriss/L401waiver.html)

Foundations (15 credit hours):
one course from each area

Assist and Educate Users of Libraries and Information Centers

- L524 Information Sources and Services

Develop and Manage Library Collections

- L528 Collection Development and Management

Organize and Represent Information Resources

- L505/L525 Organization and Representation of Knowledge and Information

Apply Management and Leadership Skills

- L527 Management of Libraries and Information Centers
L550 Issues in the Management of Library Services and Programs
L553 The School Media Specialist
L587 Rare Book Libraries and Librarianship

Conduct and Analyze Research

- L509 Introduction to Research and Statistics (P: completion of 9 hours)
L643 Evaluation of Information Systems
L651 Evaluation of Library Sources and Services (P: L528)

Specialization Core (9 credit hours)

- L520 Bibliographic Access and Control
L526 Library Automation
L570 Online Information Retrieval

Specialization Electives (15 credit hours)

Technology application courses selected from the following or chosen in consultation with the student's faculty advisor:

- L545 Systems Analysis and Design
L546 User-Centered Database Design
L552 Audio and Video Information Sources and Delivery
L571 Information Architecture for the Web
L576 Digital Libraries
L595 (SLIS workshops, up to 6 credit hours) as approved by adviser
L697 Advanced Topics in Information Systems

Outside Courses: up to 6 credit hours with advisor's approval

General Electives (6 credit hours)

selected from any SLIS elective courses; internship options for up to 6 credit hours are available

Dual Master's Degree Program: Master of Library Science–Master of Arts in History

Interest in public history, genealogy, historic preservation, and archives and museum administration creates a demand for professionals with expertise in both historical research and information management. The dual M.L.S.–M.A. in history program requires completion of a minimum of 50 credit hours of graduate course work. Students must apply for admission to the master's programs of both the School of Library and Information Science and the Department of History and meet the admission criteria established for each. The two degrees must be awarded simultaneously.

Requirements for the Master of Library Science degree are as follows:

1. Completion of SLIS courses from the common (9 credit hours minimum) and M.L.S.-specific (9 credit hours minimum) cores for a total of 18

credit hours. Explanations of the common and degree-specific cores are found in the previous section on degree requirements.

2. Other required SLIS courses (9 cr.): L586 (or History H547 [Archives]), L596, and L625.
3. SLIS elective courses to bring the total of SLIS credit hours completed to 30.
4. Elective courses in history (6 cr.). A minimum of 20 credit hours is required in the Department of History for the Master of Arts degree. For specific requirements, see the entry for the Department of History in the Indiana University Graduate School Bulletin.

School Library/Media and Information Technology Certification

Requires a Teaching License

The student must be admitted to the M.L.S. degree program in order to complete the course work leading to the minor or major in school library or media certification as a library media specialist in Indiana.

Emphasis in this area includes knowledge of a wide range of information sources and formats; selection and preparation of instructional plans and materials; promotion and use of quality literature for children and young adults; management of budgets, staff, and automated information services; collaborative teaching and cooperation with community information agencies; understanding of facilities planning; and instructional design for emerging technological innovations in education. Individuals specializing in this area are educators, information managers, and instructional designers.

Indiana library/media/technology certification transfers to other states in the United States. The student seeking certification in a state other than Indiana should contact the certification office in that state to be certain of meeting any additional teacher training requirements.

The student who has completed a bachelor's degree and meets the admission standards for the M.L.S. program, but who does not hold a teaching license, may pursue the requirements for the license in school media by completing education methods classes, student teaching in instructional media, and the courses required for the major in school media.

A student may enter a program leading to either the minor in school library services or the major in school media technology services after completion of a bachelor's degree and after meeting the requirements for an Indiana teaching license at either the elementary or secondary level. The bachelor's degree should include a minimum of 90 credit hours in liberal arts. At the secondary level, it is strongly recommended that the student have a teaching major in social studies, language arts, science, or computer

technology. Entry requirements for either certification program are the same as for those entering any master's-level SLIS program. A student must submit an application for a certification program before completing 6 credits in SLIS. Questions concerning course work leading to a valid teaching license in Indiana should be directed to:

School of Library and Information Science
IUPUI
University Library 1110C
755 W. Michigan Street
Indianapolis, IN 46202-5195
(317) 278-2376
callison@indiana.edu

The program leading to certification as a school library/media specialist at Indiana University is approved by NCATE, and the SLIS M.L.S. program is ALA accredited.

School Library Services Minor (24 credit hours)

Completion of this minor allows the graduate to hold a building-level position as a professional library media specialist. Course work leading to the minor may be obtained through the SLIS graduate program as follows:

Required course work:

L520, L524, L526, L528, L533, L553, L596 and *one* course from the following school library services minor electives:
L551, L552, L554, L557, L570, L571, L578 or any 3 graduate credits from SLIS seminars, readings, workshops, or special topics courses dealing with educational theory and technology use or information resources for children and young adults.

Completion of 24 credit hours as outlined above will allow the library services minor to be added to the standard teaching license in Indiana. The student may elect to stop graduate studies on completion of the 24 credit hour minor or may complete the M.L.S. degree by completing L527, L509, and 6 credit hours of SLIS electives approved by Dean Callison.

If the student holds a life license for teaching in Indiana, the minor in school library services can be added only after it has been professionalized by completion of 12 graduate credit hours beyond the minor. Of the total 36 credit hours, 12 must be in course work that emphasizes use or preparation of instructional technology or application and management of information technology related to public school education.

School Media Services Major (Emphasis in Information Technology) and the M.L.S.

Completion of this 36 credit hour major for school media information technology services to be added to the provisional teaching license also meets the requirements for the M.L.S. degree. Completion of this major enables the student to hold a position as a professional library media specialist with additional responsibilities in information technology and audiovisual services.

Required course work:

L509, L520, L524, L526, L527, L528, L533, L553, L596

and three courses from:

L551, L552, L554, L557, L570, L571, L578, or others approved by the Director of School Media Education.

The student who holds a life license for teaching in Indiana must professionalize this major before it can be added to the license. Professionalization requires completion of 12 additional graduate credit hours beyond the 36 described above, and these additional credits should be in educational technology, instructional theory, selection and use of instructional resources, and information technology. Any of these additional 12 credit hours may come from graduate programs outside SLIS.

The student should consult with the director for library media education in order to determine approval of these additional courses.

Courses Open to Undergraduates

The following courses may, with permission, be taken in the junior or senior year with a view toward school library certification: L533 Library Materials for Children and Young Adults and L551 Information Inquiry for School Teachers.

If such course work is taken as an undergraduate, the credit may count as an elective in the student's undergraduate work. Since all course work for either the minor in library services or the major in media services must be taken as a graduate student, an undergraduate who has completed either or both courses listed with a grade of B or better may, on consultation with the graduate advisor, substitute other graduate-level course work from SLIS in meeting the certification and/or M.L.S. degree requirements.

Public Library Certification Requirements

Courses are available through SLIS IUPUI Distance Education: www.slis.iupui.edu/courses/distance.html

Students who desire certification for positions in Indiana public libraries must meet the requirements established by the State Library Certification Board. For complete information, contact

Indiana Library Certification Board
Indiana State Library
140 N. Senate
Indianapolis, IN 46204
1-800-451-6028

The board lists two kinds of education in determining the grade of certificate granted:

Accredited library education is described as completion of graduate study in an accredited program and validated by a diploma. This level relates to the higher grades of certification: Librarian I, II, or III. Librarian I and II levels have experience as well as educational components. Librarian III is the minimum grade for heads of libraries serving populations of

10,001 to 25,000 and for comparable positions as determined by the library certification board. The Master of Library Science degree from Indiana University meets this requirement.

Approved library education is defined as elementary instruction in library science taken after completion of a prescribed period of undergraduate education. Approved library education requires specified amounts of study in library science and relates to the lower grades of Indiana library certificates. Two levels of approved education are recognized:

- Intermediate library education requires a bachelor's degree and at least 15 credit hours of library science courses. This meets the requirements for Librarian IV, which is the minimum grade for heads of libraries serving populations of 5,001 to 10,000 and for comparable positions as determined by the library certification board. The following courses at Indiana University meet the intermediate library education requirement for Librarian IV: L520, L524, L527, L528, L533.
- Minimum library education requires at least two years of undergraduate education and at least 9 credit hours of library science courses. This meets the Librarian V level, which is the minimum grade for heads of libraries serving populations of 5,000 or fewer and for comparable positions as required by the library certification board. The following courses at Indiana University meet the minimum library education requirement for Librarian V: L524, L527, L528.

Students wishing to meet Indiana public library certification requirements must meet all requirements for and be admitted to the M.L.S. degree program.

General Information

Grade Computation

Instructors in the School of Library and Information Science use a grading system that includes plus and minus grades as well as straight letters. Numerical equivalents for these grades are as follows: A+ or A = 4.0; A- = 3.7; B+ = 3.3; B = 3.0; B- = 2.7; C+ = 2.3; C = 2.0; C- = 1.7; D+ = 1.3; D = 1.0; D- = 0.7; F = 0.0.

Letter grades have been defined as follows by student and faculty members of the Curriculum Steering Committee and have been approved by the faculty as an aid in evaluation of academic performance and to assist students by giving them an understanding of the grading standards of the School of Library and Information Science.

- A (4.0) Outstanding achievement. Student performance demonstrates full command of the course materials and evinces a high level of originality and/or creativity that far surpasses course expectations. The grade of A+ is not granted in SLIS, except in very exceptional cases.
- A- (3.7) Excellent achievement. Student performance demonstrates thorough knowledge of the course materials and exceeds course expectations by completing all requirements in a superior manner.

- B+ (3.3) Very good work. Student performance demonstrates above-average comprehension of the course materials and exceeds course expectations on all tasks as defined in the course syllabus.
- B (3.0) Good work. Student performance meets designated course expectations, demonstrates understanding of the course materials, and performs at an acceptable level.
- B- (2.7) Marginal work. Student performance demonstrates incomplete understanding of course materials.
- C+ (2.3) Unsatisfactory work and inadequate understanding of course materials.
- C (2.0) Unacceptable work; course work performed at this level will not count toward the M.L.S. degree; for the course to count toward the degree, the student must repeat the course with a passing grade.
- C- (1.7) Failing. Student may continue in program only with permission of the dean.
- D+ (1.3)
- D (1.0)
- D- (0.7)
- F (0.0)

Grades are assigned by individual instructors based on a combination of student performance measures developed for each course. Student achievement of course objectives is usually assessed through the use of multiple performance measures. For example, a combination of several of the following assessment methods is common: examinations, class participation, written assignments and exercises, research papers, or term projects. Other methods, depending on course content and objectives, may include in-class small group exercises, oral presentations, field-based projects and field experiences, role-playing, or case study presentations.

No course on which a student receives a grade of lower than C (2.0) will be counted toward requirements for any SLIS degree. Any required course on which a grade lower than C is received must be repeated; an elective course on which an unacceptable grade is earned need not be repeated, but it may be repeated or another course must be taken in its place. Repeating an unacceptable course or taking another in its place does not remove the credit points for that course from a student's grade point average. All grades achieved in SLIS courses will be counted in the SLIS and IU GPA. Since a minimum GPA of 3.0 (B) is required for graduation, any grade below B must be balanced by another sufficiently above B to keep the GPA at the 3.0 level.

Grade of Incomplete (I)

The grade of Incomplete (I) may be used on the final grade report at the discretion of the instructor. The grade I indicates that the student's work in a course is satisfactory thus far but has not been completed as of the end of the semester.

The grade of Incomplete may be given only when the completed portion of a student's work in a course is of passing quality, and may be awarded only upon showing hardship to the student that would make it unjust to hold the student to the original time limit for course completion. It is the responsibility of the student who has incurred a grade of Incomplete in

any course to fulfill the requirements of that course within a maximum of one calendar year from the date on which the I grade is recorded. After one calendar year, a grade of Incomplete automatically changes to a grade of F on the student's record.

Deferred Grade (R)

Certain doctoral-level courses, such as L799 and G901, in which candidates enroll while working on their dissertations, are expected to take longer than one year. In these instances, an R, indicating that the grade has been deferred, will be assigned until such time as the dissertation is completed.

Computer Accounts

All SLIS students are eligible for and required to obtain computer accounts from University Information Technology Services immediately upon matriculation. These accounts include an electronic mail component, which is utilized by SLIS for both official and nonofficial communication. Student job openings, scholarship and financial aid opportunities, deadlines for submission of official paperwork, and announcements of social functions are just a few examples of the information disseminated via electronic communication. Students will be held responsible for receiving and responding as appropriate to all official electronic mail.

Placement

The range of placement services available from the School of Library and Information Science includes instruction on resume and cover letter writing and on interviewing strategies, both on an individual basis and through group presentations. In addition, all position announcements received are posted daily, and a monthly placement bulletin is available. This bulletin is available upon request and free of charge to SLIS alumni during the year following their graduation. All others may supply stamped, self-addressed business envelopes, one for each month, to have the bulletin mailed to them. An online version of the placement bulletin is available at www.slis.indiana.edu

SLIS does not maintain placement files on individual alumni; however, the School of Education makes the services of its placement office available to SLIS graduates wishing to establish such a file.

SLIS Alumni Association

The School of Library and Information Science Alumni Association has as its purpose the furthering of educational, professional, and social interests of the school and its alumni. The association publishes a semiannual newsletter to keep alumni informed about developments within the school and news of each other. In addition, the SLIS Alumni Association sponsors two events annually, one in May and one in December, to honor SLIS graduates. The Alumni Association, in cooperation with the school, also sponsors a minimum of two receptions per year at annual conferences of state and national professional organizations.

Summer Sessions

The School of Library and Information Science offers one of the largest selections of summer classes proportional to school enrollment. The two summer sessions are a seven-week session from early May to mid-June and a seven-week session from mid-June to mid-August. It is possible for some students to complete a SLIS master's degree by attending only summer sessions over the period of five years allowed for degree completion. Students are cautioned, however, that not all courses are or will be available during summer sessions. For additional information, consult the *Schedule of Classes* and the schedules of SLIS courses that are available from the school.

Financial Aid

Any applicant who fills out the application for SLIS financial aid, which is part of the SLIS master's and specialist applications, will be considered for all financial aid awards listed below. A student must be admitted to a graduate degree program in order to be eligible for financial aid from SLIS. Students with financial assistance must make adequate progress toward their degree each semester and meet all other requirements of the award, or financial support may be discontinued. Stipends and salaries earned by graduate students are taxable. It is our understanding that fellowships and fee scholarships are not taxable under current regulations; however, it is the responsibility of each recipient to confirm the tax status of any award with the Internal Revenue Service.

Financial Aid on the IUPUI Campus Graduate assistantships that include tuition remission and employment in the University Library are available to SLIS students attending classes on the Indianapolis (IUPUI) campus. For information about eligibility requirements and application procedures, please contact

School of Library and Information Science Office
University Library 1110C
755 W. Michigan Street
Indianapolis, IN 46202-5195
(317) 278-2375

Fellowship Awards The school also offers some one-time cash fellowship awards to new and continuing students in the SLIS degree programs. Some of these are the following:

The InULA Scholarship of \$1,000 is awarded annually by the Indiana University Librarians Association to a full or part-time student currently enrolled in a School of Library and Information Science master's degree program. Students must complete an application form (obtainable from SLIS) and a statement of professional philosophy and goals, and arrange to have at least one letter of reference sent directly to the current InULA president as listed on the application each year. InULA reserves the right to publish the winning statement in its newsletter. Deadline for submission is March 1.

The Evelyn Ray Sickels Award of \$250 is made each spring to an M.L.S. candidate who demonstrates exceptional potential in the field of youth librarianship. SLIS students graduating the December preceding or the May, June, or August of the award year are eligible to apply. The award requires

submission of an application form, a 300-500 word statement of the individual's philosophy and goals in youth librarianship, and two letters of reference. Deadline for submission is March 15.

Indiana Library Federation Scholarships are awarded annually by the ILF to students who are Indiana residents, have economic need, and are studying or wish to study for a career in librarianship. Awards are made each spring, and recipients must agree to work in an Indiana library for one year following degree receipt. Details for application are publicized each spring by SLIS and the federation.

Association for Indiana Media Educators Scholarship are offered to students planning a career in Indiana school libraries and media centers. Application details are published by the association and SLIS when they become available.

Other financial aid opportunities are publicized by the school as they become available. This information is available primarily on the SLIS-INDY electronic mailing list.

Student loans and other financial aid opportunities are available to graduate students at IUPUI through the:

Office of Student Financial Aid Services
IUPUI
Cavanaugh Hall 103
425 N. University Blvd
Indianapolis, IN 46202-5145
(317) 274-4162
finaid5@iupui.edu

International student aid from the School of Library and Information Science is very limited. Aid available from the school for beginning students is normally restricted to U.S. citizens and permanent residents. In some cases a continuing international student will receive financial assistance following the first semester in SLIS, but in no case does the available aid approach the entire amount needed for the support of an international student attending a graduate degree program at Indiana University. International students are advised not to count on any financial assistance from the school, but to seek sponsorship and support from other sources. The university will not issue visa documentation until the international student submits evidence of complete financial support. Information on other financial aid for international students may be obtained from

Office of International Affairs
IUPUI
Union Building 207
620 Union Drive
Indianapolis, IN 46202-5167
(317) 274-7294
intlaff@iupui.edu

Courses

Note: The abbreviation "P" refers to the course prerequisite or prerequisites. Undergraduate courses are marked by the sign *. Undergraduate students will be admitted only to the 100-level courses.

Undergraduates wishing to enroll in higher-level SLIS courses must receive written permission from the school prior to registering for the course.

L140* Information Resources and Student Research (1 cr.) Concepts of information, research processes, and techniques and skills for using information resources are examined. Resources explained include traditional print sources as well as those based on new technologies, such as computer databases and multimedia applications. Similar to L161 but has been designed for IUPUI students and programs incorporating technology and off-campus learning.

L401* Computer-Based Information Tools (3 cr.) Graded S/F. This skills-based course introduces basic applications that will be used throughout the student's course work and beyond. Students' experiences in this course should be seen as a basis for further skill development and learning throughout their careers. The course covers computing platforms, access tools, and management tools. Demonstration of skills will be by a mastery test or an assignment in each unit of the course. L401 does not count toward graduate degree requirements.

L501 Information and Society (3 cr.) Introduces issues related to information in society, as well as concepts, methods, and techniques of information science. Major units include the study of human communication, the information environment, uses and users of information, information systems in libraries, and the information professions.

L503 User Needs and Behavior in Theory and Practice (3 cr.) This course introduces students to the concepts of information analysis from a human perspective, focusing particularly on the theoretical models and practical techniques that underpin the field. Sociological and psychological perspectives will be examined in order to develop an approach to the assessment of users' information needs.

L505 Organization and Representation of Knowledge and Information (3 cr.) Introduces students to various disciplines' approaches to the understanding, organization, representation (summarizing), and use of knowledge and information. This survey looks for commonality among the approaches taken in information science, cognitive psychology, semiotics, and artificial intelligence, among others. The goal is to identify criteria for evaluation and improvement of ways to organize and represent information for future retrieval. Information systems currently used in libraries and information centers will be studied as examples. Emphasis in the course is on concepts and ideas, with appropriate attention to terminology and technology.

L509 Introduction to Research and Statistics (3 cr.) P: L401, completion of 9 credit hours in SLIS, or consent of instructor. The research process, including concepts, design, conduct, and evaluation. Principles and characteristics of approaches and methodologies relevant to research in the field. Examples of data sources and introduction to methods of statistical description and analysis; ethical issues.

L514 Preservation of Library and Information Resources (3cr.) Examines causes of library and archival materials deterioration. Develops conceptual framework and management perspective for preservation programs using technical standards, program development tools, scientific and administrative research reports, and advocacy literature. Explores the new information technologies and media as both preservation tools and challenges.

L515 History of the Book (3 cr.) Survey of the functions and history of writing and the various methods and styles of bookmaking from earliest times through the nineteenth century.

L516 Introduction to Archives and Records Management (3 cr.) Introduces basic theories, methods, and significant problems in archives and records management. The course also discusses how archivists are responding to the challenge of managing and preserving electronic records.

L517 History of Libraries (3 cr.) Development of libraries and information service from earliest times to the present, with emphasis on the library in relation to social, economic, cultural, and political trends.

L520 Bibliographic Access and Control (3 cr.) P: L401. Historical development and principles essential to the understanding of the conceptual foundations of providing bibliographic access and control of materials and information. Discussion and examples in the application of AACR2r will be presented to illustrate and reflect current practice. Emphasis is on monographic publications.

L522 Perspectives on Librarianship, Literacy, Communications, and Reading (3 cr.) Overview of the library as a social institution—historically, currently, and for the future—within social, economic, political, and cultural contexts. Focuses on the institution, the collections and formats, and the users, to create an understanding of the role and importance of libraries.

L524 Information Sources and Services (3 cr.) P or concurrent: L401. This course introduces students to the basic information sources and services among different types of libraries and information centers, including academic, public, special, and school media.

L526 Library Automation (3 cr.) P or concurrent: L401. Principles for the design, selection, implementation, and management of automated systems of all types in libraries, including systems for technical services processing, reference and user services, and management. Focus is on present and future applications of technology in libraries, their technical features, and their implications for library

services and management. When possible, some practical experience with a particular application will be provided.

L527 Management of Libraries and Information Centers (3 cr.) Management and administration of all types of libraries. Covers basics of organizational structure, planning, budget management, human resources issues and skills, and an understanding of the manager in the context of the organization.

L528 Collection Development and Management (3 cr.) Theoretical and pragmatic aspects of the selection, evaluation, and management of collections in all types of libraries. Acquisitions, publishers and publishing, policy making, and intellectual freedom and censorship are also covered.

L530 Legal Bibliography and Law Library Administration (3 cr.) P: L524 or consent of instructor. An introduction to basic legal materials and law librarianship. Primary and secondary resources; indexes; digests and citators; specialized research methods; current developments in automated legal research. History of law libraries in the United States, their organization and administration. The role of law librarians in law schools and law firms.

L533 Library Materials for Children and Young Adults (3 cr.) Evaluation and use of books, magazines, recordings, films, radio and television broadcasts, and other sources of information and recreation.

L534 Principles and Techniques of Storytelling (3 cr.) P or concurrent: L533 or consent of instructor. The history, philosophy, and value of storytelling. Guidance in techniques of this oral art form and its adaptation to special needs and programs.

L535 Library Services for Children and Young Adults (3 cr.) P or concurrent: L533 or consent of instructor. This course emphasizes the history, philosophy, and description of children and young adult library services. It takes a holistic look at the role of the youth services librarian, from planning and evaluation to specific services and programs, and examines the current and future outlook for this type of librarianship. Emphasis is on the public library, but cooperation with appropriate services and programs such as school media centers is also discussed.

L542 Introduction to Human-Computer Interaction (3 cr.) Examines the human factors associated with information technology and seeks to provide students with knowledge of the variables likely to influence the perceived usability, and hence the acceptability, of any information technology. In so doing it will enable students to progress further towards specialist work in the important field of human-computer interaction.

L543 Strategic Intelligence (3 cr.) Introduces different concepts of strategic intelligence and different contexts in which these are applied; the idea of intelligence is not restricted to national security, or corporate competition: it can apply at the level of the individual citizen, company, community, or country.

L544 Information Technology Standardization (3 cr.) P: L401. This course presents students with an opportunity to learn about specific information technology standards of interest to information professionals. Additionally, students will learn about various standardization activities and their impact in organizational settings.

L545 Systems Analysis and Design (3 cr.) P: Computer literacy or consent of instructor. Using a behavioral approach to information systems, this course covers information systems designed to conform to the needs of users.

L546 User-Centered Database Design (3 cr.) P: L401 or consent of instructor. Concerned with a comprehensive view of the processes involved in developing formal access to information from a user-centered point of view. Considers various database models (such as flat file, hierarchical, relational) and hypertext (in terms of text, sound, numeric, image, and geographic data). Students will design and implement databases using several commercial database management systems.

L547 The Organizational Information Resource (3 cr.) This course introduces some of the models and methodologies that have been proposed to help managers exploit the information resource. Topics include historical overview, structure and content of the organizational information resource, and resource modeling.

L548 Computer Programming for Information Management (3 cr.) P: L401 or consent of instructor. Introduces basic skills for programming and manipulation of data structures for bibliographic and full-text information systems.

L550 Issues in the Management of Library Services and Programs P: L527. A special topics course providing in-depth study of management and service issues relevant to a specific type of library or information environment. May utilize a seminar format. Specific topics announced in *Schedule of Classes*. May be repeated for credit when topic varies.

L551 Information Inquiry for School Teachers (3 cr.) This course is intended to be an opportunity for teachers and future teachers (including school library media specialists as teachers) to practice methods in critically thinking about information/media, and to use that process as a means to teach their students to be critical reviewers and communicators.

L552 Audio and Video Information Sources and Delivery (3 cr.) P or concurrent: L503 or L546 or consent of instructor. Students will become acquainted with community radio and television services, especially public access communications through public and academic libraries, as well as public information networks such as BITNET and the Internet, and cable or distance-education television services. Students will have hands-on experience in the production of oral history and community video programming. Students will also become aware of how multimedia and other audiovisual materials are selected, organized, and maintained in library collections.

L553 The School Media Specialist (3 cr.) P or concurrent: L524, L528 and L533, or consent of instructor. Establishes the professional teaching and administrative role of the certified school library media specialist in K–12 settings. Situations are examined that pertain specifically to policy development, budgeting, collection development, instructional design, support staff training, facility design, district supervision, and information networking within the modern school corporation. Students make site visits to leading school information centers, conferences, and media fairs.

L554 Bibliographic Instruction (3 cr.) P or concurrent: L524 or L542, or consent of instructor. This is a hands-on course in which the student will have the opportunity to practice and evaluate methods in design and presentation of various approaches to bibliographic instruction including library skills and orientation, user education, discipline-specific instruction, and information literacy. Students will be expected to research and debate information literacy theory, and to make several extensive oral presentations, which will be subject to critical review.

L559 Introduction to Health Sciences Librarianship (3 cr.) P or concurrent: L520, L524. Health sciences library administration, materials organization, and information services. Emphasis on National Library of Medicine classification, subject headings, printed indexes, and online databases.

L561 The Information Industry (1–3 cr.) This course examines various aspects of the information industry: products, producers, suppliers, trends, and market opportunities. Focus varies with the topic; for example, structural market characteristics, or technical developments and their impact. May be repeated for credit when topic varies.

L562 Information Accounting (3 cr.) P: L507. This course evaluates a variety of approaches to assessing the costs and benefits of information investments. The aim is to provide students with a range of information accounting techniques and impact assessment methodologies to help them better understand the true costs and value of information.

L563 Information Policies, Economics, and the Law (1–3 cr.) Data creation, publication, dissemination, and use occur in a complex social context. Legal and regulatory structures continue to evolve to control these processes. This course explores international and U.S. principles, laws, and regulations affecting the information industry. Focus varies with the topic; for example, copyright of electronic information sources or transborder data flow. May be repeated for credit when topic varies.

L564 Computerization in Society (3 cr.) Surveys social consequences of computerization when it is shaped and used by business, public agencies, and individuals.

L570 Online Information Retrieval (3 cr.) P: L401 or consent of instructor. Principles, methods, and techniques of advanced online information retrieval (IR). Characteristics of and search strategies for the use of bibliographic, referral, citation, fact, numeric, and full text databases and search systems.

Considers standards, use of communications software, front-ends and micro-based IR systems, and creation of in-house databases.

L571 Information Architecture for the Web (3 cr.) P: L401. This course focuses on technologies for connecting computers for communication/telecommunication. A discussion of the differences between digital and analog transmission is used to introduce the concept of computer networks. Network components and designs are compared in terms of performance, reliability, and cost. Communication protocols and network connectivity are presented in the light of current standards. Network management is discussed in relation to technical and economic strengths and security needs.

L574 Communication in Electronic Environments (3 cr.) Examines conceptual perspectives on information in organizations, covering topics such as types of information, information activities, organizational culture and information technology, communication as information flow, obtaining and using information from the environment, managing information in specialized extended communities, and ethical and quality issues. Focus varies by type of community studied. May be repeated for credit when the topic varies.

L576 Digital Libraries (3 cr.) P: L571 or equivalent and consent of instructor. This course introduces digital libraries—networked information servers that provide access to multimedia data for local and remote users. Primary emphasis is on developing digital libraries, based on understanding tools for presentation and manipulation of multimedia as well as analysis of user needs.

L577 Design of Information Systems (3 cr.) P: L575. Students identify, design, and implement a significant information design project, such as acquisitions, organization, or search and retrieval for an online public access system.

L578 User Interface Design for Information Systems (3 cr.) P: L548 or consent of instructor. This course focuses on established principles and methods to design effective interfaces for information systems, emphasizing document retrieval, filtering, visualization, correlation, analysis, and research.

L582 Subject Access Systems (3 cr.) P: L505. Principles, development, characteristics, and internal structures of subject access systems. Evaluation of the strengths and weaknesses of the major classification schemes and current subject heading systems.

L583 Indexing Theory and Practice (3 cr.) P: L505 or consent of instructor. Theoretical concepts of subject indexing and thesaurus construction for information retrieval. Examines alternative approaches to traditional indexing techniques. Evaluation and use of appropriate computer software.

L584 Technical Services (3 cr.) P: L507 or consent of instructor. Principles of organization and function of library technical services, including acquisition, cataloging, serials, circulation. Special emphasis on research and development in library systems and

technology. Includes file organization, documentation system development, analysis, and evaluation for manual, mechanical, and automated applications.

L585 Descriptive Bibliography (3 cr.) P: consent of instructor. The development of the practice of printing, type founding, and papermaking; the principles and practice of the bibliographical description of printed books, with emphasis on the period to 1880.

L586 Administration of Manuscripts and Personal Papers Collections (3 cr.) P: consent of instructor. Introduction to the nature, functions, and methodology of the administration of archives and manuscript collections. The course will consist of lectures, discussions, field trips, and special projects.

L587 Rare Book Libraries and Librarianship (3 cr.) P: consent of instructor. Introduction to the development, organization, and operation of rare book libraries and special collections. Includes an overview of the fundamentals of book collecting (both private and institutional), the antiquarian book trade and auction market, and the profession and practice of rare book librarianship.

L592 Bibliometric Techniques and Problems (3 cr.) Focuses on bibliometric techniques and the research problems that they are used to address; introduces the principal bibliometric techniques used in library and information science research, with particular emphasis on their role in the study of scholarly communication.

L594 Research in Library and Information Science (1–4 cr.) P: L509 and consent of instructor. Individual research in a problem in the field of library and information science.

L595 Workshop for Librarians and Information Professionals (cr. arr.) P: consent of instructor. Group study of specific problems in the library and information field. Generally includes a hands-on element. No more than 6 credit hours of L595 credit may be used toward the requirements for any SLIS degree.

L596 Internship in Library and Information Science (2–6 cr.) P: permission of faculty advisor. Graded S/E. Supervised internship in an information management environment. Professionals in library and information management mentor each graduate student. Forty on-site hours must be completed for each credit earned. Students should plan through their advisor the course work leading to an internship. Normally, at least 21 credits must be completed before enrollment.

L597 Topics in Library and Information Science (cr. arr.) P: consent of instructor. Study of specific topics in librarianship and information science. May be repeated for credit when topic varies.

L600 Readings in Library and Information Science (1–4 cr.) P: consent of instructor. Readings and study in any area of library or information science having an extensive literature. A student may enroll for this course twice in the same semester under different instructors. Normally L600 is completed under the direction of a full-time faculty member. Readings done

under L600 shall not duplicate the content of any course now in the curriculum of the School of Library and Information Science.

L605 Seminar in Education for Librarianship and Information Science (3 cr.) P: consent of instructor. An overview of the history, purpose, and methods in education for librarianship and information science. American and international systems will be covered, as well as standard accreditation requirements for higher education programs. Students will be evaluated on their demonstration of lecture delivery, group discussion management, analysis of a mentor teacher, and presentation of instruction through distance education.

L608 Seminar in Intellectual Freedom (3 cr.) P: 9 credit hours of SLIS graduate credit or permission of instructor. Beginning with a history of and alternative philosophical justifications for censorship, the student is introduced to constraints, obligations, and problems relating to intellectual freedom.

L610 International Information Issues (3 cr.) Comparisons of philosophy and practice of librarianship in selected countries; international library organizations; current world trends.

L620 Topics in Information, Literature, and Bibliography (3 cr.) The purpose of this course is to provide the opportunity for greater in-depth study of the information and literature sources related to area studies, specific academic disciplines, and/or specific library patron audiences. Examples include Slavic materials, Latin American bibliography, and international legal bibliography. Depending on the potential market, the demand for knowledge concerning the specific information, literature, and material, and the expertise of available faculty, there is a wide range of possible topics.

L622 Library Materials for Adults (3 cr.) P: L524, L528. A review and discussion of trends reflected in subject content and use of book and nonbook materials for patrons in secondary school and public libraries, in relation to changing young adult and adult needs and the role of libraries in meeting such needs.

L623 Information in the Humanities (3 cr.) P: L524 or consent of instructor. Introduction to information sources and services in the disciplines of performing arts, music, fine arts, literature, language, philosophy, and religion. In addition, the course addresses information needs and behavior patterns of users seeking these types of information.

L624 Information in Science and Technology (3 cr.) P or concurrent: L401, L524. General materials, reference books, periodicals, government documents, and nonbook media in the individual literature of individual disciplines; patents and report literature. Examination of production, publication, distribution, and forms of scientific and technical literature.

L625 Information in the Social Sciences (3 cr.) P: L401, L524, or consent of instructor. Study of the core information tools in the fields of anthropology,

economics, history, political science, psychology, and sociology. Includes key bibliographic databases and electronic network tools. Evaluation of research dealing with information channels in these fields.

L628 Government Information: Collection, Organization, Dissemination (3 cr.) P: L401, L524. Survey of government information dissemination in all formats and at all levels of government. Consideration of government information policy. Primary emphasis given to U.S. government information, but with some consideration given to state and local publications in the United States, and those of international organizations.

L629 Business Information Sources (3 cr.) P: L401, L524, or consent of instructor. Introduction to basic business materials. Includes resources, research methods, current developments, automated systems, and databases.

L630 Seminar in Art Librarianship (3 cr.) P: A575 (School of Fine Arts) or consent of instructor. Academic art library administration, collection development, reference services, technical services operations, facilities, and slide and photograph/picture collections will be emphasized.

L631 Seminar in Music Librarianship (3 cr.) P: M539 (School of Music). Academic music library administration, collection development, technical services operations, record and performing ensemble collections, and reference services will be emphasized.

L633 Seminar on Issues and Trends in Children's or Young Adult Literature (3 cr.) P: L533 or consent of instructor. An advanced seminar, addressing such topics as images of minority groups, societal problems (e.g., poverty and family patterns), or informational needs and materials (including access and availability of print, nonprint, and computer resources). May be repeated for credit when topic varies.

L641 Information Storage and Retrieval Theory (3 cr.) P: L401, L503, L505, L509. Traditional experimental design, cognitive, and naturalistic approaches to studying the fundamental concepts of information retrieval (IR). Anomalous states of knowledge, relevance, information need, search behavior, and process. Study of IR subsystems; system interface; query formulation, matching, and relevance feedback algorithms, subject indexing, and evaluation.

L642 Information Usage and the Cognitive Artifact (3 cr.) P: L542. Examines the process of information usage, with particular emphasis on reading and writing, to determine the best role for information technology in supporting such human activities with cognitive artifacts.

L643 Evaluation of Information Systems (3 cr.) P: L401. Theoretical and practical exploration of the issues surrounding contemporary information systems. A specific focus will be on evaluating information systems from the user's perspective. This evaluation approach will cut across disciplinary frameworks: behavioral, cognitive, and social sciences. The approach will also touch on multiple research methods: online surveys, sense-making, critical incident, and network analysis.

L651 Evaluation of Library Sources and Services (3 cr.) P: L528. Examines the applied evaluation of library resources and services, including collections, document delivery, technical services, reference services, and overall library performance. Emphasis is placed on the available methods and methodological issues. The checklist method, availability studies, document delivery tests, use studies, applied bibliometrics, and the use of automation are covered.

L697 Advanced Topics in Information Systems (1–4 cr.) This course is a special topics seminar, focusing on a new development or application of technology related to information systems. The intention is to provide a rapid response to current trends, with topic and content changing with each offering. Examples of topics that might be offered include: hypermedia, artificial intelligence, expert systems, parallel processing, virtual reality, or some special aspect of one of these technology trends and their implications for information system development and use. May be repeated for credit when topic varies.

369 Indiana University School of Medicine

Indiana University School of Medicine

The School of Medicine is responsible for providing medical education within the state of Indiana. As part of a major university, it accepts and fulfills five crucial responsibilities: (1) It provides its students with the opportunity to acquire a sound basic education in medicine and fosters the development of lifelong habits of scholarship and service; (2) It advances knowledge through research in biomedical studies and studies related to the cultural and behavioral aspects of medicine and the delivery of health care; (3) It provides graduate education in order to produce practitioners, teachers, and investigators through clinical residency programs and advanced degree programs in the basic medical sciences; (4) It offers continuing education programs aimed at maintaining and improving the competence of those professionals engaged in patient care; and (5) It provides multiple services to the people of Indiana in all areas of the medical sciences and health care.

The Indiana University School of Medicine was founded in 1903 and its first students were enrolled on the Bloomington campus. It was the fourth medical school in the United States, after Johns Hopkins, Harvard, and Western Reserve, to require two or more years of collegiate work for admission. The school awarded the Doctor of Medicine (M.D.) degree to its first class of 25 in 1907. Following the union of all medical schools in the state within Indiana University in 1908, the General Assembly of the State of Indiana, in 1909, mandated that Indiana University assume the responsibility for medical education in the state. Initially, students had the opportunity of taking the first two years of their medical school work at either Bloomington or Indianapolis. In 1912 all students entered through the Bloomington program and moved to Indianapolis for their second-, third-, and fourth-year courses. This remained in effect until 1958, when the work of the Bloomington division was transferred to Indianapolis. Excellent facilities for the teaching of the basic medical sciences and a strong nucleus of basic science faculty remained in Bloomington. Consequently, in 1959 an experimental program of medical education was started in Bloomington in cooperation with the College of Arts and Sciences and the Graduate School. This program, the Medical Sciences Program, included studies that could lead to the combined M.D./M.S. and M.D./Ph.D. degrees. The school also awards a Master of Public Health degree.

In 1965 a School of Medicine faculty committee recommended the adoption of a comprehensive plan for medical education throughout the state of Indiana. The plan involved the use of regional facilities in addition to those of the Medical Center in Indianapolis. The plan would coordinate and utilize elective programs in community hospitals, preceptorships with practicing physicians, internship and residency programs, and continuing medical education programs throughout the state.

The plan also resulted in the formation, within existing educational institutions, of "centers for medical education" for teaching basic medical science courses to first-year medical students. In 1971 the General Assembly of the State of Indiana unanimously authorized legislation establishing the Indiana Statewide Medical Education System. This legislation mandated that the Indiana University School of Medicine be responsible for selection, admission, and assignment of students, for curricular development, and for evaluation and accreditation of the system. Further development of the Indiana Statewide Medical Education System was approved in the 1979 Indiana General Assembly. Approval for planning and funding for a second year of medical study at each of the centers for medical education was passed, and second-year students were first appointed to all centers except Fort Wayne in the fall 1980 semester. Funding for second-year students at the Fort Wayne campus began in fall 1990. The School of Medicine currently has eight centers for medical education, located in Bloomington, Evansville, Fort Wayne, Gary, Muncie, South Bend, Terre Haute, and West Lafayette.

The Indiana University Medical Center campus covers some 85 acres within one mile of the center of Indianapolis. Half of the first- and second-year classes are on the IUMC campus; the other half are at the centers for medical education. The School of Medicine's enrollment in 2000–2001 consisted of nearly 1,100 M.D. students, 143 Ph.D. students, 115 M.S. students, and 38 M.D./Ph.D. students. In addition to opportunities at the centers for medical education, M.D. students may participate in clinical and elective rotations in physician offices and hospitals throughout the state and nation. Students may study or serve abroad during their medical school careers.

The IUMC campus includes Fesler Hall, Van Nuys Medical Sciences Building, Indiana Cancer Pavilion, IU Cancer Research Institute, the Rotary Building, and Emerson Hall. The William H. Coleman Hospital, Robert W. Long Hospital, and the Willis D. Gatch Clinical Building have been renovated to provide research and administrative offices at IUSM. The construction of a new research building began in the 2000–2001 academic year, and yet another was planned.

Hospitals that are staffed by faculty and provide residency training programs include: Wishard Memorial Hospital (a city-county hospital recently listed among the top 100 U.S. public hospitals), Roudebush VA Medical Center, Riley Hospital for Children, Indiana University Hospital and Outpatient Center, and LaRue Carter Psychiatric Hospital (state owned—about five minutes from campus). Riley and IU hospital separated from the School of Medicine in 1997 to join Methodist Hospital of Indiana to form Clarian Health Partners. Clarian Health is committed to supporting the school's mission of advancing education, research, and patient care. Located approximately two miles from IUMC, Methodist Hospital provides additional significant educational opportunities to IU students and residents.

Clarian Health's hospitals—Riley Hospital for Children, IU Hospital, and Methodist Hospital of Indiana—currently record approximately one million in- and out-patient visits per year. The affiliated hospitals—Wishard, Roudebush, and LaRue Carter—together handle another one million patient visits each year. This enormous patient base provides a broad range of superb clinical educational opportunities. The hospitals host 30 residency programs with 929 residents and provide clinical experiences in both in-patient and outpatient facilities to second- through fourth-year students. IUSM's nearly 800 teaching faculty staff all the hospitals. In addition, the hospitals host educational programs for nursing, dentistry, and allied health sciences students as well as Purdue University pharmacy doctoral students.

Indiana University School of Music at IUPUI

Indiana University's highly regarded School of Music has recently established a growing program at IUPUI that reflects urban culture. Activities include special courses on American popular music, contemporary music performance styles, and computer-based electronic music production.

The Indiana University School of Music at IUPUI is committed to delivering quality music instruction to the undergraduate non-major at the nation's premiere urban institution. Most courses carry no prerequisites and are open to all students. Performance ensembles are open to students, staff, faculty, and community members.

The Computer Music Technology Facilities have captured national attention. Several ensemble groups that are open to students, including the Jazz Ensemble, the Pep Band, and the IUPUI Chorus, perform at campus functions.

Degrees Offered in Music

The Master of Science in Music Technology degree is offered by the IU School of Music at IUPUI. Undergraduate classes and a minor in music are also available.

Graduate Program

The Master of Science Degree in Music Technology provides graduate students an academic background in digital music production, instructional design, and multimedia development. Current graduates of this master's program have found employment in a wide range of business and educational settings. Participants develop skills in designing software, using authoring tools and languages, applying multimedia concepts, and managing technology facilities and projects.

Admission Requirements

- Degree requirement: Bachelor's degree (with demonstrated musical skills)
- Minimum grade point average: 3.0 (4.0 scale)
- Admission interview: May be used to assess the applicant's musical literacy, computer literacy,* personal skills, and professional experience

*Students entering the M.S. program with little or no computer experience have to take Instructional Computing Basics (1-3 credit hours). The course consists of three units, each equivalent to one credit: computer awareness/literacy, basic applications, and instructional computing basics. A review of a student's prior computer coursework and experiences, combined when necessary with a test, will be used to assess competencies in each of the three areas. This course does not count toward the minimum 30 credit hour requirement.

- Portfolio: A performance tape and/or an original computer software program may be required to document an applicant's skills and experience
- Letters of recommendation: Three letters of recommendation are required to support the admission application

Admission Categories

Upon receipt of the completed application, letters of recommendation, transcript, portfolio, and the completed interview, the Graduate Admissions Committee of the IU School of Music at IUPUI may grant regular admission, grant admission on probation, or reject the application.

Admission on Probation

A student who does not have an undergraduate and graduate grade point average of 3.0 or better may be admitted on probation in exceptional cases. The probationary status continues until 15 credit hours of course work have been successfully completed. Students who are admitted on probation and incur academic probation during their first semester of study are subject to dismissal.

Degree Requirements

- 30 credit hours (courses at the 500 level or above)
- Six credit hours in cognate courses (at the 400 level) to be selected from music, business, education, communications, computer science, fine arts, or law
- Six credit hours of approved courses (at the 400 level or above) from the cognate field or other fields with the approval of the head of graduate studies

Minimum Grade Point Average

- 3.0 average to continue
- No grades lower than B in core courses are counted toward the degree
- No grades lower than C are counted toward the degree

Residency Requirement

- Three consecutive summers, or one summer and a contiguous academic term

Core Courses

The following courses, 18 credit hours, are required of all students enrolled in the MSMT program:

Class	Credit Hours
N512 Foundations of Music Production	3
N513 Principles of Multimedia Technology	3
N514 Music Technology Methods	3
N515 Multimedia Design Applications in the Arts	3
N516 Advanced Interactive Design Applications in the Arts	3
N517 Internship in Arts Technology OR	3
N518 Arts Technology Development Project	3
Total Credit Hours	18

Cognate Field Courses

Six credit hours are required in an approved cognate field within or outside the School of Music. Students may choose to complete the remaining 6 credit hours with emphasis in one of the following areas: music, business, communications, computer science, education, fine arts, law, or others with the approval of the department. The cognate field may become a minor if at least 12 credit hours are taken in one field.

Internship and Technology Project Opportunities

Students may elect to enroll in an internship (N517) or develop a multimedia project (N518) as the summative experience in the program. Either option is supervised by the student's academic advisor and requires a full report. (These courses are part of the core courses listed previously.) Students participating in the internship are placed in an academic technology setting or an industry setting for one semester of experience working with technology and multimedia experts. No thesis is required for the degree.

Music Minor

The IU School of Music at IUPUI welcomes students whose majors are outside the School of Music but who wish to minor in music. There is no audition required to minor in music, but students must declare music as their minor at the appropriate time in their undergraduate studies.

Music minors can and should participate in ensembles within the IU School of Music at IUPUI, and should register (or audition when required) for these ensembles during undergraduate orientation or the first week of class. The Jazz Ensemble, Pep Band, University Choir, and IUPUI Chorus are open to all students.

IUPUI Music Academy

The IUPUI Music Academy opens the world of music to students of all ages in its state-of-the-art music classrooms and computer labs. The Academy was established in August 1996 by offering piano and electronic keyboard instruction to children and adults. Since then, the academy has grown with the addition of preschool music programs and vocal and instrumental programs (violin, flute, sax, guitar, drums, trumpet). Classes are offered weekdays and on weekends for students' convenience.

IUPUI Day Care

Children attending the IUPUI Center for Young Children can join the Music Academy for preschool music classes during the week day. Students have their class in a music room during their free time. These students do not miss instruction time from the Day Care Program.

International Music Technology Conference and Workshop

The Annual International Music Technology Conference and Workshop is hosted in Indianapolis during the latter part of June. Two workshops are offered: one in Using the Internet and Web Design Instruction, and a second in Distance Learning Technology for Music. Participants may register for one or both workshops, and graduate credit is available for those who attend both workshops.

Participants in the International Computer Music Technology Conference will be able to see and experiment with the latest technology, such as the following:

- **Macintosh Music Lab:** The 15-station, fully equipped iMac lab is available. Each station is connected to the local area network and outfitted with CD-ROM, digital keyboard, and multimedia capabilities.
- **PC Music Lab:** The 21-station IUPUI Computer Music Technology Facility is one of the largest "fully networked" PC computer music education laboratories in the United States. Each of the workstations is equipped with a multimedia computer and a Korg X5D keyboard, and Viking Corporation's line of ergonomically designed furniture. For ease of use, each of the 21 workstations in the IUPUI Computer Music Technology Facility is connected to a Korg Group Education Controller Network.
- **Digital Keyboard Lab:** This lab is equipped with 16 Yamaha Clavinova keyboards, a Yamaha Lab-controller audio system, Macintosh computers/interface cards, and a Teacher's Station.
- **Graduate Lab:** This lab has full production capabilities. It is equipped with digital flatbed scanning, video and photographic digital cameras, sound-tool software, video-edit software, multimedia authoring tools, and CD-ROM burner hardware and software. Both Pentium and Macintosh computers are available.

Participants will have ample lab time to pursue individual projects on either platform throughout the conference. Participants will have the opportunity to work with both Macintosh and Windows applications. Topics include the following:

- Multimedia applications
- CD-ROM technology
- Music printing and notation
- Internet resources and Web design
- Computer-based music instruction
- Music workstation setup
- Grant writing
- Computer-based music curriculum design

Undergraduate Music Courses

D100 Percussion Elective/Secondary (2 cr.)

Individual percussion lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

E241 Introduction to Music Fundamentals (2 cr.)

Designed for, but not limited to, elementary education majors and others interested in using music as a learning tool.

E400 Undergraduate readings in Music Education (1-2 cr.)

F400 Seminar/Variable Topics (2-3 cr.)

L100 Guitar Elective/Secondary (2 cr.) Individual guitar lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

L101 Beginning Guitar Class (2 cr.)

Fundamentals of contemporary guitar playing, with emphasis on simple songs and chords; acoustic guitar required for class and practice.

L102 Intermediate Guitar Class (2 cr.) P: L101 and/or ability to read music and play chord structures proficiently. Builds on knowledge learned in L101; ability to reach chord notation, rhythms, and music notation necessary; acoustic guitar required for class and practice.

L103 Advanced Guitar Class (2 cr.) P: L101 or permission of instructor. Study of advanced techniques, including open tunings and slide guitar. A section for classical guitar is also available under this number.

M110 Special Topics in Music for Non-Music Majors (3 cr.) This is a variable topics class. At IUPUI, some of the topics could include the following: Music and Computers, Studio Music Lab, Urban Drum Experience (2 cr.), Understanding Jazz (1 cr.—5 weeks), Understanding the Orchestra (1 cr.—5 weeks), Women Musicians (1 cr.—5 weeks), or Music of Louis Armstrong (1 cr.—5 weeks).

M174 Music for the Listener (3 cr.) A survey course covering traditional and modern music styles of the last 1,000 years. Learn how to listen to music, instruments, and musical forms. No prior music experience required. (on campus and WWW)

M393 History of Jazz (3 cr.) Emphasis on jazz as a means to better understand the history and culture of America through examining the periods, major performers and composers, trends, influences, stylistic features, and related materials.

M394 Black Music in America (3 cr.) A survey and exploration of black music from its African origin to the present, with special emphasis on its social, economic, and political impact.

P100 Piano Elective/Secondary (2 cr.) Individual piano lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

P110 Beginning Piano Class for Non-Music Majors (2 cr.) Learn keyboard and music reading skills; must have access to out-of-class keyboard for practice. Classes meet in Clavinova lab. For students with no piano experience.

P120 Beginning Piano Class 2 for Non-Music Majors (2 cr.) P: P110 or permission of instructor. Builds on skills acquired in P110.

S110 Violin Elective/Secondary (2 cr.) Individual violin lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

S120 Viola Elective/Secondary (2 cr.) Individual viola lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

V100 Voice Elective/Secondary (2 cr.) Individual voice lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

V201 Voice Class 1 (2 cr.) Introductory aspects of voice, basic vocal techniques, and a wide variety of vocal styles and literature; students perform solo and ensemble singing. No previous music experience required.

W110 Flute/Piccolo Elective/Secondary (2 cr.) Individual flute/piccolo lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

W150 Saxophone Elective/Secondary (2 cr.) Individual saxophone lessons, 50 minutes each week. Additional applied fee. Time scheduled with instructor. Interview/audition required. Call 274-4000 for audition.

X040 University Instrumental Ensembles (2 cr.) Indianapolis Philharmonic Orchestra. Admission by audition only. Call 274-4000 for more information.

X040 University Instrumental Ensembles (2 cr.) IUPUI Jazz Ensemble. Music of the Big Band era. This class is contingent upon enrollment of full instrumentation. Enrollment limited. Audition/interview required. Call 274-4000 for information.

X040 University Instrumental Ensembles (1 cr. per semester) IUPUI Pep Band. The Pep Band is organized in the fall and performs at home basketball games in the spring. (Open to all students who play a band instrument.) Call 274-4000 for more information.

X070 University Choral Ensembles (2 cr.) The following vocal ensembles are available at IUPUI: IUPUI Chorus, IUPUI and Marian College Combined Choral Ensemble, and Indianapolis Symphonic Choir (authorization and audition required). Call 274-4000 for more information.

Z100 The Live Musical Performance (2 cr.) Examines the approach to attending live performances of music (large ensembles, chamber ensembles, solo

recitals, and other multimedia performances). Students attend live performances and discuss music performances by genre to develop critical listening skills.

Z111 Introduction to Music Theory (3 cr.) A study of fundamentals of the language and notation of music: listening, music reading and writing, and the elements of music as used in a variety of genres. Open to all students interested in a general background in music. Recommended for singers, instrumentalists, and keyboard players.

Z201 History of Rock 'n' Roll Music (3 cr.) Survey of major trends, styles, and genres of rock music of the 1950s and 1960s, focusing on the work of artists and groups who have proved to have the most enduring significance.

Z301 History of Rock Music—'70s and '80s (3 cr.) Survey of trends and styles in rock music of the '70s and '80s. Focusing on the artists and groups who have shaped the music of yesterday, today, and tomorrow.

Z315 Music for Film (3 cr.) A survey of the music and sound of movie soundtracks. Class will feature film segments, which are analyzed to see how music textures, tempos, and structures affect the plot. No prerequisite required.

Z320 Special Topics in Popular Music (3 cr.) This is a variable topics class in popular music. At IUPUI, some of the topics could include the following: Business of Commercial Music, Contemporary Broadway Musicals, Women Musicians, American Popular Music, Electronic Music Composition, or Music of Jimi Hendrix.

Z401 Music of the Beatles (3 cr.) Chronicles the meteoric rise of the group from Liverpool, England, that started the rock revolution heard around the world.

Graduate Music Courses

E536 Special Workshop in Music Education (1-3 cr.) IUPUI focuses on implementing computer, MIDI keyboards, and multimedia into the music curriculum. Also used for campus leaders speaking on topics of media, instructional technology, distance learning, and multimedia; plus leading music technology guests.

E536 Digital Sound Design for Multimedia (3 cr.) P: M110, N514, or consent of instructor. Presents music composition and multimedia applications for advanced M.I.D.I. systems and digital audio workstations. Analog, digital and software based synthesis as well as multi-track M.I.D.I./digital recording systems will be explored.

E536 Systematic Research in Arts Technology (3 cr.) P: Consent of instructor. Introduction to the underlying principles and concepts of technology-based studies in the arts. Emphasis on the integration of scientific methodology, descriptive and inferential techniques, and multimedia instrumentation in project development.

N512 Foundations of Music Production (3 cr.) P: Consent of instructor. Examines foundations and principles of music production. Topics include

publishing, print media, music composition, methods, textbooks, multimedia, computer and electronic transmission of computer imaging, sound, and video. Other aspects covered are broadcast media; televideo graphics; background audio; script credit approval; clearances; recording; CD audio; sampling and reproduction of sound and images; multimedia; and computer applications, including network and broadband transmission of media. Business affairs, arts management, live performance, and legal aspects of the commercial music industry are assessed.

N513 Principles of Multimedia Technology (3 cr.) P: Consent of instructor. Examines theories and research in the use of computer technology with special focus on curriculum design and implementation of technology in the classroom; learning and training theory paradigms applied to technology; technology selection and assessment for learner-centered, individualized instruction and training; implementation and resource allocation; assessment designs for specific instructional models; technology and assessment database manipulation; curriculum design and media-optimized instruction; training curriculum models; and multimedia motivation.

N514 Music Technology Methods (3 cr.) P: Consent of instructor. An in-depth study of sequencing and music notation technology. This course also explores the history of Music Instrument Digital Interface (MIDI) development and related uses of MIDI with multimedia, including history and development of music; computer graphics and video technology; multimedia methods and techniques applied to training and instruction; music applications of sound-based stimuli in methods; graphic design applications for visual stimuli; video graphics; and storyboard methods. Current and emerging digital arts technologies will be assessed.

N515 Multimedia Design Application in the Arts (3 cr.) P: Consent of instructor. Presents the principles and fundamentals of instructional design and design techniques using authoring tools on PC, Macintosh, and emerging computer platforms. Included are storyboarding, planning, and organization of scripts; the use of current technology, computers, video, and digital arts equipment; computer-assisted design and project planner software tools; and management of design team concepts. Also includes design parameters for CD-ROM and videodisc production.

N516 Advanced Interactive Design Applications in the Arts (3 cr.) P: N515 or consent of instructor. Incorporates extensive analysis and use of computer and multimedia authoring tools intended for specific educational applications. Project management and programming team organization; media management and selection criteria for digital arts media development; task analysis and instructional sequencing applied to training and instruction; assessment modeling and feedback schedules for intrinsic motivation of students and trainees are examined.

N517 Internship in Arts Technology (3 cr.) P: N516 or consent of instructor. An internship program for students to work with and learn from experts in arts technology fields who are developing and using new applications in commercial and educational

settings. Requirements for interns include the development of a technology project proposal; interview, resume, and project presentation; on-site intern residency; project report; and oral and media presentation of project outcomes.

N518 Arts Technology Development Project (3 cr.) Students create and orally present a multimedia teaching/training project which combines one or more of several elements of music technology including CD-ROM, videodisc, digital audio and video, and MIDI. Requirements include technology project proposal development; oral presentation of proposal; research and development of project; project final report; and oral and media presentation of project.

Introduction to the School of Nursing

The Indiana University School of Nursing opened its doors in Indianapolis in 1914. Since that time, it has evolved into one of the nation's most eminent schools, recently receiving a ranking of twelfth out of more than 200 schools of nursing that offer graduate programs.

Historical Milestones

1914	Indiana University Training School for Nurses opened at Indianapolis
1932	Curricula established for Bachelor of Science in Nursing on Bloomington campus for public health nursing, administration and supervision of nursing service, and teaching in schools of nursing offered for registered nurses in Bloomington
1944	Division of Nursing Education placed in School of Education with preparation for teachers of science, nursing arts, medical-surgical, maternity, and pediatric nursing
1945	Master of Science in Nursing Education first offered at IU Bloomington
1950	Bachelor of Science in Nursing (B.S.N.) program first offered
1956	Name of school officially changed to Indiana University School of Nursing
1957	Original National League for Nursing (NLN) accreditation for the Master of Science in Nursing (M.S.N.) program
1960	Last diploma school graduates
1961	Original NLN accreditation for the B.S.N. program
1965	All nursing programs organized into one administrative unit to form the School of Nursing, the tenth school of Indiana University
1965	Associate of Arts program developed by the regional campuses and the school
1965	General nursing program for registered nurses discontinued
1966	M.S.N. degree first offered
1968	Original NLN accreditation for the Associate of Arts Program, IUPUI
1974	School of Nursing building dedicated at IUPUI
1974	First efforts toward establishing a systemwide school
1975	Specialist in Clinical Nursing program approved
1975	NLN accreditation for A.S.N. program continued to 1983, IUPUI and IU East
1975	First students enrolled in A.S.N. major courses on the Richmond campus (IU East)
1976	Original American Nurses' Association (ANA) accreditation for the Continuing Education program
1976	Doctor of Nursing Science (D.N.S.) program approved
1976	NLN accreditation for B.S.N. and graduate programs continues
1978	First doctoral students admitted

1979	B.S.N. program extended to IU South Bend and IU Southeast
1980	New upper-division baccalaureate curriculum initiated
1981	B.S.N. program extended to IU Northwest
1981	First Doctor of Nursing Science degree awarded
1981	Kokomo campus becomes part of systemwide school
1982	NLN accreditation for B.S.N. and graduate programs continued until 1990
1983	Extension of B.S.N. program to IU Kokomo approved
1983	Extension of M.S.N. program to multiple sites approved
1983	NLN accreditation for A.S.N. program continued to 1991, IUPUI and IU East
1984	Extension of B.S.N. program to IU East approved
1985	First master's degree courses offered at five sites—Indiana Higher Education Telecommunications System (IHETS)
1985	NLN accreditation for A.S.N. program continued to 1993, IU Northwest
1985	Office of Nursing Practice established
1986	NLN accreditation for A.S.N. program continued to 1994, IU Kokomo
1987	Extension of B.S.N. program to IU South Bend approved
1987	Extension of A.S.N. program to IU South Bend approved
1987	Approval of Licensed Practical Nurse (L.P.N.) to A.S.N. mobility option at IUPUI Columbus
1989	School reorganized into academic departments
1990	Formal planning for a Ph.D. program in nursing initiated
1990	Institute of Action Research for Community Health established
1991	Designation of Institute of Action Research for Community Health as a World Health Organization Collaborating for Healthy Cities
1991	Establishment of Mary Margaret Walther Program in Oncology Care Research
1991	Implementation of the R.N. to M.S.N. mobility options
1993	Accreditation of A.S.N., B.S.N., and M.S.N. programs by the National League for Nursing for eight years
1995	Transition from D.N.S. to Ph.D. degree program approved
1996	First class of Ph.D. in Nursing Science students admitted
1998	Emily Holmquist Endowed Professorship instituted
1998	Commission on Collegiate Nursing Education (CCNE) Board of Commissioners granted IUPUI preliminary approval of the baccalaureate and master's nursing education programs
1999	85th anniversary of nursing at Indiana University
2000	Accreditation of A.S.N., B.S.N., and M.S.N. programs by the National League for Nursing
2000	Accrediting Commission for eight years
2000	New ten-year accreditation of B.S.N. and M.S.N. programs by the Commission on Collegiate Nursing Education

Mission of the School of Nursing

Indiana University School of Nursing on the campuses of IUPUI, IUPU Columbus, and IU Bloomington functions in most respects as one administrative unit, known as the Corridor. The mission of the Corridor is to create a community of learning that addresses society's need for caring and scientifically prepared nurse professionals, as well as the educational and developmental needs of students, faculty, staff, and alumni from diverse backgrounds. Through the scholarship of creative pedagogy, discovery, application, and integration, the Corridor will improve the health and quality of life for the citizens of central Indiana, the state, the nation, and beyond by meeting society's need for nurses at different educational levels who are prepared to be effective in a range of practice settings.

As the core campus of the largest multipurpose school of nursing in the country, the Corridor seeks to have top-ranked programs in nursing education and research. Toward that end, the Corridor emphasizes:

- Superior and innovative teaching
- Health behavior research
- Interdisciplinary collaboration
- Partnerships with the community
- Lifelong learning

The Corridor seeks to be known for:

- Creative problem-solving through critical thinking and innovative use of information technology
- Best practice models for culturally appropriate health services, in local to international arenas
- Nursing knowledge development related to healthy lifestyles, self-care, functional enhancement, effective symptom management, and delivery systems
- Leadership in health policy

The mission and values of the School of Nursing are consistent with campus aspirations toward quality, collaboration, centrality, and identity. They further the overall mission:

- To raise educational achievement and intellectual aspiration in Indianapolis, the state of Indiana, and beyond, through leadership, access, and commitment to lifelong learning
- To develop and apply knowledge to ever-changing issues of health and of economic and social well-being, through teaching, research, and service
- To enhance the professional and personal lives of students by offering the state's most comprehensive range of effective academic programs
- To serve as a model for collaboration and interdisciplinary work
- To build understanding and respect in academic and human relationships through the appreciation and celebration of diversity

Statement by the Dean

Since its founding in 1914, Indiana University School of Nursing has grown into one of the largest schools of nursing in the country, and it is ranked as one of the best. We offer the full range of academic degrees, from undergraduate through doctoral levels, as well as postdoctoral research training and extensive continuing education. As one school with offerings at eight locations (Bloomington, Columbus, Gary, Indianapolis, Kokomo, New Albany, Richmond, and South Bend), we are committed to your career preparation. Our more than 23,000 graduates are chief nursing officers of large health facilities, deans of nursing schools, clinical specialists, entrepreneurs, and staff nurses in urban and rural settings around Indiana and throughout the world.

As I look back over my own nursing career, I am struck by how nursing can be a means of developing all aspects of one's personality, from the caring to the analytical. I have had experiences that were outside my realm of thinking when I earned my undergraduate degree, and I am convinced there is no talent or ambition that cannot be realized in this profession. As I look to the future, I see nursing holding on to traditional caregiving values, but playing them out in new and exciting ways. Faced with the challenges of changing health care delivery, nurses will be called on to lead in areas never dreamed of by earlier generations. Know that the talented faculty at Indiana University are committed to helping you realize your professional aspirations in every career transition that you undertake, and to enabling you to seize your own preferred future. At all levels and on all campuses, Indiana University School of Nursing has forged strong links between nursing education and nursing services in clinical and community settings in order to improve the health of individuals, families, and communities. I welcome you and invite you to become a part of our extended IU family.

Angela Barron McBride, Ph.D., R.N., F.A.A.N.
University Dean and Distinguished Professor of Nursing

Accreditations

National League for Nursing Accrediting
 Commission—A.S.N., B.S.N., and M.S.N.
 programs

Commission on Collegiate Nursing Education—B.S.N.
 and M.S.N. programs

Indiana State Board of Nursing—A.S.N. and B.S.N.
 programs

American Nurses Credentialing Center's Commission
 on Accreditation

Memberships

The School of Nursing is an agency member of the National League for Nursing's Council of Associate Degree Programs and the Council of Baccalaureate and Higher Degree Programs, Commission on Collegiate Nursing Education (CCNE), as well as the Committee for Institutional Cooperation (CIC). The school is also a constituency member of the National League for Nursing; and the American Association of Colleges of Nursing. The Clarian Health Nursing Service is an agency member of the Council of Hospitals and Related Institutional Nursing Services.

Professional/Technical Standards

Students of the School of Nursing will be held to the American Nurses' Association's "Standards of Professional Performance" and "Code for Nurses," and the School of Nursing's Essential Abilities (outlined below). Failure to uphold these standards may result in dismissal from any nursing program.

ANA Standards of Professional Performance (revised 1989)

1. The nurse systematically evaluates the quality and effectiveness of nursing practice.
2. The nurse evaluates his or her own nursing practice in relation to professional practice standards and relevant statutes and regulations.
3. The nurse acquires and maintains current knowledge in nursing practice.
4. The nurse contributes to the professional development of peers, colleagues, and others.
5. The nurse's decisions and actions on behalf of clients are determined in an ethical manner.
6. The nurse collaborates with the clients, significant others, and health care providers.
7. The nurse uses research findings in practice.
8. The nurse considers factors related to safety, effectiveness, and cost in planning and delivering client care.

ANA Code for Nurses (revised 1985)

Each person, upon entering the nursing profession, inherits a measure of the responsibility and trust associated with the profession, along with the corresponding obligation to adhere to the standards of ethical practice and conduct it has set. Nursing students are expected to show responsibility in their behavior, to deal with faculty, peers, patients, and clinical staff in a direct and honest manner, and to be professional in their conduct. Students who violate accepted standards for professional nursing may be discharged from the program.

1. The nurse, in all professional relationships, practices with compassion and respect for the inherent dignity, worth, and uniqueness of every individual, unrestricted by considerations of social or economic status, personal attributes, or the nature of health problems.
2. The nurse's primary commitment is to the patient, whether an individual, family, group, or community.
3. The nurse promotes, advocates for, and strives to protect the health, safety, and rights of the patient.
4. The nurse is responsible and accountable for individual nursing practice and determines the appropriate delegation of tasks consistent with the nurse's obligation to provide optimum patient care.
5. The nurse owes the same duties to self as to others, including the responsibility to preserve integrity and safety, to maintain competence, and to continue personal and professional growth.
6. The nurse participates in establishing, maintaining, and improving healthcare environments and conditions of employment

conductive to the provision of quality health care and consistent with the values of the profession through individual and collective action.

7. The nurse participates in the advancement of the profession through contributions to practice, education, administration, and knowledge development.
8. The nurse collaborates with other health professionals and the public in promoting community, national, and international efforts to meet health needs.
9. The profession of nursing, as represented by associations and their members, is responsible for articulating nursing values, for maintaining the integrity of the profession and its practice, and for shaping social policy.

Essential Abilities

The School of Nursing faculty have specified essential abilities (technical standards) critical to the success of students enrolled in any IU nursing program.

Qualified applicants are expected to meet all admission criteria, and matriculating students are expected to meet all progression criteria, as well as these essential abilities (technical standards) with or without reasonable accommodations.

1. **Essential judgment skills to include** ability to identify, assess, and comprehend conditions surrounding patient situations for the purpose of problem solving and coming to appropriate conclusions and/or courses of action.
2. **Essential neurological functions to include** ability to use the senses of seeing, hearing, touch, and smell to make correct judgments regarding patient conditions for the purpose of demonstrating competence to safely engage in the practice of nursing. Behaviors that demonstrate essential neurological functions include, but are not limited to, observing, listening, understanding relationships, writing, and employing psychomotor abilities.
3. **Essential communication skills to include** ability to communicate effectively with fellow students, faculty, patients, and all members of the health care team. Skills include verbal, written, and nonverbal abilities consistent with effective communication.
4. **Essential emotional coping skills to include** ability to demonstrate the mental health necessary to safely engage in the practice of nursing as determined by professional standards of practice.
5. **Essential intellectual and conceptual skills to include** ability to measure, calculate, analyze, synthesize, and evaluate to engage competently in the safe practice of nursing.
6. **Other essential behavioral attributes to include** ability to engage in activities consistent with safe nursing practice without demonstrated behaviors of addiction to, abuse of, or dependence on alcohol or other drugs that may impair behavior or judgment. The student must demonstrate responsibility and accountability for actions as a student in the School of Nursing and as a developing professional nurse. (Policy VI-A-15)

School of Nursing Requirements

Completion of Degree Requirements

The School of Nursing must receive notices of removal of Incomplete and Deferred grades, special credit grades, and independent study course grades no later than three weeks before the end of classes in the student's last semester prior to graduation.

Auditing of Courses

An audit student officially registers for a class and pays the applicable credit hour rate. Upon completion, the course is entered on the permanent university record as one taken for no credit (NC). Note that this option is available only with the instructor's permission.

Professional Liability Insurance

All undergraduate and graduate nursing students have liability insurance under IU's malpractice contract. This policy covers students only while caring for patient/clients in the student role. This insurance does not cover students who are working for pay or in any other capacity outside program-sanctioned learning experiences.

Health Requirements

All nursing students must provide evidence of compliance with health requirements including immunizations and CPR certification on the campus where they are enrolled. **Failure to meet health requirements will prevent the student from participating in clinical learning experiences.** Lack of participation could constitute a clinical course failure. Occupational Safety and Health Administration (OSHA) training related to blood-borne pathogens is required of all students annually. Students will be notified of training dates and times. The School of Nursing faculty and administrators strongly encourage students to carry personal health insurance. The school will not be liable for any health problems requiring medical treatment for students enrolled in programs.

Health Insurance

Health insurance is mandatory and students are expected to demonstrate insurance coverage on entrance to the program and continued coverage throughout the program.

Academically Disadvantaged Students

Programs for academically disadvantaged students are available on IU campuses. Resources vary from campus to campus. Students should see individual campus bulletins for specific campus resources.

Students with Disabilities

The University is committed to helping temporarily and permanently disabled students make the transition to student life. Students with physical, mental, or learning impairments are encouraged to consult with counselors from the School of Nursing and Adaptive Educational Services for assistance in

meeting degree requirements. Students with disabilities must meet all academic and technical skill requirements of their program.

Writing Competencies

Writing competency is an expected outcome of the nursing program, and of the University. In an effort to prepare students well in this area, faculty have developed the following writing criteria to be used in assessing all student writing:

1. The writing has a focus.
2. The writing should be organized with an introduction, purpose, sense of audience, thesis, and conclusion.
3. The writing shows development, organization, and detail; the writing reveals the student's ability to develop ideas with balanced and specific arguments.
4. The writing is clear.
5. There is coherence within and between paragraphs.
6. The writing reflects critical thinking, linking the specific to the general.
7. The writing contains appropriate sentence structure, variety, punctuation, and spelling; it is free from errors in grammar and punctuation.
8. The writing follows APA style and format, unless another style and format are specified for a particular purpose.
9. The writing demonstrates original work, and where ideas or materials of others are used, appropriate credit is given to original sources. (Policy III-E-4)

Computer Literacy

Prior to enrolling in the nursing courses, faculty members expect nursing students to use computers well enough to log on to the Internet to access class content. Students should also be able to search for nursing-related materials and to return to an interesting site whenever they choose by using bookmarks or a word processor to store Internet location addresses. Students also should be able to use a word-processing program and to log in to an e-mail account to communicate with other students and faculty.

Students participating in Web-based courses should have a Pentium Pro computer with at least a 36.6-baud modem; a minimum of 32 MB RAM, 166 MHz or greater processing speed; multimedia capabilities; and the IUPUI SoftPak software. This software can be purchased at the IUPUI Cavanaugh Bookstore on CD for \$5. These CDs include software to connect to the IUPUI network, Netscape Communicator to use as a World Wide Web browser, and a virus checker. If the students are outside of the Indianapolis calling area, they should acquire an Internet provider such as America On Line (AOL), Prodigy, CompuServe, or another that has a phone number in their calling area. These commercial providers have their own World Wide Web browsers. Students in R.N.-B.S.N., R.N.-M.S.N., M.S.N., and Ph.D. programs are *required* to have their own computer and to be able to access the IUPUI campus services.

Transportation

Clinical practice learning experiences are varied in setting and are located within the surrounding communities of Indianapolis, Columbus, and Bloomington. Students are expected to travel to and from all clinical experiences, are responsible for providing their own transportation, and are expected to carry the appropriate insurance. The School of Nursing is not liable for any traffic violations or auto mishaps occurring during student commutes.

Essential Support Services

Continuing Education Program

The School of Nursing Continuing Education staff members facilitate the provision of noncredit continuing education for registered nurses and other health-related personnel. Offerings are determined on the basis of expressed needs of consumers and emerging patterns and trends in health care. Each continuing education program attempts to be responsive to the needs of the learners in regard to scheduling, time (day or evening), day of the week, and duration of instructional period. The length of each educational activity depends on the stated behavioral objectives, varying from one or two days to a semester in length, or consisting of a time interval series of programs that reinforces the application of new knowledge and skills. Courses are taught in an onsite format, by independent study, via two-way video, or on the World Wide Web.

Educational offerings are taught by experts in nursing and allied health fields who are clinicians and consultants in specialized areas of health care in the state of Indiana, at the Indiana University School of Nursing, or at other universities. The continuing education program is accredited by the American Nurses Credentialing Center's Commission on Accreditation as a provider of continuing nursing education.

Visit our Web site at nursing.iupui.edu for complete information and registration for upcoming courses. E-mail may also be sent to censg@iupui.edu, or call (317) 274-7779.

Center for Nursing Research

The mission of the Center for Nursing Research is to support the development, dissemination, and utilization of knowledge by (1) providing for development in the areas of research planning, grant writing, budget preparation, data analysis, and research dissemination; (2) coordinating and facilitating the experiences of research assistants; (3) facilitating joint projects between practitioners and educators; (4) providing ongoing information about research resources; and (5) publicizing faculty and student research accomplishments. The Center for Nursing Research supports the activities of the Patient Care Research Committee, which plans the IU/Clarian Annual sponsored each year by the Clarian Health Partners, Inc., Indiana University Hospital Nursing Service Department, and the School of Nursing. Staff members also assist the Research Committee, especially in its review of requests and awards for intramural funding (Project Development Program

funds and Research Incentive funds). Currently funded faculty projects include studies of factors affecting adaptation to childhood epilepsy, epilepsy outcomes in youth, factors predicting quality of life in dementia patients, breast cancer screening behaviors, cancer risk and genetic risk education for first-degree relatives of colorectal cancer patients, cancer care interventions to improve functioning and psychosocial outcomes in newly diagnosed cancer patients, HIV disease and the partner relationship, community-based nurse-managed clinics, school-based primary health care, making cities healthier, healthy families, and prenatal care to prevent low-birthweight infants. For further information, contact the Indiana University School of Nursing, Center for Nursing Research, 1111 Middle Drive, NU 338, Indianapolis, IN 46202; telephone (317) 274-7627, or visit the Center for Nursing Research home page at nursing.iupui.edu.

Development Office

The Development Office, headed by the director of development, collaborates with the Indiana University Foundation to design and implement fundraising efforts under the direction of the dean of the School of Nursing. Objectives of the office are to do the following:

- Work with faculty, alumni, staff, and volunteers to identify, cultivate, and secure gifts from individuals, foundations, and corporations, thereby enhancing the community of learning.
- Supervise planning and implementation of fundraising activities, special events, and donor recognition programs.
- Develop and maintain publications about the school and opportunities for giving.

For more information, please contact the Development Office, School of Nursing, NU 102, IUPUI; telephone (317) 274-1545 or (317) 274-4293; fax (317) 278-7908.

School of Nursing Alumni Association

The Indiana University School of Nursing Alumni Association, a constituent society of the greater IU Alumni Association, was established in 1918 by members of the first IUSON graduating class. Members of this class sought to maintain their strong connection to Indiana University, the School of Nursing, and to other alumni by formally establishing the organization. Through the years, the School of Nursing Alumni Association has grown to more than 2,500 dues-paying members. It represents the interests of more than 20,000 IU School of Nursing graduates worldwide. The 30-member Nursing Alumni Association Board of Directors, a group made up of nursing graduates from every School of Nursing campus, serves as the governing body for the organization. It works to implement a variety of service, professional, and social activities each year. Some of these events include local and regional alumni receptions, alumni service awards, student scholarships, class reunions, and continuing education programs. In addition, the association works to promote the general interests of the School of Nursing, the university, and the nursing profession.

School or Program Clubs

Sigma Theta Tau The Alpha chapter of the international honor society of nursing was organized at Indiana University. Students in baccalaureate and graduate programs may be admitted to membership if they have demonstrated excellence in their nursing programs and have shown superior academic and personal records of achievement. Qualified members of the nursing profession, upon demonstration of marked achievement in nursing, are also eligible for membership. Leadership, research, and scholarship constitute the purposes of Sigma Theta Tau International.

Student Nurses' Association All prenursing and nursing undergraduate students are eligible for membership in the National Student Nurses' Association, the Indiana Association of Nursing Students, and IU's local chapter. The chief purpose of the organization is to help students prepare to assume professional responsibilities through programs that involve nursing students in health care issues, legal aspects of nursing, interdisciplinary questions, and community activities at the local, state, and national levels.

Chi Eta Phi Sorority, Inc. This service organization is open to all undergraduate nursing students who demonstrate excellence in the profession of nursing, maintain an acceptable grade point average, demonstrate leadership, and participate in campus and community activities. This organization affords students an opportunity to engage in service activities and to promote interest in the field of nursing locally and nationally.

Minority Nursing Student Organization (MNSO) The purpose of the MNSO is to serve as a peer support group for undergraduate, graduate, and prenursing minority students. The organization serves as a liaison among minority nursing students, faculty, and interested persons, groups, and organizations in the school, university, and community.

Presidents' Council The Presidents' Council is composed of the presidents of School of Nursing student organizations, class officers, faculty advisors, and representatives from school committees that deal with student matters. The purpose of this group is to be a liaison between various student groups, the faculty, and administration of the school. This group is especially involved in decisions associated with progression through the program and with graduation-related events. Class presidents are expected to keep classmates informed of issues and to act as advocates for their peers.

Pi Lambda Theta Graduate students with GPAs of at least 3.5 who are enrolled in teacher education courses may meet selective criteria for election to Pi Lambda Theta, an international honor society and professional association in education.

Graduate Nursing Student Organization The Graduate Nursing Student Organization seeks to foster

fellowship, cooperation, and communication among graduate nursing students; to provide a means for graduate students to share concerns; to share information regarding student activities and concerns; to plan service and educational projects; and to provide representation for graduate students. The goal of the organization is to uphold the ideals and standards of the School of Nursing.

IU School of Nursing Committees Students are invited to participate on School of Nursing standing committees of the Council of Nursing Faculty, and on ad hoc task forces. Examples include the Curriculum Committee and the Student Affairs Committee.

Departmental Mission

Adult Health

The mission of the Department of Adult Health is to focus on the generation, utilization, and dissemination of knowledge related to the health care of adults. We offer courses in the A.S.N., B.S.N., M.S.N., and doctoral programs available through the School of Nursing.

Environments for Health

Consistent with the vision and mission of the School of Nursing, faculty in the Department of Environments for Health facilitate student learning by creating, applying, and transferring their unique knowledge and skills in the areas of psychiatric nursing, nursing administration, community health nursing, nursing informatics, and teacher education.

Family Health

The Department of Family Health Nursing focuses on the care of people and their families across the life span. The department's vision arises from the broader tripartite mission of the university, the school, and the Corridor: teaching, scholarship, and service. We embrace these essential values:

- The community is the context for our care of families.
- Interdisciplinary collaboration promotes better health care.
- Nursing of families requires a life span approach.
- Students, clients, communities, and faculty participate in connecting conversations.
- We value diversity in family constellations.
- Our practice is grounded in health as families define it.

The Department of Family Health Nursing seeks to be known for:

- Faculty clinical excellence
- Superior and innovative teaching
- Community partnerships
- Nurturing environments for students
- Research and scholarship in health promotion and family health

Undergraduate Programs

Special Expenses

- Practice kit fee—This kit includes supplies that the student will be using in the learning lab and clinical settings.
- Practicum fees—Certain courses at the School of Nursing are assessed practicum (clinical) fees in addition to credit hour charges.
- Uniform—All undergraduate nursing students must purchase the designated uniform and wear it, along with appropriate identification, while in clinical settings. Registered nurse students may wear a professional uniform appropriate to the clinical setting. Students not appropriately attired may be asked by their instructor to leave the clinical area.
- Lockers—Lockers are available for rental per semester for those attending the IUPUI campus in the School of Nursing building.

Grade Replacement, Forgiveness, Repeating Courses, Auditing

Required General Education Courses

To be considered for admission, a student must earn a minimum grade of C (2.0) in all required general education courses (C– is not acceptable). These courses may be repeated no more than one time. Effective Fall 2001 and thereafter, all incoming freshmen, ongoing students, and transfer students may repeat no more than three (3) required general education courses or only two (2) required science courses. (Policy U-VI-A-16)

The following policies apply to all students enrolled in the A.S.N. or B.S.N. programs. Students will be notified in writing of any additions to, deletions from, or modifications of those policies listed below.

Auditing of Courses

Students may register for general-education classes that will not apply to their degree on a credit or audit basis. Students auditing a course must officially register for the class and pay any applicable fees. Upon completion, the course is entered on the permanent university transcript as taken for no credit (NC). *Required general-education courses taken for NC will not apply toward completion of nursing degree requirements.* Students should check with an academic counselor as to procedures and fees for auditing classes.

Students may not audit nursing practicum courses. Permission to audit a didactic nursing course depends on availability of space, faculty consent, and demonstration of adequate program progression on the part of the student.

Correspondence Courses

Other than public speaking, all required and elective courses for the nursing major that are offered by IU's Independent Study Program may be taken for credit. Some correspondence courses, however, may not meet degree requirements. Students must contact an academic counselor before enrolling, and obtain the counselor's signature for all correspondence courses. Correspondence courses with nursing numbers do not satisfy residency requirements. Students are responsible for ensuring that all correspondence courses are completed by published deadlines. All correspondence courses must be completed prior to graduation. (A.S.N. students must complete any correspondence or independent study courses prior to enrollment in the fourth [final] semester of nursing course work. If any such course is incomplete, they must register for the on-campus course in the fourth semester.)

Portfolio Review

Students may also pursue the portfolio option if they believe they have knowledge and skills consistent with specific required course objectives and outcomes. If students wish to pursue this mechanism, they must contact the instructor responsible for the course during the semester prior to the semester in which the student would actually need to take the course. If the portfolio is not accepted, the student must register for and successfully complete the course. The portfolio review option does not take the place of course equivalency reviews or transfer credit. Students may pick up a copy of the Undergraduate Student Guideline and the portfolio review form from the Office of Educational Services (IUPUI: NU 122), or from the course instructor. As part of the portfolio process, students will be expected to register for portfolio review credit. Your academic counselor can facilitate this registration process.

Withdrawal

Students withdrawing from nursing course work must complete this work prior to progression in the program. Students withdrawing from required nursing course work will be considered out-of-sequence students.

The following stipulations apply to all undergraduate nursing students:

1. Withdrawal from a required general-education course in the semester indicated in the curriculum requires withdrawal from all corequisite courses.
2. Withdrawal from a required nursing didactic course requires withdrawal from the corequisite nursing practicum/clinical course.
3. Failure to register in each sequential semester, excluding summer session, constitutes disruption in progression, and students must seek reinstatement.
4. Approval for withdrawing from nursing courses is granted at the discretion of the faculty. Approval may be granted (based on circumstances) if the student has a didactic grade of at least C (2.0) or

a practicum grade of S (Satisfactory) in nursing major courses.

5. A pattern of withdrawals may influence requests for consideration of reinstatement.
6. Students who withdraw from the nursing major in the first semester must seek readmission to the program, subject to competitive review (A.S.N. as Category II applicants).
7. Students seeking withdrawals after the completion of first-semester courses must formally request continuation in the program. Students who interrupt studies are considered out of sequence and may progress only if space is available in needed courses. The date of graduation for out-of-sequence students is not guaranteed.

Good Standing

All undergraduate students who maintain a minimum cumulative grade point average (GPA) of 2.0 and earn a grade of C (2.0) or better in all required general education and didactic courses and a grade of S in all required practicum/clinical courses will be considered in good standing. (Policy U-VI-A-8)

Academic Probation

An undergraduate student will be placed on probation when any of the following conditions exist:

1. The cumulative GPA falls below 2.0.
2. The semester GPA falls below 2.0.
3. A grade below C (2.0) has been received in a required didactic course, or a grade of F has been earned in a required practicum/clinical course.

Academic probation will be removed when all of the following conditions exist:

1. The cumulative GPA is 2.0 or higher.
2. The semester GPA is 2.0 or higher.
3. A minimum grade of C (2.0) has been received in the required didactic courses completed, and a grade of S has been earned in the required practicum/clinical courses completed.
4. All other specific conditions, if required, have been met. (Policy U-VI-A-8)

Advanced Placement

A.S.N./B.S.N.

Students transferring from another A.S.N./B.S.N. program may pursue advanced placement if they are in good academic standing in the program from which they are transferring. The program from which the student is seeking to transfer must be accredited. Advanced placement is determined by equivalency of course work, comparability of curricula, and space availability. Students may attain advanced standing through transfer of credit from regionally accredited colleges and universities (for grades of C or higher), credit by examination, or a portfolio review process. Credit for such courses and applicability to the degree will be determined by the university and the School of Nursing.

Orientation

All students enrolled for the first time in nursing program courses in the School of Nursing are required to attend the nursing orientation program at the beginning of the fall or spring semester. Freshmen and transfer students are expected to attend the campus orientation program.

Ten-Year Limit

Courses in anatomy, physiology, microbiology (for A.S.N./B.S.N.), and life span development (for the A.S.N. program only) must have been completed within 10 years prior to the semester in which a basic student begins the nursing course work. Two options are offered to a student who completed these courses more than 10 years prior to enrollment: (1) repeat the course or; (2) take a challenge examination if an examination is authorized by the academic unit sponsoring the course. This policy does not apply to those who hold a current R.N. license.

Practicum/Clinical Absence Policy

It is expected that students will participate in all required (regularly scheduled or substituted) practicum/clinical experiences. Failure to complete all regularly scheduled or substituted experiences places students at risk for not meeting course objectives. Students absent from more than 20 percent of scheduled practicum/clinical experience will receive a failing grade, or be allowed to withdraw according to IU School of Nursing Corridor Policy VI-A-12, or take an incomplete according to university policy dictated by the timing of and the circumstances surrounding the absences. (Policy VI-A-28)

Academic Appeals

Problems related to a student's academic and professional status that emerge during enrollment in either undergraduate nursing program are handled through a campus-specific appeals process. Students wishing to appeal any matter related to their academic status should consult their academic counselor for information regarding this appeal process. Students requesting an exception to policy must petition for a waiver. Students initiate the appeal process by filing a formal appeal with the Student Affairs Committee.

Eligibility for Licensure

Those who apply for licensure examination as a registered nurse in the state of Indiana are required to submit to the Indiana State Board of Nursing (ISBN) written evidence, confirmed by oath, that they (1) have not been convicted of any act that would

constitute grounds for disciplinary sanction under the Indiana State Board rules and regulations or of any felony that has direct bearing on their ability to practice competently (note that relevant convictions include the possession and use of drugs or controlled substances); (2) have completed a high school course of study or its equivalent as approved by the appropriate educational agency; and (3) have completed all graduation requirements at a state-accredited school of nursing.

Each student is responsible for meeting licensure application deadlines. Students wishing to be licensed in another state must contact that state's board of nursing directly. Students are responsible for processing all required licensure-related forms and applications and for meeting all state requirements for licensure. A graduate is eligible to schedule a date to take the computerized licensure examination once the State Board of Nursing has cleared the graduate to do so.

International students and graduates of foreign nursing programs should contact the Indiana State Board of Nursing for licensure requirements specific to them if they wish licensure in this state.

Intercampus Transfer

Nursing students in good academic standing may seek intercampus transfer by petitioning the Admission, Progression, and Graduation (APG) Committee at least one semester in advance of the requested transfer. Intercampus transfer requests will be evaluated individually on the basis of the student's academic record and on the availability of faculty, a space in program, and facilities to meet the student's needs and program objectives.

Transfers from Other Universities or Colleges

Students must be in good academic standing to be considered for transfer as a pre-nursing or nursing student. Students wishing transfer must petition the APG Committee for acceptance. Approval is based on curriculum compatibility, space, resources, progression, and graduation requirements. Students should see an academic counselor at their current university or college prior to making transferal requests.

Professional Practices, Internships, Honors at School Level

Honors and Awards

Students have the opportunity to be recognized for academic excellence both during their program and at graduation. Full-time nursing students will be placed on the Dean's List for each semester in which they earn a grade point average (GPA) of 3.5 or higher. Part-time students are eligible for the Dean's List after the completion of 12 credit hours, and for each semester they have accumulated an additional 12 credit hours of course work with a GPA of 3.5 or higher.

B.S.N. and A.S.N. candidates who are in the top 10 percent of their graduating class and who have demonstrated a high level of academic achievement may be selected to graduate with academic distinction. To be eligible, A.S.N. students must have completed at least half of the credit hours for their degree at IU, while B.S.N. students must have completed a minimum of 60 credit hours at IU. Grade point averages used in determining the category of academic distinction awarded are:

3.83-4.00—Highest Distinction

3.66-3.82—High Distinction

3.50-3.65—Distinction

A GPA used to determine distinction is calculated from all grades in courses up to and including the seventh semester (B.S.N.) or the third semester (A.S.N.) taken at IU. The GPA does not include transfer grades, special credit, and open electives, but does include grades received in courses that are repeated because of program stipulations.

Awards and honors are also given to recognize outstanding student performance. Students interested in specific awards should see an academic counselor for a list of available awards, along with eligibility criteria.

Associate of Science in Nursing (A.S.N.)

The School of Nursing will suspend admission to the A.S.N. program. The last class to be admitted to this program will be accepted fall 2002 for the spring 2003 semester. The Columbus campus (IUPUC) will still admit L.P.N. students to the L.P.N. to A.S.N. Mobility Option.

Philosophy Statement

The Associate of Science in Nursing Degree Program seeks to educate individuals as entry-level practitioners of nursing. Graduates of this program are prepared with the knowledge and skills to provide direct care to individuals within the family and community context. Care is provided in various structured and semi-structured settings within the continuum of health care. The curriculum provides students with facts, principles, concepts, and skills from general education and nursing that serve as the basis for nursing practice within a culturally sensitive environment.

A graduate of the Associate of Science in Nursing Degree Program is expected to demonstrate competency in being a critical thinker; an effective communicator who listens actively and responds appropriately to messages being transmitted; a culturally competent person who recognizes and respects differences within and between groups of people; a competent provider of nursing care; a conscientious practitioner who practices within the legal and ethical parameters of nursing; and an accountable and responsible manager of care. Graduates of the Associate of Science in Nursing Degree Program are able to give direct care in collaboration with clients, families, and other members of the health care team to achieve therapeutic outcomes. The competencies are consistent with the American Nurses' Association's Standards of Nursing Practice and the Code of Ethics.

Graduates recognize lifelong learning as essential both to their continued growth as registered nurses and to the promotion of the profession of nursing within a changing health care environment.

Purpose

The purpose of the A.S.N. Program is to educate graduates who will competently fill entry-level staff nursing positions. The program is designed to meet the learning needs of students who are pursuing an initial career in nursing, as well as students who wish to change their career goals. Graduates of the associate degree program are prepared to provide nursing care to individuals in a diverse range of health care settings.

Student Outcomes

The graduate of the Associate of Science in Nursing Program will be expected to be:

- A critical thinker who is able to evaluate ideas of self and others, and to apply reason in problem solving.

- An effective communicator who is able to listen actively and respond appropriately to the message transmitted.
- A culturally competent person who recognizes and respects differences within and among groups of people.
- A competent provider of nursing care consistent with the Indiana Nurse Practice Act and with Professional Standards set by the American Nurses' Association.
- A conscientious practitioner who practices within the legal and ethical parameters of professional nursing.
- An accountable and responsible manager of care who functions in health care settings where policies and procedures are specified and professional consultation is available.

This program is offered on the IUPUI campus, and applications for admission to the A.S.N. Program should be filed at least one semester in advance of the desired time of enrollment. Application for admission to Indiana University may be obtained from the IUPUI Office of Admissions, 425 University Boulevard, Room 129, Indianapolis, IN 46202-5143. Prospective students should know the requirements for admission to the associate of science program, the curriculum requirements, the course sequencing, and the requirements for the degree. *Students are responsible for meeting all degree requirements.*

The admission process is selective, and acceptance depends on the number of applicants and the applicant's ability to compete academically in the pool of applicants. When the number of qualified applicants exceeds space available, the final decision about who will be admitted is based on the grade point average (GPA) computed for all grades earned in required A.S.N. courses, excluding FX grades. (The FX option allows students to replace an F grade by repeating the course. This option may be exercised no more than once for any given course and for no more than three courses.) Applicants accepted for admission to the A.S.N. Program must enroll in nursing course work at the time designated by the School of Nursing. Students who fail to do so must reapply to the program with no guarantee of readmission.

Students who have been enrolled in another university must have an IUPUI credit transfer review prior to applying for admission. If enrolled at another university for the term prior to enrollment at IUPUI, the transfer applicant must be in good academic standing, and must have completed the term with a 2.0 GPA, as well as having a cumulative grade point average of at least a 2.0 (on a 4.0 scale). If a student has 25 or fewer transferable semester hours, the high school records should reflect compliance with freshman admission requirements. Students who do not have an overall grade point average of 2.0, but have recently and successfully completed a minimum of twelve semester hours with no less than a 2.5 grade point average, may be considered on an exception basis depending on the number of applicants and on available space.

Admission occurs in the fall and spring semesters. Students may request admission through one of the following three category headings:

Category I (First Priority)

Individuals applying to the A.S.N. Program without post high school credit and who meet the following criteria may be considered for admission as Category I applicants. (Individuals holding a general equivalency diploma [GED] or those who do not meet Category I criteria must apply as Category II or Category III applicants.)

Admission Criteria

1. Graduate in the top 25 percent of high school class or rank in the top 25 percent of high school class (high school class standing).
2. Achieve a cumulative high school grade point average of 3.0 on a scale of 4.0.
3. Achieve either a minimum score of 1100 on the Scholastic Aptitude Test with a minimum of 580 on the verbal and 520 on the math. (SAT-1, SAT taken prior to April 1995 must be recalculated—consult with counselor), or a minimum composite score of 24 on the American College Test (ACT).
4. Complete Indiana University expectations for 28 semester hours of college preparatory courses, including:
 - a. 8 semesters of English composition or literature (one semester each of speech and journalism may be included);
 - b. 4 semesters of social science (economics, government, history, psychology, or sociology);
 - c. 6 semesters of mathematics, including geometry and first and second-year algebra;
 - d. 2 semesters of laboratory science (biology, chemistry, or physics). The School of Nursing highly recommends high school chemistry and biology;
 - e. 8 semesters in some combination of foreign language, computer science, or additional mathematics, laboratory science, social science, or English courses. Four semesters of foreign language is strongly recommended, as are courses to develop writing skills.
5. Achieve grades of B or above in all high school laboratory courses, as well as grades of C or above in required semesters of college preparatory courses.
6. Demonstrate math proficiency, as specified by the IU campus to which the student is applying. (Policy U-VI-A-2)

Category II (Second Priority)

Individuals who do not meet Category I criteria may apply under Category II if they meet the following criteria. Those holding a General Equivalency Diploma (GED) are eligible to apply as a Category II candidate. Priority will be given to individuals whose permanent addresses are within the defined regional area served by the campus to which they are making application, and/or who have completed a minimum of six credits of required general education courses on the campus to which they are applying. In addition, they must:

1. Complete at least 11 required A.S.N. general education credit hours prior to program application. A minimum of 4 credit hours must be taken in the natural sciences (anatomy, physiology, or microbiology) and a minimum of 3 credit hours must be from the social sciences

(Introduction to Psychology, Introduction to Sociology, or Life Span Development). All stipulated "developmental courses" must be completed prior to applying to the A.S.N. program.

2. Earn a grade of C (2.0) or better in each required A.S.N. general education course taken prior to program application. (Note that each required course may be repeated only one time in an attempt to achieve a grade of C or better.)
3. Repeat no more than three (3) required A.S.N. general education courses. Of the three (3) courses, only two (2) failures will be allowed in science course work. Any grade below a C is considered unsatisfactory (failing). All unacceptable course work must be completed by the second attempt with a grade of C or higher
4. Achieve a minimum pre-nursing GPA of 3.0 and a cumulative grade point of 3.0 on all course work completed at IU.
5. Demonstrate math proficiency as specified by the campus to which the student is applying. (Policy U-VI-A-2)

Category III (Third Priority)

Any students who do not clearly meet the criteria for Category I or II are invited to apply under Category III if they meet the following criteria:

1. Complete at least 11 required A.S.N. general education credit hours prior to program application. A minimum of 4 credit hours must be taken in the natural sciences (anatomy, physiology, or microbiology) and a minimum of 3 credit hours must be from the social sciences (Introduction to Psychology, Introduction to Sociology, or Life Span Development). Additionally, students must receive a grade of C or higher in English Composition before applying. All stipulated "developmental courses" must be completed prior to applying to the A.S.N. program.
2. Achieve a grade of C (2.0) or better in each required A.S.N. general education course taken prior to program application. (Note that each required course may be repeated only one time in an attempt to achieve a grade of C or better.) This applies to all course work completed at IU or another university.
3. Repeat no more than three (3) required A.S.N. general education courses. Of the three (3) courses, no more than two (2) science courses may be repeated. (One science course and corresponding lab are considered one course.) Any grade below a C is considered unsatisfactory (failing).
4. Achieve a minimum pre-nursing GPA of 2.3 and a cumulative grade point average of 2.0 for all course work completed at IU or another university.
5. Demonstrate current math proficiency as defined by the campus to which the student is applying. (Policy U-VI-A-2)

Students must formally accept or decline admission. Students who decline admission and later reapply must compete with the applicant pool existing at the time of reapplication. *Students who refuse an admission invitation two times are ineligible to be considered for future admission.*

A student's admission offer will be revoked if his or her GPA falls below 2.0 or a grade below C (2.0) is earned in any general-education requirement between the time of application and actual enrollment in nursing courses. Any student having questions about this policy may contact the nursing academic counselor.

Students withdrawing from course work within the first semester must reapply for competitive review. Students who withdraw have one opportunity to seek readmission. Reapplication must be within a time frame consistent with the school's progression policy.

Academic Expectations/Progression

After admission to the A.S.N. program, placement in nursing courses for the academic year is based on the following priority ranking:

1. Full-time, regular progression students.
2. Part-time, regular progression students.
3. Students who have interrupted their studies but are in good academic standing.
4. Students who have withdrawn from one or more nursing courses.
5. Students who have failed and successfully repeated a nursing or required general education course.
6. Students who need to repeat either a nursing course or a general education prerequisite or corequisite.
7. Students who have been dismissed and reinstated.
8. Intercampus transfer students.
9. Transfer students from other A.S.N. programs according to admission, progression, and graduation guidelines.

If additional criteria are needed to determine placement, the admission committee considers the date of becoming out of sequence, and the grade point average (GPA). (See an academic counselor with any questions about these requirements.) Students who interrupt their studies for any reason are considered out of sequence and will be accommodated according to the above priority ranking on a space-available basis for the remainder of course work to be completed.

An A.S.N. student must have a nursing GPA exceeding 1.65 to enter the second semester of nursing course work, and a cumulative GPA of *at least* 2.0 to enter the third semester of nursing course work. A student who fails to receive a minimum grade of C (2.0) or an S (Satisfactory) in a nursing course must petition the Admission, Progression, and Graduation Committee to continue in the program.

An A.S.N. student's failure to register in each sequential semester, excluding summer sessions, constitutes an interruption in a student's program. Students who have interrupted their program of study for any reason are required to submit a written request to reenter the program to the chairperson of

the Corridor A.S.N. Admission, Progression, and Graduation Committee. This request must be received by July 1 for fall semester, April 1 for summer, and October 1 for spring. All requests for reentry will be evaluated on the basis of the availability of resources. *Reentry of students who have interrupted their study for any reason is not guaranteed.* Students who reenter must adhere to the policies and curriculum of the School of Nursing in effect at the time of reentry.

Students may progress to the next semester of courses upon the successful completion of *all* prior semester nursing courses designated on the campus enrolled. Students wishing exception to this practice must petition the admission, progression, and graduation committee.

Academic Policies and Procedures

Dismissal and Reinstatement

Out of Sequence

Students who have interrupted their progression for any reason are considered to be out of sequence. Out-of-sequence students will be placed in required course work on a space-available basis. Out-of-sequence students are placed in required nursing courses according to the priority ranking under "Academic Expectations/Progression." Once progression is interrupted, program completion dates cannot be guaranteed, although every reasonable effort will be made to facilitate progression. The Admission, Progression, and Graduation (APG) Committee has the responsibility for determining student placement in courses. Curriculum changes during the period of interrupted progress toward the degree may result in review and revision of a student's degree requirements based on evaluation of individual situations.

Dismissal

A student will be dismissed from the program when, in the judgment of the APG Committee, there is lack of progress toward the degree. Evidence will include, but not be limited to the following:

1. Failure to achieve a nursing GPA of 1.65 on completing the first semester of nursing course work or of 2.0 prior to entering the third semester of nursing course work.
2. Failure to achieve a 2.0 GPA in any two consecutive semesters or to maintain a cumulative GPA of 2.0 in the second year of the program.
3. Failure to achieve a minimum grade of C (2.0) or S (Satisfactory) in any one nursing course (didactic or practicum) or general education course after two attempts.
4. Failure to achieve a minimum grade of C (2.0) or S (Satisfactory) in any two nursing courses (didactic or practicum) on the first attempt.
5. Failure to meet probationary stipulations in the semester following the assignment of probation.
6. Failure to meet School of Nursing's Essential Abilities with or without specified accommodations.

7. Inability to conduct oneself in a professional fashion consistent with the American Nurses' Association *Code of Nurses* or IUPUI's *Code of Student Rights, Responsibilities, and Conduct*. In particular, falsification of records and reports, plagiarism, or cheating on an examination, quiz, or any other assignment is cause for dismissal.
8. Failure to demonstrate personal integrity or conduct befitting the profession of nursing.

The dismissal of any student is contingent upon review by the APG Committee.

Reinstatement

Students who desire reinstatement in a program must submit a written request to the chairperson of the APG Committee. They must submit this request at least one semester prior to the requested date of reinstatement. Reinstatement is not guaranteed and no student may be reinstated more than once. Reinstatement by one IU campus is not binding on another IU campus. Reinstatement requests will be evaluated individually on the basis of academic standing, potential for progress toward the degree, availability of resources, and satisfactory resolution of any conditions existing at the time of withdrawal or dismissal. Students who are reinstated must adhere to policies in effect at the time of reinstatement. A reinstated student will be dismissed upon failure (grade of C- or lower) of one additional required course.

Degree Requirements

Students are responsible for meeting all degree requirements. All candidates for the degree of Associate of Science in Nursing must fulfill the following requirements:

1. Completion, with a grade of C or higher, of a minimum of 41 credit hours of required nursing courses and 27-29 credit hours in required general-education courses for the A.S.N. degree.
2. Achievement of a minimum curriculum GPA of 2.0 on a 4.0 scale.
3. Completion of the degree requirements within four years of the first enrollment in nursing course work. Students who fail to comply with this requirement need to petition the APG Committee for an extension. Extension decisions will be reviewed in terms of current curriculum requirements.
4. Completion of a minimum of 51 percent of courses in the nursing major on the IU campus that grants the degree.
5. Application for the degree at the beginning of the final semester.
6. Completion of the RN-CAT and Pre-RN Review course.

The student must file an Intent to Graduate application in the Office of Educational Services. The School of Nursing is not responsible for the student's certification for the degree if the student fails to file the application.

School Requirements

Sample Curriculum Plan

Students admitted through Category I generally complete A.S.N. degree requirements in the sequence shown below. Students admitted through Category II or Category III must complete each required general-education course with or before the program semester in which it appears below. Please maintain contact with your academic counselor to ensure that degree requirements are completed as required.

Course numbers in () indicate course numbers on the IUPUI, IUPU Columbus, and IU Bloomington campuses, respectively.

Year One

First-Semester Courses	Credit Hours
Human Anatomy (N261, A215)	5
Microbiology (J210, N251, M200/M215)	4
English Composition (W131)	3
A136 Introduction to the Science and Technology of Nursing	4
A137 Application of the Science and Technology of Nursing	3
Total Credits	19

Second-Semester Courses	Credit Hours
Human Physiology (N217, P215)	5
Introductory Psychology (B104 or B105, P101 or P102)	3
A146 Care of the Individual: Alterations in Nutrition, Elimination, and Metabolic Functions	3
A147 Nursing Practicum: Alterations in Nutrition, Elimination, and Metabolic Functions	3
A148 Care of the Individual: Alterations in Comfort and Function	2
A149 Nursing Practicum: Alterations in Comfort and Function	2
Total Credits	18

Year Two

First-Semester Courses	Credit Hours
Life Span Development (B310, P214)	3
Introductory Sociology (R100, S100 or S210)	3
A276 Care of the Individual: Alterations in Activity—Exercise	3
A277 Nursing Practicum: Care of the Individual—Alterations in Activity—Exercise	3
A278 Care of the Individual: Alterations in Cognition, Perception, and Interaction	3
A279 Nursing Practicum: Care of the Individual—Alterations in Cognition, Perception, and Interaction	2
Total Credits	17

Second-Semester Courses

Guided Communication elective (See counselor for guidance)	3-4
A286 Care of the Individual: Beginning and Evolving Families	3
A287 Nursing Practicum: Care of the Individual—Beginning and Evolving Families	3
A288 Care of the Individual within a Family and Community Context	2
A289 Nursing Practicum: Care of the Individual within a Family and Community Context 3	
A290 The Discipline of Nursing: Role Transitioning	2
Total Credits	16-17

L.P.N. to A.S.N. Mobility Option

This mobility option is available on the Columbus campus to licensed practical nurses who have graduated from an approved L.P.N. program. Those interested in applying to this option must meet the following criteria:

1. Admission to the university.
2. Documentation of current practical nurse license.
3. Documentation of the completion of 12 general-education credit hours required in the A.S.N. program. Two biological science courses and one psychology course must be taken as part of this requirement. Students must achieve a grade of C or higher in all required courses.

Admission information and applications are available from the Columbus academic counselor. Acceptance is based on academic achievement, experience, and demonstrated ability to succeed in the program. The number of students accepted each year or semester is based on resources. Licensed practical nurses applying for admission to the A.S.N. program are held to the same curriculum, student policies, standards, and expectations of that program.

Academic Expectations/Progression

L.P.N. students are required to complete the L.P.N. Transition to A.S.N. Practice (A150) with a grade of C or higher. This transition course acts as bridge linking prior knowledge and skills with new knowledge and skills. Students will be permitted two attempts to complete this course with a C or higher. A student unsuccessful in obtaining a C may not progress further in this option, but may apply to the A.S.N. program for competitive review with all other applicants with no prior nursing education. Academic performance in the transition course will not count as an unsuccessful course attempt for those L.P.N. students admitted as basic students. (Students must also successfully complete all pre- and co-requisite general education course work prior to advancing.)

All probation, dismissal, and reinstatement policies that govern A.S.N. program majors are also pertinent to L.P.N. students.

Advanced Placement

Students who have successfully completed A150 L.P.N. Transition to A.S.N. Practice with a grade of C (2.0) or higher may enter the second year of the associate degree program and continue completing degree requirements. Upon completion of A150, special credit will be awarded for the following courses:

A136 Introduction to the Science and Technology of Nursing
A137 Application of the Science and Technology of Nursing
A146 Care of the Individual: Alterations in Nutrition, Elimination, and Metabolic Functions
A147 Nursing Practicum: Alterations in Nutrition, Elimination, and Metabolic Functions
A148 Care of the Individual: Alterations in Comfort and Function
A149 Nursing Practicum: Alterations in Comfort and Function

This special credit will be posted on a student's IU transcript upon completion of appropriate forms.

School Requirements

Sample Curriculum Plan

Students apply to one of two track options designed to facilitate degree completion.

Track Option 1—One-Year Plan

A.S.N. Semester 3 Courses (Fall)	Credit Hours
A276 Care of the Individual: Alterations in Activity—Exercise	3
A277 Nursing Practicum: Care of the Individual—Alterations in Activity—Exercise	3
A278 Care of the Individual: Alterations in Cognition, Perception, and Interaction	3
A279 Practicum: Care of the Individual—Nursing Alterations in Cognition, Perception, and Interaction	2
A290 The Discipline of Nursing Role Transitioning	2
A.S.N. Semester 4 Courses (Spring)	Credit Hours
A286 Care of the Individual: Beginning and Evolving Families	3
A287 Nursing Practicum: Care of the Individual—Beginning and Evolving Families	3
A288 Care of the Individual within a Family and Community Context	2
A289 Nursing Practicum: Care of the Individual within a Family and Community Context	3

Track Option II—Two Year Plan

Fall I		Credit Hours
A276 Care of the Individual: Alterations in Activity—Exercise		3
A277 Nursing Practicum: Care of the Individual—Alterations in Activity—Exercise		3
Spring I		Credit Hours
A286 Care of the Individual: Beginning and Evolving Families		3
A287 Nursing Practicum: Care of the Individual—Beginning and Evolving Families		3
Fall II		Credit Hours
A278 Care of the Individual: Alterations in Cognition, Perception, and Interaction		3
A279 Nursing Practicum: Care of the Individual—Alterations in Cognition, Perception, and Interaction		2
A290 The Discipline of Nursing Role Transitioning		2
Spring II		Credit Hours
A288 Care of the Individual within a Family and Community Context		2
A289 Nursing Practicum: Care of the Individual within a Family and Community Context		3

Bachelor of Science in Nursing (B.S.N.)

Philosophy Statement

Baccalaureate nursing education provides a broad foundation in the sciences and liberal arts, which is necessary for preparing professional nurses who are capable of practicing in a competent and responsible fashion as informed citizens in a dynamic and diverse society. Graduates of the baccalaureate nursing program are expected to demonstrate competency in being a critical thinker; a culturally competent person; a knowledgeable coordinator of community resources; a politically aware professional; a beginning practitioner whose actions are consistent with professional legal and ethical standards; an effective communicator; a competent provider of health care; and a person who exemplifies a positive public image. These competencies are consistent with the 1998 “Essentials of Baccalaureate Education for Professional Nursing Practice,” established by the American Association of Colleges of Nursing, the 1989 “Standards of Nursing Practice,” established by the American Nurses’ Association (ANA), along with the ANA 1985 Code of Ethics. Baccalaureate graduates assist individuals, families, and communities in attaining mutually established health goals and in facilitating the highest level of functioning for individuals, families, and communities toward the

maximization of their health potential. Baccalaureate education must prepare graduates to be knowledgeable workers and processors of information, and to navigate complex health care systems using available technologies as they design and develop, independently or in conjunction with others, more efficient and effective approaches to the delivery of health care services.

Purpose

The baccalaureate program offers a creative curriculum for the education of professional nurses competent in meeting the current and future health needs of society. The curriculum prepares graduates to function as practitioners in acute and long-term care, community settings, home care, and other nontraditional settings, and also provides a foundation for leadership positions and graduate study.

The graduate of the B.S.N. program possesses a broad knowledge of the humanities, the biological and social sciences, and nursing. As a beginning practitioner, the graduate applies well-developed problem-solving skills in caring for individuals, families, and communities.

Student Outcomes

The following outcomes are expected of a graduate of the baccalaureate program:

Critical Thinker Someone who is able to demonstrate intellectual curiosity, rational inquiry, problem-solving skills, and creativity in framing problems.

Culturally Competent Person Someone who can provide holistic nursing care to a variety of individuals, families, and communities.

Knowledgeable Coordinator A coordinator of community resources who facilitates individual, family, and community access to resources necessary for meeting health care needs.

Politically Aware Person Someone who participates in the profession and the practice of nursing with a global perspective.

Conscientious Practitioner An individual who practices within the ethical and legal framework of the nursing profession.

Effective Communicator Someone who is able to share accurate information.

Therapeutic Nursing Intervention/Competent Care Provider A competent provider of health care who assumes the multiple role dimensions in structured and semi-structured health care settings.

Professional Role Model A person who promotes a positive public image of nursing.

Responsible Manager Someone who balances human, fiscal, and material resources to achieve quality health care outcomes.

The B.S.N. program is offered on the IUPUI and IU Bloomington campuses. Prospective students should acquaint themselves with curriculum requirements,

course sequencing, and other degree requirements, along with the requirements for admission to the B.S.N. program on either campus. *Students are responsible for meeting all degree requirements.*

Admission Criteria

Students seeking admission to the nursing major must meet the following criteria:

1. Admitted to Indiana University as a degree-seeking student.
2. Maintain a minimum Indiana University cumulative grade point average (GPA) of 2.3 on a 4.0 scale. Does not include transfer or FX courses.
3. Complete general education courses required for admission on the campus to which the student applies. Required courses and credit hours needed for application may vary from campus to campus depending on course availability and general campus requirements. Students are responsible for being informed of admission expectations on the campus to which they seek admission. Completed course work should include a minimum of 8 completed credit hours or 2 courses in the critical/analytical cluster. One completed course in this cluster should be Anatomy. However, science requirements are campus specific and based on campus general education requirements and course availability and accessibility. The remaining credit should include English and Psychology. It is an expectation that students demonstrate math proficiency as defined on the campus to which they are applying, and that students have completed high school chemistry or can demonstrate equivalency.
4. Demonstrate a pre-nursing admission grade point average (GPA) of 2.5 on a 4.0 scale for all completed course work required for admission. The nursing grade point average is calculated on all completed courses required for the B.S.N. degree. Grades earned in transfer courses accepted and applied to required general education credit hours will count in the calculation of the admission GPA. Repeated attempts to pass courses with a grade of C or higher will also be calculated in the GPA as a C (2.0) regardless of the grades received in the repeated courses. FX grades will not be counted. (See Policy VI-A-9: Calculating Grade Point Averages for Students Applying to the A.S.N. and B.S.N. Programs.)
5. Designate which courses will meet the cluster requirements where course choice is an option. Courses designated for the nursing major may be repeated only one (1) time. Students must successfully complete all courses for the degree with a C or better by the second attempt.
6. Complete all required course work by established deadline date. This includes independent study, correspondence course work, and courses for which students have received an Incomplete (I). Students wishing to transfer required course work from a university other than Indiana University must be in good academic standing at that university, and have achieved a grade of C (2.0) or

higher in courses for which transfer is being requested.

7. Repeat no more than three required cluster courses required for B.S.N. degree. Of the three (3) courses, only two (2) failures will be allowed in science course work. (One science course and its corresponding lab are considered one course.) A student must achieve a grade of C (2.0) or higher in all program requirements. This criterion also applies to any student wishing to transfer required cluster courses from a university other than Indiana University.
8. Submit to the School of Nursing an official credit transfer report (CTR) for all work being transferred from a university other than Indiana University.
9. Submit program application by published deadline. Applications received after the published deadline will be considered at the discretion of the faculty. Students may reapply to the Bachelor of Science in Nursing Program in a subsequent semester if they maintain eligibility.

Applicants who do not meet one or more of the above criteria may request special consideration by the campus Admission, Progression, and Graduation Committee to which admission is requested. Consult campus policies and practices to determine the appropriate process to be followed on the campus you wish to attend.

The nursing faculty of the campus to which the student is seeking admission has the responsibility and authority to select applicants for admission to the baccalaureate nursing program. The faculty reviews all qualified applicants and selects those for admission that have:

1. Demonstrated academic achievement; and
2. Displayed individual characteristics as determined by each campus. Students should check with the campus of their choice for additional requirements.

Priority for admission will be given to students applying to the campus on which they have completed more than half of the program requirements. Transfer students will be considered for admission based on availability of space. Students will be admitted to the baccalaureate nursing program for a specific semester and are expected to enter the program that semester. Students must formally accept or decline admission. Students not entering that specific semester must reapply on a competitive basis for a subsequent semester. Students will not be considered for further admission if they have declined an admission offer two times. (Policy VI-A-16)

Applicants receive priority consideration for admission if they have completed the majority (51%) of their prerequisite general education course work on the IUPUI, IUPU Columbus, or IU Bloomington campus. If additional spaces are available, the next priority is given to students who have completed the majority of their course work on another IU campus. Students transferring the majority of prerequisite course work from a non-IU school are accorded lowest priority for admission.

Academic Expectations/Progression

After admission to the B.S.N. program, placement in nursing courses for the academic year is based on the following priority ranking:

1. Full-time, regular progression students.
2. Part-time, regular progression students.
3. Students who have interrupted their studies but are in good academic standing.
4. Students who have withdrawn from one or more nursing courses.
5. Students who have failed and successfully repeated a nursing or required general education course.
6. Students who need to repeat either a nursing course or a general education prerequisite or corequisite.
7. Students who have been dismissed and reinstated.
8. Intercampus transfer students.
9. Transfer students from other A.S.N. or B.S.N. programs according to admission, progression, and graduation guidelines.

If additional criteria are needed to determine placement, the admission committee considers the date of becoming out of sequence, and the grade point average (GPA). (See an academic counselor with any questions about these requirements.) Students who interrupt their studies for any reason are considered out of sequence and will be accommodated according to the above priority ranking on a space-available basis for the remainder of course work to be completed.

A B.S.N. student's failure to register in each sequential semester, excluding summer sessions, constitutes an interruption in a student's program. Students who have interrupted their program of study for any reason are required to submit a written request to reenter the program to the chairperson of the Corridor B.S.N. Admission, Progression, and Graduation Committee. This request must be received by July 1 for fall semester, April 1 for summer, and October 1 for spring. All requests for reentry will be evaluated on the basis of the availability of resources. *Reentry of students who have interrupted their study for any reason is not guaranteed.* Students who reenter must adhere to the policies and curriculum of the School of Nursing that are in effect at the time of reentry.

Students may progress to the next semester of courses upon the successful completion of *all* prior semester nursing courses designated on the campus enrolled. Students wishing exception to this practice must petition the admission, progression, and graduation committee.

Academic Policies and Procedures

Dismissal and Reinstatement

Dismissal

A student will be dismissed from the program when, in the judgment of the Admission, Progression, and Graduation (APG) Committee on the campus of enrollment, there is lack of progress toward the degree. Lack of progress will include, but not be limited, to the following:

1. Failure to achieve a 2.0 semester grade point average in any two consecutive semesters.
2. Failure to earn a grade of C (2.0) or S (Satisfactory) in any two required nursing courses (didactic or practicum/clinical) on the first attempt.
3. Failure to achieve a minimum grade of C (2.0) in any required nursing didactic course or S (Satisfactory) in any required nursing practicum/clinical course by the second attempt.
4. Failure of more than three general education courses required for the A.S.N. or B.S.N. degree. Of the three courses, only two failures will be allowed in science course work. Any grade below a C is considered unsatisfactory (Failing).
5. Failure to meet IU School of Nursing essential abilities expectations.
6. Failure to adhere to the *IU Code of Student Rights, Responsibilities, and Conduct*.

Falsification of records or reports, plagiarism, or cheating on an examination, quiz, or any other assignment is cause for dismissal. (See *IU Code of Student Rights, Responsibilities, and Conduct*.)

The faculty reserves the right to dismiss any student whose personal integrity, health, or conduct demonstrates unfitness to continue preparation for the profession of nursing. Integrity and conduct will be judged according to the standards of the most recent *Code for Nurses* as adopted by the American Nurses' Association.

The dismissal of any student is contingent upon review by the Admission, Progression, and Graduation Committee on the campus of enrollment. *Student dismissal is subject to the appeal process on the campus of enrollment.* (Policy VI-A-18)

Reinstatement

A student who has been dismissed from the School of Nursing for academic failure or any other reason may request reinstatement by petitioning the School of Nursing's Admission, Progression, and Graduation Committee from the campus at which he or she was dismissed. Reinstatement by one campus is not binding on other campuses. This written request must be received by July 1 for fall reinstatement, April 1 for summer reinstatement, and October 1 for spring reinstatement. Reinstatement will be based on faculty recommendations at the time of dismissal, as well as on availability of resources.

Students may progress to the next semester of courses upon the successful completion of *all* prior semester nursing courses designated on the campus enrolled. Students wishing exception to this practice must petition the admission, progression, and graduation committee.

Reinstatement is not guaranteed, and no student may be reinstated more than once. A reinstated student will be dismissed upon failure (a grade of C– or lower) of one additional required course. Students who are reinstated must adhere to the policies and curriculum of the School of Nursing that are in effect at the time of reinstatement.

Degree Requirements

All candidates for the degree of Bachelor of Science in Nursing must fulfill the following requirements:

1. Satisfactory completion of a minimum of 123 credit hours that apply to the degree (credit hour requirements may vary slightly among IUPUI, IU Bloomington, and IUPU Columbus campuses). Credits earned in remedial learning-skill courses and courses that are repeated do not apply toward the degree.
2. Achievement of a minimum cumulative grade point average of C (2.0).
3. Achievement of a grade of C (2.0) or higher in each required course or its equivalent.
4. Removal of all Incompletes, deferred grades, and special credit course grades in nursing courses by three weeks prior to the end of the student's last semester before graduation.
5. Completion of all course work within six years after enrollment in nursing courses for the nursing major.
6. Completion of a minimum of 51 percent of courses in the nursing major on the IU campus that grants the degree.
7. Application for the degree at the beginning of the final semester.
8. Completion of the R.N.-CAT and Pre-R.N.-Review Course.

Honors Option

The honors option for baccalaureate students is intended to give exceptionally talented students the opportunity to engage with select faculty in scholarly work that goes beyond expected course and program activities. Students wishing to pursue Honors study should contact a nursing academic advisor.

School Requirements

Sample Curriculum Plan

In general, the baccalaureate curriculum requires a minimum of four academic years to complete. The baccalaureate curriculum is subject to continuous evaluation and revision. If curriculum changes occur, updated information can be obtained from the academic counselor. The following is an example of a full-time plan of study. Each student will develop, with the assistance of an academic advisor, an individual plan of study that reflects student need, student choices, availability of courses, and specific campus expectations.

Freshman Year*

First-Semester Courses

	Credit Hours
Communications Cluster	3
English Composition	3
Introduction to Psychology	3
Cultural Diversity Cluster	3
Critical/Analytical Cluster	3-4
Total Credits	15-16

Second-Semester Courses

	Credit Hours
Anatomy	5
Introduction to Sociology	3
Critical/Analytical Cluster	3-4
Humanistic Appreciation	3
Total Credits	14-15

Sophomore Year

Third-Semester Courses

	Credit Hours
Physiology	5
B230 Developmental Issues and Health	4
B231 Communication for Health Care Professionals	3
B232 Introduction to the Discipline of Nursing: Theory, Practice, Research	3
Total Credits	15

Fourth-Semester Courses

	Credit Hours
Microbiology	4
B233 Health and Wellness	4
B244/B245 Comprehensive Health Assessment	4
B248/B249 Science and Technology of Nursing	4
Total Credits	16

Junior Year

Fifth-Semester Courses

	Credit Hours
H351/H352 Alterations in Neuro-Psychological Health	5
H353/H354 Alterations in Health I	5
H355 Data Analysis in Clinical Practice and Health Care Research	3
Cultural Diversity Cluster Course	3
Total Credits	16

Sixth-Semester Courses

	Credit Hours
H361/H362 Alterations in Health II	5
H363/H364 The Developing Family and Child	6
H365 Nursing Research	3
Social Competence Cluster	3
Total Credits	17

Senior Year

Seventh-Semester Courses

	Credit Hours
S470/S471 Restorative Health Related to Multi-System Failures	5
S472/S473 A Multi-System Approach to the Health of the Community	5
S474 Applied Health Care Ethics	3
Open Elective (nursing or general education)	3
Total Credits	16

*Successful completion of high school chemistry, and Algebra 1 and 2 required.

Eighth-Semester Courses

	Credit Hours
S481/S482 Nursing Management and Management Practicum	5
S483 Clinical Nursing Practice Capstone	3
S484 Research Utilization Seminar	1
S485 Professional Growth and Empowerment	3
Open Elective (nursing or general education)	3
Total Credits	15

Students interested in part-time study should consult with a nursing academic advisor at the beginning of their academic studies. Students may request part-time study at any point in their progression. Students pursuing part-time study will be placed in courses based on established enrollment ranking, successful completion of prerequisite courses, and availability of courses. Part-time studies must be completed in the six-year time frame for the degree.

Accelerated B.S.N. Mobility Option—For Second Degree

The accelerated mobility option facilitates men and women holding a minimum of a baccalaureate degree in an area other than nursing who now wish to earn a bachelor of science in nursing degree. The accelerated option allows those with a bachelor's degree to apply general education course work toward the completion of the B.S.N. degree if prior general education course work meets the general education requirements for this degree.

The accelerated option requires a commitment to a full-time study plan that will be completed in an 18-month timeframe. At the completion of the program, graduates will receive an Indiana University B.S.N. degree and will be eligible to sit for the Registered Nurse Licensure Examination.

Admission Criteria

Students seeking admission to the accelerated mobility option must meet the following criteria:

1. Must have applied for admission to Indiana University–Purdue University Indianapolis in the fall or spring semester.
2. Must complete a formal application (separate from that to IUPUI) to Indiana University School of Nursing for the Accelerated B.S.N. Mobility Option by March 1.
3. Must have a demonstrated cumulative grade point average of 2.5 on a 4.0 scale for all prior college/university credit.
4. Must have a demonstrated grade point average of 3.0 on a 4.0 scale for all general education course work applied to the B.S.N. degree.
5. Must complete a personal statement that speaks to career goals and abilities to be successful in this study option.
6. Must have completed all required general education courses below:
 - a. 4-5 credit hours of anatomy

- b. 4-5 credit hours of physiology
- c. 3-4 credit hours of microbiology
- d. 3 credit hours of psychology
- e. 3 credit hours of sociology
- f. 3 credit hours of English composition
- g. 3-4 credit hours of life span development
- h. 6 credit hours of communication
- i. 3 credit hours of statistics
- j. 6 credit hours from cultural diversity cluster
- k. 6 credit hours of open electives
- l. 3 credit hours from social competence cluster
- m. 3 credit hours from humanistic appreciation
- n. 8 credit hours from critical/analytical cluster

Curriculum Plan

Summer I	Credit Hours
B244/B245 Comprehensive Health Assessment	4
B233 Health and Wellness	4
Total Credits	8
Summer II	
B232 Introduction to the Discipline	3
B248/B249 The Science and Technology of Nursing	4
Total Credits	7
Fall Semester	
H351/H352 Alterations in Neuro-Psychological Health	5
H353/H354 Alterations in Health I	5
S474 Health Care Ethics	3
Total Credits	13
Spring Semester	
H363/H364 Developing Family and Child	6
H361/H362 Alterations in Health II	5
H365 Introduction to Nursing Research	3
Total Credits	14
Summer I	
S472/S473 Health of the Community	5
Total Credits	5
Summer II	
S470/S471 Restorative Health	5
Total Credits	5
Fall Semester	
S481/S482 Nursing Management	5
S483 Nursing Practice Capstone	3
S485 Professional Growth and Empowerment	3
S484 Research Utilization Project	1
Total Credits	12

R.N. to B.S.N. Mobility Option

This program option is offered on the IUPUI campus. Registered nurses seeking admission to the Indiana University School of Nursing must apply to the IUPUI Office of Admissions, and may apply to the program anytime throughout the academic year. Students who have previously attended an IU campus or who are graduates of the associate program at IU should contact the nursing academic counselor. Unless otherwise specified, all School of Nursing policies pertinent to B.S.N. program majors also apply to registered nurse undergraduate students.

Students who have attended another college or university must forward an official transcript to the

IUPUI Office of Admissions. The Office of Admissions will then generate a credit transfer report (CTR) listing transferable credit. Upon receipt of the CTR, the student should contact the nursing academic counselor at IUPUI who will review the CTR, identify course work to be completed, and explain the process for achieving advanced standing with credit. Credit will be awarded for relevant courses completed at other accredited institutions of higher learning. Students are eligible to enroll in courses upon (1) receiving notification from the Office of Admissions that they have been admitted, (2) verification of a registered nurse license in Indiana, and (3) attainment of a minimum cumulative grade point average (GPA) of 2.5 on a 4.0 scale in all work attempted.

Placement of registered nurse students in nursing courses is based upon space availability, credit hours completed toward the degree, and GPA. It is particularly important for registered nurses to take courses as they become available. Failure to do so may seriously affect progression through the program. Many courses are offered to R.N. students using nontraditional class methods to facilitate ease of mobility. Most R.N. to B.S.N. courses are available on the Web.

Registered nurse students need to consult with the academic counselor for course planning options. Options will vary according to student need, course availability, and resources. Professional Nursing Seminar I and Professional Nursing Seminar II (B304/B404) must be successfully completed prior to enrollment in senior-level courses. These courses act as a bridge linking prior knowledge and skills with the development of new knowledge and skills.

Academic Policies and Procedures

All probation, dismissal, and reinstatement policies that govern B.S.N. program majors are also pertinent to registered nurse undergraduate students. Please refer to the policies explained above.

Advanced Placement

Registered nurse students receive advanced standing in the baccalaureate program following successful completion with a C or better of the two required Professional Nursing Seminar courses. Special credit will be awarded for the following nursing courses once the professional seminar courses are completed.

Courses Being Credentialed	Credits
B230 Developmental Issues and Health	4
B248 Science and Technology of Nursing	2
B249 Science and Technology of Nursing: Practicum	2
H351 Alterations in Neuro-Psychological Health	3
H352 Alterations in Neuro-Psychological Health: Practicum	2
H353 Alterations in Health I	3
H354 Alterations in Health I: Practicum	2
H361 Alterations in Health II	3
H362 Alterations in Health II: Practicum	2
H363 The Developing Family and Child	3
H364 The Developing Family and Child: Practicum	3
S470 Restorative Health Related to Multi-System Failures	3
S471 Restorative Health Related to Multi-System Failures: Practicum	2
Total Credits	34

A grade of S (Satisfactory) will be recorded on the student's transcript for the above courses according to the university credentialing process.

Nursing elective credit for K490/K492 (Clinical Experience in Nursing/Independent Study in Nursing) may be awarded to registered nurses holding valid specialty certification from a nationally recognized nursing organization in an appropriate area of nursing. A total of 2 credit hours may be awarded.

For specific information on advanced-standing procedures, registered nurse applicants should contact their academic counselors.

School Requirements

Sample Curriculum Plan

This curriculum plan is specifically for registered nurse students. This plan can be customized according to student need, interest, and academic goals. Students are expected to complete an individualized curriculum plan prior to beginning the R.N. to B.S.N. nursing courses.

Students must have satisfactorily demonstrated completion of the following courses. (Completion may be demonstrated by course transfer, course validation, or course enrollment.)

- 4-5 semester credits of Anatomy
- 4-5 semester credits of Physiology
- 3-4 semester credits of Microbiology
- 3 semester credits of Introduction to Psychology
- 3 semester credits of Introduction to Sociology
- 3 semester credits of English Composition
- 3-4 semester credits of Life Span Development
- 3 semester credits of a communication course

Summer Session I Courses	Credit Hours
B304 Professional Nursing Seminar I	3
B231 Communication for Health Care Professionals	3
Total Credits	6
Summer Session II Courses	Credit Hours
B404 Professional Nursing Seminar II	3
B244/B245 Comprehensive Health Assessment	4
Total Credits	7
Fall Semester Courses	Credit Hours
H355 Data Analysis in Clinical Practice and Health Care Research	3
Critical/Analytical Cluster	3-4
Cultural Diversity Cluster	3
Total Credits	9-10
Spring Semester Courses	Credit Hours
H365 Nursing Research	3
S472/S473 A Multi-System Approach to the Health of the Community	5
Humanistic Cluster	3
Total Credits	11

Summer Session I Courses

S481/S482 Nursing Management	Credit Hours
S474 Applied Health Care Ethics	5
Total Credits	<u>3</u> 8

Summer Session II Courses

S485 Professional Growth and Empowerment	Credit Hours
Social Competence Cluster	3
Critical/Analytical Cluster	3
Total Credits	<u>3-4</u> 9-10

Fall Semester Courses

S483 Clinical Nursing Practice Capstone	Credit Hours
S484 Research Utilization Seminar	3
Cultural Diversity Cluster	1
Open Electives	3
Total Credits	<u>6</u> 13

Residency Requirements

Thirty hours of residency credit is required for the baccalaureate degree. Registered nurse students must meet this requirement to be eligible for graduation. The following required nursing courses may be used to meet the residency requirement:

	Credits
B304 Professional Nursing Seminar I	3
B404 Professional Nursing Seminar II	3
B244 Comprehensive Health Assessment	2
B245 Comprehensive Health Assessment: Practicum	2
H365 Nursing Research	3
S472 A Multi-System Approach to the Health of the Community	3
S473 A Multi-System Approach to Health of the Community: Practicum	2
S481 Nursing Management	2
S482 Nursing Management: Practicum	3
S483 Clinical Nursing Practice Capstone	3
S484 Research Utilization Seminar	1
S485 Professional Growth and Empowerment	<u>3</u>
Total Credits	30

Students must petition the Admission, Progression, and Graduation Committee for special consideration if they wish to apply nursing transfer credit to meet residency requirements.

R.N. to Master's Degree Mobility Option

Registered nurses who wish to pursue graduate education and whose highest academic credential in nursing is a diploma or an associate degree in nursing may be interested in exploring this educational option. This mobility option allows eligible registered nurses to earn a master's degree in nursing without first earning a baccalaureate degree in nursing. This option may not be the best mobility option for many registered nurses, so it is important to talk with the School of Nursing's academic mobility counselor early

in the decision-making process. Interested nurses should contact the school's Office of Student Services for more information.

Graduate Programs

General Policies for the Graduate School of Nursing, All Campuses

Student Responsibility

Students in the School of Nursing are responsible for meeting with their academic advisors and planning their programs. Students need to acquaint themselves with all regulations and remain currently informed throughout the nursing program. Additional procedures and regulations pertaining to graduate study in nursing are found in the School of Nursing's *Graduate Student Handbook*. All provisions of this bulletin are in effect from the year in which the graduate student enters the nursing program. The Indiana University School of Nursing reserves the right to change the regulations in this bulletin at any time during the period for which it is in effect, and to add, modify, or withdraw courses at any time.

English as a Second Language

Students for whom deficiencies in English have been identified by the IUPUI English Entrance Exam must successfully complete recommended English as a Second Language courses before enrolling in nursing courses required by the major.

Programs of Study

The School of Nursing faculty offer the Master of Science in Nursing (M.S.N.), the Doctor of Nursing Science (D.N.S.), and the Doctor of Philosophy in Nursing Science (Ph.D.). Applications for the D.N.S. degree are no longer accepted. For information concerning these programs of study, write Graduate Programs, Indiana University School of Nursing, 1111 Middle Drive, Indianapolis, IN 46202-5107; or telephone (317) 274-2806. World Wide Web: nursing.iupui.edu.

The Master of Science in nursing program and the Ph.D. in Nursing Science program are offered through the Indianapolis campus. Selected courses from the master's program are offered through the Virtual Indiana Campus (VIC) System to sites around the state and on the Internet. Majors are offered at distant sites to meet student and community needs.

Application

How to Apply

Application forms for graduate programs may be obtained from the Office of Educational Services, School of Nursing 122, 1111 Middle Drive, IUPUI, Indianapolis, IN 46202-5107; e-mail: bmercier@iupui.edu; phone: (317) 274-2806; fax: (317) 274-2996; World Wide Web: nursing.iupui.edu. International applicants must apply to both the School

of Nursing and the IUPUI Office of International Affairs, 620 Union Drive, Room 207, Indianapolis, IN 46202-5167.

Applicants need to (1) present all forms required by the university; (2) submit official, original, sealed transcripts from each post—high school educational institution attended, including colleges, universities, and diploma schools of nursing (compilations on one transcript are not acceptable); (3) submit results from the Graduate Record Examination (GRE) General Test; and (4) pay, as directed, the nonrefundable application fee of \$35 required of all U.S. applicants who are new to Indiana University.

Applications and transcripts are submitted to the Office of Graduate Programs, Indiana University School of Nursing, 1111 Middle Drive, Indianapolis, IN 46202-5107. Fees are paid directly to the university Office of the Bursar or the office specified on the form.

Application Deadlines

Applications for the master's program are considered twice a year. Completed applications are due April 1 and October 1. Applications for the Ph.D. program are considered once a year and are due January 15.

Academic Policies for the Graduate Programs in the School of Nursing

(The following policies apply only to students admitted to the School of Nursing.)

Semester Load

Full-time graduate students are those enrolled in 8 or more credit hours during a regular semester or 4 or more credit hours during a summer session. Enrollment in fewer credits than this constitutes part-time study.

Absences

Illness is usually the only acceptable excuse for absence. Allowances for illness are based on the time at which they occur and the amount of time lost. Loss of time in any course may require that the student repeat the course.

Leave Policy

Students admitted to the graduate programs may petition for a leave of absence of up to one year for personal or health reasons. Students must obtain their advisors' approval and petition the Graduate Admission, Progression, and Graduation Committee in writing. To extend time required for completion of a program, students must obtain leave prior to extended absence.

Completion of Degree Requirements

The School of Nursing must receive notices of removal of Incomplete and Deferred grades, special credit grades, and independent study course grades no later than three weeks before the end of classes in the student's last semester prior to graduation.

Auditing of Courses

An audit student officially registers for a class and pays the applicable credit hour rate. Upon

completion, the course is entered on the permanent university record as one taken for no credit (NC). Note that this option is available only with the instructor's permission.

Withdrawals

Students who wish to withdraw from any or all courses should consult with their academic advisors. The steps to withdraw and possible refunds vary depending on the point of the semester. For specific steps consult the *Schedule of Classes* or visit registrar.iupui.edu.

Incomplete (I) Grades

The grade of Incomplete used on final grade reports indicates that the work is satisfactory as of the end of the semester, but has not been completed. The grade of Incomplete may be given *only* when the completed portion of a student's work in the course is of passing quality. Instructors may award the grade of Incomplete only upon a showing of such hardship to a student that would render it unjust to hold the student to the time limits previously fixed for the completion of the course work.

Deferred Grades

The grade of R (Deferred) is appropriate only as long as there is work in progress. Only certain courses are designated as courses for which the grade of R may be awarded.

Addition of Courses/Change of Section

Students may add courses or change from one section of a course to another according to the dates in the *Schedule of Classes*. To add a course or change a section, students must obtain their faculty advisor's signature on the appropriate forms, available from the Office of Educational Services in the School of Nursing. The signature of the associate dean for graduate programs is required after specific deadlines. Deadlines and additional signatures of authorization, when necessary, are specified in the instructions accompanying the form, and in the *Schedule of Classes*.

Cumulative Grade Point Average

Grades in courses transferred from another institution are not used in calculating the cumulative grade point average. However, all grades from course work attempted at Indiana University are used in calculating the cumulative grade point average.

Computer Literacy

Prior to enrolling in nursing courses, faculty expect nursing students to be able to use computers well enough to log on to the Internet to access class content. Students should also be able to search for nursing-related materials and to return to an interesting site whenever they choose by using bookmarks or a word processor to store Internet location addresses. Students also should be able to log in to an e-mail account to communicate with other students and faculty, and to use a word-processing program.

Students should have a Pentium Pro computer with a minimum 36.6-baud modem; a minimum of 32 MB

RAM, 166 MHz or greater processing speed; multimedia capabilities; and the IUPUI SoftPak software. This software can be purchased at the IUPUI Cavanaugh Bookstore on CD for \$5. These CDs include software to connect to the IUPUI network, Netscape Communicator to use as a World Wide Web browser, and a virus checker. If the students are outside of the Indianapolis calling area, they should acquire an Internet provider such as America On Line (AOL), Prodigy, CompuServe, or another that has a phone number in their calling area. These commercial providers have their own World Wide Web browsers. Students in R.N.-B.S.N., R.N.-M.S.N., M.S.N., and Ph.D. programs are *required* to have their own computer and to be able to access the IUPUI campus services.

Master of Science in Nursing (M.S.N.)

The goal of the M.S.N. program is to prepare its graduates for leadership roles in advanced nursing practice, clinical specialization, or nursing administration. Majors are offered in eleven areas. Post-master's options are also available in all the majors. Students select a major area of study when they apply for admission.

Students may elect to follow a full- or part-time course of study. Minimum time for completion of degree requirements is three semesters. All degree requirements must be met within six years of initial enrollment. The pattern and duration for the individual student is determined in consultation with the faculty advisor. Degree requirements can be met ONLY PARTIALLY through distance education.

Selected master's courses are offered over the Virtual Indiana Campus (VIC) and the Internet. These courses are taught by graduate faculty from IU and are telecast to IU sites across the state.

The major purpose of the Master of Science in Nursing program is to prepare nurses for advanced practice in a selected area of nursing. The graduate of the master's degree program will be able to do the following:

1. Function as a leader, collaborator, and consultant to clients, colleagues, and other professionals when dealing with organizational aspects of health care delivery to a client group.
2. Base leadership strategies in the delivery of nursing care on critical analyses of research findings and theoretical concepts from nursing and related disciplines.
3. Participate as an informed professional health care provider to shape the social, political, and ethical ramifications of health care facing a multicultural society at the local, state, national, and international levels.
4. Perform advanced nursing practice within professional, legal, and ethical rules, regulations, and standards.
5. Evaluate the utility of research findings from nursing and related disciplines for the practice of nursing.

6. Evaluate nursing practice for individuals, families, and groups based on a conceptual understanding of health.

Admission Requirements

Admission to the master's program requires approval by the faculty in the department in which study is desired. Admission is based on the composite of qualifications (as evidenced by the application), official transcripts, and references. A personal interview may be requested by the department. Acceptance into the master's program is competitive.

The criteria that follow must be met for unconditional admission. An applicant who lacks one or more of the criteria may be considered for admission with probationary or conditional status.

1. A grade point average (GPA) of 3.0 or higher on a 4.0 scale from a program accredited by the National League of Nursing, or an equivalent program.
2. A score of 400 or better on two of the three sections of the Graduate Record Examination (GRE) General Test.
3. A current Indiana registered nurse license. International applicants must submit evidence of passing the Council of Graduates of Foreign Nursing Schools (CGFNS) qualifying examination prior to coming to Indiana University. Indiana licensure must be achieved prior to enrollment in any clinical nursing course.
4. A test of English as a Foreign Language (TOFEL) score of 550 or above for those students whose native language is not English.
5. Completion within the past seven years of a 3 credit hour statistics course (undergraduate or graduate) with a minimum grade of B-.
6. Verification of ability to use computer technologies including accessing, retrieving, receiving, and communicating information.
7. Verification of physical assessment skills (nursing administration students are exempt).
8. Two years of relevant clinical nursing experience as a registered nurse required for nurse practitioner applicants.

Mobility Option

Registered nurses wishing to pursue graduate education whose highest academic nursing credential is a nursing diploma, an associate degree in nursing, or a baccalaureate degree in another field may be interested in exploring this educational option. The mobility option allows registered nurses to earn a Master of Science in Nursing (M.S.N.) degree without the conferral of the baccalaureate degree in nursing. For more information, interested parties should contact the Office of Educational Services, School of Nursing 122, 1111 Middle Drive, IUPUI, Indianapolis, IN 46202-5107; telephone (317) 274-2806. Please note that this opportunity may not be the best option for the majority of registered nurses, so it is important to talk with the School of Nursing's academic mobility counselor early in the decision process.

Admission of Students on Academic Probation

Students with undergraduate GPAs lower than 3.0 may be admitted on academic probation upon the recommendation of the academic department in which they desire a major, and with the endorsement of the Graduate Admission, Progression, and Graduation (APG) Committee.

Maintaining Active Status of Admission

Admission is valid only for the enrollment period designated in the admission letter. Deferment may be granted upon written request, subject to adjustment of admission status to requirements of the new enrollment period. Applications and transcripts are kept on file for two years only; beyond that period, reapplication is required.

Part-Time Study

Part-time study is possible, provided that the program is completed within the six-year limitation period. Part-time students should consult with their academic faculty advisors each semester in order to maintain active status.

Degree Requirements

Candidates must meet both the general requirements of the master's program in the School of Nursing and the specific requirements of the major. Students must be enrolled to graduate.

All candidates for the degree of Master of Science in Nursing must fulfill the following requirements:

1. Complete a minimum of 42 credit hours of courses, depending on the major, and fulfill departmental requirements. A maximum of 3 credit hours may be taken at the undergraduate level. Courses meeting the requirement of advanced nursing practice must be taken in or through the School of Nursing.
2. Remove all conditions, deficiencies, probation, and Deferred or Incomplete grades.
3. Achieve a 3.0 GPA by the time the student has completed 42 credit hours of course work, as required by the major department. Credit hours toward the degree are not granted for courses with a grade below B-. All grades are included in computing the grade point average.
4. Complete all degree requirements within six years of the date the student begins course work.
5. Apply for the degree at the time of program planning for the final semester of study. Reapplication must occur if the graduation date changes. Application forms may be obtained from and filed with the recorder for graduate programs.

The School of Nursing is not responsible for certification for the degree if the student fails to file the application.

Portfolio Review Process for M.S.N. Course Substitution

Portfolio Purpose: The portfolio review process is available to all M.S.N. students who believe that they

can meet the learning objectives/competencies required of a specific nursing course within their program of study. The portfolio is a mechanism used to validate the acquisition of knowledge and skills congruent with course expectations and student learning outcomes. The portfolio provides objective evidence that students have acquired the content and skills through prior learning and/or practice experiences. The decision to accept the documentation provided is based on determination of the equivalency of this prior knowledge and skills that the student would be expected to demonstrate at the completion of a specific course. The portfolio review option does not take the place of course equivalency reviews or transfer credit.

Academic Standing of Students

Good Standing

A student is in good academic standing when his or her cumulative grade point average is 3.0 or better.

Disciplinary Probation

Disciplinary probation is administered under the *Code of Student Rights, Responsibilities, and Conduct*. The faculty reserve the right to request the withdrawal of a student when problems related to personal integrity, health, maturity, or safety in the practice of nursing demonstrate the student's unfitness to continue preparation for professional nursing.

Academic Probation

A student is placed on academic probation when the cumulative grade point average falls below 3.0 or if he or she earns a C+ or lower in a required course. The probationary status is removed within one semester or its equivalent (9 credit hours). Students who do not regain good academic standing after three semesters of probation will be dismissed from the program.

Maintaining Status

Students who do not register for a period of three consecutive semesters will be dismissed from the program. Students admitted on probation that fail to remove the conditions of admission within the time frame specified are subject to dismissal. Students attaining an unsatisfactory grade (below B-) in any clinical course may repeat the course only once; non-clinical courses may be repeated more than once if approved by the Graduate Admission, Progression, and Graduation (APG) Committee. If a course must be repeated, the department may specify additional conditions relating to progression in the program until the course is successfully completed. Evidence of lack of progress toward the degree is described as failure to successfully attain a B- or better in a course in which an unsatisfactory grade has been previously received. Students who do not complete all degree requirements within a six-year period following initial registration will be dismissed.

General Policies

In addition to policies described under the general statement of the School of Nursing, the following policies govern master's study in particular.

Correspondence Courses

Correspondence courses may not be counted toward the master's degree, but they may be used to make up deficiencies.

Transfer of Credits

Students must obtain the consent of the associate dean for graduate programs before credit earned at other institutions may be added to the official transcript. A maximum of 9 credit hours with a minimum grade of B in courses that fulfill the curriculum requirements may be transferred from an accredited college or university with the consent of the academic advisor. Credits used to meet requirements for the Bachelor of Science in Nursing may not be used toward the Master of Science in Nursing.

Degree Programs

Students may earn only one Master of Science in Nursing degree from the Indiana University School of Nursing, although they may study in more than one major.

Study/Thesis Continuation

After completing R590 Nursing Study (3 cr.) or R699 Master's Thesis in Nursing (6 cr.), the student must enroll every semester in R900 Continuation in Study or Thesis (1 cr.), until the study or thesis is satisfactorily completed.

Curriculum Design

Minimum completion time for the master's degree program is three semesters. The pattern and duration for the individual student is determined in consultation with the student's faculty advisor.

All majors include the following areas of study:

1. **Core Courses** One course each in research methodology, policy and practice perspectives in advanced nursing practice, ethical and legal perspectives in advanced nursing practice, advanced nursing practice roles, and nursing theory, for a total of 12 credit hours.
2. **Courses in the Nursing Major** Between 15 and 27 credit hours in specialty courses from the major department.
3. **Nursing Study/Thesis Option** Three (3) credit hours of nursing study or 6 credit hours of thesis work.

Required by some Majors:

Focus Area Courses Between 3 and 12 credit hours of electives chosen by the student in consultation with a faculty advisor.

Post-Master's Options

A minimum of 12 credit hours, determined by the area of study. Post-master's options are available in all Master of Science in Nursing majors. The option varies from 12 to 29 credits, depending on previous course work.

Program Descriptions

Students select a major area of study at the time they apply for admission. Post-master's options are available in all clinical areas and in nursing

administration and teacher education. The majors are listed by their respective departments.

Nursing Administration

Clinical Specialists

Adult Psychiatric Mental Health Nursing
Child/Adolescent Psychiatric Mental Health Nursing
Adult Health Clinical Nurse Specialist
Pediatric Clinical Nurse Specialist
Community Health

Nurse Practitioners

Pediatric Nurse Practitioner
Adult Nurse Practitioner (Geriatric and Oncology
Tracks available)
Family Nurse Practitioner
OB/GYN Nurse Practitioner
Acute Care Nurse Practitioner

Dual Degrees

The Indiana University School of Nursing offers dual-degree programs with the School of Public and Environmental Affairs (SPEA) and the Center on Philanthropy.

Joint educational offerings with SPEA provide opportunities for students to achieve the combined degrees of Master of Science in Nursing/Master of Public Affairs (M.S.N./M.P.A.) and Master of Science in Nursing/Master of Science in Health Administration (M.S.N./M.H.A.).

The M.S.N./M.P.A. and M.S.N./M.H.A. programs enable students to take a sequence of courses leading to both degrees. The student must have a baccalaureate degree or its equivalent from an NLN-accredited school of nursing and must apply to both the School of Nursing and the School of Public and Environmental Affairs. If the applicant is admitted to only one school, the applicant will be permitted to attend that school and will be required to meet the graduation requirements of that school.

Students should apply to both schools simultaneously for the M.S.N./M.P.A. and M.S.N./M.H.A. programs. Persons already enrolled in either the School of Nursing or the School of Public and Environmental Affairs may apply for admission to the other school, up to the time of completion of the second year of nursing study, or at the end of the first year of the M.P.A. or M.H.A. course of study.

Grade point averages in the School of Nursing and the School of Public and Environmental Affairs are computed separately. Continuation in a combined program requires the student to meet academic standards in each school. A student failing in one school but meeting academic standards in the other may complete work for the degree in the school in which academic standards are met. Such completion must be upon the same conditions (credit hours, residency, etc.) as required of non-combination degree candidates (i.e., 42 credit hours for the School of Nursing and 48-60 credit hours for SPEA). Students will be eligible for honors in each school, based on the criteria of each school.

Students enrolled in the combined programs will be assigned co-advisors, one each from the faculty of the School of Nursing and the School of Public and

Environmental Affairs. The co-advisors are responsible for reviewing the student's progress each semester to ensure attainment of educational objectives. Students should consult with an academic advisor regarding appropriate sequence and combination of courses.

Dual M.H.A./M.S.N. Degrees

Courses for the M.H.A./M.S.N. Program

Required Nursing Core Courses (12 credits)

NURS R500 Nursing Research Methods I (3)
NURS N502 Nursing Theory I (3)
NURS N530 Policy and Practice Perspectives (2)
NURS N532 Advanced Practice Roles (2)
NURS N534 Ethical/Legal Perspectives (2)

Required M.H.A. Courses (31.5 – 34.5 credits)

SPEA H501 U.S. Healthcare Systems (3)
SPEA A524 Accounting (3)
SPEA J501/H614 Strategy (3)
*SPEA H615 Health Outcomes (3)
SPEA H518 Biostatistics (3)
SPEA H510 Health Care Finance (3)
SPEA H514 Health Care Economics (3) (see Required Nursing Administration Courses below)
*SPEA H516 Law (3)
SPEA M540 Marketing (1.5)
*SPEA H623 Health Care Applications of Strategy (3)
SPEA H702 Internship in Health Services Management (3)

or

NURS L579 Practicum (see Required Nursing Administration Courses below)
SPEA H521 Management Science (3)
*SPEA H628 Health Information Systems (3)

Required Nursing Administration Courses (18-21 credits)

NURS L573 Organizational Behavior (3)
NURS L574 Administrative Management (3)
NURS L575 Corporate/Public Policy (3)
NURS L671 Financial Management (3)
NURS R590 Nursing Study (3)
NURS L579 Nursing Administration Practicum (3)

or

SPEA H702 Practicum (3) (see Required M.H.A. Courses above)
SPEA H514 Health Care Economics (3)
*Nursing Electives (9)

Total: 64.5 Credits (see Note)

- * Nursing electives may be satisfied by any of these M.H.A. courses.
- Note: H518 Biostatistics may be used as the nursing prerequisite, and up to a combined 9 credits of mid-career credit may be available (see Course Waivers, Substitutions and Challenge Exams under SPEA or Portfolio Review Process under M.S.N. in Nursing – Degree Requirements).

Dual M.S.N./M.A. in Philanthropic Studies (PHST) Degrees

The Indiana University School of Nursing and the Center on Philanthropy at Indiana University have collaborated to offer the Master of Arts in Philanthropic Studies and Master of Science in Nursing Administration. Requirements for this dual degree program are:

Required Nursing Core Courses (12 credits)

NURS N502 Nursing Theory I (3)
NURS N530 Policy and Practice Perspectives (2)
NURS N532 Advanced Practice Roles (2)
NURS N534 Ethical and Legal Perspectives (2)
NURS R500 Nursing Research Methods I (3)

Required Core Courses in Philanthropic Studies (9 – 12 credits)

HIST H509 History of Philanthropy in the West (3)
PHIL P542 Ethics and Values of Philanthropy (3)
PHST P512 Human and Financial Resources for Philanthropy (3)
PHST P590 Internship in Philanthropic Studies (3)
or
NURS L579 (see Required Nursing Administration Courses below)

Required Nursing Administration Courses (18 – 21 credits)

NURS L573 Organizational Behavior (3)
NURS L574 Administrative Management (3)
NURS L575 Corporate and Public Policy for Nurse Executives (3)
SPEA H514 Health Care Economics (3)
NURS L671 Financial Management: Nursing (3)
NURS R590 Nursing Study (3)
or
NURS R699 Master's Thesis in Nursing (6)
NURS L579 Nursing Administration Practicum (3)
or
PHST P590 (see Required Core Courses in Philanthropic Studies above)

Required Focus Area Concentration Options (6 credits)

ECON E514 Nonprofit Economy and Public Policy (3) (Required)
AMST P520 Philanthropy in American Culture (3)
or
ANTH A509 Cross-cultural Dimensions of Philanthropy (3)
Theoretical elective in Philanthropic Studies (3)
Credit for Thesis Option or other approved graduate-level courses (6)

One of the Following (3 credits)

EDUC C595 Legal Aspects of Philanthropy (3)
PHST P521 / SPEA V521 The Nonprofit and Voluntary Sector (3)
Approved graduate course in fundraising, executive leadership, or grant writing (3)

Total: 51-54 Credit hours

Ph.D. in Nursing Science Program

The Doctor of Philosophy program, which builds on baccalaureate nursing education, is based on the beliefs that professional nursing is a scientific discipline and that it has a unique role and body of knowledge. This body of knowledge can be expanded, applied, and validated through recognized methods of scholarly inquiry. As students progress through the program, they become socialized to the value of research and interdisciplinary inquiry, and acquire the skills necessary to conduct independent research.

The primary goal of the Doctor of Philosophy of Nursing Science program at the Indiana University School of Nursing is the preparation of scholars in the following fields of study: environments for health,

acute and chronic health problems, health promotion, and family health adaptation. Graduates will create and disseminate to the public new knowledge related to these fields of study. Upon completion of the Ph.D. in Nursing Science program, graduates will be able to

1. Synthesize knowledge from nursing as well as from the biological and behavioral sciences to investigate health phenomena relevant to the discipline of nursing;
2. Utilize analytical and empirical methods to extend nursing knowledge and scholarship;
3. Independently conduct and communicate research that advances the body of scientific nursing knowledge;
4. Defend the social significance of the expanded knowledge base of nursing;
5. Interpret nursing science within an interdisciplinary context.

Admission Requirements

The following criteria must be met for admission consideration:

1. Successful completion of a baccalaureate in nursing or master of science in nursing from a program within a regionally accredited institution of higher education. (Indiana University School of Nursing faculty retain the right to determine acceptable accreditation status of nursing programs from which applicants have graduated.)
2. A baccalaureate cumulative grade point average (GPA) of 3.0 or higher on a 4.0 scale. For applicants holding a master's degree, a cumulative graduate GPA of 3.5 or higher is required. (The master's degree GPA will supersede the baccalaureate GPA.)
3. Completion of a 3 credit hour statistics course with a grade of B (3.0) or higher within seven years before the date of proposed enrollment.
4. The ability to secure current registered nurse licensure in Indiana. International students may request a waiver of licensure as an admission requirement. If the waiver is granted, they must obtain a registered nurse license in Indiana within one year of admission to the Ph.D. program. Applicants whose program of study will not require contact with patients may be exempted from the licensure requirement by the IUSON's director of doctoral studies.
5. Competitive scores (600 or better) on the verbal, quantitative, and analytical sections of the Graduate Record Examination (taken in the last five years).
6. A score of 600 or better on the Test of English as a Foreign Language (TOEFL) for students whose first language is not English. A test of written English is also required.
7. A two- to three-page essay summarizing immediate and long-range professional goals and a proposed area of research.
8. An example of original scholarship or research in nursing, as demonstrated by a report, published and unpublished papers, or a thesis.
9. Three references, including at least one from a nurse faculty member who has knowledge of the applicant's academic ability from undergraduate or master's work.

10. An interview with a member(s) of the Doctoral Studies Advisory Committee (arranged by the school).

11. A letter of support from an Indiana University School of Nursing faculty member with full graduate faculty status, who has agreed to be a research mentor.

Study and Research Focus Areas

Students will pursue study and related research in one of four focus areas: acute and chronic health problems, environments for health, family health adaptation, and health promotion. These focus areas were chosen on the basis of faculty research strengths and on the funding priorities of the National Institute of Nursing Research.

Acute and Chronic Health Problems

Individuals who have acute or chronic health problems often need intervention to facilitate management of the specific problem. Intervention may focus on influencing the behavior of the patient as well as the behavior of the caregiver. To that end, nurse researchers in this focus area examine human responses to acute and chronic health problems and the factors that influence these responses; individual and group factors that contribute to or influence the course of health problems; and the effectiveness of the nursing therapeutics used in the care of persons with health problems.

Environments for Health

Environments that influence health and the delivery of health care, both in traditional health care settings and in the community, are the topics in this area. Pertinent studies include factors in environments that influence the health of groups, as well as studies of the environments in which health care is delivered; the emphasis is on the system and how it affects individuals. Research in this area is particularly relevant at a time when more health care is being moved from acute care facilities to community-based settings, creating a demand for a better understanding of the evolving systems needed to deliver care effectively and efficiently.

Family Health Adaptation

Nursing's acknowledgment of the fact that no one lives in isolation, and of the importance of the person-environment fit, forms the philosophical base for this focus area. All individuals live within a social system of significant others. Although the term "family" has evolved through the years and sometimes seems to defy universal definition, the notion of nurturing relationships—regardless of specific life stage or lifestyle—is central to human existence and plays a critical role in health promotion, maintenance, and treatment. Research in this area explores the family dimensions of health and adaptation by focusing on "family" as the unit of care, rather than on individuals in the context of family. These dimensions include family development, family definition of health, family access to health care, family support to sick individuals, and the impact of health problems on the family.

Health Promotion

Nursing involves a commitment to health promotion, disease prevention, and health restoration with an emphasis on the "whole" person and the encouragement of self-help. This focus area emphasizes research that builds on those beliefs and examines the relationship between the physiological and behavioral aspects of health. The focus is on nursing's role in helping individuals to monitor and to improve their health and quality of life. Studies examine human behaviors related to health promotion, factors that influence health-seeking behaviors, and interventions that promote optimal health for individuals by influencing health behaviors.

Curriculum

Students must complete a minimum of 90 credit hours. A maximum of 30 credit hours may be from Master of Science course work. The 90 credit hours include the following areas:

Theory, Research, and Statistics

<i>Theory</i>	<i>6 cr.</i>
N502 Nursing Theory I	3 cr.
D607 Nursing Theory II	3 cr.
<i>Research Methods and Statistics</i>	<i>12 cr.</i>
R500 Nursing Research Methods I	3 cr.
R600 Nursing Research Methods II	3 cr.
Two statistical methods courses	6 cr.
<i>Advanced Methods Track</i>	<i>6 cr.</i>
Quantitative Track	
One advanced statistical methods course	3 cr.
One advanced quantitative methods course	3 cr.
OR	
Qualitative Track	
One survey of qualitative research methods seminar	3 cr.
One advanced qualitative research methods course	3 cr.
Total	24 cr.

Nursing Science and Research

<i>Proseminars</i>	<i>6 cr.</i>
D730 Proseminar: State of Nursing Science I (environments for health/family health adaptation)	3 cr.
D731 Proseminar: State of Nursing Science II (acute and chronic illness/health promotion)	3 cr.
<i>Focus Area Course Work</i>	<i>24 cr.</i>

Total 30 cr.

External Cognate Minor 12 cr.

Dissertation

Dissertation seminar (3 cr.)	
Dissertation (21 cr.)	
Total	24 cr.

TOTAL OVERALL 90 cr.

Ph.D. in Nursing Science Program: Sample Course of Study¹

First Semester

Statistical methods course	3 cr.
N502 Nursing Theory I	3 cr.
Focus area course	3 cr.
Total	9 cr.

Second Semester

R500 Nursing Research Methods I	3 cr.
Statistical methods course	3 cr.
D607 Nursing Theory II	3 cr.
Total	9 cr.

Third Semester

R600 Nursing Research Methods II	3 cr.
Focus area course	3 cr.

Focus area research	3 cr.
External cognate minor course	3 cr.
Total	9 cr.

Seventh Semester

Focus area research	6 cr.
External cognate minor course	3 cr.
Total	9 cr.

Eighth Semester

Dissertation seminar	3 cr.
Dissertation	5 cr.
Total	8 cr.

Ninth Semester

Dissertation	8 cr.
Total	8 cr.

Tenth Semester

Dissertation	8 cr.
Total	8 cr.

TOTAL OVERALL	90 cr.
----------------------	---------------

¹ Sample plan is for full-time study; part-time study is possible. Students must complete the Ph.D. program within seven years of enrollment. Sample plan is appropriate for students entering the Ph.D. program after completing a bachelor's degree. Students who hold the Master of Science in Nursing may use a maximum of 30 credit hours from that degree program to meet Ph.D. program requirements.

Financial Information

Information about financial resources for admitted graduate nursing students may be obtained from the Office of Educational Services, School of Nursing 122, 1111 Middle Drive, IUPUI, Indianapolis, IN 46202-5107; telephone: (317) 274-2806; Web site: nursing.iupui.edu. A variety of financial resources are specific to graduate students.

School of Nursing Support

Professional Nurse Traineeships

Government stipends are available to students for a maximum of 36 months. Applicants must be full-time students (Nursing Administration major students are not eligible). Application is due May 1 to School of Nursing, associate dean of graduate programs.

Fee Scholarship/Remissions, Research Graduate Assistantships

Students filling research assistant (RA) positions assist faculty in their research efforts and gain hands-on research experience. A limited number of graduate assistant (GA) positions are available. Students in these positions assist faculty in meeting their teaching responsibilities. Fee scholarships are provided for RA and GA positions. In addition, an hourly wage may be paid depending on the project's funding. Part-time and full-time admitted students are eligible. Only in-state tuition is paid. Application is due May 1 to IU School of Nursing, associate dean of graduate programs.

University Support

Financial support for graduate students, available from the IUPUI Office of Scholarships and Financial Aid, is primarily in the form of loans and Federal Graduate Work-Study employment. Eligibility for these programs is determined by financial need. Students must submit the forms to determine financial need annually by March 1. In addition to demonstrating financial need, students must be admitted and in a nursing graduate program for a minimum of 4 credit hours, or half-time per semester. Further information can be obtained from the Office of Student Financial Aid Services, Cavanaugh Hall 103, 425 University Boulevard, Indianapolis, IN 46202-5145; telephone (317) 278-GRAD.

University Fellowships

Graduate fellowships are available from Indiana University for full-time study during the first year. These awards are competitive. Ph.D. candidates are eligible and are nominated by the IUSON faculty.

IUPUI Educational Opportunity Fellowships

These fellowships are awarded to encourage graduate students who are enrolled at a minimum of 6 credit hours per semester, and who have disadvantaged backgrounds, to participate in graduate studies. Educational Opportunity Fellowships, which average

\$500 to \$1,500 per year, are awarded on the basis of financial need and academic ability. The submission of a form to determine financial need is required.

Graduate Work-Study Positions

These positions are funded by the Federal Graduate Work-Study program; students are employed as clinical faculty members, learning lab instructors, or technical research assistants. Students must complete the required application forms by March 1 each year to establish eligibility for these awards. Fee scholarships may be provided in addition to salary earned.

Admitted nursing students may be eligible for other scholarships and short-term loans administered by the School of Nursing. For more information, contact the Office of Educational Services, Graduate Counselor, School of Nursing 122, 1111 Middle Drive, IUPUI, Indianapolis, IN 46202-5107; telephone (317) 274-2806.

Educational Services

The mission of the Office of Educational Services in the School of Nursing is to promote and facilitate the success of its students. This mission is implemented through the functions of academic counseling, recruitment, admissions, registration, certification, academic record maintenance, academic performance monitoring, orientation programs, minority and international counseling, graduation, and student activities. Student services personnel serve as liaisons between students, faculty, and other groups in interpreting School of Nursing and university policies and procedures, and in advocating students' rights and responsibilities.

Orientation

All students new to the School of Nursing are expected to attend the nursing orientation program at the beginning of the fall or spring semester.

Guidance and Counseling

A counselor in the Indiana University School of Nursing Office of Educational Services is available as a resource for students. Students must see their faculty advisors for academic counseling and program planning. The counselor for minority affairs on the IUPUI campus is also available to assist minority students with special needs. Students at IUPUI may also consult the Adult Psychiatry Clinic, the Chaplain's Office, the Learning Skills Center, the Office of Career and Employment Services, Counseling and Psychological Services, or other local agencies for specialized counseling.

Graduate Minority Mentoring Program

The IU School of Nursing has initiated a graduate student mentoring program to support minority and international students during their education in the graduate program. Faculty members serve as mentors for students.

The goals of the program are:

1. To help students develop personal, social, and professional skills that will enable them to understand the challenges of graduate education and will enhance opportunities for academic and professional success.
2. To motivate students' involvement in opportunities presented through the Indiana University Graduate School, Indiana University School of Nursing, and Indiana University support services.
3. To promote communication between students, administrators, professors, mentors, staff, and the community.
4. To promote experiences that will support the accomplishment of a student's professional goals.
5. To meet regularly with students to review progress and to make plans for future success.

The benefits of the program for participating students are:

1. Opportunities to learn more about the Indiana University School of Nursing and Indiana University itself.
2. Expert assistance in developing career goals in advanced practice nursing.
3. Expert guidance in making career decisions.
4. Assistance in bridging the gap between academic achievement and its application in the workplace.
5. Participation in peer group experiences designed for students of color.
6. Individual instruction to prepare for admission into and progression through the graduate program in nursing.

Courses

All courses are preceded by the abbreviation "NURS" or "NSAA." The number of credit hours is indicated in parentheses following the course title. The abbreviation "P" refers to the course's prerequisite(s); "C" refers to corequisite(s).

A100 Nursing: Drug Dosage Calculation (2 cr.) Provides a review of basic mathematics and presents a method of solving problems involving drug dosages. Course is open to those interested in nursing.

B104 Power Up: Strategies for Academic Success (2 cr.) This course focuses on assisting students in gaining essential skills for academic success and in developing the ability to make use of university resources. Topics will include time management, stress management, critical thinking, development of networks of support, communication skills, learning styles, and academic responsibility. Teaching and learning strategies will incorporate campus technology and library resources as tools for completion of course requirements. First-year course for students who have declared nursing as a major.

Associate of Science in Nursing (A.S.N.)

A136 Introduction to the Science and Technology of Nursing (4 cr.) C: Human Anatomy, Microbiology, A137. This course focuses on the discipline of nursing by introducing students to the foundational knowledge needed to assess the life processes, and the developmental, ethnic, and

cultural patterns of health and illness in individuals. Students will apply this knowledge to identify common problems, and to implement standardized nursing practices. The course will emphasize nursing roles, the nursing process, and the acquisition of basic psychomotor skills in simulated learning settings.

A137 Application of the Science and Technology of Nursing (3 cr.) C: Human Anatomy, Microbiology, A136. Students will focus on the use of critical thinking skills in the assessment of life processes, and developmental, ethnic, and cultural patterns of health and illness in the care of adults. This course provides the opportunity to apply basic psychomotor skills and to implement standard nursing practices. Students will also be introduced to technology appropriate to support prescribed care interventions.

A146 Care of the Individual: Alterations in Nutrition, Elimination, and Metabolic Functions (3 cr.) P: A136, A137; C: Human Physiology, A147. This course focuses on the functional, adaptational, ethnic, and cultural patterns of young, middle-aged, and elderly adults with emphasis on alterations in nutrition, elimination, and metabolic processes. Students will use the nursing process in identifying interventions consistent with acute and chronic alterations in nutrition, elimination, and metabolic processes.

A147 Nursing Practicum: Alterations in Nutrition, Elimination, and Metabolic Functions (3 cr.) C: Human Physiology, A146. Students will focus on the nursing process in the delivery of nursing care for adults with alterations in nutrition, elimination, and metabolic processes. Emphasis is placed on the developmental patterns of adults. Course provides students with the opportunity to continue to develop critical thinking, communication, and psychomotor skills consistent with the role of a competent care provider in a variety of care settings.

A148 Care of the Individual: Alterations in Comfort and Function (2 cr.) P: A136, A137; C: Human Physiology, A149. This course focuses on the experience of stress and coping, and pain and mobility impairment in young, middle-age, and elderly adults from the perspectives of health, developmental, and ethnic/cultural patterns. Students will use the nursing process to formulate care plans/maps for individuals experiencing cancer, altered immune responses, and impaired musculoskeletal function and skin integrity.

A149 Nursing Practicum: Alterations in Comfort and Function (2 cr.) C: Human Physiology, A148. Students will focus on assessment, diagnosis, planning, implementation, and evaluation of individuals experiencing alterations in comfort and function. Students will be expected to perform selected skills safely and competently and to demonstrate accountability for the management of individuals' care in a variety of settings.

A276 Care of the Individual: Alterations in Activity–Exercise (3 cr.) P: A146, A147, A148, A149; C: A277. This course focuses on the application of all aspects of the nursing process in caring for individuals experiencing selected acute and chronic alterations in cardiac, respiratory, and hematological systems across the life span. Integration and critical examination of prior and new knowledge will be emphasized.

A277 Nursing Practicum: Care of the Individual—Alterations in Activity–Exercise (3 cr.) C: A276. Students will focus on adults experiencing selected acute and chronic cardiac, respiratory, and hematological alterations and their related disruptions in activity–exercise abilities. The nursing process will be used in providing care that will foster positive outcomes.

A278 Care of the Individual: Alterations in Cognition, Perception, and Interaction (3 cr.) P: A146, A147, A148, A149; C: Life Span and A279. This course focuses on the knowledge and skills needed to care for individuals experiencing actual or potential problems of the neuro-psychological, neuromuscular, or central nervous system. Problems include cognitive, physiological, emotional, and behavioral disruptions experienced by individuals across the life span.

A279 Nursing Practicum: Care of the Individual Alterations in Cognition, Perception, and Interaction (2 cr.) C: PSY B310 and A278. Students will focus on individuals experiencing neuro-psychological, neuromuscular, central nervous system, cognitive, emotional, and behavioral disruptions. Students will be expected to integrate knowledge and skills in increasingly complex care situations consistent with course and level competencies.

A286 Care of the Individual: Beginning and Evolving Families (3 cr.) P: A276, A277, A278, A279, and PSY B310; C: A287. This course focuses on the study of individuals and families during the childbearing and child raising phases of development. Concepts of growth and development, health promotion, health maintenance, illness, and illness prevention are integrated.

A287 Nursing Practicum: Care of the Individual—Beginning and Evolving Families (3 cr.) C: A286. Students will focus on care of individuals and families during the childbearing and child raising phases of development. Students will be expected to apply nursing skills and knowledge to promote family function and growth. Students will have opportunities to interact with children, adults, and families across the care continuum.

A288 Care of the Individual within a Family and Community Context (2 cr.) P: A276, A277, A278, A279, PSY B310; C: A289. This capstone course focuses on the integration of knowledge and its application in the provision of comprehensive nursing care. The role of the nurse in planning, collaborating, organizing, communicating, problem-solving, and evaluating care outcomes will be emphasized. Principles of care management and pharmacology will be synthesized into course content.

A289 Nursing Practicum: Care of the Individual within the Family and Community Context (3 cr.) C: A288. Students will apply the nursing process in managing care for multiple individuals and their families in a variety of acute and community-focused settings where policies and procedures are specified and professional consultation is available. Students will also demonstrate their ability to synthesize pharmacology and the use of computers in their practice.

A290 The Discipline of Nursing: Role

Transitioning (2 cr.) C: A286 and/or A288. This course focuses on the transition from the role of student to graduate nurse. Emphasis is placed on the responsibilities and expectations of the professional nurse in the health care delivery system. Legal and ethical issues, professional development, group dynamics, risk management, quality assurance, political action, nursing organizations, and the use of research to inform nursing practice will be explored.

A190 Special Topics in Nursing (1-3 cr.)

P: Completion of all required course work noted or permission of instructor. Students will have an opportunity to pursue special topics of interest related to the professional practice of nursing. Topics will be offered on an as-needed basis.

A192 Special Topics in Nursing: Practicum

(1-3 cr.) **P:** Completion of all required course work noted or permission of instructor. Students will have an opportunity to pursue areas of nursing practice that complement their program of study. Course offerings will be based on resource availability.

A280 A.S.N. Portfolio Review for Course

Substitution (1-3 cr.) The portfolio review process is available to all undergraduate students who believe that they can meet the learning objectives/competencies required of a specific nursing course within their program of study. The portfolio is a mechanism used to validate the acquisition of knowledge and skills congruent with course expectations and student learning outcomes. The portfolio provides objective evidence that students have acquired the content and skills through prior learning and/or practice experiences.

L.P.N. to A.S.N. Option**A150 L.P.N. Transition to A.S.N. Practice (4 cr.)**

This course builds on assessment of prior knowledge and skills and facilitates advanced placement in the A.S.N. program. Offers opportunity to use critical thinking, communication, physical assessment, and psychomotor skills in applying the nursing process to care of adults with alterations in comfort/function, nutrition, elimination, and metabolic processes. Begins socialization to A.S.N. roles.

Bachelor of Science in Nursing (B.S.N.)**B230 Developmental Issues and Health (4 cr.)**

P: Introduction to Psychology; Recommended: Cultural Diversity cluster course. This course focuses on the theoretical perspectives of growth and development, family theories and family adaptation at different stages, and usual patterns of aging. Students will make assessments of individuals in various stages of life to identify developmental issues of interest to nursing, and their impact on health phenomena.

B231 Communication for Health Care

Professionals (3 cr.) Students in this course will focus on basic communication skills essential for working with health care professionals and clients of various ages. Content includes interpersonal communications and group dynamics. Students will practice communication skills with individuals, within groups, and through electronic media.

B232 Introduction to the Discipline of Nursing: Theory, Practice, Research (3 cr.)

This course

focuses on core theoretical concepts of nursing practice: health, wellness, illness, wholism, caring, environment, self-care, uniqueness of persons, interpersonal relationships, and decision-making. Through integrating theory, research, and practice, this course helps the student understand nursing's unique contributions to meeting societal needs.

B233 Health and Wellness (4 cr.) **P/C:** Physiology, Microbiology, or Anatomy. This course focuses on the use of concepts from nursing, nutrition, pharmacology, and biopsychosocial sciences to critically examine the determinates of health, wellness, and illness across the life span.

Environmental, sociocultural, and economic factors that influence health care practices are emphasized. Theories of health, wellness, and illness are related to health-promotion, disease-prevention, and illness-prevention nursing interventions.

B244 Comprehensive Health Assessment (2 cr.)

P: B230, B231, B232, B233; **P/C:** Anatomy, physiology, or microbiology; **C:** B245. This course focuses on helping students acquire skills to conduct a comprehensive health assessment, including the physical, psychological, social, functional, and environmental aspects of health. The process of data collection, interpretation, documentation, and dissemination of assessment data will be addressed.

B245 Comprehensive Health Assessment:

Practicum (2 cr.) **C:** B244. Students will have the opportunity to use techniques of interview, observation, percussion, palpation, inspection, and auscultation in assessing clients across the life span in simulated and actual environments.

B248 Science and Technology of Nursing (2 cr.)

P: B230, B231, B232, B233; **P/C:** Physiology, Anatomy, Microbiology; **C:** B249. This course focuses on the fundamentals of nursing from a theoretical research base. It provides an opportunity for basic care nursing skills development. Students will be challenged to use critical thinking and problem solving in developing the ability to apply an integrated nursing therapeutics approach for clients experiencing health alterations across the life span.

B249 Science and Technology of Nursing:

Practicum (2 cr.) **C:** B248. Students will have the opportunity to demonstrate fundamental nursing skills in the application of nursing care for clients across the life span.

H351 Alterations in Neuro-Psychological Health (3 cr.)

P: B244, B245, B248, B249, Anatomy, Physiology, Microbiology; **C:** H352. This course focuses on individuals and small groups experiencing acute and chronic neuropsychological disorders. Content includes the effect of brain-body disturbances on health functioning. Other content areas are growth and development, stress, mental status, nurse-client relationships, psychopharmacology, and nursing approaches for clients experiencing DSM-IV neuropsychological disorders.

H352 Alterations in Neuro-Psychological

Health: Practicum (2 cr.) **C:** H351. Students will provide nursing care to individuals and small groups who are experiencing acute and chronic neuropsychological disturbances related to

psychiatric disorders. Student experiences will be with individuals and small groups in supervised settings such as acute, community-based, transitional, and/or home care.

H353 Alterations in Health I (3 cr.)

P: B244, B245, B248, B249, Anatomy, Physiology, Microbiology; **C:** H354. This course focuses on the pathophysiology and holistic nursing care management of clients experiencing acute and chronic problems. Students will use critical thinking and problem-solving skills to plan interventions appropriate to health care needs.

H354 Alterations in Health I: Practicum (2 cr.)

C: H353. Students will apply the science and technology of nursing to perform all independent, dependent, and interdependent care functions. Students will engage clients in a variety of settings to address alterations in health functioning, identify health care needs, and determine the effectiveness of interventions given expected outcomes.

H355 Data Analysis in Clinical Practice and

Health Care Research (3 cr.) **P:** B244, B245, B248, B249. This course introduces nursing and other health sciences students to the basic concepts and techniques of data analysis needed in professional health care practice. Principles of measurement, data summarization, and univariate and bivariate statistics are examined. Differences in types of qualitative data and methods by which these types of data can be interpreted are also explored. Emphasis is placed on the application of fundamental concepts to real world situations in client care.

H361 Alterations in Health II (3 cr.)

P: H351, H352, H353, H354; **C:** H362. This course builds on Alterations in Health I, and continues to focus on pathophysiology and holistic nursing care management of the associated needs of clients experiencing acute and chronic health problems.

H362 Alterations in Health II: Practicum (2 cr.)

C: H361. Students will continue to apply the science and technology of nursing to perform all independent, dependent, and interdependent care functions. Students will engage clients in a variety of settings to address alterations in health functioning.

H363 The Developing Family and Child (3 cr.)

P: H351, H352, H353, H354; **C:** H364. This course focuses on the needs of individuals and their families who are facing the phenomena of growth and development during the childbearing and child-rearing phases of family development. Factors dealing with preserving, promoting, and restoring the healthy status of family members will be emphasized.

H364 The Developing Family and Child:

Practicum (3 cr.) **C:** H363. Students will have the opportunity to work with childbearing and child-rearing families, including those experiencing alterations in health.

H365 Nursing Research (3 cr.)

P: H351, H352, H353, H354; **P/C:** Statistics. This course focuses on development of students' skills in using the research process to define clinical research problems and to determine the usefulness of research in clinical decisions related to practice. The critique of nursing and nursing-related research studies will be

emphasized in identifying applicability to nursing practice.

S470 Restorative Health Related to Multi-System Failures (3 cr.) P: H361, H362, H363, H364, H365; C: S471. This course focuses on the pathophysiology and nursing care management of clients experiencing multi-system alterations in health status. Correlations among complex system alterations and nursing interventions to maximize health potential are emphasized.

S471 Restorative Health Related to Multi-System Failures: Practicum (2 cr.) C: S470. Students will apply the nursing process to the care of clients experiencing acute multi-system alterations in health.

S472 A Multi-System Approach to the Health of the Community (3 cr.) P: H361, H362, H363, H364, H365; C: S473. This course focuses on the complexity and diversity of groups or aggregates within communities and their corresponding health care needs. Through a community assessment of health trends, demographics, epidemiological data, and social/political-economics issues in local and global communities, the student will be able to determine effective interventions for community-centered care.

S473 A Multi-System Approach to the Health of the Community: Practicum (2 cr.) C: S472. Students will have the opportunity to apply the concepts of community assessment, program planning, prevention and epidemiology to implement and evaluate interventions for community-centered care to groups or aggregates. Professional nursing will be practiced in collaboration with diverse groups within a community.

S474 Applied Health Care Ethics (3 cr.) P: H361, H362, H363, H364, H365. This course is designed to introduce the student to major ethical theory, principles, and models for the recognition, analysis, and resolution of ethical dilemmas in health care practice.

S481 Nursing Management (2 cr.) P: H361, H362, H363, H364, H365; C: S482. This course focuses on the development management skills assumed by professional nurses, including delegation of responsibilities, networking, facilitation of groups, conflict resolution, leadership, case management, and collaboration. Concepts addressed include organizational structure, change, managing quality and performance, workplace diversity, budgeting and resource allocation, and delivery systems.

S482 Nursing Management: Practicum (3 cr.) C: S481. Students will have the opportunity to apply professional management skills in a variety of nursing leadership roles.

S483 Clinical Nursing Practice Capstone (3 cr.) P: S470, S472, S473, S481, S482, or permission of instructor; C: S484. Students will have the opportunity to demonstrate competencies consistent with program outcomes and to refine their nursing care practice skills. Students will collaborate with faculty and a preceptor in: choosing a care setting, planning and organizing a learning experience, and practicing professional nursing in a safe and effective manner.

S484 Research Utilization Seminar (1 cr.) C: S483. This course focuses on students' abilities to refine their critical/analytical skills in evaluating clinical research for applicability to nursing practice. Students will examine the role of evaluation, action research, and research findings in assuring quality of nursing care and in solving relevant problems arising from clinical practices.

S485 Professional Growth and Empowerment (3 cr.) P: H361, H362, H363, H364, H365. This course focuses on issues related to professional practice, career planning, personal goal setting, and empowerment of self and others. Students will discuss factors related to job performance, performance expectations and evaluation, reality orientation, and commitment to lifelong learning.

Z480 B.S.N. Portfolio Review for Course Substitution (1-6 cr.) P: Permission of instructor. The portfolio review process is available to all undergraduate students who believe that they can meet the learning objectives/competencies required of a specific nursing course within their program of study. The portfolio is a mechanism used to validate the acquisition of knowledge and skills congruent with course expectations and student learning outcomes. The portfolio provides objective evidence that students have acquired necessary content and skills through prior learning and/or practice experiences.

Z490 Clinical Experience in Nursing (1-6 cr.) Opportunity for independent study of clinical experience related to nursing practice. Before enrolling in an independent study option, student must obtain permission from a faculty member who will supervise the study. Students must file appropriate forms prior to registration. Planned and supervised clinical experiences will be arranged in the area of the student's major interest.

Z492 Individual Study in Nursing (1-6 cr.) Opportunity for independent study of topics related to nursing practice. Before enrolling in an independent study option, student must obtain permission from a faculty member who will supervise the study. Students must file appropriate forms prior to registration.

K490 Clinical Elective (1-6 cr.) Many clinical nursing elective courses are offered under this number. These elective offerings vary from year to year depending on student interest and available resources. Students are kept informed of elective offerings both through informational forums and through listings in the *Schedule of Classes*.

K492 Nursing Elective (1-6 cr.) Many nursing elective courses are offered under this number. These elective offerings vary from year to year depending on student interest and available resources. Students are kept informed of elective offerings both through informational forums and through listings in the *Schedule of Classes*.

R.N. to M.S.N. Mobility Option

B492 R.N.—M.S.N. Transition I (4 cr.) This course is designed to provide students learning opportunities to acquire knowledge and skills fundamental to advanced nursing roles including, but not limited to, research consumer, communication facilitator, advocate of nursing practice, and teacher of patients,

their families, and colleagues. This course is constructed in three distinct but related modules: Research, Interpersonal and Group Communication, and Roles. Although modules are independent of each other, information and skills students gain in one module will be used in application to others.

B490 R.N.—M.S.N. Transition II (4 cr.) Theories of community-based nursing and nursing leadership and management are analyzed in combination with related research and are applied to the nurse's evolving role in an era of health care reform. Learning opportunities emphasize the knowledge and skills needed to provide nursing care to client systems in the community. Future trends for nursing's leadership and management role are examined, with particular emphasis placed on the impact of health care reform.

Graduate Courses

Core Courses

D607 Nursing Theory II (3 cr.) P: N502. Focus is on the philosophical and ethical foundations of nursing science. Philosophical debates concerning science, knowledge development, theory construction, and values are used to enhance appreciation of advances in nursing knowledge. Theories, models, and conceptual frameworks are considered as guides to inquiry.

D730 Proseminar: State of Nursing Science I (3 cr.) Focus is on human behaviors related to health promotion, health protection, and factors that influence health-seeking behaviors in wellness and in acute and chronic illness. Provides an overview of the fields, while each student will critique and synthesize a specific topic relevant to his or her area of study.

D731 Proseminar: State of Nursing Science II (3 cr.) Focus is on the critical review of complex interactions of the environments and systems that influence health. Students will study selected environments and systems that influence health. Emphasis is on analysis of concepts, theories, and research related to factors that influence health.

N502 Nursing Theory I (3 cr.) Focus is on evaluating the factors and issues influencing the development of theory in nursing. Theoretical terminology and criteria for the evaluation of theories are examined. Linkages applied between theory, practice, and research are explored.

N530 Policy and Practice Perspectives in Advanced Nursing Practice (2 cr.) Introduction to policy development in health care and advanced nursing practice within the context of the larger society. Provides a basis for understanding political forces, including government, industry, and economic constraints, that shape nursing and health care delivery. Strategies by which nursing influences development of health policy through political involvement are considered.

N532 Advanced Nursing Practice Roles (2 cr.) Exploration of the components of the advanced practice role and how the organization influences and is influenced by the advanced practice nurse. Leadership, organizational and role theories are examined within the health care delivery systems. Introduces students to principles of resource allocation and analysis of cost effectiveness of outcomes in a variety of health care settings.

N534 Ethical and Legal Perspectives in

Advanced Practice Nursing (2 cr.) Major ethical theories are introduced and the principles underlying ethical health care practice are analyzed. Students examine selected concepts and principles of ethics and law within a framework of ethical decision making for advanced nursing practice.

R500 Nursing Research Methods I (3 cr.)

Provides a survey of research in nursing. Topics include critique of research literature, research designs, sampling, data collection and measurement strategies, relating research and theory, developing researchable problems, and utilizing theory.

R590 Nursing Study (1-3 cr.) P: R500 and R505. A guided experience in identifying a researchable nursing problem and in developing and implementing a research proposal.

R600 Nursing Research Methods II (3 cr.) P:

R500. Focus is on in-depth analysis and decision strategies for selecting and evaluating appropriate research designs, sampling methods, data collection methods, measurement strategies, instrument development, and data analysis in the development of research investigations.

R699 Master's Thesis in Nursing (1-6 cr.) With approval of the thesis committee, students conduct an empirical study of a nursing problem.

R900 Continuation in Study or Thesis (1 cr.)

Following enrollment in R590 Nursing Study (3 cr.) or R699 Master's Thesis in Nursing (6 cr.), the student must enroll every semester and first summer session in R900 (a pseudocourse) until the study or thesis has been completed.

Other Courses**C550 Pediatric Health Assessment (3 cr.)**

Enables students to learn psychomotor skills required for performing physical examinations. Provides theoretical basis to begin process of physical diagnoses of health and illness. 5 clinical hrs./wk.

C551 Health Maintenance of the Pediatric

Client (5 cr.) P: C550. P or C: C553. Provides the basis for synthesizing health status information for nursing interventions aimed at encouraging children and families to assume responsibility for the prevention of illness and the promotion and maintenance of health. 10 clinical hrs./wk.

C555 Advanced Nursing Care of Children and

Families I (6 cr.) P: C550, C611. This course prepares advanced practice nurses for the specialized care of children and their families. Complex, unique, or challenging health issues are examined. Students develop skills in critical thinking, ethical decision making, and facilitating behavioral change to assume a leadership role in improving health outcomes. 15 non-lecture contact hours.

C556 Advanced Nursing Management of the

Pediatric Client (2 cr.) P: C551; C: C553. Enables the student to use research data and theoretical knowledge in supporting advanced nursing practice in primary health care nursing.

C661 Psychosocial Assessment Strategies in Pediatrics and Women's Health Nursing (3 cr.)

P: Statistics. Focuses on strategies to assess psychosocial health status. Assessment tools and conceptual frameworks will be analyzed. Purpose of assessment strategy, considerations for administration, technical evaluation, and implications for nursing practice will be discussed.

C666 Collaborative Clinical Practice in

Pediatric Primary Health Care (5 cr.) Seminar provides students with the opportunity to present and discuss complex, multi-faceted clinical situations with faculty and peers. The clinical component provides students with the opportunity to develop advanced clinical skills in pediatric primary health care settings. Emphasis is on continuity and comprehensiveness of nursing interventions with pediatric clients. 25 clinical hrs./wk.

C670 Advanced Nursing Care of Children and

Families II (3 cr.) P: C555. This course prepares advanced practice nurses to function effectively in leadership roles within multi-disciplinary health care systems/organizations specifically focused on children and their families. Critical issues that impact the practice environment are explored. Students develop skills in facilitating evidence-based practice for specific populations of children and their families. 10 non-lecture contact hours.

D610 Pain: Its Pathophysiology, Assessment, and Management (3 cr.)

In-depth study of the theoretical concepts of pain. Theories are evaluated for their potential use in the delivery of nursing care. Emphasis is on the assessment and management of pain. 5 clinical hrs./wk.

D700 Nursing Research Seminar (2-3 cr.)

This seminar for predoctoral/postdoctoral nursing students (a) provides an opportunity for career socialization, (b) facilitates achievement of individual research goals, and (c) enables students to experience the give and take of a writing work group.

D740 Legal and Ethical issues in Nursing

Research (3 cr.) P: R500, N502, and N534. This course includes analysis of legal and moral theories and principles related to research in nursing and health care as a basis for analysis of moral/legal dilemmas in research. Students debate issues that create tension between the quest for knowledge and the moral and legal claims of society.

D741 The Legal/Ethical Issues for Nurses in Health Care Administration (3 cr.)

P: R500, N502, and N534. This course provides a review of the basic tenets of ethics and law related to health care administration. The role of the nurse in health care administration is emphasized.

D742 Legal and Ethical Issues in Nursing

Education (3 cr.) P: R500, N502, and N534. This course deals with the application of ethics, social philosophy, and legal doctrines to problems of nursing education. It assists the learner to analyze and reflect on moral and legal issues relevant to educational practices.

D751 Nursing Seminar (3 cr.) P: D607 and R600. Provides opportunities for students to pursue in-depth study about phenomena of concern to nursing and to conduct nursing research. Each D751 course emphasizes the conduct of research in one of the following topic areas: health dynamics, self-care decision-making, stress and coping, pain, and vulnerability.

D752 Directed Study (3 cr.) P: D751. Students will continue study in a topic area covered in a D751 seminar by taking D752 Directed Study in the same area. In addition, a specific directed study (D752) on health promotion is offered, with the D751 topic areas of vulnerability and self-care decision making as prerequisites. 5 clinical hrs./wk.

F570 Assessment of Individuals, Families and

Communities (3 cr.) This course enables students to develop advanced practice nursing skills in individual health assessment of infants, children, adults and aging people. In addition, students develop skills in family and community assessment.

F572 Primary Health Care of Children

(2 cr. didactic, 1 cr. clinical for FNP majors)

Enables students to develop a knowledge base for clinical decision making in assessment and provision of primary health care nursing for children and families. Topics include health promotion/maintenance, disease prevention, diagnosis and treatment of common acute and stable chronic illnesses in children. 5 clinical hrs./wk.

F574 Primary Health Care of Adults

(2 cr. didactic, 1 cr. clinical for FNP majors)

Enables students to develop a knowledge base for clinical decision-making in the assessment and management of primary health care for adults and families. Topics include health promotion/maintenance, disease prevention, and diagnosis and treatment of common acute and stable chronic illnesses in adults. 5 clinical hrs./wk.

F576 Primary Health Care of Women

(2 cr. didactic, 1 cr. clinical for FNP majors)

Enables students to develop a knowledge base for clinical decision making in the assessment and provision of primary health care for women and families. Topics include health promotion/maintenance, disease prevention, diagnosis and treatment of common acute and stable chronic illnesses in women. 5 clinical hrs./wk.

F578 Primary Health Care of Families—Clinical

(5 cr.) Enables the FNP student to develop a practice base for clinical decision making in the assessment and management of health care of families. The course includes identification of health needs, nursing interventions for the prevention of illness, and health promotion. 25 clinical hrs./wk.

G513 Physiology of Maternal-Child (1-2 cr.)

In-depth study of biophysical and behavioral aspects of human development, while considering genetic, embryologic, and developmental physiological components. This course may be repeated for a maximum of 4 credits.

G552 Advanced Nursing Care of Pregnant Women (6 cr.) P: Y550. Prepares nurse practitioners to deliver primary health care to pregnant women in ambulatory health care settings. The identification of health needs and nursing interventions for the prevention of illness and the promotion and maintenance of health are included. Emphasizes the independent and collaborative function of the nurse practitioner. 20 clinical hrs./wk.

G553 Women, Health, and Culture (3 cr.) P: Consent of instructor. Focus on feminist and cultural theory and research, applicable to women and their families within the context of contemporary society and culture throughout the life span.

G555 Management of the Well Woman (5 cr.) Enables students to develop a knowledge base for clinical decision making in the management of primary health care for well women. Emphasis is directed toward clinical competency in the care of well women throughout their lives. Topics are directed toward gynecologic care. 20 clinical hrs./wk.

G558 Women, Health, and Society (3 cr.) P: G553 or consent of instructor. Overview of women's health concerns locally, regionally, nationally, and internationally, and the impact of social systems on the well-being and health of women and their families. A variety of frameworks will be compared, contrasted, and synthesized in relation to women's health-related theory.

H537 Community Epidemiology (3 cr.) This research course presents methodological and analytical techniques to summarize health-related indicators in populations and provides opportunities to assess mainstream and multicultural populations through existing data sets. Epidemiologic techniques will form the basis for these population assessments.

H540 Community Assessment (3 cr.) This course focuses on concepts and methods for the assessment of a mainstream and multicultural community's strengths and needs. Students will collect and analyze secondary data for selected communities, analyze health indicators, conduct a community assessment, and delineate implications for advanced practice nursing.

H544 Community Development and Organization for Health (3 cr.) The purpose of this course is to critically analyze ethical principles, theories, concepts, and research of community development and organization for health, and to consider their application in mainstream and multicultural communities. Students develop an evaluation research proposal to study the effects of community development efforts.

H546 Action Research and Community Health Policy (3 cr.) Analysis of action research as a method of scientific inquiry for social and policy change. Working with mainstream and multicultural community groups, students design and conduct action research projects. Based on research results, recommendations for social and policy change and further policy research are made.

H548 Community-Based Nursing Practicum (3-6 cr.) Students conduct a practicum experience in order to synthesize theory and research related to

program development or evaluation of community-based intervention in selected settings such as home care, occupational health, schools, and community health centers. Mainstream and multicultural community experiences and activities are independently planned to meet student career goals. 15-30 clinical hrs./wk.

H630 Community Health Planning and Implementation (4 cr.) P: H540. Presentation of concepts, theories, and research related to community health planning, implementation, and evaluation. In conjunction with the community, students develop a health plan and evaluation aimed at ameliorating the health problem identified in H540. Aspects of the plan are implemented, and an appropriate community health-nursing role is identified. Seminar and community experience. 4 clinical hrs. 5 clinical hrs./wk.

H734 Advanced Model Building in Community Health Nursing and Health Policy (3-6 cr.) P: H733. Students will be directly involved in policy development and will evaluate models of policy making for community health nursing. Hypotheses related to the conceptual model will be tested in the policy setting using empirical data.

J595 Topical Seminar (2-4 cr.) Seminar topic to be announced each semester.

J690 Readings in Clinical Nursing (1-3 cr.) Topic arranged depending on the needs and interests of the student.

J692 Independent Study in Nursing (1-6 cr.) Individual assignments arranged.

L560 Case Management in Integrated Health Care Systems (3 cr.) Traces the evolution of case management models in human services, assesses recent scholarship on implementation and evaluation in various health care delivery settings, examines dynamics of case management role, and explores future models within systems of managed care.

L573 Organizational Behavior: Nursing (3 cr.) Introduction to administration of nursing by relating behavioral science and organizational and administrative theories to the delivery of health services, with an emphasis on organizational behavior.

L574 Administrative Management in Nursing (3 cr.) P: L573. Content derived from contemporary environmental, personnel, and organizational issues related to the administration of nursing services with emphasis on management principles and processes.

L575 Corporate and Public Policy for Nursing Executives (3 cr.) This course is designed to prepare nurse administrators for active policy-making participation in health care organizations, professional associations, and governmental agencies. The focus of the course is on managerial decisions and on building coalitions for policy at the organizational, local, regional, national and international levels.

L579 Nursing Administration Practicum (3-6 cr.) P: L574 and V610. A practicum experience designed for synthesis of theory and practice. Agency observation and activities are independently planned. Includes group seminars. 15 clinical hrs./wk.

L650 Data Analysis for Clinical & Administrative Decision Making (3 cr.) Focuses on understanding, manipulating, and analyzing quantitative data in nursing and health care. Includes use of computer-based systems for data management and statistical analysis. Students learn application and interpretation of multivariate statistical models for decision making.

L671 Financial Management: Nursing (3 cr.) Designed to acquaint nurses with budget preparation and fiscal management of a nursing unit or division. Methods of obtaining personnel input, estimating costs, and cost justification are analyzed in depth.

L773 Marketing Strategies for Nursing (3 cr.) P: D606. Theories related to marketing models in nursing are studied as they relate to the entire set of exchange relationships. Practice in using a theory or model is provided.

L774 Theory Development in Nursing Administration (3 cr.) P: D606. Selected administrative models and theories are critiqued relative to their application for nursing administration. Practice in the specific critique of one theory or model is provided.

L775 Organizational Theories in Nursing (3 cr.) P: D606. An analysis of existing organizational theory for the purpose of identifying, extending, or modifying theory for application in the nursing service or education sectors.

L776 Leadership in Nursing (3 cr.) P: D606. A study of selected role, leadership, system, social exchange, and organizational theories and their related research to form a base for differentiation and integration of administrative roles in academic nursing administration.

M552 Science of Nursing Diagnosis and Treatment (3 cr., 2 didactic, 1 clinical) P: 10 credits of core. Focuses on nursing's unique contribution to client/patient care and on scientific basis for nursing practice. Critical thinking skills in diagnosis and treatment are emphasized. Clinical experience includes design, implementation, and evaluation of innovations for treating pain. 5 clinical hrs./wk.

M554 Functional Enhancement (3 cr., 2 didactic, 1 clinical) P: M552. Focus is on assessments and diagnoses of impairments contributing to functional disabilities and the critique of current therapeutics to remediate or prevent impairments. Innovative theory/research-based therapeutics to enhance physical and cognitive functioning will be examined. Clinical experiences include the design, implementation, and evaluation of innovations. 5 clinical hrs./wk.

M556 Symptom Management (3 cr., 2 didactic, 1 clinical) P: M552. Focus is on application of science to practices that facilitate self-management (nurse management when necessary) of illness-related symptoms. Clinical experiences include assessments and diagnoses of non-disease-based etiologies that contribute to symptoms, design, implementation, and evaluation of nursing therapeutics to facilitate symptom prevention or reduction. 5 clinical hrs./wk.

M559 Stress and Coping: Counseling to Promote Function (3 cr.) P: M552. Theories and research relevant to stress and stress management are explored with emphasis on the attainment of situational stress counseling skills to promote optimal functioning. Students are required to provide direct care to patients/clients who have a known or predicted biodissonance and to utilize the nursing process in clinical application of appropriate theory and research. 5 clinical hrs./wk.

M560 Enhancing Health Behaviors Through Psycho-Educational Intervention (3 cr.) P or C: M559. Focus is on application of science to design, implement, and evaluate psycho-educational interventions to influence health care decisions and behaviors. Clinical experience includes development, implementation, and evaluation of a patient/family psycho-educational program. 5 clinical hrs./wk.

M561 Advanced Practice Roles in Nursing of Adults (3 cr.) P: M559; P or C: M560. Offers graduate students the opportunity to synthesize theories and experiences pertinent to role development/modification and socialization in advanced practice roles in the nursing care of adults. 10 clinical hrs./wk.

M562 Advanced Concepts in Critical Care (3 cr.) P: 15 credits of major. Seminars and clinical experience focus on application of science to nursing practices to enhance cost-effective clinical outcomes of critically ill adults who are sensitive to nursing therapeutics. 5 clinical hours./wk.

P510 Psychopharmacology (3 cr.) Considers indications, therapeutic uses, neurophysiological mechanisms of action, and side effects of the major classifications of psychotropic drugs. Relevant research is examined as is clinical application pertinent to current psychiatric mental health practice, including therapeutic management, psychodynamics, and combination of drugs with other treatment modalities.

P515 Psychiatric/Mental Health Assessment in Advanced Psychiatric Nursing (3 cr.) Methods and skills for completing a comprehensive mental health assessment are emphasized. Content includes criteria for DSM, psychiatric nursing diagnosis, ICD, and functional abilities, developmental status, and cultural influences. Students become familiar with standardized assessment tools commonly used in psychiatric/mental health settings. 5 clinical hrs./wk.

P551 Advanced Practice in Child/Adolescent Psychiatric/Mental Health Nursing (3 cr.) Treatment theories and research related to children/adolescents and their families are examined to foster development of the advanced practice role. Sociopolitical issues in child/adolescent psychiatric nursing are examined. Students develop advanced practice skills in child/adolescent psychiatric/mental health nursing issues in a clinical practicum. 5 clinical hrs./wk.

P558 Advanced Practice in Adult Psychiatric/Mental Health Nursing (3 cr.) Students examine treatment theories and research related to mental illness in adults to foster the development of advanced practice psychiatric nursing. Sociopolitical issues related to advanced practice in

Adult Psychiatric Nursing are examined. Clinical experience is formed on the development of advanced practice skills. 5 clinical hrs./wk.

P651 Psychiatric/Mental Health Nursing with Families (3 cr.) Theoretical formulations and research related to developmental and functional processes in families are examined for their relevance in designing and implementing nursing interventions. Biopsychosocial formulations are used to understand the reciprocity of individual and family function and dysfunction. Learning experiences include analysis of family therapy simulations and a family therapy practicum. 5 clinical hrs./wk.

P654 Group Interventions in Advanced Psychiatric Nursing (3 cr.) The student will demonstrate an understanding of group treatment as a therapeutic modality in the advanced practice of psychiatric/mental health nursing. Various models of group intervention are analyzed to determine their relevance for meeting specialized needs of clients across the life span. Practicum required. 5 clinical hrs./wk.

P668 Consultation and Community Mental Health (3 cr.) Students examine and evaluate models for mental health consultation and community mental health interventions. Students will analyze and differentiate various strategies for mental health interventions that involve at-risk populations in a multicultural society. Contemporary mental health policy issues related to advanced practice nursing are discussed. Students complete a consultation project. 5 clinical hrs./wk.

P671 Advanced Clinical Practice in Psychiatric/Mental Health Nursing I (3 cr.) Students engage in advanced psychiatric nursing practice with selected populations. Students further define and expand their practice of psychiatric/mental health nursing based on the integration of theory, research, self-evaluation, and clinical supervision. A variety of approaches and issues of service delivery are explored. 5 clinical hrs./wk.

P672 Advanced Clinical Practice in Psychiatric/Mental Health Nursing II (3 cr.) In this practicum, students expand their practice to indirect care responsibilities, including clinical supervision, evaluation of treatment environments, program development, and interdisciplinary collaboration. Students examine social, legal, economic, and ethical issues to develop goals for future professional development and contributions to nursing. 10 clinical hrs./wk.

P850 Internship: Psychiatric/Mental Health Nursing (6 cr.) P: completion of major and minor area of study in Doctor of Nursing Science program. The internship is the last course in the Doctor of Nursing Science program in psychiatric/mental health nursing. Students take on an extensive clinical research experience related to the development of the knowledge and skills necessary for conducting clinical research and for implementing and evaluating prevention and intervention programs. 30 clinical hrs./wk.

R505 Measurement and Data Analysis (3 cr.) Principles and applications of scientific measurement, data summarization, inferential statistics, and practical derivations of the general linear model.

Considers the research purpose and the phenomenon under study as determinants of measurement techniques and data analysis.

R601 Instrument Development for Health Behavior I (2 cr.) P: R600. The purpose of this course is to provide an opportunity for the student to gain expertise in developing an instrument to measure health behavior. Content focuses on theoretical foundations of measurement, item construction, questionnaire design, and content analysis.

R602 Instrument Development for Health Behavior II (2 cr.) P: R601. The purpose of this course is to provide an opportunity for the student to develop expertise in the testing of an instrument to measure health behavior. Content focuses on data collection, item analysis, validity and reliability assessment, and manuscript preparation to report psychometric properties.

R610 Qualitative Methods for Nursing Research (3 cr.) Seminar on the use of qualitative methods in scientific inquiry in nursing. Content includes the role of theory in inquiry, types of qualitative methods, ethical considerations, evaluation of trustworthiness of data, and research design.

R800 Dissertation Seminar (3 cr.) In collaboration with the student's dissertation chair, dissertation development is facilitated. The seminar is a forum for students to explore with their peers research problem development, theoretical foundations, methodology, and data analysis to launch their dissertation research. Format and procedures for progression in the dissertation process are also discussed.

R899 Dissertation in Nursing (1-8 cr.) Research project is conceptualized, conducted, and written.

S674 Management of the Acutely Ill Adult 1 (6 cr.) This course focuses on assessment, diagnosis, and collaborative management of adults who are acutely/critically ill or are experiencing exacerbation of a chronic health problem. Clinical focus is on the role of the acute care nurse practitioner working with a multidisciplinary team to facilitate and accelerate the patient's return to optimal health. 15 clinical hrs./wk.

S675 Management of the Acutely Ill Adult 2 (6 cr.) P: S674. This course focuses on assessment, diagnosis, and collaborative management of adults who are acutely/critically ill or are experiencing exacerbation of a chronic health problem. Clinical focus is on the role of the acute care nurse practitioner working with a multidisciplinary team to facilitate and accelerate the patient's return to optimal health. 15 clinical hrs./wk.

S676 Management of the Acutely Ill Adult 3 (6 cr.) P: S674 and S675. This course focuses on assessment, diagnosis, and collaborative management of adults who are acutely/critically ill or experiencing exacerbation of a chronic health problem. Clinical focus is on the role of the acute care nurse practitioner working with a multidisciplinary team to facilitate/accelerate the patient's return to optimal health. 15 clinical hrs./wk.

T615 Nursing Curriculum (3 cr.) Focus is on the process of curriculum development within a conceptual framework. Emphasis is also directed toward current nursing curriculum issues.

T617 Evaluation in Nursing (3 cr.) Focus is on the integration of the concepts and processes of evaluation and evaluation-attending activities into a nursing education framework.

T619 Computer Technologies (3 cr.) Provides nurse educators with an opportunity to acquire knowledge and skills for using computer technologies to support the teaching-learning process. Emphasis is given to theoretical frameworks that guide the selection, use, and integration of computer technologies in nursing education programs.

T670 Teaching of Nursing (3-6 cr.) P: Master of Science in Nursing or equivalent, and consent of instructor. Focus is on seminar and guided experiences in teaching of nursing, including planning, developing, implementing, and evaluating classroom and clinical instruction. 5 clinical hrs./wk.

W540 Writing for Professional Nursing Publication (3 cr.) This 3-credit course is for graduate students wanting to learn how to write for nursing publication. The course is co-taught by editors of nursing journals. Students will submit a draft of an article and receive editorial review.

Y512 Advanced Concepts in Gerontology (3 cr.) P: Introductory/survey course in gerontology and consent of instructor. Enables students to synthesize theoretical and practical concepts from different disciplines to meet the primary health care needs of elderly adult clients and their families.

Y515 Pathophysiology (4 cr.) Provides advanced knowledge of Pathophysiology as the foundation for nursing management in the health care of adults.

Y535 Dynamics of Family Health Care (3 cr.) Provides students with opportunities to study families within the community context. Consideration is given to theories of family functioning and roles in family health care, using family assessment tools and other nursing intervention strategies.

Y550 Physical Health Assessment (3 cr.) Enables students to learn psychomotor skills required for performing physical examinations. This course also provides the theoretical basis to begin the process of physical diagnoses of health and illness. 5 clinical hrs./wk.

Y552 Health Maintenance for Adults (5 cr.) Provides the basis for synthesizing health status information for nursing interventions aimed at helping adults and families to assume responsibility for the prevention of illness and the promotion and maintenance of health. 15 clinical hrs./wk.

Y554 Advanced Nursing Management—Adult (2 cr.) Enables the student to use nursing research data and theoretical knowledge to support advanced nursing practice in primary health care nursing.

Y555 Collaborative Clinical Practice in Primary Health Care Nursing (4 cr.) Provides opportunities for students to develop advanced clinical practice in primary health care nursing. Seminar provides for the analysis of nursing management through care presentations. 20 clinical hrs./wk.

Y556 Advanced Nursing Management of the Oncology Client (4 cr.) P: Y515, Y550, Y552, Y562,

or consent of instructor. Provides the nurse practitioner concentrating in oncology with an overview of advanced nursing management for adults with cancer. Students will learn how to facilitate patient transition through screening and detection, diagnosis, acute care, rehabilitation, and the terminal phase. 5 clinical hrs./wk.

Y562 Pathophysiology of Cancer (2 cr.) P: Y515, Y550, or consent of instructor. A pathophysiological approach to nursing care of clients with localized or invasive cancer.

Y565 Interdisciplinary Practicum in Gerontology (3 cr.) P: Introductory/survey course in gerontology, Y512, and consent of instructor. Provides the student, as an advanced practitioner and interdisciplinary team member, with the opportunity to participate in the creation or change of health policies and/or programs affecting elderly people. Consists of a seminar and a practicum. 10 clinical hrs./wk.

Y612 Pharmacology for Nurse Practitioners (3 cr.) This course provides a basis for understanding the use of pharmacotherapeutic agents for clients across the life span. The course builds upon the pharmacologic knowledge base acquired at the baccalaureate level in nursing.

R.N. to B.S.N. Mobility Option

B304 Professional Nursing Seminar I (3 cr.) This course focuses on core theoretical concepts of professional nursing practice, including health, wellness, illness, self-care, and caring, disease prevention, and health promotion. Students will be expected to explore theoretical premises and research related to the unique wellness perspectives and health beliefs of people across the life span. Students will learn to develop care outcomes consistent with maximizing individual potentials for wellness. Students will complete a needs assessment as part of the practicum experience.

B404 Professional Nursing Seminar II (3 cr.) This course focuses on the application of nursing theory and research findings in restoring and maintaining individual and family functioning for those dealing with multi-system alterations. Students will explore the ethical, legal, and moral implications of treatment options and identify tactics to maintain nursing effectiveness in their facilitation of individuals and families through the health care system. Students will complete a scholarly analysis as part of their practicum experience.

B244 Comprehensive Health Assessment (2 cr.) C: B245. This course focuses on helping students acquire the skills necessary to conduct a comprehensive health assessment that includes the physical, psychological, social, functional, and environmental aspects of health. The process of data collection, interpretation, documentation, and dissemination of assessment data will be addressed.

B245 Comprehensive Health Assessment: Practicum (2 cr.) C: B244. Students will have the opportunity to use interview, observation, percussion, palpation, inspection, and auscultation in assessing clients across the life span in simulated and actual environments.

H365 Nursing Research (3 cr.) P: Approved statistics course or permission of instructor. This course focuses on the development of students' skills in using the research process to define clinical research problems, and in determining the usefulness of research in clinical decisions related to practice. The importance of critiquing nursing and nursing-related research studies will be emphasized in identifying applicability to nursing practice.

S472 A Multi-System Approach to the Health of the Community (3 cr.) This course focuses on the complexity and diversity of groups or aggregates within communities, along with their corresponding health care needs. Through a community assessment of health trends, demographics, epidemiological data, and social/political-economics issues in local and global communities, the student will be able to determine effective interventions for community-centered care.

S473 A Multi-System Approach to the Health of the Community: Practicum (2 cr.) P: B304, B404, B244, B245. Students will have the opportunity to apply the concepts of community assessment, program planning, prevention, and epidemiology to implement and evaluate interventions for community-centered care of groups or aggregates. Professional nursing will be practiced in collaboration with diverse groups within a community.

S474 Applied Health Care Ethics (3 cr.) This course is designed to introduce the student to major ethical theory, principles, and models for the recognition, analysis, and resolution of ethical dilemmas in health care practice.

S481 Nursing Management (2 cr.) P: B304 and B404. This course focuses on the development of management skills assumed by professional nurses, including delegation of responsibilities, networking, facilitation of groups, conflict resolution, leadership, case management, and collaboration. Concepts addressed include organizational structure, change, managing quality and performance, workplace diversity, budgeting and resource allocation, and delivery systems.

S482 Nursing Management: Practicum (3 cr.) Students will have the opportunity to apply professional management skills in a variety of nursing leadership roles.

S483 Clinical Nursing Practice Capstone (3 cr.) P: S481 and S472 or permission of instructor. Students will have the opportunity to demonstrate competencies consistent with program outcomes and to refine their nursing care practice skills. Students will collaborate with faculty and a preceptor in choosing a care setting, planning and organizing a learning experience, and practicing professional nursing in a safe and effective manner.

S484 Research Utilization Seminar (1 cr.) C: S483. This course focuses on students' abilities to refine their critical/analytical skills in evaluating clinical research for applicability to nursing practice. Students will examine the role of evaluation, action research, and research findings in assuring quality of nursing care and in solving relevant problems arising from clinical practices.

S485 Professional Growth and Empowerment (3 cr.) C: S481 or permission of instructor. This course focuses on issues related to professional practice, career planning, personal goal-setting, and empowerment of self and others. Students will discuss factors related to job performance, performance expectations and evaluation, reality orientation, and commitment to lifelong learning.

School of Nursing Administration

ANGELA BARRON MCBRIDE, Ph.D., M.S.N., B.S.N., R.N., F.A.A.N., *University Dean*

SHARON FARLEY, Ph.D., M.S.N., B.S.N., R.N., F.A.A.N., *Executive Associate Dean for Academic Affairs*

DONNA L. BOLAND, Ph.D., M.S., B.S., R.N., *Associate Dean for Undergraduate Programs*

SUE MORRISSEY, D.N.S., B.S.N., *Acting Associate Dean for Graduate Programs*

IUPU Columbus History

On August 17, 1970, IUPUI Columbus opened its offices and classrooms and became a permanent extension of IUPUI. This event was the result of several years of discussion among representatives of Indiana University, Purdue University, Franklin College, the Columbus Chamber of Commerce, and many other interested citizens of the area. The establishment of IUPUI Columbus was a natural outgrowth of the intense interest in post-secondary education in Columbus: Indiana University courses had been offered in the city since 1941, and Purdue University courses had been offered since 1942.

Under the directorship of Dr. Emerson Gilbert, IUPUI Columbus offered classes in various locations of Columbus. In 1971, the university moved to the former Civilian Personnel Building at Bakalar Municipal Airport. In 1974, a move was made to the Technical Training Building, and the first advisory board was named. Dr. Paul R. Bippen became the university's second director in 1977, a position he holds today, but with the title of dean.

In 1982, a capital fund drive was inaugurated, and the goal of \$900,000 was topped by \$5,000 in gifts and pledges. With the approval of \$150,000 from the Indiana General Assembly for a building expansion project, renovation of the IUPUI Columbus facility was completed in October of 1985, with an expansion of over 60 percent of the pre-renovation square footage.

The Purdue Statewide Technology program was established at IUPUI Columbus in 1984. In 1987, an additional 11 acres of land was deeded to the IU Board of Trustees by the City of Columbus. Delivery of off-campus credit courses to six locations near Columbus began in 1989. Also in 1989, a small building on the campus grounds was renovated to become a science research facility. In 1990, IUPUI Columbus celebrated its twentieth anniversary. A child care program, offered jointly with Ivy Tech State College, was initiated.

In 1990–91, new landscaping was placed around the building. In the spring of 1991, the Diploma Ceremony, including both IUPU Columbus and Purdue University School of Technology students, was initiated. In 1991–92, a café was created and became heavily used. The American Business Seminar, a cultural exchange/business program involving students from Chartres, France, was initiated. In 1992–93, IUPUI Columbus received reaccreditation by the North Central Association; touchtone registration was implemented; an Elderhostel program was initiated.

In 1994, IUPUI Chancellor Gerald Bepko announced the change of the name IUPUI Columbus to IUPU Columbus. Negotiations were completed to transfer academic and administrative responsibilities for Purdue Continuing Education offerings in Versailles to IUPU Columbus. Three key messages for the university were established: (a) we are IU and Purdue; (b) we provide university education on a personal level; (c) we are a good investment.

In 1996, a new logo was created for the campus. The Center for Economic Education of IUPU Columbus was created. An articulation agreement for ten mandated courses with Ivy Tech State College was negotiated. In 1997, the name Purdue Statewide Technology was changed to Purdue University School of Technology at Columbus, and the title of the Site Administrator was changed to Director. In 1999, the auditorium was renovated into office spaces for Student Services personnel. The Indiana General Assembly approved \$750,000 in planning monies for the design of a learning facility to be located between IUPU Columbus and Ivy Tech State College Columbus. This facility will house administrative offices of IUPU Columbus, Purdue University School of Technology, Ivy Tech State College, the Bartholomew Consolidated School Corporation, and the Office of Workforce Development. In addition to offices, it will house classrooms, an auditorium, an information/technology center, and other spaces for use by all students, faculty, and staff of the educational institutions in Columbus and by all area residents. Academic programs requested by residents and by local business and industry will be offered in this facility. During the 2000–2001 academic year, the following degree programs were approved by the IU and Purdue Boards of Trustees and the Indiana Commission for Higher Education: Associate of Science in Chemistry, Bachelor of Science in Business, Bachelor of Science in Education, Bachelor of Science in Nursing (the RN-BSN Mobility Option), Bachelor of Science/Bachelor of Arts in Psychology, and the Master of Business Administration.

Mission Statement

The mission of Indiana University-Purdue University Columbus, a campus site of Indiana University-Purdue University Indianapolis, is to identify and respond to post-secondary education needs and enhance the quality of life of the residents of our 10-county service area by providing Indiana University and Purdue University degrees, programs, courses, and faculty expertise.

Statement by the Dean

IUPU Columbus is located one hour south of Indianapolis in the south-central part of Indiana. The 1900 students enrolled come from Bartholomew County and the 11 surrounding counties. Two master's degrees, eight bachelor's degrees, and 10 associate degrees can be completed in their entirety on the Columbus campus, or students can transfer to IUPUI or any IU or Purdue campus to finish one of the numerous degrees offered there.

The 35 full-time and 140 adjunct IUPU Columbus faculty are committed to helping students learn; many are actively engaged in research that they bring into the classroom and in which they include their students. Students enjoy the personalized attention offered by both faculty and staff, in addition to the affordable tuition, convenience, and high quality of IU and Purdue programs.

We encourage students to become an active part of the campus by joining one of the student clubs on campus; contributing their artistic talents in writing, photography, or drawing to *Literalines*, IUPU Columbus' magazine of the arts; or offering their

service to the university through the Student Ambassador program. We are here to serve students; to assist them in developing their skills, understanding, and perspective; and to help them reach their academic goals. We invite them to visit the Columbus campus of IUPUI.

The Academic Programs

Degrees Offered at IUPU Columbus

The following degree programs are offered at IUPU Columbus:

INDIANA UNIVERSITY DEGREES

Master's Degrees

Business Administration

Bachelor's Degrees

Business
Elementary Education
General Studies
Nursing (RN-BSN Mobility Option)
Psychology
Sociology*

Associate Degrees

General Studies
Liberal Arts
Nursing (LPN-ASN Mobility Option)

PURDUE UNIVERSITY DEGREES

Associate Degree

Chemistry

PURDUE UNIVERSITY SCHOOL OF TECHNOLOGY DEGREES

Master's Degree

Technology

Bachelor's Degrees

Computer Information Systems Technology
Organizational Leadership & Supervision

Associate Degrees

Computer Graphics Technology
Computer Integrated Manufacturing Technology
Computer Technology
Electrical Engineering Technology
Mechanical Engineering Technology
Organizational Leadership and Supervision

*Approval pending from Indiana Commission for Higher Education

Admission to Undergraduate Programs

Admission to undergraduate programs at IUPUI Columbus is the same as at IUPUI.

University College

University College is the academic unit on the Indiana University-Purdue University Columbus campus that provides a common gateway to degree programs available to entering students. This academic unit provides a setting where students, faculty, and staff share in the responsibility for making IUPUI Columbus a supportive and challenging environment for successful learning.

University College exists to help students adjust to college life. Because students are diverse, the needs of students are diverse. Thus, University College offers an array of academic services and courses to meet the diverse needs of students in this region.

Academic Expectations for Remaining in the Program

These are the same at IUPUI Columbus as they are at IUPUI.

Financial Aid

The IUPUI Office of Student Financial Aid Services coordinates the financial aid program on behalf of IUPUI Columbus. All policies, procedures, and guidelines that are enforced at IUPUI are also applicable for students attending IUPUI Columbus. Questions regarding financial aid policies and procedures can be addressed to the Financial Aid Advisor at the IUPUI Columbus campus in the Student Services Office or by calling (812) 348-7271 or (800) 414-8782, ext. 7271.

Special Expenses

In addition to the tuition, which is the same as that of IUPUI, there are special fees relating specifically to the IUPUI Columbus campus. These include:

1. Field Experience in Teacher Education Fee: This fee is mandatory for the following courses: EDUC M101, M201, M301, and M401.
2. Student Activity Fee: This fee is mandatory if the student has one or more courses on campus. This fee is allocated to the student organizations and other areas to support student services and activities in order to keep direct costs to students at a minimum. Examples of uses for this fee are payment of tutors for the writing and math centers, the annual Diploma Ceremony and Awards Banquet, the student newsletter, as well as activities sponsored by the various student groups.

3. Late Enrollment Fees (Non-Refundable): Late enrollment fees are assessed to all students enrolling after the close of the regular registration period.
4. Parking Fee: Students will be asked to pay a parking fee.
5. Technology Fee: Students will be asked to pay a technology fee. This fee makes it possible for the student to use the computer labs, to have access to the Internet and e-mail, and to take advantage of registration and advising through computerized means.

Awards and Scholarships

Student Ambassador Cost of 3 credit hours of tuition. Awarded each fall and spring. This is a performance-based scholarship based on an application and interview. Students will represent IUPUC by assisting the admissions office with recruitment of high school students. 2.0 semester GPA required for renewal. One or more credit of enrollment required.

Dean's Scholarship \$1,500 per year/\$750 per semester. Graduating high school seniors who are in the top 5 percent of their class; have an SAT of 1200 or ACT of 27; enroll full time at IUPUC. Renewable for up to \$6,000. Recipient must have a 3.0 GPA each semester to have the scholarship renewed. No application required. Full-time enrollment required.

Top 25% Scholarship \$1,000 per year/\$500 per semester. Graduating high school seniors who are in the top 25 percent of their class; have an SAT of 990 or ACT of 21; enroll full time at IUPUC. Renewable for up to \$4,000. Recipient must have a 3.0 GPA each semester to have the scholarship renewed. No application required. Full-time enrollment required.

New Millennium Scholarship \$500 per year/\$250 per semester. Graduating high school seniors who are in the top 50 percent of their class; have an SAT of 990 or ACT of 21; enroll full time at IUPUC. Renewable for up to \$1,000. Recipient must have a 3.0 GPA each semester to have the scholarship renewed. No application required. Full-time enrollment required.

Outstanding GED Scholarship \$1,000 per year/\$500 per semester. GED recipient who is an entering freshman; degree seeking with a GED score of 62 or higher. Recipient must enroll full time and demonstrate competency in English W131 and Math 111. Renewable for up to \$4,000. Recipient must have a 3.0 GPA each semester to have the scholarship renewed. No application required. Full-time enrollment required.

Speak Easy Scholarship \$50-\$100 per fall semester. This scholarship is awarded to IUPUC students who participate in the annual Speak Easy Speak Contest each spring semester. Students will be judged on presentation style, relevance of speech to topic selected. First place, \$100; second place, \$75; third place, \$50. Minimum of 2.0 semester GPA required. Three or more credits of enrollment required. Nonrenewable.

Dr. Richard Thompson Scholarship \$100 per Fall semester. Returning IUPUC students are eligible to apply for this scholarship. Selection is based on completed application, essay, merit, and financial need. Minimum of 2.5 semester GPA required. Six or more credits of enrollment required. Nonrenewable.

Nawzat Hafez Scholarship \$200 per Fall semester. This scholarship was created in the memory of Nawzat Hafez, who at the age of 45 returned to college to earn a bachelor's degree in history. Students who are over the age of 40 and single parents (female) are eligible for this scholarship. Selection is based on application, GPA, essay; and must have completed at least 12 credit hours at IUPUC. Minimum of 3.0 semester GPA required. Six or more credits of enrollment required. Nonrenewable.

Glenn Klipsch Community Service Scholarship \$1,000 per year/\$500 per semester. Students who participate in community service activities are encouraged to apply for this scholarship. Selection is based on application, community service work completed, and essay. Student must perform a minimum of 20 hours of community service per semester. Minimum of 3.0 semester GPA required. Full-time enrollment required. Nonrenewable.

Fran Rust Scholarship \$100 per fall semester. Awarded to a female student who is over the age of 25 and has completed at least 26 credit hours at IUPUC. Selection is based upon an application, essay, merit, and financial need. Minimum of 2.5 semester GPA required. Six or more credits of enrollment required. Nonrenewable.

April Perkinson Scholarship \$600 per year/\$300 per semester. Must have completed at least 56 credit hours and be pursuing a degree in elementary education. Selection is based on application, essay, merit, and financial need. Minimum of 3.0 semester GPA is required. Six or more credits of enrollment required. Nonrenewable.

Shirley Mae Mittlestat Scholarship \$250 toward purchase of textbooks in fall semester. For freshman, sophomore, or junior students pursuing a degree in elementary education. Designed to assist with the purchase of textbooks for the fall semester. Selection based on application, merit, financial need, and essay. Minimum of 2.5 semester GPA required. Full-time enrollment required. Nonrenewable.

*Please note that many scholarships require a scholarship application as well as admission to IUPUC by the scholarship deadline. Applicants must submit all materials by the due date. Scholarships which evaluate financial need must complete the FAFSA by March 1st.

Columbus-Specific Academic Policies and Procedures

Registration

IUPU Columbus offers course registration by computer, touchtone telephone, on the web, and in person. Dates and times for registration for continuing students, new students, and final registration for all students are listed in the calendar portion of the class schedule. Continuing student registration is by appointment.

Computer registration enables students to register from a home or office computer with appropriate communications software or from the computer laboratory on campus. The web registration is available utilizing any computer with Internet connectivity and current software. Touchtone registration enables students to register from any location with the use of a touchtone telephone. Pulse, multi-line, cellular telephones, and telephones with call-waiting feature will not work for touchtone registration. See the class schedule for instructions in using the computer and touchtone registration systems.

Grade Appeals

Students who think that an error has been made in grading should contact the instructor of the course directly. If a resolution cannot be reached in this discussion with the instructor, the students should complete a formal grade change request form for the chairperson of the Academic Affairs Committee. Cases in which there is clear evidence of unfair treatment in the assigning of grades may be submitted to the Grade Appeals Committee for a formal hearing. This process must be initiated within 30 days after the grade is mailed by the university to the student's address of record. Contact the Student Services Center for appeals procedures.

Organizations and Activities

Clubs

Students can take advantage of many extracurricular opportunities on the IUPU Columbus campus. They may participate in the social activities planned for the French students who are part of the American Business Seminar each October, attend the free Brown

Bag Lunch Lectures, or join one of the academic clubs on campus. Clubs have been formed by students interested in anthropology, Campus Crusade for Christ, English, psychology, performing arts, computers, math, and education. Students may also join the Student Activities Council, a club whose members plan social and service events, such as student-faculty-staff "socials," Halloween parties, Christmas gatherings, and benefits for local not-for-profit organizations. Students interested in using their creative talents in writing, photography, or drawing may submit their work to *Literelines*, the IUPU Columbus magazine of the arts.

Special Campus Events

Spring Awards Banquet

Each spring an academic awards banquet is held on the second Friday of May to honor students who have excelled academically. The banquet is attended by nearly all of the faculty and staff on campus, plus their spouses or guests, and the students who will be honored that night.

Diploma Ceremony

IUPU Columbus holds a Diploma Ceremony for graduates who have taken all or most of their courses at IUPU Columbus. During this formal ceremony, graduates receive a symbolic diploma. The graduates may attend the IUPUI graduation, the IUPU Columbus Diploma Ceremony, or both. The ceremony in Columbus is very personalized because of the small number of students (between 80 and 90) who participate (relative to the thousands participating in the graduation ceremonies in Indianapolis).

Courses

The following courses are specific to IUPU Columbus:

AST A115 Birth and Death of the Universe (3 cr.) Introduction to cosmology. Traces the ideas describing the origin and evolution of the universe from ancient geocentric cosmologies to the Big Bang cosmology.

COAS J151 Career Exploration and Development (1 cr.) P: freshman or sophomore standing. Development and integration of career planning and academic area. Students will follow individually designed career plans leading to understanding of personal values, interests, and abilities in relation to vocational options and academic process. This course does not count toward the 112 credit hour requirements within the College of Arts and Sciences.

CPT 107 Computers and Software Packages (3 cr.) This service course has been designed to meet the needs of IU business and accounting students and provide a rigorous introduction to the contemporary world of business computing. The instructional goal of this class is to help students develop their analytical and problem solving skills. Technical computer skills, such as making spreadsheets, electronic mail, Internet tools, or manipulating a database program, are included in the lab component of this course.

Computer literacy, which is necessary to compete and survive in today's global business economy, is included in the lecture component. This course does not apply toward the CPT major.

HER H495 Columbus Architecture (1 cr.) Uses the architecture of Columbus as illustration to help in the understanding of the basic concepts of architecture. The course answers the question: why is the architecture of Columbus important? Many of the buildings in Columbus will be visited and studied first-hand.

HPER E100 Fitness Walking (1 cr.) Course will provide participants with knowledge of general fitness and guidelines to exercise safely. This course will help students become more aware of their current fitness level and how to improve their overall level of health. This course is a participation course and students will practice skills learned.

INDIANA UNIVERSITY SCHOOL OF OPTOMETRY

800 E. Atwater Avenue
Bloomington, IN 47405
(812) 855-1917
www.opt.indiana.edu

Contents

- 411 IU School of Optometry Mission
- 411 Degree Programs
- 411 Clinics
- 411 Teaching, Research, Service
- 411 For More Information

School of Optometry

The IU School of Optometry is one of Indiana University's health profession schools and is located on the Indiana University Bloomington campus. The school has a strong clinical presence at its Indianapolis Eye Care Center near the IUPUI campus at 501 Indiana Avenue. It is expanding its clinical and research programs in cooperation with other IU health sciences programs, including the IU School of Medicine. The IU School of Optometry is also a collaborating partner, along with dentistry, medicine, nursing, allied health, public and environmental affairs, law, social work, and other schools and agencies in the graduate program in public health at IUPUI.

Mission

The mission of the IU School of Optometry is to protect, advance, and promote the vision, eye care, and health of people worldwide by

- Preparing individuals for careers in optometry, the ophthalmic industry, and vision science
- Advancing knowledge through teaching, research and service

Degree Programs

The school offers one of the best programs in the country for the education of optometrists. The American Optometric Association defines an optometrist as a primary health care provider who examines, diagnoses, treats, and manages diseases and disorders of the visual system. Students in the four-year Doctor of Optometry (O.D.) program study in a rigorous curriculum that prepares them to provide outstanding eye care to all patients. The students learn to diagnose and treat patients with refractive errors, binocular vision problems, ocular diseases and other eye-related problems. Practical experience is gained in the school's clinics in Indianapolis and Bloomington and on rotations to different clinical settings in and outside of Indiana.

The school also provides education for people who complement the work of optometrists: opticians and optometric technicians. Students in the

Optician/Technician program at the IU School of Optometry earn a two-year Associate of Science (A.S.) degree. They learn how to test visual acuity, depth perception, and field of vision, and how to help people select eyewear and learn to care for contact lenses. They also learn how to fill optical prescriptions and make spectacles. Opticians and optometric technicians are a valuable part of the eye care team.

Students interested in research can join the graduate program in vision science and study for the M.S. and Ph.D. degrees. This is an interdisciplinary program primarily for those who wish to prepare for teaching and/or research in the sciences related to vision. Students participate in research projects in such areas as ocular physiology, psychophysics, optics, corneal physiology, infant vision, contact lenses, and low vision. They work with world-renowned faculty members to add to the body of knowledge of the vision sciences.

Clinics

The IU School of Optometry provides a broad range of clinical services for both the general public and the experience of its students. The **Atwater Eye Care Center**, located on the Bloomington campus, provides the public with primary vision care services, contact lens fitting and care, binocular vision diagnosis and treatment, and pediatric care.

The Community Eye Care Center is located on the west side of Bloomington. This busy clinic provides primary vision care, pediatric care, and experience in sports vision, low vision, and other aspects of vision care.

The Indianapolis Eye Care Center, located next to the IUPUI campus, provides primary eye care, contact lens care, low vision services and pediatric care to the campus and to the general public.

The Guanajuato Eye Care Center is located in the Hospital General in the city of Guanajuato, Mexico, and is operated in cooperation with Mexico's Department of Infants and Family. Optometrists and students at this clinic provide primary eye care.

The Rural Clinics Program, with support from the Indiana State Department of Health, provides eye and vision care services to underserved, low-income residents of rural areas in five southern Indiana counties.

Teaching, Research, and Service

School of Optometry faculty members help to fulfill the school's mission by providing outstanding instruction. In addition, the school has excellent research facilities, both as part of its graduate program in vision science and as part of the Borish Center for Ophthalmic Research. There are many opportunities for students in both the doctor of optometry and graduate programs to participate in ongoing studies.

The school is also strongly committed to service for the general public and to the education of its students. Some of the activities include providing vision screenings to the homeless, eye care to uninsured/low-income patients, school screenings, and helping to support new optometric education programs in other countries. Students participate in many of these activities, on campus and in the community. Members of the School of Optometry community also travel together with volunteers from organizations like Volunteer Optometric Service to Humanity to underdeveloped countries to provide examinations and spectacles to needy persons. This outreach effort led to the establishment of the school's clinic in Guanajuato, Mexico. Faculty, students, and staff join together to bring vision care to all people.

History of the School of Physical Education

The School of Physical Education is the oldest unit at Indiana University—Purdue University Indianapolis (IUPUI), and also the oldest existing school for the preparation of physical education teachers in the country.

The school was founded in New York City in 1866 as the Normal College of the American Gymnastic Union. It was established by the American Turners to prepare instructors for their gymnastics societies.

The school moved to Chicago in 1871 only to be burned out by the great Chicago fire, which forced it to return to New York, where it remained until 1873. The school then moved to Milwaukee, and settled finally in Indianapolis in 1907. During these years, the curriculum was continually expanded, from a four-month certificate program to a one-year, then a two-year, and eventually a four-year degree program. The curricular changes were in response to the ever-changing needs for trained professionals in other educational institutions.

The Normal College merged with Indiana University in 1941, when financial difficulties occurred. Under the merger, students attended the Normal College in Indianapolis for two years and completed their junior and senior years in Bloomington, where they earned the Bachelor of Science in Physical Education degree. This arrangement remained in effect until 1969, when the junior-year program was moved to Indianapolis, followed by the senior-year program in 1972. In the same year, the name of the college was changed to the School of Physical Education to reflect more closely the mission of the school as a training center for teachers of physical education.

Major changes in the physical education program were initiated at the beginning of the 1992 academic year. As a result of expanded professional demands, the academic program was divided into the three tracks of teacher education, exercise science, and general physical education. In 1994 the School of Physical Education added two new departments: the Department of Tourism, Conventions, and Event Management and the Department of Military Science.

Mission

The mission of the School of Physical Education at Indiana University—Purdue University Indianapolis is to prepare students for entry-level positions and advanced study, to contribute to the body of knowledge through creative and scholarly activities, and to serve the profession and the community. Through collaboration and interdisciplinary work with diverse populations, the School of Physical Education strives to enhance wellness, to improve quality of life, and to encourage leisurely pursuits.

The Department of Physical Education grants the Bachelor of Science in Physical Education degree. Students may select from three tracks (**exercise**

science with pre-physical therapy option, fitness and sports studies, K-12 teacher education) and a variety of minors, endorsements, concentrations, and certificates.

The Department of Tourism, Conventions, and Event Management offers a two-year degree in **food service and lodging supervision**. The program focuses on the skills needed by a supervisor, department head, or unit manager employed in any of the various fields of hospitality: food operations, lodging management, and/or institutional management.

A four-year degree, **tourism, conventions, and event management**, emphasizes tourism research and meeting, special events, and sport event planning to prepare graduates for management positions in a variety of profit and not-for-profit tourism organizations.

The Department of Recreational and Intramural Sports and the Department of Military Science also reside in the School of Physical Education.

Location

The School of Physical Education and the Indiana University Natatorium share a \$21.5 million facility located at 901 W. New York Street on the main campus of IUPUI. The complex is divided into deck, concourse, and bridge levels, covering approximately 200,000 gross square feet.

The deck level features weight-training and conditioning rooms, a 50-meter competitive pool, a diving pool, and a 50-meter instructional pool; the instructional pool is equipped with moveable bulkheads and floor so that the water depth may be adjusted to aid in instruction and recreation. A research suite for exercise physiology and biomechanics is located on the deck level.

The concourse level of the physical education wing has a large gymnasium, an auxiliary gymnasium, racquetball courts, and a student lounge.

The bridge level houses the administrative and faculty offices. From this level an enclosed overhead pedestrian walkway connects the physical education complex with the Education/Social Work Building across New York Street, where the three schools share classroom space.

Adjacent to the Physical Education/Natatorium Building is an Olympic-caliber 400-meter track and field stadium, plus outdoor fields for instructional, recreational, and competitive athletic events. The 28.7-acre outdoor facility also includes fields for softball, soccer, and touch football.

The National Institute for Fitness and Sport was created in 1985. Dedicated to promoting healthy, active lifestyles through research, education, and service, this nonprofit organization currently works in conjunction with the School of Physical Education and other departments of the university. It occupies a \$12 million, 120,000-square-foot facility located on the IUPUI campus and in White River State Park.

The Academic Program

Policies Governing the Academic Program—School of Physical Education

Degree Requirements

Students in the School of Physical Education are responsible for fully understanding and meeting all the requirements for graduation. Information regarding the program can be obtained by consulting this bulletin.

A minimum cumulative grade point average (GPA) of 2.0 (on a 4.0 scale) is necessary. Class standing is based on credit hours completed:

Freshman—26 or fewer

Sophomore—27-55

Junior—56-85

Senior—86

The Department of Physical Education requires a minimum of 124 credit hours for a Bachelor of Science degree. In the physical education major the department offers three tracks (exercise science with pre-physical therapy option, fitness and sports studies, teacher education), five minors (adapted physical education, athletic training, business, dance, health and safety), two endorsements (coaching, driver education), one concentration (aquatics), and a certificate in personal training (final approval pending). A capstone course is required of students in each of the three majors: an internship for exercise science and fitness and sports studies students, and student teaching for teacher education students. A minimum 2.5 cumulative grade point average is required for entry into the capstone course, and a minimum 2.0 cumulative grade point average is required to earn the bachelor's degree. A letter grade of C or better is required in English W131, English W231 and Communication R110, and none of these three courses may be taken by correspondence.

The **teacher education** (K-12) track prepares the student to meet K-12 physical education—teacher education certification requirements set by the state of Indiana. The **exercise science** track is designed for the individual who wishes to work in the corporate/community fitness setting or to pursue a graduate degree in exercise science, biomechanics, physical therapy, or a related health discipline. The **fitness and sports studies** track is directed to those interested in personal fitness training, sports programming, entrepreneur activities related to fitness and sports, and related fields.

The Department of Tourism, Conventions, and Event Management requires 64 credit hours for the Associate of Science degree and 124 for the Bachelor of Science degree.

The four-year and two-year degrees, as well as all certificate programs require a letter grade of C or better in courses from the major, as well as in the

general education courses of ENG W131, BUS X204, and COMM R110. The degree programs require 600 hours of work experience in a pre-approved tourism or hospitality organization. Students may complete the work experience with a paid or a not-for-pay position.

Advising and Special Options

Advising Each student in the School of Physical Education is assigned a faculty counselor who advises the student in program planning and assists with any academic questions or problems. All students are expected to obtain counseling each semester prior to enrollment.

Independent Study Work may be accomplished in absence for credit through the School of Continuing Studies. A student must have satisfied the entrance requirements of the School of Physical Education, however, before registering for such work if it is to be applied toward a degree. Special permission from the dean is required. Students may apply up to 18 credit hours of correspondence work from the School of Continuing Studies toward a degree in the School of Physical Education.

Pass/Fail Option Physical Education students may elect to take one course each semester with a grade of P (Pass) or F (Fail), with a maximum of two such courses each school year, including summer sessions. The student must elect to exercise this option early in the semester or summer session, per the timeline contained in the *Schedule of Classes*. Courses that satisfy school or degree program requirements may not be taken under this option.

Excessive Withdrawal Policy After eight withdrawals, a mandatory meeting between the student, advisor, and department chair will be held to identify the reason(s) for the withdrawals, discuss alternatives for course scheduling, and review the student's plan of study to determine if satisfactory progress is being made toward the degree objective. After 10 withdrawals, a mandatory meeting with the dean of the school will occur. A review of the previous meeting and reason(s) for subsequent withdrawals will determine if the student will be allowed to continue in the School of Physical Education.

Special Credit Opportunities

See department chair for procedures on special credit.

Academic Expectations

Student work in general education and major courses will include content and learning activities supporting the principles of undergraduate learning as defined by the faculty of the School of Physical Education. These five principles relate to students' competencies in the following areas: core skills (reading, writing, speaking, quantitative analysis, and use of information technology); critical thinking; intellectual depth, breadth, and adaptiveness; understanding society and culture; and integration and application of knowledge. These general education principles are defined on course syllabi. Faculty expect students to use software applications to prepare assignments, to use electronic mail to enhance communication and/or submit assignments, and to develop competencies with various campus technology resources (e.g., Insite,

Oncourse, internet browsers). Written work is to be of high quality (focused, organized, and with an introduction, purpose, sense of audience, thesis, and conclusion; appropriate sentence structure; variety; and correct spelling, grammar, and punctuation). Writing should reveal the student's ability to develop ideas with balanced and specific arguments. Papers should follow APA style unless another style is specified, and should give credit to original sources when ideas or materials of others are used.

Academic Integrity

Students are responsible for familiarizing themselves with the school's regulations concerning cheating and plagiarism, which appear as follows in the IUPUI *Faculty Handbook* VI-5:

Cheating is dishonesty of any kind with respect to examinations, course assignments, alteration of records, or illegal possession of examinations. It is the responsibility of the student not only to abstain from cheating, but, in addition, to avoid the appearance of cheating and to guard against making it possible for others to cheat. Any student who helps another student to cheat is as guilty of cheating as the student who was assisted. Students should also do everything possible to induce respect for the examining process and honesty in the performance of assigned tasks in or out of class.

Plagiarism is the claiming of the work of someone else as one's own. Honesty requires that any ideas or materials taken from another source for either written or oral use must be fully acknowledged. The language or ideas taken from another may range from isolated formulas, sentences, or paragraphs to entire articles copied from books, periodicals, speeches, databases, or the writings of other students. The offering of materials assembled or collected by others in the form of projects or collections without acknowledgement also is considered plagiarism. Any student who fails to give credit for ideas or materials taken from another source is guilty of plagiarism.

A faculty member who has evidence that a student is guilty of cheating or plagiarism shall initiate the process of determining the student's guilt or innocence. No penalty shall be imposed until the student has been informed of the charge and of the evidence upon which it is based, and has been given an opportunity to present a defense. If the faculty member finds the student guilty, the faculty member assesses a penalty within the course and promptly reports the case in writing to the dean of the school or comparable head of the academic unit. The report should include the names of any other students who may be involved in the incident and recommendations for further action. The dean, in consultation with the faculty member if the latter so desires, will initiate any further disciplinary proceedings and inform the faculty member of any action taken. In every case, a record of the offenses remains on file in the dean's office.

For further regulations, students should refer to IUPUI's *Code of Student Rights, Responsibilities, and Conduct* by the Board of Trustees of Indiana University. You may obtain a copy of the *Code* from the Dean's Office or view the text on the IUPUI Web site at www.iupui.edu.

Academic Load and Absences

Semester Academic Load A typical academic load is 12-18 credit hours, with an average load being approximately 15 credit hours. A typical load in a summer session is 6 credit hours. Students expecting to carry more than 18 credit hours per semester or 7 credit hours per summer session must have permission of the dean of the School of Physical Education and should have a minimum cumulative grade point average (GPA) of 3.0 (B), or have earned a B (3.0) average in their last full semester.

Academic Standing, Probation, Dismissal, and Reinstatement

Academic Standing Students who consistently maintain a GPA of 2.0 (C) or higher in both their cumulative and semester records are considered to be in good standing.

Academic Probation Students are on academic probation when either their semester GPA or their cumulative GPA is below 2.0 (C). Each student on academic probation will be so advised by a letter from the dean of the School of Physical Education. The student will be informed of all conditions and restrictions required for reestablishing good academic standing.

Dismissal Students are subject to dismissal when they have failed to attain a minimum of a 2.0 (C) average in any two consecutive semesters or when the cumulative GPA of the student who is on probation falls or remains below 2.0 (C). Each student who is dismissed will be so advised by a letter from the Office of the Dean of the School of Physical Education.

Reinstatement A dismissed student who wishes to be reinstated must contact the dean of the school to obtain an Application for Reinstatement. This application requires explanation of any extenuating circumstances that may have hindered academic performance, and a brief outline of future schedules and study plans. Each application will be considered on an individual basis, and will receive more favorable consideration if the student has sought advice about academic progress on previous occasions, and if academic records are close to the standards required for retaining the student. In order to allow time for each case to be reviewed on its own merits, petitions for readmission must be filed at least two weeks before the first day of classes.

The School of Physical Education typically does not consider petitions for immediate reinstatement. Dismissed students who believe that circumstances warrant consideration for immediate reinstatement must meet with the dean, who will determine whether or not an application for immediate reinstatement is warranted.

One Dismissal Students who have been dismissed once for academic reasons may appeal for reinstatement subject to the conditions stated above.

Two Dismissals Students who have been dismissed twice for academic reasons may not appeal for reinstatement for any enrollment period during the next calendar year.

Students who are reinstated by the school will have to meet prescribed standards of performance for the semester for which they are reinstated. Failure to meet these standards will result in dismissal.

Student Grievance Procedures

Students who feel they have been treated in an unfair or unethical manner by a member of the School of Physical Education faculty are encouraged to resolve their differences directly with the faculty member. When informal solutions do not appear possible, the following procedures should be observed.

Appeal for Grade Change A student may request a change of grade in a School of Physical Education course by filing a petition with the dean of the school. The petition, along with supporting evidence that the grade was improper, must be submitted to the Dean's Office (PE 251) no later than one calendar year following the final date of the term in which the course was taken.

Complaints of Unethical Treatment All academic personnel (faculty, part-time instructors, and advisors) are expected to conform to the *Code of Student Rights, Responsibilities, and Conduct* published in the Indiana University *Academic Handbook*. Students who feel they have been treated unfairly by a faculty member may lodge a complaint by following the procedures outlined in the *Code*, a copy of which may be obtained from the Dean's Office, PE 251.

Student Ombuds Office

The Student Ombudsperson provides impartial, objective, and confidential assistance to students, faculty/staff, and parents in situations involving students. The office assists in mediating or resolving specific complaints or conflicts. Contact the Student Ombuds Office for an initial, neutral, and confidential first step toward resolution. For information, contact the Student Ombuds Office, 274-3931, stuombud@iupui.edu.

Graduation

Residency Requirements for Graduation The student must complete at least 30 of the last 60 credit hours required for a specific degree program while in residence at the School of Physical Education at IUPUI. The 30 credit hours should include either one 12 credit hour regular semester or two 6 credit hour summer sessions.

Students in the two-year degree program must complete 15 of the last 24 credit hours required while in residence in the Tourism, Conventions, and Event Management (TCEM) department.

Degree Application A candidate for graduation must file a formal application for the degree with the school approximately one year prior to the expected date of graduation. The school will not be responsible for the timely graduation of students who fail to meet this requirement.

Graduation with Honors Indiana University recognizes high cumulative grade point averages (GPAs) by awarding degrees with the designations "Distinction," "High Distinction," and "Highest Distinction." Purdue programs recognize the top 10 percent of graduates with the designations

"Distinction" and "Highest Distinction." The designated individuals are presented honor cords to wear at the commencement exercises for IUPUI.

Intercampus Transfers

Temporary To transfer credit for an individual semester or for the summer from one campus to another campus of Indiana University, the student must file a temporary Intercampus Transfer Request with the School of Physical Education Recorder's Office on the campus currently being attended.

Permanent To transfer permanently from one campus to another campus of Indiana University, the student must file an Intercampus Transfer Request with the School of Physical Education Recorder's Office on the campus currently being attended. Advance notice is necessary to allow for the transfer of records and the validation of the student's eligibility to continue studies. Contact the School of Physical Education Records Office for details and deadline dates.

Other Physical Education Department Information

Uniforms Physical education majors wear uniform shirts and shorts for several professional preparation activity classes. Instructors indicate on the first day of class if uniforms will be required. Uniforms may be purchased at the IUPUI Bookstore in Cavanaugh Hall. White polo shirts and long navy pants are the required attire for physical education majors participating in professional field experiences off campus.

Swimming classes require a one-piece bathing suit. Warm-ups or street clothes are appropriate attire for the Student Lounge on the Concourse Level or the office area on the Bridge Level of the Physical Education/Natatorium Building.

Camp Brosius In 1921, the School of Physical Education established Camp Brosius at Elkhart Lake, Wisconsin, as a summer training camp for its physical education majors. The Indiana University Alumni Association currently operates the camp, with the IUPUI School of Physical Education classes on-site in mid-May and June. Physical education majors attend Camp Brosius for one intensive summer session early in their academic careers at IUPUI. HPER P271 Individual Sports and HPER R275 Dynamics of Camp Leadership comprise the course work for physical education majors. TCEM L391 Event Management Catering Laboratory meets at Camp Brosius. TCEM students complete laboratory requirements during camp. Students are expected to enroll for the required camp session following their first year of attendance at the school. Orientation sessions are held each spring prior to the actual camp session.

Internship Programs in Exercise Science and Fitness and Sports Studies

Students following the exercise science or fitness and sports studies tracks complete an internship with a community agency approved by the School of Physical Education. Prospective interns must have completed at least 30 semester hours in residence at IUPUI and at least 15 semester hours in the major. Students apply approximately one year prior to the expected internship placement. A minimum overall grade point

average (GPA) of 2.5 is required at the time of the application. The internship assignment will entail full-time work for 12 weeks (summer, fall, or spring). Only in exceptional cases will students be allowed to participate in an internship at their previous or present place of employment.

Internship Program in Tourism, Conventions, and Event Management (TCEM)

TCEM majors are required to complete a minimum of 600 hours of work experience in tourism/hospitality businesses. The internship should be completed after the sophomore year of attendance.

Student Organizations

Physical Education Student Organization (PESO) PESO exists to improve the quality of student life. Its activities include assimilating new students into the School of Physical Education program, representing the school in the shaping of university-wide policies and activities, helping students attain educational objectives, and promoting participation in student activities. The general membership of the organization is composed of full- and part-time majors in the Physical Education and the Tourism, Conventions, and Event Management degree programs.

Phi Epsilon Kappa This professional fraternity was organized in 1913 at the Indianapolis campus of the School of Physical Education's predecessor, the Normal College of the American Gymnastic Union Campus. It is dedicated to advancing interest in health education, physical education, recreation education, and safety education. It seeks to promote sound community relationships that support physical education programs. Eligibility criteria include a minimum 2.0 cumulative grade point average (GPA) earned at IUPUI in addition to participation in professional activities.

IUPUI Moving Company The IUPUI Moving Company is a performing dance company composed of students enrolled at IUPUI. Prospective members audition during the first week of the fall semester, when members and apprentices are taken into the company. Approximately 4-6 hours per week are spent in rehearsals, workshops, lecture-demonstrations, or performances. Members should be enrolled concurrently in a dance technique class while performing with the company. The repertoire consists of ballet, modern, jazz, and ethnic dance forms. The IUPUI Moving Company performs on campus, at professional conferences, and for elementary, middle school, and high school audiences.

Indiana Association for Health, Physical Education, Recreation, and Dance and the American Alliance of Health, Physical Education, Recreation, and Dance Students of the Department of Physical Education are encouraged to affiliate with this professional organization. Annual conferences and workshops, a professional journal, and a newsletter are among the membership benefits.

Tourism and Hospitality Society The Tourism, Conventions, and Event Management (TCEM) department sponsors this student organization to

expand students' knowledge about the tourism industry. Site visits and speakers are educational components. Social activities and fundraisers are also planned.

Awards and Scholarships

School Awards and Scholarships

Dean's Honor List Students in the School of Physical Education are recognized for outstanding academic achievement by having their names placed on the Dean's List. This award goes to all full-time students who have achieved a semester grade point average (GPA) of 3.3 or better.

Phillip K. Hardwick Scholarship Established in 1998, this scholarship recognizes a student in the School of Physical Education for outstanding community volunteerism or philanthropy.

Department of Physical Education Awards and Scholarships

Athenaeum Turners Scholarship The Athenaeum Turners of Indianapolis established this scholarship to honor a physical education major who demonstrates academic excellence and professional promise. The School of Physical Education was located at the Indianapolis Athenaeum from 1907 to 1970.

The Clara L. Hester Scholarship This coveted award is presented in the name of the past director of the Normal College of the American Gymnastic Union. Clara Hester served the school for 44 years; the award was established in 1978 to honor her. It is given to a full-time student majoring in physical education who has satisfied all academic criteria at the completion of the junior year. The recipient must use the award for academic programs in the Department of Physical Education at IUPUI.

Peg Hope Scholarship This scholarship is awarded to a student with a GPA of 2.5 or higher who demonstrates financial need and who has worked to defray the cost of his or her education.

The John Jordan Scholarship Recognizes an outstanding active member who emulates John Jordan, an outstanding former member of Alpha Chapter of Phi Epsilon Kappa.

The Lola L. Lohse Scholarship This scholarship is presented annually to a minority student who is majoring in physical education. The basis for the selection consists of involvement in extracurricular activities, student leadership, participation in professional organizations, and evidence of self-help in obtaining a college education. Selection is made by the faculty.

Rudolph L. Memmel Scholarship The Memmel Scholarship is given in honor and recognition of "Rudy" Memmel, former head of Physical Education for the Cincinnati, Ohio, Public Schools. Selection criteria include excellence of academic record and active involvement in activities related to the profession.

Phi Epsilon Kappa Scholarship Key Award These awards are presented to undergraduate

physical education majors who are outstanding scholars. The awards are of unique distinction and attest to the academic excellence of the students in the Department of Physical Education.

The Department of Physical Education Faculty Award

The faculty presents this award to a graduating senior as a vote of confidence in a promising future in the profession. The award is based on scholarship performance, professional attitude toward physical education as a career, and service to the department, university, and community.

Dr. Carl B. Spath Memorial Scholarship These memorial scholarships are presented annually to outstanding juniors enrolled full time in the Department of Physical Education. The candidates are selected by the faculty on the basis of scholastic achievement, character, need, and professional promise in the teaching of physical education.

The William A. Stecher Honor Award An outstanding graduating senior from the Department of Physical Education is recognized annually at the commencement reception with this award. The candidate is selected by the faculty on the basis of scholarship, level of performance in physical activities, professional attitude, character, leadership, and service.

Dr. Rudy Schreiber Scholarship This scholarship recognizes a physical education major and member of Phi Epsilon Kappa for outstanding academic achievement.

Dr. Hitwant Sidhu Scholarship This scholarship honors an undergraduate physical education major with a grade point average (GPA) of 2.5 or higher who participates in voluntary service to the community, the profession, education, or the university.

Jeff and Sue Vessely Scholarship This scholarship is awarded to an incoming freshman physical education major with an outstanding high school academic performance record.

Department of Tourism, Conventions, and Event Management (TCM) Scholarships

American Hotel Foundation Scholarship This scholarship is awarded to a student who has demonstrated potential for leadership in hospitality management, has a minimum 3.0 cumulative GPA, and has financial need.

Raymond A. Dault Care, Pride, and Skill Scholarship In recognition of Raymond Dault's leadership of the TCEM department and his devotion to students, two annual awards are given. One recipient is the freshman student who has earned the highest GPA. The second recipient is the student with the highest GPA on completion of the associate degree.

Bill Day Outstanding Tourism Scholarship and Award The scholarship recognizes a junior for academic achievement, extracurricular participation, and leadership potential. The award recognizes the graduating senior with the highest GPA.

Peter George Scholarship This scholarship is awarded to a student with a 3.2 GPA or higher who demonstrates leadership potential.

Bo L. Hagood Scholarship The scholarship recipient must be an incoming TCEM major with a high school GPA of 2.5.

Per Moller Scholarship This scholarship is awarded to a full-time student who has maintained a GPA of 3.0 or greater and is currently employed in the hospitality industry.

Max M. Shapiro Restaurant Excellence Scholarship This scholarship recognizes an outstanding student and leader. Selection criteria include scholarship, potential for leadership in hospitality management, and commitment to the department and student organizations.

Elias and Fofo Stergiopoulos Scholarship This scholarship award goes to a full-time student in good academic standing who is currently employed in the hospitality industry and is committed to community service.

Department of Physical Education Undergraduate Degree Programs

Bachelor of Science—Physical Education

Each student will select one of the following tracks and will complete each of the classes listed as requirements for that option: (1) Teacher Education; (2) Exercise Science with pre-physical therapy option; (3) Fitness and Sports Studies; (4) Athletic Training.

Teacher Education K-12 Track (135-142 credit hours)

This program will lead to a Teaching Certificate and a Bachelor of Science in Physical Education degree. There are three categories of requirements in this program: (1) physical education; (2) general education; and (3) professional education. The holder of this degree will be eligible to teach physical education at the elementary, junior high/middle school, and high school levels. This curriculum is under revision; contact your academic advisor to obtain the most current listing of requirements.

Physical Education Requirements

UCOL 110 First Year Seminar/Learning Community (1 cr.)
 HPER P110 Dance in Elementary Education (2 cr.)
 HPER P150 Gymnastics I (2 cr.) or HPER P219 Performance and Teaching of Stunts, Tumbling, and Novice Gymnastics (1 cr.)
 HPER H160 First Aid and Emergency Care (3 cr.)
 HPER P195 History and Principles of Physical Education (3 cr.)

HPER P200 Microcomputer Applications in Physical Education (3 cr.) (C or better required)
 HPER P210 Dance in Secondary Education (2 cr.)
 HPER P215 Principles and Practice of Exercise Science (3 cr.)
 HPER N220 Nutrition for Health (3 cr.)
 HPER P271 Individual Sports (1 cr.)
 HPER R275 Dynamics of Camp Leadership (2 cr.)
 HPER P290 Movement Experiences for Preschool and Elementary Children (2 cr.)
 HPER H363 Personal Health (3 cr.)
 HPER P390 Growth and Motor Performance of School-Age Youth K-12 (2 cr.)
 HPER P397 Kinesiology (3 cr.)
 HPER P398 Adapted Physical Education (3 cr.)
 HPER P405 Introduction to Sport Psychology (3 cr.)
 HPER P409 Basic Physiology of Exercise (3 cr.)
 HPER P452 Motor Learning (3 cr.)
 HPER P493 Tests and Measurements in Physical Education (3 cr.)
 HPER P495 Laboratory Teaching in Physical Education Program (1 cr.)
 HPER P497 Organizational and Curricular Structures of Physical Education K-12 (2 cr.)
 HPER: Performance and Teaching (P and T) of Individual/Dual Sports (1-2 cr.)

Select one course: E477-Water Safety (2 cr.), P230-Golf, P235-Aquatics, P236-Tennis, P237-Track and Field, P244-Cardiovascular Fitness (2 cr.)**, P245-Resistance Training (2 cr.)**, PXXX-occasional special topic P and T class

HPER: Performance and Teaching of Team Sports (2-4 cr.)

Select two courses: P229-Flag Football, P233-Softball, P241-Basketball, P242-Soccer, P243-Volleyball, P244-Cardiovascular Fitness (2 cr.)**, P245-Resistance Training (2 cr.)**

HPER: Coaching of Sports (1.5 cr.)

Select two courses: A361-Football, A362-Basketball, A363-Baseball, A364-Track and Field, A367-Swimming and Diving, A368-Tennis, A369-Golf, A370-Soccer, A371-Volleyball, A372-Softball

Total: 59-64 credit hours

General-Education Requirements

A. *Humanities* (18 cr.)

ENG W131 Elementary Composition (3 cr.)

ENG W231 Professional Writing Skills *or*

BUS X204 Business Communications (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

Grade of C or better required in W131, W231 or BUS X204, and R110, and none of these three may be taken by correspondence.

Electives Choose 9 credit hours from the following departments. *At least one humanities elective must be from a department other than English or communication.*

Art
 Classical Studies
 Communications
 English

** P244 and P245 may count in *either* Performance and Teaching of Individual/Dual or Team/Sports.

Folklore

Foreign Language

HPER: D101-dance, D332-dance, D441-dance, P402-Ethics in Sports, P411-Legal Aspects and Risk Management in Sports Settings

Journalism

Music

Philosophy

Religion

B. *Life Science and Math* (12-17 cr.)

MATH 110 Algebra (4 cr.) or more advanced mathematics course

BIOL N217 Human Physiology (5 cr.) *or* BIOL N212+N213+N214+N215 Human Biology (8 cr.)

HPER P205 Structural Kinesiology (3 cr.) *or* BIOL N261 Human Anatomy (5 cr.).

C. *Social and Behavioral Sciences* (9 cr. minimum)

PSY B104 Psychology as a Social Science (3 cr.)

ANTH A104 Culture and Society (3 cr.) *OR* similar cross-cultural course approved in advance

Electives Choose 3 credit hours from one of the following departments:

Economics	Geography (non-physical)
History	Organizational
Political Science	Leadership and
Sociology	Supervision (OLS
Women's Studies	252, OLS 274)

Total: 39-44 credit hours

Professional Education Requirements

Students must be admitted to the School of Education teacher education program before being allowed to enroll in these courses. It takes a minimum of two academic years to complete the professional education component. Courses must be taken in sequence, and are offered only in the daytime and in fall and summer semesters. Grade of C required in all classes; grade point average (GPA) average of 2.5 or higher required in professional education block of courses. See School of Education Web site (education.iupui.edu) for further details.

The Professional Education curriculum is under revision; the new curriculum will begin in August 2002. Contact the Department of Physical Education for updates.

Exercise Science Track (124-126 credits)

The exercise science track will lead to a Bachelor of Science in Physical Education degree. It is designed to meet the needs of students who wish to pursue careers in a corporate/community fitness setting, a graduate degree in exercise science, biomechanics, physical therapy, or a career in a related health/wellness field. There are three categories of requirements in this program: (1) physical education; (2) general education; and (3) electives.

Physical Education Requirements

UCOL 110 First Year Seminar/Learning Community (1 cr.)

HPER H160 First Aid and Emergency Care (3 cr.)

HPER P195 History and Principles of Physical Education (3 cr.)

HPER P200 Microcomputer Applications in Physical Education (3 cr.) (C or better required)

HPER P215 Principles and Practice of Exercise Science (3 cr.)

HPER N220 Nutrition for Health (3 cr.)

HPER P271 Individual Sports (1 cr.)

HPER R275 Dynamics of Camp Leadership (2 cr.)

HPER H363 Personal Health (3 cr.)

HPER P373 Progressive Resistance Exercise and Sports Conditioning (3 cr.)

HPER P374 Basic Electrocardiography for the Exercise Sciences (2 cr.)

HPER P397 Kinesiology (3 cr.)

HPER P393 Professional Practice Programs in Physical Education, Health, and Recreation (10 cr.)

HPER P403 Rhythmic Aerobic Training (3 cr.)

HPER P405 Introduction to Sport Psychology (3 cr.)

HPER P409 Basic Physiology of Exercise (3 cr.)

HPER P410 Physical Activity Programming for Individuals with Disabilities and Other Special Populations (3 cr.)

HPER P452 Motor Learning (3 cr.)

HPER P493 Tests and Measurements in Physical Education (3 cr.)

HPER: Performance and Teaching (P and T) of Individual/Dual Sports (2-4 cr.)

Select two courses: E477-Water Safety (2 cr.); P230-Golf; P235-Aquatics; P236-Tennis; P237-Track and Field; P244-Cardiovascular Fitness (2 cr.)**, P245-Resistance Training (2 cr.)**, PXXX-occasional special topic P and T class

HPER: Performance and Teaching of Team Sports (1-2 cr.)

Select one course: P229-Flag Football, P233-Softball, P241-Basketball, P242-Soccer, P243-Volleyball, P244-Cardiovascular Fitness (2 cr.)**, P245-Resistance Training (2 cr.)**

Total: 61-64 credit hours

General Education Requirements

A. *Humanities* (18 cr.)

ENG W131 Elementary Composition (3 cr.)

ENG W231 Professional Writing Skills *or*

BUS X204 Business Communications (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

Grade of C or better required in W131, W231 or BUS X204, and R110, and none of these three may be taken by correspondence.

Electives Choose 9 credit hours from the following departments. *At least one humanities elective must be from a department other than English or communication.*

Art

CSCI N207 Data Analysis Using Spreadsheets
(3 cr.)

STAT 301 Statistics *or* PSY B305 Statistics (3 cr.)

C. Social and Behavioral Sciences (9 cr.
minimum)

PSY B104 Psychology as a Social Science (3 cr.)

Electives Choose a class (3 cr.) from two different
departments in this list:

Anthropology
Economics
Geography (non-physical)
History
Organizational Leadership and Supervision
(OLS 252, OLS 274)
Political Science
Sociology
Women's Studies

Total: 56-62 credit hours

D. Electives

Additional elective credits may be required to reach
124 credit hour minimum required for the degree.

**Exercise Science/Pre-Physical
Therapy Track (132-137 credits)**

Students will earn a Bachelor of Science in Physical
Education with an Exercise Science emphasis, and will
complete the additional courses and experiences
required to apply for graduate-level physical therapy
degree programs. Graduate level physical therapy
programs require completion of any undergraduate
major; completion of specific pre-physical therapy
prerequisite courses (primarily math, science) and
experiences (documented volunteer or paid activity in
physical therapy-related settings under supervision of
an approved physical therapist); and high grade point
average (GPA) (minimum 3.0 overall; minimum 3.0
in math/science courses). For further information
about the IUPUI physical therapy degree program
(Doctor of Physical Therapy), contact the School of
Allied Health at (317) 274-1031 or (317) 278-1875,
www.sahs.iupui.edu/pt.

- Students will complete all courses listed above in
the Exercise Science Track curriculum (minimum
of 124 cr.). Students may utilize physical
therapy-related sites to fulfill the exercise science
HPER P393-Internship (10 cr.) requirement.
- Additional coursework beyond the Exercise
Science curriculum to meet physical therapy
admission requirements (using IUPUI course
titles/numbers) (12-13 cr.):
 - CHEM C106 Chemistry II (3 cr.) and CHEM
C126 Experimental Chemistry (2 cr.)
 - PHYS P202 General Physics II (5 cr.) *or* PHYS
219 General Physics (4 cr.)
 - PSY B310 Lifespan/Human Development
(3 cr.)
 - Documented voluntary or paid experience in a
variety of physical therapy settings (more than
three settings; supervisors must submit a
reference form in advance)
- Additional recommended courses:
 - GLAS C209 Medical Terminology (2 cr.) *or*
AHLT W105 Medical Terms (1 cr.)
 - PSY B380 Abnormal Psychology (3 cr.)

Fitness and Sports Studies Track

This track will lead to a Bachelor of Science in
Physical Education degree. It is directed to those who
may hold positions in personal fitness training,
recreational fitness, and related areas.

Physical Education Requirements

UCOL 110 First Year Seminar/Learning Community
(1 cr.)

HPER P150 Gymnastics (2 cr.) *or* HPER P219
Performance and Teaching of Stunts, Tumbling,
and Novice Gymnastics (1 cr.)

HPER H160 First Aid and Emergency Care (3 cr.)

following departments:

Economics	Geography (non-physical)
History	Organizational
Political Science	Leadership and
Sociology	Supervision (OLS
Women's Studies	252, OLS 274)

Total: 39-44 credit hours

** P244 and P245 may count in *either* Performance and Teaching of
Individual/Dual or Team Sports

Health Education Track (cr. pending)

Students pursuing this track may earn certification to teach health education in elementary and secondary schools. The health education curriculum, formerly a health and safety minor at IUPUI, is undergoing revision in response to certification changes by the Indiana Professional Standards Board. Contact the Department of Physical Education for details, 274-2248.

Athletic Training Track (131-133 cr.)

This track is designed to prepare students for careers in athletic training in school, clinic, and team settings. Prospective students must meet prerequisites before applying for admission to the athletic training track. The academic curriculum and clinical experiences, based on the *National Athletic Trainers Association Athletic Training Educational Competencies*, prepare students to take the certification exam of the National Athletic Trainers Association Board of Certification.

Application Process for the Athletic Training Program

Admission to the program is limited to approximately 8-10 new students per year. Applications are due on the last Friday of the spring semester. The Athletic Training Admission Committee will evaluate candidates based on the written application, scholastic performance, career goals, and previous athletic training experience. The committee will hold interviews in May, and notify candidates of admission status in June.

Application Criteria

- Six prerequisite courses, with GPA of 2.70 or above
 HPER H160 First Aid and Emergency Care (3 cr.)
 HPER P215 Principles and Practices of Exercise Science (3 cr.)
 HPER H363 Personal Health (3 cr.)
 HPER P205 Structural Kinesiology (3 cr.) (C or above required)
 HPER P280 Principles of Athletic Training and Emergency Care (2 cr.)
 CLAS C209 Medical Terms for Greek and Latin (2 cr.) or AHLT W105 Medical Terms for the Health Sciences (1 cr.)
- Cumulative GPA of 2.50 or above
- Current transcript
- Completion of athletic training application form
- Interview with athletic training admissions committee
- Transfer students who completed prerequisites at a previous school must submit three letters of recommendation, with one of those from the Athletic Training Program Director or Head Athletic Trainer at the previous school

Physical Education Requirements (49 cr.)

UCOL 110 First Year Seminar/Learning Community (1 cr.)
 HPER H160 First Aid and Emergency Care (3 cr.)

Other Programs Offered in Physical Education and Related Areas

Adapted Physical Education Minor (27 cr.)

The adapted physical education minor will prepare the physical educator to design and develop programs for special populations in school and community settings.

Adapted Physical Education (12 cr.)

HPER P398 Adapted Physical Education (3 cr.)
 HPER P410 Physical Activity Programming for Individuals with Disabilities and Other Special Populations (3 cr.)
 HPER P490 Motor Development of Preschool-Elementary School Children (3 cr.)
 HPER P475 Motor Assessment and Service Delivery for Children, Youth, and Adults with Disabilities (P: P490) (3 cr.)

NOTE: Students are to take these 12 credit hours in order as listed.

Adapted Physical Education Practicum (3 cr.)

HPER P399 Adapted Physical Education Practicum (P: P398) (1 or 2 cr.)
 (Repeated for a total of 3 credit hours.)

Special Education (6 cr.)

EDUC K205 Introduction to Exceptional Children (3 cr.) *and*
 EDUC K453 Management of Academic and Social Behavior (3 cr.) *or*
 EDUC K465 Service Delivery Systems and Consultation Strategies (3 cr.)

Directed Electives (6 cr.)

Select courses for a total of 6 credits:

- EDUC K461 Curriculum and Methods for Students with Severe Disabilities (3 cr.)
 EDUC P254 Educational Psychology for All Teachers (3 cr.)
 HPER P373 Progressive Resistance Exercise and Sports Conditioning (3 cr.)
 HPER P421 Special Topics: Adapted Aquatics Instructor (1 cr.)
 SPHS S211 American Sign Language I (4 cr.)
 SPHS S212 American Sign Language II (4 cr.)
 EDUC K465 Service Delivery Systems and Consultation Strategies (3 cr.)
 EDUC K453 Management of Academic and Social Behavior (3 cr.)
 HPER P399 (P: P398) Adapted Physical Education Practicum (1-2 cr.)

Dance Minor (22-27 cr.)

The dance minor provides students with experience in dance performance, choreography and production, movement theory and the related arts, and teaching.

Required Courses:

- HPER P205 Structural Kinesiology (3 cr.) *or*
 BIOL N261 Human Anatomy (5 cr.)
 HPER D201 Modern Dance Workshop I (1 cr.)
 HPER D201 Modern Dance Workshop II (1 cr.)
 HPER D221 Dance Composition I (2 cr.)
 HPER D332 Dance and the Allied Arts II (3 cr.)
 HPER D441 Dance Production I (2 cr.)

Choose one group of three courses: either

- HPER D202 Intermediate Ballet (1 cr.)

and

- HPER D218 Modern Jazz Dance Technique (1 cr.)

and

- HPER E255 Modern Dance—Intermediate (1 cr.)

or

- PER D211 Advanced Technique I (2 cr.) *and*

- HPER D212 Advanced Technique II (2 cr.) *and*

- HPER E355 Modern Dance I—Advanced (1 cr.)

Choose one: HPER D351 Teaching of Modern Dance (1 cr.) *or*

- HPER P110 Dance in Elementary Education (2 cr.) *or*

- HPER P210 Dance in Secondary Education (2 cr.) *or*

- HPER P495 Laboratory Teaching in Physical Education Program (1 cr.)

A minimum of 6 elective credit hours are required in addition to the above courses.

Coaching Endorsement (19-22 cr.)

A coaching endorsement may be earned in conjunction with a physical education teaching major or with another major in education. An “endorsement” is an item that may be added to a teaching license in Indiana and signifies that the person has completed a set of course work. Many states (though currently not Indiana) require coaches to hold a coaching endorsement to qualify for coaching assignments. NOTE that the Indiana Professional Standards Board is revising criteria for teacher licensure in Indiana, and specifications for coaching are subject to change. Direct inquiries to the IUPUI Department of Physical Education, 274-2284.

- BIOL N217 Human Physiology (5 cr.) *or* BIOL N212+N213+N214+N215 Human Biology (8 cr.)
 HPER P280 Principles of Athletic Training and Emergency Care (2 cr.)
 HPER P397 Kinesiology (3 cr.)
 HPER P405 Introduction to Sport Psychology (3 cr.)
 HPER coaching electives (theory and technique) (6 cr.)

Driver Education Endorsement (12 cr.)

The driver education endorsement prepares students to teach driver education in secondary schools and in commercial driving schools. The term “endorsement” originally referred to a subject area that could be added to an Indiana teaching license. This set of courses retains the title “endorsement”; however, students in any degree program and non-degree students are eligible to pursue this program. To teach driver education in programs not affiliated with a high school, individuals must take the courses listed below (12 credits), have earned at least 60 college credits (which may include the 12 credit hours listed below), and do not need to hold a teaching license. Specific requirements leading to this endorsement are listed below. Offered in summer only.

- HPER S360 Highway Safety Administration (3 cr.)
 HPER S441 Readings in Safety Education (2 cr.)
 HPER S456 Traffic Safety Education for Teachers (4 cr.)
 HPER S458 Driver Education Multiple Instruction Techniques (3 cr.)

Aquatic Concentration (12.5 cr.)

An aquatic concentration may be earned in conjunction with a major in physical education.

Required Courses

Students must complete all of the following (9.5 cr.):

- HPER A367 Coaching of Swimming and Diving (1.5 cr.)
 HPER E475 Lifeguard Certification (1 cr.)*
 HPER E477 Water Safety Instructor (2 cr.)*
 HPER P421 Special Topics: Adapted Aquatics Instructor (1 cr.)
 HPER P235 Performance and Teaching of Aquatic Activities (1 cr.)
 HPER P327 Administration, Maintenance, and Construction of Aquatic Facilities (3 cr.)

Electives

Select three courses: (3 cr.)

- HPER E123 Diving (1 cr.)
 HPER E270 Scuba (1 cr.)
 HPER E271 Swimming—Synchronized (1 cr.)
 HPER E275 Aquatic Conditioning (1 cr.)
 HPER E371 Advanced Scuba (1 cr.)
 HPER R470 Professional Field Experience in Recreation (1-3 cr.)
 HPER P499 Research in Physical Education and Athletics (1-3 cr.)

Business Minor (39 cr.)

Students enrolled in the School of Physical Education may combine the major in physical education with a business minor. Students must complete all pre-business courses listed below before taking the integrative business core. A minimum 2.5 grade point

*Students who possess these two certifications must hold current certification at the time they complete the aquatic concentration.

average (GPA) is required in the 27 credit hours of pre-business requirements before a student can proceed to the integrative core.

Prebusiness Requirements (27 cr.)

- BUS A201-A202 Introduction to Accounting I-II (3 cr. each)
 CSCI 208 The Computer in Business (3 cr.)
 ECON E201 Introduction to Microeconomics (3 cr.)
 ECON E202 Introduction to Macroeconomics (3 cr.)
 ECON E270 Introduction to Statistical Theory in Economics and Business (3 cr.)
 MATH M118 Finite Mathematics (3 cr.)
 MATH M119 Brief Survey of Calculus I (3 cr.)
 PSY B104 Psychology as a Social Science (3 cr.)

Business Integrative Core Requirements (12 cr.)

- BUS F301 Financial Management (3 cr.)
 BUS M301 Introduction to Marketing Management (3 cr.)
 BUS P301 Operations Management (3 cr.)
 (*Note:* BUS F301, M301, and P301 are an integrated 9 credit hour package and must be taken in the same semester.)
 J401 Administrative Policy (3 cr.)

Recommended:

- BUS L201 Legal Environment of Business (3 cr.)
 BUS Z302 Managing and Behavior in Organizations (3 cr.)

Certificate in Personal Training (19-21 cr.)

This certificate provides individuals with a basic understanding of the principles of personal training and prepares them for two national certification exams: the Exercise Leader certificate of the American College of Sports Medicine and Certified Personal Trainer from the National Strength and Conditioning Association. All courses in the certificate curriculum apply to the Exercise Science degree. Currently there are no state or national licensing requirements for personal trainers.

- HPER H160 First Aid and Emergency Care (3 cr.)
 HPER P205 Structural Kinesiology (3 cr.) *or* BIOL N261 Human Anatomy (5 cr.)
 HPER P215 Principles and Practices of Exercise Science (3 cr.)
 HPER N231 Human Nutrition *or* FN 303 Essentials of Nutrition (3 cr.)
 HPER P244 Performance and Teaching of Cardiovascular Fitness (2 cr.)
 HPER P245 Performance and Teaching of Resistance Training (2 cr.)
 HPER P373 Progressive Resistance Exercise and Sports Conditioning (3 cr.)

Maintaining a Teaching License

The Indiana Department of Education (IDOE) requires licensed teachers to take courses on an ongoing basis to maintain a valid teaching license, as follows:

Six credit hours every five years; undergraduate or graduate courses in education or license area(s). Submit documentation to IDOE.

Note: New licensing and renewal procedures will go into effect in approximately 2002. For information, contact the IUPUI School of Education, (317) 274-0643.

Interested teachers may contact the IUPUI School of Education, Certification Program, for information and enrollment: 902 W. New York Street, Indianapolis, IN, 46202-5155; (317) 274-0643.

Earning Certification to Teach

Individuals who have earned college degrees but who do not hold teaching credentials may pursue those credentials through a process called certification. The process involves a review of past course work, designation of required courses, application to the certification program, and successful completion of required courses. Two routes are available to degreed students interested in earning certification, and the course work is exactly the same in each route: (1) Pursue a second undergraduate degree—a B.S. in Physical Education; (2) pursue the “certification only” program through the School of Education. There are fees associated with evaluation of past course work and for application to the certification program. For further information, contact the physical education department regarding pursuit of a second bachelor's degree (317) 274-2248, or the Certification Program, IUPUI School of Education, 902 W. New York Street, Indianapolis, IN, 46202-5155; (317) 274-0643.

Department of Physical Education Graduate Degree Program

Master of Science—Physical Education

The Indiana University School of Physical Education at Indiana University—Purdue University Indianapolis is authorized to offer an Indiana University Master of Science degree in Physical Education. This degree will provide students with a multidisciplinary and in-depth understanding of physical education and its related fields. The objectives of the program are to (1) create course work and experiences that promote higher learning, (2) develop community- and university-based partnerships that facilitate research and learning opportunities, and (3) provide personal growth and professional development to teachers and others in the field.

Application for Admission

An application for admission may be obtained by writing to Recorder, School of Physical Education, 910 West New York Street, Indianapolis, IN 46202 or by calling (317) 274-2599.

Admission Requirements

Students entering the graduate program must have a bachelor's degree in physical education, exercise science, sports management or a related area; have completed undergraduate work with a minimum 2.8 grade point average (GPA) on a 4.0 scale; and have appropriate scores on the Graduate Record Examination (GRE). Students who have a bachelor's

degree in an unrelated area or discipline may be granted admission upon the completion of a series of undergraduate courses to be determined by the admission committee. Minimal requirements include the completion of BIOL N217 Human Physiology (5 cr.); BIOL N261 Human Anatomy (5 cr.); HPER P215 Principles and Practice of Exercise Science (3 cr.); HPER P397 Kinesiology (3 cr.); and HPER P409 Basic Physiology of Exercise (3 cr.).

Admission Process

The applicant must submit the following materials to the School of Physical Education to be considered for admission to the Master of Science Program:

1. A three-page School of Physical Education application form.
2. A Graduate and Professional Application Data sheet from the IUPUI Graduate School.
3. A 200-300 word candidate statement indicating areas of interest and professional goals.
4. Three reference letters from individuals who have sufficient knowledge of the applicant's ability to be successful in graduate work.
5. One official transcript for all previous college and university work including degrees awarded. If the applicant has completed course work from any campus of Indiana University, transcripts from that work is not required.
6. Scores from the Graduate Record Examination (GRE).
7. A non-refundable application fee of \$35.00.
8. For International students, proof of proficiency in English, as defined by a 550 or above for the paper-based TOEFL and a minimum of 213 for the computer-based TOEFL.
9. Send all materials to Recorder, School of Physical Education, 901 W. New York Street, Indianapolis, IN, 46202. All materials submitted for the application process become the property of the university and will not be returned. Applications will not be considered until all materials have been submitted.

Admission Status

An applicant for admission into the graduate program in the School of Physical Education will be classified in one of the following admission categories:

1. **Unconditional** Applicants in this category have met all of the requirements for admission into the program and may begin course work immediately.
2. **Conditional** The applicant is admitted provisionally, pending the completion of certain course prerequisites.
3. **Denied** The applicant is denied regular admission into the program and may not pursue the degree at this time. Reconsideration of the application can be requested if new evidence is presented to the admission committee. If that new evidence includes graduate course work taken at Indiana University or another accredited institution, that course work will not usually be accepted toward the degree if the student is subsequently accepted.
4. **Non-degree** Students who hold a bachelor's degree who wish to pursue advanced study may do so as an adult non-degree student in the School of Physical Education. These students will need to complete an abbreviated application for

admission. Non-degree students must obtain permission each semester to enroll in classes. If a non-degree student later applies for unconditional admission in order to complete a degree, no more than 9 credit hours taken before formal admission may be applied toward the degree.

Academic Regulations

Degree requirements for students in the School of Physical Education are established by the faculty of the school and may change from time to time. Students are bound by rules and regulations established by the faculty at the time of their initial matriculation as a graduate student. Every graduate student will be assigned an advisor who will help cooperatively plan their course of study depending on experiences and education objectives. The Master of Science degree consists of a 15-hour core of major topics in physical education and human performance and an additional 20 hours of elective courses, a minimum of 9 of which must be completed in the School of Physical Education.

Core Courses (15 cr.)

HPER T590 Introduction to Research in HPER (3 cr.)
 HPER K525 Psychological Foundations of Exercise and Sports (3 cr.)
 HPER K530 Mechanical Analysis of Human Performance (3 cr.)
 HPER K535 Physiological Basis of Human Performance (3 cr.)
 HPER K522 Adapted Physical Education (3 cr.)

Grades

Quality points are assigned for purposes of determining the cumulative grade point average as follows: A+ or A=4 credit points; A-=3.7; B+=3.3; B=3.0; B-=2.7; C+=2.3; C=2.0; C-=1.7; D+=1.3; D=1.0; D-=0.7; F=0. No points are assigned for grades of Incomplete (I), Satisfactory (S), Pass (P), or Withdrawn (W).

All graduate students are expected to maintain an overall grade point average of 3.0 or better. Students whose average falls below this level will be placed on probation. Grades below C- will not count toward degree requirements; however, all grades earned in courses taken for graduate credit will be included in the calculation of the grade point average.

Transfer of Credit

A maximum of nine credit hours of graduate work may be transferred from other institutions for application to the master's degree. The admission committee will determine the distribution and acceptance of those transfer hours at the time of admission. Once a student has enrolled in the Master of Science degree program in the School of Physical Education they must receive advance approval from the advisor and Department Chair to take work at another institution for transfer to IUPUI. This limitation does not apply to work taken at any other Indiana University campus.

Transfer credit bearing grades of Pass (P) or Satisfactory (S) cannot be accepted unless there is official documentation for the transferring institution to verify that these grades are equivalent to at least a B on a graduate grading scale. No credit can be transferred for a course that cannot be officially documented as carrying graduate credit.

Graduation

At least six months prior to the date of expected graduation from the Master of Science program, the student should file an application for graduation with the School of Physical Education Recorder, Room 258, Physical Education/Natatorium Building. Students are ultimately responsible for knowing, understanding and completing all degree requirements in a timely manner. IUPUI holds a single commencement ceremony in May each year. In order to participate in commencement activities the student must have completed all degree requirements by the prior December or expect to complete them no later than August following the May commencement exercises.

Department of Tourism, Conventions, and Event Management (TCEM, formerly RHIT) Degree Programs

Bachelor of Science in Tourism, Conventions, and Event Management—124 credit hours (IU Degree)

This program will lead to a Bachelor of Science degree. Graduates may be employed in different segments of the tourism industry: research, destination development, adventure travel, festivals, events, travel management, entertainment, attractions, transportation, accommodations, and/or food operations. All courses in the major must be completed with a C or higher.

General Education Requirements (39 credit hours)

BUS X204 Business Communications (3 cr.)
 COMM R110 Fundamentals of Speech Communication (3 cr.)
 ECON E201 Economics (3 cr.)
 ENG W131 Elementary Composition I (3 cr.)
 GEOG G110 Introduction to Human Geography (3 cr.)
 GEOG elective (300 level) (3 cr.)
 HPER R423 Visitor Behavior (3 cr.)
 PSY Elective (300 level) (3 cr.)
 PSY B104 Psychology as a Social Science (3 cr.)
 STAT 301 Elementary Statistics Methods I (3 cr.)
 STAT 302 Elementary Statistics Methods II (3 cr.)
 Foreign Language (3 cr.)

 TCEM 319 Management of Sports Events (3 cr.)
 TCEM 352 Promotional Communications (3 cr.)
 TCEM 362 Economics of Tourism (3 cr.)
 TCEM 372 Global Tourism Geography (3 cr.)
 TCEM 387 Tourism Internship (2 cr.)
 TCEM 391 Event Catering Management (2 cr.)
 TCEM L391 Event Catering Management Laboratory (1 cr.)
 TCEM 392 Destination Development (1 cr.)
 TCEM 411 Hospitality Law (3 cr.)
 TCEM 461 Tourism Research and Planning Development (3 cr.)
 TCEM 472 Global Tourism (3 cr.)
 TCEM 499 Operational Analysis (3 cr.)

Electives (12 credit hours)*

6 credit hours must be 100 or 200 level.

6 credit hours must be 300 level or higher.

Total: 124 credit hours

Food Service and Lodging Supervision (Purdue degree) 60 credit hours

This program will lead to an Associate of Science degree. Graduates are prepared for employment in hospitality management positions in quick service, fine dining, cafeterias, hotels, resorts, condominiums and bed and breakfasts. All courses in the major must be completed with a grade of C or higher.

TCEM 100 Introduction to Tourism and Hospitality Management (3 cr.)
 TCEM 110 College Life Orientation (1 cr.)
 TCEM 115 Computers in the Tourism and Hospitality Industry (3 cr.)
 TCEM 141 Financial Accounting for the Service Industries (3 cr.)
 TCEM 181 Front Office Operations (3 cr.)

TCEM 191 Sanitation and Health in Food Service, Lodging, and Tourism (3 cr.)
 TCEM 212 Tourism and Hospitality Management Principles (3 cr.)
 TCEM 231 Hospitality and Tourism Marketing (3 cr.)
 TCEM 241 Financial Analysis and Decision Making (3 cr.)
 TCEM 352 Promotional Communication (3 cr.)
 TCEM 281 Hotel Operations (3 cr.)
 TCEM 391 Event Catering Management (1 cr.)
 TCEM L391 Event Catering Management Laboratory (2 cr.)
 TCEM 312 Human Resource Management for the Service Industries (3 cr.)
 TCEM 387 Tourism Internship (2 cr.)

Total: 60 credit hours

Cultural Heritage Tourism Certificate

Completion of the courses identified below with a grade of C or better within a five-year period will qualify an IUPUI degree-seeking student or graduate nondegree student to be awarded a Cultural Heritage Tourism Certificate.

TCEM 172 The Development and Management of Attractions (3 cr.)
 TCEM 231 Marketing Tourism and Hospitality (3 cr.)
 TCEM 272 The Tourism System (3 cr.)
 TCEM 334 Cultural Heritage Tourism (3 cr.)
 TCEM 372 Global Tourism Geography (3 cr.)
 TCEM 387 Tourism Internship (1 cr.)
 ANTH A104 Culture and Society (3 cr.)

19 credit hours

Food Production Management Certificate

Completion of the courses identified below with a grade of C or better within a five-year period will qualify an IUPUI degree-seeking student or a graduate nondegree student to be awarded a Food Production Management Certificate.

TCEM 115 Computers in the Tourism and Hospitality Industry (3 cr.)
 TCEM 191 Sanitation and Health in Food Service, Lodging, and Tourism (3 cr.)
 TCEM 212 Tourism and Hospitality Management Principles (3 cr.)
 TCEM 311 Procurement Management (3 cr.)
 TCEM 322 Hospitality Facilities Management (3 cr.)
 TCEM 391 Event Catering Management (2 cr.)
 TCEM L391 Event Catering Management Laboratory (1 cr.)

18 credit hours

Lodging Management Certificate

Completion of the courses identified below with a grade of C or better within a five-year period will qualify an IUPUI degree-seeking student or a graduate nondegree student to be awarded a Lodging Management Certificate.

TCEM 181 Front Office Operations (3 cr.)
TCEM 212 Tourism and Hospitality Management Principles (3 cr.)
TCEM 281 Hotel Management (3 cr.)
TCEM 311 Procurement Management (3 cr.)
TCEM 322 Hospitality Facilities Management (3 cr.)
TCEM 385 Beer and Spirit Management (3 cr.)
TCEM 387 Tourism Internship (1 cr.)

19 credit hours

Beverage Management Certificate

Completion of the courses identified below with a grade of C or better within a five-year period will qualify an IUPUI degree-seeking student or a graduate nondegree student to be awarded a Beverage Management Certificate.

TCEM 218 Wines of the World (3 cr.)
TCEM 231 Marketing Tourism and Hospitality (3 cr.)
TCEM 308 Wine Selection (3 cr.)
TCEM 311 Procurement Management (3 cr.)
TCEM 385 Beer and Spirits Management (3 cr.)

15 credit hours

Events Management Certificate

Completion of the courses identified below with a grade of C or better within a five-year period will qualify an IUPUI degree-seeking student or graduate nondegree student to be awarded an Events Management Certificate.

TCEM 171 Introduction to Convention/Meeting Management (3 cr.)
TCEM 271 Mechanics of Meeting Planning (3 cr.)
TCEM 310 Special Event Management (2 cr.)
TCEM L310 Special Event Management Laboratory (1 cr.)
TCEM 319 Management of Sports Events (3 cr.)
TCEM 352 Promotional Communications (3 cr.)
TCEM 377 Exhibit Marketing (3 cr.)
TCEM 387 Tourism Internship (1 cr.)

19 credit hours

To record progress of students toward completion of any of the certificates, an application must be filed with the school records upon enrollment in the first course, and updated with enrollment in each of the other five courses.

***Note: TCEM classes may not be used for free electives.**

Consumer and Family Science Transfer Program

Requirements for a Bachelor of Science degree in child development and family studies; foods and nutrition; consumer sciences and retailing; hospitality and tourism management; or family and consumer sciences education can be started at IUPUI. Students must transfer to the School of Consumer and Family Sciences at Purdue University in West Lafayette. See a TCEM academic advisor for more information on transfer completion.

Department of Physical Education (HPER) Courses

The courses below represent the total offerings of the School of Physical Education. Not all courses are offered every semester. The number of credit hours given for a course is indicated in parentheses following the course title. The abbreviation P refers to prerequisites.

Professional Preparation Program in Physical Education

A281 Recognition and Evaluation of Athletic Injuries (3 cr.) P: HPER H160, HPER P280. A course designed to educate the student athletic trainer in principles and procedures of soft-tissue evaluation of all major anatomic sites. Skill development in special tests for assessing musculoskeletal trauma is included.

A282 Strapping and Bandaging Techniques in Athletic Training (3 cr.) P: Admission to the Athletic Training Program. Advanced course in the recognition of injuries and of the need for support and bandaging. Lecture and demonstration of emergency procedures will be covered, as well as general strapping and bandaging.

A361 Coaching of Football (1.5 cr.) Fundamentals of offensive and defensive line and backfield play; technique of forward passing; outstanding rules; offensive plays; most frequently used defenses.

A362 Coaching of Basketball (1.5 cr.) Fundamentals of basket shooting, passing, ball handling, and footwork; patterns against man-to-man defense, zone defense, and zone pressure defense—full court and half court. Strategy of playing regular season and tournament play. Psychology of coaching.

A363 Coaching of Baseball (1.5 cr.) Fundamentals of pitching, catching, batting, base running, infield and outfield play; offensive and defensive strategy; organization and management.

A364 Coaching of Track and Field (1.5 cr.) Fundamental procedures in conditioning and training for cross-country, track, and field. Gives basic understanding of each event's coaching strategy and coaching psychology. Home-meet organization and management.

A367 Coaching of Swimming and Diving (1.5 cr.) Theory and methods of coaching swimming and diving; will cover technical, administrative, and organizational aspects involved in the process. Emphasis placed on fundamentals, conditioning, and coaching psychology.

A368 Coaching of Tennis (1.5 cr.) Theory and methods of coaching tennis; will cover technical, administrative, and organizational aspects involved in the process. Emphasis placed on fundamentals, tactics, conditioning, and conduct of practice sessions.

A369 Coaching of Golf (1.5 cr.) Theory and methods of coaching golf; will cover technical, administrative, and organizational aspects involved in the process. Emphasis on skill analysis, error identification and correction, special golf shots, and strategies for playing the course.

A370 Coaching of Soccer (1.5 cr.) Theory and methods of coaching soccer; will cover technical, administrative, and organizational aspects involved in the process. Emphasis on execution of advanced skills, team offense and defense patterns, conditioning of the player, and organizing practice sessions.

A371 Coaching of Volleyball (1.5 cr.) Theory and methods of coaching volleyball; will cover technical, administrative, and organizational aspects involved in the process. Emphasis on execution of advanced skills, team offense and defense patterns, conditioning of the player, and organizing practice sessions.

A372 Coaching of Softball (1.5 cr.) Theory of coaching competitive softball, both fast- and slow-pitch. Emphasis on individual and team play.

A381-A382 Laboratory Practice in Athletic Training I-II (2 cr. each) Laboratory hours are assigned so that students have an opportunity to practice athletic training skills during all sports seasons. Direct supervision and guidance provided by the athletic team physician and the athletic training staff.

A383 Therapeutic Management of Sports Injuries (3 cr.) An introduction to therapeutic techniques used on ill or injured athletes to facilitate enhanced recovery and safe return to competitive conditions. Lectures, demonstration of methods of application of therapeutic equipment, and exercise protocols will be covered.

A384 Therapeutic Exercise in Athletic Training (3 cr.) Principles in the use of therapeutic exercise techniques for treating the injured physically active person to facilitate enhanced recovery and safe return to activity. Lecture, demonstration and laboratory experience in the principles of therapeutic exercise.

A480 Care and Prevention of Athletic Injuries (1 cr.) Course designed to assist students in recognizing, understanding, and managing athletic injuries. Methods of taping and bandaging are emphasized.

A481 Practicum in Athletic Training (2 cr.) Variety of experiences provided through assignments to university varsity sports, high school sports, middle school sports, and reserve programs. Students will be under the experienced guidance and control of medical and athletic training supervisors.

A483 Principles of Sports Officiating (1 cr.) Topics include such sports as football, baseball, basketball, volleyball, and gymnastics. Ethics of sports officiating. Mastery, interpretation, and application of sports rules. Laboratory and classroom experiences. (Course may be repeated.)

A484 Interscholastic Athletic Programs (2 cr.) An overview of the operation of athletic programs for men and women in the School of Physical Education. Administrative structure on national and state levels. Policies and procedures as they pertain to budget,

facilities, eligibility, contest regulations, safety, and current trends.

F255 Human Sexuality (3 cr.) Survey of the dynamics of human sexuality; identification and examination of basic issues in human sexuality as they relate to the larger society.

F258 Marriage and Family Interaction (3 cr.) Basic personal and social factors that influence the achievement of satisfying marriage and family experiences.

H160 First Aid and Emergency Care (3 cr.) Lecture and demonstration of first-aid measures for wounds, hemorrhage, burns, exposure, sprains, dislocations, fractures, unconscious conditions, suffocation, drowning, and poisons, with skill training in all procedures.

H163 Introduction to Health (3 cr.) Introduction to and survey of the field of school and community health education.

H195 Principles and Applications of Lifestyle Wellness (3 cr.) This course will increase an awareness of and provide instruction pertaining to wellness, and will assist the student with making healthy lifestyle choices. The course supports an emphasis on measurable parameters within the physical dimension of wellness, and incorporates the remaining dimensions of emotional, intellectual, occupational, social, and spiritual wellness.

H305 Women's Health (3 cr.) Examines the relationship of women to health and health care. Five dimensions of health: physical, mental, emotional, social, and spiritual provide a framework for comparison and contrast of health concerns unique to women and common to both sexes at all ages.

H318 Drug Use in American Society (3 cr.) An interdisciplinary approach to the study of drug use in American society. The course will examine the effects of alcohol, tobacco, and illicit drugs on the physical, mental, and social health of the individual.

H363 Personal Health (3 cr.) Acquaints prospective teachers with basic personal health information; provides motivation for intelligent self-direction of health behavior with emphasis on responsibilities as citizens and as teachers. Study of physiological and psychological bases for health; drugs and other critical issues; and family health.

H461 Teaching of First Aid (2 cr.) P: HPER H160. Advanced consideration of first-aid subject matter, along with orientation in methods, techniques, and teaching devices in first-aid courses. Practical classroom instruction required.

H464 Organization of Health Education (3 cr.) P: HPER H363 or consent of instructor. Organization of total health program involving health service, healthful school living, and health instruction. Content and materials suitable for a high school health course stressed. Introduction to public health, functions of voluntary and official agencies, and textbook evaluation.

H465 Community Health Education (3 cr.) Addresses the place of the teacher in community health education programs. Considers the

need to program, various media and methods which may be employed, and the place of existing agencies in the program.

N220 Nutrition for Health (3 cr.) Basic principles of nutrition, with emphasis on identification, functions, and food sources of nutrients required by individuals for optimum health and development.

P110 Dance in Elementary Education (2 cr.) Instruction in fundamental, locomotor, and axial dance movements and the relation of dance movement to music. Singing games, simple folk dances, and creative dance appropriate to children K-6.

P150 Gymnastics I (2 cr.) Basic skills in gymnastics and procedures used in teaching these activities.

P195 History and Principles of Physical Education (3 cr.) Understanding and interpretation of principles of modern physical education programs. Contributions of historical programs related to development of present-day programs.

P200 Microcomputer Applications in Physical Education (3 cr.) A hands-on introduction to the use of microcomputers as problem-solving tools in physical education. Course content includes an introduction to microcomputers and DOS functions; word processing, spreadsheets, and database skills; and experience with graphic and sport-specific application programs.

P205 Structural Kinesiology (3 cr.) Overview of basic human body structures and functions appropriate for beginning students in physical education. Fundamental concepts concerning the interaction of biological and mechanical aspects of the musculoskeletal and neuromuscular structures. Emphasis on practical application to study and teaching of skilled human movement.

P210 Dance in Secondary Education (2 cr.) Methods and materials of folk, square, and social dance skills for junior and senior high students. Introduction to modern dance, modern jazz techniques, and choreography.

P215 Principles and Practice of Exercise Science (3 cr.) A study of the scientific principles related to physical fitness and the practical application of principles to directing fitness programming in school, recreational, and corporate settings. Students will be involved in setting up, participating in, and evaluating personal fitness activities.

P219 Performance and Teaching of Stunts, Tumbling, and Novice Gymnastics (1 cr.) Instruction and practice teaching of fundamental stunts, tumbling activities, and novice gymnastic movements.

P229 Performance and Teaching of Flag Football (1 cr.) Instruction and analysis of skills, techniques, and strategies in flag football. Development of skills in unit planning, drills, and modified game forms.

P230 Performance and Teaching of Golf (1 cr.) Instruction and analysis of skills, techniques, and strategies in golf. Development of skills in unit planning, error analysis, and correction.

P233 Performance and Teaching of Softball (1 cr.) Instruction and analysis of skills, techniques, and strategies in softball. Development of skills in unit planning, drills, and modified game forms.

P235 Performance and Teaching of Aquatic Activities (1 cr.) Primarily for physical education and recreation majors. Emphasizes techniques of teaching swimming as well as the improvement of the students' swimming skills.

P236 Performance and Teaching of Tennis (1 cr.) Instruction and analysis of skills, techniques, and strategies of tennis. Development of skills in unit planning, error analysis, and correction.

P237 Performance and Teaching of Track and Field (1 cr.) Instruction and analysis of skills, techniques, and strategies of track and field. Development of skills in unit planning, error analysis, and correction.

P241 Performance and Teaching of Basketball (1 cr.) Instruction and analysis of skills, techniques, and strategies of basketball. Development of skills in unit planning, error analysis, and correction.

P242 Performance and Teaching of Soccer (1 cr.) Instruction and analysis of skills, techniques, and strategies of soccer. Development of skills in unit planning, error analysis, and correction.

P243 Performance and Teaching of Volleyball (1 cr.) Instruction and analysis of skills, techniques, and strategies of volleyball. Development of skills in unit planning, error analysis, and correction.

P244 Performance and Teaching of Cardiovascular Fitness (2 cr.) This course will focus on teaching cardiovascular fitness activities in physical education settings. These concepts will be covered: aerobic fitness, fitness prescription, training principles, fitness infusion into traditional activities, lifetime fitness activities (youth through older adults), and safety. Emphasis on lesson planning and pedagogy.

P245 Performance and Teaching of Resistance Training (2 cr.) This course will focus on teaching resistance training in physical education settings. These concepts will be covered: basic muscle anatomy, equipment and facility safety, proper applications and techniques, etiquette, equipment options, considerations for youth through older adults. Emphasis on lesson planning and pedagogy.

P271 Individual Sports (1 cr.) Teaching of and participation in sports activities some of which are not included in other skills courses in the curriculum. Includes badminton, bowling, archery, and golf.

P280 Principles of Athletic Training and Emergency Care (2 cr.) An introduction to the principles of injury prevention. Lecture and demonstration of emergency measures; for example, fractures, sprains, dislocations, and spinal injuries. Skill training in bandaging, strapping, and splinting techniques emphasized.

P290 Movement Experiences for Preschool and Elementary Children (2 cr.) Provides the student with knowledge of potential outcomes of preschool and elementary school motor development programs,

of how to implement such programs, and of appropriate movement experiences for young children. Also provides the student with opportunities for observing and teaching young children in a structured gymnasium setting.

P324 Recreational Sports Programming

(3 cr.) Course provides an overview of the programmatic elements and techniques that currently exist in recreational sports. Specific topics include informal, intramural, club, and extramural programming; value of recreational sports; programming techniques; publicity and promotion; facility utilization; equipment concerns; safety; liability; and program observation.

P327 Administration, Maintenance, and Construction of Aquatic Facilities (3 cr.)

Information in pool management, maintenance, and construction with emphasis on the newest design, information, and construction techniques.

P373 Progressive Resistance Exercise and Sports Conditioning (3 cr.)

P: BIOL N261 Human Anatomy or equivalent is recommended. This course focuses on progressive resistance exercise and its application in physical conditioning for the competitive athlete, the fitness enthusiast, and various special populations. Topics covered include basic muscle physiology, kinesiology, musculoskeletal adaptation to resistance exercise, modes of training, muscle-specific exercises, and exercise technique.

P374 Basic Electrocardiography for the

Exercise Sciences (2 cr.) Introduction to the basic concepts, theory, and interpretation of electrocardiograms (ECG/EKG), and their uses in fitness programs that deal with healthy people and with cardiac rehabilitation patients.

P390 Growth and Motor Performance of

School-Age Youth K-12 (2 cr.) A study of growth and developmental characteristics of school-age youth. Emphasis is placed on motor development and movement performance, and the relationship to cognitive and affective behavior. Supervised teaching experiences are an integral part of the course.

P393 Professional Practice Programs in Physical Education, Health, and Recreation

(3-10 cr. arranged) P: sophomore standing or higher, and approval of the instructor and the Office of Professional Practice Programs. This course is designed to provide the student with a quality career-related work experience. Evaluation by employer and faculty sponsor.

P397 Kinesiology (3 cr.)

P: BIOL N261. Application of facts and principles of anatomy, physiology, and mechanics to problems of teaching physical education skills and activities of daily living.

P398 Adapted Physical Education (3 cr.) P: BIOL N261 and HPER P397. Study of conditions that require physical education programs to be adapted to special needs of individuals, including analysis of normal and faulty postures. Principles and practices in application of exercises and activities for specific handicap conditions.

P399 Practicum in Adapted Physical Education (1-2 cr.) P: P398. A practical learning experience in

adapted physical education with children with disabilities. Course may be repeated.

P402 Ethics in Sport (3 cr.) A study of the nature of ethics in sport with an emphasis on current application of moral principles and values. The relationship of ethics to social issues in sport will be explored, including philosophical and historical perspectives.

P403 Rhythmic Aerobic Training (3 cr.) P: BIOL N261 and HPER P397. This course focuses on principles and processes of designing, organizing, and teaching a variety of rhythmic aerobic training forms. Topics covered include a review of basic exercise and rhythmic movement principles and how they are used to create modes of rhythmic aerobic training used in group and individual exercise programs.

P405 Introduction to Sport Psychology (3 cr.)

Theory and practical application of psychology to learning, teaching, and coaching of movement and sport skills. Students are expected to have completed an introductory psychology course prior to enrolling.

P409 Basic Physiology of Exercise (3 cr.)

P: BIOL N217 and BIOL N261. A survey of human physiology parameters as related to physical exercise and work and the development of physiological fitness factors. Physiological foundations will be considered.

P410 Physical Activity Programming for Individuals With Disabilities and Other Special Populations (3 cr.)

P: HPER P409. Course focuses on the provision of physical activity programs in community settings for individuals with special needs. Topics include laws relating to service delivery, conditions which may lead to impairment of ability to participate in physical activity, facility and equipment accessibility, activity modifications, contraindications to activity, and organized disabled sport.

P411 Legal Aspects and Risk Management in Sports Settings (3 cr.)

An introduction to legal principles involved in sport. Tort liability including intentional tort, negligence, and product liability. Covers constitutional law issues, particularly as they relate to athletic eligibility, athletes' rights, sex discrimination, and drug testing. Discussion of sport contracts.

P421 Special Topics in Physical Education

(1-3 cr.) An in-depth study of a selected topic from the many areas that have contributed to the development of physical education in today's world. Topics will vary. Directed to upper-level students with a special interest in the topic presented.

P444 Issues in Physical Education (3 cr.)

A senior seminar. Major arguments pro and con on a number of controversial ideas in the field of physical education are considered.

P452 Motor Learning (3 cr.) P: BIOL N261 and BIOL N217. An examination of factors that affect the acquisition and performance of motor skills. Topics include perception, psychomotor learning, practice methods, and theories of neuromuscular integration. Open to juniors and seniors only.

P475 Motor Assessment and Service Delivery for Children, Youth, and Adults with Disabilities (3 cr.) Selecting and applying

appropriate evaluation techniques for individuals with disabilities. Using assessment results to plan and implement appropriate physical activity programs. Service delivery models for physical education in public school and community settings, including consulting and conferencing skills.

P490 Motor Development of Preschool and

Elementary School Children (3 cr.) A study of the motor development of children from infancy through middle childhood. Emphasis is placed on observing and analyzing characteristic movement behavior and motor performance of children with application to developmentally appropriate movement and experiences.

P493 Tests and Measurements in Physical Education (3 cr.)

Theory of measurement in physical education, along with selection and administration of appropriate tests, and interpretation of their results by fundamental statistical procedures.

P495 Laboratory Teaching in Physical

Education Program (1 cr.) P: HPER P290 and consent of school. Prepractice teaching experience. Students assist and help teach activities in the Physical Education Program. Student must have had a course in the teaching of the chosen activity before they are allowed to enroll.

P497 Organizational and Curricular Structures of Physical Education K-12 (2 cr.)

Techniques in organization and development of all-grade curriculum in physical education. Development and implementation of extracurricular activities.

P498 Practicum in Physical Education and

Athletics (1-3 cr.) A practical learning experience in teaching and/or coaching under the guidance of faculty and supervisor. Only Satisfactory (S) or Fail (F) grades given.

P499 Research in Physical Education and

Athletics (cr. arr.) This course is open to junior majors or minors in physical education.

R275 Dynamics of Camp Leadership (2 cr.)¹

Role of counselors in relation to objectives, organization, guidance, leadership skills, and program resources in organized camps.

R423 Visitor Behavior (3 cr.)

Examines the theory and findings of visitor and tourism research as it is conducted in such recreation and leisure settings as parks, museums, towns, historic sites, sporting facilities, and resorts. Topics include visitor motivations, expectations, social interactions, and assessment. Students will learn nine techniques for gathering information from and about visitors.

R470 Professional Field Experience in

Recreation (1-3 cr.) P: Consent of instructor. Practical/applied field work in a HPER setting.

R474 Camping Leadership II (2 cr.)

Advanced camping with an emphasis on practical experience in a camp setting.

S360 Highway Safety Administration (3 cr.)

Introduction to the organization and structure of both U.S. and Indiana highway traffic safety systems.

¹The Camp Leadership Course must be completed in an intensive session at the end of the first year a student enrolls in the school.

Emphasis placed upon system actors, agency responsibilities, the pervasiveness of motor accidents and their consequences, and system responses to reduce the frequency and severity of motor vehicle crashes.

S441 Readings in Safety Education (2 cr.) In-depth readings related to a specific safety education topic.

S456 Traffic Safety Education for Teachers (4 cr.)² Materials and methods for high school classroom and practice driving instruction. Psychophysical limitations of drivers, driving procedures, car procurement, scheduling, public relations, maintenance, pedestrian protection, skill exercises, road training. Students teach beginning drivers. Driver's license required.

S458 Driver Education Multiple Instruction Techniques (3 cr.)² Multimedia techniques, methods, and materials of instruction including multimedia systems and driving simulators. Multiple-car methods of instruction, including the design and operation of off-street driving ranges. Open only to juniors, seniors, and graduate students who will be completing certification in the field of driver education.

Graduate Physical Education Courses

H510 Organization and Administration of School Health Programs (3 cr.) Recommends criteria for the organization, implementation, and evaluation of health education programs in schools. Covers the areas of administration, health instruction, health services, and a healthful school environment. Discusses special roles and responsibilities of teachers, nurses, administrators, and other school and community personnel in promoting child health.

H517 Workshop in Health Education (1-3 cr.) Interesting topics of relevance to individuals in school and public health and related disciplines. Conducted in workshop fashion under the direction of faculty members. Emphasizes practical application, group involvement, and the use of resource personnel. Specific topics vary; course may be repeated for credit.

H522 Women's Health (3 cr.) Examines the relationships of women to health and health care, with attention to health concerns unique to women and common to both sexes throughout the life span. Emphasizes current information related to women's health issues and the health educator's role in women's health.

K500 Special Topics in Physical Education (1-3 cr.) Selected topics in physical education.

K506 Computer Applications in Physical Education (3 cr.) Hands-on applications in the use of microcomputers as problem-solving tools in physical education. Programming applications and problems in physical education, sport sciences, administration, athletics, and research.

K510 Administrative Theory of Competitive Sports Programs (3 cr.) Organization of high school athletics with reference to national, state, and local control. Staff, program, budget, health and safety, facilities, and other phases of administration.

K511 Legal Issues in the Sport Environment (3 cr.) An introduction to legal principles involved in amateur sport. Constitutional law issues such as athletic eligibility, NCAA due process, gender discrimination, and drug testing. In-depth explanation of tort liability. Contracts in amateur sport settings.

K525 Psychological Foundations of Exercise and Sport (3 cr.) Addresses theoretical and empirical aspects of topics including exercise and mental health, anxiety and sport performance, "personology" and sport, overtraining, exercise adherence, and perceived exertion.

K530 Mechanical Analysis of Human Performance (3 cr.) P: ANAT A215 or equivalent, PHYS P201 recommended. Newtonian mechanics applied to human movement. Analysis of sports techniques.

K533 Advanced Theories of High-Level Performance (3 cr.) An integrative analysis of the physiological, psychological, and biomechanical principles, mechanisms, and phenomena underlying the acquisition of the capacities and abilities required for high-level physical performance.

K535 Physiological Basis of Human Performance (3 cr.) P: PHYS P215 or equivalent. A study of physiological changes that occur with exercise. Emphasis on cardiorespiratory, muscular, and biochemical adaptations to training, and how these adaptations affect human performance. Physiological principles are applied to athletic training, adult fitness, weight regulation, and physical therapy.

K552 Problems in Adapted Physical Education (3 cr.) A study of problems as they relate to philosophy, procedures, and practices in adapted physical education.

K571 Administration of Physical Education (3 cr.) Prepares individuals to assume administrative roles in physical education. Concepts and practices related to the administration of physical education. Procedures for developing and evaluating learning experiences. Aspects of administration pertaining to programming, personnel, facilities, equipment, supplies, safety, and in-service programs.

K572 The Physical Education Curriculum (3 cr.) Influences on curricula. Designs for developing, revising, and evaluating physical education curricula. Alternative modes of curriculum organization. The interdependence of general education, specialized education, exploratory education, and enrichment education. The roles of teachers and administrators in the production of curricula. Suggested formats.

K576 Measurement and Evaluation in Physical Education (3 cr.) Theory of measurement in physical education, along with selection and administration of appropriate tests, and interpretation of results by statistical procedures. Project required to apply the theories involved.

K601 Readings in Kinesiology (cr. arr.) P: Graduate grade point average (GPA) of at least 3.0. Guided readings for broadening information about and understanding of the profession.

K602 Independent Study and Research (cr. arr.) P: Graduate GPA of at least 3.0.

Independent research conducted under the guidance of a graduate faculty member.

Elective Physical Education Program

D101 Beginning Ballet I (1 cr.) This course is designed for the adult learner in ballet technique. It includes barre work and center combinations that promote strength, flexibility, balance, and coordination. Ballet serves as a foundation for other forms of dance and enhances body posture and carriage.

D110 Beginning Modern Jazz Dance (1 cr.) This course is designed for the adult beginner in modern jazz dance and will be concerned with rigorously training the body in the styles of leading jazz educators. Warm-up exercises and jazz combinations will be performed, and historical, social, and ethnic dance contributions will be examined.

D201 Modern Dance Workshop (1 cr.) Collaboration of dance faculty in providing a wide variety of movement experiences in the areas of technique, composition, and improvisation. This course may be repeated.

D202 Intermediate Ballet (1 cr.) This course is a continuation of HPER D101 or is for the adult beginner with previous experience in ballet technique. It will cover a technical vocabulary of barre and center work to stimulate both the mind and the body.

D211 Advanced Technique I (2 cr.) P: HPER E355 or permission of the instructor. Designed to allow the student to develop a higher level of technical proficiency, with an emphasis on the application and analysis of various movement principles as they relate to dance and performance.

D212 Advanced Technique II (2 cr.) P: HPER D211. An extension of principles examined in D211 through the use of longer and more complex movement sequences, with an emphasis on style and performance.

D218 Modern Jazz Dance Technique (1 cr.) Instruction in jazz dance technique derived from the styles of Luigi and Gus Giordano; special emphasis on centering, precision and clarity of movement, and coordination and performance skills such as style and visual focus.

D221 Dance Composition I (2 cr.) P: HPER E255 or E355. Through problem-solving assignments and appropriate dance composition, tools for discovering movement will be developed.

D332 Dance and the Allied Arts II (3 cr.) P: Permission of instructor. Historical development of dance and related art forms, Renaissance through contemporary.

D351 Teaching of Modern Dance (1 cr.) P: HPER D221. Study of various approaches, methods, and materials for teaching dance at the secondary level, including procedures for evaluation.

² May be taken for graduate credit

D421 Choreographic Performance Project

(2 cr.) P: Senior dance performance majors only. Under faculty guidance, each student is responsible for initiating and developing a completed work for concert performance.

D441 Dance Production I (2 cr.) Basic orientation to technical theatre, specifically for dance. Production methods for publicity, audio-visual materials, and make-up design. Includes presentation of an original lecture-demonstration.

E100 Experiences in Physical Activity (1 cr.) Any of a series of courses in new and developing fitness and activity areas.

E102 Aerobic Dance (1 cr.) Course is a total fitness class that emphasizes cardiorespiratory conditioning, flexibility, muscular endurance, and coordination through rhythmical body movement. Only Satisfactory (S) and Fail (F) grades are given.

E105 Badminton (1 cr.) Beginning instruction in basic skills and techniques of badminton for singles, doubles, and mixed doubles play. Emphasis on basic skill development, rules, and strategy.

E109 Ballroom and Social Dance (1 cr.)

Instruction in the techniques of ballroom dance including fox trot, waltz, cha-cha, tango, rumba, samba, and fad dances.

E111 Basketball (1 cr.) Instruction in fundamental skills of shooting, passing, ball handling, footwork, basic strategies of offensive and defensive play, and interpretation of rules.

E112 Bicycling (1 cr.) Beginning instruction in the principles of fitness through a cycling program. Fitness testing will be done and cardiovascular training will be emphasized. Proper riding technique, safety, and other features of competitive and recreational cycling will be discussed.

E119 Conditioning (1 cr.) Instruction in basic principles of conditioning and fitness. Emphasis on muscular strength, muscular endurance, flexibility, and cardiorespiratory endurance. Designed for students without prior knowledge of conditioning methods.

E121 Conditioning and Weight Training

(1 cr.) Instruction in basic principles of conditioning and weight training. Emphasis on muscular strength, muscular endurance, flexibility, and cardiorespiratory endurance.

E123 Diving (1 cr.) Instruction in fundamental dives including approach, takeoff, execution of the dive, and entry into the water. Emphasis on basic forward, backward, reverse, and twisting somersaults. Course designed for all levels regardless of past diving experience.

E125 Exercise to Music (1 cr.) Instruction in exercises for flexibility and muscle toning. Exercises are set to musical routines.

E127 Fencing (1 cr.) Instruction in guard position, footwork, and basic defensive and offensive skills. Emphasis on fencing with foil and an overview of the sabre and épée.

E130 Army Physical Fitness (2 cr.) The path to total fitness requires a combination of physical

conditioning, mental conditioning, and commonsense dietary considerations. Army Physical Fitness is for those willing to accept a disciplined regimen proven to lead to total fitness.

E131 Folk and Square Dance (1 cr.) Introduction to folk dance in the United States and other countries. Instruction in fundamentals of movement, basic folk dance techniques, and square-dance patterns in traditional and modern folk and square dances.

E133 Fitness and Jogging I (1 cr.) Beginning instruction in the basic principles of fitness as they apply to a jogging program. Emphasis on cardiorespiratory endurance and flexibility. Basic concepts underlying Dr. Kenneth Cooper's aerobic program included. Course designed for students without prior experience in jogging programs or in aerobics levels I through III.

E135 Golf (1 cr.) Beginning instruction in techniques for putting, chipping, pitching, iron swing, and wood stroke. Course includes rules and etiquette of golf. Students play on par-3 courses. Fee charged.

E137 Gymnastics (1 cr.) Beginning instruction in basic skills and incorporation of basic routines in trampoline, tumbling, and vaulting. Emphasis on events performed by both men and women. All events will be included.

E139 Handball (1 cr.) Instruction in basic skills for beginning players. Includes both four-wall singles and doubles games.

E148 Tai Chi Chu'an (1 cr.) Instruction in basic skills and techniques for beginning-level participants in this non-contact martial art. Topics include breathing, centering, postures, and movement sequences.

E149 Judo (1 cr.) Beginning instruction in techniques for throwing, grappling skills, and limited self-defense. Students should achieve technical skill level of yellow belt. Judo uniform required.

E150 Karate (1 cr.) Beginning instruction in techniques for blocking, kicking, striking, punching, limited free fighting, and self-defense. Students should achieve technical skill level of yellow belt. Uniform required.

E151 Self-Defense (1 cr.) Instruction techniques for practical self-defense skills and situations. No uniform required.

E155 Modern Dance (1 cr.) Beginning instruction in modern dance technique, stressing knowledge and application of movement principles essential to dance training.

E159 Racquetball (1 cr.) Instruction in basic skills for beginning players. Includes both four-wall singles and doubles games.

E165 Soccer (1 cr.) Instruction in fundamental techniques, rules, basic team tactics, and strategies. Emphasis on competitive game scrimmages and fundamental drills.

E168 Swimming—Nonswimmers (1 cr.) Beginning instruction in self-rescue, remedial swimming skills, and several basic strokes. For the student with no swimming skills.

E181 Tennis (1 cr.) Beginning instruction in the fundamental skills of forehand and backhand strokes and serves. Competitive play in women's, men's, and mixed doubles.

E185 Volleyball (1 cr.) Instruction in fundamental skills of power volleyball. Emphasis on overhand serve, bump, set, dig, and spike. Team offensive and defensive strategies included.

E187 Weight Training (1 cr.) Instruction in basic principles and techniques of conditioning through use of free weights. Emphasis on personalized conditioning programs.

E189 Wrestling (1 cr.) Instruction in basic moves of takedown, escape rides, reversal, and pinning combinations. Class instruction appropriate for beginning- and intermediate-level wrestlers.

E190 Yoga (1 cr.) Introduction to the basic principles and techniques of yoga.

E200 Military Science—Leadership Lab

(1-6 cr.) P: Minimum grade point average (GPA) of 2.0, 54 semester credits. Conducted at Fort Knox, Kentucky, for six weeks, course will cover basic military skills and leadership. Students earn 1-6 credits, based on military science basic courses previously taken. Students should not have completed military basic training or Reserve Officer Training Corps (ROTC) basic course.

E219 Weight Loss and Exercise (2 cr.) Designed for overweight students, this class will stress the importance of diet and exercise in permanent weight control. Uses dietary behavior modification techniques and an exercise program to achieve a gradual reduction to and maintenance of ideal weight. Only Satisfactory (S) and Fail (F) grades given.

E230 Advanced Army Physical Fitness (2 cr.) P: E130 or consent of instructor. Continuing along the path to total fitness begun in E130, this course emphasizes the leadership aspect of army physical fitness. Students will lead physical training sessions, participate in and lead formation runs, and continue the discipline regimen begun in E130.

E250 Karate—Intermediate (1 cr.) P: Yellow-belt technical level or permission of instructor. Instruction in advanced applications of basic techniques and free fighting. Students should achieve technical level of green belt. Karate uniform required.

E255 Modern Dance—Intermediate (1 cr.) P: HPER E155 or permission of instructor. Intermediate modern dance technique stressing knowledge and application of movement principles essential to dance training.

E268 Swimming—Intermediate (1 cr.) Instruction designed to help the less-skilled swimmer master the five basic strokes and be proficient in self-rescue and basic rescue skills.

E270 Scuba (1 cr.) Introduction to scuba diving. Emphasis on safety and avoidance of potential dangers. A noncertification course.

E275 Aquatic Conditioning (1 cr.) Course designed for highly skilled swimmers interested in training methods that may be used by noncompetitive swimmers.

E281 Tennis—Intermediate (1 cr.) Instruction in spin service, volley, lob, and advanced drive placement. Emphasis on singles and doubles playing strategies.

E355 Modern Dance I—Advanced (1 cr.) P: HPER E255 or permission of instructor. Advanced techniques in modern dance with emphasis on performance of movement patterns and individual creative work.

E356 Modern Dance II—Advanced (1 cr.) P: HPER E355. Course may be repeated. Continuation of advanced techniques in modern dance with emphasis on performance of movement patterns and on individual creative work.

E371 Advanced Scuba (1 cr.) P: HPER E370 or National Scuba Certification. Course provides students with practical knowledge in advanced scuba. Topics include natural and compass navigation, search and recovery, night or limited visibility, and specialty and deep-diving knowledge.

E475 Lifeguard Certification (1 cr.) Instruction per American Red Cross standards prepares students to lifeguard at pools and non-surf beaches. Corequisites (set by the Red Cross) needed to earn the Lifeguarding Certification (i.e., Standard First Aid and CPR) are included in this course.

E477 Water Safety Instructor (2 cr.) Instruction prepares students to teach American Red Cross swimming and water safety courses to infants/parents, preschoolers/parents, youths, and adults. Includes safety course for swim coaches. Students meeting written and skill criteria earn American Red Cross Water Safety Instructor certificate.

Department of Tourism, Conventions, and Event Management (TCEM) Courses

The courses below represent the total offerings of the Department of Tourism, Conventions, and Event Management. Not all courses are offered every semester. The number of credit hours given for a course is indicated in parentheses following the course title. The abbreviation P refers to prerequisites.

TCEM 100 Introduction to Tourism and Hospitality Management (3 cr.) An overview of the industries. Management theory and responsibilities in addition to career paths are presented.

TCEM 110 College Life Orientation (1 cr.) To introduce new TCEM majors to the department, school, and university to ensure a successful beginning to their academic careers.

TCEM 115 Computers in the Tourism and Hospitality Industry (3 cr.) Establishes computer competency with operating systems, spreadsheets, and

word processing. Explores applications of computers in the tourism industry with emphasis on programs impacting the management of organizations.

TCEM 119 Travel Career Development (3 cr.) A comprehensive investigation of the broad range of available travel services and products. Skills needed to begin a productive career in the travel industry are emphasized.

TCEM 141 Financial Accounting for the Service Industries (3 cr.) Fundamental accounting principles and procedures applied to the hospitality and service industries. Includes study of the uniform system of accounts, financial statements, special purpose journals, and subsidiary ledgers unique to the hospitality and service industries.

TCEM 171 Introduction to Convention/Meeting Management (3 cr.) An overview of the conventions, expositions and meetings industry. Focus will be on the operational aspects of various industry segments and the intra-industry interaction of each.

TCEM 172 The Development and Management of Attractions (3 cr.) An examination of the process of developing visitor attractions and a discussion of the main issues involved in their management.

TCEM 181 Front Office Operations (3 cr.) Concepts of organization, communication, ethics, and policy formulation in the front office. Introducing the basic techniques and trends in systems and equipment available to meet the needs of the management and the guest.

TCEM 191 Sanitation and Health in Food Service, Lodging, and Tourism (3 cr.) The application of sanitary and public health engineering principles to food service and lodging operations.

TCEM 212 Tourism and Hospitality Management Principles (3 cr.) P: TCEM 100. The principles of planning, organizing, directing, and controlling as applied to the hospitality service industry. Topics relating to motivation and leadership will be stressed. Issues of organizational change, organizational effectiveness, and the nature of managerial work will be addressed.

TCEM 218 Wines of the World (3 cr.) P: At least 21 years of age. An examination of the wines produced in other countries. Identify the characteristics of the growing regions, types of wines produced, economic considerations of purchasing imported wines, and marketing these wines to increase beverage sales.

TCEM 231 Marketing Tourism and Hospitality (3 cr.) Development, use, and evaluation of effective merchandising, advertising, and public relations techniques in the hospitality and tourism industries.

TCEM 241 Financial Analysis and Decision Making in Tourism and Hospitality Operations (3 cr.) P: TCEM 141. Managerial and financial analyses of numerical data used for decision making. Consideration of systems, techniques, information types, and presentational forms used by hospitality management. Emphasis on situations oriented to the hospitality industry.

TCEM 271 Mechanics of Meeting Planning (3 cr.) P: TCEM 171. An analysis of details pertinent to the organization and execution of a meeting. Topics include finances and contracts, site selection, program development, marketing, and evaluation and wrap-up.

TCEM 272 The Tourism System (3 cr.) Travel, trends, travel modes, and economic impact on destination area. Emphasis on local, regional, and national tourism.

TCEM 281 Hotel Management (3 cr.) P: TCEM 181. All components of a hotel are reviewed to examine the efficient flow of activities among departments for optimal operation. Includes discussion of operational departments relevant to the type of property. Focuses on management procedures to maximize guest service and profit.

TCEM 305 Newsletter Design and Technology Work Experience (1 cr.) In-service training and practical experience in the design and development of a newsletter.

TCEM 306 Destination Development (3 cr.) P: TCEM 212, TCEM 231, TCEM 352. Preparation of a destination development plan that presents a comprehensive outline of a proposed tourism operation.

TCEM 308 Wine Selection (3 cr.) P: At least 21 years of age. Topics will include types of wines, wine quality, and serving suggestions. Wine tastings will be included.

TCEM 310 Special Event Management (2 cr.) Course topics will include planning for social events such as themed parties, weddings, or balls; planning for fundraiser events; planning recognition events; and planning entertainment events.

TCEM L310 Special Event Management Laboratory (1 cr.) Laboratory experiences in special event execution.

TCEM 311 Procurement Management (3 cr.) Identifies and describes foods, beverages, supplies, equipment, furniture, and furnishings. Provides methods and criteria for recognizing quality and for evaluating, specifying, purchasing, and inspecting these materials.

TCEM 312 Human Resource Management for the Service Industries (3 cr.) P: TCEM 212. Covers the concepts of management of people for effective operation of institutions involving supervisory development and communications; the pretesting, training, and evaluating of employees; and the development of attitudes and morale of people working together.

TCEM 313 Hospitality Career Planning (1 cr.) Development of skills and understanding of tools and techniques of planning for a career in the hospitality industry. Emphasis on preparation for the job search.

TCEM 317 Seminar Planning (1 cr.) Seminar planning to provide education update for business and industry or for professional licensing. Content selection, speaker arrangement, site arrangement, and quality evaluation are possible course topics.

TCEM 318 Wine Management (3 cr.) Students will be presented with a concise, practical guide to profitable wine management. The course will incorporate the best experience amassed by operations over the years, with heavy emphasis on the recent trends.

TCEM 319 Management of Sports Events (3 cr.) P: TCEM 171. Amateur or professional sport event planning. Course will include discussion of site selection, logistics, personnel, housing, food, and legalities of hosting an event.

TCEM 322 Hospitality Facilities Management (3 cr.) Technical and managerial issues related to the operation and maintenance of the physical plant and equipment in hospitality industry facilities.

TCEM 334 Cultural Heritage Tourism (3 cr.) P: TCEM 272. Examines the balance between visitor interests and needs as compared to protecting cultural and heritage resources. Looks at ways of linking quality cultural heritage tourism to community development. Special emphasis will be placed on Indiana cultural and heritage tourism.

TCEM 352 Promotional Communications (3 cr.) P: BUS X204 or consent of instructor. Provides information on the field of personal and public relations. Explores effective public relations methods. Focuses on the relationship-oriented decisions a public relations professional must make based upon different circumstances that arise within an organization.

TCEM 362 Economics of Tourism (3 cr.) P: ECON 201, TCEM 272. Discussion of the economic impact of travel on tourism's various sectors and of the quantitative methods that can be applied to travel forecasting and tourism projects.

TCEM 372 Global Tourism Geography (3 cr.) P: TCEM 272. Analysis of U.S. and world travel destinations, including the exploration of principal geographic features, population centers and attractions, habits, customs, and traditions, and festivals and events, as these relate to the hospitality and travel industry. The major airline and airport/city codes in North America and overseas are also covered.

TCEM 377 Exhibit Marketing (3 cr.) P: TCEM 231. A successful exhibit can be one of the most powerful sales and marketing tools in any company's arsenal. This course is designed to help students through every phase of the endeavor—from the initial planning stage to implementation and post-show follow-up.

TCEM 385 Beer and Spirits Management (3 cr.) Students will be introduced to the basic principles of beer and spirits production with a primary focus on manufacturing, quality criteria, beer and spirits styles, and sensory standards. Evaluation by tasting is an integral part of the course.

TCEM 387 Tourism Internship (1-12 cr.) P: Junior standing. Provides students with an opportunity to improve their operational/ managerial skills by working in new areas.

TCEM 391 Event Catering Management (1 cr.) Exploration and creative use of foods and beverages to meet the clients' needs for on-premise and off-

premise catering. Concepts of management for the effective operation of catering businesses with analysis of financial framework, menu planning, customer relations, and production-service logistics.

TCEM L391 Event Catering Management Laboratory (1 cr.) A laboratory to execute on-premise and off-premise catered events. Course is completed at Elkhart Lake, Wisconsin.

TCEM 392 Destination Development (1 cr.) P: TCEM 212, TCEM 231, TCEM 352. To prepare destination development plans that present a comprehensive outline of a proposed tourism operation.

TCEM 411 Hospitality Law (3 cr.) P: TCEM 212, TCEM 312. Rights and duties of innkeepers and restaurateurs, civil rights, contracts, negotiable instruments, and types of organizations.

TCEM 461 Tourism Research and Planning Development (3 cr.) P: TCEM 212, TCEM 362, and STAT 302. This course discusses tourism research planning and development as a process, with emphasis on goal achievement for both tourism businesses and host communities.

TCEM 472 Global Tourism (3 cr.) P: TCEM 272. Critical issues, problems, and opportunities that face the tourism industry.

TCEM 499 Operational Analysis (3 cr.) P: TCEM 212, TCEM 231, TCEM 241, STAT 302, and senior classification. Combines all of the areas concerned with executive management, marketing, personnel, cost controls, etc. Examines the hospitality organization as a total system, with emphasis on strategic planning, systems design, and problem analysis.

Foods and Nutrition (FN) Courses

FN 203 Foods: Their Selection and Preparation (3 cr.) Principles of food selection, preparation, and meal planning, including purchasing guides, nutrition principles, and meal service.

FN 297 Food and Nutrition Trends and Issues (1 cr.) Exploration of trends and issues in food and nutrition that relate to the hospitality industry.

FN 303 Essentials of Nutrition (3 cr.) Credit not given for both FN 303 and FN 315. Basic nutrition and its application in meeting nutritional needs of all ages. Consideration is given to food selection, legislation, and community nutrition education programs.

FN 309 Vegetarian Lifestyles (1 cr.) Course topics will include reasons for selecting vegetarianism and types of vegetarianism.

FN 313 Heart-Healthy Principles of Menu Planning and Food Preparation (3 cr.) Basic principles of nutrition as applied to menu planning, food preparation, and recipe modification. Computerized nutrient analysis and laboratories will be used to practice principles.

FN 315 Fundamentals of Nutrition (3 cr.) P: CHEM C101 or BIOL N217 or consent of instructor. Credit not given for both FN 303 and FN 315. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Administrative Officers

PAUL NICHOLAS KELLUM, Ed.D., *Dean of the School of Physical Education, Indianapolis, and Associate Dean of the School of Health, Physical Education, and Recreation, Bloomington*

LINDA BROTHERS, Ph.D., *Chairperson of the Department of Tourism, Conventions, and Event Management*

ELIZABETH JONES, P.E.D., *Chairperson of the Department of Physical Education*

Department of Physical Education Faculty

(formerly Normal College of the American Gymnastic Union)

Angermeier, Lisa, Ph.D. (*Indiana University, 2000*), *Assistant Professor of Physical Education*

Bahamonde, Rafael E., Ph.D. (*Indiana University, 1994*), *Assistant Professor of Physical Education*

Barnett, Sandra, M.S. (*Indiana University, 1995*), *Lecturer in Physical Education*

Barrett, Sonja Sue, M.S. (*Purdue University, 1965*), *Associate Professor Emerita of Physical Education*

Bradley, Jay A., M.Ed. (*University of Cincinnati, 1979*), *Clinical Assistant Professor and Director, Professional Athletic Training Program and Associate Head Athletic Trainer*

Craigie, Paige, M.A., (*Butler University, 1983*), *Part-time Lecturer in Physical Education (Dance)*

Doecke, Johannah, Ph.D. (*Ohio State University, 1984*), *Part-time Lecturer in Physical Education*

Jones, Elizabeth Ann, P.E.D. (*Indiana University, 1983*), *Chair of the Department of Physical Education and Associate Professor of Physical Education*

Kellum, Paul Nicholas, Ed.D. (*Indiana University, 1986*), *Dean of the School of Physical Education, Indianapolis; Associate Dean of the School of Health, Physical Education, and Recreation, Bloomington; and Professor of Physical Education*

Kimball, Mary Maitland, M.A. (*Butler University, 1975*), *Professor Emerita of Physical Education and Director of Dance*

Lienert, Walter J., B.S. (*Indiana University, 1950*), *Assistant Professor Emeritus of Physical Education*

Mikesky, Alan E., Ph.D. (*University of Texas, 1987*), *Professor of Physical Education*

Schilling, Edmund C., M.S. (*Butler University, 1974*), *Associate Professor of Physical Education and Part-time Associate Professor of Education*

Sidhu, Hitwant, P.E.D. (*Indiana University, 1957*), *Professor Emeritus of Physical Education*

Stanton, Kathleen A., Ph.D. (*University of Virginia, 1995*), *Assistant Professor of Physical Education*

Teegarden, Karen W., M.S. (*Indiana University, 1971*), *Assistant Professor of Physical Education*

Udry, Eileen, Ph.D. (*University of North Carolina—Greensboro, 1995*), *Assistant Professor of Physical Education*

Urtel, Mark G., M.S. (*Ball State University, 1992*), *Lecturer in Physical Education*

Vessely, Jeffrey Stephen, Ed.D. (*Indiana University, 1986*), *Professor of Physical Education*

Department of Tourism, Conventions, and Event Management Faculty

Achana, Francis T., Ph.D. (*Purdue University, 2000*), *Assistant Professor of Tourism, Conventions, and Event Management*

Avgoustis, Sotiris H., Ph.D. (*Indiana State University, 1996*), *Assistant Professor of Restaurant, Hotel, Institutional, and Tourism Management*

Bennett, James D., M.S. (*Indiana University, 1996*), *Lecturer in Restaurant, Hotel, Institutional, and Tourism Management*

Brothers, Linda R., Ph.D. (*Purdue University, 1984*), *Chair of the Department of Tourism, Conventions, and Event Management and Associate Professor of Home Economics*

School of Public and Environmental Affairs

The School of Public and Environmental Affairs (SPEA) is a professional school dedicated to applied interdisciplinary learning combining the study of public affairs and environmental sciences. The interests of the faculty and professional staff typically fall into one or more of the following areas:

- criminal justice
- environmental science and policy
- finance and economics
- health science and administration
- law
- policy and administration
- public safety
- urban affairs

The school's faculty, staff, and students work individually and jointly to solve problems that require SPEA's unique combination of in-depth knowledge in the natural, behavioral, social, and administrative sciences.

SPEA, because of its broad program base, offers scientific and technical assistance to Indiana communities from any of the eight IU campuses. The organizational design of the school reinforces a wide network of continuing relations with a large number of public agencies at all levels of government.

Welcome from Dean Astrid E. Merget

The Indiana University School of Public and Environmental Affairs has no small agenda. Because society's most critical concerns are connected to quality of life and sustainability of all life forms, our teaching, research, and service are distinguished by immediate relevancy and benefit in the public, private, and nonprofit sectors. Founded in 1972, the school has, from its very beginning, embraced a distinctive interdisciplinary approach to the pursuit of comprehensive solutions for society's most complex challenges in our classrooms, labs, and research centers.

Our work touches citizens around the world in multiple ways on any given day. On our campuses throughout the state of Indiana, our students and faculty address an assortment of issues that help define how well citizens of the world live, how well their institutions serve and sustain, and how well their environments are protected and enhanced.

We assess the water people drink and how their governments define and assist those most in need. Members of our faculty study the safety of air and highway travel and transport and how health care and food quality can be enhanced. In our research centers, our students learn how developing governments define principles of justice and address criminal behavior and social welfare. Today, we lead the country in helping groups and organizations in all

sectors learn inventive techniques to settle disputes and approach their environmental catastrophes. And internationally, our faculty and our students help new democracies determine how tax monies are best collected and utilized for society's betterment.

I am pleased with your interest in the School of Public and Environmental Affairs and hope that your investment of time here will ultimately serve you well as you prepare for a most meaningful and rewarding professional life.

With best wishes,

Astrid E. Merget
Dean

Welcome from Associate Dean James L. Perry

I am pleased to welcome you to the School of Public and Environmental Affairs, which is a multidisciplinary division of Indiana University. We are located in downtown Indianapolis on one of the most dynamic urban campuses in the nation. Our location fosters strong relationships with public, private, and nonprofit organizations in the metro area. This allows us to offer unique opportunities to our students, which blend academic course work with practical experience.

Our faculty has earned national distinction for innovative programs in public affairs, urban affairs, environmental science, planning, criminal justice, and health administration. It is my pleasure to announce that our graduate concentration in nonprofit management is consistently ranked among the top ten in the nation.

In addition to our academic programs, SPEA is affiliated with a variety of nationally recognized research centers. Students and faculty are developing cutting-edge research in such areas as health policy and health services, urban policy and the environment, and the intersection of government and the nonprofit sector.

We invite you to join the legacy of SPEA and challenge you to make a world of difference in your community!

James L. Perry
Associate Dean

SPEA Centers, Institutes, Programs, and Services

The School of Public and Environmental Affairs encompasses public service activities that complement innovative academic programs. The school provides a wide variety of services to an equally broad range of federal, state, and local agencies.

The Bowen Research Center, based in Indianapolis, is the result of a joint effort of the Department of Family Medicine, School of Medicine and the School of Public and Environmental Affairs. Named for Governor Otis Bowen, M.D., the former director of the U.S. Department of Health and Human

Services, the Bowen Research Center is the university's leader in health policy and health services research. The center's multimillion-dollar research program provides important research opportunities for the faculty, staff, and students. The center's research focuses on primary health care service among rural and underserved populations and promotes health, disease prevention, and reduction of the untimely loss of life through research on lifestyle changes. The center also develops methods to control health care costs and improve the effectiveness, efficiency, humaneness, and appropriateness of health services. The Bowen Research Center can be reached at (317) 278-0312 or www.bowenresearchcenter.iupui.edu.

The Executive Education Program is one of the most prestigious leadership programs in the nation. Offered through the School of Public and Environmental Affairs, the Executive Education Program works with the government, nonprofit agencies and the private sector to prepare leaders and managers to meet today's challenges and anticipate tomorrow's opportunities.

The Executive Education Program offers graduate-level programs at four sites nationally: Washington, DC; Seattle, Washington; Indianapolis, Indiana for the United States Navy; and Louisville, Kentucky for the United States Army Corps of Engineers. Graduate programs include the Master of Public Affairs (M.P.A.), the Public Management Certificate and the Environmental Management Certificate.

The Executive Education Program has formed a partnership with the American Association of State Highway and Transportation Officials (AASHTO) which also meets in Indianapolis. Together, they have created two institutes to challenge and educate transportation managers and leaders. The National Transportation Leadership Institute and the Graduate Leadership/Management Institute are two of the most influential programs for transportation management.

The Executive Education Program's partnership with the Indiana Health and Hospital Association (IHHA) created a 10-course management institute for health care officials in Indiana to help them lead their organizations through the continually changing health care industry.

SPEA's Executive Education Program also offers customized leadership and management programs for local and national clients.

The Institute for the Study of Government and the Nonprofit Sector is the result of a joint initiative of Indiana University's Center on Philanthropy, the Center for Urban Policy and the Environment, and the School of Public and Environmental Affairs. The purpose of the institute is to support intellectual exchange between faculty members, stimulate extramural support for faculty research, and engage students and returning practitioners in a discussion of issues involving the intersection of government and the nonprofit sector. The mission of the institute is to create and disseminate knowledge about the complex linkages between government and the nonprofit sector and to develop specialized faculty expertise. The institute strives to be the preeminent national and

international resource on matters related to government and the nonprofit sector. The institute can be reached on the Web at www.isgns.spea.iupui.edu.

The Center for Urban Policy and the Environment brings analyses and decision facilitation competencies to complex societal problems, especially in central Indiana. Foundations, governments, nonprofit organizations, and businesses have supported center projects. Affiliated faculty from Indiana University–Purdue University Indianapolis and other universities, professional staff of the center, and graduate assistants commonly forms teams for projects. Clients who have engaged the center in recent projects include: the Central Indiana Corporate Partnership, the State of Indiana, the Indianapolis–Marion County Public Library, the City of Indianapolis, the Indianapolis Neighborhood Housing Partnership, and the Catholic Diocese of Cleveland. The center is evaluating implementation of the charitable choice provisions of the welfare reform act with an award from the Ford Foundation. The Lilly Endowment has provided an award of general support to the center that is funding extensive analyses of investments by households, businesses, governments and nonprofits in central Indiana.

Center for Urban Policy and the Environment
School of Public and Environmental Affairs

Placement and Internship Office

SPEA's students utilize IUPUI's Career Center and the expertise of SPEA's career representative in making the transition from the university setting to the working world. Workshops, individual counseling, alumni mentoring, and an extensive library are provided. Other services include bulletins, directories, and networking interviews with on-campus recruiters, and automated resume preparation and distribution to employers.

SPEA students also may make internship arrangements through faculty and the SPEA program directors.

In recent years, students have held internships in the following types of organizations: county government, state government, federal government, police departments, environmental consulting firms, hospitals, assisted living facilities, nursing homes, law firms, nonprofit agencies, private corporations, pharmaceutical firms, insurance companies and more.

Internship programs are designed for maximum flexibility so that many valid learning experiences can qualify as internships. Work can be full- or part-time, and paid or unpaid; however, prior approval by the student's faculty advisor is always required. After obtaining approval for an internship, a student may register for 1-6 credit hours, earning one credit for every 80 hours of work, with a minimum of 120 hours of work. All credit for an internship is awarded on an S/F (Satisfactory/Fail) basis. Credit is not granted for

work experience obtained prior to approval of an internship and enrollment in the appropriate internship class.

Students on the IUPUI campus seeking career-planning assistance should contact:

Career and Employment Services
Business/SPEA 2010
(317) 274-2556
Web: www.iupui.edu/~career

Career-planning assistance also is available on other campuses. For information, contact:

Placement and Internship Office
SPEA 200
Bloomington Campus
(812) 855-9639
Web: www.indiana.edu/~speacare

SPEA Alumni Association

SPEA maintains contact with alumni through the SPEA Alumni Association, a constituent society within the parent Indiana University Alumni Association. The SPEA Alumni Association publishes the school's newsletter, *Alumni Update*, mailed two times a year to more than 18,000 SPEA alumni located in all 50 states and 50 countries. Through this newsletter, alumni, faculty, and students are able to maintain contact. The Alumni Association raises funds for student scholarships with a summer golf outing in Indianapolis and with specialized efforts for specific programs. It sponsors the publication of an alumni directory and sponsors alumni events in several major cities. The SPEA Alumni Association is governed by an elected board of directors, which meets biannually.

Student Organizations

Alpha Phi Sigma

Alpha Phi Sigma is the national criminal justice honor society, with chapters established on the Northwest, Fort Wayne, South Bend, Kokomo, and Indianapolis campuses of Indiana University. The society recognizes scholastic excellence by students in the field of criminal justice. It was founded in 1942 and was admitted to the Association of College Honor Societies in 1980. Membership of graduate students is limited to those who have a bachelor's degree in criminal justice or who are currently doing graduate work in this field. A minimum grade point average of 3.4 is required of graduate students seeking membership in Alpha Phi Sigma.

Indiana Health Student Association

The purpose of the Indiana Health Student Association is to: stimulate professional career development and leadership of its members; provide the opportunity to assemble with and enjoy the fellowship of students and faculty whose professional interests are in public and environmental health; encourage students to become active in causes and projects which will protect the environment and provide better health care for our society; and keep members informed of recent trends in health-related areas.

Pi Alpha Alpha

Pi Alpha Alpha is the national honorary society for schools of public affairs and administration. The society acknowledges outstanding scholarship and

contributions to these fields. It was founded in 1972 by the National Association of Schools of Public Affairs and Administration (NASPAA) to honor those whose performance in public affairs has been distinguished. The Indiana chapter of Pi Alpha Alpha is a charter chapter. Membership in Pi Alpha Alpha may be compared to membership in Phi Beta Kappa for liberal arts graduates. A person evaluating credentials in the various fields of public service should recognize the professional quality such a membership represents.

Undergraduate students are eligible for Pi Alpha Alpha membership when they are in the top 10 percent of their graduating class with a minimum grade point average of 3.50 in at least 15 credit hours of SPEA courses, when they are in the last semester of the junior year or in the senior year, and when they have earned a grade point average of at least 3.00 in all course work.

Alumni are eligible for membership if they meet all the requirements of student membership, even if they graduated before induction by the Indiana chapter.

Honorary membership is available to any person who has achieved distinction in public administration and who has the distinguished qualities that Pi Alpha Alpha fosters.

Phi Alpha Delta Law Fraternity, Prelaw Chapter

Phi Alpha Delta Law Fraternity, International is a professional service organization composed of prelaw students, law students, legal educators, attorneys, judges and government officials. Phi Alpha Delta was founded in 1902 for the purpose of promoting professional competency and achievement within the legal profession. It is also the first law fraternity to admit women. Phi Alpha Delta (PAD) is the world's largest law fraternity with almost 200 prelaw chapters, 179 law school chapters and 94 alumni chapters in the United States, Canada, Puerto Rico and Mexico.

Undergraduate Programs

The School of Public and Environmental Affairs on the Indianapolis campus offers a wide range of undergraduate programs. The following is a list of bachelor degrees offered through SPEA:

- Bachelor of Science in Public Affairs with majors in:
 - Management
 - Civic Leadership
- Bachelor of Science in Public Health with majors in:
 - Health Administration
 - Environmental Science and Health
- Bachelor of Science in Health Services Management (associate degree required)
- Bachelor of Science in Criminal Justice

Minors are available in the following areas:

- Public and Environmental Affairs
- Criminal Justice
- Environmental Science and Health
- Health Systems Administration

In addition, SPEA offers a number of undergraduate certificates:

- Effective Citizenship
- Environmental Studies
- Nonprofit Management
- Public Affairs
- Public Health
- Public Management
- American Humanics

General information concerning these programs can be obtained by visiting our Web site at www.spea.iupui.edu or from the SPEA Student Services Office:

Student Services Office

Indianapolis, IN 46202-5152
(317) 274-4656
(877) 292-9321: toll free
e-mail: infospea@iupui.edu
Web: www.spea.iupui.edu

Admissions

SPEA has a special program to admit freshman students simultaneously to SPEA and to the University College. To be eligible for this dual admission, applicants must meet the general university and campus requirements for admission, have a minimum combined Scholastic Aptitude Test (SAT) (or equivalent) test score of 990, and be in the top quartile in their high school ranking.

Students who do not qualify for dual admission at Indianapolis or choose not to apply for freshman-level entry may be admitted to the School of Public and Environmental Affairs after they have completed 12 credit hours with a minimum cumulative grade point average of 2.00.

Inter-campus Transfer

Students admitted to the School of Public and Environmental Affairs at any campus of Indiana University may transfer permanently to SPEA on another campus, provided they meet the requirements for admission and good academic standing at the desired campus. Students wanting a temporary inter-campus transfer need only meet the good academic standing requirements.

Policies Governing the Undergraduate Program

The following academic policies of the School of Public and Environmental Affairs are applicable to all SPEA undergraduate programs regardless of the campus where they are offered. Additional policies at individual campuses may also apply to SPEA students.

Grading Policies SPEA follows the official grading system of Indiana University, described in the introductory section of the bulletin.

Good Academic Standing Students are in good academic standing when their semester and their cumulative grade point averages are 2.00 or above, and their grade point average in all courses counting in the SPEA core and major/concentration requirements is at least 2.30. Students must be in good academic standing to graduate.

Acceptance of Grade Replacement SPEA students who have retaken a course (must be same department and course number) may request to have only the last grade computed in their grade point average. Courses must have been taken the fall semester of 1996 or later, and can only have been taken on the IUPUI campus.

Forgiveness Policy This policy applies to former IU students pursuing a first undergraduate degree who have been away from the IU system and have not attended any other college or university, including any campus of IU, for the last five years. This policy first became available to students returning to SPEA in the fall of 1996. Students must apply for forgiveness upon application for admission to a degree-granting unit. If the student has not yet been admitted to a degree-granting unit, the student should submit a notification of intent to petition for academic forgiveness as part of the academic advising process. If the petition is approved, the student starts with a fresh cumulative grade point index, after which all the rules of academic probation and dismissal (for SPEA) will apply. The school will evaluate the student's transcript, and all courses taken previously will remain on the permanent record. Only credit hours for courses with grades C or above, or P and S may be counted toward degree completion. After approval, the student must complete a minimum of 32 credit hours on the IUPUI campus after his or her return in order to meet the graduation residency requirement.

Probation Students will be placed on academic probation if their cumulative or semester grade point average is below 2.00 or their SPEA core and major/concentration GPA falls below 2.30. In order for the core and major/concentration GPA to be considered, students must have completed 12 or more credit hours in the core and major/concentration.

Critical Probation After one semester on probation, students who fail to return to good academic standing will be placed on critical probation. At the discretion of the undergraduate program director, these students could be dismissed. If a student is given the opportunity to enroll under critical probation, SPEA will establish strict conditions that must be met before that student will be allowed to register for future classes.

Dismissal Students can be dismissed if they fail to return to good academic standing after one semester on critical probation. Students also may be dismissed if, in the opinion of the undergraduate program

director, they are not making satisfactory progress toward their degrees.

Re-admission Dismissed students must petition their campus undergraduate program director for re-admission. Dismissed students whose petitions are denied will not be allowed to register.

Grade Appeals Students generally have one year to appeal a grade given by a SPEA faculty member. Resolution of the issue with the class instructor must be attempted before submitting a written appeal to the appropriate program director.

Student Rights and Responsibilities These provide for due process in the event of disciplinary or other actions and are explained in detail in the student handbook, *Code of Student Rights, Responsibilities, and Conduct*. In accordance with federal law, student records are confidential and are available to other persons only under specific conditions as outlined in university regulations. Students are responsible for planning their own academic programs and for meeting the requirements for their degree or certificate programs. Faculty and academic advisors are obligated only to assist students in meeting this responsibility.

Academic Integrity This is a basic principle requiring that students take credit only for ideas and efforts that are their own. Academic dishonesty violates that principle and undermines the bonds of trust and cooperation among members of the university community. Penalties and procedures that are applicable when academic misconduct or dishonesty occurs are provided in the *Code of Student Rights, Responsibilities, and Conduct*.

Sex Offenders Screening Policy for Students/Applicants Indianapolis applicants should be aware that criminal convictions may result in ineligibility for participation in certain courses/activities within the School of Public and Environmental Affairs. Questions regarding school policy on such matters should be addressed to the appropriate program director.

Other Policies Concerning Degree Requirements

Bulletin Policy Students are expected to complete the requirements for their undergraduate degree within 10 years of admission to the School of Public and Environmental Affairs. Students are allowed to continue beyond this time period only at the discretion of the undergraduate program director or campus director. If a student has not taken classes for three years or more, that student must satisfy program requirements of the School of Public and Environmental Affairs in effect at the time of re-activation. Requests for deviation from requirements listed in the bulletin must be approved in writing by the program director, whose decision is final.

Hours Requirements Students must successfully complete a minimum of 120 credit hours for most Bachelor of Science degrees and a minimum of 60 credit hours for Associate of Science degrees. The campus at which a student completes the plurality of required course work will award the degree, provided that campus is authorized to grant the degree/major/concentration and that the student has been admitted to that campus. Students may transfer no more than 90 credit hours (60 credits from a junior college) toward a Bachelor of Science degree or 30 credit hours toward an Associate of Science degree. Class standing, based on total credit hours that count toward minimum degree requirements, is as follows: senior, 86 or more; junior, 56-85; sophomore, 26-55; freshman, fewer than 26.

Grade Point Average Requirement A minimum cumulative GPA of 2.00 is required for the B.S. and A.S. degrees. In addition, a SPEA core and major/concentration GPA of 2.30 must be maintained in order to graduate. For students seeking certificates or minors from SPEA, the minimum GPA requirement is 2.00 in all applicable course work.

Double-Counting Generally, courses taken to meet a specific degree requirement cannot be double-counted (i.e., used to satisfy any other degree requirement). Two exceptions to this rule are: Environmental Management majors may double-count SPEA E272 Introduction to Environmental Sciences as a core and major/concentration requirement, and SPEA students earning a SPEA minor may double-count two minor courses.

Application for Degree All students must fill out an application for degree at the SPEA records office on their campus. This application is usually filed six months before the expected graduation date.

Degrees Awarded with Distinction SPEA recognizes outstanding performance by awarding bachelor's and associate degrees with three levels of distinction to students who rank within the upper 10 percent of their SPEA graduating class and have completed a minimum of 60 hours at Indiana University for a B.S. (30 hours for an A.S.). The levels of distinction are as follows: highest, 3.90 and above; high, 3.70 through 3.89; distinction, 3.50 through 3.69.

Requirements for a Second Bachelor's Degree Students must petition for approval to work toward a second bachelor's degree. If permission is granted, students are required to take 30 credit hours beyond the credits used for the first bachelor's degree and satisfy all the requirements for the second degree. Generally, SPEA encourages students to work toward a graduate degree rather than a second bachelor's degree.

Available Options A student in good academic standing may choose to take a maximum of eight elective courses (two per academic year) **pass/fail** for a B.S. degree or two courses for an A.S. degree. Deadlines for exercising this option are published in the *Schedule of Classes* and are strictly enforced.

With prior approval, a student may take three courses totaling no more than 10 credit hours by

correspondence through the IU Division of Extended Studies, Independent Study Program. Under no circumstances may a student satisfy a core or major/concentration requirement by correspondence.

With SPEA faculty approval, a student in good standing may earn a maximum of 15 credit hours of elective credit through the SPEA **internship** program. The SPEA internship program is described in more detail elsewhere in this bulletin.

SPEA students may choose to pursue a **minor** from another school or department or within SPEA in an area other than their degree or major/concentration. Students interested in a minor should contact that department for additional information.

Honors and Accelerated Master's Programs

Sophomores and juniors who have completed at least 45 credit hours with a cumulative grade point average of 3.50 or higher may apply for the Honors Program. The primary requirements are that a student maintain the 3.50 GPA, successfully complete designated honors courses, and write a senior thesis. Students may propose a unique course of study in consultation with the SPEA honors advisor.

The Accelerated Master's Program (A.M.P.) is a competitive program for outstanding SPEA students. Students may apply to the Master of Public Affairs (M.P.A.), the Master of Health Administration (M.H.A.), or the Master of Planning (M.Pl.) early in their junior year.

Participation in this program allows the student to fulfill some graduate program requirements during the senior year. Graduate courses count for both graduate and undergraduate degree requirements. Before starting the graduate program, students must have satisfied all general education and core requirements with a minimum of 96 credit hours completed toward their bachelor's degree (90 credit hours for students seeking the M.H.A. degree). For additional information, students should contact the appropriate program director.

International Programs

SPEA offers several opportunities to study abroad for credit:

- the Rotterdam Program in the Netherlands (spring and fall)
- the Parliamentary Internship Program in Canberra, Australia (year-round).

The Rotterdam program is a one-semester program that allows students to take 15 credit hours in the general area of public affairs. The Parliamentary internship is available with or without course work and is offered each semester and during the summer (the Australian winter). In addition, IU offers many other officially approved study abroad programs that can, with the authorization of an advisor, count for SPEA credit.

All these programs are taught in English, and the IU credit obtained costs the same as it would on campus. Financial aid obtained is normally applied to these overseas experiences. Experience has taught us that studying abroad does not adversely affect a student's GPA, increase the cost of study, or delay graduation,

even though many people seem to think one or all of these things will happen.

Our purpose in creating these study abroad opportunities is to provide students with a unique chance to broaden their horizons, help them prepare themselves for a world that is becoming much more international and global, and allow them to challenge themselves by facing something new. Of course, there are opportunities to travel and socialize as well as study—and that is all part of the educational experience. More than 200 SPEA students have benefited from this opportunity. There are many programs from which to choose, and students are advised to make use of the overseas study resource center on the third floor of Franklin Hall. For further information, consult SPEA's International Program Center in SPEA 339 on the Bloomington campus.

Washington Leadership Program

The School of Public and Environmental Affairs offers the Washington Leadership Program each fall and spring semester in Washington, D.C. This program consists of two senior-level seminars (each worth 3 credit hours) and an internship (worth 5 or 6 credit hours). Students complete internships by working four days per week in an assigned congressional office, public interest group, federal agency, or nonprofit organization.

Students reside and attend classes in Washington, D.C. Tuition is based on the regular fees for Indiana University, plus any special program charges. Students in the program remain eligible for any scholarships or financial aid they would normally receive as Indiana University students. Interested students should contact the SPEA undergraduate advisor or program director.

Bachelor of Science Degree Programs

The School of Public and Environmental Affairs recognizes the complex problems facing our society such as global warming, hazardous waste, escalating health care costs, and increasing crime rates. Through our programs, students develop the critical thinking and problem solving skills necessary for offering solutions to these issues.

Students pursuing the Bachelor of Science in Public Affairs may major in either management or civic leadership. The B.S.P.A. prepares graduates for careers in the public, private, or nonprofit sector. Many students also choose to continue their education in law, planning, public affairs, environmental science, or business administration.

The Bachelor of Science in Public Health allows students to major in either health administration or environmental science and health. Graduates with a B.S.P.H. degree may work in either the public or private sector in areas such as environmental health, health administration, epidemiology, or health policy and planning.

The Bachelor of Science in Health Systems Management is a management preparation program for experienced health and nursing specialists who hold an associate degree. The program is designed for

health care professionals who wish to become managers within their specialty areas. Students should be able to complete all requirements without interrupting employment.

The Bachelor of Science in Criminal Justice gives students a sophisticated understanding of the operations of the criminal justice system. Students learn to deal with problems of crime in a manner consistent with democratic traditions of law, justice and social welfare. Graduates are well prepared to work in the criminal justice system, as well as other public and private organizations. Alumni work in a variety of positions throughout the government system including corrections, probation, policing, and state agencies. Many graduates also work for private firms in security and investigative roles.

Bachelor of Science in Public Affairs

The Bachelor of Science in Public Affairs requires 120 credit hours.

DEGREE REQUIREMENTS

The SPEA curriculum is divided into three categories—general education, electives, and major area.

General Education

Communications

Three courses for a minimum of 9 credit hours.

The following writing course:

ENG W131 Elementary Composition (3 cr.) **or** equivalent campus option (must earn a C or better)

One of the following:

BUS X204 Business Communications (3 cr.)

ENG W231 Professional Writing Skills (3 cr.)

The following speech course:

COMM R110 Fundamentals of Speech Communication (3 cr.) **or** equivalent campus option

Social Sciences and Humanities

Six courses for a minimum of 18 credit hours.

The following three courses:

ECON E201 Introduction to Microeconomics (3 cr.)

ECON E202 Introduction to Macroeconomics (3 cr.)

POLS Y103 Introduction to American Politics (3 cr.)

One of the following courses:

ANTH A104 Culture and Society (3 cr.)

CLAS C205 Classical Mythology (3 cr.)

FLAC F200 World Cultures through Literature (3 cr.)

GEOG G110 Introduction to Human Geography (3 cr.)

HIST H105 American History I (3 cr.)

HIST H106 American History II (3 cr.)

HIST H108 Perspectives on the World to 1800 (3 cr.)

HIST H114 History of Western Civilization II (3 cr.)

REL R133 Introduction to Religions (3 cr.)

REL R212 Comparative Religion (3 cr.)

Two courses from the following Social Sciences and Humanities lists:

Social Sciences

AFRO A150 Survey of the Culture of Black Americans (3 cr.)

ANTH A104 Culture and Society (3 cr.)

COMM C180 Introduction to Interpersonal Communication (3 cr.)

ENG G104 Language Awareness (3 cr.)

FOLK F101 Introduction to Folklore (3 cr.)

GEOG G110 Introduction to Human Geography (3 cr.)

GEOG G130 World Geography (3 cr.)

HIST H117 Introduction to Historical Studies (3 cr.)

POLS Y101 Principles of Political Science (3 cr.)

POLS Y219 Introduction to International Relations (3 cr.)

PSY B104 Introduction to Psychology as a Social Science (3 cr.)

PSY B310 Life Span Development (P) (3 cr.)

SOC R100 Introduction to Sociology (3 cr.)

SOC R121 Social Problems (3 cr.)

SPEA J101 The American Criminal Justice System (3 cr.)

WOST W105 Introduction to Women's Studies (3 cr.)

Humanities

CLAS C205 Classical Mythology (3 cr.)

CMLT C190 Introduction to Film (3 cr.)

ENG L105 Appreciation of Literature (3 cr.)

FLAC F200 World Cultures through Literature (3 cr.)

FOLK F101 Introduction to Folklore (3 cr.)

HER H100 Art Appreciation (3 cr.)

HER H101 History of Art I (3 cr.)

HER H102 History of Art II (3 cr.)

HIST H105 American History I (3 cr.)

HIST H106 American History II (3 cr.)

HIST H108 Perspectives on the World to 1800 (3 cr.)

HIST H113 History of Western Civilization I (3 cr.)

HIST H217 The Nature of History (3 cr.)

Courses may be substituted with permission of faculty advisor.

Natural Sciences

Three natural science courses of more than one credit each are required. One of the courses must have an associated laboratory of one or two credits. The courses and laboratory must total a minimum of eight credit hours.

Courses may be chosen from the following list:

ANTH A103 Human Origins and Prehistory (3 cr.)

AST A100 The Solar System (3 cr.)

AST A105 Stars and Galaxies (3 cr.)

BIOL K101 Concepts of Biology I — Plants (5 cr.)

BIOL K103 Concepts of Biology II — Animals (5 cr.)

BIOL N100 Contemporary Biology (3 cr.)

BIOL N107 Introduction to Zoology (4 cr.)

BIOL N200 The Biology of Women (3 cr.)

BIOL N212 Human Biology (2 cr.)

BIOL N213 Human Biology Laboratory (1 cr.)

BIOL N214 Human Biology (2 cr.)

BIOL N215 Human Biology Laboratory (1 cr.)

BIOL N217 Human Physiology (5 cr.)

BIOL N251 Introduction to Microbiology (3 cr.)

BIOL N322 Introductory Principles of Genetics (3 cr.)

CHEM C100 World of Chemistry (3 cr.)

CHEM C101 Elementary Chemistry I (5 cr.)

CHEM C102 Elementary Chemistry II (5 cr.)

CHEM C105 Principles of Chemistry I (3 cr.)

CHEM C106 Principles of Chemistry II (3 cr.)

GEOG G107 Physical Systems of the Environment (3 cr.)

GEOG G108 Physical Geography Laboratory (2 cr.)

GEOG G303 Weather and Climate (3 cr.) /Topical Seminar in Urban and Regional Systems

GEOG G307 Biogeography: Distribution of Life (3 cr.)

GEOG/GEOG G185 Global Environmental Change (3 cr.)

GEOL G107 Environmental Geology (3 cr.)

GEOL G109 Fundamentals of Earth History (3 cr.)

GEOL G110 Physical Geology (3 cr.)

GEOL G115 Introduction to Oceanography (3 cr.)

GEOL G117 Environmental Geology Laboratory (1 cr.)

GEOL G119 Fundamentals of Earth History Laboratory (1 cr.)

GEOL G120 Physical Geology Laboratory (1 cr.) **or** GEOL G206 Advanced Physical Geology Laboratory (2 cr.)

GEOL G132 Environmental Problems (3 cr.)

GEOL G180 Dinosaurs (3 cr.)

PHYS 100 Physics in the Modern World (5 cr.)

PHYS 152 Mechanics (4 cr.)

PHYS 200 Our Physical Environment (3 cr.)

PHYS 218 General Physics I (4 cr.)

PHYS 219 General Physics II (4 cr.)

PHYS 251 Heat, Electricity, and Optics (5 cr.)

PHYS P201 General Physics I (5 cr.)

PHYS P202 General Physics II (5 cr.)

PSY B105 Psychology as a Biological Science (3 cr.)

Quantitative Methods

Three courses for a minimum of 9 credit hours.

One of the following computer courses:

SPEA V261 Computers in Public Affairs (3 cr.)

BUS K201 The Computer in Business (3 cr.)

CPT 115 Computer Info Systems Fundamentals (3 cr.) **and**

CPT 140 Programming Constructs Lab (3 cr.)

CSCI N201 Programming Concepts (3 cr.)

CSCI N207 Data Analysis Using Spreadsheets (3 cr.)

One of the following mathematics courses:

MATH M118 Finite Mathematics (3 cr.)

MATH M119 Brief Survey of Calculus I (3 cr.)

MATH 163 Integrated Calculus and Analytic Geometry I (5 cr.)

MATH 164 Integrated Calculus and Analytic Geometry II (5 cr.)

One of the following statistics courses:

SPEA/MATH/PSY K300 Statistical Techniques (3 cr.)

ECON E270 Introduction to Statistical Theory in Economics and Business (3 cr.)

PSY B305 Statistics (3 cr.)

SOC R359 Introduction to Sociological Statistics I (3 cr.)

STAT 301 Elementary Statistical Methods I (3 cr.)

General Electives

Additional courses beyond the general education and major requirements are needed to complete the minimum 120 hours required for the degree.

Majors

There are two majors offered on the Indianapolis campus: Management and Civic Leadership.

Management Major

Fifteen courses.

The following course:

SPEA V170 Introduction to Public Affairs (3 cr.)

Two of the following courses:

SPEA E272 Introduction to Environmental Sciences (3 cr.)

SPEA V221 Nonprofit and Voluntary Sector (3 cr.)

SPEA V264 Urban Structure and Policy (3 cr.)

One of the following courses:

SPEA V263 Public Management (3 cr.)

SPEA V362 Nonprofit Management and Leadership (3 cr.)

Ten of the following courses:

SPEA V263 Public Management (3 cr.)

SPEA V346 Introduction to Government Accounting and Financial Reporting (3 cr.) **or**

SPEA V356 Introduction to Nonprofit Accounting and Reporting (3 cr.)

SPEA V348 Management Science (3 cr.)

SPEA V361 Financial Management (3 cr.)

SPEA V362 Nonprofit Management and Leadership (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

SPEA V368 Managing Government Operations (3 cr.)

SPEA V369 Managing Information Technology (3 cr.)

SPEA V370 Research Methods and Statistical Modeling (3 cr.)

SPEA V372 Government Finance and Budgets (3 cr.)

SPEA V373 Human Resources Management in the Public Sector (3 cr.)

SPEA V376 Law and Public Policy (3 cr.)

SPEA V432 Labor Relations in the Public Sector (3 cr.)

SPEA V458 Fund Development for Nonprofit Organizations (3 cr.)

The following capstone course:

SPEA V473 Management Applications Seminar (3 cr.)

Civic Leadership Major

Fifteen courses.

The following five courses:

SPEA V170 Introduction to Public Affairs (3 cr.)

SPEA V221 Nonprofit and Voluntary Sector (3 cr.) **or**
POL S Y378 Civil Society and Public Policy (3 cr.)

SPEA V264 Urban Structure and Policy (3 cr.)

SPEA V372 Government Finance and Budgets (3 cr.)

SPEA V376 Law and Public Policy (3 cr.)

Four of the following courses:

SPEA V260 Topics in Public Affairs: Political Organization (3 cr.)

SPEA V260 Topics in Public Affairs: Political Action (3 cr.)

SPEA V263 Public Management (3 cr.) **or**

SPEA V362 Nonprofit Management and Leadership (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

SPEA V370 Research Methods and Statistical Modeling (3 cr.)

SPEA V450 Contemporary Issues in Public Affairs: Community and the Constitution (3 cr.)

SPEA V450 Contemporary Issues in Public Affairs: The Media and Public Affairs (3 cr.)

SPEA V472 Policy Processes in the United States (3 cr.)

POL S Y378 Civil Society and Public Policy (3 cr.)

POL S Y380 Civil Society in Comparative **or**
other 300-400 level Political Science courses
chosen in consultation with a faculty advisor

Four courses, totaling at least 12 credits, chosen with the advice of a faculty advisor in an Emphasis Area, are required. Students are encouraged to design their own Emphasis Areas. Some suggestions include: Urban Problems and Solutions, Environmental Studies, Criminal Justice, Health Policy, Public Management, Nonprofit Management, Prelaw.

The following capstone course:

SPEA V449 Policy Senior Seminar (3 cr.)

The following course:

SPEA V380 Internship in Public and Environmental Affairs (at least 3 cr.)

Bachelor of Science in Public Health/Environmental Science and Health

DEGREE REQUIREMENTS

Students must satisfy requirements in four main areas: general education, electives, a public health core, and one of the two concentrations.

Communications

Four courses for a minimum of 12 credit hours.

Each of the following courses:

ENG W131 Elementary Composition I (3 cr.)

ENG W231 Professional Writing Skills (3 cr.) **OR**
BUS X204 Business Communications (3 cr.) **OR**
TCM 220 Technical Report Writing (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

COMM C223 Business and Professional Communication (3 cr.)

Social Sciences and Humanities

Four courses for a minimum of 12 credit hours.

EACH of the following **three** courses:

ECON E201 Introduction to Microeconomics (3 cr.)
P: Sophomore Standing

ECON E202 Introduction to Macroeconomics (3 cr.)
P: Sophomore Standing

ONE approved course from the following subject areas:

Anthropology
Geography
Journalism
Linguistics
Philosophy
Political Science
Psychology
Sociology

ONE approved course from the following subject areas:

Afro-American Studies
Classical Studies
Communications and Theater
Comparative Literature
English
Fine Arts
Folklore
Foreign Languages and Literatures
History
Music
Philosophy
Religious Studies
Speech
Theatre and Drama

Science

Five courses for a total of 21 credit hours.

EACH of the following courses:

BIOL N100 Contemporary Biology (3 cr.)

BIOL N251 Introduction to Microbiology (3 cr.)

PHYS P201 General Physics I (5 cr.) P: MATH 151 or equivalent

TWO of the following courses:

CHEM C101/C121 Elementary Chemistry I with Lab (5 cr.) **and**

CHEM C110/C115 Elementary Chemistry II with Lab (5 cr.)

OR

CHEM C105/C125 Principles of Chemistry I with Lab (5 cr.) **and**

CHEM C106/C126 Principles of Chemistry II with Lab (5 cr.)

Quantitative Methods

Five courses for a minimum of 14 credit hours.

TWO computer courses:

SPEA V261 Computers in Public Affairs (3 cr.)

SPEA V369 Managing Information Technology (3 cr.)
or SPEA V450/E400 Geographic Information Systems (2 cr.)

TWO of the following mathematics courses:

MATH 153 Algebra and Trigonometry I (3 cr.) **and**
MATH 154 Algebra and Trigonometry II (3 cr.)

OR

MATH 151 Algebra and Trigonometry I (5 cr.) **and**
MATH 163 Integrated Calculus and Analytic Geometry I (5 cr.)

ONE statistics course:

SPEA K300 Statistical Techniques (3 cr.) **P: M110 or M111. R: M118 or approved course**

ENVIRONMENTAL SCIENCE AND HEALTH MAJOR (16 courses) – 45 credit hours

Policy and Management

EACH of the following courses:

Three courses for a total of 9 credit hours.

SPEA V170 Introduction to Public Affairs (3 cr.) **or**
SPEA E162 Environment and People (3 cr.)

SPEA H416 Environmental Health Policy (3 cr.)

ONE of the following courses:

SPEA H320 Health Systems Administration (3 cr.)

SPEA V263 Public Management (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

Foundation and Methods

Five courses totaling 15 credit hours.

EACH of the following courses:

SPEA H316 Environmental Health (3 cr.)

SPEA H322 Epidemiology (3 cr.)

SPEA E326 Mathematical Methods in Environmental Science (3 cr.) P: math, statistics, and computer course

SPEA H459 Environmental Science and Health Data Analysis (3 cr.)

SPEA H460 Techniques in Environmental Science and Health (3 cr.) P: H316

Applications in Environmental Science and Health

Six courses totaling 18 credit hours.

EACH of the following courses:

SPEA E410 Introduction to Environmental Toxicology (3 cr.)

SPEA E431 Water Supply and Wastewater Treatment I (3 cr.)

SPEA E451 Air Pollution and Control (3 cr.)

SPEA E452 Solid and Hazardous Waste Management (3 cr.)

SPEA H428 Food Science and Sanitation (3 cr.)

SPEA H433 Industrial Hygiene and Radiological Health (3 cr.)

Environmental Science and Health Experience

Two courses totaling a minimum of 3 credit hours.

EACH of the following courses:

SPEA H367 Environmental Science and Health Practicum (2 cr.)

SPEA V380 Internship in Public and Environmental Affairs (1-6 cr.) **or**

SPEA H466 Public Health Field Experience (1 cr.) P: H465

Bachelor of Science in Public Health/Health Administration

DEGREE REQUIREMENTS

Students must satisfy requirements in four main areas: general education, electives, a public health core, and one of the two concentrations.

Communications

Four courses for a minimum of 12 credit hours.

Each of the following courses:

ENG W131 Elementary Composition I (3 cr.)

ENG W231 Professional Writing Skills (3 cr.) **OR** BUS X204 Business Communications (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

COMM C223 Business and Professional Communication (3 cr.)

Social Sciences and Humanities

Four courses for a minimum of 12 credit hours.

EACH of the following **three** courses:

ECON E201 Introduction to Microeconomics (3 cr.) P: Sophomore Standing

ECON E202 Introduction to Macroeconomics (3 cr.) P: Sophomore Standing

PHIL P120 Ethics (3 cr.)

ONE approved course from the following subject areas:

Anthropology

Geography

Journalism

Political Science

Psychology

Sociology

ONE approved course from the following subject areas:

Afro-American Studies

Classical Studies

Communications and Theater

Comparative Literature

English

Fine Arts

Folklore

Foreign Languages and Literatures

History

Music

Philosophy

Religious Studies

Speech

Theatre and Drama

Science

Two approved courses from the basic sciences, such as biology, chemistry, or physics for a total of 8 credit hours.

Recommended courses:

BIOL N212 Human Biology (3 cr.) and

BIOL N213 Human Biology Lab (1 cr.)

BIOL N214 Human Biology (3 cr.) P: N212 and

BIOL N215 Human Biology Lab (1 cr.) P or C: N213

Quantitative Methods, Computer

Four courses for a minimum of 11-12 credit hours.

TWO computer courses:

SPEA V261 Computers in Public Affairs (3 cr.)

SPEA V369 Managing Information Technology (3 cr.)

or SPEA V450/E400 Geographic Information Systems (2 cr.)

ONE mathematics course such as Math M118, M119 or higher:

Recommended:

MATH M118 Finite Mathematics (3 cr.)

ONE statistics course:

SPEA K300 Statistical Techniques (3 cr.) **P: M110 or M111. R: M118 or approved course**

HEALTH ADMINISTRATION MAJOR (17 Courses) – 48 credit hours

Health and Health Care System

EACH of the following 3 courses:

SPEA H316 Environmental Health (3 cr.)

SPEA H320 Health Systems Administration (3 cr.)

SPEA H322 Principles of Epidemiology (3 cr.)

Health and Public Policy

EACH of the following 3 courses:

SPEA H120 Contemporary Issues in Public Health (3 cr.) **or**

SPEA V170 Introduction to Public Affairs (3 cr.)

SPEA H441 Legal Aspects of Health Care

Administration (3 cr.) **or**

SPEA V376 Law and Public Policy (3 cr.)

SPEA H420 Health Policy (3 cr.)

Management Fundamentals

Three courses totaling 9 credit hours:

THREE of the following courses:

SPEA V263 Public Management (3 cr.)

SPEA V362 Nonprofit Management and Leadership (3 cr.)

SPEA V366 Management Behavior in Public Organizations (3 cr.)

SPEA V348 Management Science (3 cr.) P: SPEA K300, MATH M025 or MATH M118

SPEA V368 Managing Government Operations (3 cr.)

SPEA V373 Personnel Management in the Public Sector (3 cr.)

Health Services Management Skills

EACH of the following courses:

SPEA H352 Health Finance and Budgeting (3 cr.) **and** SPEA H401 Strategic Planning for Health Care Organizations (3 cr.)

TWO of the following courses:

SPEA H353 Advanced Health Finance and Budgeting (3 cr.)

SPEA H354 Health Economics (3 cr.)

SPEA H432 Health Care Marketing (3 cr.)

SPEA V370 Research Methods and Statistical Modeling (3 cr.)

Integration of Health Services Management Theory and Practice

EACH of the following courses:

SPEA H472 Applied Health Administration (3 cr.)

SPEA H474 Health Administration Seminar (3 cr.)

Health Services Management Experience

Two courses totaling 3 credit hours

EACH of the following courses:

SPEA H365 Health Administration Practicum (2 cr.)

SPEA V380 Internship in Public and Environmental Affairs (1 cr.) **or**

SPEA H466 Public Health Field Experience (1 cr.)

Bachelor of Science in Health Services Management

Students applying for the 120 credit hour B.S.H.S.M. degree must have earned an associate of arts or associate of science degree from an accredited university or college in nursing, allied health, dental hygiene, or medical technology; or an associate degree in another field with relevant work experience. Students who complete this degree are eligible to sit for the Long-Term Care Administrators Examination after they have fulfilled the Administrator-in-Training requirement.

DEGREE REQUIREMENTS

These requirements are divided into four main areas: general education, electives, a management core, and the health services concentration courses.

General Education

Communications

Three courses for a minimum of 9 credit hours.

The following writing course:

ENG W131 Elementary Composition (3 cr.) or approved option (must earn a C or better)

One of the following:

BUS X204 Business Communications (3 cr.)

ENG W231 Professional Writing Skills (3 cr.)

One of the following speech courses:

COMM C180 Introduction to Interpersonal Communication (3 cr.)

COMM C223 Business and Professional Communication (3 cr.)

COMM C228 Discussion and Group Methods (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

COMM R227 Argumentation and Debate (3 cr.)

Arts and Humanities

One course for a minimum of 3 credit hours from any of the following subject areas.

Afro-American Studies

Classical Studies

Communication and Theatre

Comparative Literature

English

Fine Arts

Folklore

Foreign Languages and Literature

History

Musicology and Music History

Philosophy

Religious Studies

Social Sciences

Four courses for a minimum of 12 credit hours.

The following courses:

ECON E201 Introduction to Microeconomics (3 cr.)

ECON E202 Introduction to Macroeconomics (3 cr.)

POLS Y103 Introduction to American Politics (3 cr.)

One approved course from one of the following subject areas:

Anthropology

Geography

Journalism

Linguistics

Political Science

Psychology

Sociology

Natural Sciences

Two courses with labs for a minimum of 6 credit hours.

The following courses:

BIOL N212 Human Biology (2 cr.) **and**

BIOL N213 Human Biology Laboratory (1 cr.)

BIOL N214 Human Biology (2 cr.) **and**

BIOL N215 Human Biology Laboratory (1 cr.)

Quantitative Methods

Three courses for a minimum of 9 credit hours.

One computer course:

SPEA V261 Computers in Public Affairs (3 cr.) **or** other approved option

One of the following courses:

MATH M118 Finite Mathematics (3 cr.)

MATH M119 Brief Survey of Calculus (3 cr.)

MATH 163 Integrated Calculus and Analytic Geometry I (3 cr.)

One of the following courses:

SPEA K300 Statistical Techniques (3 cr.)

ECON E270 Introduction to Statistical Theory in

Economics and Business (3 cr.) **or** other

approved option

General Electives

Sufficient additional courses beyond the general education, core, and concentration requirements are needed to reach the minimum 120 credit hours required for the degree.

Management Core

The following four courses:

SPEA V263 Public Management (3 cr.)

SPEA V346 Introduction to Government Accounting and Financial Reporting (3 cr.)

SPEA V348 Management Science (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

Health Services Management Concentration

Requirements (9 courses):

The following five courses:

SPEA H316 Environmental Health (3 cr.)

SPEA H320 Health Systems Administration (3 cr.)

SPEA H322 Principles of Epidemiology (3 cr.)

SPEA H352 Health Finance and Budgeting (3 cr.)

SPEA H371 Human Resources Management in Health Care Facilities (3 cr.)

Four of the following courses:

SPEA H402 Hospital Administration (3 cr.)

SPEA H411 Long-Term Care Administration (3 cr.)

SPEA H441 Legal Aspects of Health Care Administration (3 cr.)

SPEA H455 Topics in Public Health (3 cr.) (*May be repeated.*)

SPEA H474 Health Administration Seminar (3 cr.)

Bachelor of Science in Criminal Justice

The Bachelor of Science in Criminal Justice requires 120 credit hours.

DEGREE REQUIREMENTS

The program includes three main areas: general education (including a foreign language and a non-foreign language component), management and policy, and criminal justice.

Communications

Three courses for a total of 9 credit hours.

Take ALL of the following:

ENG W131 Elementary Composition (3 cr.)

ENG W231 Professional Writing Skills (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)

Quantitative Methods

Three courses for a total of 9 credit hours.

ONE of the following Computer courses:

SPEA V261 Computer in Public Affairs (3 cr.)

SPEA V369 Managing Information Technology (3 cr.)

SPEA V450 Geographic Information Systems (3 cr.)

ONE of the following Mathematics courses:

MATH M118 Finite Mathematics (3 cr.)

MATH M119 Survey of Calculus I (3 cr.)

MATH 163 Integrated Calculus and Analytic Geometry I (5 cr.)

MATH 164 Integrated Calculus and Analytic Geometry II (5 cr.)

TAKE the following statistics course (or another statistics course approved by your faculty advisor):

SPEA K300 Statistical Techniques (3 cr.) **P: 110 or 111. R: M118**

Social Sciences

Four courses for a minimum of 12 credit hours.

Select 4 courses from the following:

SPEA V170 Introduction to Public Affairs (3 cr.)

ECON E201 Microeconomics (3 cr.)

ECON E202 Macroeconomics (3 cr.)

ANTH A104 Culture and Society (3 cr.)

GEOG G110 Introduction to Human Geography (3 cr.)

GEOG G130 World Geography (3 cr.)

POLS Y101 Principles of Political Science (3 cr.)

POLS Y103 Introduction to American Politics (3 cr.)

POLS Y219 Introduction to International Relations (3 cr.)

POLS Y217 Introduction to Comparative Politics (3 cr.)

PSY B104 Introduction to Psychology as a Social Science (3 cr.)

PSY B310 Life Span Development (3 cr.)

PSY B380 Abnormal Psychology (3 cr.)

SOC R100 Introduction to Sociology (3 cr.)

SOC R121 Social Problems (3 cr.)

SOC R461 Race and Ethnic Relations (3 cr.)

WOST W105 Introduction to Women's Studies (3 cr.)

Humanities and Natural Sciences

(16-20 credit hours)

Students must complete one of the following two options:

OPTION ONE—FOREIGN LANGUAGE (RECOMMENDED OPTION)

Total of 16 to 18 credit hours.

Complete first-year foreign language requirements: Only required for Option One.

This requirement may be satisfied in one of the following ways:

1. By completing first-year (10 credit hours) courses in a single language with passing grades;
2. By completing second- or third-year course with a grade of C or better;
3. By taking a placement test and placing into the 200 level or higher; this waives the 100-level requirement but does not carry with it credit toward graduation.

This requirement may be met with first-year proficiency in American Sign Language.

Placement Test Students with previous experience in French, German, or Spanish should take the Foreign Language Placement Test at the Testing Center to assess their level of language preparation.

Students who have achieved elementary or intermediate proficiency in any other foreign language should confer with the Foreign Languages and Cultures department for placement in the correct level of that foreign language.

Students who complete the course into which they were placed with a grade of C or better are eligible for special credit at a reduced fee for the appropriate lower-division course(s) that precede the course taken. Foreign language special credit counts toward graduation and toward the foreign language requirements.

117 Courses Courses numbered 117 are reserved for students who have never studied the language before. Students who have had two or more years of formal study in a language may take a 117-level course in that language as a refresher course before enrolling in a more advanced course, but they must recognize that their work will be graded on a Satisfactory/Fail basis. A grade of S is equivalent to a grade of C.

Non-Native Speakers Students for whom English is not a first language may be exempted from the foreign language requirement, without credit, by completion of ENG W131 and ENG W132 with the required grade of C or better.

Students whose native language is not English may demonstrate proficiency in their native language and earn 3 to 6 hours of 298/299 special credit by successfully completing an appropriate 300-level course. They may not, however, receive credit for taking first- and second-year courses in their native language.

Humanities and Natural Sciences:

Take the following course:

HIST H105 American History I (3 cr.)

Take one of the following Natural Science courses: (3-5 cr.)

ANTH A103 Human Origins and Prehistory (3 cr.)
AST A100 The Solar System (3 cr.)
AST A105 Stars and Galaxies (3 cr.)
BIOL K101 Concepts of Biology I – Plants (5 cr.)
BIOL K103 Concepts of Biology II – Animals (5 cr.)
BIOL N100 Contemporary Biology (3 cr.)
BIOL N107 Introduction to Zoology (4 cr.)
BIOL N200 The Biology of Women (3 cr.)
BIOL N212 Human Biology (2 cr.)
BIOL N213 Human Biology Laboratory (1 cr.)
BIOL N214 Human Biology (2 cr.)
BIOL N215 Human Biology Laboratory (1 cr.)
BIOL N217 Human Physiology (5 cr.)
BIOL N251 Introduction to Microbiology (3 cr.)
BIOL N322 Introductory Principles of Genetics (3 cr.)
CHEM C100 World of Chemistry (3 cr.)
CHEM C101 Elementary Chemistry I (5 cr.)
CHEM C102 Elementary Chemistry II (5 cr.)
CHEM C105 Principles of Chemistry I (3 cr.)
CHEM C106 Principles of Chemistry II (3 cr.)
GEOL G107 Environmental Geology (3 cr.)
GEOL G117 Environmental Geology Laboratory (1 cr.)
GEOL G109 Fundamentals of Earth History (3 cr.)

GEOL G119 Fundamentals of Earth History Laboratory (1 cr.)
GEOL G110 Physical Geology (3 cr.)
GEOL G120 Physical Geology Laboratory (1 cr.) **or**
GEOL G206 Advanced Physical Geology Laboratory (2 cr.)
GEOL G115 Introduction to Oceanography (3 cr.)
GEOL G132 Environmental Problems (3 cr.)
GEOL G180 Dinosaurs (3 cr.)
GEOG G107 Physical Systems of the Environment (3 cr.)
GEOG G108 Physical Geography Laboratory (2 cr.)
GEOG G303 Weather and Climate (3 cr.) Tropical Seminar in Urban and Regional Systems
GEOG G307 Biogeography: Distribution of Life (3 cr.)
GEOG/GEOL G185 Global Environmental Change (3 cr.)
PHYS 100 Physics in the Modern World (5 cr.)
PHYS 200 Our Physical Environment (3 cr.)
PHYS 218 General Physics (4 cr.)
PHYS 219 General Physics (4 cr.)
PHYS P201 General Physics I (5 cr.)
PHYS P202 General Physics II (5 cr.)
PHYS 152 Mechanics (4 cr.)
PHYS 251 Heat, Electricity, and Optics (5 cr.)
PSY B105 Psychology as a Biological Science (3 cr.)

OPTION TWO—NO FOREIGN LANGUAGE

Totaling 19-20 credit hours.

Humanities and Natural Sciences

Take all of the following:

Two courses for 6 credit hours

HIST H105 American History I (3 cr.)

HIST H106 American History II (3 cr.)

Take two of the following Humanities courses:

Two courses for a minimum of 6 credit hours

AFRO A150 Survey of the Culture of Black Americans (3 cr.)

CLAS C205 Classical Mythology (3 cr.)

CMLT C190 Introduction to Film (3 cr.)

ENG L105 Appreciation of Literature (3 cr.)

ENG L115 Literature for Today (3 cr.)

COMM T130 Introduction to Theatre (3 cr.)

COMM C190 Introduction to Film (3 cr.)

HER H100 Art Appreciation (3 cr.)

HER H101 History of Art I (3 cr.)

HER H102 History of Art II (3 cr.)

FOLK F101 Folklore (3 cr.)

FLAC F200 World Cultures Through Literature (3 cr.)

HIST H108 Perspectives on the World to 1800 (3 cr.)

HIST H113 History of Western Civilization I (3 cr.)

HIST H217 The Nature of History (3 cr.)

PHIL P110 Introduction to Philosophy (3 cr.)

PHIL P120 Ethics (3 cr.)

REL R133 Introduction to Religion (3 cr.)

REL R173 American Religion (3 cr.)

REL R180 Introduction to Christianity (3 cr.)

REL R212 Comparative Religion (3 cr.)

Take two of the following Natural Science courses (One must be a course with an accompanying lab):

ANTH A103 Human Origins and Prehistory (3 cr.)

AST A100 The Solar System (3 cr.)

AST A105 Stars and Galaxies (3 cr.)

BIOL K101 Concepts of Biology I – Plants (5 cr.)

BIOL K103 Concepts of Biology II – Animals (5 cr.)

BIOL N100 Contemporary Biology (3 cr.)
BIOL N107 Introduction to Zoology (4 cr.)
BIOL N200 The Biology of Women (3 cr.)
BIOL N212 Human Biology (2 cr.)
BIOL N213 Human Biology Laboratory (1 cr.)
BIOL N214 Human Biology (2 cr.)
BIOL N215 Human Biology Laboratory (1 cr.)
BIOL N217 Human Physiology (5 cr.)
BIOL N251 Introduction to Microbiology (3 cr.)
BIOL N322 Introductory Principles of Genetics (3 cr.)
CHEM C100 World of Chemistry (3 cr.)

SPEA CRIMINAL JUSTICE MAJOR REQUIREMENTS

Management and Policy

Four courses totaling 12 credit hours.

Take four of the following:

V221 Nonprofit and Voluntary Sector (3 cr.)
V263 Public Management (3 cr.)
V264 Urban Structure and Policy (3 cr.)
E272 Introduction to Environmental Science (3 cr.)
V348 Management Science (3 cr.)
V366 Managing Behavior in Public Organizations (3 cr.)
V368 Managing Government Operations (3 cr.)
V372 Government Finance and Budgets (3 cr.)
V373 Human Resource Management in the Public Sector (3 cr.)
V376 Law and Public Policy (3 cr.)
V432 Labor Relations in the Public Sector (3 cr.)
V458 Fund Development for Nonprofit Organizations (3 cr.)
V472 Policy Processes in the United States (3 cr.)

Criminal Justice Concentration

Eleven courses totaling 33 credit hours.

Take the following course:

SPEA J101 The American Criminal Justice System
(3 cr.)

Take three of the following:

SPEA J301 Substantive Criminal Law (3 cr.) **or**
SPEA J302 Procedural Criminal Law (3 cr.) —
students may take both of these courses, but
only one will count toward this requirement
SPEA J305 The Juvenile Justice System (3 cr.)
SPEA J306 The Criminal Courts (3 cr.)
SPEA J321 American Policing (3 cr.)
SPEA J331 Corrections (3 cr.)

Take all of the following:

SPEA J201 Theoretical Foundations of Criminal
Justice Policies (3 cr.)
SPEA J202 Criminal Justice Data, Methods, and
Resources (3 cr.)
SPEA J439 Crime and Public Policy (3 cr.)

Four additional criminal justice courses totaling 12 credits. At least two of these totaling 6 credits must be 300- or 400-level criminal justice courses. SPEA J260 and SPEA J380 may count toward this requirement, but are limited to a maximum of three credit hours each. SPEA J380 may not be counted as one of the 300- or 400-level courses for this requirement.

GENERAL ELECTIVES

A sufficient number to total a minimum of 120 credit hours with a 2.0 (C) cumulative GPA and a minimum GPA of 2.3 (C+) in all courses taken to satisfy the Public Affairs and Policy and the Concentration area requirements.

Associate of Science Degree Programs

The School of Public and Environmental Affairs offers two associate degree programs. Courses that meet associate degree requirements generally can be applied to a subsequent baccalaureate degree program. The following are general requirements for the completion of an associate degree:

1. Students must apply for admission to the associate degree program before completing 35 credit hours of course work toward the degree. Applications are available in the records office.
2. A minimum of 60 credit hours with a 2.00 cumulative average or higher and a 2.30 average or higher in core and concentration courses is required. All requirements for this degree must be satisfied before earning 86 credit hours.
3. A limited number of courses may be transferred from other accredited institutions or be taken through independent study.
4. Courses taken to meet specific degree requirements cannot be double-counted (i.e., used to satisfy any other degree requirement).
5. A maximum of two elective courses may be taken Pass/Fail in this degree.

Associate of Science in Criminal Justice**DEGREE REQUIREMENTS**

The SPEA curriculum is divided into four categories—general education, electives, a public policy course, and a concentration area.

General Education**Communications**

Three courses for a minimum of 9 credit hours.

The following writing course:

ENG W131 Elementary Composition (3 cr.) **or**
equivalent campus-approved option (must earn a C– or better)

One of the following:

BUS X204 Business Communications (3 cr.)
ENG W231 Professional Writing Skills (3 cr.)

One of the following speech courses:

COMM C104 Voice and Diction (3 cr.)
COMM C180 Introduction to Interpersonal
Communication (3 cr.)
COMM C223 Business and Professional
Communication (3 cr.)
COMM C228 Discussion and Group Methods (3 cr.)
COMM R110 Fundamentals of Speech Communication
(3 cr.)
COMM R227 Argumentation and Debate (3 cr.)

Arts and Humanities

One course, for a minimum of 3 credit hours, from one of the following subject areas.

Afro-American Studies
Classical Studies
Communication and Theatre
Comparative Literature
English
Fine Arts
Folklore
Foreign Languages and Literature
History: H105 or H106 recommended
Musicology and Music History
Philosophy
Religious Studies

Social and Behavioral Sciences

Two courses, for a minimum of 6 credit hours, from two different subject areas.

Anthropology
Economics
Geography
Journalism
Linguistics
Political Science
Psychology
Sociology

Natural Sciences

One course, for a minimum of 3 credit hours, from one of the following subject areas.

Anatomy and Physiology
Astronomy
Biology
Botany
Chemistry
Geology
Physics
Zoology

Or one of the following cross-listed courses:

GEOG G107 Physical Systems of the Environment
(3 cr.)

GEOG G303 Weather and Climate (3 cr.)

GEOG G304 Meteorology and Climatology (3 cr.)

Quantitative Methods

One approved course (must be at least 3 credit hours) from *one* of the following subject areas:

Computer Science
Mathematics
Statistics

General Electives

Additional courses beyond the general education, core, and concentration requirements are needed to complete the Associate of Science degree requirement of 60 credit hours.

Public Policy

The following course:

SPEA V170 Introduction to Public Affairs (3 cr.)

Criminal Justice Concentration

Requirements (six courses):

The following course:

SPEA J101 The American Criminal Justice System
(3 cr.)

Three of the following courses:

SPEA J301 Substantive Criminal Law (3 cr.)
SPEA J306 The Criminal Courts (3 cr.)
SPEA J321 American Policing (3 cr.)
SPEA J331 Corrections (3 cr.)

Two additional SPEA criminal justice courses for a minimum of 6 credit hours:

SPEA J201 and SPEA J202 recommended.

Associate of Science in Public Affairs

Students must complete one of the following concentrations: Criminal Justice, Emergency Services Administration, Environmental Affairs, Public Administration, or a specialized program approved by a SPEA advisor.

DEGREE REQUIREMENTS

The SPEA curriculum is divided into four categories—general education, electives, public affairs core, and a concentration area.

General Education**Communications**

Three courses for a minimum of 9 credit hours.

The following writing course:

ENG W131 Elementary Composition (3 cr.) **or**
equivalent campus-approved option (must earn a C or better)

One of the following advanced writing courses:

BUS X204 Business Communications (3 cr.)
ENG W231 Professional Writing (3 cr.)

One of the following speech courses:

COMM C104 Voice and Diction (3 cr.)
COMM C180 Introduction to Interpersonal
Communication (3 cr.)
COMM C223 Business and Professional
Communication (3 cr.)
COMM C228 Discussion and Group Methods (3 cr.)

COMM R110 Fundamentals of Speech Communication (3 cr.)
 COMM R227 Argumentation and Debate (3 cr.)

Social Sciences

Three courses for a minimum of 9 credit hours.

The following two courses:

ECON E201 Introduction to Microeconomics (3 cr.)

or

ECON E202 Introduction to Macroeconomics (3 cr.)

POLS Y103 Introduction to American Politics (3 cr.)

One course from sociology or psychology.

Quantitative Methods

Two courses for a minimum of 6 credit hours.

One of the following computer science courses:

SPEA V261 Computers in Public Affairs (3 cr.)

CPT 115 Computer Information Systems Fundamentals (3 cr.) and

CPT 140 Programming Constructs Lab (3 cr.)

CSCI N201 Programming Concepts (3 cr.)

CSCI N207 Data Analysis Using Spreadsheets (3 cr.)

One approved mathematics course:

MATH M118 Finite Mathematics (3 cr.) or

MATH M119 Brief Survey of Calculus I (3 cr.)

(Note: Environmental Affairs Concentration students must select a course in calculus to satisfy this requirement.)

Arts and Humanities

One course from one of the following subject areas for a minimum of 3 credit hours.

Afro-American Studies

Classical Studies

Communication and Theatre

Comparative Literature

English

Fine Arts

Folklore

Foreign Languages and Literature

History: H105 or H106 recommended

Musicology and Music History

Philosophy

Religious Studies

General Electives

Additional courses beyond the general education, core, and concentration requirements are needed to complete the Associate of Science degree requirement of 60 credit hours.

Public Affairs Core

Four courses.

The following courses:

SPEA V170 Introduction to Public Affairs (3 cr.)

SPEA V264 Urban Structure and Policy (3 cr.)

One of the following courses:

SPEA E162 Environment and People (3 cr.)

SPEA E272 Introduction to Environmental Sciences (3 cr.)

One of the following courses:

SPEA V270 Survey of Administrative Techniques (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

Areas of Concentration

Criminal Justice Concentration

This concentration provides an introduction to law enforcement, correctional administration, and criminal law and procedure.

Requirements (five courses):

The following two courses:

SPEA J101 The American Criminal Justice System (3 cr.)

SPEA J301 Substantive Criminal Law (3 cr.)

One of the following courses:

SPEA J201 Theoretical Foundations of Criminal Justice Policies (3 cr.)

SPEA J202 Criminal Justice Data, Methods, and Resources (3 cr.)

SPEA J306 The Criminal Courts (3 cr.)

SPEA J321 American Policing (3 cr.)

SPEA J331 Corrections (3 cr.)

Two additional criminal justice courses.

Emergency Services Administration Concentration

The Emergency Services Administration Concentration provides managerial skills to emergency service personnel.

Requirements (five courses):

The following course:

SPEA V375 Emergency Services Administration (3 cr.)

Three of the following courses:

SPEA H320 Health Systems Administration (3 cr.)

SPEA J376 Principles of Public Safety (3 cr.)

SPEA K300 Statistical Techniques (3 cr.) or other approved course

SPEA V346 Introduction to Government Accounting and Financial Reporting (3 cr.)

SPEA V348 Management Science (3 cr.)

SPEA V372 Government Finance and Budgets (3 cr.)

SPEA V373 Human Resources Management in the Public Sector (3 cr.)

Students are required to complete successfully an approved administrative field experience course of at least 3 credit hours. The field experience requirement may be satisfied through an internship or special project that must have an advisor's prior approval.

Environmental Affairs Concentration

The Environmental Affairs Concentration provides an introduction to environmental problems and options for their solutions.

Requirements (seven courses):

The following course:

SPEA V365 Urban Development and Planning (3 cr.)

One chemistry or physics course (3-5 cr.)

One of the following courses:

GEOG G107 Physical Systems of the Environment (3 cr.)

GEOG G107 Environmental Geology (3 cr.)

GEOG G110 Geology: The Earth's Environment (3 cr.)

One of the following courses not taken as a social science requirement in the general education area:

ECON E201 Introduction to Microeconomics (3 cr.)

ECON E202 Introduction to Macroeconomics (3 cr.)

Two of the following courses:

SPEA E431 Water Supply and Wastewater Treatment (3 cr.)

SPEA E451 Air Pollution and Control (3 cr.)

SPEA E452 Solid and Hazardous Waste Management (3 cr.)

SPEA H316 Environmental Health (3 cr.)

BIOL K341 Principles of Ecology (5 cr.)

GEOG G315 Environmental Conservation (3 cr.)

GEOG G300 Environmental and Urban Geology (3 cr.)

GEOG G415 Geomorphology (3 cr.)

GEOG G416 Economic Geology (3 cr.)

POLS Y313 Environmental Policy (3 cr.)

One of the following courses:

SPEA/MATH/PSY K300 Statistical Techniques (3 cr.)

ECON E270 Introduction to Statistical Theory in Economics and Business (3 cr.)

PSY B305 Statistics (3 cr.)

SOC R359 Introduction to Sociological Statistics (3 cr.)

STAT 301 Elementary Statistical Methods I (3 cr.)

Public Administration Concentration

The Public Administration Concentration provides an overview of the primary areas of public administration.

Requirements (four courses):

Four of the following courses:

SPEA H316 Environmental Health (3 cr.)

SPEA V346 Introduction to Government Accounting and Financial Reporting (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)
 (if not taken to meet public affairs core requirement)

SPEA V372 Government Finance and Budgets (3 cr.)

SPEA V373 Human Resources Management in the Public Sector (3 cr.)

SPEA V376 Law and Public Policy (3 cr.)

Special Concentration

Minimum of four courses.

A special concentration of at least four courses may be developed to meet special career needs. This concentration must be approved by a faculty advisor and program director.

SPEA Minors

Any Indiana University student enrolled in a baccalaureate program may pursue one or more of the minors offered by the School of Public and Environmental Affairs. Individuals interested in one or more of these minors should inquire in the SPEA undergraduate advising office for additional details. Students who successfully complete the requirements will have the minor conferred with their degree. SPEA's multidisciplinary faculty and curricula address environmental, health, public policy, and management issues from a variety of perspectives. A minor in SPEA can enhance career opportunities for liberal arts and other majors.

Public and Environmental Affairs Minor

Requirements (five courses):

The following course:

SPEA V170 Introduction to Public Affairs (3 cr.)

One of the following courses:

SPEA E162 Environment and People (3 cr.)

SPEA E272 Introduction to Environmental Sciences (3 cr.)

Three of the following courses:

SPEA E272 Introduction to Environmental Sciences (3 cr.) (*May be counted only once.*)

SPEA E400 Topics in Environmental Studies (3 cr.) (*May be repeated.*)

SPEA V263 Public Management (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

SPEA V373 Human Resources Management in the Public Sector (3 cr.)

SPEA V376 Law and Public Policy (3 cr.)

SPEA V432 Labor Relations in the Public Sector (3 cr.)

SPEA V444 Public Administrative Organization (3 cr.)

SPEA V450 Contemporary Issues in Public Affairs (3 cr.) (*May be repeated.*)

or other courses in public or environmental affairs approved by a SPEA advisor

Criminal Justice Minor

Requirements (five courses):

The following course:

SPEA J101 The American Criminal Justice System (3 cr.)

One of the following courses:

*SPEA J201 Theoretical Foundations of Criminal Justice Policies (3 cr.)

*SPEA J301 Substantive Criminal Law (3 cr.)

Three of the following courses:

*SPEA J201 Theoretical Foundations of Criminal Justice Policies (3 cr.)

*SPEA J301 Substantive Criminal Law (3 cr.)

SPEA J306 The Criminal Courts (3 cr.)

SPEA J321 American Policing (3 cr.)

SPEA J331 Corrections (3 cr.)

*J201 and J301 can be taken only once each for credit.

Environmental Science and Health Minor

Requirements (five courses):

The following course:

SPEA H316 Environmental Health (3 cr.)

One of the following courses:

SPEA H416 Environmental Health Policy (3 cr.)

POLS Y313 Environmental Policy (3 cr.)

Three of the following courses:

SPEA E326 Mathematical Methods in Environmental Science (3 cr.)

SPEA E410 Introduction to Environmental Toxicology (3 cr.)

SPEA E431 Water Supply and Wastewater Treatment (3 cr.)

SPEA E451 Air Pollution and Control (3 cr.)

SPEA E452 Solid and Hazardous Waste Management (3 cr.)

SPEA H428 Food Science and Sanitation (3 cr.)

SPEA H433 Industrial Hygiene and Radiological Health (3 cr.)

or other courses in environmental science and health approved by a SPEA faculty advisor.

Health Systems Administration Minor

Requirements (five courses):

The following course:

SPEA H320 Health Systems Administration (3 cr.)

One of the following courses:

SPEA H371 Human Resources Management in Health Care Facilities (3 cr.)

SPEA V373 Human Resources Management in the Public Sector (3 cr.)

Three of the following courses:

SPEA H352 Health Finance and Budgeting (3 cr.)

SPEA H402 Hospital Administration (3 cr.)

SPEA H411 Long-Term Care Administration (3 cr.)

SPEA H441 Legal Aspects of Health Care Administration (3 cr.)

SPEA H455 Topics in Public Health (3 cr.) (*May be repeated.*)

Certificate Programs

The areas of study in which certificate programs are currently available are environmental studies, nonprofit management, public affairs, public health, public management, and American Humanics.

General Requirements

1. Students in good academic standing and enrolled in baccalaureate programs at Indiana University are eligible to apply for a certificate at the SPEA records office. Interested students must apply for a certificate before completing 15 credit hours (9 credit hours for public health) of applicable course work.
2. SPEA students cannot earn a certificate in the same area as their concentration.
3. A grade point average of 2.0 or higher is required in all course work credited toward the certificate.

Certificate in Effective Citizenship

Offered in conjunction with the Department of Political Science, this certificate provides an understanding of political organizations and political action in the United States. (19 credit hours, including an internship with a civic group or political party).

Certificate requirements

Select a minimum of 19 credit hours from the following:

POLS Y103 Introduction to American Politics (3 cr.)

SPEA V170 Introduction to Public Affairs (3 cr.)

SPEA V260 Topics in Public Affairs: Political and Civic Organization (3 cr.) **or**

POLS Y250 Political and Civic Organization (3 cr.)

SPEA V260 Topics in Public Affairs: Effective Political Action (3 cr.) **or**

POLS Y260 Effective Political Action

Attendance at, and completion of a report on, both the Bulen Symposium on American Politics and the Bowen Institute for Political Participation (1 cr.)

Completion of an internship with a public affairs or civic group, or with a local or state political party organization.

SPEA V380 Internship in Public Affairs (3 cr.) **or**

POLS Y481 Field Experience in Political Science (3 cr.)

Completion of an independent research project, based on either the student's internship experience or a topic covered at the Bulen Symposium or Bowen Institute that the student attended.

SPEA V390 Readings in Public and Environmental Affairs (3 cr.) **or**

POLS Y480 Undergraduate Readings in Political Science (3 cr.)

Certificate in Environmental Studies

This certificate introduces students to selected aspects of current thinking and research on the nature, causes, and solutions to environmental problems.

Certificate Requirements (10 courses):

The following five courses:

BIOL K341 Principles of Ecology (3 cr.)

CHEM C101 Elementary Chemistry I (5 cr.) **or**

CHEM C105 Principles of Chemistry (5 cr.)

ECON E201 Introduction to Microeconomics (3 cr.)

ECON E202 Introduction to Macroeconomics (3 cr.)

SPEA V372 Government Finance and Budgets (3 cr.)

One of the following courses:

SPEA E162 Environment and People (3 cr.)

SPEA E272 Introduction to Environmental Sciences (3 cr.)

One of the following courses:

GEOG G107 Physical Systems of the Environment (3 cr.)

GEOL G107 Environmental Geology (3 cr.)

GEOL G110 Geology: The Earth's Environment (3 cr.)

Three of the following courses:

SPEA E431 Water Supply and Wastewater Treatment (3 cr.)

SPEA E451 Air Pollution and Control (3 cr.)

SPEA E452 Solid and Hazardous Waste Management (3 cr.)

SPEA H316 Environmental Health (3 cr.)

SPEA K300 Statistical Techniques (3 cr.) or other approved option

SPEA V365 Urban Development and Planning (3 cr.)

BIOL K442 Population and Systems Ecology (3 cr.)

CHEM C207 Introduction to Biochemistry (4 cr.)

CHEM C310 Analytical Chemistry (3 cr.)

CHEM C341 Organic Chemistry Lectures I (3 cr.)

ECON E485 Social Control of Industry (3 cr.)

GEOG G303 Weather and Climate (3 cr.)
 GEOG G304 Meteorology and Climatology (3 cr.)
 GEOG G315 Environmental Conservation (3 cr.)
 GEOL G300 Environmental and Urban Geology (3 cr.)
 GEOL G303 Geologic Mapping and Field Methods (4 cr.)
 GEOL G406 Introduction to Geochemistry (3 cr.)
 GEOL G415 Geomorphology (3 cr.)
 GEOL G451 Principles of Hydrogeology (3 cr.)
 PHYS 218 General Physics I (4 cr.)
 SOC R465 Population and Human Ecology (3 cr.)

Certificate in Nonprofit Management

The nonprofit sector is a dynamic and rapidly expanding area. The Certificate in Nonprofit Management allows students to take part in course work specifically concerned with the nonprofit sector and geared toward preparing them for careers in nonprofit organizations.

Certificate Requirements (five courses):

Courses must be selected from the following categories. Alternate courses may be substituted with the approval of the campus undergraduate program director. Courses listed with an asterisk are included in the American Humanics program. Completion of the American Humanics program at IUPUI qualifies a student for the IU Nonprofit Management Certificate.

Nonprofit Institutions (minimum of 3 credit hours):

*SPEA V221 Nonprofit and Voluntary Sector (3 cr.)
 *BUS W220 Introduction to the Nonprofit Corporation (3 cr.) (offered on the Bloomington campus)

Nonprofit Management (minimum of 6 credit hours):

The following course:

*SPEA V362 Nonprofit Management and Leadership (3 cr.)

One of the following courses:

*SPEA V356 Introduction to Nonprofit Accounting and Reporting (3 cr.)
 SPEA V401 Financial and Cost-Benefit Analysis (3 cr.)
 *SPEA V458 Fund Development for Nonprofit Organizations (3 cr.)
 *BUS A200 Foundations in Accounting (3 cr.)

Nonprofit Field (minimum of 3 credit hours):

Select one course from a special feature of a nonprofit field, service arena, or industry. Examples include:
 SPEA E162 Environmental and People (3 cr.)
 SPEA H316 Environmental Health (3 cr.)
 SPEA H320 Health Systems Administration (3 cr.)
 POLS Y326 American Social Welfare Policy (3 cr.) (offered on the Bloomington campus)
 *PSY B310 Life Span Development (3 cr.)
 *SOC R335 Sociological Perspectives on the Life Course (3 cr.)

Internship (minimum of 3 credit hours):

*SPEA V380 Internship in Public and Environmental Affairs (1-6 cr.) (for non-SPEA students) **or**
 *SPEA V381 Professional Experience (1-6 cr.) (for SPEA Students only)

Certificate in Public Affairs

The School of Public and Environmental Affairs offers the Certificate in Public Affairs to provide an overview of the study of public policy, governmental organization, and public management as an enhancement to the major area of study in a student's undergraduate program. The interdisciplinary program requires 27 credit hours, of which at least 15 but not more than 21 credit hours must be in SPEA courses.

Certificate Requirements (nine courses):

The following courses:

SPEA V170 Introduction to Public Affairs (3 cr.)
 SPEA V264 Urban Structure and Policy (3 cr.)

One of the following courses:

SPEA E162 Environment and People (3 cr.)
 SPEA E272 Introduction to Environmental Sciences (3 cr.)

A total of two courses from groups A, B, and C, with no more than one course from any group.

A. *Organizational Behavior*

BUS Z302 Managing and Behavior in Organizations (3 cr.)
 SPEA V270 Survey of Administrative Techniques (3 cr.)

B. *Public Administration*

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

C. *Law*

SPEA J301 Substantive Criminal Law (3 cr.)
 SPEA V376 Law and Public Policy (3 cr.)
 BUS L201 Legal Environment of Business (3 cr.)
 POLS Y304 American Constitutional Law I (3 cr.)
 POLS Y305 American Constitutional Law II (3 cr.)

Choose any four of the following courses:

Public Affairs

SPEA V260 Topics in Public Affairs (approved topics) (3 cr.) (*May be repeated.*)
 SPEA V346 Introduction to Government Accounting and Financial Reporting (3 cr.)
 SPEA V348 Management Science (3 cr.)
 SPEA V365 Urban Development and Planning (3 cr.)
 SPEA V372 Government Finance and Budgets (3 cr.)
 SPEA V373 Human Resources Management in the Public Sector (3 cr.)
 SPEA V432 Labor Relations in the Public Sector (3 cr.)
 SPEA V442 Topics in Budgeting or Cost-Benefit (3 cr.) (*May be repeated.*)
 SPEA V444 Public Administrative Organization (3 cr.)
 SPEA V449 Policy Senior Seminar (3 cr.)
 SPEA V450 Contemporary Issues in Public Affairs (approved topics) (3 cr.) (*May be repeated.*)
 SPEA V472 Policy Processes in the United States (3 cr.)

Criminal Justice

SPEA J101 The American Criminal Justice System (3 cr.)
 SPEA J302 Procedural Criminal Law (3 cr.)

SPEA J322 Introduction to Criminalistics (3 cr.)
 SPEA J401 Criminal Law and Procedure (3 cr.)
 SPEA J439 Crime and Public Policy (3 cr.)

Geography

GEOG G412 Urban Transportation Analysis (3 cr.)
 GEOG G414 Regional Transport Systems (3 cr.)

Political Science

POLS Y200 Citizen and the Courts (3 cr.)
 POLS Y302 Public Bureaucracy in Modern Society (3 cr.)
 POLS Y306 State Politics in the United States (3 cr.)
 POLS Y394 Public Policy Analysis (3 cr.)

Sociology

SOC R329 Urban Sociology (3 cr.)
 SOC R345 Crime and Society (3 cr.)
 SOC R346 Control of Crime (3 cr.)
 SOC R480 Sociology and Social Policy (3 cr.)

Certificate in Public Health

The curriculum is designed to provide students with a basic understanding of environmental health issues, current health policies, and the structure of the medical care delivery system.

Certificate Requirements (six courses):

The following three courses:

SPEA H316 Environmental Health (3 cr.)
 SPEA H320 Health Systems Administration (3 cr.)
 SPEA H322 Principles of Epidemiology (3 cr.)

Three of the following courses:

SPEA E400 Topics in Environmental Studies (approved topics) (3 cr.) (*May be repeated.*)
 SPEA E410 Introduction to Environmental Toxicology (3 cr.)
 SPEA E431 Water Supply and Wastewater Treatment (3 cr.)
 SPEA E451 Air Pollution and Control (3 cr.)
 SPEA E452 Solid and Hazardous Waste Management (3 cr.)
 SPEA H342 Community Health Education (3 cr.)
 SPEA H411 Long-Term Care Administration (3 cr.)
 SPEA H416 Environmental Health Policy (3 cr.)
 SPEA H423 Disease Vector Control (3 cr.) **or**
 BIOL K443 Medical Parasitology and Entomology (3 cr.)
 SPEA H428 Food Science and Sanitation (3 cr.)
 SPEA H433 Industrial Hygiene and Radiological Health (3 cr.)
 SPEA H441 Legal Aspects of Health Care Administration (3 cr.)
 SPEA H459 Environmental Science and Health Data Analysis (3 cr.)
 SPEA H460 Techniques in Environmental Science and Health (3 cr.)
 SPEA V450 Contemporary Issues in Public Affairs (approved topics) (3 cr.) (*May be repeated.*)
 ECON E387 Health Economics (3 cr.)

Certificate in Public Management

The School of Public and Environmental Affairs offers the Certificate in Public Management to provide a systematic program that gives students an understanding of how to work in and with public organizations.

Certificate Requirements (seven courses):

The following course:

SPEA V263 Public Management (3 cr.)

Six of the following courses:

SPEA V346 Introduction to Government Accounting and Financial Reporting (3 cr.)

SPEA V348 Management Science (3 cr.)

SPEA V366 Managing Behavior in Public Organizations (3 cr.)

SPEA V368 Managing Government Operations (3 cr.)

SPEA V369 Managing Information Technology (3 cr.)

SPEA V370 Research Methods and Statistical Modeling (3 cr.)

SPEA V372 Government Finance and Budgets (3 cr.)

SPEA V373 Human Resources Management in the Public Sector (3 cr.)

SPEA V375 Emergency Services Administration (3 cr.)

SPEA V376 Law and Public Policy in Nonprofit Management (3 cr.)

SPEAV432 Labor Relations in the Public Sector (3 cr.)

American Humanics Certificate in Nonprofit Management

Any IUPUI student is eligible to enroll in the American Humanics Certificate in Nonprofit Management. It is offered in partnership with American Humanics, Inc. and the Indiana University Center on Philanthropy at IUPUI. This certification prepares college students for professional careers in the expanding job market of nonprofit youth and human services organizations. Upon completion of the program, students will be certified for possible positions of leadership with collaborating organizations such as the YMCA, American Red Cross, Big Brothers Big Sisters, Habitat for Humanity, and many other nonprofit agencies at both the local and national level. SPEA students may also simultaneously enroll in SPEA's Nonprofit Management Certificate. The American Humanics Certification program requires the demonstration of a set of knowledge and skill competencies and the completion of the 300-hour internship. Competencies are obtained through course work, professional workshops and retreats, the internship, and participation in the American Humanics Student Association. Students interested in learning more about the certificate should contact SPEA Student Services at 274-4656.

Course Descriptions

Undergraduate Courses

The abbreviation "P" refers to course prerequisites and "R" to recommended prerequisite courses.

Prerequisites can be waived by the instructor of the course. The number of hours of credit is indicated in parentheses following the course title. Courses are listed in four groups: environmental, public health, criminal justice, and public affairs.

Environmental Courses

E100 Environmental Topics (3 cr.) Study of selected issues in environmental affairs. Topics vary from semester to semester. May be repeated for credit.

E162 Environment and People (3 cr.) An interdisciplinary examination of the problems of population, pollution, and natural resources and their implications for society. Credit not given for both SPEA E162 and E262.

E262 Environmental Problems and Solutions (3 cr.) An integrated approach to understanding and solving environmental problems. Topics may include ecosystem restoration, surface water and groundwater contamination, air pollution, and global environmental change. This course is intended primarily for majors in the B.S.E.S. degree program.

E272 Introduction to Environmental Sciences (3 cr.) P: one statistics course. Application of principles from life and physical sciences to the understanding and management of the environment. Emphasis will be placed on: (1) the physical and biological restraints on resource availability and use, and (2) the technological and scientific options to solving environmental problems.

E311 Introduction to Risk Assessment and Risk Communication (3 cr.) This course will cover basic human health and risk assessment procedures, as outlined by the various regulatory agencies (especially EPA) and standards setting groups. Because risk communication is an integral part of any risk management process, risk communication techniques and applications will be integrated into the course material.

E325 Computing for Environmental Scientists (1-3 cr.) P: MATH M118 or M119; K300 or equivalent; and SPEA E272. Survey of computing applications to environmental issues. Personal computing emphasized. Application of spreadsheets, graphics, simple statistics, and BASIC programming to environmental science issues. Manipulation and interpretation of real data, case studies, and projects. Many software packages used.

E326 Mathematical Methods in Environmental Science (3 cr.) P: MATH M119 or M211; CSCI C211 or BUS K201; and K300. Mathematical modeling in environmental science. Expressing problems as equations. Applications and numerical evaluation of derivatives and integrals. Derivation and solution of differential equations. Use of package FORTRAN subroutines in problem solving. Statistics applied to environmental science.

E340 Environmental Economics and Finance (3 cr.) This course familiarizes students with the principles of environmental economics, finance, and cost-benefit analysis. The incentive effects of environmental policy design are assessed. Policy instruments include tradable permits, emissions taxes, deposit-refund systems, pollution prevention programs, and voluntary agreements. Project appraisal techniques are then developed and applied to specific case evaluations.

E355 Introduction to Limnology (3 cr.) Limnology is the integrated science of inland waters. Principles of physics, chemistry, geology, and biology combine to form the basis for understanding how lakes and streams function as aquatic ecosystems. The course will highlight the effects of human activity on lake and stream ecosystems.

E360 Introduction to Biological Resources (3 cr.) P: SPEA E272; one biology course. This

course provides the necessary background for students interested in fisheries, wildlife, or forest management who have had little course work or experience with the taxonomy, ecology, or natural history of plants or animals.

E363 Environmental Management (3 cr.) Introductory course in environmental management. Subjects covered include current issues and trends, total quality environment management, managing scientific and technical personnel, managing contracts and grants, nontraditional approaches to regulation, environmental conflict resolution, working with the media, risk communication, and working with communities.

E400 Topics in Environmental Studies (2-3 cr.) P: SPEA E272. An interdisciplinary consideration of specific environmental topics. May be repeated for credit.

E410 Introduction to Environmental Toxicology (3 cr.) P: SPEA E272 or H316; one biology course. Study of toxic mechanisms, pathology, and disease development resulting from exposure to biological and chemical agents in the environment.

E411 Introduction to Groundwater Hydrology (3 cr.) An overview is presented of the theory and practice of groundwater movement, groundwater contamination, and aquifer testing remediation, as well as policy issues such as groundwater management. The formal lectures are supplemented by several guest speakers who are professionals working in different areas of groundwater hydrology.

E418 Vector-Based Geographic Information Systems (3 cr.) Introduction to geographic information systems using vector data structure Vector GIS capabilities and uses. Data structure and file management of spatial data. Laboratory exercises using ARC/INFO software.

E431 Water Supply and Wastewater Treatment (3 cr.) P: SPEA E272 or H316; CHEM C101 or equivalent; MATH M119 or equivalent. Health and ecological premises for water and wastewater treatment; principles of water supply; treatment, distribution, and construction; basis for water standards and laboratory examinations; wastewater disposal methods and construction for private installations, institutions, municipalities, and industries; water quality control with respect to wastewater pollution.

E440 Wetlands: Biology and Regulation (3 cr.) P: SPEA E272 or H316; any biology course. This course trains students to evaluate wetlands to comply with federal, state, and local regulations. It examines the principles that inspired these regulations and assesses the consequences. It seeks to relate the breadth and strength of available scientific knowledge to public policy goals.

E441 Controversies in Environmental Health (3 cr.) A skills course in a debate format. Skills are developed by researching, preparing arguments for, and debating topics related to environmental health and health of the environment. Clear writing skills are also emphasized, as the students write up debate evaluations which are critically graded for content, form, and style.

E451 Air Pollution and Control (3 cr.) P: SPEA E272 or H316; CHEM C101 or equivalent; MATH M119 or equivalent. Type, sources, and behavior of air contaminants; economic, social, and health hazard aspect of air pollutants; principles of evaluation; indices of pollution and their worth; control measures, organization, and administration of community control programs.

E452 Solid and Hazardous Waste Management (3 cr.) P: SPEA E272 or H316. Types and sources of solid waste; collection methods; disposal techniques: sanitary landfill, incineration, composting, reclaiming, or recycling; advantages and disadvantages of each; special and hazardous waste handling; operation and management of solid and hazardous waste programs.

E457 Introduction to Conservation Biology (3 cr.) Ecological principles associated with rare species and with biodiversity, laws and statutes used to conserve biodiversity, and land and species management practices. The aim is to understand scientific and political complexities of conservation biology, and to study different methods used to conserve living resources and resolve conflicts associated with conservation.

E460 Fisheries and Wildlife Management (3 cr.) P: SPEA E272 or H316; any biology course. This course first reviews taxonomy, vertebrate biology, and population ecology, then introduces the student to a variety of conflicts concerning fisheries and wildlife. Case studies examine endangered species, overharvesting, maximum sustained yield, habitat evaluation, and recreational use.

E461 Fisheries and Wildlife Management Laboratory (3 cr.) P: SPEA E272 or H316; one biology course; and SPEA E460 (can be concurrent). Practical experience course in which student identify fish and wildlife in the field for the purpose of evaluating the effectiveness of and making recommendations for change to existing wildlife plans.

E466 International and Comparative Environmental Policy (3 cr.) This course explores how stakeholders manage environmental problems that extend beyond national borders. Key questions considered include the following: How do nations resolve environmental conflict? Is environmental diplomacy in a state of crisis? How can we improve international environmental management? Historical, contemporary and emerging institutions for international environmental protection are examined.

E475 Techniques of Environmental Science (3 cr.) P: SPEA E272 or H316. Principles and methods of sampling, collection, measurement, analysis, interpretation, and presentation of data concerning environmental science. Through lab demonstrations and fieldwork, students will become familiar with instrumentation and analytical methods currently used in environmental analysis. Team instruction will be used to demonstrate techniques.

E476 Environmental Law and Regulation (3 cr.) Introductory course in environmental law and regulation. Subjects covered include command and control regulation, air quality, water quality, toxics, waste management, energy, natural resources, international environmental law, and alternative dispute resolution.

Public Health Courses

H120 Contemporary Health Issues (1-3 cr.)

An examination of current public health, environmental health, and health service delivery issues in the U.S. Topics include the organization and costs of health systems, access to care, and the interrelationships between risk factors and health; also, environmental challenges facing our society and their impact on health.

H316 Environmental Health (3 cr.) An introduction to the broad concerns of environmental and health interactions. Topics considered include vector control food sanitation, air quality control, water and wastewater treatment and quality control, solid and hazardous waste management, industrial hygiene, radiation safety, and public safety, as well as related policy and administrative techniques.

H320 Health Systems Administration (3 cr.) An overview of the U.S. health care delivery system. It examines the organization, function, and role of the system; current system problems; and alternative systems or solutions.

H322 Principles of Epidemiology (3 cr.) A basic overview of epidemiologic methodology and techniques. Both communicable and chronic disease risk factors will be discussed, along with data acquisition, analysis techniques, and current published epidemiological studies.

H342 Community Health Education (3 cr.) A study of theory and practice in the field of professional health education. The process of behavioral change is examined. Procedures for the planning, delivery, and evaluation of health education practices are considered.

H352 Health Finance and Budgeting (3 cr.) A study of the financial management of health care facilities based on generally accepted business principles. Accounting and managerial control of cash, accounts receivable, inventory control, budgeting, and cost control, as well as accounting and evaluation of short- and long-term debt will be examined.

H353 Advanced Health Finance and Budgeting (3 cr.) P: SPEA H352. This course builds upon H352 Health Finance and Budgeting. Will use a series of case studies to apply techniques and principles taught in H352.

H354 Health Economics (3 cr.) This course will familiarize students with economic tools and principles applied to health care and policy. In addition to the textbook, students will analyze recent articles on federal policy.

H365 Health Administration Practicum (2 cr.) Supervised orientation, observation, and instruction with local- and state-level health-related agencies and facilities. Primary focus will be placed on health administration.

H367 Environmental Science and Health Practicum (2 cr.) Supervised orientation, observation, and instruction with local- and state-level health-related agencies and facilities. Primary focus will be placed on environmental science and health.

H371 Human Resources Management in Health Care Facilities (3 cr.) This course covers the

function of management, which is concerned with the acquisition, development, and use of human resources in the field of health care delivery. Labor relations relating to health care delivery are also included.

H401 Strategic Planning for Health Care Organizations (3 cr.) This course examines strategic planning techniques as they apply to health care organizations. Students will develop and defend a comprehensive strategic plan for a case facility. One half of the course will be conducted in a workshop format.

H402 Hospital Administration (3 cr.) P: SPEA H320. The study of organization, structure, function, and fiscal operations within hospitals. The role of the hospital in the community, relationship to official and voluntary health agencies, coordination of hospital departments, and managerial involvement will be examined.

H411 Long-Term Care Administration (3 cr.) Nursing home regulations, legal aspects, and insurance; personnel management; medical records; diet and food service; rehabilitation; nursing services; psychiatric aspects in handling of geriatric patients; professional standards; use of volunteer groups.

H416 Environmental Health Policy (3 cr.) Study of professional requirements and duties of the environmental health functions within health agencies; consideration of applicable laws and standards in each environmental health function; environmental health program planning, evaluation, implementation, and personnel responsibilities.

H423 Disease Vector Control (3 cr.) Survey of animal and insect disease vectors and economic pests of public health significance; vector and pest identification and control procedures; survey of the classification, application, and restriction of pesticides in controlling disease vectors and economic pests commonly found in the U.S.

H428 Food Science and Sanitation (3 cr.) Basic concepts of food technology with emphasis on methods and procedures in food processing to minimize contamination and to prevent food-related illness. Federal, state, and local food laws and inspection procedures will be examined.

H432 Health Care Marketing (3 cr.) A practical study of marketing in health care institutions, health service organizations, and health insurers. A basic foundation in marketing principles, new methods in marketing products and services, and inexpensive marketing techniques will be examined.

H433 Industrial Hygiene and Radiological Health (3 cr.) Fundamental concepts of industrial and occupational health hazards of a biological, chemical, or physical nature; evaluation of hazards, methods of control, and safety protection; Occupational Safety and Health Act standards. Principles of radioactivity; characteristics of ionizing and nonionizing radiation; detection and measurement of radiation dose and exposure, radiation uses, and hazards; methods for controlling radiation hazards.

H441 Legal Aspects of Health Care Administration (3 cr.) An overview of the liability

and legal responsibility, as well as legal recourse, that health care facilities may exercise. This course will discuss policies and standards relating to health facility administration. Also included is a discussion of financial aspects unique to the hospital/health care facility environment, such as third-party payments and federal assistance.

H448 Public Health Education Methods (3 cr.)

Usual techniques of group work with investigations of social and psychological factors that determine effectiveness in promoting public health. Laboratory time provides opportunity for competence in group work and in design and use of promotional materials.

H455 Topics in Public Health (1-3 cr.) Extensive discussion of selected topics in public health. The topic may change from semester to semester, based on resource availability and student demand. May be repeated for credit.

H456 Managed Care (3 cr.) Course examines the organizational structures of managed care as used in the health industry. The strengths and weaknesses of managed care organizations are examined as well as the performance of both public and private managed care organizations. Course also examines and discusses current issues surrounding managed care.

H459 Environmental Science and Health Data Analysis (3 cr.) Provides students with an understanding of basic principles needed to perform sampling and analysis of field and laboratory environmental data. Topics include properties of chemical and biological constituents, detection limits, calibration, quality control, precision accuracy, and statistical analysis.

H460 Techniques in Environmental Health (3 cr.) P: SPEA H459. Basic physical, chemical, and biological examinations and standards for potable water quality, wastewater treatment determinations, and stream pollution control. Basic physical, chemical, and biological (ergonomic) examinations used in industrial hygiene and air pollution control. Instruction in basic laboratory skills and techniques for performing these examinations.

H466 Public Health Field Experience (1 cr.) P: SPEA H465. Supervised advanced training in professional and technical functions in public health; guided student activity and performance in professional public health functions. Individualized programs may be arranged to suit students' areas of concentration.

H474 Health Administration Seminar (3 cr.) P: SPEA H320 and senior standing. This course will examine current issues in public health and governmental and private initiatives to resolve these issues.

Criminal Justice Courses

J101 The American Criminal Justice System (3 cr.) Introduction to the criminal justice system of the United States and its function in contemporary society.

J201 Theoretical Foundations of Criminal Justice Policies (3 cr.) P: SPEA J101. This course examines the impact of sociological, biological, and economic theories of crime and the practice of

criminal justice. Focus is on the nature and importance of theory, context of theoretical developments, methods for the critical analysis of theoretical developments, and policy implications of the varying perspectives considered.

J202 Criminal Justice Data, Methods, and Resources (3 cr.) P: SPEA J101. R: MATH M111 or equivalent; SPEA V261 or equivalent. Course examines basic concepts of criminal justice. Students become familiar with research techniques necessary for systematic analysis of the criminal justice system, offender behavior, crime trends, and program effectiveness. Students will learn to critically evaluate existing research. Students will become familiar with existing sources of criminal justice data and will learn to assess the quality of that data.

J260 Topics in Criminal Justice (1-3 cr.) Study of selected issues in criminal justice. Topics vary from semester to semester. May be repeated for credit.

J301 Substantive Criminal Law (3 cr.) P: SPEA J101. R: SPEA J201 and SPEA J202. The development, limitations, and application of substantive criminal law utilizing the case-study method.

J302 Procedural Criminal Law (3 cr.) P: SPEA J101. Criminal law application and procedure from the initiation of police activity through the correctional process, utilizing the case-study method.

J303 Evidence (3 cr.) P: SPEA J101. The rules of law governing proof at trial of disputed issues of fact; burden of proof; presumptions and judicial notice; examination, impeachment, competency, and privileges of witnesses; hearsay rule and exceptions—all related as nearly as possible to criminal, as opposed to civil, process.

J304 Correctional Law (3 cr.) P: SPEA J101. Legal problems from conviction to release: pre-sentence investigations, sentencing, probation and parole, incarceration, loss and restoration of civil rights.

J305 Juvenile Justice (3 cr.) P: SPEA J101. This course is designed to provide an overview of the justice system's response to abused, neglected, and dependent children; juvenile misconduct; and delinquent behavior. An extensive review of the development of recent legal changes to the court, options for prevention, treatment of juvenile offenders, and possible system reforms.

J306 The Criminal Courts (3 cr.) P: SPEA J101. R: SPEA J201 and SPEA J202. An analysis of the criminal justice process from prosecution through appeal. The organization and operation of felony and misdemeanor courts are examined. Topics include prosecutorial decision making, plea bargaining, judicial selection, and the conduct of trials, sentencing, and appeal.

J310 Introduction to Administrative Processes (3 cr.) P: SPEA J101. Introduction to principles of management and systems theory for the administration of criminal justice agencies. Credit not given for both SPEA J310 and SPEA V270.

J320 Criminal Investigation (3 cr.) P: SPEA J101. Theory of investigation, crime scene procedures, interviews, interrogations, surveillances, and sources of information; collection and preservation of physical evidence; investigative techniques in specific crimes.

J321 American Policing (3 cr.) P: SPEA J101. R: SPEA J201 and SPEA J202. This course will examine the history, evolution, and organization of policing in the United States. Emphasis is placed on such major contemporary issues as the police role, discretion, use of force, corruption, accountability, and community policing.

J322 Introduction to Criminalistics (3 cr.) P: SPEA J101. R: SPEA J301. This course will examine physical evidence developed through the investigative process, and methods of identifying and establishing validity and relevance through forensic laboratory techniques.

J331 Corrections (3 cr.) P: SPEA J101. R: SPEA J201 and SPEA J202. This course examines the historical development of the American correctional system; the study of administration of local, state, and federal corrections programs, including jails, probation, community corrections, and prisons. Includes the study of punishment rationales, current correctional policies, and possibilities for reform.

J369 Private Justice: Police, Courts, and Corrections (3 cr.) P: SPEA J101. This course examines the role of private policing and security; courts and adjudication; and corrections. Includes legislative and ethical issues and the economics of criminal and juvenile justice privatization. Principles of loss prevention; protection of assets; relationship between public and private services; current issues in privatization.

J370 Seminar in Criminal Justice (3 cr.) P: SPEA J101. Selected contemporary topics in criminal justice. May be repeated for credit.

J376 Principles of Public Safety (3 cr.) P: SPEA J101. Examination of threats to public safety and of governmental response at various levels to those threats. Treatment of such areas as transportation and highway threats; occupational safety and health; criminal threats; emergency and disaster planning; consumer protection; and fire control and suppression. Discussion of techniques to identify and measure risk, the acceptability of risk, and governmental attempts to control risk.

J380 Internship in Criminal Justice (1-6 cr.) P: permission of instructor. Open to interested students who qualify upon approval of the faculty. Students may be placed with various criminal justice agencies for assignment to a defined task relevant to their educational interests. Tasks may involve staff work or research. Full-time participants may earn up to 6 credit hours. May be repeated for credit. Course is graded S/F (Satisfactory/Fail).

J433 Institutional Corrections (3 cr.) P: SPEA J101. The history and development of the jail, penitentiary, prison, and reformatory. Analysis and evaluation of contemporary imprisonment.

J439 Crime and Public Policy (3 cr.) P: SPEA J101. R: SPEA J201 and SPEA J202. A detailed examination of the major efforts designed to control or reduce crime. A review of existing knowledge is followed by an investigation of current crime control theories, proposals, and programs.

J440 Corrections in the Community (3 cr.) P: SPEA J101. A detailed analysis of correctional alternatives to incarceration that focus on the reintegration of the offender while remaining in the

community. Because of their extensive use, considerable attention is given to probation and parole. Other topics include diversion, community residential programs, restitution, halfway houses, and home detention.

J445 Trends in Corrections (3 cr.) P: SPEA J101. Analysis and evaluation of contemporary correctional systems. Discussion of recent research concerning the correctional institution and the various field services.

J460 Police in the Community (3 cr.) P: SPEA J101. In-depth examination of crime as an urban policy problem, focusing on the role of police and victims in defining crime as a policy problem, and their role in seeking to reduce the incidence of crime.

J470 Seminar in Criminal Justice (3 cr.) P: senior standing. Emphasizes current developments in legal, administrative, and operational aspects of the criminal justice system.

J480 Research in Criminal Justice (1-6 cr.) P: junior standing and consent of instructor. Individual research under guidance of faculty member.

Public Affairs Courses

K300 Statistical Techniques (3 cr.) P: MATH M014 or equivalent. R: MATH M118. An introduction to statistics. Nature of statistical data. Ordering and manipulation of data. Measures of central tendency and dispersion. Elementary probability. Concepts of statistical inference decision: estimation and hypothesis testing. Special topics discussed may include regression and correlation, analysis of variance, nonparametric methods. Credit not given for both K300 and either ECON E270/ E370, SOC S250, or PSY/MATH K310.

V100 Current Topics in Public Affairs (1-3 cr.) Readings and discussion of current public issues and problems. May be repeated for credit.

V160 National and International Policy (3 cr.) This course will discuss current debates about United States public policy on the national and international levels. Some policy issues covered are economic, crime, security, health, and energy. Credit not given for both V160 and V170.

V170 Introduction to Public Affairs (3 cr.) Broad coverage of public affairs through critical and analytical inquiry into policy making at all levels of government. Particular emphasis on intergovernmental relations as they affect policy in the federal system. Credit not given for both V160 and V170.

V221 Nonprofit and Voluntary Sector (3 cr.) This course provides a broad overview of the United States nonprofit sector. Topics include the sector's size and scope; and its religious, historical, and theoretical underpinnings. It also examines perspectives on why people organize, donate to, and volunteer for nonprofit organizations, and looks at current challenges that the sector faces.

V252 Career Development (1 cr.) Career planning and placement strategies, assessment of labor market information, market surveys, and development of customized portfolios. Emphasis given to projects, papers, and independent research.

V260 Topics in Public Affairs (3 cr.) Study of selected issues in public affairs. Topics vary from semester to semester. May be repeated for credit.

V261 Computers in Public Affairs (3 cr.) An introduction to computer applications in public affairs. Topics include basic terminology, core concepts, and issues associated with managing operating systems, designing networks, and applying user information technology to public affairs problems. Issues of security and ethics in computing are also considered.

V263 Public Management (3 cr.) This course is an examination of the management process in public organizations in the United States. Special attention will be given to external influences on public managers, the effect of the intergovernmental environment and, in particular, problems of management in a democratic, limited government system.

V264 Urban Structure and Policy (3 cr.) An introduction to urban government and policy issues. Topics include urban government structure and policy making, the economic foundations and development of cities, demography of cities and suburbs, land-use planning, and other selected urban policy problems. Credit not given for both SPEA V161 and SPEA V264.

V267 American Humanities Management Institute (1 cr.) Students attending the American Humanities Management Institute (AHMI) are required to participate in orientation meetings to plan for AHMI and raise funds for the trip. AHMI is held annually in January. Permission of the American Humanities campus director is required. May be repeated for credit.

V268 American Humanities Topics (1-3 cr.) Topics covering specific American Humanities competencies reflecting the particular needs and interests of participating students and the local advisory board for the program. Topics may include risk management, fundraising, board and committee development, and nonprofit marketing. Topics vary from semester to semester. May be repeated for credit.

V270 Survey of Administrative Techniques (3 cr.) Introduction to principles of management and systems theory for the administration of public agencies. Credit not given for both SPEA V270 and SPEA J310.

V340 Urban Government Administration (3 cr.) Structure of local government in the U.S., federalism and intergovernmental relations, policy problems faced by local officials, and the implications of these problems for local government administrators.

V346 Introduction to Government Accounting and Financial Reporting (3 cr.)

P: BUS A201 or permission of instructor. An introduction to government accounting, including comparison with accounting for the private sector, intended as background for the use of financial administrators. The course deals primarily with municipal accounting. Not open to students with more than 7 credit hours of accounting.

V348 Management Science (3 cr.) P: SPEA K300, MATH M025, or MATH M118. Introduction to management science models and methods for policy analysis and public management. Methods include decision analysis, linear programming, queuing analysis, and simulation. Computer-based applications

are included. Prior familiarity with computers is recommended, though not required.

V350 Introduction to Development Administration (3 cr.) Introduction to the administration of development activities in poor countries. Examines key problems, including the complexity of development, the interplay of external donors and domestic administration, and the difficulties of organizing and managing development efforts. Combines cases and textual readings, allowing the student to analyze actual programs, policies, and projects.

V352 Personal Career Planning (1 cr.) Investigation of careers, the world of work, and the career planning process. The focal point is on students and their goals. Provides assistance in developing practical, meaningful, and realistic insights into the nature of making a public career choice in today's world. Credit not awarded for both SPEA V352 and BUS X420.

V356 Introduction to Nonprofit Accounting and Reporting (3 cr.) P: BUS A201 or consent of instructor. This course covers concepts and processes of nonprofit accounting and financial reporting with exploration of differences between for profit, governmental and nonprofit systems. Examples will be drawn from health organizations, welfare agencies, charities, and educational institutions.

V361 Financial Management (3 cr.) This course introduces students to accounting, financial management techniques, and financial reporting. Topics include accounting, debit/credit sheets and balance sheets, financial indicators, fund balances, fringe benefits and pensions, and payroll management.

V362 Nonprofit Management and Leadership (3 cr.) Students in this course examine the management practices of nonprofit organizations. The course encourages students to take the perspectives of nonprofit managers, volunteers, board members, policy makers, donors, and clients. Course projects expand understanding of the nonprofit sector and develop students' management skills, analytical tools, and knowledge.

V365 Urban Development and Planning (3 cr.) P: SPEA V264 and SPEA K300. This course identifies the major problems associated with urban development in the U.S. and investigates the potential of public planning strategies and tools to deal with these problems. An emphasis is placed on the application of analytical approaches to problem definition and solution.

V366 Managing Behavior in Public Organizations (3 cr.) This course provides an introduction to the management of people in public organizations. Focus is on behavioral science in management and related analytical and experiential applications.

V368 Managing Government Operations (3 cr.) P: SPEA V348. Application of analytical techniques to operating decisions in public management sector. Cases are used extensively to illustrate the application of techniques (such as charting, capacity and demand analysis, forecasting, performance measurement, decision analysis, queuing/simulation, Markov

modeling, and cost-effective analysis) to design, scheduling, inventory assignment, transportation, and replacement decisions.

V369 Managing Information Technology (3 cr.) Analysis and application of information technology to problem solving.

V370 Research Methods and Statistical Modeling (3 cr.) P: SPEA K300 or equivalent. This course will introduce the student to the basic methods, issues, analytical techniques, and ethical considerations of evaluation research.

V371 Financing Public Affairs (3 cr.) P: SPEA V160 or V170; ECON E201, E202. A survey of economic and political theories of market failures, public expenditure evaluation, economic stabilization, systems of redistribution, and fiscal federalism. Examples and applications to contemporary government decisions.

V372 Government Finance and Budgets (3 cr.) Study of fiscal management in public agencies, including revenue administration, debt management, and public budgeting.

V373 Human Resources Management in the Public Sector (3 cr.) The organization and operation of public personnel management systems with emphasis on concepts and techniques of job analysis, position classification, training, affirmative action, and motivation.

V375 Emergency Services Administration (3 cr.) An overview of management principles and functional components of EMS systems.

V376 Law and Public Policy (3 cr.) The purpose of this course is to provide a basic understanding of the origins, process, and impact of law in the making and implementing of public policy. The course's major objective is to provide students with the substantive concepts necessary to understand the judicial system and law in its various forms.

V377 Legal Process and Contemporary Issues in America (3 cr.) P: SPEA V376. An introduction to the American legal system, including the Constitution, courts system, and administrative law in federal and state agencies. Readings and discussion center around current issues affected by the legal process.

V380 Internship in Public and Environmental Affairs (1-6 cr.) P: permission of instructor. Open to interested students upon approval of the faculty. Students are placed with public agencies or governmental units for assignment to a defined task relevant to their educational interests in public affairs. Tasks may involve staff work or research. Full-time participants may earn up to 6 credit hours. May be repeated for credit. Course is graded S/F.

V381 Professional Experience (1-6 cr.) Students will be required to fulfill a minimum of 120 hours of relevant professional work.

V386 Case Studies for Policy Analysis (3 cr.) This course focuses on analyzing case studies of public policies using a variety of disciplinary perspectives, including application of the principles and concepts of intermediate microeconomic theory.

V388 American Humanics Internship (3-6 cr.) American Humanics, Inc. requires an internship of 300 to 600 contact hours. A minimum of 3 credit hours is required. Credits will be given at the rate of 1 hour = 100 internship hours. Permission of the American Humanics campus director is required.

V390 Readings in Public and Environmental Affairs (0-3 cr.) P: permission of instructor. Independent readings and research related to a topic of special interest to the student. Written report required. May be repeated for credit.

V401 Financial and Cost-Benefit Analysis (3 cr.) This course familiarizes students with the principles of financial analysis, cost-benefit analysis, and Kaldor/Hicks accounting. Topics include net present value calculation, net annual worth, public and private decision criteria, and market data adjustment for taxes, rents, and other market distortions.

V405 Public Law and the Legislative Process (3 cr.) This course focuses on Congress as a policy-making body in the United States public law system. It covers the constitutional framework for congressional operations as well as technical aspects of the legislative process such as bill drafting and analysis, the role of leadership, and the prerogatives of individual members.

V406 Public Law and the Electoral Process (3 cr.) The purpose of this course is to facilitate understanding of the interaction of electoral politics and policy. It covers the legal framework of the evolution of the "right" to vote, the impact of the judiciary on the structure of elections, limitations on campaign practices, and the importance of legislative districting and its control.

V407 Public Law and Government Relations (3 cr.) The purpose of this course is to build understanding of government relations work as applied to careers in the field. It covers the historical evolution of the constitutional right to petition the government with an understanding of the limitations imposed upon the process. The interaction of public and private sectors is included.

V421 Metropolitan Development (3 cr.) Discussion of the process of development in metropolitan regions. Includes topics such as economic development, land use evolution, and demographic change. Consideration of relevant policy issues.

V422 Transportation Policy Analysis (3 cr.) This course examines current issues in transportation to identify the key analytic and management issues that must be considered in developing effective public policy. Particular emphasis will be placed on examining the rationale for and actual impact of existing government policies, and on analyzing the likely impacts of policy alternatives.

V432 Labor Relations in the Public Sector (3 cr.) An introductory overview of labor relations in the public sector. Course includes the development, practice, and extent of the collective bargaining process and administration of the labor agreement by state and local governments.

V435 Negotiation and Alternative Dispute Resolution (1-4 cr.) This course introduces students to the theories and techniques of alternative dispute resolution. The course covers interest-based negotiation, mediation, arbitration, fact finding, early neutral evaluation, and other techniques used in business, labor relations, environmental disputes, family relations, and international affairs.

V436 Communication for Government and Nonprofit Organizations (3 cr.) This course will develop an appreciation regarding the critical nature of communication by managers in the public and nonprofit sector. It will introduce students to the skills critical to effective communication as professionals.

V441 Topics in Financial Management and Policy (3 cr.) P: SPEA V372. Various topics focusing on financial management and policy are examined in state and local settings. May be repeated for credit.

V442 Topics in Budgeting or Cost/Benefit (3 cr.) P: SPEA V372. Various topics in budgeting or cost/benefit analysis are examined. Course may be repeated for different topics.

V443 Managing Workforce Diversity (3 cr.) The composition and nature of the work force is changing. Managers must decide how to accommodate real differences among the members of their organizations. This course seeks to provide information for practitioners who hope to integrate an understanding of workforce diversity into their management style and professional behavior.

V444 Public Administrative Organization (3 cr.) A review of research findings and analysis of the operation of public agencies and their performance.

V447 Federal Budget Policy (3 cr.) Examination of the institutions and processes involved in putting together the annual federal budget, with emphasis on the role of the Appropriations and Budget Committees in Congress and on the White House and the Office of Management and Budget in the executive branch. Selected major policy areas will be considered.

V449 Policy Senior Seminar (3 cr.) P: SPEA V348. Discussion of the role of policy analysts in government. Applications of analytical tools to substantive policy areas such as transportation, community development, education, poverty, manpower, and health.

V450 Contemporary Issues in Public Affairs (1-3 cr.) Extensive analysis of selected contemporary issues in public affairs. Topics vary from semester to semester. May be repeated for credit.

V451 Social Policy and the Aging (3 cr.) A focused examination of government and the elderly. Public policy and administration of income, health, housing, employment, and social service programs, as well as analysis of the context of aging policy.

V456 Topics in Public Law (3 cr.) Extensive analysis of selected contemporary issues in public law. Topics vary from semester to semester. May be repeated for credit.

V457 Management Science in the Public Sector (3 cr.) P: SPEAV348, CSCI C211, and SPEA K300. An intermediate treatment of management science

methods with primary application to public managerial decision support. Topics include network analysis, queuing, simulation, and others. Computer-based analysis is emphasized.

V458 Fund Development for Nonprofit Organizations (3 cr.) Course builds an understanding of the practice, philosophy, law, and theory of fundraising. Students establish an organization's value base and mission, prepare funding appeals, evaluate readiness for a campaign, assess funding sources, implement fundraising vehicles, evaluate effectiveness, and discuss stewardship of contributions.

V460 Federalism, Intergovernmental Relations and Management (3 cr.) Overview of the dynamics of multi-organizational governance in the United States. Examination of federal and other systems. Structure and operations of intergovernmental programs and the role of managers within these systems.

V461 Computer Applications in Public Affairs (3 cr.) P: BUS K201. This course is designed to provide students with the essentials of computer hardware and software needed to operate effectively in a public sector environment. The course will emphasize public sector applications using software packages or microcomputers and minicomputers.

V462 Community Development (3 cr.) The process and outcomes of local citizen-based efforts to improve social, economic, and cultural conditions. Interaction of public and nonprofit sectors in community revitalization. Experiences, cases, and problems involving both rural and urban settings.

V463 Interpersonal Relations in the Workplace (1-4 cr.) Key interpersonal skills will be modeled through a variety of media and experiences. Students will practice these skills and receive feedback. Students will be expected to participate in structured experiences designed to give them insight into their behavior and how it will affect their ability to achieve personal and professional objectives.

V465 Geographic Information Systems for Public and Environmental Affairs (3 cr.) P: SPEA V261 and V369. Students will learn the concepts, methodologies, and perspectives essential for using geographic information systems (GIS) to address critical public affairs issues. Through course projects, students will learn how to use desktop and Internet-based GIS applications, and will develop complementary skills related to designing and implementing GIS applications for public-sector organizations.

V470 Community Development Workshop (3 cr.) This course will be conducted as an undergraduate research workshop. The focus will be on community development problems, such as long-range planning, the delivery of government services, or local economic development. The research topic of the course will change each year, and will be announced the preceding semester.

V471 Urban Management Systems (3 cr.) P: SPEA V348 and senior standing. This course is designed to extend the student's skill in applying a variety of qualitative and quantitative methods to the problems of urban government planning and management.

V472 Policy Processes in the United States (3 cr.) P: senior standing. Intended as an integrative senior course, primarily for SPEA students. Course content includes analytical perspectives of the policy process, the centers of policy, and the public interest. Selected cases involving problem analysis and decision making on public issues are included, as well as discussion of current policy issues.

V473 Management Applications Seminar (3 cr.) The purpose of this seminar is to provide students with an opportunity to apply the techniques they have learned to an actual situation. Special attention will be paid to feasible, as contrasted to desirable, solutions. Emphasis will be given to the contextual factors involved in developing feasible solutions.

V475 Database Management Systems (3 cr.) P: SPEA V261, V369, or equivalent. Students learn contemporary theories and methodologies regarding design, use, and management of database systems among public-sector organizations. The course provides hands-on experience with tools such as entity-relationship diagrams, query languages, database management software; and an understanding of critical database management issues such as security, backup, and recovery.

V490 Directed Research in Public and Environmental Affairs (0-3 cr.) To be arranged with the individual instructor and approved by the chairperson of the undergraduate program. May be repeated for credit.

V491 Honors Research in Public and Environmental Affairs (1-3 cr.) P: approval of instructor and SPEA honors advisor. Restricted to students in the SPEA Honors Program. May be repeated for credit.

V499 Honors Thesis (3 cr.) Required of seniors in the Honors Program. Research and paper to be arranged with individual instructor and approved by the campus SPEA Honors Program director. May be repeated for credit.

Graduate Programs

The School of Public and Environmental Affairs offers degree programs that range from the associate degree to the Ph.D. The IUPUI campus offers three professional master's degrees for individuals interested in leadership positions in public, private and nonprofit organizations:

Master of Public Affairs (M.P.A.)
Master of Health Administration (M.H.A.)
Master of Planning (M.Pl.)

The M.P.A. is a professional degree structured around the concepts and skills essential to management, policy, and planning activities within governmental and quasi-governmental organizations. The M.H.A. provides a broad, balanced foundation of theoretical and practical knowledge and technical skills needed to succeed in health administration and health policy and planning. The M.Pl. prepares students to address social, physical, and economic problems in a systematic and creative way. Additionally, master's

degrees may be pursued in combination with degrees in law, business, nursing and philanthropy.

The School of Public and Environmental Affairs offers a variety of graduate degrees and certificate programs.

Graduate Degrees

Master of Public Affairs (M.P.A.)

Master of Health Administration (M.H.A.)

Master of Planning (M.Pl.)

Joint Degree Programs

Master of Health Administration—Doctor of Jurisprudence (M.H.A.—J.D.)

Master of Health Administration—Master of Business Administration (M.H.A.—M.B.A.)

Master of Health Administration—Master of Science in Nursing (M.H.A.—M.S.N.)

Master of Public Affairs—Doctor of Jurisprudence (M.P.A.—J.D.)

Master of Public Affairs—Master of Arts in Philanthropic Studies (M.P.A.—M.A.)

Master of Public Affairs—Master of Science in Nursing (M.P.A.—M.S.N.)

Graduate Certificates

Certificate in Hazardous Materials Management

Certificate in Health Systems Management

Certificate in Nonprofit Management

Certificate in Public Management

Degrees and Concentrations

M.P.A.

Criminal Justice
Environmental Management
Nonprofit Management
Policy Analysis
Public Management
Urban Management

M.H.A.

Admissions

Procedure

Application Information about graduate study, including literature and application materials, may be obtained from the School of Public and Environmental Affairs offices listed in the previous section of this bulletin.

Eligibility For most programs, applicants with bachelor's degrees in any field from an accredited institution are eligible to apply for admission to the graduate programs of the School of Public and Environmental Affairs.

Application Submission Applicants should apply to a degree or certificate program and request financial assistance as early as possible before the desired semester of enrollment. Deadlines for applying for admission and for financial assistance may vary across campuses.

Admission Each application for admission is carefully evaluated by the admissions committee for the appropriate degree. Applicants to all SPEA degree programs must do the following:

1. Submit applications to the graduate program office on the campus where the applicant intends to matriculate.
2. Submit complete official transcripts from all colleges and universities attended. Students who have taken course work on any Indiana University campus do not need to submit an Indiana University transcript.
3. Pay a nonrefundable application fee to Indiana University.
4. Submit three Application Reference Forms completed by individuals familiar with the applicant's activities and potential to succeed in graduate work. These forms are included in the application packet.
5. Read carefully the applicable sections in this bulletin for any specific program or campus admission requirements.
6. Submit proof of bachelor's degree certification from an accredited institution. Students who have not completed undergraduate course work at the time of application may be admitted based on the strength of previous work, but a final transcript attesting to the award of a bachelor's degree must be submitted before the student can enroll.

LSAT and GRE Requirements Applicants for the M.P.A.–J.D. degree may submit LSAT or GMAT (Law School Admission Test or Graduate Management Admission Test) scores in lieu of GRE (Graduate Record Examination) scores. Other degrees require the GRE. Information concerning the GRE is available from Graduate Record Examination, Educational Testing Service, P.O. Box 6000, Princeton, NJ 08541, (609) 771-7670. Information concerning the LSAT is available from Law School Admission Services, P.O. Box 2000, Newtown, PA 18940, (215) 968-1001.

Admission Status

Regular (Unconditional) Admission Status Applicants with this status have met all admission requirements for the specific degree program and may enroll in accordance with the entry date contained in the application for admission.

Deferred Admission Following notice of regular admission, applicants may defer enrollment for a

maximum of one year. Transcripts of course work completed during the deferral period must be submitted, and the admissions committee may request additional letters of recommendation. Should the additional material prove unsatisfactory, the admission may be canceled. Applicants who fail to enroll within one year may need to re-apply for admission.

Provisional Admission On some campuses, applicants may be admitted on a provisional basis if GRE or LSAT scores or prior grade point averages are below admission criteria. Provisional status is removed upon fulfillment of conditions stipulated by the respective degree program admissions committee.

Admission with Deficiencies Applicants may be admitted with deficiencies on a case-by-case basis if they lack course work in certain foundation areas such as mathematics, economics, or statistics. Campus and degree policies may vary.

Nondegree Enrollment Applicants who have a bachelor's degree and who have not been admitted to the graduate program may enroll in SPEA courses as nondegree graduate students. Procedures may vary across campuses.

If nondegree students later wish to obtain SPEA graduate degrees, they must apply for admission to the specific degree program.

Academic Regulations

The following academic regulations of the School of Public and Environmental Affairs are applicable to all graduate programs. Additional campus-specific policies also may apply.

Confidentiality of Student Records In accordance with Indiana University regulations, student records are confidential and are available to other persons only under specific conditions as outlined in university regulations.

Student Rights Rights of students are included in a handbook available on each campus. Due process is followed in the event of disciplinary or other actions.

Student Responsibility Students are responsible for planning their own academic programs and for meeting the requirements for their degree or certificate programs. Faculty and academic advisors may assist students in meeting their responsibilities.

Applicability of Degree and Certificate

Requirements Students may choose to complete either the specific degree and certificate requirements published in the appropriate bulletin at the time of entry into the university or those in the bulletin current at the time of graduation.

Residency Requirements—Master's and

Certificate Programs The campus at which a student completes the majority of required course work will certify and award the degree or certificate, provided the campus is authorized to grant that degree or certificate. The student must have been admitted by the SPEA campus awarding the degree or certificate.

Academic Standing Students are considered to be in good standing during any semester in which their academic grade point average is at least 3.00 (B) both for their last semester's course work and for the cumulative average of all course work completed.

Only courses with grades of C (2.00) or above may be counted toward degree requirements. However, grades below C are used in computing the cumulative grade point average, even if a course is repeated and a higher grade is earned.

Academic Probation Students are placed on probation following a semester in which their cumulative or semester grade point average falls below 3.00. Students on probation or admitted provisionally are required to attain an average of at least 3.00 for all work completed by the end of the next semester of full-time enrollment or its equivalent (12 credit hours). Failure to do so is cause for dismissal.

Grading System SPEA follows the official grading system of Indiana University described in the introductory section of the bulletin.

Incomplete A grade of Incomplete must be removed within the time specified by the instructor of the course; if not, the grade automatically changes to an F one calendar year after the Incomplete was given.

Withdrawals Because deadlines for withdrawal from courses may vary by campus and/or school, students should check with the current campus *Schedule of Classes* to verify deadlines and procedures.

Intercampus Transfer Students enrolled in the School of Public and Environmental Affairs at any campus of Indiana University may transfer to SPEA on another campus, provided they are in good standing.

Transfer of Credit A maximum of 9 credit hours of appropriate graduate course work with grades of B (3.00) or better (only 6 credit hours for the M.H.A. program) may be transferred from degree programs of other academic units within Indiana University or other accredited colleges and universities and applied to SPEA master's-level degree programs. The transfer must be approved by the appropriate graduate program director.

Course Waivers Requests for waiver of specific courses or requirements on the basis of previous course work are to be submitted in writing to the appropriate faculty member or program director.

Program Deviations Requests for deviation from SPEA programs or school requirements are granted only with written approval from an academic advisor and a campus or program director. Disposition by the SPEA program or campus director is final.

Minimum Credit Hours To qualify for the M.P.A. or M.Pl. degrees, students must complete a minimum of 24 of the required 48 credit hours of graduate SPEA courses at Indiana University. Credit granted to transfer students and those exercising the mid-career option does not reduce the number of courses taken in SPEA below this 24-credit-hour minimum.

Credit Earned in Nondegree Status Not more than 12 hours of graduate credit completed as a nondegree student may be credited toward a SPEA graduate degree. Not more than 9 hours of SPEA graduate credit earned as a nondegree student may be credited toward SPEA certificate programs.

Academic Integrity Academic integrity requires that students take credit only for their own ideas and efforts. Misconduct, including cheating, fabrication, plagiarism, interference, or facilitating academic

dishonesty, is prohibited because it undermines the bonds of trust and cooperation among members of this community and between us and those who may depend on our knowledge and integrity. Complete details are contained in the Indiana University *Code of Student Rights, Responsibilities, and Conduct*.

Academic Appeals Students may appeal academic decisions made by SPEA faculty members. Attempts to resolve such issues should be made first at the class/instructor level. If necessary, written appeals should be submitted to relevant program directors. Appeals must be submitted before the last day of classes in the semester following the point at which the events in question occurred.

Master of Public Affairs (M.P.A.)

Professional managers in the public and nonprofit sectors constantly face challenges evolving from complex people, politics, and settings. Often difficult to resolve with the standard methods learned from a traditional academic focus, these challenges require the type of creative problem-solving for which the School of Public and Environmental Affairs has earned national respect. We meld social and physical sciences from various disciplines into a graduate education that requires and prepares students to be in tune with the diverse landscape of changing ideas, culture, policies, and problems our society faces today and will continue to face in the future.

The M.P.A. is designed to develop leaders for public agencies and nonprofit organizations and allows for expertise in one of these concentrations: criminal justice, environmental management, nonprofit management, policy analysis, public management, and urban management. Each course of study requires completion of the core requirement, the concentration requirement, the experiential requirement, and sufficient electives and/or mid-career option credit to total 48 credit hours.

The core requirements of the M.P.A. degree consist of 21 credit hours of work in nine courses. The experiential requirement ensures that each graduate of the M.P.A. program gains insight into the world of public service through an experience outside the classroom. Additionally, the completion of at least one concentration is required along with general electives that can be used to add breadth to a student's program; to further explore the field of concentration; or to enhance quantitative and analytical skills or administrative techniques.

Degree Requirements

(48 credit hours)

Before enrolling in the M.P.A. program, students must show proficiency in the foundation areas of computing, economics, government, mathematics, and statistics to facilitate mastery of core course material. Graduate credit is not given for work done to satisfy these undergraduate requirements.

The core requirements of the M.P.A. degree consist of 21 credit hours of work in nine courses and are common to the five campuses where this degree is offered. Each student must complete the requirements of at least one concentration.

The experiential requirement ensures that each graduate of the M.P.A. program has gained insight into the world of public service by way of an experience outside the classroom. This experience may or may not involve the accumulation of credit hours toward the degree. The remaining credit hours necessary for graduation, if any, are general electives that can be used to add breadth to a student's program; to further explore a field of concentration; or to enhance skills in foreign languages, quantitative tools, or administrative techniques.

Core Requirements

(21 credit hours)

The M.P.A. core is designed to ensure that each student acquires both the prerequisite analytical skills and an understanding of policy issues and governmental processes that compose the environment within which graduates will pursue their careers.

Required Courses

SPEA V501 Professional Development Practicum:
Information Technology (1 cr.)

SPEA V502 Public Management (3 cr.)

SPEA V503 Professional Development Practicum:
Writing and Presentation (1 cr.)

SPEA V505 Professional Development Practicum:
Teamwork and Integrated Policy Project (1 cr.)

SPEA V506 Statistical Analysis for Effective Decision
Making (3 cr.)

SPEA V517 Public Management Economics (3 cr.)

SPEA V540 Law and Public Affairs (3 cr.)

SPEA V560 Public Finance and Budgeting (3 cr.)

SPEA V600 Capstone in Public and Environmental
Affairs (3 cr.)

Extremely well-prepared applicants may petition the program director to waive one or more of the core requirements on the basis of advanced course work done elsewhere. Students may be exempted on the basis of satisfactory equivalent course work or by examination. Credit hours waived from the core add to the electives a student may use. Students requesting course waivers should contact the appropriate graduate program director for requirements and guidelines.

Concentration Requirements

(18-30 credit hours)

Concentrations give students educational experiences in a substantive area of interest. The course of study in each concentration area is determined in conjunction with an advisor. Up to 3 credit hours of the concentration may be taken in V585 Practicum in Public Affairs, if approved *in advance* by an advisor.

Concentration requirements may be waived on the same basis as core requirements. Consult an advisor about course prerequisites.

Experiential Requirements

Each M.P.A. student must obtain professionally relevant experience through one of the following options: an approved internship (0-6 credit hours); SPEA V590 Research in Public Affairs; SPEA V601 Workshop in Public Affairs; the Lilly Fellowship Program; the Environmental Fellowship Program; or the Mid-Career Credit Option.

Mid-Career Credit Option

The Graduate Admissions Committee of the School of Public and Environmental Affairs may grant up to 12 credit hours toward the Master of Public Affairs (M.P.A.) degree for students who have had **significant technical, administrative, or policy-level work experience** in their backgrounds. Credit will be granted for work experience gained until the end of the semester in which the student completes 24 credit hours according to the following guidelines as adopted by the SPEA Academic Council.

1. To receive 3 credit hours, a student must have a minimum of one year's technical, administrative, or policy-level work experience with a government or private agency. Experience should be in policy planning and direction.
2. 6 credit hours will be awarded for one to four years of managerial experience in directing programs, preparing budgets, and making decisions on organizational or staff development, or for one to four years of professional experience in policy analysis or planning.
3. Those with four or more years of executive assignment may be awarded 9-12 credit hours. Applicants must have had responsibility for supervision of high-level staff, budget preparation, and organizational control of public agencies, or executive responsibility for policy analysis or planning.

Mid-Career Credit Option Application Process and Policies

Students are eligible to apply for Mid-Career credit at the time of application or during the first semester of graduate study in order to take full advantage of available credit. Applicants may appeal the initial Mid-Career credit decision by submitting a request, in writing, for reconsideration and providing additional information to the appropriate program or campus director.

Determination of Mid-Career credit is made separately from decisions about transfer of credit. Under no circumstances will the Mid-Career credit and transfer credit total more than 21 hours of the 48 required for the degree. Students receiving Mid-Career credit should carefully plan the balance of their program with an advisor.

General Elective Courses

Graduate courses, or undergraduate courses approved for graduate credit, may be used to complete the overall degree requirement of 48 credit hours.

Fields of Concentration

Concentrations give students a focused educational experience in a substantive area of interest. The concentration is selected in conjunction with a faculty advisor and the appropriate SPEA administrator. Concentrations include criminal justice, environmental management, nonprofit management, policy analysis, public management, and urban management.

Criminal Justice Concentration

(18 credit hours)

The criminal justice concentration is for those interested in the issues, methods, and skills involved in the management of criminal justice or related

agencies. Students are required to take a minimum of 9 "J" credit hours for this concentration.

Required Courses (12 credit hours):

- SPEA J501 Evolution of Criminological Thought and Policy (3 cr.)
- SPEA J502 Research Methods in Criminal Justice and Public Affairs (3 cr.)
- SPEA V509 Administrative Ethics in the Public Sector (3 cr.)

One of the following:

- SPEA J666 Criminal Justice Policy and Evaluation (3 cr.)
- SPEA J682 Criminal Justice Planning and Management (3 cr.)

Electives (6 credit hours):

Two courses from one of the following groups:

Group A:

- SPEA J550 Topics in Criminal Justice (3 cr.)
- SPEA J582 Criminal Justice Systems (3 cr.)
- SPEA J587 Criminal Violation: Problems and Characteristics (3 cr.)
- SPEA J588 Law and Control in Society (3 cr.)
- SPEA V580 Readings in Public Affairs (criminal justice topics only) (3 cr.)
- SPEA V585 Practicum in Public Affairs (criminal justice topics only) (3 cr.)
- SPEA V685 Research Seminar in Public Affairs (criminal justice topics only) (3 cr.)

Group B:

Management, Organizations, and Policy

- SPEA H507 Management of Individual and Group Behavior (3 cr.)
- SPEA J550 Topics in Criminal Justice (1-3 cr.)
- SPEA V504 Public Organizations (3 cr.)
- SPEA V512 Public Policy Process (3 cr.)
- SPEA V539 Management Science for Public Affairs (3 cr.)
- SPEA V547 Negotiation and Dispute Resolution for Public Affairs (3 cr.)
- SPEA V561 Public Human Resources Management (3 cr.)
- SPEA V562 Public Program Evaluation (3 cr.)
- SPEA V564 Urban Management (3 cr.)
- SPEA V566 Executive Leadership (3 cr.)
- SPEA V569 Managing Interpersonal Relations (3 cr.)
- SPEA V570 Public Sector Labor Relations (3 cr.)

Nonprofit Management

- SPEA V522 Human Resource Management in Nonprofit Organizations (3 cr.)
- SPEA V525 Management in the Nonprofit Sector (3 cr.)

Finance

- SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)
- SPEA V542 Governmental Financial Accounting and Reporting (3 cr.)

Information Systems

- SPEA V516 Public Management Information Systems (3 cr.)
- SPEA V518 Intergovernmental Systems Management (3 cr.)
- SPEA V519 Database Management Systems (3 cr.)
- SPEA V550 Topics in Public Affairs (non-criminal justice topics) (3 cr.)

Other courses must be approved by a faculty advisor.

Environmental Management Concentration

(21 credit hours)

Students entering this concentration should have a working knowledge of chemistry and calculus prior to admission. The minimum level of competence needed is equivalent to two semesters of undergraduate chemistry and one semester of calculus.

Required Courses (9 credit hours):

- SPEA E526 Applied Mathematics for Environmental Science (3 cr.)
- SPEA E552 Environmental Engineering (3 cr.)
- SPEA V645 Environmental Law (3 cr.)

Electives (12 credit hours):

Four of the following courses or other 500-level or above environment-related courses approved by a concentration advisor.

- SPEA E431 Water Supply and Wastewater Treatment (3 cr.)
- SPEA E510 Hazardous Materials Regulation (3 cr.)
- SPEA E512 Risk Communication (3 cr.)
- SPEA E515 Fundamentals of Air Pollution (3 cr.)
- SPEA E520 Environmental Toxicology (3 cr.)
- SPEA E536 Environmental Chemistry (3 cr.)
- SPEA E542 Hazardous Materials (3 cr.)
- SPEA E549 Environmental Planning (3 cr.)
- SPEA E554 Groundwater Flow Modeling (3 cr.)
- SPEA E560 Environmental Risk Analysis (3 cr.)
- SPEA E562 Solid and Hazardous Waste Management (3 cr.)
- SPEA E620 Environmental Analysis Workshop (3 cr.)
- SPEA V520 Environmental Policy Analysis (3 cr.)
- SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)

Nonprofit Management Concentration

(18 credit hours)

The nonprofit management concentration prepares persons for leadership positions in nonprofit and volunteer organizations. Students receive a professional degree structured around theories, concepts, and practices essential to the policy and management of nonprofit organizations. Students who choose careers in the third sector will be more enlightened practitioners with a clear understanding of modern management techniques and of the philanthropic tradition in the broadest sense; that is, voluntary action for the public good.

Required Courses (6 credit hours):

- SPEA V521 The Nonprofit and Voluntary Sector (3 cr.)
- SPEA V525 Management in the Nonprofit Sector (3 cr.)

One of the following nonprofit theoretical courses:

- SPEA V523 Civil Society and Public Policy (3 cr.)
- SPEA V524 Civil Society in Comparative Perspective (3 cr.)
- ECON E514 The Nonprofit Economy and Public Policy (3 cr.)

- HIST H509 History of Philanthropy in the West (3 cr.)
- PHIL P542 Ethics and Values of Philanthropy (3 cr.)

Other courses must be approved by the faculty advisor.

Two of the following nonprofit application courses:

- SPEA V522 Human Resource Management in Nonprofit Organizations (3 cr.)
- SPEA V526 Financial Management for Nonprofit Organizations (3 cr.)
- SPEA V550 Topics in Public Affairs: Fund Development for Nonprofit Organizations (3 cr.)
- SPEA V550 Topics in Public Affairs: Proposal Writing and Grant Administration (3 cr.)
- SPEA V602 Strategic Planning of Public and Nonprofit Organizations (3 cr.)
- EDUC C595 Legal Aspects of Philanthropy (3 cr.)

One of the following general management courses:

- SPEA H507 Management of Individual and Group Behavior (3 cr.)
- SPEA V516 Public Management Information Systems (3 cr.)
- SPEA V539 Management Science of Public Affairs (3 cr.)
- SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)
- SPEA V562 Public Program Evaluation (3 cr.)
- SPEA V566 Executive Leadership (3 cr.)

Policy Analysis Concentration

(17-18 credit hours)

The policy analysis concentration focuses on techniques for the rigorous evaluation of public policies and public programs, emphasizing science, operations research techniques, cost-benefit analysis, and program evaluation.

Required Courses (3 credit hours):

- SPEA V512 Public Policy Process (3 cr.)

Choose two of the following:

- SPEA H515 Seminar in Health Policy Process Special Topics (3 cr.)
- SPEA P550 Topics in Planning (public policy topics approved by an advisor) (3 cr.)
- SPEA V520 Environmental Policy Analysis (3 cr.)
- SPEA V550 Topics in Public Affairs (3 cr.) (public policy topics approved by an advisor)
- SPEA V580 Readings in Public Affairs (3 cr.)
- SPEA V622 Seminar in Urban Economic Development (3 cr.)

One of the following:

- SPEA P520 Methods for Planning and Policy Analysis (2 cr.)
- SPEA V507 Data Analysis and Modeling for Public Affairs (3 cr.)

One of the following:

- SPEA V539 Management Science for Public Affairs (3 cr.)
- SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)
- SPEA V562 Public Program Evaluation (3 cr.)

Research Requirement

- SPEA V590 Research in Public Affairs (3 cr.)

Students must submit a proposal for the policy analysis project and receive approval from the concentration advisor before undertaking the project. A minimum of 12 credit hours (four courses) must be completed in the policy analysis concentration before a project proposal may be approved.

Public Management Concentration

(18 credit hours)

The public management concentration is a structured program that enables students to develop a managerial perspective. The curriculum ensures breadth of coverage across those areas essential to a managerial career.

Required Courses (12 credit hours):

- SPEA H507 Management of Individual and Group Behavior (3 cr.)
- SPEA V561 Public Human Resource Management in the Public Sector (3 cr.)
- SPEA V602 Strategic Management of Public and Nonprofit Organizations (3 cr.)
- SPEA V639 Managing Government Operations (3 cr.)

One of the following:

- SPEA V516 Public Management Information Systems (3 cr.)
- SPEA V542 Governmental Financial Accounting and Reporting (3 cr.)

One of the following:

- SPEA V539 Management Science for Public Affairs (3 cr.)
- SPEA V541 Benefit-Cost Analysis for Public and Environmental Policies (3 cr.)
- SPEA V562 Public Program Evaluation (3 cr.)

Urban Management Concentration

(29-30 credit hours)

The urban management concentration prepares students for entry-level and mid-career management and policy positions in local government and nonprofit organizations.

Required Courses (9 credit hours):

- SPEA V561 Public Human Resources Management (3 cr.)
- SPEA V564 Urban Management (3 cr.)
- SPEA V567 Public Financial Administration (3 cr.)

Advanced Electives (8-9 credit hours):

Take three of the following courses. You must take two from one area and one from another area.

Area 1: Planning

- SPEA E549 Environmental Planning (3 cr.)
- SPEA P500 Foundations of Planning (3 cr.)
- SPEA P510 Social and Economic Aspects of Human Settlements (2 cr.)
- SPEA P515 Physical Systems, Development, and Infrastructure (3 cr.)
- SPEA P530 Land Use Law (3 cr.)
- SPEA V563 The Planning Process (3 cr.)
- SPEA V597 Land Use Planning (3 cr.)

Area 2: Personnel/Labor Relations

- SPEA V547 Negotiation and Dispute Resolution for Public Affairs (3 cr.)
- SPEA V570 Public Sector Labor Relations (3 cr.)

Area 3: Operations Management

- SPEA V568 Management of Urban Government Services (3 cr.)
- SPEA V639 Managing Government Operations (3 cr.)

Area 4: Analysis and Information Systems

- SPEA E529 Applications of Geographic Information Systems (3 cr.)
- SPEA P520 Methods for Planning and Policy Analysis (2 cr.)
- SPEA V507 Data Analysis and Modeling for Public Affairs (3 cr.)
- SPEA V516 Public Management Information Systems (3 cr.)
- SPEA V539 Management Science for Public Affairs (3 cr.)
- SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)
- SPEA V562 Public Program Evaluation (3 cr.)
- SPEA V593 Analytic Methods in Planning and Policy Analysis (3 cr.)
- SPEA V662 Seminar in Productivity and Program Evaluation (3 cr.)

Area 5: Government Finance

- SPEA V542 Governmental Financial Accounting and Reporting (3 cr.)
- SPEA V609 Seminar in Revenue Theory and Administration (3 cr.)
- SPEA V610 Seminar in Government Budget and Program Analysis (3 cr.)
- SPEA V667 Seminar in Public Capital and Debt Theory (3 cr.)

Area 6: Development

- SPEA P540 Community and Neighborhood Development Planning (3 cr.)
- SPEA V550 Topics in Public Affairs: Community Development (3 cr.)
- SPEA V622 Seminar in Urban Economic Development (3 cr.)

Other courses approved by the faculty advisor.

Area 7: Nonprofit Management

- SPEA V518 Intergovernmental Systems Management (3 cr.)
- SPEA V521 The Nonprofit and Voluntary Sector (3 cr.)
- SPEA V522 Human Resource Management in Nonprofit Organizations (3 cr.)
- SPEA V525 Management in the Nonprofit Sector (3 cr.)

Area 8: Policy Issues and Analysis

- SPEA E562 Solid and Hazardous Waste Management (3 cr.)
- SPEA V550 Topics in Public Affairs: Urban Poverty (3 cr.) or other topics approved by the faculty advisor.

Urban Management Internship and Seminar (12 credit hours)

- SPEA V585 Practicum in Public Affairs (9 cr.)

Compensated internship in local government to be served during the fourth semester.

- SPEA V623 Seminar in Urban Management (3 cr.)

Seminar served in conjunction with urban management internship. This seminar normally will substitute for the V600 capstone requirement in the M.P.A. core.

Master of Health Administration (M.H.A.)

The graduate program in health administration is offered by the School of Public and Environmental Affairs, the country's largest school of public affairs. Recognized for its outstanding faculty, professional integration, and strong business ethics, the Indianapolis program reflects the exciting frontiers of the contemporary health care industry.

This advanced program attracts professionals and students interested in a variety of leadership opportunities in hospitals, managed care, ambulatory care, and voluntary health agencies. Opportunities also exist in consulting firms, corporate health programs, insurance, government, and other regulatory agencies. The program is fully accredited by the Accrediting Commission on Education for Health Services Administration and is a member of the Association of University Programs in Health Administration.

Approximately one-third of the students in the program have professional backgrounds; the remaining two-thirds come directly from undergraduate programs. In the classroom, this mix creates a dynamic environment of fresh perspectives and practical experience. The versatile faculty teach a rigorous interdisciplinary curriculum interwoven with current research and events. The M.H.A. program is comprised of 51 graduate semester credit hours.

A summer internship between the first and second year of study is an excellent opportunity to learn from a health industry leader. The internship offers students valuable experience in the health care field and is an excellent opportunity to blend academic preparation with hands-on experience. Positions are available throughout the United States.

As an option, students may choose an Administrative Residency, a 10-12 month paid residency that can assist in the transition from classroom to workplace through intensive exposure to a selected management career. It blends academic preparation with administrative practice. Students with little health administration experience may find the residencies beneficial. Residents are selected through competitive application processes.

A Mentorship Program utilizing local M.H.A. alumni and friends of the school gives students the opportunity to meet a variety of practicing health care professionals. Mentors are available in all segments of the health care field, and range from recent graduates to corporate officers and senior public officials.

Some students become involved as research assistants at the Bowen Health Research Center and the Center for Urban Policy and the Environment. These are IU's leaders in health policy and services research. The Bowen Center is a joint endeavor of the School of Medicine and the School of Public and Environmental Affairs.

Increasingly, our students are successfully competing for national administrative fellowships after graduation. Recent fellowships awarded to M.H.A. program graduates include: Good Samaritan Health

System in Nebraska, Winston Fellowship and Washington Hospital Group in Washington, D.C., and the American College of Healthcare Executives in Chicago. Most fellowships provide a two-year paid administrative experience and lead to permanent employment.

Admissions

In addition to the general requirements for admission to graduate study in the School of Public and Environmental Affairs, the following requirements generally must be met for admission to the Graduate Program in Health Administration:

1. Applicants must possess an undergraduate degree from an accredited institution and have a minimum overall undergraduate grade point average (GPA) of 3.0 (B) on a 4.0 scale. Applicants with a minimum GPA of 3.0 during the last half of their undergraduate education are shown preference.
2. Applicants must complete at least 3 credit hours each of undergraduate courses in introductory accounting, microeconomics, and statistics at an accredited institution with a minimum grade of C in each course. Students who have not completed these courses but who meet all other requirements may be accepted with deficiencies. These students are not usually permitted to enroll in the classes that require these courses as prerequisites until the deficiencies are removed.
3. Applicants must take the Graduate Record Examination (GRE) and achieve a composite score of at least 1,500 total in all three sections. An applicant with a GRE score lower than 500 in any section may be required to participate in special academic counseling and evaluation prior to any admission decision. Additional course work may be required, and admission as a provisional student may be stipulated. Applicants who have been awarded an advanced degree may petition the admissions committee for waiver of the GRE requirement.

Mid-Career Credit Option

Students in the Master of Health Administration can receive Mid-Career credit for work experience obtained up through the semester in which they complete 24 credits toward the Master of Health Administration degree. The credits are to be awarded as follows:

3 credit hours – for a least one year of meaningful work experience in health administration.

6 credit hours – for two to four years of meaningful work experience in health administration.

9 credit hours – for four or more years of meaningful work experience in health administration.

Students may apply for the Mid-Career credit option upon application to the program or may seek the credits any time up to graduation. The admission committee will have the responsibility to evaluate each student request and determine if the work experience meets the requirements for the credit hours requests.

Degree Requirements

(51 credit hours)

A minimum of 51 credit hours, divided between required and elective courses, is required in the

Master of Health Administration degree program. The M.H.A. curriculum begins with a foundation of theory and skill-building courses and makes a transition to course work that requires practical application of those skills in a variety of health care settings.

Part-time students must complete at least 6 credit hours each semester to remain in good standing. All students must complete the program's academic requirements within five calendar years of matriculation.

Required Courses (45 credit hours):

SPEA H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.)
 SPEA H502 Developing Strategic Capability in Health Care (3 cr.)
 SPEA H507 Management of Individual and Group Behavior (3 cr.) **or**
 SPEA V504 Public Organizations (3 cr.) *with permission*
 SPEA H508 Managing Health Care Accounting Information for Decision Making (3 cr.)
 SPEA H509 Financial Management Principles of Health Care (3 cr.)
 SPEA H510 Health Services Financial Management (3 cr.)
 SPEA H514 Health Economics (3 cr.)
 SPEA H516 Health Services Delivery and the Law (3 cr.)
 SPEA H518 Statistical Methods for Health Services (3 cr.)
 SPEA H521 Management Science for Health Services Administration (3 cr.) **or**
 SPEA V539 Management Science for Public Affairs (3 cr.) *with permission*
 SPEA H615 Health Care Outcomes and Decision Making (3 cr.)
 SPEA H623 Health Care Applications of Strategic Management (3 cr.)
 SPEA H628 Health Care Information Systems (3 cr.)
 SPEA H650 Strategies for Career Preparation (1.5 cr.)
 BUS M540 Service Marketing (1.5 cr.)

One of the following courses:

SPEA H700 Residency (3-6 cr.) **or**
 SPEA H702 Internship in Health Services Management (3 cr.) **or**
 SPEA H735 Research in Health Administration (3-6 cr.)

Electives (6 credit hours)

Choose two of the following elective courses, or other electives approved by a faculty advisor:

SPEA H515 Seminar in Health Policy: Special Topics (3 cr.)
 SPEA H517 Managerial Epidemiology (3 cr.)
 SPEA H626 Health Services Human Resources Management (3 cr.)
 SPEA H627 Seminar in Advanced Health Finance (3 cr.)
 SPEA H630 Readings in Health Services Administration (3 cr.)
 SPEA V541 Benefit-Cost Analysis (3 cr.)
 BUS A508 Not-for-Profit Accounting (3 cr.)

Course Waivers, Substitutions, and Challenge Examinations

Students may petition the program director to waive or make substitutions for required courses based on completion of satisfactory equivalent course work or

by examination (if available). The following guidelines govern the consideration of these types of petitions.

Waivers of Required Courses The requirement for a particular course may be waived if the student furnishes evidence of equivalent graduate course work completed within a reasonable period of time from an accredited institution. It should be noted that credit is not given with a waiver—only an exemption from a particular course; another course is always substituted.

Substitutions As a general rule, the substitution of a course for one that is required in the M.H.A. curriculum is prohibited. On rare occasions, petitions for substitutions may be considered, and students who believe they would benefit from such a procedure should discuss the matter with their advisors.

Challenge Examination Students who believe they possess mastery of the subject matter stipulated in a given required course may request a challenge examination. If, in the opinion of the faculty, the student has demonstrated the requisite knowledge, academic credit for the course is authorized. The university fee structure for the cost of such an examination applies.

Master of Planning (M.Pl.)

The Master of Planning (M.Pl.) is a professional degree program that prepares students for professional careers in planning and related fields. The program emphasizes the development of professional skills to enable graduates to develop successful careers in planning. The emphasis is always on gaining the knowledge and tools to provide the foundation for professional practice. The program is hands-on, applied, and professional. Students in the planning workshop focus on real planning problems for outside clients, developing their ability to function as effective professionals.

Indianapolis is nationally recognized for its achievements in urban development. Students in the Master of Planning program have the opportunity to use this major metropolitan area as a laboratory to learn planning. The planning faculty bring their experience working in Indianapolis and central Indiana to the classrooms, integrating this practical knowledge into the learning experience.

The School of Public and Environmental Affairs and the faculty of the Master of Planning program are associated with the Center for Urban Policy and the Environment. The center consults with public, nonprofit, and private clients and is engaged in a major effort to enhance policy discussions in the central Indiana region. The wide-ranging studies of the region include a focus on understanding and improving the planning process and the development of a large-scale computer simulation model of urban development in the region. Students in the Master of Planning program have the opportunity to participate in and learn from the innovative research under way at the Center for Urban Policy and the Environment.

The Master of Planning program is offered within the largest school of public affairs in the United States. Students in the program have the opportunity to draw

upon the school's strengths in public management and policy, environmental science and policy, and health administration.

Mid-Career Credit Option

Students in the Master of Planning Program can receive Mid-Career credit for work experience obtained up through the end of the semester in which they complete 24 credits toward the Master of Planning degree. Decisions on the credits to be awarded for work experience are made by the Master of Planning Admissions Committee. The guidelines for eligibility for credit are as follows:

3 credit hours – for at least one year of work experience in planning or a related field such as policy analysis or public management.

6 credit hours – for two to four years of work experience in planning or a related field that includes primary responsibility for the preparation of plans, or similar levels of responsibility in related fields.

9 credit hours – for four or more years of work experience in planning or a related field that includes responsibility for the organization of the planning process and the supervision of other planners in the preparation of plans, or similar levels of responsibility in related fields.

12 credit hours – for eight or more years of work experience in planning or a related field that includes overall responsibility for the planning function in a major organization, or similar levels of responsibility in related fields.

Admissions

In addition to the general requirements for admission to graduate study in the School of Public and Environmental Affairs, students entering the Graduate Program in Planning are expected to have completed introductory undergraduate courses in statistics and microeconomics at an accredited institution with a minimum grade of B in each course. Students lacking this preparation may be admitted with deficiencies. These students are expected to remedy any deficiencies before taking courses in which this background is required.

Degree Requirements

(48 credit hours)

The Graduate Program in Planning requires a minimum of 48 graduate credit hours and the completion of: (1) the core requirement, (2) the concentration requirement, and (3) the experiential requirement. The core requirement consists of 22 credit hours of work in nine courses and is required of all students pursuing the M.Pl. degree. Each student must complete the requirements of one concentration, which consists of 11-15 credit hours of course work, depending on the concentration and courses selected. The experiential requirement ensures that each graduate of the M.Pl. program has gained relevant professional planning practice outside the classroom. This experience may or may not involve the accumulation of credit hours toward the degree. The remaining credit hours necessary for graduation are general electives that can be used to add breadth to a student's program, to further explore a field of concentration, or to enhance skills in quantitative tools or other techniques.

Core Requirement

(22 credit hours)

The core requirement in the Graduate Program in Planning ensures that each student acquires an understanding of the field of planning and its practice, of the environment in which planning takes place, and of the analytical methods necessary for the practice of planning. The core requirement also provides for the integration of learning and professional practice in workshop and seminar settings.

SPEA P500 Foundations of Planning (3 cr.)
 SPEA P510 Social and Economic Aspects of Human Settlement (2 cr.)
 SPEA P515 Physical Systems Development and Infrastructure (3 cr.)
 SPEA P520 Methods for Planning and Policy Analysis (2 cr.)
 SPEA P525 Geographic Information Systems for Planning (2 cr.)
 SPEA P600 Portfolio Assessment (1 cr.)
 SPEA P610 Planning Workshop (3 cr.)
 SPEA V506 Statistical Analysis for Effective Decision Making (3 cr.)

One of the following:

SPEA V517 Public Management Economics (3 cr.)
 SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)

Students in the health planning concentration may elect to substitute SPEA H514 Health Economics (3 cr.) for the above requirement.

All students are required to assemble a portfolio of work completed in various courses taken as a part of the degree program. Students will evaluate this work and present their evaluations to the faculty in P600 Portfolio Assessment.

Especially well-prepared applicants may petition the director of the Graduate Program in Planning to waive one or more of the core requirements on the basis of advanced course work done elsewhere. Students may be exempted on the basis of satisfactory course work or by examination. Credit hours waived from the core increase the number of electives a student may take. Students requesting course waivers should contact the program director for requirements and guidelines.

Concentration Requirements

(11-15 credit hours)

The concentrations are designed to give the student the opportunity to focus on study in a specialized area of planning. Concentration requirements may be waived on the same basis as core requirements. The concentrations available in the Graduate Program in Planning are as follows:

Environmental Planning Concentration

(11-12 credit hours)

The environmental planning concentration is intended for students interested in planning that deals with the problems of the natural environment.

The following course:

SPEA E549 Environmental Planning (3 cr.)

One of the following courses:

SPEA P530 Land Use Law (3 cr.)
 SPEA V645 Environmental Law (3 cr.)

Two of the following courses:

SPEA E431 Water Supply and Wastewater Treatment (3 cr.)
 SPEA E510 Hazardous Materials Regulation (3 cr.)
 SPEA E515 Fundamentals of Air Pollution (3 cr.)
 SPEA E520 Environmental Toxicology (3 cr.)
 SPEA E542 Hazardous Materials Control (3 cr.)
 SPEA E552 Environmental Engineering (3 cr.)
 SPEA E554 Groundwater Flow Modeling (3 cr.)
 SPEA E560 Environmental Risk Analysis (3 cr.)
 SPEA E562 Solid and Hazardous Waste Management (3 cr.)
 SPEA P527 Planning Applications of Geographic Information Systems (2 cr.)

Health Planning Concentration

(15 credit hours)

The health planning concentration is intended for students interested in planning that deals with the problems of the health care system and the provision of health services. The requirements for the concentration are as follows:

SPEA H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.)
 SPEA H502 Developing Strategic Capability (3 cr.)
 SPEA H514 Health Economics (3 cr.)
 SPEA H516 Health Services Delivery and the Law (3 cr.)

One of the following courses:

SPEA H515 Seminar in Health Policy: Special Topics (3 cr.)
 SPEA H615 Health Care Outcomes and Decision Making (3 cr.)

Students in the health planning concentration who elect to take SPEA H514 Health Economics to satisfy the requirement in the core shall be required to take one additional health planning-related course, to be selected in consultation with their advisor.

Urban Development Planning Concentration

(11-12 credit hours)

The urban development planning concentration is for students interested in planning that deals with the problems of urban areas, including general urban planning, neighborhood and community development, housing, and economic development.

The following three courses:

SPEA P530 Land Use Law (3 cr.)
 SPEA V560 Public Finance and Budgeting (3 cr.)
 SPEA V597 Land Use Planning (3 cr.)

One of the following courses:

SPEA P527 Planning Applications of Geographic Information Systems (2 cr.)
 SPEA P532 Site Planning and Urban Design (3 cr.)
 SPEA P540 Community and Neighborhood Development Planning (3 cr.)
 SPEA P550 Topics in Planning (3 cr.) (urban topics only)
 SPEA P630 Strategic Planning (3 cr.)

SPEA V564 Urban Management (3 cr.)

SPEA V622 Seminar in Urban Economic Development (3 cr.)

Specialized Concentration in Planning and Public Policy

(14-15 credit hours)

Students with professional interests and goals that are not met by the preceding concentrations may choose to develop a customized concentration with the approval of their faculty advisors.

Experiential Requirement

In addition to the course requirements listed above, students must demonstrate professionally relevant experience through approved internships, approved independent study projects, or other field experience approved by the director of the Graduate Program in Planning.

General Elective Courses

General elective courses are used to complete the overall degree requirement of 49 graduate credit hours.

Joint Master's Degrees

Master of Health Administration–Doctor of Jurisprudence (M.H.A.–J.D.)

The School of Public and Environmental Affairs and the School of Law—Indianapolis have established a four-year, full-time program for the combined study of law and health administration. This course of study addresses the need for professionals who understand the legal and administrative frameworks necessary to function successfully as a health lawyer or a health services administrator.

The Master of Health Administration (M.H.A.) and the Doctor of Jurisprudence (J.D.) are awarded when the student meets the degree requirements of each school. All courses are offered on the Indianapolis campus. Successful completion of this rigorous 125.5 credit hour program provides the graduate sufficient depth and breadth in each discipline to be able to function effectively in the swiftly changing health field.

The delivery of health care and health services is the second largest industry in the United States, accounting for almost 14 percent of the gross national product. The importance of health care to our citizens has long been obvious.

What has become more apparent recently, however, is the growing impact of case law, statutes, and regulations on access to and availability of care; on the delivery of health care services; and, increasingly, on decisions relating to the appropriateness of individual treatment. For this reason, the Schools of Law and Public and Environmental Affairs have sought jointly to develop a strong academic curriculum to address the educational needs of health lawyers and health service administration executives as they seek to serve the public's needs.

Admissions

Applicants must apply for admission to each school and must meet the admission criteria published in each school's bulletin. Normally, applicants should apply to both the School of Law—Indianapolis and the School of Public and Environmental Affairs at the same time. However, a person enrolled in the School of Law may apply for admission to the Graduate Program in Health Administration up to the end of the second year of law study (approximately 57 credit hours). A student formally enrolled in the study of health administration may seek admission to the School of Law—Indianapolis up to the end of the first year of full-time study leading to the award of the Master of Health Administration (approximately 30 hours of graduate credit).

Academic Standing Grade point averages in the School of Law—Indianapolis and the School of Public and Environmental Affairs are computed separately. To continue in the joint program, the student must meet the academic standards in each school. A student failing in one school but meeting academic standards in the other may complete course work for the degree in the school in which the student is able to meet the academic standards. Such completion must be according to the same conditions (credit hours, residency, etc.) required of regular (noncombination) degree candidates. Students are eligible for honors in each school based on the criteria of each school.

Residency The student customarily completes the first 34 credit hours in the School of Law—Indianapolis. Thereafter, the student divides the remaining course work between the two schools, taking health administration courses and law courses concurrently. Thus, the student has a continuing educational experience in both schools.

Program Requirements

(125.5 credit hours)

Master of Health Administration (M.H.A.) Requirements

(43.5 credit hours)

Students must complete 43.5 credit hours distributed among the M.H.A. required core, electives, and a joint research paper.

Required Courses (34.5 credit hours):

SPEA H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.)

SPEA H502 Developing Strategic Capability (3 cr.)

SPEA H507 Management of Individual and Group Behavior (3 cr.)

SPEA H508 Managing Health Care Accounting Information for Decision Making (3 cr.)

SPEA H509 Financial Management Principles of Health Care (3 cr.)

SPEA H510 Health Services Financial Management (3 cr.)

SPEA H514 Health Economics (3 cr.)

SPEA H521 Management Science for Health Services Administration (3 cr.)

SPEA H623 Health Care Applications of Strategic Management (3 cr.)

SPEA H628 Health Care Information Systems (3 cr.)

BUS M540 Service Marketing (1.5 cr.)

Elective Courses (6 credit hours)

Six credit hours of elective courses, chosen from the following:

SPEA H517 Managerial Epidemiology (3 cr.)

SPEA H518 Statistical Methods for Health Services (3 cr.)

SPEA H612 Marketing for Health Services Delivery (3 cr.)

SPEA H626 Health Services Human Resources Management (3 cr.)

SPEA H627 Seminar in Advanced Health Finance (3 cr.)

SPEA H630 Readings in Health Services Administration (1-3 cr.)

SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)

Joint Research Paper (6 credit hours)

SPEA H735 Research in Health Administration is to be completed in the last year of the combined program.

Doctor of Jurisprudence (J.D.) Requirements

(82 credit hours)

Students are required to complete 82 credit hours of law courses and to satisfy all requirements for the Doctor of Jurisprudence degree.

Master of Health Administration–Master of Business Administration (M.H.A.–M.B.A.)

The combined M.H.A.–M.B.A. program enables the student to take a sequence of courses leading to the attainment of both degrees. Successful completion of this 73.5 credit hour program provides the graduate student with sufficient depth and breadth in each discipline to function effectively in a health care delivery system that is driven by business principles.

Admissions To participate in the joint program, students must apply and be accepted into both the School of Public and Environmental Affairs Master of Health Administration program and the Indianapolis Kelley School of Business Master of Business Administration program. To streamline the admission process, SPEA will accept the results of the GMAT exam in place of the GRE from applicants to the joint program.

Academic Standing Grade point averages for the two schools are computed separately. To continue in the joint program, the student must meet the academic standards in each school. Students failing in one school but meeting academic standards in the other school may complete work for the degree in the school in which they are able to meet the standards. Such completion must be upon the same conditions as required of regular (noncombination) degree candidates. Students are eligible for honors in each school based on the criteria of each school.

Program Advisors Once students have been accepted into this joint degree program, they should meet academic advisors to plan course sequencing.

All M.B.A. core courses must be taken as intact modules. Full-time students typically take two M.H.A. and two M.B.A. courses each semester. Part-time students take either two M.H.A. or two M.B.A. courses each semester. Since M.B.A. courses must be taken as a cohort, part-time students will need to sequence all the M.B.A. courses in a block.

Program Requirements

(73.5 credit hours)

The following degree requirements are required of all students admitted to the program.

Master of Health Administration (M.H.A.) Requirements

(34.5 credit hours)

Students are required to complete 34.5 credit hours of SPEA courses and to satisfy all requirements for the joint degree.

SPEA H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.)

SPEA H507 Management of Individual and Group Behavior (3 cr.)

SPEA H508 Managing Health Care Accounting Information for Decision Making (3 cr.)

SPEA H510 Health Services Financial Management (3 cr.)

SPEA H514 Health Economics (3 cr.)

SPEA H516 Health Services Delivery and the Law (3 cr.)

SPEA H518 Statistical Methods for Health Services (3 cr.)

SPEA H615 Health Care Outcomes and Decision Making (3 cr.)

SPEA H623 Health Care Applications of Strategic Management (3 cr.)

SPEA H627 Seminar in Advanced Health Finance (3 cr.)

SPEA H650 Strategies for Career Preparation (1.5 cr.)

SPEA H702 Internship in Health Services Management (3 cr.) **or**

SPEA H735 Research in Health Administration (3 cr.)

Master of Business Administration (M.B.A.) Requirements

(39 credit hours)

Students are required to complete 39 credit hours of business administration courses and to satisfy all requirements for the joint degree. For specific guidelines, see the Indianapolis Kelley School of Business Graduate Bulletin.

Master of Health Administration–Master of Science in Nursing (M.H.A.–M.S.N.)

The combined M.H.A.–M.S.N. program enables the student to take a sequence of courses leading to the attainment of both degrees. Successful completion of this rigorous 70.5 credit hour program provides the graduate nurse with sufficient depth and breadth in each discipline to be able to function effectively in the rapidly changing health field.

Admissions Applicants must have a bachelor's degree or its equivalent from an NLN-accredited school of nursing, meet the admission criteria of each school, and apply to both the School of Nursing (Indianapolis) and the School of Public and Environmental Affairs. If applicants are admitted to only one of the schools, they are permitted to attend that school and are required to meet the graduation requirements of that school.

Applicants must complete at least 3 credit hours each of undergraduate course work in accounting, microeconomics, and statistics with a grade of C or higher from an accredited institution.

It is preferred that the student apply to both schools simultaneously for the combined program. It is possible, however, for students already enrolled in the School of Nursing to apply for admission to the School of Public and Environmental Affairs up to the time they complete the second year of nursing study. It also is possible for a student enrolled in the School of Public and Environmental Affairs to seek admission to the School of Nursing up to the end of the first year of the M.H.A. course of study.

Academic Standing Grade point averages for the two schools are computed separately. To continue in the joint program, the student must meet the academic standards in each school. A student failing in one school but meeting academic standards in the other school may complete work for the degree in the school in which the student is able to meet the standards. Such completion must be upon the same conditions as required of regular (noncombination) degree candidates (i.e., 42 credit hours for School of Nursing and 60 credit hours for SPEA). Students are eligible for honors in each school based on the criteria of each school.

Program Advisors Students enrolled in the combined program are assigned co-advisors; one from each school. The co-advisors are responsible for reviewing each semester's progress to assure attainment of educational objectives. The co-advisors also help students resolve scheduling problems that might develop as a result of the combined program.

Program Requirements

(70.5 credit hours)

The following degree requirements are required of all students admitted to the program.

Master of Health Administration (M.H.A.) Requirements

(34.5-37.5 credit hours)

Students are required to complete 34.5-37.5 credit hours of SPEA courses and to satisfy all requirements for the joint degree.

Required Courses (34.5-37.5 credit hours):

SPEA H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.)

SPEA H502 Developing Strategic Capability (3 cr.)

SPEA H508 Managing Health Care Accounting Information for Decision Making (3 cr.)

SPEA H510 Health Services Financial Management (3 cr.)

SPEA H514 Health Economics (3 cr.)

SPEA H516 Health Services Delivery and the Law (3 cr.)

SPEA H521 Management Science for Health Services Administration (3 cr.)

SPEA H615 Health Care Outcomes and Decision Making (3 cr.)

SPEA H621 Management Application Skills I (3 cr.)

SPEA H628 Health Care Information Systems (3 cr.)

BUS M540 Service Marketing (1.5 cr.)

H702 Internship in Health Services Management (3 cr.)

Elective (3 credit hours)

An additional course approved by the program advisor.

Master of Science in Nursing (M.S.N.) Requirements

(21-30 credit hours)

Students are required to complete 21-30 credit hours of nursing courses and to satisfy all requirements for the joint degree. For specific guidelines, see the School of Nursing Graduate Bulletin.

Master of Public Affairs–Doctor of Jurisprudence (M.P.A.–J.D.)

The combined M.P.A.–J.D. program enables the student to take a sequence of courses leading to the attainment of both degrees.

Admissions The student must have a bachelor's degree from an accredited institution of higher education and must apply to both the School of Law—Indianapolis and the School of Public and Environmental Affairs. If the applicant is admitted to only one school, the applicant is permitted to attend that school and is required to meet the graduation requirements of that school. It is preferred that the student apply to both schools simultaneously for the combined program. It is possible, however, for a person already enrolled in the School of Law to apply for admission to the School of Public and Environmental Affairs up to the time that student completes the second year of law study. It is also possible for a student enrolled in the School of Public and Environmental Affairs to seek admission to the School of Law up to the end of the first year of the M.P.A. course of study.

Academic Standing Grade point averages in the School of Law—Indianapolis and the School of Public and Environmental Affairs are computed separately. To continue in the program, the student must meet the academic standards in each school. A student failing in one school but meeting academic standards in the other may complete work for the degree in the school in which the student is able to meet the academic standards. Such completion must be according to the same conditions (credit hours, residency, etc.) required of regular (noncombination) degree candidates. Students are eligible for honors in each school based on the criteria of each school.

School Residency Students in the joint program should enroll in courses through the School of Law—Indianapolis in the first year of the program and through the School of Public and Environmental

Affairs in the second year of the program. In the third and fourth years, or until the program is completed, students should enroll through the school in which the majority of their credit hours reside in each enrollment period.

Program Requirements

(118 credit hours)

Master of Public Affairs (M.P.A.) Requirements

(34 credit hours)

Students are required to complete 34 credit hours of SPEA courses distributed among the M.P.A. core, a specialization, and a research paper.

Required Courses (18 credit hours):

- SPEA V501 Professional Development Practicum: Information Technology (1 cr.)
- SPEA V502 Public Management (3 cr.)
- SPEA V503 Professional Development Practicum: Writing and Presentation (1 cr.)
- SPEA V505 Professional Development Practicum: Teamwork and Integrated Policy Project (1 cr.)
- SPEA V506 Statistical Analysis for Effective Decision Making (3 cr.)
- SPEA V517 Public Management Economics (3 cr.)
- SPEA V560 Public Finance and Budgeting (3 cr.)
- SPEA V600 Capstone in Public and Environmental Affairs (3 cr.)

Specialization (14 credit hours)

The student chooses a field of specialization and develops a program of specialization courses in consultation with the SPEA program advisor.

Research Paper (2 credit hours)

SPEA V590 Research in Public Affairs, a required research paper, is written during the final year of the program.

Doctor of Jurisprudence (J.D.) Requirements

(84 credit hours)

Students are required to complete 84 credit hours of law courses and satisfy all requirements for the degree Doctor of Jurisprudence.

Master of Public Affairs–Master of Arts in Philanthropic Studies (M.P.A.–M.A.)

The combined Master of Public Affairs with a concentration in nonprofit management and Master of Arts in Philanthropic Studies enables a student to take a sequence of courses leading to the receipt of both degrees. This joint degree program focuses on the history, culture, and values of philanthropy as well as the managerial frameworks of public service and quasi-governmental institutions.

Admissions To participate in the joint degree program, students must apply and be accepted into both the Master of Public Affairs program and the Master of Arts in Philanthropic Studies program. Most students will apply for admission to both programs simultaneously. However, if admitted to one program

first, the student should submit an application for admission to the other program before completing 24 credit hours toward the first program.

Academic Standing Grade point averages for the programs are computed separately. To continue in the program, the student must meet the academic standards in each school. A student failing in one school but meeting academic standards in the other school may complete work for the degree in the school in which the student is able to meet the standards. Such completion must be upon the same conditions as required of regular (noncombination) degree candidates. Students are eligible for honors in each school based on the criteria of each school.

Program Advisors Students enrolled in the combined programs are assigned co-advisors, one from each school. The co-advisors are responsible for reviewing each semester's progress to assure attainment of educational objectives. The co-advisors also help students resolve scheduling problems that might develop as a result of the combined program.

Program Requirements

(63 credit hours)

The following degree requirements are required of all students admitted to the program.

Master of Public Affairs (M.P.A.) Requirements

(39 credit hours)

Students are required to complete 39 credit hours of SPEA courses and to satisfy all requirements for the joint degree.

M.P.A. Core Requirements (21 credit hours):

- SPEA V501 Professional Development Practicum: Information Technology (1 cr.)
- SPEA V502 Public Management (3 cr.)
- SPEA V503 Professional Development Practicum: Writing and Presentation (1 cr.)
- SPEA V505 Professional Development Practicum: Teamwork and Integrated Policy Project (1 cr.)
- SPEA V506 Statistical Analysis for Effective Decision Making (3 cr.)
- SPEA V517 Public Management Economics (3 cr.)
- SPEA V540 Law and Public Affairs (3 cr.)
- SPEA V560 Public Finance and Budgeting (3 cr.)
- SPEA V600 Capstone in Public and Environmental Affairs (3 cr.)

Experiential Component (3 credit hours)

Each M.P.A. student must obtain relevant experience. This can be accomplished through an approved internship, SPEA V590 Research in Public Affairs, the SPEA mid-career credit option, or PHST P590 Internship in Philanthropic Studies. Students wishing to complete the dual degree program in the minimum credit hours should take PHST P590.

Degree Electives (3 credit hours)

One of the courses from the M.A. in Philanthropic Studies will fulfill this requirement.

Nonprofit Concentration (18 credit hours):

- Both of the following:
- SPEA V521 The Nonprofit and Voluntary Sector (3 cr.)
- SPEA V525 Management in the Nonprofit Sector (3 cr.)

Nonprofit Theoretical Courses

One of the following:

- ECON E514 The Nonprofit Economy and Public Policy (3 cr.)
- HIST H509 History of Philanthropy in the West (3 cr.)
- PHIL P542 Ethics and Values of Philanthropy (3 cr.)

Nonprofit Application Courses

Two of the following:

- SPEA V522 Human Resource Management in Nonprofit Organizations (3 cr.)
- SPEA V526 Financial Management for Nonprofit Organizations (3 cr.)
- SPEA V550 Topics in Public Affairs: Fund Development for Nonprofit Organizations (3 cr.)
- SPEA V550 Topics in Public Affairs: Proposal Development and Grant Administration (3 cr.)
- SPEA V602 Strategic Management of Public and Nonprofit Organizations (3 cr.)
- EDUC C595 Legal Aspects of Philanthropy (3 cr.)

General Management Courses

One of the following:

- SPEA H507 Management of Individual and Group Behavior (3 cr.)
- SPEA V516 Public Management Information Systems (3 cr.)
- SPEA V539 Management Science for Public Affairs (3 cr.)
- SPEA V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)
- SPEA V562 Public Program Evaluations (3 cr.)
- SPEA V566 Executive Leadership (3 cr.)

Master of Arts (M.A.) in Philanthropic Studies Requirements

(24 credit hours)

Students are required to complete 24 credit hours in philanthropic degree courses and satisfy all requirements for the Master of Arts in Philanthropic Studies degree.

Master of Public Affairs–Master of Science in Nursing (M.P.A.–M.S.N.)

The combined Master of Public Affairs–Master of Science in Nursing program enables a student to take a sequence of courses leading to the receipt of both degrees.

Admissions The student must have a bachelor's degree from an accredited institution of higher education and must apply to both the School of Nursing (Indianapolis) and the School of Public and Environmental Affairs. If the applicant is admitted to only one school, the applicant is permitted to attend that school and is required to meet the graduation requirements of that school. It is preferred that the student apply to both schools simultaneously for the combined program. It is possible, however, for a person already enrolled in the School of Nursing to apply for admission to the School of Public and Environmental Affairs up to the time that student completes the second year of nursing study. It is also possible for a student enrolled in the School of Public and Environmental Affairs to seek admission to the School of Nursing up to the end of the first year of the M.P.A. course of study.

Academic Standing Grade point averages in the School of Nursing and the School of Public and Environmental Affairs are computed separately. To continue in the joint program, the student must meet the academic standards in each school. A student failing in one school but meeting academic standards in the other may complete work for the degree in the school in which the student is able to meet the academic standards. Such completion must be on the same conditions (credit hours, residency, etc.) as required of regular (noncombination) degree candidates (i.e., 36 credit hours for nursing and 48 credit hours for SPEA). Students are eligible for honors in each school based on the criteria of each school.

Program Advisors Students enrolled in the combined program are assigned co-advisors, one each from the faculties of the School of Nursing and the School of Public and Environmental Affairs. The co-advisors are responsible for reviewing the student's progress each semester to assure attainment of educational objectives. The co-advisors also help students resolve scheduling problems that might occur as a result of the combined degree program.

Program Requirements

(64 credit hours)

The combined M.P.A.–M.S.N. program requires a minimum of 64 credit hours distributed between the Master of Public Affairs and the Master of Science in Nursing components, including a joint research paper.

Master of Public Affairs (M.P.A.) Requirements

(32 credit hours)

M.P.A. Core (21 credit hours):

- SPEA V501 Professional Development Practicum: Information Technology (1 cr.)
- SPEA V502 Public Management (3 cr.)
- SPEA V503 Professional Development Practicum: Writing and Presentation (1 cr.)
- SPEA V505 Professional Development Practicum: Teamwork and Integrated Policy Project (1 cr.)
- SPEA V506 Statistical Analysis for Effective Decision Making (3 cr.)
- SPEA V517 Public Management Economics (3 cr.)
- SPEA V540 Law and Public Affairs (3 cr.)
- SPEA V560 Public Finance and Budgeting (3 cr.)
- SPEA V600 Capstone in Public and Environmental Affairs (3 cr.)

Concentration (11 credit hours)

- SPEA V504 Public Organizations (3 cr.)

The remaining 8 credit hours consist of courses in a concentration chosen by the student in consultation with a SPEA advisor.

Master of Science in Nursing (M.S.N.) Requirements

(27 credit hours)

Students are required to complete 27 credit hours of nursing courses and to satisfy all requirements for the Master of Science in Nursing degree. For specific guidelines, see the School of Nursing Graduate Programs Bulletin.

Joint Research Paper (5 credit hours)

Credit for this supervised research is arranged and counts toward degree requirements in both schools. A minimum of 5 credit hours must be taken with at least 3 credit hours of research counting toward the M.S.N. degree and 2 credit hours of SPEA V590 Research in Public Affairs counting toward the M.P.A. degree. The topic must be selected no later than the end of the third year of the combined program, include elements of both disciplines, and be approved by the student's co-advisors. This paper must be completed in the last year of the combined program and jointly supervised by advisors from both schools.

Certificate Programs

Four graduate certificates are offered by the School of Public and Environmental Affairs at IUPUI: Certificate in Hazardous Materials Management; Certificate in Health Systems Management; Certificate in Nonprofit Management; and Certificate in Public Management. Certificate programs are flexible and adaptable to the needs of either precareer or in-service students.

Admissions

Admission Eligibility The student must have a bachelor's degree from an accredited college or university to apply. For the Certificate in Hazardous Materials Management, applicants must have completed one year of general chemistry.

Application Application forms and literature may be obtained from the same SPEA offices that offer material for the graduate degree programs. Students should apply to the SPEA admissions office on the campus where they plan to enroll.

Application Deadlines Application deadlines for the certificate programs vary by campus. For specific guidelines, check with the campus to which you are applying.

Application Fee Students must pay a nonrefundable application fee.

Program Restrictions

1. Students enrolled in a certificate program must complete it within 15 credit hours of approved SPEA course work with a minimum cumulative GPA of 3.00 (B). Failure to do so results in automatic dismissal from the certificate program.
2. Students who have completed more than three SPEA courses are not eligible for admission to a certificate program.
3. Transfer credit, course substitutions, or course waivers are not accepted for fulfilling the public management, nonprofit management, or health systems management certificate requirements. Students in the Hazardous Materials Management Certificate Program may utilize these options; however, they must first have the approval of their campus graduate program advisors.
4. Students admitted to a SPEA graduate degree program are not eligible for admission to the certificate program or eligible for the awarding of a certificate.
5. Admission to or successful completion of a certificate program does not guarantee

subsequent admission to a SPEA graduate degree program.

6. Students enrolled in a certificate program who apply to SPEA's graduate degree programs must meet all existing admission requirements.
7. Students planning to request admission to a SPEA graduate degree program after successfully completing a certificate program should refer to the application procedure presented earlier in this bulletin.

Certificate in Hazardous Materials Management

The Certificate in Hazardous Materials Management is a 15 credit hour program of study. The program provides managers and technicians in concerned organizations and agencies, public and private, with training in the management of hazardous materials. The certificate program provides an information base that managers and technicians can use to develop, implement, manage, and assess hazardous waste programs for local, state, and federal regulatory agencies. Graduate students in other disciplines can use the program to supplement their primary fields with course work in hazardous materials management, possibly using the certificate courses as part of a doctoral or master's minor.

Requirements

(15 credit hours)

Required Courses (9 credit hours):

- SPEA E510 Hazardous Materials Regulation (3 cr.)
- SPEA E520 Environmental Toxicology (3 cr.)
- SPEA E542 Hazardous Materials (3 cr.)

Electives (6 credit hours)

Two of the following courses:

- SPEA E515 Fundamentals of Air Pollution (3 cr.)
- SPEA E526 Applied Mathematics for Environmental Science (3 cr.)
- SPEA E536 Environmental Chemistry (3 cr.)
- SPEA E552 Environmental Engineering (3 cr.)
- SPEA E553 Creation and Solution of Environmental Models (3 cr.)
- SPEA E554 Groundwater Flow Modeling (3 cr.)
- SPEA E555 Topics in Environmental Science: Limnology (2-3 cr.)
- SPEA E560 Environmental Risk Analysis (3 cr.)
- SPEA E562 Solid and Hazardous Waste Management (3 cr.)
- SPEA H433 Industrial Hygiene and Radiological Health (3 cr.)
- GEOL G430 Principles of Hydrology (3 cr.)
- GEOL G451 Principles of Hydrogeology (3 cr.)
- GEOL G551 Advanced Hydrogeology (3 cr.)
- GEOL G585 Environmental Geochemistry (3 cr.)

Or other specialty courses with the approval of the campus graduate program advisor.

Certificate in Health Systems Management

The Certificate in Health Systems Management is a 15 credit hour program of study. The certificate program

is designed to serve administrators and physicians who are actively engaged in managerial duties; physicians and health care workers who may want to pursue managerial duties in the future; or those who want to gain greater understanding of the structure, processes, and goals of their health care organizations and the environment in which they operate.

Requirements

(15 credit hours)

Required Courses (9 credit hours):

SPEA H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.) **or**

SPEA V545 The U. S. Health Care System (3 cr.)

SPEA H502 Developing Strategic Capability (3 cr.)

SPEA H503 Principles of Health Systems Management and Policy Development (3 cr.)

SPEA H509 Financial Management Principles of Health Care (3 cr.)

Electives (6 credit hours)

The remaining courses will be determined by the faculty and the needs of the student and must be authorized by faculty.

Certificate in Nonprofit Management

The Certificate in Nonprofit Management is a 15 credit hour program of study. The certificate is designed to serve the needs of individuals who would like exposure to the nonprofit sector and nonprofit management issues but who do not wish or need to pursue a degree in nonprofit management. The certificate complements other courses of study or career experience in such areas as social work, library science, and parks and recreation. Students pursuing a nonprofit management certificate gain an understanding of how to work in and with nonprofit organizations.

Requirements

(15 credit hours)

Required Courses (9 credit hours):

SPEA V522 Human Resource Management in Nonprofit Organizations (3 cr.)

SPEA V525 Management in the Nonprofit Sector (3 cr.)

SPEA V526 Financial Management for Nonprofit Organizations (3 cr.)

Electives (6 credit hours)

Two additional SPEA graduate courses are selected with the approval of the student's advisor. A sampling of current course titles includes: Nonprofit and Voluntary Sector, Ethics and Values of Philanthropy, Fund Development for Nonprofit Organizations, Public Relations in Nonprofits, and History of Philanthropy in the West.

Students interested in continuing for the Master of Public Affairs should consider selecting the electives from the nonprofit management concentration.

Certificate in Public Management

The Certificate in Public Management is a 15 credit hour program of study in public management. The

certificate program is flexible enough to be adapted to the needs of precareer and in-service individuals. Graduate students in other disciplines can use the program to supplement their primary fields with course work in public management, possibly using the certificate courses as part or all of a doctoral or master's degree minor. Career employees of public- and private-sector agencies seeking courses in public management, and especially those changing from professional or technical roles to managerial roles, find the certificate program beneficial.

Requirements

(15 credit hours)

Required Courses (9 credit hours):

SPEA V502 Public Management (3 cr.)

SPEA V560 Public Finance and Budgeting (3 cr.)

SPEA V561 Public Human Resources Management (3 cr.)

Electives (6 credit hours)

Two additional SPEA graduate public affairs courses approved by the program director.

Note: Students interested in continuing on for the Master of Public Affairs degree should consider selecting the two elective courses from the M.P.A. core; one of the courses recommended is V506 Statistical Analysis for Effective Decision Making. These courses may also be applied to the Master of Planning upon admission to the M.Pl. program.

Graduate Courses

The abbreviation "P" refers to course prerequisites, and the abbreviation "C" indicates courses that should be taken concurrently. The number of credit hours is indicated in parentheses following the course title.

Criminal Justice Courses

J501 Evolution of Criminological Thought and Policy (3 cr.) This course provides an intensive introduction to the theoretical literature on crime and delinquency. Its purpose is to develop students' ability to critically evaluate and compare theories of crime as they apply to public policy and the criminal justice system.

J502 Research Methods in Criminal Justice and Public Affairs (3 cr.) This course examines research techniques necessary for systematic analysis of the criminal justice system, offenders' behavior, crime trends, and program effectiveness. The course requires that students actively pursue such techniques as conducting interviews, coding data, and designing studies. Criminological research will be critically examined.

J550 Topics in Criminal Justice (1-3 cr.) Selected research and special topics in criminal justice such as violence; history of criminal prosecution; and alcohol, drugs, and crime.

J582 Criminal Justice Systems (3 cr.) Detailed examination of operations of police, courts, and correctional agencies. Study of management problems in system response to criminal activity. Development

of understanding of relationships among system components. Examination of major policy issues in criminal justice, with emphasis on decision-making techniques.

J587 Criminal Violation: Problems and Characteristics (3 cr.) Commonalities in criminal behavior. Circumstances leading to the commission of the criminal act, subsequent perceptions of them. Family, community, and other environments affecting criminal behavior. Behavioral consequences of processes of crime control.

J588 Law and Control in Society (3 cr.) The role of law versus other forms of social control. How social change and social institutions shape the law. Social factors influencing the administration of law.

J666 Criminal Justice Policy and Evaluation (3 cr.) An empirical assessment of the foundations of contemporary and historical attempts to control or prevent crime. Major policies, programs, and strategies are reviewed and critically analyzed. Specific topics and policies will vary in this capstone seminar.

J682 Criminal Justice Planning and Management (3 cr.) Issues in criminal justice planning and management in policing, courts, and corrections are addressed. The problems faced by administrators in the implementation and development of public policies are considered.

Environmental Science Courses

The SPEA 400-level environmental science courses listed below, which are described in the undergraduate section of this bulletin, may be taken for graduate credit if specifically listed within degree requirements or approved by a graduate advisor.

E400 Topics in Environmental Studies (approved sections) (3 cr.)

E410 Introduction to Environmental Toxicology (3 cr.)

E431 Water Supply and Wastewater Treatment (3 cr.)

E440 Wetlands: Biology and Regulation (3 cr.)

E451 Air Pollution and Control (3 cr.)

E452 Solid and Hazardous Waste Management (3 cr.)

E455 Limnology (4 cr.)

E475 Techniques of Environmental Science (3 cr.)

E510 Hazardous Materials Regulation (3 cr.)

The course provides an in-depth study of federal, state, and local regulations and requirements pertaining to the management of hazardous materials.

E515 Fundamentals of Air Pollution (3 cr.) The purpose of the course is to provide the student with an understanding of the field of air pollution, including the behavior of the atmosphere and pollutants in the atmosphere, effects of air pollution, regulatory programs, engineering controls, and air quality management programs.

E520 Environmental Toxicology (3 cr.) An examination of the principles of toxicology and the toxicity resulting from environmental exposure to chemical substances.

E526 Applied Mathematics for Environmental Science (3 cr.) P: differential and integral calculus. Applications of mathematics to modeling environmental processes. Applied calculus, numerical analysis, differential equations.

E527 Applied Ecology (3 cr.) P: one introductory-level ecology course. Ecosystem concepts in natural resource management. Techniques of ecosystem analysis. Principles and practices of ecological natural resource management.

E529 Application of Geographic Information Systems (3 cr.) Conceptual and technical overview of geographic information systems (GIS). Applications in various fields of public affairs and environmental science.

E533 Environmental Management Systems: ISO 14001 Based (3 cr.) This course provides students with the knowledge and skills to establish or improve an environmental management system that is compatible with ISO (International Organizations for Standardization) 14001, an international, voluntary standard that is emerging as a best-management practice for environment.

E535 International Environmental Policy (3 cr.) This course examines the forces in society alternately promoting and impeding cooperation in the environmental realm. Our inquiry is guided by four interrelated course units: (1) international environmental law, (2) international political order, (3) the environment and global markets, and (4) sustainable development.

E536 Environmental Chemistry (3 cr.) P: one course in chemistry with lab. Gas law calculations, stoichiometry, steady and non-steady state box models, stratospheric ozone, chemical kinetics, photochemical smog, greenhouse effect, CO₂ equilibria, chemodynamics, pesticides, and toxic metals.

E537 Environmental Chemistry Laboratory (3 cr.) P or C: SPEA E536 or consent of instructor. Experimental work in environmental chemical analysis to demonstrate analytical methods and instrumentation used in environmental laboratories, having reference to air, water, and soil quality.

E541 Controversies in Environmental Health (3 cr.) Research, presentation, writing, and argumentation skills will be developed using a debate format. The course focuses on topics related to environmental health and the health of the environment.

E542 Hazardous Materials (3 cr.) Topics of discussion include properties and chemistry of hazardous materials; recognition of potential hazards associated with the use, storage, and transport of these materials; emergency and spill response; health effects of hazardous materials; hazard communication and personal protection; and case studies related to the management of hazardous materials.

E546 Stream Ecology (3 cr.) P: SPEA E455. Advanced limnology course that explores patterns and processes characterizing stream ecosystems. Takes a holistic approach that includes: physical, chemical

and biological stream characteristics; watershed patterns; and stream processes (trophic dynamics, colonization and dispersal, community dynamics, and responses to change). A four-hour weekly lab and group project develop necessary analytical skills.

E547 Applied Earth Science (3 cr.) Principles of the earth sciences and their applications to environmental analysis and management. Identification, quantification, and analysis of critical components of watershed systems. Interaction of human activities with the physical environment.

E548 Applied Earth Science Laboratory (3 cr.) Principles and methods of sampling, collection, measurement, analysis, and interpretation of data concerning processes and features of the physical environment. Students will become familiar with field and laboratory equipment within the context of research projects. Emphasis is placed on practical application of basic techniques to real problems.

E549 Environmental Planning (3 cr.) Concepts and methodologies in environmental planning. The planning process. Topics may include environmental impact assessment, economic approaches to environmental decision making, use of computer models in environmental planning, geographic information systems in environmental planning, environmental perception, and construction of environmental indices. Team projects with planning agencies.

E552 Environmental Engineering (3 cr.) Concerned with biological, chemical, physical, and engineering knowledge essential to the achievement of environmental quality objectives. Theory and design of unit operations and processes for air, water, and land pollution abatement. Emphasis on water quality control, industrial wastewater treatment, and solid waste management.

E555 Topics in Environmental Science (2-3 cr.) Selected research and discussion topics in environmental science. Usually organized in a seminar format.

E560 Environmental Risk Analysis (3 cr.) P: SPEA E538 or V506, or consent of instructor. Methods of probabilistic risk analysis applied to environmental situations. Event trees, fault trees, toxicological estimation, ecological risk analysis. Social and psychological aspects of risk. Individual and group projects assessing some real environmental risk are an important part of the course.

E562 Solid and Hazardous Waste Management (3 cr.) The purpose is to provide students with a technical foundation in areas of solid and hazardous waste management which can be applied to the examination of policy options. Topics include characterization of the waste stream, regulations, health and environmental risks, liability issues, management technologies, and treatment and disposal options.

E579 Readings in Environmental Science (1-3 cr.) Readings on selected topics in environmental science to be arranged with the individual instructor.

E620 Environmental Analysis Workshop (3 cr.) Projects in environmental analysis.

E625 Research in Environmental Science (1-12 cr.) Research on selected topics in environmental science to be arranged with the individual instructor.

Health Administration Courses

The SPEA 400-level course listed below, which is described in the undergraduate section of this bulletin, may be taken for graduate credit if specifically listed within degree requirements or approved by a graduate advisor.

H433 Industrial Hygiene and Radiological Health (3 cr.)

H501 U.S. Health Care: Systems, Policies, and Ethical Challenges (3 cr.) Study of health, illness, and disease trajectories and the systemic components that mold the health care system. Ideological paradigms predicting utilization and health behaviors are addressed, as are guidelines for ethical decision making and problem analysis. Formulation and implementation of organizational and governmental policies and their associated theoretical assumptions are addressed.

H502 Developing Strategic Capability (3 cr.) An introduction to tools for strategic management and the complexities involved in determining long-term strategies in a health care environment. An examination of the dynamics of the competitive environment, how both the pace and direction of industry change are influenced by the resources, capabilities, and interactions of rival organizations.

H503 Principles of Health Systems Management and Policy Development (3 cr.) Explores management roles in public, nonprofit, and for-profit health system environments. Application of management theories, concepts and principles; development of ethical, professional values; and understanding managerial roles in organizational and public policy development emphasized. Managerial process, resource dependence, population ecology, contingency theory, corporate culture, ethics and quality management processes examined.

H504 Quantitative Health Planning Methods (3 cr.) P: SPEA H501 and H503. An examination of health planning theory, methods, and techniques, including quantitative and subjective forecasting, determination of health service area, identifying need and demand for health services, health resource allocation decision models, and standards for the design of services and facilities.

H505 Health Program Design, Implementation, and Evaluation (3 cr.) P: SPEA H501, H503, H504, and V595, or consent of instructor. Study and application of techniques to conduct, interpret, and present the design, implementation, and evaluation of health services programs. Includes collecting, analyzing, interpreting, and reporting information. Emphasis on computer utilization and statistical analysis as a management tool. Field project required.

H507 Management of Individual and Group Behavior (3 cr.) This course provides a conceptual framework for understanding behavior in the work environment by introducing concepts concerning effective management of people in organizations. Key theories and concepts in the field of organizational

behavior will be introduced. The focus of this course is at the micro level of analysis, addressing topics such as individual theories of motivation, job design, and diversity issues; management of work teams; group decision making; managing conflict; and leadership, influence, and power issues.

SPEA H508 Managing Health Care Accounting Information for Decision-Making (3 cr.) P: undergraduate principles of accounting. Provides a user-oriented understanding of how accounting information should be managed to ensure its availability on a timely and relevant basis for decision-making. A focus on cost-benefit analysis for evaluating potential value-added results from planning, organizing, and controlling accounting information.

H509 Financial Management Principles of Health Care (3 cr.) P: SPEA H508. Provides knowledge of corporate finance practice in health care organizations. Establishes an understanding of the basic elements of financial theory used to address business management problems and explores this interrelationship among corporate policies and decisions. Course work includes problem sets, preparation of summary memos, and use of spreadsheets.

H510 Health Services Financial Management (3 cr.) P: SPEA H509. An examination of cost accounting techniques used in health care organizations, with emphasis on measuring and using cost accounting information for planning, control, and nonroutine decision making. Conceptual and quantitative practice is provided using cases and computer spreadsheet programs.

H514 Health Economics (3 cr.) P: 3 credit hours of undergraduate economics. Examines the principles and application of economic analysis in the health field and the economist's approach to health care issues. Provides insights offered by economic analysis of specific health issues and problems.

H515 Seminar in Health Policy: Special Topics (3 cr.) P: SPEA H501, H503, or consent of instructor. Exploration of health policy topics from economic, financial, sociological, political, and psychological perspectives. Analytical paradigms are applied to organizational or macro policy-making issues that vary in response to changing environments. May be repeated once with advisor's approval.

H516 Health Services Delivery and the Law (3 cr.) Medical-legal concepts related to hospitals and other health services organizations. Course provides an in-depth understanding of the law and the legal processes affecting the health services system. Presentation of the elements of administrative and agency processes, torts, contracts, facilities, physicians, patients, and personnel.

H517 Managerial Epidemiology (3 cr.) Examines general epidemiologic methods such as population descriptive techniques, use of health indicators and secondary health-related data sources. Includes design, administration, and analysis of observational and experimental studies. Emphasis will be on the use of epidemiologic techniques to assess community health, determine community risk factors, and evaluate community-based programs.

H518 Statistical Methods for Health Services (3 cr.) P: 3 credit hours of undergraduate statistics. Study of the quantitative techniques commonly used to examine health-related data. Includes univariate, bivariate, and multivariate techniques. Emphasis is on using statistical techniques to make policy and administrative decisions in a health services setting. Students use standard computer software to analyze data.

H519 Environmental Health (3 cr.) This course provides a broad yet in-depth investigation of human interaction with the environment, the major elements of environmental health, and the effects which uncontrolled environmental hazards may have on people's physical, mental, and social well-being.

H521 Management Science for Health Services Administration (3 cr.) Focus is on management science methods, as applied to health sciences administration. Includes treatment of decision theory, constrained optimization, and probability simulation.

H601 Hospital Organization and Management (3 cr.) P: SPEA H501, H503, or V504, or consent of instructor. Study of the organization and management of hospital clinical, support, and administrative functions. Examination of performance evaluation techniques for health managers. Analysis of special operational problems and administrative ethics. Requirements of the Joint Commission Accreditation of Hospitals emphasized.

H602 Mental Health Services Organization and Management (3 cr.) P: SPEA H501, H503, or V504, or consent of instructor. Study of the organizations and systems for delivery of mental health services; emphasis on the management and financing of psychiatric services.

H603 Nursing Home Organization and Management (3 cr.) P: SPEA H501, H503, or V504, or consent of instructor. Study of the purpose, organization, and management of nursing homes and residential care facilities involving long-term, specialty treatment. Emphasis on personal and professional skills necessary to provide a wide range of services and quality care in these environments.

H604 Ambulatory Care and Managed Care Programs (3 cr.) P: SPEA H501, H503, or V504, or consent of instructor. Study of the organizational and managerial aspects of ambulatory health services delivery. Focus on delivery strategies and organizational models and on the operational issues of financial control, personnel, regulation, and evaluation.

H605 Multi-Institutional Systems and Arrangements (3 cr.) P: SPEA H501, H503, or V504, or consent of instructor. Students will be exposed to developing innovations in health services delivery structures in both the proprietary and nonprofit sectors. Emphasis will be placed on the organization and management of multi-institutional arrangements such as sharing, mergers, management contracts, consortium, and so forth.

H606 Health Services Quality Improvement and Risk Management (3 cr.) P: SPEA H501, H503, and V504. Critically examines the concepts, strategies, and techniques related to the improvement of the quality of health service delivery. Addresses the increasing need to enhance productivity given the impact of

external and other factors on the workplace. Principles and application of risk management concepts and techniques, including insurance, are emphasized.

H607 Public Health Organization and Management (3 cr.) The course provides a broad overview of the history of public health in the United States and an analysis of the structure and function of public health and voluntary health agencies.

H612 Marketing for Health Services Delivery (3 cr.) P: SPEA H501, H503, or H504, or consent of instructor. The course provides a working knowledge and the skills required to market health services. Health institution-based projects are emphasized.

H615 Health Care Outcomes and Decision Making (3 cr.) P: SPEA H501, H502, H514, and H518. Application of health outcomes measures in decision making and evaluation in various health service settings. Includes designing and implementing evaluation plans of health and social programs. Emphasis on evaluation strategies, measurement of health outcomes, and management decision making.

H620 Health Services Seminar (3 cr.) Characterized as the program's capstone course, this seminar is designed to assist the student in synthesizing and summarizing all previous course work. Course emphasizes "real-world" situations and requires active participation by the students.

H621 Management Applications Skills I (3 cr.) P: all required SPEA H500-level courses except H510. A study of the complexities of multi-institutional arrangements and integrated services in the health industry. Topics include the shift to regional alliances, multiprovider networks, integrated physician-hospital relationships, shared risk contracting, and capitated insurance products. This course focuses on understanding the forces driving shifts in the roles of different settings in the health care environment.

H622 Management Applications Skills II (3 cr.) P: SPEA H621. This second of three courses in the management application skills sequence focuses on applying skills to and making comparisons among specific health care settings. Topics include quality assurance, quality improvement, and risk management; cost finding, rate setting, financing, payment, and reimbursement; and human resource management, recruiting, and labor relations.

H623 Health Care Applications of Strategic Management (3 cr.) P: SPEA H501, H502, H510, and H521. Students will synthesize the previous course work into their capstone experience. Includes strategic management analytical models and their use in evaluative decision making. Students will gain competencies in strategic and managerial analytical skills through class discussion and practical application through a required interactive group project.

H626 Health Services Human Resources Management (3 cr.) This course provides the knowledge and skills needed to understand the application of personnel and labor relations techniques to the health services sector, with particular emphasis on human resources management, employee benefit programs, and labor relations as applied to the health services delivery organization.

H627 Seminar in Advanced Health Finance (3 cr.) P: SPEA H509 and H510. An advanced seminar in health services management dealing with cases, problems, and contemporary health finance issues. Student presentations emphasized.

H628 Health Care Information Systems (3 cr.) A study of the terminology, technology, and application of information systems in various health care settings. Topics include the gathering, organization, storage, and retrieval of complex data banks, as well as assessment of health service data needs and considerations in developing information systems. Includes many computer-based exercises.

H630 Readings in Health Services Administration (1-3 cr.) Supervised readings in selected areas of health services management, policy, and planning. For second-year students; open to others by arrangement.

H640 Topics in Health Services Administration (1-3 cr.) Selected research and discussions emerging in health services administration. Topics, organized in a semester-by-semester seminar format, will not cover topics available in other courses.

H650 Strategies for Career Preparation (1.5 cr.) This course will provide guidance in finding a summer internship and developing the skills necessary to obtain and work in a summer internship. Skills covered include interviewing, resume development, internship design, and other work-related skills.

H700 Residency (1-6 cr.) Requires the equivalent of 6 credit hours of on-site experience under the supervision of a qualified preceptor and program faculty; students who opt for longer residencies may continue to register for this course each semester. Grading is on an S/F basis.

H702 Internship in Health Services Management (3 cr.) P: SPEA H501, H509, H514, and H650. Requires the equivalent of a minimum of 3 credit hours of on-site experience under the supervision of a qualified preceptor and program faculty. Grading is on a S/F basis.

H735 Research in Health Administration (3-6 cr.) P: all core courses or consent of instructor. Field research conducted under the direction of a faculty member. Designed for advanced students and those who have elected not to take a residency. Grading is on a S/F basis.

Planning Courses

P500 Foundations of Planning (3 cr.) Overview of planning theory and practice. Course considers planning history, normative and applied theories of planning, approaches to planning, and ethics in planning. Course presents a critical perspective on state, regional, and local planning processes, how organizational structure and group processes affect the planning process, and general approaches to conflict negotiation and resolution.

P510 Social and Economic Aspects of Human Settlement (2 cr.) Examination of the development and growth of human settlement and social and economic aspects of regional policy. Topics include location theory, land use and zoning, economic development, population and employment, social service delivery and use, and planning for diversity.

P515 Physical Systems Development and Infrastructure (3 cr.) Examination of the physical environment and its role in development, environmental problems and policies, and the man-made physical infrastructure. Topics include soils, hydrology, solid waste management, transportation, air pollution, urban ecology, and recreation.

P520 Methods for Planning and Policy Analysis (2 cr.) P: SPEA V506. Application of analytical methods in the planning process. Topics include collection of information for planning, evaluation methods, forecasting techniques, and spatial analysis methods.

P525 Geographic Information Systems for Planning (2 cr.) Introduction to the principles of geographic information systems for use in planning. Covers representation of data, sources of data, analysis with geographic information systems, and the development of systems for planning. Emphasizes the learning of the use of geographic information systems software.

P527 Planning Applications of Geographic Information Systems (2 cr.) P: P525 or consent of instructor. The development of geographic information systems applications to address problems in planning. Consideration of a range of planning applications of geographic information systems. Advanced use of geographic information systems, including network and spatial analysis and the development of custom applications using geographic information systems software.

P530 Land Use Law (3 cr.) Public and private control of land use. Legal basis for public planning and regulation, zoning, subdivision regulations, and other forms of public regulation.

P532 Site Planning and Urban Design (3 cr.) Examination of prerequisites for site planning, including environmental, legal, and infrastructure consideration. Development of basic graphic design skills. Application to development of site plans at various scales. Introduction to urban design principles.

P540 Community and Neighborhood Development Planning (3 cr.) Examination of the role of neighborhoods in planning; methods of neighborhood analysis; government intervention; issues in community development; planning for neighborhood and community development, including citizen participation and institutional mechanisms; and implementation.

P550 Topics in Planning (3 cr.) Selected research and discussion topics vary by semester. May be repeated for credit.

P580 Readings in Planning (1-3 cr.) P: written consent of instructor. Readings on selected topics in planning.

P585 Practicum in Planning (1-6 cr.) P: prior approval of the director of the Graduate Program in Planning. Students hold work assignments with planning agencies. Requires written evaluations by supervisor and submission of written reports by student. Grading is on an S/F basis.

P590 Research in Planning (1-3 cr.) P: written consent of instructor. Research on selected topics in planning.

P600 Portfolio Assessment (1 cr.) Capstone seminar addresses professional ethics in planning and requires assembly, evaluation, and presentation of portfolio of work completed while in Master of Planning program. Written consent of program director required. Grading is on an S/F basis.

P610 Planning Workshop (3 cr.) P: written consent of instructor. Students work as a group on a complex planning problem for a public sector client. Presentation of findings made to client.

P630 Strategic Planning (3 cr.) Strategic planning and strategic management are processes used by organizations to align their actions with their mission, goals, and objectives. This course describes the theory and practice of strategic planning and management in public and nonprofit organizations, focusing on the methods that planners and managers use to ensure such alignments.

P650 Planning Seminar (3 cr.) P: written consent of instructor. Student research and presentation on selected topics intended to integrate the educational experience. Preparation of final professional report.

Public Affairs Courses

V500 Quantitative Tools for Public Affairs (1-3 cr.) A modular presentation of mathematical and statistical concepts designed to prepare students for V506 Statistical Analysis for Effective Decision Making. Representative module topics include basic algebraic concepts, probability, computer use, and matrix algebra.

V501 Professional Development Practicum: Information Technology (1 cr.) Provides an introduction to information technology and computing software skills in a problem-solving context.

V502 Public Management (1-3 cr.) Analysis of concepts, methods, and procedures involved in managing public organizations. Problems of organization, planning, decision making, performance evaluation, and management of human resources are considered. Cases are drawn from a variety of public services found at federal, state, and local levels of government.

V503 Professional Development Practicum: Writing and Presentation (1 cr.) Students use practical methods to develop professional-level writing and oral communication skills to engender an appreciation for the value of effective communication skills: learn to analyze a case study effectively, write policy memos, executive summaries, news releases, professional letters; critique presentations of outside professionals; and assess personal and peer presentations.

V504 Public Organizations (1-3 cr.) This course focuses on the behavior and theory of public organizations in four areas: (1) individuals and groups in public organizations, (2) the design of public organizations, (3) organization-environment relations, and (4) interorganizational relations.

V505 Professional Development Practicum: Teamwork and Integrated Policy Project (1 cr.) Students integrate courses and knowledge through team-based case analysis of complex policy

problems. Teamwork is practiced using structured team-building exercises and discussions.

V506 Statistical Analysis for Effective Decision Making (3 cr.)

Noncalculus survey of concepts in probability, estimation, and hypothesis testing. Applications of contingency table analysis and analysis of variance, regression, and other statistical techniques. Computer processing of data emphasized.

V507 Data Analysis and Modeling for Public Affairs (3 cr.)

P: SPEA E538 or V506. Focus on analytical models and their use in solving problems and making decisions in the public sector. Discussion of standard approaches to modeling and estimation of parameters.

V508 Topics in Quantitative Analysis (1-3 cr.)

P: consent of instructor. Study and application of selected quantitative methods of analysis. Additional topics that are not included in V506 and V507 may be presented, or more advanced examination of topics that are introduced in V506 or V507 may be presented.

V509 Administrative Ethics in the Public Sector (3 cr.)

Ethical conduct in the public sector is examined. Topics covered could include personal ethical responsibility, deception, corruption, codes of ethics, policy making, morality, politics, and whistle blowing. Case studies and media material will be used to illustrate these and other such issues affecting the workplace.

V510 Government Regulation in Market Economies (3 cr.)

P: SPEA V517 or consent of instructor. An overview of government regulation and involvement in the private sector and of public policy consequences of government action in market economies. Analysis of case studies in business-government relations.

V512 Public Policy Process (1-3 cr.)

An examination of the role of public affairs professionals in policy processes. Focuses on relationships with political actors in various policy areas.

V516 Public Management Information Systems (3 cr.)

This course focuses on the application of information systems concepts and tools to challenges and opportunities in the public sector. Topics covered will include current trends in information systems; managerial use of information systems; hardware, software, and telecommunications; systems development processes and practices; and strategic and policy issues in information systems.

V517 Public Management Economics (3 cr.)

This course focuses on applications of the principles and concepts of intermediate microeconomic theory and managerial economics to public sector management decisions and policy analysis. The course utilizes case studies to give students opportunities to recognize the economic dimensions inherent in the public policy problems and to develop an analytical problem-solving orientation.

V518 Intergovernmental Systems Management (1-3 cr.)

Discussion of theories and approaches to systems management, including responsibilities and tasks of public systems. Examination of intergovernmental relationships and intralocal

governmental relationships; treatment of organizational and systems design; as well as planning, decision making, and control of public systems. Discussion of applications to services such as environment, health, and human services.

V519 Database Management Systems (3 cr.)

This course provides students with an in-depth knowledge of database design and management in public organizations. The students create a conceptual, logical, and physical design of databases; build models of data required by users with modeling formalisms and computer-aided software engineering tools; and design queries using leading database software packages.

V520 Environmental Policy Analysis (3 cr.)

The interrelationships among social, technical, and natural systems. Theories of growth. Causes and implications of environmental problems. Alternative policies and mechanisms for environmental control and bases for choice.

V521 The Nonprofit and Voluntary Sector (3 cr.)

Same as PHST P521. The theory, size, scope, and functions of the nonprofit and voluntary sector are covered from multiple disciplinary perspectives including historical, political, economic, and social.

V522 Human Resource Management in Nonprofit Organizations (3 cr.)

This course provides an overview of the human resource management areas necessary for the productive functioning of nonprofit organizations. Theories of motivation applicable to the management of staff and volunteers and personnel topics of recruitment, selection, board-staff relations, compensation, training, and development are covered.

V523 Civil Society and Public Policy (3 cr.)

Exploration of interaction of public policy and nonprofit organizations, drawing on history, political theory, and social science. Includes examination of regulations and taxation. Depending on instructor's interests, course covers nonprofit role in selected policy arenas (such as environment and poverty) and industries (such as international development and health care).

V524 Civil Society in Comparative Perspective (3 cr.)

An exploration of state-society relationships in a variety of regimes and time periods. Focuses on ways regimes' policies affect the existence and contribution of those nongovernmental and nonprofit organizations that stand between the individual and the state and how nonprofit organizations shape the policy agenda of a regime.

V525 Management in the Nonprofit Sector (3 cr.)

P: SPEA V521 or PHST P521. An examination of nonprofit organizations and their role in society. Management issues and public policy affecting these organizations are discussed. Primary emphasis is upon U.S. organizations, but attention is given to the global nature of the sector.

V526 Financial Management for Nonprofit Organizations (3 cr.)

This course emphasizes a thorough understanding of the language and key concepts of nonprofit financial management. A working knowledge of the basic analytical tools used in financial decision making for nonprofit organizations will be examined through the use of computer software.

V529 Seminar in Career and Professional Development (1 cr.)

Introduction to career development in public and environmental affairs. Orientation to career development approaches and resources. Discussion and practice of professional skills and techniques. Orientation to career development opportunities. Grading is on an S/F basis.

V539 Management Science for Public Affairs (3 cr.)

P: SPEA V506. Focuses on management science methods as applied to public affairs. Includes treatment of decision theory, constrained optimization, and probability simulation.

V540 Law and Public Affairs (1-3 cr.)

Explanation of law in society and its influence on public sector operations. Examination of some of the central substantive areas of the study of law, including regulatory processes, administrative adjudication, the Administrative Procedures Act, ombudsmen, and citizen rights, among others.

V541 Benefit-Cost Analysis of Public and Environmental Policies (3 cr.)

P: SPEA V517 or consent of instructor. A course applying benefit-cost analysis to public and environmental policies. The first part of the course develops the foundation of benefit-cost analysis. The second part of the course consists of case studies applying benefit-cost analysis to actual policy decisions.

V542 Governmental Financial Accounting and Reporting (3 cr.)

P or C: SPEA V560. An introduction to the fundamentals of accounting in business, nonprofit, and public sectors. Intended only for students without previous accounting courses. Primary emphasis is on municipal entity fund accounting, including the development and use of financial statements.

V543 Health Services Management (3 cr.)

A course that integrates theory and application with respect to management of health service organizations. Emphasis on the role of managers and management within formal health service organizations. Current management and organization theories are applied to an understanding of health care delivery settings.

V545 The U.S. Health Care System (3 cr.)

An analysis of the delivery of health care in the United States from 1900 to the present. Major system components are defined and studied with emphasis on current health care policy. Topics include the organization of health care delivery on federal, state, and local levels, in both public and private sectors.

V546 Health Services Utilization (3 cr.)

An examination of problems of access to health care and the utilization of health services. The social, political, and individual factors associated with utilization are studied, along with social change and control strategies. Special emphasis is given to power and the definition of power in the system.

V547 Negotiation and Dispute Resolution for Public Affairs (3 cr.)

Students will learn the skill of interest-based negotiation through role play and simulation. Students will learn about dispute resolution techniques such as mediation, arbitration, fact finding, early neutral evaluation, ombudsmanship,

and facilitation. The course covers dispute resolution in federal government and in the context of public, environmental, labor, and business disputes.

V550 Topics in Public Affairs (1-4 cr.) Selected research and discussion topics organized on a semester-by-semester basis, usually with significant student input in the course design.

V551 Topics in Comparative Public Policy (3 cr.) The role of administrative and political systems in an international setting that focuses on industrial policy as developed between collaborative governments and their links to the key countries of Asia, Europe, the Americas, and Africa will be examined in topic settings. Related readings and published research will also be used.

V554 Human Services Administration (3 cr.) Focus is on policy, management, and organization relating to a variety of human service systems. Special attention is given to the management of social programs in the environmental system.

V556 Topics in Human Services Administration (3 cr.) Readings and research on selected topics in the field of the management of human services. Topics selected for study will vary.

V557 Proposal Development and Grant Administration (3 cr.) This course provides the opportunity for each student to develop a complete proposal through participation in the entire grant application process. The integration of case studies, visual media, printed materials, and class discussions provides students with practical knowledge for writing successful proposals.

V558 Fund Development for Nonprofits (3 cr.) Important aspects of the fundraising process in nonprofit organizations are covered, including techniques and strategies for assessing potential sources of support, effective use of human resources, process management, theory to underlay practice, analysis of current practice, practice standards, and discussion of ethical problems.

V560 Public Finance and Budgeting (1-3 cr.) The fiscal role of government in a mixed economy; sources of public revenue and credit; administrative, political, and institutional aspects of the budget and the budgetary process; problems and trends in intergovernmental fiscal relations.

V561 Public Human Resources Management (3 cr.) Analysis of the structure, operations, and design of public personnel systems, including government agencies and public enterprise. Relationships between public policy and personnel concepts, values, and operations are considered.

V562 Public Program Evaluation (1-3 cr.) Examination of how the programs of public agencies are proposed, established, operated, and evaluated. Discussion of the role and conduct of research in the program evaluation process. In addition, techniques of effective evaluation and analysis are discussed.

V563 The Planning Process (1-3 cr.) Seminar designed to familiarize students with planning ramifications of policy issues faced by governments. The focal topics selected for study will vary. Emphasis placed on identification and analysis of substantive

issues, methods employed for resolution, and application of planning techniques for achieving goals.

V564 Urban Management (3 cr.) This course deals with the management of public policy in American urban government, with special attention to the relationships between structure, process, and policy. Readings and case studies will focus on urban management problems relating to leadership, planning, and operations.

V565 Environmental Conflict Resolution: Theory and Practice (3 cr.) Theories of environmental conflict resolution are examined. Students will practice through participation in a series of environmental conflict resolution simulations.

V566 Executive Leadership (3 cr.) The course offers an in-depth examination of factors that contribute to successful executive leadership practice in a wide variety of organizational settings. Topics include what leadership is, what impact leadership has, and how leaders use various approaches and powers to achieve their goals.

V567 Public Financial Administration (3 cr.) Problems of financial management in governmental units; alternative revenue sources, financial planning, and control; cash debt management; and survey of modern expenditure management, control, and planning.

V568 Management of Urban Government Services (1-3 cr.) The course deals with selected topics in urban services. The course may focus on a specific urban service or provide an overview for several urban services.

V569 Managing Interpersonal Relations (3 cr.) P: SPEA V502. This course will teach students the theory and application of individual and group human behavior. Key interpersonal skills will be modeled expertly on videotape. Students will be expected to practice these key skills and receive feedback on their performance.

V570 Public Sector Labor Relations (1-3 cr.) An introductory overview of labor relations concepts within the framework of the public sector. The development, practice, and extent of the collective bargaining process, as well as the administration of the labor agreement, will be examined for state agencies, local municipalities, and school districts.

V571 State and Local Environmental Management (3 cr.) This course examines a mix of management and policy issues. Included are civic environmentalism, alternatives to environmental regulation, unfunded mandates, environmental justice, public relations, outsourcing, ethical challenges, and managing scientific and technical personnel.

V572 Urban Topics (3 cr.) Selected topics in urban policy and administration. The course is sometimes restricted to a special group of students in order to focus on a particular research interest.

V575 Comparative Public Management and Administration (3 cr.) Reading and discussion of case studies and comparative analyses of formal organizations, with emphasis on governmental

bureaucracies, public corporations, and international organizations. Topics include bureaucratic environment and culture, technology and organizations, program evaluation, communication and decision making, and administrative structure and process.

V576 Approaches to Development (3 cr.) Examination of the application of development theory to the public sector. Topics include modernization theory, urbanization, development administration, community development, ethnicity, ideology, and national planning. Area case study project will include problems of policy implementation in developing areas.

V577 International Economic Strategies and Trade Policy (3 cr.) Examination of topics in international economics as related to problems of economic development policy. Topics include international trade, comparative economic policy, economic integration, foreign aid investment, exchange rates, and international economic organizations.

V578 Introduction to Comparative and International Affairs (3 cr.) The purposes of this course are to enlighten future public professionals about the promises and challenges posed by globalization, and to introduce and examine major concepts and case material from the world of comparative and international affairs.

V580 Readings in Public Affairs (1-3 cr.) P: written consent of instructor. Readings on selected topics in public affairs.

V581 Public Safety Law (1-3 cr.) Survey of historical development of Anglo-American law of public safety, including criminal law, civil remedies, administrative regulation of risk, and recent developments in employee and consumer safety. Emphasis on understanding legal theory and practice as basis for management decisions. Comparison of jurisprudential viewpoints and other disciplinary approaches to causation, prevention, and correction of public safety problems.

V585 Practicum in Public Affairs (1-6 cr.) Students hold work assignments with public agencies. Grading is on an S/F basis.

V586 Public Safety in the U.S. (2-3 cr.) Overview of criminal justice and public safety. Definitions of public safety and identification of major components. Functional description of major public safety agencies. Discussion of basic issues in public safety. Management in public safety system.

V590 Research in Public Affairs (1-3 cr.) P: written consent of instructor. Research on selected topics in public affairs.

V593 Analytical Methods in Planning and Policy Analysis (3 cr.) P or C: SPEA V507. Topics relate to goal setting and forecasting. Analytical methods include time series analysis, demographic projections, economic development and employment forecasting, and land use and transportation planning analysis. Optimization methods are applied to transportation and project management.

V594 Principles of Urban and Regional Science (3 cr.) Discussion of the basic processes of change and development in regional systems, with emphasis on metropolitan regions. Includes economic, demographic, and environmental aspects of their interactions.

V595 Managerial Decision Making (1-3 cr.) P: SPEA V504 and V539. Applications of decision-making tools to substantive public management problems. A variety of managerial cases and issues are selected for intensive discussion and analysis.

V597 Land Use Planning (3 cr.) The course examines the theoretical basis and practical need for land use planning. Emphasis is placed on the institutional context in which land use planning occurs. The course provides an in-depth analysis and exercise in plan preparations.

V600 Capstone in Public and Environmental Affairs (3 cr.) Interdisciplinary course designed to expose students to the realities of the policy process through detailed analyses of case studies and projects. Course integrates science, technology, policy, and management.

V601 Workshop in Public Affairs (1-6 cr.) Projects in public affairs. The students work on a research and resource team to complete a project for a public-sector client. Faculty act as project managers and resource personnel.

V602 Strategic Management of Public and Nonprofit Organizations (3 cr.) P: SPEA V502. Concepts, cases, and problem solving associated with the structure and process of strategic management in the public sector, broadly defined to include governmental and nongovernmental organizations.

V609 Seminar in Revenue Theory and Administration (3 cr.) P or C: SPEA V560. This seminar examines the basic objectives and the political and economic aspects of tax administration. In the course of an examination of the interrelationships of tax policy, tax laws, and tax administration, the course reviews the major economic issues raised by types of taxes and user charges. The seminar also examines the fundamentals of tax legislation. Major emphasis is on state and local administration, although some federal problems will be covered.

V610 Seminar in Government Budget and Program Analysis (3 cr.) P or C: SPEA V560. Advanced study of management aspects of budgetary process. Special cases are analyzed, and budget problem-solving exercises are utilized.

611 Design of Information Systems (3 cr.) P: SPEA V516 and V519. Students in this course will learn the concepts, skills, methodologies, techniques, tools, and perspectives essential to successfully develop information systems for the public sector. To achieve this, students will learn how to conduct systems requirements analysis, translate it to process and logical models, and design the systems.

V613 Implementation of Information Systems (3 cr.) P: SPEA V516, V519, and V611. This course is intended to build on prior courses in information systems management. The course covers advanced

topics in systems implementation and evaluation. Special emphasis is placed on evaluation of alternative systems designs and their implementation in operational settings of public agencies.

V622 Seminar in Urban Economic Development (3 cr.) P: SPEA V517 or course in urban economics or instructor's consent. Reading, discussion, and research into problems of urban economic development in the United States. Case study approach used to investigate job creation, financial incentives, development corporations, and other factors that have led to successful economic development plans and projects.

V623 Seminar in Urban Management (3 cr.) P: SPEA V561, V564, V567. This course is the required capstone course for all graduate students with a concentration in urban management. Course is combined with student's required internship. Students are assigned selected reading in current urban management issues as well as research projects and case studies on/in the communities they are serving.

V631 Health Planning (3 cr.) A workshop in analysis and use of health data in a planning context. Course deals with the planning process and planning methods with an emphasis on systems theory. Class project or plan is developed, and presented and defended in a simulated public hearing format.

V639 Managing Government Operations (3 cr.) P: SPEA V502. This is an introductory survey of operations management. Emphasis is placed on the analysis, design, and management of operation systems using models from operations management. Readings, lectures, and structured exercises are used to present the models and demonstrate their application.

V643 Natural Resource Management and Policy (3 cr.) P: SPEA V517. This course evaluates a broad range of contemporary resource policies, cases, and controversies, using bio-economic resource management models as an intuitive aid, wherever possible. Topics include fishery management, forestry policy, tropical deforestation, water management policy, nature preservation/endangered species, sustainable development, and national income accounting.

V645 Environmental Law (3 cr.) An overview of U.S. environmental law. Key environmental statutes are examined, as are court decisions interpreting those statutes. Topics include water and air pollution, hazardous waste, toxins, pesticides, and environmental impact statements.

V650 Topics in Public Personnel Management (1-3 cr.) P: SPEA V561. Readings and research on selected topics in the public personnel field. Topics may include such subjects as affirmative action, occupational health and safety, workforce forecasting and planning, and personnel approaches to position classification.

V660 Cases and Problems in Fiscal Administration (3 cr.) P or C: SPEA V560 or consent of instructor. An advanced seminar in the management aspects of public finance. Focuses on the budgetary process. Special cases are analyzed and budget problem-solving exercises are utilized.

V662 Seminar in Productivity and Program Evaluation (3 cr.) Examines the problem of rigorously determining the productivity of governmental services, including problems of defining and measuring public products, specifying public service inputs, and statistically estimating public service production functions. Concepts are given concrete application through careful investigation of attempts to measure productivity of governmental services.

V665 Seminar in Policy and Administration (3 cr.) Politics of program development and management. Translation of plans into viable, administrable programs. Marshaling support, political processes, strategies, constraints, tradeoffs, etc.

V667 Seminar in Public Capital and Debt Theory (3 cr.) P or C: SPEA V560. This seminar examines the options open to governments, especially state and local, and why they resort to debt finance. The issues raised by the alternatives are examined in detail. Among the topics are public authority debt, revenue bonds, methods of placement, lease-purchase finance, and maturity choice. In addition, management of idle cash balances will be considered.

V670 Topics in Public-Sector Labor Relations (1-3 cr.) P: SPEA V570 or consent of instructor. Selected research and discussion topics in the field of public-sector labor relations arranged on a semester-by-semester basis. Possible topics are collective bargaining in the public sector and dispute settlement in public-sector labor relations.

V675 Issues and Problems in Public-Sector Personnel and Labor Relations (3 cr.) P: SPEA V561 and V570. A capstone seminar providing a practical and integrated examination of significant current cases and problems confronting public-sector employees and employers.

V681 Seminar in Development Policy and Management (3 cr.) P: SPEA V575 and V576, or consent of instructor. The purpose of the course is to explore linkages among policy analysis, management models, programs, and outcomes in a variety of development efforts in less-developed countries. The primary focus is on empirical analysis of developing countries, with some attention to U.S. domestic ventures.

V690 Seminar in the Public Policy Process (3 cr.) An evaluation of the theoretical and empirical literature on public policy processes. The findings of policy research are evaluated. An integrative paper is required.

BUHNER, JOHN D., Ph.D. (Indiana University, 1963), Professor Emeritus of Public and Environmental Affairs; Professor Emeritus of Political Science

JOHNSON, CARLYN E., J.D. (Indiana University, 1963), Professor Emeritus of Public and Environmental Affairs

MCHUGH, GERALD J., D.B.A. (George Washington University, 1973), Associate Professor Emeritus of Public and Environmental Affairs

MENDELSON, ROBERT I., Ph.D. (Michigan State University, 1970), Associate Professor Emeritus of Public and Environmental Affairs

PEVA, JAMES R., J.D. (Indiana University, 1961), Associate Professor Emeritus of Public and Environmental Affairs

RUTLEDGE, PHILIP J., LL.D. (Indiana University, 1980), Professor Emeritus of Public and Environmental Affairs; Professor Emeritus of Political Science (IUB/IUPUI/IUN)

Faculty

ADAMS, KENNETH, Ph.D. (State University of New York at Albany, 1984), Associate Professor of Public and Environmental Affairs (Graduate School)

BAUMER, TERRY L., Ph.D. (Loyola University of Chicago, 1980), Associate Professor of Public and Environmental Affairs

BIELEFELD, WOLFGANG, Ph.D. (University of Minnesota, 1990), Associate Professor of Public and Environmental Affairs

DECOSTER, THOMAS A., Ph.D. (University of Notre Dame, 1968), Director, Executive Education; Professor of Public and Environmental Affairs

GARCIA, CRYSTAL, Ph.D. (University of California, 1996), Assistant Professor of Public and Environmental Affairs

GLEESON, MICHAEL E., Ph.D. (Syracuse University, 1973), Associate Professor of Public and Environmental Affairs

HARLOW, KAREN S., Ph.D. (University of Texas, 1981), Co-Director, Institute for the Study of Government and the Nonprofit Sector, Indianapolis; Associate Professor of Public and Environmental Affairs; Associate Professor of Family Medicine (part-time) (Graduate School)

HOLMES, ANN M., Ph.D. (University of British Columbia, 1993), Associate Professor of Public and Environmental Affairs; Assistant Professor of Family Medicine (part-time); Adjunct Assistant Professor of Economics (Graduate School) (IUN/IUPUI)

JARJOURA, G. ROGER, Ph.D. (University of Maryland, 1990), Associate Professor of Public and Environmental Affairs (Graduate School)

KENNEDY, SHEILA, J.D. (Indiana University, 1975), Assistant Professor of Public and Environmental Affairs

KIRLIN, JOHN, Ph.D. (University of California, Los Angeles, 1969), Director, Center for Urban Policy and the Environment; Professor of Public and Environmental Affairs (Graduate School)

KIRLIN, MARY, Ph.D. (University of Southern California, 1996), Assistant Professor of Public and Environmental Affairs

LEHNEN, ROBERT G., Ph.D. (University of Iowa, 1968), Professor of Public and Environmental Affairs (Graduate School)

LINDSEY, GREG H., Ph.D. (Johns Hopkins University, 1992), Janet Duey-Murphy Professorship in Rural Land Policy, Associate Professor of Public and Environmental Affairs (Graduate School)

MAN, JOYCE, Ph.D. (Johns Hopkins University, 1992), Associate Professor of Public and Environmental Affairs (Graduate School)

MCSWANE, DAVID Z., H.S.D. (Indiana University, 1980), Director, Undergraduate Programs, Indianapolis; Associate Professor of Public and Environmental Affairs (Graduate School)

MERGET, ASTRID E., Ph.D., Dean, School of Public and Environmental Affairs; Professor of Public and Environmental Affairs

MESCH, DEBRA J., Ph.D. (Indiana University, 1990), Associate Professor of Public and Environmental Affairs (Graduate School)

NUNN, SAMUEL, Ph.D. (University of Delaware, 1981), Director, Graduate Programs for Planning and Public Affairs; Professor of Public and Environmental Affairs (Graduate School)

OTTENSMANN, JOHN R., Ph.D. (University of North Carolina, 1974), Professor of Public and Environmental Affairs (Graduate School); Adjunct Associate Professor of Geography

PERRY, JAMES L., Ph.D. (Syracuse University, 1974), Associate Dean, School of Public and Environmental Affairs; Professor of Public and Environmental Affairs

QUINET, KENNA, Ph.D. (University of Illinois, 1992), Associate Professor of Public and Environmental Affairs (Graduate School)

RITCHIE, INGRID M., Ph.D. (University of Minnesota, 1980), Associate Professor of Public and Environmental Affairs (Graduate School)

WALSTON, STEPHEN, Ph.D. (University of Pennsylvania, 1997), Director, Graduate Programs in Health Administration; Associate Professor of Public and Environmental Affairs

WEDIG, GERARD J., Ph.D. (Harvard University, 1987), Associate Professor of Public and Environmental Affairs

ZOLLINGER, TERRELL W., Dr.PH. (Loma Linda University, 1979), Professor of Public and Environmental Affairs; Associate Professor of Family Medicine (part-time) (Graduate School)

IUPUI School of Science History

Indiana University (IU) established its first extension center at Indianapolis in 1916, although the first IU course was taught in Indianapolis in 1890. The Purdue University Indianapolis campus grew out of World War II training programs sponsored by Purdue and began its major operations in 1946. Indiana University established the Indianapolis regional campus in the mid-1960s. In 1968, Indiana University at Indianapolis was created by the Trustees of Indiana University, and less than a year later, in 1969, the trustees of Indiana and Purdue universities merged their Indianapolis operations to form Indiana University–Purdue University at Indianapolis. Indiana University was selected to administer the campus. Purdue brought to the merger a growing complex of degree programs and Purdue's traditional strengths in the physical sciences, engineering, and technology. The name of the campus was changed to Indiana University–Purdue University Indianapolis (IUPUI) in 1992. IUPUI and IU Bloomington are the largest of Indiana University's eight campuses.

A restructuring of undergraduate programs at IUPUI in the fall of 1972 created three new schools: the School of Liberal Arts (humanities and the social sciences), the School of Science (physical, behavioral, and life sciences), and the School of Engineering and Technology.

After being housed for almost 22 years on the 38th Street Campus, the School of Science made a historic move in two phases into two buildings on the main campus during 1991-1993.

The School of Science

IUPUI
Science Building, LD 222
402 N. Blackford Street
Indianapolis, IN 46202-3276
(317) 274-0625, FAX (317) 274-0628
www.science.iupui.edu/science

The School of Science offers many undergraduate and graduate programs that will prepare students for a variety of careers open to scientists. As part of its instructional mission, the school also provides non-science majors with the scientific background to help them become more aware and better-informed consumers and citizens. Scientists push forward the boundaries of our knowledge of the natural world through applied and basic research. Science benefits society by providing fundamental knowledge and technical advances in such areas as health, ecology, computer and software design, mathematical modeling, and chemistry. Science informs the social sciences with scientific understanding of psychology, applications of statistics, and implications of environmental problems. Science contributes to the arts and humanities by offering knowledge of the physical universe and the symmetry and wonder of nature.

In addition to preparing students for traditional science-related career opportunities and for advanced study in graduate school, an undergraduate program in one of the sciences is considered excellent background for professional study in medicine (including veterinary medicine), dentistry, business administration, law, and areas of the social sciences where quantitative methods are important. Scientifically trained persons are also sought as administrators for some governmental agencies and as salespersons or managers by companies producing science-based products.

Supplementing the full-time instructional staff, with ranks ranging from instructor through full professor, is a contingent of well-qualified, experienced lecturers who are recruited from the reserve of talent existing in the Indianapolis area.

Degree Programs in the School of Science

The School of Science at Indiana University–Purdue University Indianapolis awards students degrees from both Purdue University (PU) and Indiana University (IU). This list shows all the degrees awarded and the institution granting the degree.

Biology

Bachelor of Arts PU
Bachelor of Science PU
Master of Science PU
^{1,2}Doctor of Philosophy

Chemistry

Associate of Science PU
Bachelor of Arts PU
Bachelor of Science PU
Master of Science PU
^{1,2}Doctor of Philosophy

Computer and Information Science

Bachelor of Science PU
Master of Science PU
¹Doctor of Philosophy

Geology

Bachelor of Arts IU
Bachelor of Science IU
Master of Science IU

Mathematical Sciences

Bachelor of Science PU
Master of Science PU
Pure/Applied Math
Applied Statistics
Math Education
Industrial/Applied Math
^{1,2}Doctor of Philosophy

Physics

Bachelor of Science PU
Master of Science PU
^{1,2}Doctor of Philosophy

Psychology

Bachelor of Arts PU
Bachelor of Science PU
Master of Science PU
Industrial/Organizational (I/O) Psychology
Clinical Rehabilitation Psychology

Doctor of Philosophy in Clinical Rehabilitation Psychology PU
¹Psychobiology of Addictions

Joint M.D. – ^{1,2}Ph.D. Degrees—Several departments participate in the joint M.D. – Ph.D. program with the Indiana University School of Medicine. In this program students concurrently earn an Indiana University Doctor of Medicine degree and a Ph.D. degree in the School of Science.

Certificate Programs in the School of Science

The School of Science at Indiana University–Purdue University Indianapolis also awards a Purdue University (PU) certificate.

Computer and Information Science

Certificate in Applied Computer Science PU

Admissions and Transfers

All students entering the School of Science must have been officially admitted to the university by the Office of Admissions, Cavanaugh Hall 129, 425 University Blvd., IUPUI, Indianapolis, IN 46202-5143. Further information and application forms may be obtained at this address or by calling (317) 274-4591. All applications for admission must be accompanied by a \$35 nonrefundable fee. Checks should be made payable to IUPUI.

Applicants should be aware that, under Indiana law, criminal convictions may result in ineligibility for admission to certain programs at IUPUI. For the School of Science, criminal convictions may also result in ineligibility for enrollment in certain courses or participation in certain projects. Questions regarding school policy on such matters should be addressed to the associate dean for academic programs and student development.

Beginning Students

Students entering IUPUI directly from high school should file their applications for admission during their senior year.

Acceptance to the university as a new student is influenced by several factors. The Office of Admissions is guided by the following:

1. The applicant should be a high school graduate or be scheduled to graduate before enrolling at IUPUI.
2. The extent to which the student meets or exceeds the minimum subject requirements indicated below is considered. For admission to the School of Science, the student's record should include the following course work:

¹Purdue University Ph.D. Programs, pursued at IUPUI, arranged through Purdue, West Lafayette.

²Indiana University Ph.D. Programs, pursued at IUPUI, in departments or programs of the Indiana University School of Medicine in which School of Science faculty hold adjunct appointments.

Subjects	Semesters
English	8
History and Social Science	6
Algebra	4
Geometry	2
Trigonometry ¹	1-2
Laboratory Science ²	6
Combination of foreign language, additional math, laboratory science, social science, or computer science courses	6-7

Students may be admitted with some deficiencies in mathematics or laboratory science. Such deficiencies may be removed by taking courses offered by the School of Science. However, these courses may not be counted as credit toward a School of Science degree. If the high school offers more than the above mathematics courses, students may benefit from taking precalculus mathematics.

In planning high school electives, the curricula of the various departments of the School of Science contained in this bulletin should be reviewed. Departmental advisors will be glad to help with planning for admission.

- All applicants are required to take the Scholastic Aptitude Test (SAT) or the American College Test (ACT). It is recommended that these tests be taken in the spring of the student's junior year in high school or fall of the senior year.
- Indiana Residents
 - Residents of Indiana must rank in the upper half of their high school graduating class or have a combined verbal-math SAT score of 1050. In either case, neither SAT score may be below 480.
 - Residents of Indiana must rank in the upper half of their high school graduating class or have an ACT composite score of 23. In either case, neither the verbal nor math ACT score may be below 18.
 - A marginal applicant may be granted admission, admitted on probation, or have admission denied.
- Out-of-State Residents

If enrollment limits are in place, out-of-state applicants must rank in the top third of their high school graduating class. They must also rank in the top third of the IUPUI distribution on the SAT or ACT.
- Information provided by the high school counselor is considered.

Students should declare a major when applying for admission so a departmental advisor can be assigned.

Transfer Students

From IUPUI Schools, Indiana University Campuses, and Purdue University Campuses

Prospective transfer students should have a minimum grade point average of 2.0 on a 4.0 scale, meet the requirements of the department they wish to enter,

¹Students who plan to major in chemistry, computer science, or physics must have taken an advanced mathematics course that includes trigonometry.

²It is advised that one semester of chemistry be included in lab science course work.

and be in good disciplinary standing. In order to be accepted for admission to the School of Science, students must first complete the processing of appropriate materials as indicated below. Acceptance to the school also requires the signature of the chairperson of the department approving the request to pursue a degree program and the signature of the associate dean for academic programs and student development of the School of Science.

- An IUPUI or other Indiana University campus student should file a record change form, which may be obtained from the Office of the Associate Dean for Academic Programs and Student Development of the School of Science or the student's current school.
- A Purdue University campus student must make an official application through the IUPUI Office of Admissions.

From Other Colleges and Universities

Students who have earned transfer credit for 12 credit hours and have a cumulative grade point average of 2.0 on a 4.0 scale from other institutions may be considered for admission to the School of Science. Admittance to the school is contingent upon acceptance into a departmental program. Students should submit the following with their application for admission:

- A copy of their high school record showing satisfactory completion of entrance requirements;
- An official transcript of work completed in each institution previously attended;
- Evidence of good academic and disciplinary standing at the institution last attended.

Credit from other institutions is evaluated by the Office of Admissions, and its applicability toward degree requirements in the School of Science is determined by the major department and the Office of the Associate Dean for Academic Programs and Student Development.

Transfer Credit

Acceptability of transfer credits from another college or university is determined by the student's major department and the Office of the Associate Dean for Academic Programs and Student Development. However, transfer credit will be allowed for the master's degree only after one semester of satisfactory work in residence at IUPUI.

From IUPUI to Other Indiana University and Purdue University Campuses

Students transferring from IUPUI to other Indiana University and Purdue University campuses should consult the appropriate departments at those campuses about equivalence of courses.

International Students

International students seeking admission to the School of Science at IUPUI must submit the International Application for Admission, which is available from the Office of International Affairs, Union Building 207, 620 Union Drive, IUPUI, Indianapolis, IN 46202-5167; telephone (317) 274-7000; fax (317) 278-2213; e-mail: intlaaff@iupui.edu.

Graduate Students

To be considered for admission, a candidate must have a baccalaureate degree from an accredited

institution and must show promise of ability to engage in advanced work and evidence of adequate preparation to pursue graduate study in the field chosen. The minimum standard for unconditional admission to the graduate school is a graduation grade point average of 3.0 (B) or the equivalent. An applicant not meeting these requirements should take the aptitude tests section of the Graduate Record Examination (GRE). Individual departments may set higher grade point requirements and may require the submission of additional evidence of academic performance, such as GRE scores.

A minimal score of 550 on the Test of English as a Foreign Language (TOEFL) is required for admission to the graduate school for applicants whose native language is not English. Departments may set higher requirements. Applicants in the Indianapolis area may substitute the IUPUI English as a Second Language (ESL) Placement Examination for the TOEFL. A brochure about this test is available from the Office of International Affairs, Union Building 207, 620 Union Drive, Indianapolis, IN 46202-5167; telephone (317) 274-7000.

Application should normally be made at least three months before the beginning of the session in which the student wishes to enroll. However, late applications will also be accepted. Applicants will be advised of the action taken on their applications by the dean of the Purdue University Graduate School. Applications to the Department of Geology will be considered by the Department of Geology and forwarded to the IUPUI office of the Indiana University Graduate School; applicants will be notified of the results by the graduate advisor in the Department of Geology.

Qualified students may be authorized to pursue a Ph.D. degree at IUPUI in areas where a program has been arranged with Purdue, West Lafayette, or the Indiana University School of Medicine. For further details, contact the department in which study is desired.

Applicants should be aware that, under Indiana law, criminal convictions may result in ineligibility for admission to certain programs at IUPUI. For the School of Science, criminal convictions may also result in ineligibility for enrollment in certain courses or participation in certain projects. Questions regarding school policy on such matters should be addressed to the associate dean for academic programs and student development.

Financial support in the form of teaching and research assistantships is available through the departments of the School of Science. Students who want to be considered for IUPUI fellowships must submit GRE (verbal/quantitative/analytic) scores. Area examination scores may also be submitted for consideration.

Degree-seeking Graduate Student Application

Application to all graduate programs must be made by electronic applications accessible through the School of Science Web site (www.science.iupui.edu). Application fees are submitted on line at the time of application. If necessary, paper applications may be obtained from each department.

Applicants must submit complete, official transcripts of all previous college and university studies and three letters of academic reference for evaluation by the major department.

Graduate Nondegree Program

The graduate nondegree classification is normally used for two groups of students:

(1) Students who are working on prerequisites or are in the process of filing for admission into a graduate degree program; (2) nondegree students whose intent is to take course work for personal improvement. A student who wishes to become a candidate for an advanced degree should consult with the chosen major department at the time of application for admission as a graduate nondegree student. The major department will advise applicants of the procedure for obtaining status as a degree-seeking student. Admission as a graduate nondegree student is obtained through the IUPUI Graduate Office, Union Building 518, 620 Union Drive, Indianapolis, IN 46202-5167; telephone (317) 274-1577.

No more than 12 hours of credit earned under this classification may be used on a plan of study for a Purdue University degree program without approval of the major department and the Purdue University Graduate School. Similarly, not more than 9 hours of credit earned under this classification may be used in a plan of study for an Indiana University degree program without approval of the major department.

Bulletin Designation and Program Planning

Bulletin Designation

All colleges and universities establish certain academic requirements that must be met before a degree is granted. These regulations concern such things as curricula and courses, majors and minors, and campus residence. Advisors, directors, and deans will aid students in meeting these requirements, but students are responsible for fulfilling them. At the end of the course of study, the faculty and the Board of Trustees vote on the conferring of degrees. If requirements have not been satisfied, degrees will be withheld pending adequate fulfillment. For this reason, students need to acquaint themselves with all regulations and to remain informed throughout their university career.

This bulletin lists the requirements and regulations in effect for students who are admitted to the School of Science in August 2002 (fall semester). Students who enter after this date may be subject to different requirements; students who entered prior to August 2002 may elect to follow the graduation requirements that were in effect at the time of their admission to their degree program or the graduation requirements that became effective thereafter. However, the requirements chosen must be from only one bulletin. If a student has not completed an associate degree program within four years of admission, or a baccalaureate degree program within eight years of admission, the student may be obliged by the major department to meet the requirements of a subsequent bulletin. Additionally, students in good standing who

have not been enrolled at the university for two or more consecutive years must satisfy the requirements of the School of Science bulletin in effect upon their return.

Program Planning and Counseling Guidelines

The experience of academic advisors and of successful students suggests the following guidelines for effective planning of undergraduate programs:

1. Students should be thoroughly familiar with all academic requirements that must be met before a degree is granted.
2. Students should seek appointments with academic advisors in their major departments before the dates established by the university calendar for registration. In such conferences students should, as a minimum objective, make certain that they review their degree requirements and that they have made an appropriate plan for the next semester.
3. Each student should understand that the responsibility for determining an appropriate academic program and for meeting every degree requirement rests with the student; faculty or staff members acting in the capacity of advisors are obligated only to assist students in meeting this responsibility. Any student who needs clarification of any of the requirements for the degree program is urged to obtain this clarification from an academic advisor or from the Office of the Associate Dean for Academic Programs and Student Development; School of Science; Science Building, Room 222; 402 N. Blackford Street, telephone (317) 274-0625.

Undergraduate Programs

Baccalaureate Degree

General Requirements

1. A minimum of 124 credit hours (122 for geology) must be completed. Approval must be obtained from the Office of the Associate Dean for Academic Programs and Student Development to use as credit toward graduation any course that was completed 10 or more years previously.
2. A minimum grade point average of 2.0 is required.
3. A minimum of 24 credit hours must be taken in a major subject (see departmental requirements) with a minimum grade point average of 2.0. No grade below C– is acceptable in the major subject.
4. At least four courses totaling a minimum of 12 credit hours in the major subject must be completed at IUPUI (see departmental requirements).
5. Residence at IUPUI for at least two semesters and completion, while at IUPUI, of at least 32 credit hours of work in courses at the 300 level or higher are required.
6. With the approval of the associate dean for academic programs and student development, students who have had at least four semesters of resident study may complete up to 15 credit hours of the senior year at another approved college or university.

7. Courses taken on the Pass/Fail option may be applied only as general electives and not toward degree area requirements of the school or department. Courses taken on the Pass/Fail option may apply to the 32 credit hours residency requirement listed in item 5 if the course is at the 300-level or higher.
8. No more than 64 credit hours earned in accredited junior colleges can be applied toward a degree.
9. Students may enroll in Independent Study (correspondence) courses for general electives up to a maximum of 12 credit hours with permission of the associate dean for academic programs and student development. Independent Study (correspondence) courses may not apply to the 32 credit hours residency requirement listed in item 5.
10. With permission of the appropriate department, credit may be earned through special credit examination. Credits earned by special credit examination may be used toward the total credit hours required and to satisfy area requirements for a degree.
11. The following courses do not count for any credit toward any degree program in the School of Science: AGR 101; BIOL N120; CSCI N100-level courses; CPT 106; all Indiana University remedial and developmental COAS courses; EDUC U205, X100, X150, X151, X152; ENG W001, W130; MATH M010, 001, 002, 110, 111, 123, 130, 132; and PHYS 010.
Note that CHEM C100 may count for general elective credit if the student has not already established credit in CHEM C101 or CHEM C105/C106, or equivalent courses.
12. Courses taken outside of the Schools of Science and Liberal Arts must receive departmental approval. No more than 6 credit hours of studio, clinical, athletic, or performing arts course work will be approved. Consult a School or departmental advisor.
13. An application for a degree must be filed with the Director of Student Records in the School of Science, Science Building, Room 222, by February 1 if graduation is anticipated in May or August, or by October 1 if graduation is anticipated for December. Candidates for December, May, or August graduation of a particular academic year may participate in the May Commencement. Students should also be registered in the appropriate section of CAND 991 (0 credit hours) during their final semester before graduation. See the Schedule of Classes for listings on CAND 991, Candidate for Graduation.
14. In general, credit is not allowed for both of two overlapping courses. Examples of course overlaps include:

BIOL N100	and	BIOL K101/K103
BIOL N212/213/ 214/215	and	BIOL N217 and N261
CHEM C101	and	CHEM C105 and/or C106
CHEM C102	and	CHEM C341/C343
CHEM C110	and	CHEM C341
CHEM C360	and	CHEM C361
CHEM C325	and	CHEM C410/C411
MATH M119	and	MATH 221 or MATH 163
MATH 151	and	MATH 153/154

MATH 221/222 and MATH 163/164
 PHYS P201/P202
 or 218/219 and PHYS 152/251
 STAT 301 and PSY B305

In addition, any course that is retaken is considered to be overlapped. Consult with your academic advisor regarding other overlapping courses.

15. See statements about required First Year Experience Course and Capstone Experience in description of the Bachelor of Arts Degree and Bachelor of the Science Degree programs.

Area Requirements for Baccalaureate Degrees

The faculty of the School of Science has adopted the following degree requirements for the Bachelor of Arts and Bachelor of Science degrees. Students may follow the School of Science and departmental requirements that are in effect when they enter the School of Science, or they may choose new requirements that become effective after that date. However, the requirements must be chosen from only one bulletin. A student who has not completed a baccalaureate degree program within eight years of entering the School of Science may be obliged by the major department to meet the requirements of a subsequent bulletin. Additionally, students in good standing who have not been enrolled at the university for two or more consecutive years must satisfy the requirements of the School of Science bulletin in effect upon their return.

School of Science requirements are the minimal requirements in various areas, and individual departments *may require more*, as stated in their degree descriptions. Students should consult with departmental advisors in planning their courses of study.

Bachelor of Arts Degree and Bachelor of Science Degree

The requirements for these baccalaureate degree programs include the common general education core approved by the faculties of both the School of Liberal Arts and the School of Science. This general education core, together with the major, is a curriculum based on the IUPUI Principles of Undergraduate Learning (see the front part of this bulletin for a description of these principles).

First-Year Experience Course

Each beginning freshman and transfer student (with less than 18 credit hours) in both the Bachelor of Arts and Bachelor of Science programs in the School of Science is required to take either SCI 120 Windows on Science (1 cr.) or an equivalent freshman experience course that may be offered by a department in which the student is a major. Beginning psychology majors are required to take PSY B103 Orientation to a Major in Psychology (1 cr.).

Area I

English Composition and Communication Skills

Both Bachelor of Arts and Bachelor of Science students are required to take two courses in English composition worth at least 3 credit hours each and COMM R110 Fundamentals of Speech Communications (3 cr.). The English composition

requirement is partially satisfied by completing ENG W131 (or ENG W140). The second composition course must have ENG W131 (or ENG W140) as a prerequisite. An appropriate course in technical or research writing may be used to complete the second composition course requirement. Consult departmental guidelines. A grade of C or better must be obtained in both composition courses.

Area II

Foreign Language

1. A first-year proficiency in a foreign language is required for the Bachelor of Arts degree program. Note that American Sign Language is considered a foreign language.

This requirement may be satisfied in one of the following ways:

- i. by completing first-year (8-10 credit hours) courses in a single language with passing grades;
- ii. by completing a second- or third-year course with a grade of C or better;
- iii. by taking a placement test and placing into the 200 level or higher.

See the School of Liberal Arts section of this bulletin for items related to the placement test, courses numbered 117, non-native speakers, and credit for lower division language courses.

2. Check the department section of the bulletin for any reference to a language proficiency requirement for a Bachelor of Science degree program.

Area III

IIIA Humanities, Social Sciences, and

Comparative World Cultures Four courses totaling 12 credit hours are required. The courses are to cover each of four areas:

1. HIST H114 History of Western Civilization II (3 cr.)
2. One course in Humanities from List H
3. One course in Social Sciences from List S
4. One course in Comparative World Cultures from List C

Courses taken from lists H, S, and C must be outside the student's major.

It is recommended that the student see an academic advisor for updated lists.

Note that some courses may appear on more than one list. A cross-listed course may apply to only one of the required areas specified by the lists.

List H: Humanities

Afro-American Studies (AFRO)

A150 Survey of the Culture of Black Americans (3 cr.)

American Studies (AMST)

A103 Topics in American Studies (3 cr.)

Art History (HER)

H100 Art Appreciation (3 cr.)

H101 History of Art I (3 cr.)

H102 History of Art II (3 cr.)

Classical Studies (CLAS)

C205 Classical Mythology (3 cr.)

Communication Studies (COMM)

T130 Introduction to Theatre (3 cr.)

English (ENG)

L105 Appreciation of Literature (3 cr.)

L115 Literature for Today (3 cr.)

Film Studies (CMLT)

C190 Introduction to Film (3 cr.)

Folklore (FOLK)

F101 Introduction to Folklore (3 cr.)

Foreign Languages and Cultures (FLAC)

F200 World Cultures through Literature (3 cr.)

History (HIST)

H105 American History I (3 cr.)

H106 American History II (3 cr.)

H108 Perspectives on the World to 1800 (3 cr.)

H113 History of Western Civilization I (3 cr.)

H217 The Nature of History (3 cr.)

Philosophy (PHIL)

P110 Introduction to Philosophy (3 cr.)

P120 Personal and Social Ethics (3 cr.)

Religious Studies (REL)

R133 Introduction to Religion (3 cr.)

R173 American Religion (3 cr.)

R180 Introduction to Christianity (3 cr.)

R212 Comparative Religions (3 cr.)

Women's Studies (WOST)

W105 Introduction to Women's Studies (3 cr.)

List S: Social Sciences

Afro-American Studies (AFRO)

A150 Survey of the Culture of Black Americans (3 cr.)

Anthropology (ANTH)

A104 Culture and Society (3 cr.)

Communication Studies (COMM)

C180 Introduction to Interpersonal Communication (3 cr.)

Economics (ECON)

E101 Survey of Current Economic Issues and Problems (3 cr.)

E201 Introduction to Microeconomics (3 cr.)

E202 Introduction to Macroeconomics (3 cr.)

English (ENG)

G104 Language Awareness (3 cr.)

Folklore (FOLK)

F101 Introduction to Folklore (3 cr.)

Geography (GEOG)

G110 Introduction to Human Geography (3 cr.)

G130 World Geography (3 cr.)

History (HIST)

H117 Introduction to Historical Studies (3 cr.)

Political Science (POLS)

Y101 Principles of Political Science (3 cr.)

Y103 Introduction to American Politics (3 cr.)

Y213 Introduction to Public Policy (3 cr.)

(Note: POLS Y213 and SPEA V170 are equivalent courses. Students may not receive credit for both.)

Y219 Introduction to International Relations (3 cr.)

Psychology (PSY)

- B104 Psychology as a Social Science (3 cr.)
 B310 Life Span Development (3 cr.)

Public and Environmental Affairs, School of (SPEA)

- V170 Introduction to Public Affairs (3 cr.)
 (Note: POLS Y213 and SPEA V170 are equivalent courses. Students may not receive credit for both.)

Sociology (SOC)

- R100 Introduction to Sociology (3 cr.)
 R121 Social Problems (3 cr.)

Women's Studies (WOST)

- W105 Introduction to Women's Studies (3 cr.)

List C: Comparative World Cultures**Anthropology (ANTH)**

- A104 Culture and Society (3 cr.)

Classical Studies (CLAS)

- C205 Classical Mythology (3 cr.)

Foreign Languages and Cultures (FLAC)

- F200 World Cultures through Literature (3 cr.)

Geography (GEOG)

- G110 Introduction to Human Geography (3 cr.)

History (HIST)

- H108 Perspectives on the World to 1800 (3 cr.)

Political Science (POLS)

- Y217 Introduction to Comparative Politics (3 cr.)

Religious Studies (REL)

- R133 Introduction to Religion (3 cr.)
 R212 Comparative Religions (3 cr.)

IIIB Junior/Senior Integrator (3 cr.) One course from a list of Junior/Senior Integrator courses is required for this area (see academic advisor for details). The Junior/Senior Integrator is designed to integrate the areas of humanities, social sciences, and science. Prerequisites: at least junior standing; ENG W131; a second composition course applicable to Area I; one course applicable to Area IIIC Physical and Biological Sciences; one course applicable to area IIID Mathematical Sciences; one course in the major; HIST H114; and two courses taken from two of the H, S, and C lists. For a particular semester, Junior/Senior Integrator courses may be found under INTG offerings in the *Schedule of Classes*.

IIIC Physical and Biological Sciences Both Bachelor of Arts and Bachelor of Science students are required to complete at least four science courses totaling a minimum of 12 credit hours outside the major department. At least one of the courses must have a laboratory component. Not acceptable are AST A130; BIOL N100, N120, N200; CHEM C100; GEOL G130; PHYS 010, 140; and all agriculture courses. Except for laboratory courses combined with corresponding lecture courses, 1 credit hour and, in general, 2 credit hour courses do not apply to this area. *In addition, students must obtain grades of C– or higher in their Area IIIC courses; a single grade of D+ or D will be allowed for one course only.* Check with the major department for additional restrictions or requirements.

- | | |
|-----------|---|
| Biology | Geology |
| Chemistry | Physics (including astronomy, for Bachelor of Arts students only) |

Note that GEOG G107 Physical Systems of the Environment (3 cr.) / GEOG G108 Physical Systems of the Environment: Laboratory (2 cr.) may apply to Area IIIC with approval of the student's major department. Also, GEOG G185 Global Environmental Change (3 cr.) is an acceptable substitute for GEOL G185 Global Environmental Change (3 cr.).

IIID Mathematical Sciences Bachelor of Arts students must have at least one course of at least 3 credit hours in mathematics and one course of at least 3 credit hours in computer science.

Bachelor of Science students must have at least two courses beyond algebra and trigonometry, totaling 6 credit hours. In addition, one course of at least 3 credit hours in computer science is required. Courses in applied statistics are not acceptable.

MATH M010, 001, 002, 110, 111, 123, 130, 132 do not count for any credit toward any degree in the School of Science. Computer Science (CSCI) N100-level courses do not count in this area, as well as CSCI N241; CPT 106. *In addition, students must obtain grades of C– or higher in their Area IIID courses; a single grade of D+ or D will be allowed for one course only.* Check with the major department for additional restrictions or requirements.

Computer Science Mathematical Sciences

Area IV

Major Department Consult the listing of the major department for courses required within the major subject as well as courses required by the major department in the other areas.

Capstone Experience Course

Each undergraduate major in the School of Science is to be provided a **Capstone Experience** (research, independent study/project, practicum, seminar, or field experience). The capstone, required of all majors, is to be an independent, creative effort of the student that is integrative and builds on the student's previous work in the major. See departmental sections of the bulletin for specific information about capstone courses.

Minors

See the departmental sections of this bulletin for information on minor fields of study. Minors are awarded only with the completion of a baccalaureate degree. Independent Study (correspondence) courses may not be used to fulfill a minor program.

Requirements for minors offered by departments in the School of Science are as follows:

1. A minimum of 18 credit hours must be taken in a minor subject.
2. A minimum of 6 credit hours in the minor subject must be taken at IUPUI.
3. No grade below C– is acceptable in the minor subject.
4. A minimum grade point average of 2.0 is required for the complete minor program.

Check with the department offering the minor for additional restrictions or requirements.

Certificate Programs

See departmental sections of bulletin.

Associate Degree

Some associate degree programs are in the approval process. Consult the department of interest.

General Requirements:

1. A minimum of 62 credit hours (60 for geology) must be completed. Acceptance must be obtained from the Office of the Associate Dean for Academic Programs and Student Development to use as credit toward graduation any course that was completed 10 or more years previously.
2. A minimum grade point average of 2.0 is required.
3. A minimum of 15 credit hours must be taken in a major subject (see departmental requirements) with a minimum grade point average of 2.0. No grade below C– is acceptable in the major subject.
4. At least three courses totaling a minimum of 9 credit hours must be completed at IUPUI (see departmental requirements).
5. Residence at IUPUI is required for at least two semesters and the enrollment in and completion of at least 32 credit hours of course work required for the completion of the degree.
6. With the approval of the associate dean for academic programs and student development, students who have had at least four semesters of resident study may complete up to 15 credits in their terminal year at another approved college or university.
7. Courses taken on the Pass/Fail option can be applied only as general electives and not toward degree area requirements of the school or department. Courses taken on the Pass/Fail option may apply to the 32 credit hours residency requirement listed in item 5.
8. No more than 32 credit hours earned in accredited junior colleges can be applied toward an associate degree.
9. Students may enroll in Independent Study (correspondence) courses for general electives up to a maximum of 6 credit hours with permission of the associate dean for academic programs and student development. Independent Study (correspondence) courses may not apply to the 32 credit hours residency requirement listed in item 5.
10. With permission of the appropriate department, credit may be earned through special credit examination. Credits earned by special credit examination may be used toward the total credit hours required and to satisfy area requirements for a degree.
11. The following courses do not count for any credit toward any degree program in the School of Science: AGR 101; BIOL N120; all Indiana University remedial or developmental COAS courses; CSCI N100-level courses; CPT 106; EDUC U205, X150, X151, X152; ENG W001, W130; MATH 001, 002, 110, 111, 123, 130, 131, 132; and PHYS 010.
12. Courses taken outside of the Schools of Science and Liberal Arts must receive departmental

approval. No credits are allowed for clinical, athletic, or performing arts course work. See the department advisor for details.

13. In general, credit is not allowed for both of two overlapping courses. See the departmental advisor for details and item 14 under "General Requirements for the Baccalaureate Degree."
14. An application for a degree must be filed with the Director of Student Records in the School of Science, Science Building, Room 222, by February 1, if graduation is anticipated in May or August, or by October 1, if graduation is anticipated for December. Candidates for December, May, or August graduation of a particular academic year may participate in the May Commencement. Students should also be registered in the appropriate section of CAND 991 (0 credit hours) during their final semester before graduation. See the *Schedule of Classes* for listings on CAND 991, Candidate for Graduation.

Area Requirements for Associate Degrees

The faculty of the School of Science has adopted the following degree requirements for the associate degree. Students may follow the School of Science and departmental requirements that are in effect when they enter the School of Science, or they may choose new requirements that become effective after that date. However, the requirements must be chosen from only one bulletin. A student who has not completed an associate degree program within four years of entering the School of Science may be obliged by the major department to meet the requirements of a subsequent bulletin. Additionally, students in good standing who have not been enrolled at the university for two or more consecutive years must satisfy the requirements of the School of Science bulletin in effect upon their return.

School of Science requirements are the minimal requirements in various areas, and individual departments *may require more*, as stated in their degree descriptions. Students should consult with departmental advisors in planning their courses of study.

Associate Degree

First-Year Experience Course

Each beginning freshman and transfer student (with less than 18 credit hours) in an associate degree program in the School of Science is required to take either SCI 120 Windows on Science (1 cr.) or an equivalent freshman experience course that may be offered by a department in which the student is a major. Beginning psychology majors are required to take PSY B103 Orientation to a Major in Psychology (1 cr.).

Area I

English Composition and Communication Skills

Two courses in English composition worth at least 3 credit hours each and COMM R110 Fundamentals of Speech Communication (3 cr.) are required. The English composition requirement is partially satisfied by completing ENG W131 (or ENG W140). The second composition course must have ENG W131 (or ENG W140) as a prerequisite. An appropriate course in technical or research writing may be used to

complete the second composition course requirement. Consult departmental guidelines. A grade of C or better must be obtained in both composition courses.

Area II

Foreign Language The School of Science requires no foreign language for an associate degree.

Area III

IIIA Humanities, Social Sciences, and

Comparative World Cultures One course of at least 3 credits taken from the Humanities List H, Social Sciences List S, or the Comparative World Cultures List C; or HIST H114, History of Western Civilization II (3 cr.). (See lists under Area IIIA, Bachelor of Arts Degree and Bachelor of Science Degree requirements.)

IIIB Junior/Senior Integrator Not required for an associate degree.

IIIC Physical and Biological Sciences* Two courses outside the major department totaling at least 6 credit hours are required. At least one of the courses must have a laboratory component. Not acceptable are AST A130; BIOL N100, N120, N200; CHEM C100; GEOL G130; PHYS 010, 140; and all agriculture courses. Except for laboratory courses combined with corresponding lecture courses, 1 credit hour and, in general, 2 credit hour courses do not apply to this area. *In addition, students must obtain grades of C– or higher in their Area IIIC courses; a single grade of D+ or D will be allowed for one course only.* Check with the major department for additional restrictions or requirements.

Biology	Geology
Chemistry	Physics

Note that GEOG G107 Physical Systems of the Environment (3 cr.) / GEOG G108 Physical Systems of the Environment: Laboratory (2 cr.) may apply to Area IIIC with approval of the student's major department. Also, GEOG G185 Global Environmental Change (3 cr.) is an acceptable substitute for GEOL G185 Global Environmental Change (3 cr.).

*For exceptions to this Area, refer to the description of the Associate degree program offered by the specific department.

IIID Mathematical Sciences One course of at least 3 credit hours in mathematics. The student must obtain a grade of C– or higher for the course. Note that MATH M010, 001, 002, 110, 111, 123, 130, and 132 do not count for any credit toward any degree in the School of Science.

Area IV

Major Department Consult the listing of the major department for courses required within the major subject as well as courses required by the major department in other areas.

Graduate Programs

Master of Science Degrees

Purdue University Master of Science degrees are offered in all School of Science departments except Geology, which offers an Indiana University Master of

Science degree. All departments award either a thesis or nonthesis option.

Doctor of Philosophy Degrees

A Purdue University Ph.D. program in Clinical Rehabilitation Psychology is offered by the Psychology Department. Purdue University Ph.D. Programs pursued at IUPUI, arranged through Purdue, West Lafayette, are available in Biology, Chemistry, Computer Science, Mathematics, Physics and an additional area of Psychology.

Indiana University Ph.D. Programs pursued at IUPUI in departments or programs of the Indiana University School of Medicine in which School of Science faculty hold adjunct appointments are available.

Joint M.D. – Ph.D. Degrees—Several departments participate in the joint M.D. – Ph.D. program with the Indiana University School of Medicine. In this program students concurrently earn an Indiana University Doctor of Medicine degree in the School of Medicine and a Ph.D. degree arranged through the School of Science. Students interested in this option should consult the program in which they wish to earn the Ph.D.

General Requirements for Graduate Programs

1. Students must be seeking graduate degrees.
2. The student must meet the general requirements of the Indiana University Graduate School or the Purdue University Graduate School, depending on the degree. Specific requirements of the individual department in which the student enrolls must also be met. Special departmental requirements are listed under the major department.
3. At least 30 academic credits are required for the Masters Degree and at least 90 academic credits are required for the Ph.D. Some programs may require more credits. The maximum number of transfer credits allowed is 12 hours, but some programs may allow fewer. Acceptability of transfer credits from another college or university is determined by the student's major department and the Office of the Associate Dean for Academic Programs and Student Development. No work may be transferred from another institution unless the grade is a B or higher.
4. Students must meet graduate school resident study requirements. At least one-half of the total credit hours used to satisfy a Purdue Masters Degree must be earned while in residence at IUPUI. At least 30 credit hours of IU graduate work must be completed while enrolled on a campus of Indiana University to satisfy the Masters Degree. At least one-third of the total credit hours used to satisfy degree requirements must be earned (while registered for doctoral study) in continuous residence on the IUPUI campus. The major department should be consulted for other more specific rules.
5. All non-native speakers of English must submit results of the Test of English as A Foreign Language (TOEFL). A minimal score of 550 on the TOEFL is required. Departments may set higher standards. Applicants in the Indianapolis area may substitute the IUPUI English as a Second Language

(ESL) Placement Examination for the TOEFL. A brochure about this test is available from the:

Office of International Affairs
Union Building 207
620 Union Drive
Indianapolis, IN 46202-5167
telephone (317) 274-7294

6. Each student must file a plan of study that conforms to the departmental and disciplinary requirements. This is normally done in consultation with a faculty advisory committee. A tentative plan of study should be drawn up in advance of registration for the first semester of graduate work. This should be done by the student and the graduate advisor. Students and advisors should pay careful attention to the deadlines established by the graduate schools for filing plans of study.
7. Students must meet the grade and grade point average requirements. Only grades of A, B, or C are acceptable in fulfilling graduate school requirements in any plan of study. An advisory committee or department may require higher performance than C in certain courses. Grades of Pass (P) are not acceptable. Specific cumulative grade point average requirements, if any, are up to the individual departments.
8. Students must fulfill departmental requirements regarding oral and written examinations. These requirements vary by program and students should consult the major department. The graduate school has no general requirement for oral and written examinations for the nonthesis master's degree.

Graduate Nondegree Study

A student who has previously earned a bachelor's degree may enroll in graduate courses without making formal application as a degree-seeking student. Application as a graduate nondegree student is, however, required and may be accomplished through the IUPUI Graduate Office, Union Building 518, 620 Union Drive, IUPUI, Indianapolis, IN, 46202-5167; telephone (317) 274-1577. Students should consult the major department to determine how many credits earned in a nondegree status may be transferred into a graduate degree program.

Academic Regulations

See the front of the bulletin for general information about grades. The following policies are specific to the School of Science.

Pass/Fail Option During the four years of their undergraduate program, all undergraduates in good standing (with an overall GPA of 2.0 or higher) may enroll in up to eight elective courses to be taken with a grade of P or F. The Pass/Fail option is open for a maximum of two courses per year, including summer sessions. For this option, the year is defined as August 15 to August 15. The Pass/Fail option form is available in School of Science departmental offices and in the Office of the Associate Dean for Academic Programs and Student Development; Science Building, Room 222; telephone (317) 274-0625.

The course selected for Pass/Fail grading must be an elective. It may not be used to satisfy any of the school area requirements, nor may it be counted as a part of the student's concentration area. If the course is at the 300-level or higher, with a grade of P, the course may apply to the 32 hour School of Science residency requirement. A grade of P cannot be changed subsequently to a grade of A, B, C, or D.

Withdrawal Students may officially withdraw from classes without penalty during the first half of a semester or session if they secure the approval of their advisor; a grade of W (Withdrawal) is recorded on the final grade report. Students may withdraw from classes during the third quarter of a semester or session if they secure the approval of their advisor and the instructor of the course; a grade of W or F may be assigned by the instructor. The grade so assigned is recorded on the final grade report. Students may withdraw from classes during the last quarter of a semester or session if they secure the approval of their advisor, the instructor of the course, and the dean of their school; a grade of W or F may be assigned by the instructor. The grade so assigned is recorded on the final grade report. *Students will be allowed to withdraw from class during the last quarter of the semester only under extenuating circumstances. A written justification from a doctor, member of the clergy, advisor, etc., must be presented.* The necessary form for withdrawal from a course is available in School of Science departmental offices and in the Office of the Associate Dean for Academic Programs and Student Development; Science Building, Room 222; telephone (317) 274-0625.

Students who alter their schedules, whether by personal incentive or by departmental directive, must follow correct withdrawal procedures. Students who do not follow these procedures risk jeopardizing their record by incurring a failing grade in a course not properly dropped, or they risk not receiving credit for work done in a course that has not been properly added.

Grade Replacement Policy The Grade Replacement Policy is available only to undergraduate students. It may be exercised for a maximum of 15 credit hours, no more than two times for a given course, with each attempted replacement counting toward the 15 credit hour limit. Any grade may be replaced with the last grade earned for the course. The replaced grade will then be excluded from the cumulative grade point average. However, the course listing and the replaced grade will remain on the student's academic record with an "X" notation indicating that the grade is excluded from the cumulative grade point average.

The policy took effect beginning with the fall 1996 semester, and any courses being used to replace an earlier grade must have been taken in the fall of 1996 or later. Grades previously granted FX will be honored and will count toward the 15 credit hour limit. Once invoked, a student may not subsequently request

reversal of the grade replacement granted for a given course. A student interested in accessing the Grade Replacement Policy should contact the School of Science Office of the Associate Dean for Academic Programs and Student Development; Science Building, Room 222; telephone (317) 274-0625.

Degree Grade Point Average

The School of Science computes a school grade point average, which is the basis for recommending the awarding of a degree. The computation of this grade point average, including repeated courses, is done during the senior year at IUPUI. Only the most recent grade in repeated courses counts in computing the school grade point average for the purpose of graduation. The official grade point average, which is based upon all grades earned, appears on all transcripts.

Special Credit

Special credit by examination, by credentials, and/or by experience may be awarded in order to help qualified students earn their degrees more quickly. Each instructional department determines which of its courses are available for special credit and establishes procedures to determine student eligibility, to administer evaluations for special credit, and to grade them. The evaluations are as comprehensive as those given in the course. Credit earned by examination will be assigned an A (highest passing grade) or S (passing grade). Credit earned by credentials and/or experience will be assigned an S. An S (passing) grade is considered to be equivalent to performance at a minimum grade level of C.

Responsibility for initiating a request for special credit in a specific course normally rests with the student. To find out if special credit is warranted, the student should consider meeting first with the department chair, advisor, or course instructor.

For additional information, refer to the front part of this bulletin under "Special Credit."

Auditing Courses

University policy permits the auditing of courses, but audited courses may not be retaken later for academic credit. Written permission from the instructor to audit a class must be obtained before the student attempts to register. See the front of the bulletin for general information about auditing courses.

Petition for Grade Change

Faculty Petition A faculty member may request a change of grade for the student. This request can be honored only after approval of the department chairperson and the School of Science associate dean for academic programs and student development.

Student Petition In certain cases, a student may request a change of grade. Students should contact the School of Science Office of the Associate Dean for Academic Programs and Student Development (Science Building, Room 222) for information about procedures and time limits for applicable cases.

Science Scholars List and Dean's Honor List

The School of Science recognizes exceptional academic performance in baccalaureate and associate degree programs prior to graduation from the university by periodically publishing the Science Scholars List and the Dean's Honor List. The Science Scholars List names full-time students (taking 12 or more credit hours) or part-time students (taking at least 5 credit hours) who have completed at least 26 credit hours of course work at IUPUI and who have a semester and cumulative grade point average (GPA) of at least 3.75. The Dean's Honor List contains the names of the students who have achieved a GPA of 3.5 or higher during a semester in which they carry 12 or more credit hours. Part-time students (taking 5 or more credit hours) who have completed at least 26 credit hours of course work at IUPUI will be included on the Dean's Honor List if they have a semester and cumulative GPA of 3.5 or higher.

Courses assigned a deferred grade (R) will count toward the 12 credit hour minimum required of full-time students. Courses taken on a Pass/Fail basis will not count toward the 12 credit hour minimum. Students who received an Incomplete (I) will not be placed on the Science Scholars List or the Dean's Honor List. No Science Scholars List or Dean's Honor List is published for the summer sessions.

Candidates for Baccalaureate Degrees

Students are considered to be candidates in good standing for baccalaureate degrees awarded by the School of Science when they have been admitted as regular students by the Office of Admissions, when their last semester's grade point average is not less than a 2.0, and when their cumulative grade point average is not below this same level.

Double Major

A double major is awarded to students who simultaneously complete the requirements for two Purdue Bachelor of Science degree programs or two Purdue Bachelor of Arts degree programs in the School of Science. Students who plan to double major must have their programs approved by both major departments and the associate dean for academic programs and student development. A form to petition for a double major can be obtained from the Office of the Associate Dean for Academic Programs and Student Development; School of Science; Science Building, Room 222; telephone (317) 274-0625. A student declaring a double major must satisfy the departmental requirements for the second major as stated in the School of Science bulletin in effect when the second major is approved.

Double Degree

A student may be awarded two degrees by simultaneously completing baccalaureate degree programs from two different schools at IUPUI or by simultaneously completing two baccalaureate major programs from the School of Science, one leading to a Purdue Bachelor of Arts degree and the other leading to a Purdue Bachelor of Science degree, or one leading to a Purdue degree and the other leading to an Indiana University degree. A student who plans to

pursue a double degree must receive approval from the two major departments and the academic deans of the schools awarding the degrees. A form to petition for a double degree can be obtained from the Office of the Associate Dean for Academic Programs and Student Development; School of Science; Science Building, Room 222; telephone (317) 274-0625. A student who declares a double degree and who is accepted by a department in the School of Science for the additional degree program must satisfy the requirements for that program as stated in the School of Science bulletin in effect when the additional degree program is approved.

Change of Major within the School of Science

A student who desires to change a major within the School of Science should petition the Office of the Associate Dean for Academic Programs and Student Development; School of Science; Science Building, Room 222; telephone (317) 274-0625. If the petition is approved, the student may be placed under the bulletin in effect during the time of admission into the new major.

Second Baccalaureate Degree

Normally the holder of a baccalaureate degree who wishes to pursue a further educational goal is encouraged to consider a graduate degree program. However, a student interested in pursuing a second degree should apply through the IUPUI Office of Admissions. In order to be admitted to the degree program, the applicant must meet admission requirements of the School of Science and of the department. If admitted, the candidate will be placed under the bulletin in effect during the time of admission into the second degree program.

Degrees Awarded with Distinction

IUPUI recognizes outstanding performance in course work by awarding bachelor's degrees with distinction. Purdue degrees are awarded with Distinction and Highest Distinction. Indiana University degrees are awarded with Distinction, High Distinction, and Highest Distinction. (Cords designating graduation with distinction are the only cords to be worn at commencement.)

To be eligible, candidates must complete all the requirements of their degree programs and meet the following conditions: (1) A minimum of 65 credit hours of course work from Purdue University or Indiana University applicable to the graduation index (degree grade point average) must be on record; (2) the minimum graduation index for Distinction (Purdue and IU degrees) shall be no less than the 90th percentile of the graduation indexes of all the graduates in the school for the spring semester, provided that the index is at least 3.30; (3) of those who qualify for distinction under these rules for the spring semester, the six-tenths of the baccalaureate graduates having the highest graduation indexes shall be designated as graduating with High Distinction (IU degrees only); (4) of those who qualify for distinction under these rules for the spring semester, the three-tenths of the baccalaureate graduates having the highest graduation indexes shall be designated as

graduating with Highest Distinction (Purdue and IU degrees); (5) the minimum graduation indexes determined for the spring semester for graduation with Distinction, High Distinction, and Highest Distinction shall be applied for graduation with those respective levels of distinction for the subsequent summer sessions and fall semester.

Academic Standing

Academic Probation

A student whose cumulative grade point average (GPA) falls below a 2.0 will be placed on probation. The student may continue studies provided the student achieves a GPA of at least 2.0 for each semester while on probation. Once the cumulative GPA is at least 2.0, the student will be removed from probationary status. A student will be advised of probationary status by letter from the associate dean for academic programs and student development.

Dismissal

A student on probation who has completed a minimum of 12 IUPUI grade point average (GPA) hours is subject to dismissal if the student fails to attain a GPA of at least 2.0 in any two consecutive IUPUI semesters (fall and spring), including the semester that the student was first placed on probation.

A student can also be dismissed from the university when, in the opinion of the associate dean for academic programs and student development of the School of Science, the student has ceased making progress in the degree program.

Readmission

A student dismissed for the first time must remain out of school at least one regular (fall or spring) semester. During the semester out of school, the student may petition the Office of the Associate Dean for Academic Programs and Student Development for readmission. A student dismissed for the second time must remain out of school at least two regular semesters (fall and spring), but may petition for readmission during the second semester out of school. Readmission after a second dismissal is extremely rare.

In order that there is sufficient time for considering a petition for readmission, a student eligible to submit a petition should do so before June 15 for the fall semester, October 15 for the spring semester, or March 15 for either summer session.

A student readmitted will be so informed by letter from the associate dean for academic programs and student development. The letter will indicate any conditions and restrictions affecting readmission and continuance in the degree program.

Special Programs

Teaching Certification

A student earning a baccalaureate degree in the School of Science may also receive a standard senior high/junior high/middle school teacher's certificate. The standard certificate qualifies the holder to teach in the subject matter areas for which it is endorsed in any public middle school, junior high school, or secondary school in Indiana. The standard certificate

is granted upon completion of a baccalaureate degree based on a program of teacher education and the recommendation of the graduating institution. It is valid for five years from the completion of program requirements and may be renewed.

Students who plan to obtain a teaching certificate must be admitted formally to the Teacher Education Program. Admission to teacher education is dependent on successful completion of an admission test, course prerequisites, and a formal application to the School of Education Undergraduate Program. Application forms and test information are available from the student's departmental advisor or from the School of Education, 902 W. New York Street, Indianapolis, IN 46202-5155.

A candidate for a senior high/junior high/middle school teacher's certificate *and* a bachelor's degree must satisfy the appropriate degree requirements of the IUPUI School of Science, the departmental requirements, and the School of Education teacher education/certification requirements. The student must, therefore, plan a complete program with a School of Science advisor and a School of Education advisor to ensure that all requirements are satisfied.

A candidate for a senior high/junior high/middle school teacher's certificate must earn a baccalaureate degree that includes a minimum of 124 credit hours. The student must have a grade point average of 2.5 or above in all university work taken. The student must earn a grade point average of 2.5 in all education courses (with at least a C in each methods course), and a grade point average of 2.5 in all the course work of the teaching major and of the teaching minor, if one exists.

For a standard certificate, the state of Indiana sets the following general education, professional education, and subject matter area requirements:

General Education (40 cr.)

Consult with your academic advisor for any changes in this area.

Humanities: a minimum of 18 credit hours chosen from, for example, English, fine arts, folklore, foreign language, music, philosophy, speech, and theatre.

Social and Behavioral Sciences: a minimum of 9 credit hours chosen from, for example, anthropology, economics, geography, history, political science, psychology, and sociology.

Life and Physical Sciences: a minimum of 9 credit hours—subject matter area meets this requirement; some departments specify lab sciences.

Electives as needed for a total of 40 credit hours.

Professional Education (45 cr.)

See an academic advisor from the School of Education for course sequence and scheduling.

EDUC P255 Educational Psychology for Middle and Secondary School Teachers (3 cr.) *and* Field Experience (1 cr.)

EDUC W200 Microcomputing for Education: An Introduction (3 cr.)¹

EDUC K205 Introduction to Exceptional Children (3 cr.) *and* Field Experience (1 cr.)

EDUC H340 Education and American Culture (3 cr.)
EDUC M300 Teaching in a Pluralistic Society (3 cr.)
EDUC M314 General Methods for Senior High/Junior High/Middle School Teachers (3 cr.) *and* Field Experience (1 cr.)

EDUC M469 Content Area Literacy (3 cr.) *and* Field Experience (1 cr.)

EDUC M440-M480 Methods of teaching (major academic area) (4 cr.)

Student Teaching: Junior High/Middle School/Secondary (16 cr.)

Note: Admission to the Teacher Education Program is a prerequisite for all professional education courses except for EDUC W200.

All professional education courses must be completed before a student may enroll in the EDUC Student Teaching courses. During the semester of student teaching, the student normally does not enroll in other courses.

All science teaching programs must include courses in nutrition and drug and alcohol education.

Consult a School of Education advisor about any changes in or additions to these requirements.

Predental and Premedical Programs

Admission to dental and medical schools is highly competitive. The preprofessional student is therefore urged to elect a degree program, rather than to strive for the minimal requirements of these schools. Preprofessional counseling is available from advisors in the departments of biology and chemistry, which also offer preprofessional degree programs. Advisors help students prepare for the professional school admissions process. They can also suggest alternative, rewarding career opportunities should the application to the professional school be unsuccessful. Graduate students holding nonscience degrees who are electing courses in the School of Science to prepare for professional school are also invited to use this advising service.

Preoptometry, Prepharmacy, and Preveterinary Programs

See the Department of Biology listings for information on these programs.

Pre-Physical Therapy Program

Students may take any undergraduate program and include a set of core courses needed as prerequisites for a graduate degree in physical therapy at the Indiana University School of Allied Health Sciences. Undergraduate degree programs in biology, chemistry, or psychology in the School of Science may be of interest to the pre-physical therapy student. Advising for the undergraduate degree and planning the requirements for application/admission to a graduate degree program in physical therapy is available in those departments. An academic advisor in the IUPUI School of Allied Health Sciences is also available for consultation.

The following is a list of courses fulfilling prerequisites required for graduate studies in physical therapy.

BIOL N217	Human Physiology	(5 cr.)
BIOL N261	Human Anatomy	(5 cr.)
CHEM C105/ C125	Principles of Chemistry I/Lab	(5 cr.)

CHEM C106/ C126	Principles of Chemistry II/Lab	(5 cr.)
PSY B310	Life Span Development	(3 cr.)
PHYS P201/ P202	General Physics I/II	(5 cr./5 cr.)
or 218/219	General Physics	(4 cr./4 cr.)
PSY B104	Psychology as a Social Science	(3 cr.)
PSY B105	Psychology as a Biological Science	(3 cr.)
PSY B305 or STAT 301	Statistics Elementary Statistical Methods I	(3 cr.) (3 cr.)

Two courses, 3 credit hours each, in the Humanities/Social Sciences areas.

The pre-physical therapy student should consult with an academic advisor for updates of pre-physical therapy requirements.

Honors Program

The IUPUI Honors Program is open to students in both the Purdue and Indiana University degree programs. Students with an overall grade point average (GPA) of 3.0 after their first full semester of work, entering freshmen with a minimum combined SAT score of 1180, or ACT of 26, or those who have graduated in the top 15 percent of their high school class, are automatically invited to participate in the Honors Program. Students with a GPA of less than 3.0 may be permitted to take honors courses. They should, however, discuss the matter with their academic advisor and the honors advisor before doing so.

To obtain an honors degree in computer science, mathematics, or physics, a student must have a cumulative grade point average of 3.3 and a minimum of 24 credit hours, with a 3.5 average in honors work. Six hours of honors credit must be outside the student's major field. A senior thesis track is also available. To obtain an honors degree in biology, chemistry, geology, or psychology, a student should follow the requirements described below.

Biology

Students with a GPA of 3.3 and 12 hours of credit, or entering high school students with a minimum SAT score of 1180, or who are graduating in the top 10 percent of their high school class, qualify for the Biology Honors Program. Students wishing to participate in the Biology Honors Program must first receive approval from the Department of Biology. Students may choose from two tracks. In Track 1 (honors with thesis), students must complete 21 credit hours of honors work including 6 credit hours outside of biology and 15 credit hours in biology. These biology hours are to include 4 credit hours of BIOL K101/K103 honors sections of lab/recitation, 6 credit hours in honors sections of BIOL K493, and 5 credit hours in H-Option¹ biology courses and/or

¹H-Option contracts are the most popular and frequent way that students earn honors credit. An H-Option requires that a student work out with the instructor of a course a specific contract for a paper, field project, oral presentation, etc., early in the semester. The contract is not merely an extension of the regular class work, but an opportunity not provided by regular assignments. All the necessary signatures of approval, including that of the director of the Honors Program, must be submitted to the Honors Program office before consent to begin the project will be given.

¹See a School of Science advisor for possible substitute courses.

500–600-level biology courses. In Track 2 (honors without thesis), students must complete 24 credit hours of honors work. These hours are to include 6 credit hours outside of biology, 4 credit hours of BIOL K101/K103 honors sections of lab/recitation, and 14 credit hours in H-Option biology courses and/or 500–600-level biology courses.

Chemistry

Students with a minimum GPA of 3.0 may be admitted into the Chemistry Honors Program with approval of the Honors Program and the Department of Chemistry. After entering the program, maintenance of a GPA of 3.3 in all courses and of 3.5 in honors courses is necessary. The Curriculum Committee of the chemistry department will approve any honors Bachelor of Science degrees awarded in chemistry. In addition to meeting general honors requirements, students who intend to graduate with honors in chemistry must complete 24 honors credit hours, consisting of 1 credit hour in the C301 or C302 Chemistry Seminar, 6 credit hours in C409 Chemical Research, 5 credit hours of H-Options¹ in undergraduate courses and/or graduate chemistry courses, and 12 credit hours of honors credit in courses outside of chemistry.

Geology

For the Bachelor of Science degree, honors students must complete 24 credit hours of honors work, 18 credit hours in geology and 6 credit hours in other approved honors courses. For the Bachelor of Arts degree, the requirements are 15 credit hours in geology and 9 credit hours outside geology in other approved honors courses. The following upper-division geology courses are approved for H-Option contracts¹: G205 Reporting Skills in Geoscience, G209 History of the Earth, G221 Introductory Mineralogy, G222 Introductory Petrology, G304 Principles of Paleontology, G323 Structural Geology, G334 Principles of Sedimentation and Stratigraphy, G403 Optical Mineralogy and Petrography, G404 Geobiology, plus G410 Undergraduate Research in Geology (1 cr.), G406 Introduction to Geochemistry, G413 Introduction to Geophysics, G415 Principles of Geomorphology, G416 Economic Geology, G430 Principles of Hydrology, and G499 Honors Research in Geology. The student must complete 3 credit hours in G499 Honors Research in Geology to satisfy the requirements for the honors component. The overall grade point average must be 3.3 with a 3.5 in all honors work.

Psychology

To graduate with honors, students may choose one of two tracks. *Track 1*: The student must earn at least 24 hours of honors credit, 6 credit hours of which must be in psychology and 6 credit hours of which must be outside of psychology (the remaining 12 credit hours can be either). At least 3 hours of this credit must be for PSY B499 Honors Research, which should culminate in an honors thesis. *Track 2*: The student must earn at least 21 hours of honors credit, 6 credit hours of which must be in psychology and 6 credit hours of which must be outside of psychology (the remaining credit hours

can be from either). At least 6 hours of the credit must be for a research project culminating in a psychology thesis. In this track the university honors council must approve the project proposal. In both tracks only grades of A or B will count for honors credit. To graduate with honors, the student must have an overall GPA of 3.3 with at least a 3.5 in honors and psychology courses.

In general, students may take no more than 6 credit hours of honors work a semester. Students may earn honors credit by taking special Honors Program courses (H300, H399, H400), by taking specially designated sections of multisection courses, by doing special overseas or internship work, or by contracting for honors credit using an H-Option contract¹ in conjunction with regular classes.

Students completing honors work or an honors degree will, upon request, receive an honors course record listing all honors work, to be included with official university grade transcripts.

For additional information, contact the Honors Program, University College, UC 3140, 815 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5164; telephone (317) 274-2660.

School of Science Undergraduate Research Program

The School of Science has established a school-wide undergraduate research program to encourage and recognize undergraduates who participate in research projects with faculty in the school.

A student may qualify for transcript certification of completion of the Undergraduate Research Program. The School of Science Research Committee, which certifies the student's right to the certification, requires a Research Portfolio. This portfolio is to be presented to the Committee for approval by April 1 for May graduation, by July 1 for August graduation and by November 1 for December graduation in the semester in which the student expects to graduate. Upon approval of the portfolio, the Committee forwards its recommendation of certification to the registrar. Certification is awarded concurrently with the degree.

Students may participate in all or part of this program. To receive transcript certification, the student must fulfill all of the following requirements:

1. Register for and complete five credit hours of formal research in his/her department. Each department in the school can provide detailed information about research credits. The student should consult his/her department advisor.
2. Prepare a written product from the research. This may include a senior thesis or journal publication.
3. Attend one outside scientific meeting at the state or national level.
4. Participate in a formal symposium. The student must present a paper in a formal competition that the school will sponsor during the spring semester each year. Students in this program will

be encouraged to present work at a professional scientific meeting.

5. Prepare a Research Portfolio. Further information, including how to prepare the Research Portfolio, may be obtained from the program director: Associate Dean Kathryn Wilson; School of Science; Science Building; Room 222; telephone (317) 278-1028.

Extracurricular Activities

A wide variety of activities are available to School of Science students, both activities sponsored by the School of Science and those open to all students. Students seeking involvement in campus-wide activities, such as the IUPUI Undergraduate Student Assembly, should contact the Office of Student Life and Diversity in the basement of University College, UC 002, or call (317) 274-3931.

Clubs and Organizations in the School of Science

The following activities are of particular interest to students in the School of Science:

Science Undergraduate Student Council and Science Graduate Student Council

These councils, composed of student representatives from each department in the School of Science, advise the dean and the School on matters of concern to students. Each council also decides how to allocate the student activity fee to support School projects, departmental clubs and other initiatives.

Departmental Clubs

Most departments within the School of Science sponsor clubs and other activities for majors and interested students. Contact each department for additional information.

Scholarships and Awards

The faculty nominate and select students for various annual scholarships and awards offered by School of Science departments or by individuals and organizations interested in advancing science education.

School of Science

The School of Science Dean's Scholarships recognize School of Science majors attending IUPUI who excel academically and show promise of success in their future careers.

John D. Barnwell Memorial Scholarship for a student in the School of Science who has effectively integrated the sciences and the arts into his or her undergraduate career.

Carl H. Johnson Achievement Scholarship for a School of Science major who is registered with the IUPUI Office of Adaptive Educational Services as a student with a learning disability.

Frank G. Lambertus Memorial Scholarship for a student who has shown outstanding academic progress since the previous year.

¹H-Option contracts are the most popular and frequent way that students earn honors credit. An H-Option requires that a student work out with the instructor of a course a specific contract for a paper, field project, oral presentation, etc., early in the semester. The contract is not merely an extension of the regular class work, but an opportunity not provided by regular assignments. All the necessary signatures of approval, including that of the director of the Honors Program, must be submitted to the Honors Program office before consent to begin the project will be given.

Indianapolis Project SEED Scholarship for a School of Science major who has successfully participated in the American Chemical Society Indiana Chapter Project SEED program.

School of Science Alumni Association Outstanding Science Student Scholarship for a School of Science major who plans to graduate within one year of receiving the scholarship and has demonstrated how his/her personal life experiences have impacted his/her educational career.

Robert W. Tuveson Memorial Scholarship for a student majoring in the biological sciences. Consideration is given to the student's financial need, academic performance, and future promise.

Department of Biology

Award for Outstanding Academic Achievement for the student with the best overall academic record in the Department of Biology.

Biology Research Awards for undergraduate and graduate students making the most outstanding contributions in scientific research.

Ronald E. Kirk Memorial Award for the outstanding freshman biology student.

Richard O. McCracken Memorial Scholarship for the outstanding sophomore or junior biology major.

Student Services Award is given to the faculty member, student, or staff member whose contributions and activities have had significant positive impact on the experiences of biology students beyond the classroom.

Department of Chemistry

American Institute of Chemists Student Research and Recognition Award for an outstanding senior student majoring in chemistry.

Patricia A. Boaz Award for the graduating senior with highest academic achievement in a Bachelor of Arts degree program.

Chemical Rubber Company Outstanding Freshman Award for the outstanding student in general chemistry.

Loren T. Jones Award for the graduating senior with the highest academic achievement in a Bachelor of Science degree program.

Loren T. Jones Memorial Scholarship for summer support of an outstanding chemistry major.

Scott Alan Kent Memorial Scholarship for a promising sophomore or junior chemistry major.

Outstanding Undergraduate Analytical Chemistry Award sponsored by the American Chemical Society.

Frank J. Welcher Award for the graduating senior with greatest professional promise.

Department of Computer and Information Science

Gersting Undergraduate Student Award for an outstanding major in computer and information science.

Gersting Graduate Student Award for an outstanding graduate student in computer and information science.

Department of Geology

Academic Achievement Award for the graduating senior with highest academic achievement.

Geology Alumni Scholarship for a senior geology major.

Indiana Geology and Gem Society Scholarship for a sophomore or junior geology major.

Leadership and Service Award for the graduating senior with outstanding leadership and service to the department.

Arthur Mirsky Geology Fellowship for an outstanding master's student.

Department of Mathematical Sciences

Outstanding Undergraduate Award for an outstanding junior or senior (or both) based on achievements in advanced mathematics.

Anna K. Suter Award for the outstanding senior mathematics major.

Anna K. Suter Scholarship for undergraduate mathematics majors. It is renewable based on academic performance.

Best Academic Performance by a Graduate Student Awards for exceptional scholastic performance by a beginning graduate student and an advanced graduate student.

Igor Kuznetsov Graduate Student Teaching Award for outstanding performance in classroom teaching by a graduate student.

Department of Physics

D. J. Angus-Sciencetech Award for the most improved sophomore or junior student in physics.

The Forrest Meiere Prize for Outstanding Physics Major for the undergraduate major with the best academic record.

The University Physics Award for the best student in the physics 152/251 course sequence.

Outstanding Graduate Student Award, based on achievements in research and academics.

Department of Psychology

Robert I. Long Award for the most outstanding graduating psychology major.

Robert G. Neel Award for the graduating psychology major with highest academic achievement.

Student Research Award for the psychology major who has demonstrated the most skill as a research scientist.

Paul McKinley Award for the most outstanding graduate student in the Ph.D. psychobiology of addictions program.

Graduate Psychology Awards for the most outstanding graduate student in the programs of industrial/organizational psychology and clinical rehabilitation psychology.

Arnold M. Quittner Dissertation Award for a Ph.D. student in the clinical rehabilitation psychology program who has successfully defended his/her Ph.D. proposal and has a clear plan for publication of his/her dissertation.

Other Recognition

In addition, many science honor students compete successfully for scholarships awarded by IUPUI. Freshmen with a high level of achievement are eligible for election to the IUPUI chapters of Alpha Lambda Delta and Phi Eta Sigma honoraries. Psychology majors may be elected to the Psi Chi Honorary, which recognizes outstanding students in that discipline.

Distinguished Faculty and Staff Awards

The School of Science proudly salutes faculty and staff members who have distinguished themselves in the areas of teaching, research, or service. The following full-time faculty and staff members have been chosen by their colleagues and students to receive awards in recognition of their outstanding contributions to the academic mission of the School of Science and the university.

W. David Laverell	1975
L. Kent Morrison	1976
Gordon H. Fricke	1977
Erwin Boschmann	1978
Frederick W. Kleinhaus	1978
Terry L. Hall	1979
Robert D. Hall	1980
John F. Kremer	1980
Patricia A. Boaz	1981
Martin J. O'Donnell	1981
Forrest T. Meiere	1982
Peter W. Rabideau	1982
Frederick C. Thatcher	1982
Erwin Boschmann	1983
Robert D. Hall	1983
David J. Malik	1983
Martin J. O'Donnell	1983
Stanley Aeschleman	1984
Elaine V. Alton	1984
Patricia A. Boaz	1984
Marvin D. Kemple	1984
John F. Kremer	1984
B. D. Nageswara Rao	1984
Richard Bodonyi	1985
Frederick W. Kleinhaus	1985
Arthur Mirsky	1985
Richard G. Pflanzner	1985
D. W. Rajcecki	1985
J. Roger Ware	1985
Shirley A. Bayer	1986
Joan B. Lauer	1986
J. Roger Ware	1986
C. D. Aliprantis	1987
Owen Burkinshaw	1987
Judith L. Gersting	1987
John F. Kremer (two awards)	1987
Richard R. Patterson	1987
J. Roger Ware	1987
Theodore W. Cutshall	1988
Pascal de Caprariis	1988
Robert D. Hall	1988
Charles Schauf	1988
C. D. Aliprantis	1989
Rosalie Bandy*	1989

plus prerequisite basic sequence or background to enter sequence above. The second laboratory in organic chemistry (CHEM C344) is required for admission to some medical schools and is strongly recommended for students in most other programs. Consult a departmental advisor.

Area IIID Mathematical Sciences MATH 151. (However, the starting point for mathematics courses should be worked out with a departmental advisor based on the math placement test and/or background of the student.) The computer science requirement may be satisfied with CSCI N201, CSCI N207, or CSCI N211.

Area IV Biology Requirements

Required Core Sequence:

- K101-K103 Concepts of Biology I and II
- K322 Genetics
- K341 Principles of Ecology

Upper-Level Courses

- A. At least one lecture course from each of areas I-III listed below.
- B. Three laboratory courses beyond K101-K103 selected from areas I-IV below. To receive credit for a laboratory for which there is an accompanying pre- or corequisite lecture, the lecture must be completed with a minimum grade of C-. A maximum of 2 credit hours of K493 Independent Research may be applied to the biology credit hour requirement. K493 will count as one laboratory course.
- C. Capstone Experience. This requirement is met by taking either K493 Independent Research (1 cr.) or K490 Capstone (1-3 cr.) in the senior year. K490 addresses the integration of knowledge in the principles of undergraduate education as well as values and ethics as they relate to the student's major. It is generally taken in the senior year. The Capstone is an independent, creative effort by the student that is integrative and builds on the student's previous work in the major; it may include research projects, independent study and projects, a practicum, a seminar, and/or a field experience.
- D. Electives consisting of sufficient lecture and laboratory course work to total 30 credit hours (including core sequence credit hours). These credits may be selected from any of the areas I-IV below.

Areas/Electives:

I. Molecular Area

Undergraduate Level

- K338 Introductory Immunology
- K339 Immunology Laboratory
- K483 Biological Chemistry
- K484 Cellular Biochemistry

Undergraduate and Graduate Level

- 507 Principles of Molecular Biology
- 516 Molecular Biology of Cancer
- 530 Introductory Virology
- 550 Plant Molecular Biology
- 559 Endocrinology
- 561 Immunology
- 564 Molecular Genetics of Development
- 570 Biological Membranes
- 651 Cellular Immunology

II. Cellular Area

Undergraduate Level

- K324 Cell Biology
 - K325 Cell Biology Laboratory
 - K356 Microbiology
 - K357 Microbiology Laboratory
- ##### *Undergraduate and Graduate Level*
- 532 Topics in Bacteriology
 - 566 Developmental Biology
 - 571 Developmental Neurobiology

III. Organismal Area

Undergraduate Level

- K331 Embryology
- K332 Plant Growth and Development
- K333 Embryology Laboratory
- K345 Behavioral Ecology
- K350 Comparative Animal Physiology

Undergraduate and Graduate Level

- 556 Physiology I
- 557 Physiology II

IV. Biotechnology Electives

Undergraduate Level

- K309 Computer Applications in Biology and Medicine
- K493 Independent Research

Undergraduate and Graduate Level

- 540 Topics in Biotechnology
- 548 Techniques in Biotechnology
- 568 Wound Repair, Regeneration, and Artificial Tissues

Additional laboratory courses for the B.A.

- K323 Genetics Laboratory
- K342 Ecology Laboratory

The Department of Biology will accept 20 credit hours toward graduation outside the Schools of Science and Liberal Arts. A maximum of 15 credit hours of biology earned **previously** at other institutions is applicable toward the major for the B.A. degree. Once admitted, students are expected to fulfill their course requirements within the major at IUPUI.

Bachelor of Science

Degree Requirements

Freshmen are required to take SCI 120 Windows on Science (1 cr.)

Area I See the School of Science requirements under "Undergraduate Programs" in this bulletin. The second semester of English composition may be satisfied with ENG W132 (or ENG W150), ENG W231, or TCM 320.

Area II No foreign language is required. However, knowledge of a foreign language is strongly recommended for any student planning to attend graduate school.

Area IIIA Humanities, Social Sciences, and Comparative World Cultures (12 cr.)

HIST H114 History of Western Civilization II (3 cr.)
One course (3 cr.) from a list of Humanities courses, List H

One course (3 cr.) from a list of Social Science courses, List S

One course (3 cr.) from a list of Comparative World Cultures courses, List C

Area IIIB Junior/Senior Integrator (3 cr.)

This course is from a list of Integrator courses. Consult academic advisor.

Area IIIC Physical and Biological Sciences

Physics Two semesters of basic physics (PHYS P201-P202 or PHYS 152-251).

Chemistry Two semesters of Principles of Chemistry (C105/C125 3/2 cr.; C106/C126 3/2 cr.), two semesters of organic chemistry with laboratory (CHEM C341, C342, C343, C344), plus prerequisite basic sequence or background to enter sequence above. (A course in analytical chemistry or biochemistry is also strongly recommended; determination to be made in consultation with departmental advisor.)

Area IIID Mathematical Sciences Coursework through two semesters of calculus (MATH 221-222 or MATH 163-164). Starting point to be worked out with departmental advisor based on the math placement test and/or background of the student. The computer science requirement may be satisfied with CSCI N201, CSCI N207, or CSCI N211.

Area IV Biology Requirements

Required Core Sequence:

- K101-K103 Concepts of Biology I and II
- K322 Genetics
- K341 Principles of Ecology
- K493 Independent Research; 2 cr. min., 3 cr. max.
- K494 Senior Research Thesis

Upper-Level Courses

- A. At least one lecture course from each of areas I-III listed below.
- B. Four laboratory/lecture courses beyond K101-K103 selected from areas I-IV. To receive credit for a laboratory for which there is an accompanying pre- or corequisite lecture, the lecture must be completed with a minimum grade of C-.
- C. K494 Senior Research Thesis. This will consist of the completion of K493 activities (2 to 3 credit hours) and the preparation of a written report on the results of the research project. The title and nature of the K493-K494 sequence is to be determined in consultation with the department research sponsor.
Capstone Experience: This requirement is met upon completion of K493.
- D. Electives consisting of sufficient lecture and laboratory course work to total 40 credit hours (including core sequence credit hours). These credits may be selected from any of the areas I-IV below.

Areas/Electives:

I. Molecular Area

Undergraduate Level

- K338 Introductory Immunology
- K339 Immunology Laboratory
- K483 Biological Chemistry
- K484 Cellular Biochemistry

Undergraduate and Graduate Level

- 507 Principles of Molecular Biology

Additional laboratory courses for the B.S.:
K323 Genetics Laboratory
K342 Ecology Laboratory

The Department of Biology will accept 20 credit hours toward graduation outside the Schools of Science and Liberal Arts. A maximum of 20 credit hours of biology earned **previously** at other institutions is applicable toward the major for the B.S. degree. Once admitted, students are expected to complete their course requirements within the major at IUPUI.

Minor in Biology

The Department of Biology offers an undergraduate minor in biology with the following requirements:

BIOL K101 Concepts of Biology I (5 cr.)
BIOL K103 Concepts of Biology II (5 cr.)
BIOL K322 Genetics (3 cr.)
BIOL K341 Principles of Ecology (3 cr.)
Additional K-prefixed biology course of at least 3 credits

At least half of the minimum 19 credit hours required to minor in biology must be completed at IUPUI. The minor requires a minimum grade point average of 2.0 and all grades must be C– or better. Correspondence courses may not be used to fulfill requirements for the minor.

Honors in Biology

The Department of Biology offers two separate tracks that lead to a degree with honors. Admission to either program requires a combined SAT of 1180 (1100 for those who took the SAT before April 1, 1995), or placement in the top 10 percent of the high school class for incoming freshmen, or a minimum GPA of 3.3 based on at least 12 hours of university work for continuing students. Students must maintain an overall GPA of 3.3 and an honors GPA of 3.5 to remain in good standing in the program.

Track 1 in biology is an honors-with-thesis program consisting of a total of 21 hours of honors registrations. Six credit hours are taken outside of the major; 4 hours are taken as the special experimental laboratory and recitation sections of freshman biology (BIOL K101 and K103); 5 hours are taken as H-Option registrations or 500-level courses; and 6 hours are taken as K493 Independent Research and K494 Senior Research Thesis. Track 2 is an honors program without thesis and consists of a total of 24 hours of honors registrations. This option requires 6 credit hours of honors outside of the major, the K101 and K103 sections, and 14 hours of H-Option or 500-level course registrations.

Biology Plans of Study

No single semester-by-semester plan of study will guide all students through the degree options because of the flexibility encouraged within the programs.

However, one possible sequence of courses for each option is given below; variations from these examples of plans of study should be made in consultation with a departmental advisor.

Sample Program for the Bachelor of Arts Degree (124 cr. required)

Freshman Year

First Semester	
SCI 120 Windows on Science	1
BIOL K101 Concepts of Biology I	5
CHEM C105 Principles of Chemistry I	3
CHEM C125 Experimental Chemistry I	2
MATH 153 Algebra and Trigonometry I	3
ENG W131 Elementary Composition I	3
	<hr/> 17

Second Semester

BIOL K103 Concepts of Biology II	5
CHEM C106 Principles of Chemistry II	3
CHEM C126 Experimental Chemistry II	2
MATH 154 Algebra and Trigonometry II	3
ENG W132 Elementary Composition II	3
	<hr/> 16

Sophomore Year

Third Semester	
BIOL K322 Genetics	3
BIOL K323 Genetics Laboratory	2
CHEM C341 Organic Chemistry I	3
CHEM C343 Organic Chemistry Laboratory I	2
Humanities—List H	3
Elective or Major's Course	3
	<hr/> 16

Fourth Semester

Elective or Major's Course	3
CHEM C342 Organic Chemistry II	3
CHEM C344 Organic Chemistry Laboratory II	2
COMM R110 Fundamentals of Speech Communication	3
CSCI Course	3
	<hr/> 14

Junior Year

Fifth Semester

BIOL K341 Principles of Ecology	3
Comparative World Cultures—List C	3
Foreign Language I	3
PHYS P201 General Physics I	5
Social Sciences—List S	3
	<hr/> 17

Sixth Semester

HIST H114 History of Western Civilization II	3
PHYS P202 General Physics II	5
Biology Course and Lab (Area II)	5
Foreign Language II	3
	<hr/> 16

Senior Year

Seventh Semester

Junior/Senior Integrator	3
Foreign Language III	4
Biology Course and Lab (Area I)	5
Elective	3
	<hr/> 15

Eighth Semester

BIOL K493 Independent Research or	1
BIOL K490 Capstone in Biology	1
Biology Course and Lab (Area III)	4
Electives	9
CAND 991 Candidate for Graduation	0
	<hr/> 14

Sample Program for the Bachelor of Science Degree (124 cr. required)

The major has 40 credit hours.

The School of Science Purdue degrees are 124 credit hours. To graduate in four years a student generally must take four semesters of 15 credits and four semesters of 16 credits. When figuring the number of credit hours that you will take each semester, be sure to consider the effect on your total number of credit hours balanced over four years.

Freshman Year

First Semester

SCI 120 Windows on Science	1
BIOL K101 Concepts of Biology I	5
CHEM C105 Principles of Chemistry I	3
CHEM C125 Experimental Chemistry I	2
ENG W131 Elementary Composition I	3
Elective or pre-calculus math	3
	<hr/> 17

Second Semester

BIOL K103 Concepts of Biology II	5
CHEM C106 Principles of Chemistry II	3
CHEM C126 Experimental Chemistry II	2

Master of Science**Degree Options****M.S. Nonthesis in Interdisciplinary**

Biology This program requires a minimum of 30 credit hours of registration, at least 21 of which must be in biology. For students who wish to combine biology training with work in a secondary area as a mechanism to meet career objectives, up to 9 credit hours can be taken in the secondary area. Advanced-level undergraduate course work hours are limited to 6. Examples of secondary areas include, but are not limited to, chemistry, mathematics, public affairs, business, statistics, law, computer science, administration, and, for those interested in teaching, education. For those students with no secondary area of interest, all 30 credit hours may be taken in

biology. The program requires registrations in BIOL 595 Special Assignments and BIOL 696 Seminar. The former consists of an independent, creative project done in association with a faculty member. Typical examples include a limited laboratory research experience or a library research assignment. The results of the project are reported both in writing and orally in BIOL 696.

M.S. Preprofessional Nonthesis This program also consists of a minimum of 30 credit hours, all of which must be taken over two semesters. This challenging program is highly intensified and is open only to those students who meet a high admission standard based on undergraduate GPA and GRE scores. The program is available to those students planning careers in medicine, dentistry, optometry, or other health-related fields and differs from the interdisciplinary nonthesis M.S. by having no requirement for the 595 and 696 registrations.

M.S. with Thesis This 30 credit hour program requires a minimum of 9 credit hours of 500- and 600-level course work in biology, chosen in consultation with the student's graduate advisory committee, and intensive research leading to a thesis. Most full-time students should expect to spend two full years to complete this program. Areas in which research opportunities are available include: immune dysfunction, yeast molecular biology, renal physiology, wound repair and tissue regeneration, oncology, tumor immunology, plant hormones, antifungal antibiotics, developmental genetics, cell biology, membrane biochemistry and biophysics, molecular toxicology, plant tissue culture, plant physiological ecology, and plant and animal molecular biology. The overall emphasis of the department's research program focuses on questions at the cellular, biochemical, and molecular levels. Many of the projects provide a foundation in biotechnology and an excellent preparation for biomedical and industrial applications.

Co-op M.S. with Thesis This modification of the thesis M.S. is open to full-time M.S. students. Here, research is conducted at the university and at a local industrial laboratory. The project is the result of a collaborative arrangement between a faculty member and an industrial scientist. This program is open to a small group of students and is available only in cases where industrial support is committed.

Admission Requirements

1. Students must hold a baccalaureate degree from an accredited institution of higher learning and demonstrate good preparation in biological sciences, organic chemistry, physics, and mathematics.
2. Students must take the GRE aptitude tests.
3. Three letters of recommendation are required.
4. A minimum graduation grade point average of 3.0 or its equivalent is required for unconditional admission.

Transfer of Credit

Transfer credit to be used in the nonthesis option may be given for up to 9 credit hours of graduate work completed elsewhere with a grade of B or better. Such credit may be used only in the secondary area and will

be accepted only after one semester of satisfactory work is completed in residence at IUPUI. Transfer credit is not accepted in the thesis option. Up to 12 hours of biology graduate credit taken at IUPUI under graduate nondegree status may be transferred to the thesis or nonthesis options.

Grades

Only grades of A, B, or C are acceptable, although performance higher than C may be required. Pass/Fail grades are unacceptable.

Requirements**Residence Requirements**

Thirty credit hours of registration are required for the M.S. degree. Students entering with advanced standing from another graduate school are given residence credit commensurate with the graduate work accomplished.

Final Examination

A comprehensive written or oral examination in the individual's primary area may be required of nonthesis students unless their cumulative GPA is 3.0 or higher. The final examination for thesis students will consist of a thesis defense, which will be done in conjunction with BIOL 696 Seminar.

All students are required to take BIOL 696 Seminar. The creative project required of all nonthesis students will provide the basis for the public presentation.

Financial Assistance

The Department of Biology has financial support available in the form of tuition-refund assistantships, associate faculty positions, fellowships, and stipends from local industry on a limited basis.

Doctor of Philosophy—Purdue University

The degree of Doctor of Philosophy (Ph.D.), the highest earned degree conferred by Purdue University, can be pursued in the Department of Biology through Purdue University, West Lafayette. The doctoral degree is restricted to those scholars who have demonstrated superior ability in a recognized academic discipline. The Ph.D. degree is not awarded on the basis of time spent in residence or following the completion of any specific number of formal courses, nor is the degree granted on the basis of miscellaneous course studies and research effort. The entire Ph.D. program must be rationally related, should be highly research-oriented, and should culminate in a thesis of scholarly merit indicative of the candidate's ability to conduct original research in a recognized field of specialization.

Ph.D. programs are directed by professors who work in close association with selected graduate students. In practice, doctoral programs are composed of formal courses, guided individual study in a chosen field or discipline, study in such cognate subjects as may be required by the candidate's advisory committee, and original research that serves as the basis of a scholarly thesis.

As part of their graduate training, all Ph.D. candidates are expected to teach at least quarter time for one year.

Ninety credit hours of registration are required for the Ph.D. degree. Students entering with advanced standing from another graduate school are given residence credit commensurate with the graduate work accomplished.

Fields of Study

Ph.D. degrees are offered in most of the fields described for the M.S. degree. Until a major professor is named, a student is counseled by a temporary advisor. In order to help familiarize students with the department and to assist the student in the selection of a major professor, a series of laboratory rotations is available.

Admission and Qualifying Examination

To enter the Ph.D. program, a student must satisfy the admission requirements for the M.S. with thesis option and also take a qualifying examination in two areas at the end of the first year of graduate study. By the end of the second year, both must have been passed with a grade of B or better. The examination areas are as follows: (1) immunobiology, (2) biochemistry and molecular biology, (3) cell and developmental biology, (4) membrane biology.

Plan of Study

Each prospective candidate for the doctoral degree, with the approval of the head of the Department of Biology, shall select a major professor from the department who will act as the chairperson of the student's advisory committee and who will direct the research. An advisory committee of five faculty members who have been approved to guide graduate students will then be appointed.

The plan of study shall include a primary area and related area or areas. The plan will be appropriate to meet the needs of the student in a chosen field as determined by the advisory committee. The Graduate School of Purdue University does not impose any minimum number of required course credit hours, but the plan shall specify the area or field of interest in which the student proposes to study and to conduct research. The plan will include the specific courses that the student is expected to complete, all specific course and language (if any) requirements, and 2 credit hours of BIOL 696 Seminar.

The plan of study must be approved by the department or school head, the school dean, and the dean of the Graduate School at Purdue University, West Lafayette. The graduate school dean reserves the right to refer any or all plans of study to the Purdue Graduate Council for review and approval when deemed advisable. The Graduate Council has the final authority to supervise the quality of all graduate programs.

Preliminary Examination

After the student has completed most of the formal study to the satisfaction of the advisory committee and met any language requirement(s), the student becomes eligible to take the preliminary examinations. The results of these written and oral examinations will be reported to the graduate school by the examining committee with an appropriate

recommendation for the student's admission to candidacy, continued preparatory study, or discontinuation. The graduate school dean reserves the right to appoint additional members to the preliminary examining committee. The dean must be informed of the date and place of the examination and the membership of the examining committee at least two weeks before the examination. No examining committee shall have fewer than three faculty members.

The written preliminary examination will be conducted by the examining committee. In some cases, parts of the examination may be delegated to certain other staff members, but the final responsibility for the examination rests with the student's examining committee.

If the student does not pass the preliminary examinations, at least one semester must elapse before reexamination. Should the preliminary examinations be failed twice, the student may not be given a third examination, except upon the recommendation of the examining committee and with *special approval* of the Graduate Council.

Ph.D. Thesis

After admission to candidacy, the candidate must devote at least two semesters to research before the final examination.

The special research carried on as part of the doctoral work is expected to make a definite contribution to the candidate's chosen field of knowledge—a contribution of sufficient importance to merit publication. Each candidate must, therefore, prepare a thesis showing the research results.

After the research has been completed and the thesis written, the candidate shall be given a final examination in which the candidate defends the thesis and demonstrates to the examining committee all of the capabilities for which the Doctor of Philosophy degree is awarded. The examining committee shall consist of no fewer than four members. The dean of the graduate school reserves the right to appoint additional committee members and must be informed of the place and time of the final examination at least two weeks in advance.

Doctor of Philosophy—Indiana University

The Ph.D. degree conferred by Indiana University can be pursued under the direction of faculty in the Department of Biology who hold adjunct appointments with departments or programs in the Indiana University School of Medicine. All Indiana University doctoral degrees require 90 credit hours of registration; specific course and examination requirements vary with the department or program in which the student is enrolled. Contact the graduate program director in the Department of Biology for additional information.

Other Programs

Bachelor of Arts with Secondary Teaching Certification

Students planning to teach biology at the secondary school level usually enter the Bachelor of Arts degree program. Elective hours within this program will be used to satisfy the requirements of the School of Education and the state of Indiana.

Prepharmacy

The prepharmacy program comprises two years of study at IUPUI during which time students will apply to a Pharm.D. program at a school of pharmacy. The following scheme provides the course preparation for application to the School of Pharmacy and Pharmacal Sciences at Purdue University, West Lafayette. A similar program has been designed to interface with the Butler University School of Pharmacy; consult the prepharmacy advisor in the Department of Biology.

Prepharmacy Sample Program (Purdue University)

Year One

First Semester

BIOL K101 Concepts of Biology I	5
CHEM C105 Principles of Chemistry I	3
CHEM C125 Experimental Chemistry I	2
ENG W131 Elementary Composition I	3
MATH 221 Calculus for Technology I	3

Second Semester

BIOL K103 Concepts of Biology II	5
CHEM C106 Principles of Chemistry II	3
CHEM C126 Experimental Chemistry II	2
ENG W132 Elementary Composition II	3
MATH 222 Calculus for Technology II	3

Year Two

First Semester

CHEM C341 Organic Chemistry I	3
CHEM C343 Organic Chemistry Laboratory I	2
ECON E101 Survey of Current Economic Issues and Problems	3
PHYS P201 General Physics I	5
Electives	3

Second Semester

BIOL K356 Microbiology	3
BIOL K357 Microbiology Laboratory	2
CHEM C342 Organic Chemistry II	3
CHEM C344 Organic Chemistry Laboratory II	2
BIOL N261 Human Anatomy	5

Summer Sessions

BIOL N217 Human Physiology	5
-----------------------------------	---

Years Three and Beyond

The Doctor of Pharmacy (Pharm.D.) degree is now required to obtain a license to practice pharmacy. This program encompasses six years of study (two pre-pharmacy and four professional). Years three through six for the Pharm.D. degree are to be completed at the School of Pharmacy and Pharmacal Sciences, Purdue University, West Lafayette.

Preoptometry

This program is specifically designed for transfer to the professional program at Indiana University Bloomington. Typically, three preoptometry years are spent at IUPUI.

Preoptometry Program Requirements

Subject	Minimum credit hours required
Inorganic chemistry	8
Organic chemistry	4
English composition	2
Calculus	4
General physics	8
Psychology	
Introductory and above	4
Statistical techniques	3
Biology/Zoology	
Introductory	4
Microbiology	4
Advanced	3
Arts and humanities	6
Social and behavioral sciences	6
Foreign language	6-8
Electives	as needed
	90 credit hours

Preveterinary Medicine

IUPUI offers an organized four-semester preveterinary curriculum for students who want to meet the requirements for admission to the Purdue University School of Veterinary Medicine. This curriculum also provides for a rigorous program in the biological and physical sciences that may be used as a basis for continued training in the Purdue University School of Agriculture should the degree of Bachelor of Science be desired.

Students who have successfully completed two or more years of preveterinary instruction at IUPUI are eligible to apply for admission to the School of Veterinary Medicine at Purdue University, West Lafayette. Admission to the School of Veterinary Medicine is highly competitive. Students are selected on the basis of college course work and grades, Graduate Record Exam (GRE) scores (General Aptitude Test only), and the extent and nature of the applicant's experience with animals and practicing veterinarians. The selection committee is also concerned with the individual's level of motivation, degree of maturity, and general character.

The requirements for admission to the preveterinary curriculum are the same as those for other programs in the School of Agriculture.

Preveterinary Sample Program

Freshman Year

Courses in Biology (BIOL)

All courses designed for the biology major are identified by the letter prefix K on the course number or have no prefix. All courses identified by the letter prefix N are primarily designed to serve students uncommitted to a degree in biology or students for whom these courses are appropriate to their curricular program (e.g., allied health).

Note: P—prerequisite; C—corequisite; Fall—offered fall semester; Spring—offered spring semester; Summer—offered during one or both of the summer sessions; Day—offered as a daytime section; Night—offered as an evening section; Equiv.—course is equivalent to the indicated course taught at Indiana University Bloomington, or the indicated course taught at Purdue University, West Lafayette.

Undergraduate Level

K101 Concepts of Biology I (5 cr.) P: High school or college chemistry. Fall, day; Spring, day, night; Summer, day. An introductory course emphasizing the principles of cellular biology; molecular biology; genetics; and plant anatomy, diversity, development, and physiology.

¹CHEM C310 Analytical Chemistry and CHEM C311 Analytical Chemistry Laboratory may be substituted for CHEM C342 and CHEM C344.

K103 Concepts of Biology II (5 cr.) P: K101. Fall, day, night; Spring, day; Summer, day. An introductory biology course emphasizing structure, physiology, development, diversity, and behavior in animals, and evolution and ecology of plants and animals.

K295 Special Assignments (arr.) P: Consent of instructor. Fall, Spring. Special work, such as directed readings, laboratory or field work, or presentation of material not available in the formal courses in the department.

K309 Computer Applications in Biology and Medicine (3 cr.) P: Sophomore standing and one semester of biology. Spring, day. Provides the undergraduate with experience in the major applications of the computer to the life sciences. Topics: computer hardware, software, BASIC programming concepts, and application packages. Projects: micro and mainframe computer experiences with databases, simulations, statistical packages, computer graphics, networks, and computer interfacing to laboratory equipment.

K322 Genetics (3 cr.) P: K103, CHEM C106. Fall. Spring of even-numbered years. Principles of genetics at the molecular, cellular, organismal, and population level.

K323 Genetics Laboratory (2 cr.) P or C: K322. Fall, day. Applied principles of genetics using organisms of increasing complexity, from viruses to the fruit fly.

K324 Cell Biology (3 cr.) P: K103, CHEM C106. Spring, day. Examination of the structure and activity of eukaryotic cells and subcellular structures. Emphasis is on regulation of and interactions among subcellular events such as protein targeting, transmembrane signaling, cell movement, and cell cycle.

K325 Cell Biology Laboratory (2 cr.) P or C: K324. Spring, day. Experiments on the molecular and biochemical basis of organization and function of eukaryotic cells.

K331 Embryology (3 cr.) P: K103. Fall, Spring, day. The development of animals through differentiation of cells, tissues, organs, and organ systems will be examined.

K332 Plant Growth and Development (3 cr.) P: K101, CHEM C341. Fall, day. An examination of growth and developmental patterns in plants as affected by growth regulators, age, heredity, photoperiod, and environmental factors.

K333 Embryology Laboratory (1 cr.) P or C: K331. Spring, day. Processes of animal development are examined in a series of classical and modern experiments using cell, tissue and embryo culture, drug treatments, and microscopic techniques.

K338 Introductory Immunology (3 cr.) P: K103, CHEM C106. Fall, day, night. Principles of basic immunology with an emphasis on the cells and molecules underlying immunological mechanisms.

K339 Immunology Laboratory (2 cr.) P or C: K338. Fall, day, night. Demonstration of immunological principles by experimentation.

Exercises include cells and factors of the innate and the adaptive immune systems.

K341 Principles of Ecology (3 cr.) P: K103. Fall, day. A study of the basic concepts of the interrelation of living organisms and their environment.

K342 Ecology Laboratory (2 cr.) P or C: K341. Fall, day. Experiments in the laboratory and field to illustrate the principles and techniques of ecology.

K345 Behavioral Ecology (3 cr.) P: K341. Spring, night. An examination of the relationships among ecology, evolution, and behavior, including sexual selection and conflict, mating systems, altruism, and communication among animals.

K350 Comparative Animal Physiology (3 cr.) P: N107 or K103, CHEM C106. Spring, day. A comparative examination of principles of animal physiology from molecular to organismal levels using homeostasis, regulation, and adaptation as central themes.

K356 Microbiology (3 cr.) P: K103, CHEM C341. Spring, day, night. Introduction to microorganisms: cytology, nutrition, physiology, and genetics. Importance of microorganisms in applied fields including infectious disease.

K357 Microbiology Laboratory (2 cr.) P or C: K356. Spring, day. Laboratory experiments and demonstrations to yield proficiency in aseptic cultivation and utilization of microorganisms; experimental investigations of biological principles in relation to microorganisms.

K483 Biological Chemistry (3 cr.) P: CHEM C342. Fall, day. Chemistry of biologically important molecules including carbohydrates, lipids, proteins, and nucleic acids. Special emphasis on chemistry of intermediary metabolism.

K484 Cellular Biochemistry (3 cr.) P: CHEM C342. Spring, day, night. Emphasis on selected topics in cellular biochemistry including nucleic acid : protein interactions, protein : protein interactions, protein synthesis, biogenesis of membranes, and signal transduction. Current techniques for studying these processes in higher eukaryotes will be discussed.

K490 Capstone (1 cr.) P: Senior standing. Faculty-directed or approved independent library research on an area of public, scientific interest *or* a community service activity in local industry, government, schools, or other public science-related groups or organizations. Topics for independent research and a list of service opportunities are available in the Department of Biology Office.

K493 Independent Research (1-3 cr.) P: Consent of instructor. Fall, Spring, Summer. A course designed to give undergraduate students majoring in biology an opportunity to do research in fields in which they have a special interest.

K494 Senior Research Thesis (1 cr.) P: K493. Fall, Spring, Summer. A formally written report describing the results or accomplishments of K493.

Undergraduate and Graduate Level

507 Principles of Molecular Biology (3 cr.) P: K322, CHEM C342, or consent of instructor. Fall, night. Molecular aspects of structure and function of nucleic acids and proteins, including recombinant DNA research. Prokaryotic and eukaryotic molecular biology are given equal weight.

516 Molecular Biology of Cancer (3 cr.) P: CHEM C342 and K322 or a course in biochemistry. A detailed course examining the molecular mechanisms controlling the growth of animal cells. Emphasis on current experimental approaches to defining the molecular basis of growth regulation in developing systems and the uncontrolled proliferation of cells in metabolic disorders, such as cancer.

530 Introductory Virology (3 cr.) P: K356, CHEM C342. Fall, odd years, night. Detection, titration, and chemistry of viruses; viral host interactions: bacteriophage—bacterium, animal virus—animal cell, plant virus—plant cell; tumor viruses: infection and transformation.

532 Topics in Bacteriology (2 cr.) P: K356, CHEM C342. Fall, even years, night. Selected topics in bacterial physiology: cell division, chemotaxis, bacterial plasmids, sporulation, bacterial toxins, recombinant DNA.

540 Topics in Biotechnology (3 cr.) P: K322 and CHEM C341 or consent of instructor. Fall, night. Examines research techniques and applications for several technologies situated at currently recognized biological frontiers including recombinant DNA technology, hybridoma technology, protein engineering, agricultural research, and microbiological engineering.

548 Techniques in Biotechnology (3 cr.) P: K322, CHEM C342, or consent of instructor. Fall, day, night. Laboratory experience in techniques applicable to biotechnology: protein chemistry, molecular biology, and immunology.

550 Plant Molecular Biology (3 cr.) P: K322, C341, or consent of instructor. Fall, day, night. A comprehensive study of plant molecular biology and plant molecular genetics. Topics will include the structure and expression of plant nuclear, chloroplast, and mitochondrial genomes, and plant viruses.

556 Physiology I (3 cr.) P: K103, CHEM C342. Fall, night. Principles of physiology: nerve and muscle, temperature regulation, ion and water balance.

557 Physiology II (3 cr.) P: 556 or consent of instructor. Spring, night. A study of human cardiovascular, pulmonary, blood, and gastrointestinal systems. Higher neuronal functions and intersystem interactions will be discussed.

559 Endocrinology (3 cr.) P: 556 or equivalent, and CHEM C342. Fall. The study of hormone function. Consideration will be given to the role of hormones in growth, development, metabolism, homeostasis, and reproduction.

561 Immunology (3 cr.) P: K103, CHEM C341. Spring, night. Introduction to basic principles and experimentation in cellular and humoral immunology.

564 Molecular Genetics of Development. (3 cr.) P: K322 or similar or consent of instructor. R: BIOL 566. Spring, day, night. Examines how key regulatory genes and molecular signaling pathways regulate development in both lower eukaryotic organisms and mammalian organ systems, with emphasis on the function and evolution of signaling molecules and transcription factor superfamilies.

566 Developmental Biology (3 cr.) P: K322. Fall. Principles of development with emphasis on concepts and underlying mechanisms, including descriptive, physiological, and molecular approaches.

568 Regenerative Biology and Medicine (3 cr.) P: K324 or K331 or a biochemistry course. Spring. This course examines the mechanisms of natural regeneration (regenerative biology) and the application of these mechanisms to the development of therapies to restore tissues damaged by injury or disease (regenerative medicine).

570 Biological Membranes (3 cr.) P: CHEM C342, or consent of instructor. Spring, night. An examination of structure and function of biological membranes. Topics include lipid and protein composition and interactions, physiological properties of membranes, physiological methods of analysis, model membrane systems, and survey of specific biological membranes and their modes of action.

571 Developmental Neurobiology (3 cr.) P: consent of instructor. Fall, odd years, night. The major phases of nervous system development beginning with neurogenesis and neurogenesis and ending with the onset of physiological activity will be studied in a variety of animals, mainly avians and mammals (including man). Neural developmental disorders and behavioral ontogeny will also be considered.

595 Special Assignments (1-3 cr.) P: Consent of instructor. Fall, Spring, Summer. Special work, such as directed reading, independent study or research, supervised library, laboratory or field work, or presentation of material not available in the formal courses of the department.

Graduate Level

641 Microbial Genetics (2 cr.) P: K323, CHEM C342, and consent of instructor. Spring, odd years, night. Genetics of bacteria, bacterial viruses, and other microorganisms with emphasis on organization, replication, and function of the genetic material.

651 Cellular Immunology (3 cr.) P: 561. Spring, night. Study of cells, molecules, and mechanisms comprising the cellular immune system in normalcy and disease.

696 Seminar (1 cr.) (May be repeated for credit.) Fall, Spring. Each semester there are several separate offerings. They will likely be on the following topics: biochemistry, biology teaching, ecology and population biology, genetics, mechanisms of development, microbiology, neurobiology, and plant physiology. Oral presentations required.

697 Special Topics (1-3 cr.) (May be repeated for credit.) Fall, Spring. The frontiers of biology. Critical examination of developments in the various specialties represented by the members of the department.

Currently, advanced work in the following and related fields can be offered: molecular genetics; structure and biosynthesis of biologically significant molecules; the nature of biological specificity and enzyme catalysis; the fine structure and chemistry of subcellular particles, cells, and tissues; microbial and plant metabolism; comparative biochemistry; genetics and physiology of viruses, bacteria, fungi, protozoa, helminths, and cells of higher forms of life; the genetics, structure, development, and physiology of plants and animals, including endocrinology and work physiology; excitable membranes; neurobiology, ecology, systematics, and evolution of microorganisms, plants and animals; host-parasite relationships including immunology; and the teaching of biology. The field in which work is offered will be indicated in the student's record.

698 Research M.S. Thesis (cr. arr.)

699 Research Ph.D. Thesis (cr. arr.)

Courses for the Nonmajor

N100 Contemporary Biology (3 cr.) P: None. Fall, day, night; Spring, day, night; Summer. Selected principles of biology with emphasis on issues and problems extending into everyday affairs of the student.

N107 Exploring the World of Animals (4 cr.) P: None. Equiv. PU BIOL 109. Fall, day, night; Spring, day, night; Summer, day. This course introduces students to animals and their native environments. It surveys individual ecosystems and highlights the interactions, features, and characteristics of the animals found there. Examples of discussion topics include unique features of animals, animal relationships, societies and populations, exotic species, and behavior, including mating, communication, feeding and foraging, and migration. Environmental issues including the effects of pollution on ecosystems are also discussed. **Not** equivalent to K103.

N200 The Biology of Women (3 cr.) P: None. Fall, day, night; Spring, day, night; Summer. This course examines the biological basis for bodily functions and changes that take place throughout the life of females.

N212 Human Biology (3 cr.) P: None. Equiv. PU BIOL 201. Fall, day. First course in a two-semester sequence in human biology with emphasis on anatomy and physiology, providing a solid foundation in body structure and function.

N213 Human Biology Laboratory (1 cr.) P or C: N212. Fall, day. Accompanying laboratory for N212.

N214 Human Biology (3 cr.) P: N212. Equiv. PU BIOL 202. Spring, day. Continuation of N212.

N215 Human Biology Laboratory (1 cr.) P or C: N214. Spring, day. Accompanying laboratory for N214.

N217 Human Physiology (5 cr.) P: None. Equiv. IU PHSL P215. Fall, day; Spring, day; Summer, day. Lectures and laboratory work related to cellular, musculoskeletal, neural, cardiovascular, gastrointestinal, renal, endocrine, and reproductive function in humans.

N222 Special Topics in Biology (1-3 cr.) P: None. A variable topics course dealing with current topics in

biology. In a given semester, a topic such as disease, genetics, the environment, etc., will be dealt with as a separate course.

N251 Introduction to Microbiology (3 cr.) P: One semester general chemistry or one semester life science. Spring, night. The isolation, growth, structure, functioning, heredity, identification, classification, and ecology of microorganisms; their role in nature and significance to humans.

N261 Human Anatomy (5 cr.) P: None. Equiv. IU ANAT A215. Fall, day, night; Spring, day, night; Summer, day, night. Lecture and laboratory studies of the histology and gross morphology of the human form, utilizing a cell-tissue-organ system-body approach.

N322 Introductory Principles of Genetics (3 cr.) P: N107 or K101. Equiv. PU AGR 430. Spring, night. Basic principles of plant and animal genetics. Emphasis on transmission mechanisms as applied to individuals and populations. For students in health and agricultural sciences.

N400 Biological Skills for Teachers (3 cr.) P: Consent of instructor. Fall, night. Concepts and laboratory skills necessary to prepare teachers with diverse backgrounds to return to graduate academic biology courses are reviewed. Topics include general principles of biology, biochemistry, and biomathematics.

Department of Chemistry

IUPUI
Science Building, LD326
402 N. Blackford Street
Indianapolis, IN 46202-3274
(317) 274-6872, FAX (317) 274-4701
chem.iupui.edu

Professors Boschmann, Dubin, Dykstra (*Chancellor's Professor*), Larter (*Chair*), Lipkowitz, Malik, O'Donnell, Schultz, Sunderwirth (*IUPUI Columbus*)

Professors Emeriti Cutshall, Fife, Fricke, Wyma

Associate Professors Long, Muhoherac, Nurok, Sen

Assistant Professors Breen, Moser, Naumann

Assistant Scientists Forsythe, Young

Research Professor Boyd, Scott

Lecturer/Coordinator of Student Services Nguyen

Lecturer Holladay

Departmental Academic Advisors Contact the department for assignment to an advisor.

Chemistry is the science that studies substances, both natural and synthetic, and their compositions, properties, transformations, and interactions with external forces.

The Department of Chemistry offers the Associate of Science in Chemistry degree, the Bachelor of Arts in Chemistry degree, the Bachelor of Science in Chemistry degree with a chemistry option and a biological chemistry option, and the Master of Science degree. All degrees carry the general requirements of

the School of Science. These are described elsewhere in this bulletin. An undergraduate minor in chemistry is also offered. The Bachelor of Science degree carries certification by the American Chemical Society Committee on Professional Training. The Master of Science degree has both a thesis and nonthesis option. An Industrial Co-op Program is also offered for the Master of Science degree. Qualified students may be authorized to pursue the Ph.D. degree in chemistry in the areas of analytical, biological, inorganic, organic, and physical chemistry. Contact the Department of Chemistry for details or use the Internet address chem.iupui.edu.

To enter the undergraduate curriculum in chemistry, a student should have completed a minimum of two years of algebra, one semester of trigonometry, one year each of chemistry and physics, and two years of a modern foreign language. The choice of a particular degree program in chemistry and the selection of courses for that degree must be made in consultation with a departmental advisor.

Courses for Non-Majors

Students in programs that require only one semester of chemistry should take C100, C101, or C110 depending on their specific degree program. C100 and C110 are both non-mathematical introductions to chemistry, while C101 requires one semester of high school algebra. Students in programs that require two semesters of chemistry take either C101/C121 with C110/C115 or the C105/C125 with C106/C126 sequence (see specific program for degree major). The C105/C125 with C106/C126 sequence is designed for students pursuing advanced work in scientific fields (e.g., biology, chemistry, geology, medicine, and physics). Students with an insufficient background in high school chemistry for C105 should take C101 as a preparatory course. Credit for C101 cannot count toward the total credit hours needed for graduation if any of the following courses are taken: C105, C106, C111, or C112. Completion of C101 does not qualify a student for admission to C106.

Academic Counseling in Chemistry

Academic success requires frequent and regular interaction between students and faculty in the classroom as well as outside it. In keeping with this departmental philosophy, chemistry majors are required to meet with their advisor at least once a year, preferably in the first half of the fall semester. Students who do not meet with their advisor by October 21 will not be permitted to register for the following spring semester until their registration is approved by their advisor.

Course Prerequisites

The department enforces all prerequisites for chemistry courses as indicated in the course listing of this bulletin. For course equivalency of prerequisites, consult the instructor.

Associate of Science in Chemistry

For students seeking entry into the industrial job market as qualified chemical laboratory and process technicians. Students who complete this two year, 62

credit hour program will be able to enter the job market directly or, if they should choose at a later time, to complete additional coursework toward a Bachelor of Arts degree in chemistry with no loss of credits.

Degree Requirements

First-Year Experience Course See the School of Science requirements under “Undergraduate Programs” in this bulletin.

Area I See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied only by ENG W132 (or ENG W150), ENG W231, ENG W233, ENG W290, or TCM 320.

Area II No foreign language is required.

Area IIIA See the School of Science requirements under “Undergraduate Programs” in this bulletin.

Area IIIB None

Area IIIC Physical and Biological Sciences In order to satisfy the science electives for this program students must take at least two courses totaling at least 8 credit hours of advanced chemistry, mathematics/physics or biology courses. Students must select courses from at least two of the three areas indicated and should consult with their advisor for course selection.

Area IIID Mathematical Sciences MATH 151 and STAT 301. Computer Science, CSCI N201, is also required. An additional advanced mathematics course, i.e. Math 221 Calculus for Technology I, can be used to partially satisfy the science elective requirement of this program. The Department of Chemistry requires a minimum grade of C– in MATH 151, STAT 301 and CSCI N201 (D grades are unacceptable).

Area IV Chemistry Concentration Requirements C105, C125¹, C106, C126², C325, C341, C343. Students can take either Analytical Chemistry Lecture and Laboratory (C310/C311) or Organic Chemistry Lecture and Laboratory II (C342/C344). A total of 24 credit hours of chemistry are required. An additional advanced chemistry course can be used to partially satisfy the science elective requirement of this program. The Department of Chemistry requires a minimum grade of C in all chemistry courses (C– grades are unacceptable).

Bachelor of Arts—Preprofessional Chemistry Major

For students who require a knowledge in chemistry as a basis for work in other fields such as business, dentistry, environmental science and policy, law, medicine or other allied health fields. Recommended for premedical and predentistry students.

Degree Requirements

Areas I, IIIA, and IIIB See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied only by ENG W132 (or ENG W150), ENG W231, ENG W233, ENG W290, or TCM 320.

Area II See the School of Science requirements under “Undergraduate Programs” in this bulletin.

Area IIIC Physical and Biological Sciences PHYS P201 and PHYS P202 (recommended PHYS 152 and PHYS 251). Also, at least two additional courses outside chemistry having a laboratory component, which may be chosen from, for example, biology, geology, or physics.

Area IIID Mathematical Sciences MATH 221 and MATH 222 (recommended MATH 163 and MATH 164). One computer science course is also required.

Area IV Chemistry Concentration Requirements C105, C125¹, C106, C126², C310, C311, C325, C341, C342, C343, C344, C360 (recommended C361), and C495. Recommended C483. Total of 33 credit hours of chemistry courses is required. The Department of Chemistry requires a minimum grade of C in all chemistry courses (C– grades are unacceptable).

Bachelor of Science in Chemistry—Professional Chemistry Major, A.C.S. Certified

This degree is for students who plan to be professional chemists or secondary school teachers or who plan to pursue graduate studies in chemistry. It carries certification by the Committee on Professional Training of the American Chemical Society. Two options are available: a chemistry option and a biological chemistry option.

Degree Requirements (Chemistry Option)

Areas I, IIIA, and IIIB See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied only by ENG W132, ENG W150, ENG W231, ENG W233, ENG W290, or TCM 320.

Area II No foreign language is required.

Area IIIC Physical and Biological Sciences PHYS 152, PHYS 251, and at least two additional courses outside chemistry, which may be chosen from, for example, biology, geology, or physics.

Area IIID Mathematical Sciences MATH 163, MATH 164, and MATH 261. One computer science course is also required.

Area IV Chemistry Concentration Requirements C105, C125¹, C106, C126², C310, C311, C341, C342, C343, C344, C361, C362, C363, C410, C411, C430, C435, C483 and C495. Total of 48 credit hours of chemistry courses is required. The Department of Chemistry requires a minimum grade of C in all chemistry courses (C– grades are unacceptable).

In addition to the above requirements, a minimum of 3 additional credit hours of advanced technical elective courses is required. Courses may be chosen from the following: CHEM C409 (3 cr. min.), any graduate-level chemistry course (permission

required), or any 300-level or higher biology, computer science, geology, mathematics, or physics course.

Degree Requirements (Biological Chemistry Option)

Areas I, IIIA, and IIIB See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied only by ENG W132, ENG W150, ENG W231, ENG W233, ENG W290, or TCM 320.

Area II No foreign language is required.

Area IIIC Physical and Biological Sciences PHYS 152, PHYS 251, BIOL K101, and BIOL K103.

Area IIID Mathematical Sciences MATH 163, MATH 164, and MATH 261. One computer science course is also required.

Area IV Chemistry Concentration Requirements C105, C125¹, C106, C126², C310, C311, C341, C342, C343, C344, C361, C362, C363, C483, C484, C486, either C410-C411 or C430-C435, and C495. Total of 48 credit hours of chemistry courses is required. The Department of Chemistry requires a minimum grade of C in all chemistry courses (C– grades are unacceptable).

Chemistry Plans of Study

Associate of Science in Chemistry Major (62 cr. required)

Freshman Year

The Department of Chemistry will not grant credit for a course when considerable duplication of course content may occur with another course taken. In general, credit will be allowed for the higher-level course, but not for the lower-level course. The following listings are considered to be duplications (lower-level courses listed first):

CHEM C360	and	CHEM C361
MATH 221-222	and	MATH 163-164
PHYS P201-P202	or	218-219 and PHYS 152-251
PHYS 100 or 200	and	PHYS P201, 218, or 152

For example, if a student has earned credit in MATH 163-164, the student will receive no credit for MATH 221-222, even if earned previously.

On occasion, a student who initially enrolled in the preprofessional B.A. in chemistry program decides to transfer to the B.S. in Chemistry program, having already taken one or more of the above-listed lower-level courses. The following policies will apply:

If a student has a minimum grade of B (B– or lower is unacceptable) in CHEM C360 and approval of the departmental chairperson, credit will be granted for CHEM C361 and the student may proceed to CHEM C362.

If a student has earned credit for the MATH 221-222 sequence, the student will be placed in MATH 164. If the student passes MATH 164, the MATH 163-164 requirement will be considered fulfilled. Credit will be granted for MATH 221 and MATH 164 only (8 credit hours). If the student does not pass MATH 164, the student must start with MATH 163.

If a student has earned credit for MATH 221 only, the student must take the MATH 163-164 sequence, and no credit will be allowed for MATH 221.

If a student has earned credit for the PHYS P201-P202 or PHYS 218-219 sequence, the student will be placed in PHYS 251. If the student passes PHYS 251, the PHYS 152-251 requirement will be considered fulfilled. Credit will be granted for PHYS P201 and PHYS 251 only (10 credit hours). If the student does not pass PHYS 251, the student must start with PHYS 152.

If a student has earned credit for PHYS P201 or PHYS 218 only, the student must take the PHYS 152-251 sequence, and no credit will be allowed for PHYS P201 or PHYS 218.

On occasion, a student who initially enrolled in the B.S. in Chemistry program decides to transfer to the preprofessional B.A. in chemistry program, having already taken one or more of the above-listed higher-level courses. A higher-level course will always substitute for a lower-level course to satisfy the requirement.

The Department of Chemistry will accept a maximum of 15 credit hours toward graduation in courses outside the Schools of Science, Liberal Arts, Business, Engineering, and Public and Environmental Affairs (e.g., technology, physical education, military science, therapy, etc.).

Minor in Chemistry

The undergraduate minor in chemistry requires 21 credit hours of chemistry courses. The following courses are required: CHEM C105, C125, C106, C126, C341, C342, C343, and either CHEM C310 or C360. MATH 222 and PHYS P202 are prerequisites for CHEM C360. For other requirements see the School of Science requirements under “Undergraduate Programs, Minors” elsewhere in this bulletin.

Graduate Programs (M.S. and Ph.D. Degrees)

Admission Requirements

The prospective student should have a baccalaureate degree from an accredited institution, show promise of ability to engage in advanced work, and have adequate preparation—at least 35 credit hours of chemistry broadly representative of the fields of the discipline—in a chemistry curriculum. The GRE subject exam in chemistry is strongly recommended.

Incoming students with an undergraduate grade point average (GPA) of 3.0 or higher (A=4.0) will automatically be recommended for admission as regular graduate students. Those with a GPA below 3.0 will be admitted as temporary graduate students with the provision that a 3.0 average must be achieved in the first three graduate courses (or 9 credit hours) if they are to be admitted as regular graduate students.

Application for Admission

Inquiries concerning the application process can be made directly to the Department of Chemistry by

writing to Graduate Admissions, Department of Chemistry, IUPUI, 402 N. Blackford Street, Indianapolis, IN 46202-3272; telephone (317) 274-6876; chem.iupui.edu. Applications for full-time study should be completed by March for the following fall semester to ensure complete consideration for fellowships and other financial support (see “Graduate Program Financial Aid” in this section). Applications for part-time graduate admission may be submitted at any time.

Temporary graduate students who wish to enroll in courses, though not necessarily in a degree program, should contact the IUPUI Graduate Office, Union Building 203, IUPUI, Indianapolis, IN 46202-5167; telephone (317) 274-1577. Students should be aware that no more than 12 credit hours earned as a nondegree student may be counted toward a degree program.

Transfer Credit

The Department of Chemistry will accept by transfer a maximum of 6 hours of graduate credit, in excess of undergraduate degree requirements, from approved institutions.

Graduate Program Financial Aid

All full-time thesis graduate students receive support stipends through teaching assistantships, research assistantships, departmental fellowships, university fellowships, or through the Industrial Co-op Program. Full-time students receive fee remissions; students with assistantships and fellowships are also eligible for health insurance. Consult the graduate advisor for current funding levels.

Master of Science Program

The M.S. program in chemistry, which awards a Purdue University degree, requires 30 credit hours of study beyond the baccalaureate level. It is designed for students seeking careers as professional chemists. Graduates of the program often choose industrial positions, but others enter Ph.D. programs in chemistry or related areas. Graduates have been placed in positions throughout the United States and abroad.

General Degree Options and Requirements

Specific area requirements (core courses) apply for course work. Courses from three of the following areas must be taken: analytical, biological, inorganic, organic, and physical. Typically, students take three courses in their primary area and two courses outside of it to meet these requirements.

The M.S. degree can be earned through any of three different options: the thesis option, the Industrial Co-op Program, and the nonthesis option.

Thesis Option This traditional full-time program requires 20 hours of course work and 10 hours of thesis research. The research activity culminates in the completion and defense of a thesis. This option is available to full- or part-time students.

³ Students have a choice of either CHEM C410-C411 or CHEM C430-C435. Students will be able to take 5 additional hours of electives during the semester they are not enrolled in C410-C411 or C430-C435.

Industrial Co-op Program This full-time program has the same requirements as the thesis option, but it includes industrial work experience in the Indianapolis area. The program is described in detail in the following section, “Master of Science Industrial Co-op Program.”

Nonthesis Option The nonthesis option requires 30 hours of course work alone. Since actual research experience is essential in an advanced chemistry program, this option is recommended for part-time students only. Students in this option are usually employed full time and are already engaged in research activity as part of their employment. However, nonthesis students may still enroll in a limited amount of research study that applies to the degree requirements (usually through CHEM 599).

Master of Science Industrial Co-op Program

Although most chemists seek careers in industry upon completion of their educational goals, few have had industrial experience or the opportunity to develop an appreciation for the types of problems presented in the industrial setting. The Industrial Co-op Program in Indianapolis is designed to provide industrial experience and to offer an alternative approach to career preparation. Most graduates leave with a strong, research-based M.S. degree plus meaningful work-study experience commensurate with graduate-level training. Students may also enter the Ph.D. program and participate in the co-op program for the first two years of their residency.

The M.S. Industrial Co-op Program requires 24 months of full-time study. The first semester consists of intensive course work, interviews with personnel from several local industrial laboratories, and familiarization with faculty research interests. In the second and subsequent semesters, the student continues course work and engages in parallel work experience and academic experience, consisting of 20 hours per week at an industrial lab and 20 hours per week in an academic lab. This work experience is commensurate with the student's background and interests and is an important part of the overall training program. The faculty thesis advisor and the industrial supervisor serve together to monitor each student's progress in the program.

Most students who enter the co-op program have sound academic backgrounds and some research experience, and they desire industrial experience and an opportunity to pursue graduate studies in chemistry.

Ph.D. Program

The Ph.D. program is a full-time thesis-based research program. This program provides a substantially larger research component than that of the M.S. degree and requires original and significant research contributions by the student. As a result, the Ph.D. student is qualified for employment where the ability to design, develop, and complete a research program is expected. The program is part of the Purdue University system-wide doctoral program in chemistry, and, as such, identical requirements apply to all campuses participating in the program.

To establish candidacy, students must pass five written “cumulative” examination questions within their first four semesters and an oral examination prior to the end of their fifth semester of graduate study. The oral examination will include a discussion of the student's research and defense of an original research proposal that is different from the student's thesis research.

Course requirements include a core of three courses in the student's major division plus three additional courses outside the major division. A number of additional courses may be recommended that cover material appropriate to the written part of the preliminary examination.

Joint M.D.–Ph.D. Program

The Department of Chemistry participates in the joint M.D.–Ph.D. program with the Indiana University School of Medicine. In this program, students concurrently earn an Indiana University M.D. degree and Purdue University Ph.D. degree in chemistry. Students take courses in both chemistry and medicine, with several courses simultaneously satisfying both degree requirements.

Eligible students must be admitted separately to the School of Medicine and the Department of Chemistry. Once admission to each is approved, students, together with advisors from medicine and chemistry, plan a tentative course outline for a concurrent program. Graduate and teaching assistantships or fellowships are arranged primarily through the Department of Chemistry.

Medical Biophysics Ph.D. Program

In cooperation with departments in the Indiana University School of Medicine and the Purdue University School of Science, this interdisciplinary program leads to an Indiana University Ph.D. degree in biophysics. The program is designed to give talented graduate students the skills required of the next generation of biologically-oriented scientists. The program combines a core of courses in molecular and cellular biophysics with flexible electives and a seminar program. The training is oriented primarily toward faculty-directed research with focus points at the boundaries of the traditional disciplines of physics, chemistry, and biology. Prospective students should contact the director of graduate programs in the chemistry department for further information.

Biomedical Engineering Ph.D. and Master's Program

Biomedical Engineering is a rapidly emerging interdisciplinary field combining engineering, chemistry, biology, and medicine. The curriculum involves mathematics, engineering, and classical and medical sciences. The Doctoral program is a joint effort between the Biomedical Engineering Programs at IUPUI and Purdue University, West Lafayette. In this case, students apply to the West-Lafayette campus and can take courses and do research at IUPUI. Students

for the Master's Program apply to the Biomedical Engineering Program at IUPUI.

Courses in Chemistry (CHEM)

Notes: P—prerequisite; C—corequisite; Fall—offered fall semester; Spring—offered spring semester; Summer—offered during one or both summer sessions; Day—offered as a daytime section; Night—offered as an evening section; Equiv.—course is equivalent to the indicated course taught at Indiana University Bloomington, the indicated course taught at the School of Science, IUPUI, or the indicated course taught at Purdue University, West Lafayette.

Undergraduate

C100 The World of Chemistry (3 cr.) P: None. Optional laboratory: C120. A topically oriented, non-mathematical introduction to the nature of matter. Topics covered include fossil fuel and nuclear sources of power; environmental issues involving chemistry such as recycling, acid rain, air and water pollution, global warming, ozone depletion; genetic modification of foods, DNA profiling, use of food additives and herbal supplements, and other public policy issues involving science.

C101 Elementary Chemistry I (3 cr., lecture, recitation) P: At least one semester of high school algebra. Usually taken concurrently with C121. Fall, day, night; Spring, day, night; Summer I, day. Essential principles of chemistry; atomic and molecular structure; bonding; properties and reactions of elements and compounds; stoichiometry; solutions; acids and bases. For students who are not planning careers in the sciences and for those with no previous course work in chemistry. Note: Most degree programs that include C101 require the concurrent laboratory, C121.

C102 Elementary Chemistry II (5 cr., lecture, recitation, laboratory) P: C101 (5 cr.). Equiv. PU CHEM 257-257L. Fall, even years, day; odd years, night; Spring, day, night; Summer II, day. Continuation of C101. Introduction to organic chemistry and biochemistry; organic compounds and their reactions.

C105 Principles of Chemistry I (3 cr., lecture, recitation) P: Two years of high school algebra, one year of high school chemistry. Equiv. PU CHEM 115, PU CHEM 125. Fall, day, night; Spring, day; Summer I, day. Usually taken concurrently with C125. A placement examination may be required for admission to this course. See text on page 42 under Chemistry Placement Examination. Principles of inorganic and physical chemistry emphasizing physical and chemical properties, atomic and molecular structure, chemical bonding and states of matter.

C106 Principles of Chemistry II (3 cr., lecture, recitation) P: C105 or equivalent. Equiv. PU CHEM 116, PU CHEM 126. Fall, day; Spring, day, night; Summer II, day. Continuation of C105. Usually taken concurrently with C126. Topics include condensed phases, solution chemistry, thermodynamics, equilibrium and kinetics.

C110 The Chemistry of Life (3 cr.) High school chemistry recommended. Equiv. IU C102, PU CHEM 257. Optional laboratory: C115. A non-mathematical introduction to organic molecules and their transformation to useful materials such as drugs and polymers. An emphasis is placed on the chemical features of biomolecules including hormones and neurotransmitters; proteins; lipids (fats); carbohydrates (sugars); and nucleic acids (DNA/RNA). The chemistry of enzymes, carcinogens, vitamins, antihistamines, anesthetics, genetic engineering, mental health, and other health-related topics.

C115 Laboratory for The Chemistry of Life (2 cr.) P or C: C110. Equiv. PU CHEM 257L. Laboratory work illustrating topics covered in C110.

C120 Laboratory for The World of Chemistry (2 cr.) P or C: C100. A hands-on approach to the topics discussed in C100.

C121 Elementary Chemistry Laboratory I (2 cr.) P or C: C101 (3 cr.) Fall, day, night; Spring, day, night; Summer I, day. Introduction to the techniques and reasoning of experimental chemistry. Emphasis is given to study of physical and chemical properties of inorganic compounds.

C125 Experimental Chemistry I (2 cr., lecture, laboratory) P or C: C105 or equivalent. Fall, day, night; Spring, day; Summer I, day. Laboratory work illustrating topics covered in C105.

C126 Experimental Chemistry II (2 cr., lecture, laboratory) P: C105 and C125; P or C: C106 or equivalent. Fall, day; Spring, day, night; Summer II, day. Continuation of C125. Laboratory work illustrating topics covered in C105 and C106.

C209 Special Problems (1-2 cr.) P: Two semesters of college chemistry and consent of instructor. Equiv. PU CHEM 290. Every semester, time arranged. Individually supervised special problems of chemical interest, e.g., environmental problems, development of experiments, development of audiovisual materials, etc. May be repeated for credit, but maximum of 2 credit hours may be applied toward a chemistry degree.

C301 Chemistry Seminar I (1 cr.) P or C: C409 and consent of instructor. Fall, day. Topics in various areas of chemistry. Students are required to attend departmental seminars and to prepare and present at least one seminar on their research. C301 and C302 may be elected three semesters for credit.

C302 Chemistry Seminar II (1 cr.) P or C: C409 and consent of instructor. Spring, day. Content same as C301.

C309 Cooperative Education in Chemistry (1 cr.) P: General and organic chemistry and consent of departmental chairperson. Every semester, time arranged. Industrial or similar experiences in chemically oriented employment. Grade is determined on basis of employment visitations, a written student report, and a supervisor evaluation report. May be repeated for a maximum of 5 credit hours of which 3 may be used to satisfy an advanced chemistry elective.

C310 Analytical Chemistry (3 cr.) P: C106. With C311, Equiv. PU CHEM 321. Fall. Fundamental analytical processes including solution equilibria, theory and applications of electrochemistry and spectrophotometry, and chemical methods of separation.

C311 Analytical Chemistry Laboratory (1 cr.) P or C: C310. Fall. Laboratory instruction in the fundamental analytical techniques discussed in C310.

C325 Introductory Instrumental Analysis (5 cr.) P: C310, C311. Spring. Instrumental methods of chemical analysis and separation for the chemical technician or preprofessional chemistry major.

C341 Organic Chemistry I (3 cr.) P: C106. Equiv. PU CHEM 261. Fall, day, night; Spring, even years, day; odd years, night; Summer I, day. Comprehensive study of organic compounds. Valence bond theory, stereochemistry, and physical properties of organic compounds are discussed in detail. Introduction to reaction mechanisms and to spectroscopic identification. Synthesis and reactions of selected compounds are also discussed.

C342 Organic Chemistry II (3 cr.) P: C341. Equiv. PU CHEM 262. Fall, even years day, odd years, night; Spring, day, night; Summer II, day. Continuation of CHEM 341. The chemistry of aromatic compounds and other major functional groups are discussed in detail. Multistep synthetic procedures and reaction mechanisms are emphasized. Introduction to biological chemistry.

C343 Organic Chemistry Laboratory I (2 cr.) P or C: 341. Equiv. PU CHEM 265. Fall, day, night; Spring, day, night; Summer I, day, night. Fundamental laboratory techniques of organic chemistry, introduction to spectroscopic methods of compound identification, and general synthetic methods.

C344 Organic Chemistry Laboratory II (2 cr.) P or C: 342; P: C343. Equiv. PU CHEM 266. Fall, night; Spring, day, night; Summer II, day, night. Preparation, isolation, and identification of organic compounds, spectroscopic methods of compound identification, qualitative organic analysis, multistep synthesis.

C360 Elementary Physical Chemistry (3 cr.) P: C106, MATH 222, PHYS P202. Spring, even years, day; Spring, odd years, night. Properties of gases and liquids, intermolecular forces, diffusion, chemical thermodynamics, ligand binding, kinetics, and introduction to quantum chemistry and spectroscopy. Includes topics in biophysical chemistry. For students who desire a survey course in physical chemistry.

C361 Physical Chemistry of Bulk Matter (4 cr.) P: C106, MATH 164, and PHYS P202 or PHYS 251 and C: MATH261. Equiv. PU CHEM 373 and 374. Spring, even years, day; Spring, odd years, night. Kinetic-molecular theory, gases, liquids, thermodynamics, statistical mechanics, solutions, transport properties, and phase and chemical equilibria.

C362 Physical Chemistry of Molecules (4 cr.) P: C106, MATH 164, and PHYS P202 or PHYS 251 and C: MATH261. Equiv. PU CHEM 375. Fall, odd years, day; Fall, even years, night. Quantum chemistry,

symmetry, atomic and molecular structure and spectra, solids, chemical kinetics, photochemistry, and introduction to statistical thermodynamics.

C363 Experimental Physical Chemistry (2 cr.) P: C361 and C: C362 or P: 362 and C: 361. Equiv. PU CHEM 376. Fall, spring. Experimental work to illustrate principles of physical chemistry and to introduce research techniques.

C371 Chemical Informatics I (1cr.) P: C106, Fall. Basic concepts of information representation, storage, and retrieval as they pertain to chemistry. Structures, nomenclature, molecular formulas, coding techniques for visualization of chemical structures and properties.

C372 Chemical Informatics II (1cr.) P: C341 and C371, Spring. Basic concepts of information representation, storage, and retrieval as they pertain to chemistry with emphasis on "organic and biochemical knowledge." Spectral data representation and retrieval, crystallographic data systems, pattern recognition, instrumentation and laboratory networking, combinatorial chemistry, molecular modeling, and bioinformatics.

C409 Chemical Research (1-4 cr.) P: Junior or senior standing and consent of instructor. Equiv. PU CHEM 499. Every semester, time arranged. Chemical or literature research with a report. Can be elected only after consultation with research advisor and approval of program. May be taken for a total of 10 credit hours, which count toward graduation. Three credit hours may be used to satisfy the advanced technical elective in the Bachelor of Science in Chemistry degree program.

C410 Principles of Chemical Instrumentation (3 cr.) P: C310, C311, C361. P or C: C362. Equiv. PU CHEM 424. Fall. Modern methods of instrumental analysis, including spectroscopy, chromatography, and electrochemistry.

C411 Principles of Chemical Instrumentation Laboratory (2 cr.) P: C311. P or C: C410. Fall. Laboratory instruction in the instrumental analysis techniques discussed in C410.

C430 Inorganic Chemistry (3 cr.) P: C362. Equiv. PU CHEM 342. Spring. Atomic structure; periodic trends and properties of the elements. Introduction to symmetry and group theory. Valence bond, molecular orbital and ligand field theories of bonding and their application to structure and properties of inorganic and organometallic compounds. Spectroscopic properties and acid-base, oxidation-reduction, and coordination reactions of inorganic compounds.

C435 Inorganic Chemistry Laboratory (2 cr.) P or C: C430. Spring. Synthesis, characterization, and study of chemical and physical properties of inorganic and organometallic compounds.

C471 Chemical Information Sources (1cr.) P: C341, Fall. Techniques for the storage and retrieval in both printed and computer-readable formats; sources of chemical information, including Chemical Abstracts; development of search strategies; online searching of chemical databases.

C472 Computer Sources for Chemical Information (1 cr.) P: C471, Spring. Techniques for the utilization of the major computer-based information tools found in academic and industrial environments.

C483 Biological Chemistry (3 cr.) P: C342, and one semester of physical chemistry or consent of instructor. Fall. The chemical and biophysical properties of biologically important molecules and systems. Special emphasis on the relationship between structure and function in proteins, nucleic acids, and biomembranes, as well as bioenergetics, kinetics, allosteric interactions, and enzyme catalysis.

C484 Biomolecules and Catabolism (3 cr.) P: C483. Spring. Mechanisms of biological catalysis, metabolism, biosynthesis, regulation of genetic information, and molecular biology.

C486 Biological Chemistry Laboratory (2 cr.) P: C483 or equivalent. Spring. An introduction to the important laboratory techniques currently employed by practicing biological chemists, including biomolecule isolation, purification, enzyme kinetics, and biomolecule characterization by electrophoresis, centrifugation, and spectroscopic methods.

C495 Capstone in Chemistry (1 cr.) P: Senior standing, B.A. or B.S. program. Fall, day; Spring, day. Independent study, under the supervision of a chemistry faculty member or appropriate academic advisor can be earned by completion of (a) a chemical research project; (b) a library research project in an area of current scientific investigation; (c) a research investigation in industry; or (d) a service activity in university, government, public schools, or other science-related groups or organizations. Students will report the results of their activities in both a formal written report and oral presentation, prepare portfolios of undergraduate work in chemistry, discuss recent scientific literature, and explore chemistry in society. Enrollment in the Capstone in Chemistry requires joint approval of the capstone instructor and the independent project advisor.

C496 Methods in Teaching Chemistry (1 cr.) P: CHEM C105. Fall; Spring. Designed for workshop leaders, this course is intended to offer continued support and training in group dynamics and learning theory. The larger goals for this course are to continue the development of leadership skills, to foster ongoing communication among workshop leaders, and to provide an environment for reviewing content knowledge.

Graduate

Please consult the IUPUI Class Schedule for a listing of graduate lecture courses offered each Fall or Spring semester.

533 Introductory Biochemistry (3 cr.) P: C342 or equivalent. A rigorous one-semester introduction to biochemistry.

542 Inorganic Chemistry (3 cr.) P: C362 or equivalent or consent of instructor. Atomic structure; periodic trends and properties of the elements. Introduction to symmetry and group theory. Valence bond, molecular orbital, and ligand field theories of

bonding and their application to structure and properties of inorganic and organometallic compounds. Spectroscopic properties and acid-base, oxidation-reduction and coordination reactions of inorganic compounds. Advanced topics in main group or transition element chemistry.

575 Intermediate Physical Chemistry (3 cr.) P: C362 or equivalent. Quantum theory of atoms and molecules; theories of chemical bonding; molecular spectroscopy; methods for determining molecular structure; electrical and magnetic properties.

599 Special Assignments (1-4 cr.) P: Consent of instructor. Every semester including summer I and II, time arranged. Directed reading or special work not included in other courses.

621 Advanced Analytical Chemistry (3 cr.) P: C310, C410. Equiv. IU CHEM C510. A critical survey of recent developments in chemical and instrumental methods of analysis.

629 Chromatographic Methods of Analysis (3 cr.) P: C410 or equivalent or consent of instructor. Principles and practice of modern gas and liquid chromatography and capillary electrophoresis are developed from an integrated point of view. Emphasis is placed both on theory and on features useful for practical analytical separations.

634 Biochemistry: Structural Aspects (3 cr.) P: C310, C342, C361, and C362 or equivalent. Chemistry of materials of biochemical interest: carbohydrates, lipids, proteins, amino acids, nucleic acids, porphyrins, biochemistry of blood.

636 Biochemical Mechanisms (3 cr.) P: One year of physical chemistry and 651. The chemical basis of enzymatic catalysis with particular emphasis on catalytic interactions important in aqueous media.

641 Advanced Inorganic Chemistry (3 cr.) P: C430 or 542 or equivalent or consent of instructor. Applications of symmetry and group theory to structure, bonding and spectral properties of inorganic compounds. Advanced topics in main group and transition element chemistry including determination of structure from physical and spectroscopic properties, bonding in coordination, and organometallic compounds and inorganic reaction mechanisms.

651 Advanced Organic Chemistry (3 cr.) P: 342 or equivalent. Modern structural organic chemistry. Introduction to bonding theory, stereochemistry, and computational chemistry.

652 Synthetic Organic Chemistry (3 cr.) P: 651 or 657. An advanced treatment of methods for preparing major types of organic functionalities and bonds, stressing stereochemical and regiochemical control, and employing mechanistic organic chemistry for understanding choice of reagents and reactions conditions.

657 Reaction Mechanisms (3 cr.) P: 342 or equivalent or consent of instructor. Modern structural organic chemistry, introduction to physical organic chemistry, mechanisms of representative reactions, and methods used for understanding reactivity in organic transformations.

672 Quantum Chemistry (3 cr.) P: One year of physical chemistry. Equiv. IU CHEM C661. Basic principles of classical and quantum mechanics; approximation methods; atomic structure; spectroscopy; application of group theory; theory of molecular bonding.

675 Chemical Kinetics (2 or 3 cr.) P: One year of physical chemistry. Equiv. IU CHEM C673. Experimental and theoretical considerations of chemical reaction rates and mechanisms.

682 Statistical Thermodynamics (3 cr.) P: C362 or equivalent. Application of statistical mechanics to the description of imperfect gases, liquids, and solutions, to order-disorder phenomena in solids and surfaces; Monte Carlo techniques and molecular dynamics.

696 Special Topics in Chemistry (1-3 cr.) P: Bachelor of Science in Chemistry from an accredited institution or consent of instructor. Lectures on selected topics of current interest, as follows:

Analysis and Characterization of Synthetic Polymers A description of the principles and techniques of solution characterization and molecular weight methods, polymer spectroscopy, thermal analysis, and evaluation of mechanical properties.

Analytical Spectroscopy Survey of modern techniques, applications of spectroscopy and imaging in analytical chemistry.

Applied Computational Chemistry and Molecular Modeling Applied computational techniques that are widely used in the chemical and pharmaceutical industry, including computational chemistry, molecular modeling and computer-aided synthesis.

Bioanalytical Chemistry Modern techniques for the study of biological macromolecules, such as protein and peptides, carbohydrates, DNA, RNA, and lipids, including (1) spectroscopy (UV-Vis, Raman, NMR, mass spectrometry, and light scattering); (2) bioseparations (chromatography, electrophoresis, and microdialysis); (3) electrochemistry (sensors, electron transfer, and LCEC); (4) miscellaneous topics (amino acid analysis, sequencing, microcalorimetry, and immunochemistry).

Biochemistry-Dynamic Aspects Mechanisms of biological catalysis, metabolism, biosynthesis, regulation of genetic information, and molecular biology.

Bioelectrochemistry Principles of electrochemical measurements including potentiometry, amperometry and linear sweep and cyclic voltammetry and application to the study and utilization of biological molecules. Topics covered include redox transformations in biological systems, electron transfer between electrodes and biological molecules, and electrochemical sensors for detection and quantitation of biological analytes.

Bioinorganic Chemistry A study of the occurrence, properties, and mechanistic roles of transition and main group elements in biological processes including photosynthesis, oxygen evolution, respiration, nitrogen fixation, metabolic detoxification, and electron transfer.

Bioorganic Chemistry Structure and reactivity of biological macromolecules, such as proteins, enzymes, and nucleic acids, and their relevance to bioorganic chemistry. Current experimental studies of enzymes, nucleic acids, and model systems.

Biomaterials Introduction to the field of biomaterials science including chemistry, physics, and engineering of biomaterials; biological and biochemical aspects of biomaterials; and biomaterials in medicine.

Biophysical Chemistry The study of structure and properties of biologically important macromolecules in solution using physical techniques, with special emphasis on optical, fluorescence, and magnetic resonance spectroscopy to describe protein conformation, denaturation, catalytic center structure, thermodynamics of ligand binding, time dependent processes, and membrane properties.

Chemical Information Technology Overview of chemical informatics techniques, including chemical information and data systems, chemical structure and data representation and search systems, and bioinformatics techniques.

Electroanalytical Chemistry Principles of modern methods of electroanalytical chemistry and quantitative applications to electrode reaction mechanisms and analytical determinations.

Medicinal Chemistry The application of basic concepts of organic chemistry, biochemistry, and pharmacology to the design of organic medicinal agents as well as recent advances in synthesis and evaluation of pharmaceuticals.

Organometallics in Organic Synthesis

Recent developments in the use of transition metals in synthetic organic methodology. Emphasis is placed on applications of methods in the synthesis of complex organic molecules.

Protein Structure and Function Physical forces stabilizing protein structure; protein folding. Essential features of macromolecular interactions. Introduction to enzyme kinetics and chemical mechanism in enzyme reactions.

Group Theory in Chemistry This course is on molecular symmetry and how we obtain information about the quantum states of molecules through application of group theoretical techniques related to the symmetries of molecules.

698 Research M.S. Thesis (cr. arr.)

699 Research Ph.D. Thesis (cr. arr.)

Department of Computer and Information Science

IUPUI
Engineering, Science and Technology Building, SL 280
723 W. Michigan Street
Indianapolis, IN 46202-5132

(317) 274-9727, FAX (317) 274-9742
www.cs.iupui.edu

Academic Advising Appointments: Please call the department.

Professors Bukhres, Chin, W. Liu, Palalak
(*Chairperson*)

Professor and Dean Emeritus Yovits

Associate Professors Mukhopadhyay, Olson
(*Associate Chairperson*), Patterson, Tuceryan, Zheng

Assistant Professors Fang, Huang, Z. Liu, Rajee,

Lecturers Harris, Molnar, Roberts

Adjunct Professors Mostafa, Pidaparti

The department offers Purdue University Bachelor of Science and Master of Science degrees. It also offers a Certificate of Applied Computing. Students interested in research may arrange to pursue a Doctor of Philosophy degree through the Purdue University Graduate School. The programs of study emphasize the basic principles of computing and information processing, which include the creation, representation, storage, transformation, and transmission of information. Since computers are used in all segments of society, the theory and practice of computer and information science are pervasive and the field is, therefore, interdisciplinary. It is also young and dynamic, as evidenced by the growth of the computer industry, so the curriculum itself evolves rapidly.

Bachelor of Science

Students completing the undergraduate degree in computer and information science will have acquired a fundamental understanding of computing, information processing, and information communication. The department's graduates serve in a variety of programming, software engineering, database administration, systems analysis, management, and research positions.

Degree Requirements

See the School of Science requirements under "Undergraduate Programs" in this bulletin for the general and area degree requirements. Computer science majors are admitted only provisionally to the program until they have completed MATH 163 and CSCI 230 and 240 with a grade point average of 2.7 or higher for the three courses. Please note that computer and information science courses below CSCI 230 or CSCI N311, mathematics courses below MATH 163, and statistics courses below STAT 311 are not credited toward the degree. Furthermore, the School of Science will not accept certain university courses for the computer science degree program. The Bachelor of Science degree program in computer science requires a minimum of 124 credit hours.

Area I English Composition and Communication Skills See the School of Science requirements under "Undergraduate Programs" in this bulletin for details.

English W131 Elementary Composition I

Communications R110 Fundamentals of Speech

The second semester of English composition *must* be satisfied with:

TCM 320 Written Communication in Science and Industry.

Area II Foreign Language There is no foreign language required for the B. S. degree.

Area IIIA Humanities, Social Sciences, and Comparative World Cultures The information about the IIIA requirements in the School of Science part of this bulletin lists courses that may be used to satisfy the requirements below. Consult a departmental advisor before registering for these courses.

HIST H114 History of Western Civilization II

and at least one course from *each* of the following three lists is required:

Humanities

Social Sciences

Comparative World Cultures

Area IIIB Junior/Senior Integrator (3 cr.) See School of Science requirements in this bulletin for more details.

Area IIIC Physical and Biological Sciences The Department of Computer and Information Science requires *five* courses chosen from the areas of biology, chemistry, geology, and physics, or from certain courses in engineering. This experience *must* include a designated laboratory component. Each course that counts as one of the five required courses *must* have a lecture component and be at least 3 credit hours. Students pursuing the minor in business will substitute one business course for one non-laboratory science course. Courses that *may not* be used to fulfill Area IIIC requirements include: BIOL N100, N107, N120, N200, K309; CHEM C100, C101, C102, C110; PHYS 010, 100, 140, 200, 218, 219, P201, P202; AST A100, A105, A130; GEOL G107, G115, G130, G132; and all agriculture and geography courses. Consult a departmental academic advisor concerning the acceptability of other courses. The following engineering courses *may* be applied toward Area IIIC requirements: EE 201, 202, and 266. Laboratory courses without a lecture component may be taken for credit but do not count toward the five-course requirement.

Area IIID Mathematical Sciences Completing the conditions described in "Major Requirements" below will satisfy these requirements. Mathematically-oriented or computer-oriented courses in other schools *cannot* be used to fulfill these requirements. They may not count towards the degree in computer science either. Consult a departmental advisor before registering for such courses.

Area IV Major Requirements Minimum requirements are 71-72 credit hours of designated computer science and mathematics courses. Students who do not maintain a minimum GPA of 2.5 in MATH 163, 164, and 261 and in CSCI 230, 240, 300, and 340 will not be permitted to continue as departmental majors.

Computer and Information Science Program Tracks

Two tracks are available in the computer and information science degree program: the Computing Science Track and the Scientific Computing Track.

The **Computing Science Track** provides a strong theoretical foundation in modern computing combined with hands-on learning experiences in database systems, networking, operating systems, programming languages, and software project

management. Students will learn problem-solving skills required in the fields of business, industry, health, and education.

The **Scientific Computing Track** is a sequence of six courses that uses scientific methods and the computer for problem solving in science and engineering disciplines. Scientific philosophy and methodology, data analysis, statistical inference, experimental design, computation, visualization, and modeling techniques will be thoroughly integrated. This interdisciplinary track requires a fundamental knowledge of chemistry, physics, or engineering. Students are strongly encouraged to satisfy their Area IIC requirements with these related courses.

Both tracks require the following courses:

1. SCI 120
2. The calculus sequence MATH 163, 164, 261; and MATH 351 or 511.
3. CSCI 230, 240, 265, 300, 340, 355, 362, 402, 403, 450, and at least 3 credits for a single project in 495.

Additional track requirements are as follows:

Computing Science Track	Scientific Computing Track
STAT 311 or 511	MATH 262 CSCI 475
CSCI 470	MATH 426 CSCI 476
CSCI/MATH 414	CSCI 437 CSCI 477
CSCI electives (9 credit hours)	

Note: The CSCI 475 and CSCI 476 course sequence may be substituted for STAT 311 or STAT 511 and CSCI/MATH 414.

The department strongly urges that elective and required area courses be chosen to form a cohesive support area for the applications of computer and information sciences.

Minor in Computer and Information Science

The undergraduate minor in computer and information science requires at least 20 credit hours in computer science courses, including CSCI 230, 240, 265, 300, 340, and 362. Course prerequisites must be fulfilled *prior* to enrollment in CSCI courses.

A minimum GPA of 2.5 must be maintained in these courses. At least 9 credit hours of the minor must be taken at IUPUI.

Students who wish to pursue a minor in computer and information science must consult with a department advisor, who can be reached at (317) 274-9727. They must also file a formal application.

Minor in Business

The School of Business grants a minor in business to computer and information science students. This requires 16 credit hours of business courses and 24 credit hours of related courses. The business courses are distributed as free elective credit toward the total of 124 credit hours needed for a bachelor's degree. The requirements for a business minor include the following courses:

Business courses

1. BUS A100, A201, and A202 are to be taken as prerequisite courses; a GPA of 2.3 (C+) in these courses is required.

2. BUS F301, M301, and P301 are to be taken concurrently after completing the prerequisite courses.

Related courses

1. MATH 163.
2. STAT 311 or STAT 511.
3. ECON E201 and ECON E202.
4. CSCI 230, CSCI 443, and CSCI 541.

Certificate in Applied Computer Science

The certificate program introduces computer science principles, develops practical skills in market-driven software applications and prepares students to be successful with emerging technologies. The program is designed to supplement and enhance a primary degree program. It serves current IUPUI students and returning adults who are interested in gaining knowledge and skills in computing applications.

Those who earn the certificate will have demonstrated that they have the core competencies necessary for entry-level positions in information technology. They will have the ability to solve complex problems, design and implement algorithms, apply computer science theory to practical problems, adapt to technological change and to program in at least two languages.

Admission Requirements

A cumulative GPA of at least 2.0.

Junior standing, and

Successful completion (no grade below C-) of: MATH M118 Finite Mathematics, or equivalent CSCI N201 Programming Concepts CSCI N241 Introduction to Web Design

Students must declare their intent to earn this certificate prior to completing the core requirements (9 credit hours) described below. No more than 9 credit hours earned prior to admission to the program will be accepted toward certification.

Program Requirements

Students are required to successfully complete 18 credit hours (six courses) to earn the certificate. Three courses are core requirements and three courses are advanced electives. Core requirements must be completed prior to enrolling in the advanced electives. No individual grade below a C- is acceptable toward certification. At least 9 credit hours in the certificate program must be taken in the Department of Computer and Information Science. A GPA of at least 2.0 is required for the complete certificate program.

Required Core CSCI Courses (9 credit hours):

- N301 Fundamental Computer Science Concepts
- N341 Client Side Web Programming
- N485 Capstone Project in Applied Computing

Advanced Electives (9 credit hours):

Students must successfully complete three of the following CSCI courses. Each is worth 3 credits. Other courses may apply with approval from the advisor.

- N305 C Language Programming
- N311 Advanced Database Programming, Oracle
- N321 System and Network Administration
- N335 Advanced Programming, Visual Basic
- N345 Advanced Programming, Java
- N351 Introduction to Multimedia Programming
- N355 Introduction to Virtual Reality
- N399 Topics in Computing

To enroll in this program, students must be formally admitted by the Office of Admissions on the IUPUI campus. Applications for admission to the Certificate of Applied Computer Science program are available in the offices of the Dean of the School of Science or the Department of Computer and Information Science. Credit may be given for applicable courses taken at other colleges or universities. In general, courses of the Certificate Program do not apply toward the degree programs in computer science. However, those numbered N311 and above may count as general electives in the B. S. program with the approval of the advisor *prior* to enrolling.

Sample Program for B.S. Degree (124 cr. required)

Freshman Year

First Semester	
CSCI 230 Computing I	4
MATH 163 Integrated Calculus and Analytic Geometry I	5
ENG W131 Elementary Composition I	3
Free Elective	3
SCI120 Windows on Science	1
	<hr/> 16

Second Semester

CSCI 240 Computing II	4
CSCI 265 Advanced Programming	3
MATH 164 Integrated Calculus and Analytic Geometry II	5
HIST H114 History of Western Civilization II	3
	<hr/> 15

Sophomore Year

Third Semester

CSCI 300 Systems Programming	3
CSCI 340 Discrete Computational Structures	3
MATH 261 Multivariate Calculus	4
COMM R110 Fundamentals of Speech Communication	3
Physical or Biological Laboratory Science	4-5
	<hr/> 17-18

Fourth Semester

CSCI 355 Introduction to Programming Languages	3
CSCI 362 Data Structures	3
MATH 511 Linear Algebra with Applications	3
TCM 320 Written Communication in Science and Industry	3
Humanities—List H	3
	<hr/> 15

Junior Year

Fifth Semester

CSCI 402 Architecture of Computers	3
CSCI 470 Automata and Formal Languages	3
CSCI/MATH 414 Numerical Methods	3
Physical or Biological Science	3-5
Social Sciences—List S	3
	<hr/> 15-17

Sixth Semester

CSCI 403 Introduction to Operating Systems	3
STAT 311 Introductory Probability or STAT 511 Statistical Methods	3
CSCI Advanced Elective	3
Physical or Biological Science	3-5
Comparative World Cultures—List C	3
	<hr/> 15-17

Senior Year**Seventh Semester**

CSCI 450 Principles of Software Engineering	3
CSCI 495 Explorations in Applied Computing	3
Physical or Biological Science	3-5
Free Electives	<u>6</u>
	15-17

Eighth Semester

CSCI Advanced Electives	6
Junior/Senior Integrator	3
Physical or Biological Science	3-5
Free Elective	3
CAND 991 Candidate for Graduation	<u>0</u>
	15-17

Master of Science

This program leads to a Master of Science degree from Purdue University. Many courses are offered in the late afternoon or evening to accommodate working students.

Computer science continues to evolve rapidly so research experiences are an essential aspect of graduate study. Students will expand their knowledge of modern computing and pursue either a research thesis or project. Students are expected to work closely with their faculty advisor and to contribute to the growth of knowledge in the field.

Application for Admission

Submit applications for admission to the graduate program directly to the Department of Computer and Information Science. Applications should be complete by May 1 for the following fall semester and October 15 for the following spring semester. To be considered for departmental graduate assistance, all application materials must be received by January 15 for the following fall semester or September 15 for the following spring semester. Apply early because it *may* take up to six months to complete the application process. See the department's Web site for additional information.

Students interested in advanced study or students who are required to complete preparatory courses and are waiting on application processing may take courses as graduate non-degree students. However, no more than 12 graduate credit hours earned as a non-degree student may be counted toward a graduate degree program. For guidelines and applications, contact the IUPUI Graduate Office, Union Building, 620 N. Union Drive, IUPUI, Indianapolis, IN 46202-5167; phone (317) 274-4023.

General Admission Requirements

The applicant to the graduate program must have a bachelor's or equivalent degree.

The applicant's record should exhibit outstanding achievement as indicated by the grade point average for each degree over his or her entire academic record. An applicant is expected to have a GPA of at least a 3.0 on a scale of 4.0 (letter grade A). The record should also demonstrate strong individual accomplishments and recommendations from independent references.

All applicants must submit their scores on the General Aptitude Test of the Graduate Record Examination

(GRE). The applicants are strongly encouraged to submit scores for the Computer Science subject test also.

All applicants should have a background in the following core areas of computer science:

- Software development experience in a high-level language
- Data structures and algorithms
- Systems (operating systems, compilers, and programming languages)
- Theory (discrete math and theory of computation)
- Hardware (computer architecture)

In addition, applicants should have a strong background in mathematics, including calculus, linear algebra, and in numerical computations.

All applicants whose native language is not English must submit a Test of English as a Foreign Language (TOEFL) score of at least 580 or pass an equivalent test administered by the university.

Provisional Admission

Those students who do not satisfy the admission requirements may request **provisional admission only** to the Graduate Program if they satisfy the following requirements:

possess a bachelor's degree with a cumulative GPA of 3.0/4.0

and

have taken 5 semester hour credits of calculus (MATH 163 or equivalent)

and

CSCI 265 (C++) or equivalent experience or credit

If provisional admission to the Graduate Program in Computer Science is granted, the student will be required to satisfy the stipulations of the admission, which may include satisfactorily completing one or more courses, before admission without provisions is granted.

Requirements for the Master of Science Degree in Computer Science

To receive the Master of Science degree, the applicant must be admitted as a graduate student **without provisions** and complete 30 semester credit hours of study in CSCI courses numbered 500 or above, at least 6 credit hours of which must be from the following core courses:

- 503 Operating Systems
- 504 Concepts in Computer Organization
- 565 Programming Languages
- 580 Algorithm Design, Analysis, and Implementation

Each student is required to submit to the Graduate Committee for approval an initial plan of study during the first year in the program. This is prepared in consultation with the faculty advisor. *Prior* to the semester of expected graduation, the student's formal plan of study must be submitted to, and accepted by, the Purdue University Graduate School. Each student must register in CAND 991 for 0 credits during the final semester before graduation.

Credit for Courses from Outside the Department

Credit for graduate courses taken at other institutions may be transferred with the approval of the Graduate Committee and the Graduate School if the courses have not been used for other degree requirements. Transfer credits are normally limited to 6 credit hours and are restricted to courses in which the grade is B or better. Up to 6 credit hours of graduate credit from a closely related discipline may be used to substitute for the elective courses subject to approval by the department prior to enrolling in them.

Assessment

The student's Graduate Examination Committee will examine the student's project or thesis and general proficiency in computer science. Grades of A and B are expected; up to 6 credit hours of C may be included provided an overall GPA of 3.0 (B) is maintained. Other grades are unacceptable.

Programs of Study

The department offers two programs of study within its M.S. Program: the Research Program and the Applied Program.

The objective of the Research Program is to develop a general knowledge of computer science, depth in a specific area, and an ability to do independent research. The student learns research techniques by working in close cooperation with a faculty member while doing the thesis research. In addition to the two core courses and 6 to 9 credit hours of thesis work, the student completes a sufficient number of electives from the department's graduate level courses to satisfy the requirement of 30 credits hours total.

The objective of the Applied Program is to develop skills and knowledge of the computer science fundamentals and an ability to apply these to practical problems. In addition to the two core courses, it requires at least two courses in a specialization, 3 to 6 credits of work in the project course, 695, and a sufficient number of electives from the department's graduate courses to complete the requirement of 30 credits hours. The course work is designed to provide breadth of knowledge to the professional as well as specialized knowledge in the areas that the project will require. The project normally involves at least two semesters of intensive work on an application of the course material to a problem of practical importance. This might be a project from the student's work environment, internship, or a faculty member's work. Its objective is generally of a more immediately practical nature than the thesis in the Research Program. The student carries out the project under the supervision of a faculty member.

The Applied Program offers a menu of courses from which the individual selects one or more specializations to prepare for the proposed project. To define a specialization, the graduate advisor and student identify on the plan of study two or more courses that provide depth in a cohesive theme.

Doctor of Philosophy

Students interested in research in certain areas and who qualify may be admitted to pursue a Ph.D. degree. Information on the general nature of the program appears in the "Graduate Programs" section of this bulletin. Consult the department for more specific information on how this might be arranged.

Courses in Computer and Information Science (CSCI)

Note: P—prerequisite; C—corequisite; R—recommended; Fall—offered fall semester; Spring—offered spring semester; Summer—offered in the summer session.

Undergraduate Level

Courses numbered with N are primarily for majors outside of computer science. They do not satisfy the major or minor requirements in computer science.

N100-Level Courses

Courses in this category are primarily for majors outside of science. They are especially for those who are not familiar with computers. These courses do not satisfy the computer science course requirement for School of Science majors. Science majors may use them for general elective credit with their department's approval.

N100 Introduction to Computers and Computing (3 cr.) P or C: MATH M010. No computing experience assumed. How computers work, word processing, spreadsheets, file management, and Internet skills. Emphasis on problem solving techniques. Lecture and laboratory. Credit given for only one of CSCI N100, CPT 106, or BUS K201.

N199 Introductory Computing Topics (topic varies) (1-3 cr.) Seminars in emerging technologies. May be repeated for credit.

N200-Level Courses

Courses in this category or higher levels satisfy the computer science course requirement for School of Science majors with the major department's approval. They assume some previous use of computers. Consult your faculty advisor before registering.

N201 Programming Concepts (3 cr.) Summary of basic computing topics, problem solving techniques, and their application to computing. Introduction to programming concepts with a focus on language-independent principles such as algorithm design, debugging strategies, essential control structures, and basic data structure concepts. Lecture and laboratory.

N205 Computing for the Paralegal (3 cr.) Summary of basic computing topics, problem solving techniques, and their application to computing. Introduction to software and problem solving methods of special interest to those entering the paralegal profession. Jointly offered with the Continuing Studies Paralegal Program. Lecture and Laboratory.

N207 Data Analysis Using Spreadsheets (3 cr.) P: MATH 111. Summary of basic computing topics. An introduction to data analysis using spreadsheets. Emphasis on the application of computational problem solving techniques. Lecture and laboratory.

N211 Introduction to Databases (3 cr.) Summary of basic computing topics. Introduction to database design concepts, creation of user forms, development of databases, querying techniques, and building

reports. Focus on relational database systems from development and administration point of view. Lecture and laboratory.

N241 Introduction to Web Design (3 cr.) Summary of basic computing topics. Introduction to the Internet and the World Wide Web. Emphasis on standard protocols, levels of connectivity, generating html documents with standard text editing tools, basic UNIX skills. Lecture and laboratory.

N299 Survey of Computing Applications (topic varies) (1-3 cr.) An introduction to an emerging technology in the computing field. It will emphasize the various problems technology helps to solve and specific problem solving strategies. Lecture and laboratory. May be repeated for credit.

N300-Level Courses

Prerequisite for all N300-level courses: one CSCI course at the N200 level or equivalent.

N301 Fundamental Computer Science Concepts (3 cr.) P: MATH M118. An introduction to fundamental principles of computer science, including hardware architecture, algorithms, software engineering, and data storage. Lecture and laboratory.

N305 C Language Programming (3 cr.) The basics of computer programming concepts using the C programming language. Emphasis on problem solving and algorithm implementation using a universal subset of the C programming language. Lecture and laboratory.

N307 Introduction to Programming Using Java (3 cr.) P: CSCI N241 or equivalent. Introduction to programming concepts focusing on the Java language. Essential algorithm design, basic program control concepts, essential data concepts, debugging and testing programs. The course will also include object-oriented programming, creating user interfaces, event handling, and multi-platform programming issues. *This course is primarily for students in the School of Informatics.*

In some cases, courses of level N311 or higher may be used as general elective credit by computer science majors with the prior approval of the department. You must consult your faculty advisor before registering.

N311 Advanced Database Programming, Oracle (3 cr.) P: CSCI N211 or equivalent. Focus on the concepts and skills required for database programming and client server development. Concepts will apply to any modern distributed database management system. Emphasis on developing Oracle SQLPlus scripts, PL/SQL server side programming, and Oracle database architecture. Students with programming experience in ODBC compliant languages will be able to practice connecting such languages to an Oracle database. Lecture and laboratory.

N321 System and Network Administration (3 cr.) P: CSCI N301 or equivalent. Fundamental concepts of system administration. Design and administration of network servers and workstations. Focus on basic network concepts such as user account administration, resource allocation, security issues, and Internet service management. Lecture and laboratory.

N323 Communication Security and Network Controls (3 cr.) P: CSCI N301 or equivalent. Conventional encryption, and many hardware, software, and managerial controls needed to operate a data communication network in a safe and secure manner. Emphasis is on security attacks, malicious programs, authentication, and availability. In addition, legal and ethical issues are covered.

N325 Design and Implementation of Local Area Networks (3 cr.) P: CSCI N301 or equivalent. The design, implementation, and configuration of local area networks. Working in groups, students install the necessary hardware and software to set up a LAN server with several clients. Students will explore topics including inter-networking, network management, network performance, and security.

N327 Communication Network Design (3 cr.) P: CSCI N301 or equivalent. An introduction to wide area networking, which is a technology used to extend telecommunications connectivity for information distribution over large geographic regions. Topics include architecture, design (including Frame Relay and ATM), and implementation, as well as the influence of the state and federal regulatory environments.

N331 Visual Basic Programming (3 cr.) An introduction to programming with a focus on rapid application development environments, event-driven programming, and programming in the Windows environment. Course will demonstrate how the major application types (spreadsheets, databases, text editors) are written. Lecture and laboratory.

N335 Advanced Programming, Visual Basic (3 cr.) P: N331 or equivalent. Databases and VB, object-oriented design and practice, the component object model, inter-object communication, related RAD environments such as VB for Applications and ActiveX using the Windows API, and generating online help. Lecture and laboratory.

N341 Web Programming (3 cr.) P: N241 or equivalent. Introduction to programming focusing on the World Wide Web. Essential algorithm design, client-side programming using languages such as JavaScript, interface technologies (including CGI interface), server-side programming with languages such as Perl, and an introduction to other languages and techniques of Web development. Lecture and laboratory.

N345 Advanced Programming, Java (3 cr.) P: N307 or N331 or N341 or equivalent. A Java language course designed for students familiar with programming and the World Wide Web. Focus on the unique aspects of Java, Applet, and GUI design, object-oriented programming, event-handling, multi-threaded applications, animation, and network programming. Lecture and laboratory.

N351 Introduction to Multimedia Programming (3 cr.) An integration of computing concepts and multimedia development tools. An introduction to the science behind multimedia (compression algorithms and digital/audio conversion). Use of authoring tools to create compositions of images, sounds, and video. Special emphasis given to using the Web as a multimedia presentation environment. Lecture and laboratory.

N355 Introduction to Virtual Reality (3 cr.)

Explore concepts of 3D imaging and design including primitive shapes, transformations, extrusions, facesets, texture mapping, shading, and scripting. Lecture and laboratory.

N399 Topics in Computing (topic varies)

(1-3 cr.) P: CSCI N200-level course or equivalent. An investigation of an emerging language or topic in computing. May be repeated for credit.

N485 Capstone Project in Applied Computing (3 cr.)

P: CSCI N301 and N341. This course provides students with a mechanism for producing and integrating technical achievement meritorious of program culmination. The project shall demonstrate subject matter mastery in project development guidelines, and reflect both a breadth and depth of technically focused problem-solving skills.

N499 Topics in Applied Computing (topic varies)

(1-3 cr.) P: CSCI N300-level course or equivalent. An investigation and examination of an emerging discipline in applied computer science.

Courses for Majors**230 Computing I (4 cr.)**

P or C: MATH 163. The context of computing in history and society; information representation in digital computers; introduction to programming in a modern high-level language; introduction to algorithms and data structures; their analysis and implementation as programs.

240 Computing II (4 cr.) P: 230. Overview of computer architecture; fundamentals of operating systems; introduction to programming languages; file organization and database concepts; social and ethical issues in computing.

242 Computing II for Engineers (2 cr.) Overview of fundamentals of operating systems; introduction to programming languages, file organization, and database concepts.

265 Advanced Programming (3 cr.) P or C: 240. Fall, Spring. The primary objective of the course is to teach students advanced programming skills and concepts. Introduction to the principles of software engineering; problem specification and program design with emphasis on object-oriented programming, programming style, debugging, and documentation. A significant software development project is required.

300 Systems Programming (3 cr.) P or C: 240 and 265. Fall. Assembly language programming and structure of a simple and a typical computer. Pseudo operations, address structure, subroutines, and macros. File I/O and buffering techniques. Interfacing with high-level languages. Assemblers: one and two pass assemblers, system dependent and independent assembler features, design options. Loaders, linkers, and macro processors.

340 Discrete Computational Structures (3 cr.)

P: 240 and MATH 164. Fall. Theory and application of discrete mathematics structures and their relationship to computer science. Topics include sets, relations, functions, permutations, combinatorics, graphs, trees, Boolean algebra, recurrence relations, group theory, and finite-state automata.

355 Introduction to Programming Languages (3 cr.)

P: 265 and 340. Spring. Programming language concepts and different paradigms of

programming. Topics include syntax and semantics of high-level languages, parsing methods, subprograms and their implementation, data abstraction, language translation overview including lexical analysis, syntax-directed translation, symbol table handling, code generation, functional programming, logic programming, and object-oriented programming.

362 Data Structures (3 cr.)

P: 265 and 340. Spring. A study of the design and analysis of data structures and algorithms. Abstract data types: arrays, stacks, queues, lists, trees, graphs. Algorithms: sorting, searching, hashing. File structures: organization and access methods.

402 Architecture of Computers (3 cr.)

P: 340. Fall. Basic logic design. Storage systems. Processor organization: instruction formats, addressing modes, subroutines, hardware and microprogramming implementation. Computer arithmetic, fixed and floating point operations. Properties of I/O devices and their controllers. Interrupt structure. Virtual memory structure, cache memory. Examination of architectures such as microcomputers, minicomputers, vector and array processors.

403 Introduction to Operating Systems (3 cr.)

P: 300, 362, and 402. Spring. Operating system concepts; history, evolution and philosophy of operating systems. Concurrent processes, process coordination and synchronization, CPU scheduling, deadlocks, memory management, virtual memory, secondary storage and file management, device management, security and protection, networking, distributed and real-time systems.

414 Numerical Methods (MATH 414) (3 cr.)

P: MATH 262 or MATH 351. Fall. Error analysis, solution of nonlinear equations, direct and iterative methods for solving linear systems, approximation of functions, numerical differentiation and integration, numerical solution of ordinary differential equations. Not open to students with credit in 512.

436 Principles of Computer Networking (3 cr.)

Survey of underlying principles, fundamental problems, and their solutions in designing computer networks. Laboratory projects include using network systems and network simulation environments. Topics include: motivations, networking topologies, layered open systems protocols, transmission capacity, circuit and packet switching, packet framing and error correction, routing, flow and congestion control, and internetworking.

437 Introduction to Computer Graphics (3 cr.)

P: 362, and MATH 262 or MATH 351. Spring. An introduction to graphics hardware; implementation and interaction with operating systems. Mathematical aspects of computer graphics: 2D and 3D transformations, homogeneous coordinates, clipping, 3D views and hidden line removal, 3D realistic viewing. High-level issues in user-interface design, application of computer graphics in science and industry, and application software packages.

443 Database Systems (3 cr.)

P: 362. Fall. Relational database systems: architecture, theory, and application. Relational data structure, integrity rules, mathematical description, data manipulation. Standard SQL and its data manipulation language, engineering aspects of database design in industry, introduction to non-relational database systems.

446 Introduction to Microprocessor

Architecture (3 cr.) P: 402. Introduction to programmable logic; elements of microprocessor system design; interrupt structures; interfacing using LSI devices; hardware timers; interactive debugging; physical device I/O programming; vectored and polled service; microprocessor architecture; self-paced laboratory using A/D converters, D/A converters, etc.

450 Principles of Software Engineering (3 cr.)

P: 355 and 362. Fall. Tools and techniques used in software development. Lifecycle concepts applied to program specification, development, and maintenance. Topics include overall design principles in software development; the use of structured programming techniques in writing large programs; formal methods of program verification; techniques and software tools for program testing, maintenance, and documentation.

452 Object-Oriented Analysis and Design (3 cr.)

P: 355 and 362. Spring. Introduction to the object-oriented paradigm in software development. Basic concepts: objects, classes, messaging, inheritance, methodologies. Analysis: defining objects, structures, attributes, services. Design: transforming the analytic model into the design model. Implementation: comparison of the support features provided by languages such as Smalltalk, C++, Eiffel, and CLOS. A significant design project.

463 Analysis of Algorithms (3 cr.)

P: 362. Techniques for analyzing and comparing algorithms. Average case analysis in sorting and searching; dynamic programming: greedy algorithms, amortized analysis, and applications; matrix algorithms: polynomials, discrete Fourier transforms, and fast Fourier transforms; parallel algorithms: examples in sorting, searching, graphs, and matrices; computational complexity, polynomial complexity classes P, NP.

470 Automata and Formal Languages (3 cr.)

P: 362. Fall. Introduction to formal languages and automata theory: finite automata and regular expressions, context-free grammars and languages, pushdown automata, equivalence of CFGs and pushdown automata, application of pushdown automata in parsing, closure properties, pumping lemmas, decision procedures, Turing machines, computability, undecidability, and a brief survey of the Chomsky hierarchy.

475 Scientific Computing I (3 cr.)

P: 230 and MATH 351. P or C: MATH 262. Fall. Solving scientific problems on computers. Languages for scientific computing. Software development on workstations: using tools the environment provides, organization of programs. Computer architecture: impact on software and algorithms. Problem formulation: model selection/simplification, relationship to numerical methods. Solution of linear equations: methods and packages. Nonlinear equations and optimization problems.

476 Scientific Computing II (3 cr.)

P: 475. Spring. Elementary statistical computing: time series analysis, model fitting, robust methods, generation of pseudorandom numbers, and Monte Carlo methods. Interpolation and curve fitting; numerical integration. Solving ordinary differential equations. Use of packaged environments and symbolic computation for scientific purposes.

477 High Performance Computing (3 cr.) P: 476. Fall. Architecture of supercomputers: pipelined, vector, SIMD, MIMD; implications for algorithm and program design; vectorization, parallelization, loop restructuring, nonstandard language features. Splitting computation between supercomputers and workstations; interactive analyses of remote machines' output. Numerical methods for large-scale problems: examples from continuum mechanics, graphical visualization, statistical computing. A project is required.

485 Expert System Design (3 cr.) P: 362. Overview of artificial intelligence; expert system technology; early expert systems: MYCIN, DENDRAL; theoretical foundations, uncertainty measures, knowledge representation, inference engines; reasoning mechanisms: forward and backward chaining; explanation systems, expert system shells, tools, and intelligent hybrid systems.

487 Artificial Intelligence (3 cr.) P: 362. Study of key concepts and applications of artificial intelligence. Problem-solving methods, state space search, heuristic search, knowledge representation: predicate logic, resolution, natural deduction, nonmonotonic reasoning, semantic networks, conceptual dependency, frames, scripts, and statistical reasoning; advanced AI topics in game playing, planning, learning, and connectionist models.

490 Topics in Computer Sciences for Undergraduates (1-5 cr.) By arrangement. Fall, spring, summer. Supervised reading and reports in various fields. Open to students only with the consent of the department.

495 Explorations in Applied Computing (1-6 cr.) Fall, spring, summer. Explorations in Applied Computing is an undergraduate capstone experience. Students will work in teams, advised by faculty and external liaisons, to solve real-world computing problems. This hands-on experience will cultivate technical expertise, utilization of analytical thinking, quantitative reasoning, project management skills, and communication skills.

Undergraduate and Graduate Level

These courses require admission to the graduate program or permission of the department.

**Course pending approval.*

502 Compiling and Programming Systems (3 cr.) P: 300. R: 470. Fall. Basic principles of compilers and compiler design; control of translation, loading, and execution; symbolic coding systems; lexical and syntactic analysis; design and operation of assemblers and macroprocessors; design of interpretive systems. Students are expected to complete a large programming project as part of the course.

503 Operating Systems (3 cr.) P: 403. Spring. Basic principles of operating systems: addressing modes, indexing, relative addressing, indirect addressing, stack maintenance; implementation of multitask systems; control and coordination of tasks, deadlocks, synchronization, mutual exclusion; storage management, segmentation, paging, virtual memory, protection, sharing, access control; file systems; resource management; evaluation and prediction of performance.

504 Concepts in Computer Organization (3 cr.) P: 402. The fundamentals of computer hardware for computer scientists. An overview of the organization of modern computers, ranging from sequential to advanced machines. CISC, RISC, and vector processors; multiprocessors; virtual storage, hierarchical memory; interaction with O/S; connection models; high-level programming support; cost/performance analysis.

506 Management of the Software Development Process (3 cr.) A survey of the fundamental principles and concepts of managing a software project. Topics include life cycle models, standards and goals, cost estimation, risk analysis, tool use, component reuse, traceability, metrics, process control and improvement. Students are required to apply management concepts using a project-based approach.

507 Object-Oriented Design and Programming (3 cr.) An advanced exploration of the object-oriented model and programming. Topics range from a review of the object model to advanced concepts such as abstraction mechanisms, standard library/packages, OO design using an OO language, the syntax and the semantics of constructs.

512 Numerical Methods for Engineers and Scientists (3 cr.) P: MATH 351 or MATH 511; MATH 510; and knowledge of programming. Not open to students with credit in 414. Not normally accepted for graduate credit in computer science programs. A survey of the useful methods of computation. Solution of nonlinear equations and systems of nonlinear equations. Numerical methods for systems of linear equations. Approximate differentiation and integration. Numerical solution of ordinary differential equations. Introduction to partial differential equations and elementary approximation methods.

514 Numerical Analysis (3 cr.) P: 414 or equivalent. Iterative methods for solving nonlinear equations; linear difference equations; applications to solution of polynomial equations; differentiation and integration formulas; numerical solution of ordinary differential equations; round-off error bounds.

515 Numerical Analysis of Linear Systems (3 cr.) P: Knowledge of programming, and MATH 351 or MATH 511. Computational aspects of linear algebra; linear equations and matrices; direct and iterative methods; eigenvalues and eigenvectors of matrices; error analysis.

516 Computational Methods in Applied Mathematics (3 cr.) P: CSCI 265 and MATH 510 or consent of instructor. A study of techniques such as direct integration, shooting, finite difference, finite elements, method of weighted residuals, and methods of characteristics for solving problems in fluid mechanics, solid mechanics, dynamics, and other fields of applied mathematics.

520 Computational Methods in Analysis (3 cr.) P: 220 or 230 or equivalent, and MATH 351 or MATH 511. A treatment of numerical algorithms for solving classical problems in real analysis with primary emphasis on linear and nonlinear systems of equations and on optimization problems; the writing, testing, and comparison of numerical software for solving such problems; a discussion of the characteristics of quality software for implementing these algorithms.

536 Data Communication and Computer Networks (3 cr.) P: 402. Data communications: communication hardware technologies including local area and long-haul network hardware, circuit and packet switching, interfaces between computer and network hardware, and performance issues. Network architecture: protocol software and conceptual layering, reliable delivery over an unreliable channel, transport protocols, virtual circuits, datagrams, Internet working as a fundamental design concept, the client-server paradigm, naming and name binding, name servers, addressing and address resolution, routing and routing algorithms, congestion and flow control techniques, network file systems, distribution of computation, DARPA Internet protocols (TCP/IP) as examples of protocol organization.

***537 Introduction to Distributed Computing (3 cr.)** P: 503, 536. Introduction to the principles and methods in the design of distributed computing systems. It covers the fundamentals of distributed computing from four perspectives: underlying communication media, protocols and their implications; operating system issues; high-level language constructs; and distributed algorithms.

***538 The Design of Interactive Systems (3 cr.)** Fundamental concepts and tools employed in designing the interaction between humans and machines and the mediating interfaces. Topics include: design problem, interface design concepts, experimental design and analysis, cognitive and predictive models, the design project, case studies, and applications.

***539 Computing with Distributed-objects (3 cr.)** An introductory treatment of the distributed-object model and programming. The topics range from a review of the distributed and object models of computation to advanced concepts such as remote method invocations, object brokers, object services, open systems, and future trends for distributed-object systems.

541 Database Systems (3 cr.) P: 443 or equivalent. Spring. Fundamentals for the logical design of database systems. The entity-relationship model, semantic model, relational model, hierarchical model, network model. Implementations of the models. Design theory for relational databases. Design of query languages and the use of semantics for query optimization. Design and verification of integrity assertions, and security. Introduction to intelligent query processing and database machines.

543 Introduction to Simulation and Modeling of Computer Systems (3 cr.) P: 265 and STAT 511 or equivalent. Simulation: discrete event simulation, process oriented simulation, generating random numbers, simulation languages, simulation examples of complex systems. Nondeterministic models: random variables, Poisson process, moment generating functions, statistical inference, and data analysis. Modeling: elementary queuing models, network of queues, applications to performance evaluation of computer systems.

547 Information Storage and Retrieval and Natural Language Processing (3 cr.) P: 541. Complex data structures of fields within records, as well as clustered, multilist, and inverted files; key

decoding by tree and randomized techniques; overall techniques of classical document retrieval systems, e.g., the MEDLARS and NASA systems; overall techniques of automatic document retrieval systems, e.g., TIP and SMART, the internal structure of SMART; question answering systems; natural language translation.

548 Introduction to Bioinformatics (3 cr.) P: CSCI 340, BIOL K483, CHEM C483, or MATH 511. Analysis of biological data employing various computational methods to obtain useful information in the emerging area of bioinformatics. Topics include: structures, functions and evolution of proteins and nucleic acids, retrieval and interpretation of bioinformation from the Internet, learning principles, algorithms and software for sequence alignment, similarity search of sequence databases, estimation of phylogenetic trees, structural prediction, and functional inference.

549 Intelligent Systems (3 cr.) This course will discuss problems in the area of intelligent systems. Topics include the formalisms within which these problems are studied, the computational methods that have been proposed for their solution, and the real-world technological systems to which these methods have been applied.

***550 Computer Graphics (3 cr.)** An introduction to computer graphics. Topics include the concepts, principles, algorithms, and programming techniques in 3D interactive computer graphics. Emphasis is on the development and applications of 3D graphic algorithms and methods.

***552 Advanced Graphics and Visualization (3 cr.)** P: 550. An introduction to data visualization methods and tools, and related graphics techniques. Students will explore a variety of data representation and modeling techniques, their corresponding visualization algorithms, and practical visualization applications in scientific, engineering, and biomedical fields.

***553 Recent Trends in Database Systems (3 cr.)** P: 503, 541. Emerging topics in database systems. Topics cover advanced applications including management of multimedia, spatial, and semi-structured data; database integration; Web databases; electronic commerce; digital libraries; and data mining.

***554 Special Topics in Visual Computing (3 cr.)** P: 550. Emerging topics in 3D computer graphics, visualization, virtual and augmented environments, image processing, image and video compression, and computer vision.

556 Fault-Tolerant Computing (3 cr.) P: 362. Concepts of fault-tolerant computing; phases of fault-tolerance; applications to commercial, communication, and aerospace systems; fault-tolerance in multiprocessor systems; diagnosis techniques; software fault-tolerance.

565 Programming Languages (3 cr.) P: 300. R: 470. Fall. An exploration of modern or unconventional concepts of programming languages, their semantics, and their implementations; abstract data types; axiomatic semantics using Hoare's logic and Dijkstra's predicate transformers; denotational

semantics; functional, object-oriented, and logic programming; concurrency and Owicki-Gries theory. Example languages include ML, Ada, Oberon, LISP, PROLOG, and CSP.

580 Algorithm Design, Analysis and Implementation (3 cr.) P: 463 and 470. Basic techniques for designing and analyzing algorithms: dynamic programming, divide-and-conquer, balancing, upper and lower bounds on time and space costs, worst case and expected cost measures. A selection of applications such as disjoint set union/find, graph algorithms, search trees, pattern matching. The polynomial complexity classes P, NP, and co-NP; intractable problems.

582 Automata and Formal Languages (3 cr.) P: 470. Spring. Finite automata, regular expressions; push-down automata, context-free grammars; languages and behaviors. Closure properties, pumping lemmas, decision procedures. Deterministic context-free languages and LR(k) parsing; brief survey of the Chomsky hierarchy.

585 Mathematical Logic I (MATH 585) (3 cr.) Students should register for MATH 585. P: MATH 351. Formal theories for propositional and predicate calculus with study of models, completeness, compactness. Formalization of elementary number theory; Turing machines, halting problem, and the undecidability of arithmetic.

590 Topics in Computer Science (3 cr.) By arrangement. Fall, spring. Directed study for students who wish to undertake individual reading and study on approved topics.

Graduate Level

614 Numerical Solution of Ordinary Differential Equations (3 cr.) P: 514. Numerical solution of initial-value problems by Runge-Kutta methods, general one-step methods, and multistep methods. Analysis of truncation error, discretization error, and rounding error. Stability of multistep methods. Numerical solution of boundary-value and eigenvalue problems by initial-value techniques and finite difference methods.

615 Numerical Solution of Partial Differential Equations (3 cr.) P: 515 and MATH 523. The numerical solution of hyperbolic, parabolic, and elliptic equations by finite difference methods; iterative methods (Gauss-Seidel, overrelaxation, alternating direction) for solving elliptic equations; discretization and round-off errors; explicit and implicit methods for parabolic and hyperbolic systems; the method of characteristics; the concept of stability for initial value problems.

660 Design of Translating Systems (3 cr.) P: 502. Systems design of higher-level programming languages and their processors; symbol tables, lexical scan, syntax scan, object code generation and optimization; boot-strapping techniques, higher-level translators, self-compilers, and decompilers; heuristic generators.

661 Formal Compiling Methods (3 cr.) P: 502. Application of concepts developed in formal language and automata theory to the design of programming languages and their processors. Models of syntactic analysis, including canonical precedence, LR(k) and LL(k) parsing methods and variants; efficiency of

each. Synthesis techniques, including symbol tables, storage administration, parameter mechanisms, garbage collection; optimization considerations. Models of synthesis, including level, affix, attributed grammars; prospects of fully automating compiler design. Applicative vs. procedural languages and their implementations based on semantic definition of a language (LISP, Lucid) and on proof-like techniques (PROLOG, equational systems); merits of such approaches.

695 M.S. Project (1-9 cr., maximum of 6 credit hours apply to degree) P: Instructor's consent. The student integrates and applies the knowledge gained from the formal course work to formulate and execute a solution to a problem of practical importance. The faculty advisor and the sponsoring organization mentor, if applicable, provide guidance and evaluation.

698 Research M.S. Thesis (1-18 cr.)

Departmental Academic Advisor Barth

Geology is the study of the planet Earth—the materials of which it is made, the processes that act upon these materials, and the history of the planet and life forms since its origin. Geology considers the physical forces acting on the earth, the chemistry of its constituent materials, and the biology of its past inhabitants. Geology also includes the study of the interrelationships in the modern environment of humans and geological phenomena and focuses on such important concerns as how our global climate is changing and how that change will affect human activities.

The Department of Geology offers the Bachelor of Arts (B.A.) and Bachelor of Science (B.S.) degrees from Indiana University. These programs prepare students for graduate studies and for a variety of careers with emphasis on investigation of the environment by federal and state agencies, industries, and consulting companies. The programs allow flexibility to accommodate the needs and interests of all students. Selection of a particular program should be made in consultation with a departmental advisor.

The Department of Geology offers graduate study leading to the Master of Science (M.S.) degree

granted by Indiana University. The M.S. program offers both thesis and nonthesis options.

Faculty and students of the Department of Geology are actively engaged in basic and applied research. Specific research areas include igneous petrology, geochemistry, hydrogeology, glacial geology and soils, sedimentary geochemistry, paleoclimate, biomineralization, sedimentology, history of geology, and paleontology.

Associate of Environmental Geoscience

(This program is in the approval process for an Indiana University degree. Please consult the department for the official status of the program.)

This program provides a foundation of knowledge concerning earth surface processes necessary for employment in the environmental industry, as well as college-level skills in data collection, analysis, and communication.

Admission Requirements

Admission requirements are the same as those of the undergraduate programs in the Department of Geology and the School of Science as listed in this bulletin.

Degree Requirements

Freshman Experience Course (for beginning freshmen and transfer students with less than 18 credit hours):

SCI 120 Windows on Science (1 cr.) or an equivalent first-year experience course.

Area I See School of Science "Area Requirements for Associate Degrees" in this bulletin. The second writing course will be satisfied by GEOL G205.

Area II No foreign language is required.

Area IIIA See School of Science "Area Requirements for Associate Degrees" in this bulletin.

Area IIIB No courses are required in this area.

Area IIIC Physical and Biological Sciences CHEM C105/C125, C106/C126, and C341, and BIOL N107 and K341.

Area IIID Mathematical Sciences MATH 153-154 and CSCI N207.

Area IV Geology 25 credit hours in geology, including G110, G205, G206, G300, G303, G403, G430, and G445.

Bachelor of Arts

(Granted by Indiana University)

Degree Requirements

Area I See the School of Science requirements under "Undergraduate Programs" in this bulletin. The second semester of English composition may be satisfied by ENG W132 (or ENG W150) or ENG W231. GEOL G205 may partially satisfy this requirement in Area I, but the 3 credit hours cannot then also be counted as part of the geology credit hours required in Area IV.

Area II First-year proficiency in a modern foreign language is required for the Bachelor of Arts degree program. See the School of Science requirements under "Undergraduate Programs" in this bulletin.

Area IIIA See the School of Science requirements under "Undergraduate Programs" in this bulletin.

Area IIIB See the School of Science requirements under "Undergraduate Programs" in this bulletin.

Area IIIC Physical and Biological Sciences See the School of Science requirements under "Undergraduate Programs" in this bulletin, but all four courses must include laboratories; at least two of the four courses must include CHEM C105/C125, C106/C126; and at least one of the four courses must be in biological sciences. No grade below C- will be accepted in any of these courses.

Area IIID Mathematical Sciences MATH 153-154 or MATH 151 and CSCI N207 or another CSCI course approved by the Department of Geology. No grade below C- will be accepted in any of these courses.

Area IV Geology Concentration

Requirements 40 credit hours of geology, including G110, G205, G206, G209, G221, G222, G303, G304, G323, G334, G495, and three 400-level or higher geology courses. Other 100-level courses and G300 do not count toward the geology concentration of 40 credit hours, but may be applied as electives toward the university-required total of 122 credit hours. No grade below C- will be accepted in any of these courses.

Other Requirements

See the School of Science requirements under "Undergraduate Programs, Baccalaureate Degree, General Requirements" in this bulletin. GEOL G420, G460, or G495 may be used to satisfy the School of Science capstone requirement, upon approval by the Department of Geology. The Department of Geology will accept 10 credit hours toward graduation outside the Schools of Science and Liberal Arts.

Bachelor of Science

(Granted by Indiana University)

Degree Requirements

Area I See the School of Science requirements under "Undergraduate Programs" in this bulletin. The second semester of English composition may be satisfied by ENG W132 or ENG W231. GEOL G205 may partially satisfy this requirement in Area I, but the 3 credit hours cannot then also be counted as part of the geology credit hours required in Area IV.

Area II No foreign language is required.

Area IIIA See the School of Science requirements under "Undergraduate Programs" in this bulletin.

Area IIIB See the School of Science requirements under "Undergraduate Programs" in this bulletin.

Area IIIC Physical and Biological Sciences CHEM C105/C125, C106/C126; PHYS P201-P202 or 152-251; and two courses in biological

sciences, with the Department of Geology's approval. No grade below C- will be accepted in any of these courses.

Area IIID Mathematical Sciences MATH 163-164; CSCI N207 or another CSCI course approved by the Department of Geology; and one course in statistics approved by the Department of Geology. No grade below C- will be accepted in any of these courses.

Area IV Geology Concentration

Requirements 43 credit hours of geology, including G110, G205, G206, G209, G221, G222, G303, G304, G323, G334, three 400-level or higher geology courses, and a field camp of at least 3 credit hours approved by the faculty of the Department of Geology. Other 100-level courses and G300 do not count toward the geology concentration requirement of 43 credit hours, but may be applied as electives toward the university-required total of 122 credit hours. No grade below C- will be accepted in any of these courses.

General Two science courses at the 300-400 level approved by the Department of Geology. No grade below C- will be accepted in any of these courses.

Other Requirements

See the School of Science requirements under "Undergraduate Programs, Baccalaureate Degree, General Requirements" in this bulletin. GEOL G420, G460, or G495 may be used to satisfy the School of Science capstone requirement, upon approval by the Department of Geology. The Department of Geology will accept 10 credit hours toward graduation outside the Schools of Science and Liberal Arts.

Minor in Geology

(Granted by Indiana University)

The undergraduate minor in geology requires 18 credit hours of courses, with an overall grade point average of 2.0 (C) and with no grade less than a C-, distributed as follows:

1. Students must complete the following five courses which total 12 credit hours: G110 (3 cr.), G130 (1 cr.), G206 (2 cr.), G209 (3 cr.), and G221 (3 cr.).
2. Students must complete an additional 6 credit hours minimum, including two of the following courses: G222 (3 cr.), G304 (3 cr.), G334 (3 cr.), G406 (3 cr.), G415 (3 cr.), G430 (4 cr.), and G451 (3 cr.).

At least 9 credit hours of the minor must be taken at IUPUI. In addition, recommended courses include one year of college chemistry and at least one course in college algebra.

Geology Plans of Study

There is no single semester-by-semester plan of study for either the B.A. or B.S. degree because of the flexibility encouraged within the program. However, one possible sequence of courses for each degree is given below; variations from these samples of plans of study should be made in consultation with a departmental advisor.

Bachelor of Arts (122 cr. required)**Freshman Year****First Semester**

Master of Science

The Department of Geology graduate program leads to a Master of Science degree from Indiana University. The program is administered by a departmental graduate advisory committee, composed of the graduate advisor and two or more members of the graduate faculty.

Admission Requirements

Prospective students should have a bachelor's degree in geology, including a summer field course, and a minimum of a B (3.0) average in geology courses. One year of chemistry and mathematics through college algebra and trigonometry are required. Individuals with a bachelor's degree in another area of science are also encouraged to apply; the departmental graduate advisory committee will prescribe a plan of study to remove deficiencies. The Graduate Record Examination (GRE) General Test is required; the Subject Test in Geology is optional. Each student must submit three letters of recommendation.

Financial Aid

Admitted students may be appointed as research assistants or teaching assistants in introductory geology courses. Several such assistantships are available each year. Assistantships include remission of tuition and fees.

Degree Requirements

Both thesis and non-thesis options are available. Both options require at least 18 credit hours of non-research course work in geology and at least 3 credit hours in courses approved for graduate credit from allied sciences, mathematics, or the environmental program of the School of Public and Environmental Affairs (SPEA). Up to 6 credit hours of 400-level courses approved for graduate credit may be counted toward the degree with the approval of the graduate advisor. The thesis option requires the completion of 30 credit hours, 6 of which are taken as G810 Research (the thesis). The non-thesis option requires the completion of 36 credit hours, 3 of which consist of a research project taken as G700 Geologic Problems. The departmental graduate committee must approve elective credits outside of the Department of Geology for both options.

Admitted students will be assigned a three-person advisory committee at the beginning of the first year of graduate study. The committee will prescribe a study program based on the interests of the student and the principal graduate advisor. Students must complete all degree requirements within six years of beginning this study program. A B (3.0) average or higher must be maintained, and no grade below C is acceptable.

Bachelor of Science/Master of Science Program

The B.S./M.S. program blends the undergraduate B.S. program with the M.S. program in geology, leading to the award of an Indiana University bachelor's and master's degree with completion of the M.S. thesis. The departmental graduate advisory committee administers the B.S./M.S. program.

Admission Requirements

Prospective students should have advanced standing in the undergraduate program. Students should apply to the program in early spring of the junior year. Students should submit GRE scores and three letters of recommendation. Application requires a minimum GPA of 3.0, and will be considered by the departmental graduate committee.

Degree Requirements

Course and thesis requirements are the same as those listed under the Master of Science program in this bulletin. Upon acceptance into the program, the student will prepare a research and course plan in consultation with a graduate academic advisory committee. Research reading and data collection begins in the summer prior to the senior year of undergraduate study, and will be completed in the following summer. The fifth year of study is devoted to graduate course work and completion of the M.S. thesis.

Courses in Geology (GEOL)

Courses with numbers in the 100s and 200s are lower-division undergraduate courses. Courses with numbers in the 300s and 400s are upper-division undergraduate courses that may, in some cases, be used for graduate credit. Courses in the 300s may be used for graduate credit by graduate students in education, but not by other students. Courses in the 400s may be taken for graduate credit by all graduate students. Courses numbered 500 or higher are graduate courses.

Note: P—prerequisite; C—corequisite; R—recommended; Fall—offered fall semester; Spring—offered spring semester; Summer—offered in the summer session; Day—offered as a daytime section; Night—offered as an evening section. For courses with no designated semester or section, consult the *Schedule of Classes*. *Equiv.*—course is equivalent to the indicated course taught at Indiana University, Bloomington or the indicated course taught at Purdue University, West Lafayette.

G107 Environmental Geology (3 cr.) P: None. Fall, spring, summer. An introduction to geology through discussion of geological topics that show the influence of geology on modern society. Topics include mineral and energy resources, water resources, geologic hazards and problems, geology and health, and land use.

G109 Fundamentals of Earth History (3 cr.) P: None. Fall, spring, summer. Basic principles of earth history: geologic time, basic rock types, reconstructing past environments. Physical development of the earth: its interior, mountain formation, plate tectonics. Origin and development of life: evolution, the fossil record. With laboratory G119, equivalent to IU GEOL G104, IU GEOL G112, and PU GEOS 112.

G110 Physical Geology (3 cr.) P: None. Fall, spring, summer. Introduction to processes within and at the surface of the earth. Description, classification, and origin of minerals and rocks. The rock cycle. Internal processes: volcanism, earthquakes, crustal deformation, mountain building, plate tectonics.

External processes: weathering, mass wasting, streams, glaciers, ground water, deserts, coasts. With laboratory G120, equivalent to IU GEOL G103, IU GEOL G111, and PU GEOS 111.

G115 Introduction to Oceanography (3 cr.) P: None. Fall, spring, summer. Nonmathematical introduction to the geology, biology, and physical characteristics of the ocean. Includes waves, tides, and currents of the world ocean, the adaptations and distribution of marine animals, pollution of the marine ecosystem, and an introduction to the global ocean/atmosphere system.

G117 Environmental Geology Laboratory (1 cr.) P or C: G107. Fall, spring, summer. Laboratory exercises in environmental aspects of the geosciences. To accompany G107.

G119 Fundamentals of Earth History Laboratory (1 cr.) P or C: G109. Fall, spring, summer. Laboratory studies of rocks, fossils, and stratigraphic principles to reconstruct past environments and interpret earth history. To accompany G109.

G120 Physical Geology Laboratory (1 cr.) P or C: G110. Fall, spring, summer. Laboratory studies of minerals and rocks, landscapes, and earth structures. To accompany G110 for non-geology majors.

G123 Art and the Earth Sciences (3 cr.) The principles of geology and the evolution of the Earth and life as revealed by art objects. Use of Earth materials in art. The influence of art history on the development of modern geologic thought. Laboratories in lithography, etching, music, morphing, and microscopy.

G130 Short Courses in Earth Science (topic varies) (1 cr.) P: None. Five-week short courses on a variety of topics in the earth sciences. Examples of topics include lunar and planetary geology; geology of Indiana; geology of national parks; glaciers; water; gemstones; geology of art; earthquakes, volcanoes; dinosaurs. Each short course is one credit; no topic may be taken for credit more than once.

G132 Environmental Problems (3 cr.) This course is offered via the Internet, and provides experience in addressing some of the kinds of problems that arise in studies of the environment. Particular attention is given to developing skills in evaluating scientific articles; specifically, the relevance of the information in an article, the credibility of the author, and the accuracy and usefulness of the quantitative information provided. The kinds of problems considered in this course will vary from semester to semester, but will be chosen from a list that includes global warming, tropical rain forests, acid rain, water pollution, solid waste disposal, appropriate use of land, and the ability of regulations to protect the environment. Three or four such topics will be covered each semester.

G135 Indiana Geology (3 cr.) An in-depth investigation of Indiana's geology, including minerals and rocks, geologic time, mineral resources, fossils, topography, soil, water resources, and special geologic features such as the Falls of the Ohio River and Indiana Dunes.

G136 Indiana Geology Field Experience (1 cr.) P or C: G107, G110, or G135. Application of geologic principles to the solution of geologic problems in field

settings. Projects on geologic topics including sedimentary rocks and fossils, soils, mineral resources, hydrology, glacial history, and karst topography. Students undertake two projects per semester and must be available on two Saturdays for field work. Preparation for field days uses a combination of television, the Web, and e-mail. Each project requires a written report.

G180 Dinosaurs (3 cr.) P: None. Fall, spring, summer. A survey of the characteristics and evolution of dinosaurs. Topics include: occurrence of dinosaur remains in the fossil record, basic anatomy, principles used in classification, types of predatory and plant-eating dinosaurs, environments occupied during life, biology and behavior, extinction theories, dinosaur hunters, and dinosaurs in the media and the public eye.

G199 Service Learning in Geology (1 cr.) P or C: G107, G110, or G115. Students participate in community service projects. Completion of the project includes a paper reflecting on how the service experience contributed to their application of the principles of general education.

G205 Reporting Skills in Geoscience (3 cr.) P: G110 and G209, and ENG W131. Spring. Techniques of presenting written and oral reports from the geoscience approach. The written report: mechanics of format and illustrations, proper citation of geoscience literature, the abstract, proofreading, and editing. The oral report: effective presentation and response to audience questions, simulating a professional science meeting.

G206 Advanced Physical Geology Laboratory (2 cr.) P or C: G110. Fall, spring. The laboratory study of minerals, rocks, topographic maps and aerial photographs, landforms and landscapes, structural geology, and geologic maps.

G209 History of the Earth (3 cr.) P: G110, G206. Fall, spring. Earth history emphasizing physical and biological evolution. Geologic time, stratigraphic correlation, plate tectonics, depositional environments, paleogeography, and evolution of life. Laboratory. Field trips.

G221 Introductory Mineralogy (3 cr.) P: G206 and CHEM C105. Fall. Crystallography: symmetry, morphology, classes. Mineral chemistry, physics, and genesis. Description, identification, association, occurrence, and use of common and important minerals.

G222 Introductory Petrology (3 cr.) P: G221 and CHEM C106. Spring. Igneous, sedimentary, and metamorphic rocks: composition, field occurrence, characteristics, classification, origin, laboratory description, and identification.

G300 Environmental and Urban Geology (3 cr.) P: G107 or G110 or consent of instructor. Significance of regional and local geologic features and geologic processes in land use planning; use of geologic data in areas of rapid urbanization to properly utilize mineral and water resources and to assess potential geologic hazards.

G303 Geologic Mapping and Field Methods (4 cr.) P: G205, G209, and G222, or consent of instructor. Fall. Brunton-compass and GPS/GIS mapping. Measuring and describing stratigraphic

sections of sedimentary rocks and surficial deposits. Mapping geologic structures. Field hydrology. Interpretation of maps, aerial photographs, and satellite imagery.

G304 Principles of Paleontology (3 cr.) P: G209 or consent of instructor. Spring. Biological principles applied to the fossil record. Examination of the quality of the fossil record, taxonomic principles and procedures, analytical techniques, evolutionary theory, evolution and paleoecology of species, populations and communities, diversification and extinction, paleogeography. Laboratories: systematics, stratigraphic distribution, and ecology of major fossilized invertebrate phyla.

G323 Structural Geology (3 cr.) P: G205, G206, G209, G222, G303. Spring. Nature and origin of primary and secondary structural features of the earth's crust, with emphasis on mechanics of deformation and origin, and three-dimensional problems illustrating structural concepts. Laboratory.

G334 Principles of Sedimentation and Stratigraphy (3 cr.) P: G205, G209, and G222. P or C: G303. Fall. Processes and factors influencing genesis of sedimentary particles and their deposition. Interpretation of depositional environments. Sedimentary facies and interpretation of stratigraphic record from outcrop, core sequence, and remote sensing. Laboratory. Field trip.

G403 Optical Mineralogy and Petrography (3 cr.) P: G205, G222. Identification of rock-forming minerals in fragments and thin sections using principles of optical crystallography and the petrographic microscope. Description of common igneous, sedimentary, and metamorphic rocks and interpretation of their genesis using hand specimens and thin sections.

G404 Geobiology (3 cr.) P: G205, G209, and G222, and BIOL K101 or BIOL K103 or BIOL N107, or consent of instructor. Principles of paleontology. Emphasis on invertebrates. Major patterns and fundamentals of biological evolution as revealed by the fossil record. Use of fossils in the study of stratigraphy and Earth's history. Laboratory exercises examine the form, ecology, and stratigraphic record of major phyla with a fossil record.

G406 Introduction to Geochemistry (3 cr.) P: G205, CHEM C106, or consent of instructor. Interactions between geology, chemistry, and biology in natural systems. Explores biogeochemical processes on small scales and in terms of global cycles, as well as human impacts on biogeochemical cycling.

G410 Undergraduate Research in Geology (1-3 cr.) P: G205, junior standing, and consent of instructor. Field and laboratory research in selected problems in geology. May be repeated. A total of 3 credit hours may be applied toward the degree.

G413 Introduction to Geophysics (3 cr.) P: G205 and consent of instructor. Applications of gravity, magnetism, seismology, electricity, and other methods of mineral exploration, engineering, and environmental investigations.

G415 Principles of Geomorphology (3 cr.) P: G205, G209, G222, and G303. P or C: G334. Natural processes that create landforms and landscapes. Physics and chemistry of weathering and soil

formation. Dynamics of mass wasting, streams, and glaciers. Includes field and laboratory investigations.

G416 Economic Geology (3 cr.) P: G205 and G222, or consent of instructor. Origin, geologic occurrence, distribution, use, and conservation of important geologic natural resources: metallic minerals; industrial minerals and rocks; coal, petroleum, natural gas, and other energy resources.

G420 Regional Geology Field Trip (1-3 cr.) P: G205 or consent of instructor. Summer. Field trip to selected regions for study of mineralogic, lithologic, stratigraphic, structural, paleontologic, geomorphologic, or other geological relationships.

G430 Principles of Hydrology (4 cr.) P: G205, G206, MATH 153, CHEM C106, PHYS P202 or PHYS 251, and introductory biology. An introduction to the hydrologic cycle reviewing processes such as precipitation, evaporation and transpiration, infiltration, runoff, streamflow and watersheds, and ground water.

G445 Applied Analytical Techniques in Geology (3 cr.) P: G221, CHEM C105-C106, and consent of instructor. Principles of advanced analytical techniques including x-ray analysis, electron beam imaging and analysis, and mass spectrometry, with applications in geosciences. Lectures on theory followed by laboratory exercises. Students will complete individual or collaborative research projects.

G451 Principles of Hydrogeology (3 cr.) P: G205 and G110, or consent of instructor. R: G334. Geologic and hydrologic factors controlling the occurrence and dynamics of ground water. Emphasis on basic physical and chemical relationships between water and geologic material.

G460 Internship in Geology (3 cr.) P: G303, G304, G323, G334. Fall, spring, summer. Industrial or similar experiences in geologically oriented employment. Projects jointly arranged, coordinated, and evaluated by faculty and industrial/governmental supervisors.

G490 Seminar in Geology (1-3 cr.) P: Junior or senior standing and consent of instructor. Readings and discussion of selected topics. May be repeated, provided different topics are studied, for a maximum of 6 credit hours.

G495 Senior Thesis in Geology (1 cr.) P: G303, G304, G323, G334, two 400-level geology courses. Capstone experience involving a research project. Written report required.

G499 Honors Research in Geology (3 cr.) P: Approval of departmental Honors Committee.

G502 Trace Element and Isotope Geochemistry (3 cr.) P: CHEM C360 or C361 or GEOL G406. Principles governing the distributions of trace elements, radioisotopes, and stable isotopes in igneous, metamorphic, or sedimentary environments and Quaternary landforms. Emphasis on applications to petrology and geochronology.

G525 Glacial Geology (3 cr.) P: G415 or consent of instructor. Formation, dynamics, and regimen of glaciers. Erosional and depositional processes and landforms. Glaciation of North America with emphasis on stratigraphy, soils, climates, and physical changes resulting from glacial processes and environments.

Field investigations and a student research project required.

G527 Geological Oceanography (3 cr.) P: Graduate standing, G334, and G413. Geological features and processes operating in the oceans; continental shelf, slope and ocean-basin geomorphology, sedimentology, structure, and composition; origin and geologic history of seawater and ocean basins.

G535 Quaternary Geology (3 cr.) P: G415 or consent of instructor. Characteristics, distribution, and origin of Pleistocene and recent deposits, stratigraphy and chronology; formation of associated landforms, landscapes, paleosols, and soils; Quaternary environments and paleoclimatic interpretation.

G545 Applied Analytical Techniques in Geology (3 cr.) P: G221, CHEM C105-C106, and consent of instructor. Principles of advanced analytical techniques including x-ray analysis, electron beam imaging and analysis, and mass spectrometry, with applications in geosciences. Lectures on theory followed by laboratory exercises. Students will complete individual or collaborative research projects.

G550 Surface-Water Hydrology (3 cr.) P: G430 or G451. In-depth analysis of surface water components of hydrologic cycle: hydrometeorology, evaporation/transpiration, rainfall-runoff relationships, open-channel flow, flood hydrology, and statistical and probabilistic methods in hydrology.

G551 Advanced Hydrogeology (3 cr.) P: G430 or G451. Advanced treatment of concepts fundamental to subsurface hydrologic processes. Applications to ground water resource development and environmental protection such as aquifer mechanics and well hydraulics, heterogeneity and anisotropy, ground water and surface water interactions, unsaturated flow, and tracer and contaminant transport.

G585 Environmental Geochemistry (3 cr.) P: G406 or consent of instructor. Aquatic and environmental geochemistry, including freshwater and marine systems, natural and human-induced changes to geochemical systems, and the geochemical record of paleoceanographic and paleoclimatic variations.

G595 Data Analysis Techniques in Geoscience (3 cr.) P: STAT 301 and CSCI 207, or equivalent. Application of statistical and numerical analysis techniques to geoscience data, including sampling methods, confidence intervals, least squares methods, correlation, time series analysis, and multivariate techniques. Emphasis on using a computer to solve geoscience problems.

G596 Topics in Applied Environmental Geology (3 cr.) P: Consent of instructor. Application of geologic principles to common environmental problems. Topics covered include waste site assessment, flood hazard analysis and mitigation, slope stability, and hydrogeology. Application of principles to problems pertaining to urban planning, earthquake-resistant design, and waste site/landfill development.

G621 Modeling Hydrological Systems (3 cr.) P: G430 or G451 and consent of instructor. Introduction to ground water flow and solute transport modeling.

Includes development of equations describing ground water flow and applied ground water/contaminant transport modeling using a variety of current software packages.

G635 Soil Geomorphology (3 cr.) P: G415.

Application of geomorphic principles in evaluation of weathering and soil formation; systems analysis of soil-landscape models; paleogeomorphology and paleopedology. Lectures and discussion; field and laboratory problems.

G640 Fluvial Geomorphology (3 cr.) P: G415 or

consent of instructor. Survey of fluvial processes including sediment transport, bed and bank erosion, and river metamorphosis. Examination of the controls on channel form. Analysis of landform genesis with an emphasis on feature sedimentology and stratigraphy. Application of fluvial geomorphic principles to land management and restoration of riparian ecosystems.

G645 Carbonate Sedimentology (3 cr.) P: G334

or consent of instructor. Spring. Course focuses on origin and generation of carbonate grains, description of modern carbonate depositional environments, interpretation of ancient limestone and dolomite sequences, and carbonate diagenesis.

G690 Advanced Geology Seminar (cr. arr.) P:

Consent of instructor.

G700 Geologic Problems (1-5 cr.) P: Consent of

instructor. Consideration of special geologic problems.

G810 Thesis Research (6 cr.)

Assistant Professors Ernst, Mukhin

Adjunct Professors Aliprantis, Reid

Lecturers Cooley, E. Its, Rangazas, Ziemian

Mathematical sciences include the areas of pure and applied mathematics, mathematics education, and statistics. Mathematics involves the study of problems in areas such as algebra, geometry, analysis, and logic, and of problems arising in the real world. Mathematics and statistics are used in the physical sciences, engineering, and the social, life, and

management sciences. Mathematics education involves the training of prospective secondary teachers.

Degree Programs

The department offers the Purdue University Bachelor of Science degree in mathematics with options in pure mathematics, applied mathematics, actuarial science, and secondary school teaching.

Purdue graduate degrees offered include the Master of Science, Master of Science (Option for Teachers), Master of Science (Concentration in Applied Statistics), and Master of Science (Concentration in Industrial and Applied Mathematics). Additionally, qualified students may be authorized to pursue the Ph.D. in mathematics in areas where a program has been arranged with Purdue, West Lafayette.

Bachelor of Science

Students are encouraged to declare a mathematics major in the freshman year so they can receive proper academic advising. A grade point average of 2.5 with no failing grades in mathematics courses through MATH 351 is a minimum indication of success in this major.

Degree Requirements

The baccalaureate degree general requirements, the area requirements, and the Bachelor of Science degree requirements are listed earlier in this bulletin (see the School of Science requirements under "Undergraduate Programs"). For a Bachelor of Science degree in mathematics, the following additional requirements and restrictions apply:

Area I No additional requirements. The second semester of English composition may be satisfied by ENG W132 (or ENG W150), ENG W231, or TCM 320.

Area II All degree options require 5 credit hours in a modern foreign language.

Area III The following apply to all degree options:

1. Mathematics courses below MATH 163 and those mathematics courses in which the student has received grades below C– do not count toward the degree.
2. Certain courses, such as CHEM C101, C102, C110; PHYS 100, 200, 218, 219, P201, P202; and AST A100 and A105 may not be used to fulfill the science requirement, Area IIIC, of the School of Science. If in doubt about a particular course, the student should consult a mathematics department advisor.
3. The Area IIID computer science requirement must be in a higher-level programming course (not BASIC). A grade of C (2.0) or better is required.

Area IV Mathematics courses in which a student has received grades below C (2.0) do not count in area IV. The Area IV requirements for the secondary area of concentration and the major for the four degree options—pure mathematics, applied mathematics, actuarial science, and secondary teaching—are described in the following sections. There is no single semester-by-semester plan of study for any of the options because flexibility is encouraged within the various programs. However, a sample

program that shows one possible sequence of courses is given for each option. Variations from the sample program should be made in consultation with the student's advisor. Because of the complexity of the requirements, and because certain courses are not offered every semester, it is important that each student consult the assigned advisor as soon as possible in order to proceed through a proper plan of study for the chosen degree program. A minimum grade point average of 2.5 is required in all mathematics courses that count toward the major.

Area IV Secondary Area of Concentration Requirements

So that each student can acquire some depth of study in a subject outside of the major area, the Department of Mathematical Sciences requires students to have a secondary area of concentration outside of the department. The secondary area of concentration consists of at least 18 credit hours and includes at least three courses beyond the introductory level. It is subject to the approval of the student's advisor. Although a secondary area of concentration is usually in one department, it may be from two or more if the advisor approves.

Courses may be used for the double purpose of fulfilling the general requirements and also for fulfilling the secondary area of concentration requirements of the Department of Mathematical Sciences. For students in the Pure Mathematics Option or the Applied Mathematics Option, a secondary area in one of the physical sciences or in a subject that makes serious use of mathematics, such as computer science, engineering, or economics, is desirable. Students in the Secondary School Teaching Option satisfy the requirements for a secondary area by the courses they take to meet the professional education requirement.

The requirement of 18 credit hours in a secondary area of concentration does not, by itself, constitute an official minor that would be acknowledged on the student's transcript. A minor must be offered through the department or school in which the minor is taken. One such minor, which is designed to be of particular interest to students choosing a career in actuarial sciences, is offered by the School of Business in conjunction with the Department of Mathematical Sciences. Students interested in the business minor for mathematics majors should contact the Department of Mathematical Sciences or the School of Business for exact requirements.

Area IV Major Requirements

PURE MATHEMATICS OPTION

With this option, students will be well prepared for graduate work in pure mathematics. However, students with undergraduate degrees in pure mathematics have also been successful with graduate studies in business administration, computer science, economics, engineering, educational research, law, medicine, operations research, psychology, statistics, and physics. Persons with advanced degrees in pure mathematics find careers primarily in college teaching, but careers in business, industry, or government service are also possible.

The Area IV major requirements are as follows:

1. Core curriculum: MATH 163, 164, 261, 262, and 351.
2. Analysis: MATH 441-442.
3. MATH 453 Beginning Abstract Algebra.
4. MATH 462 Elementary Differential Geometry *or* MATH 510 Vector Calculus.
5. 12 additional credit hours in mathematics or statistics courses at the 300 level or higher. Courses in computer science or courses in other departments of the School of Science that have an appropriate mathematical content may be selected with the approval of the advisor. Normally, no more than 6 credit hours will be approved outside of mathematics and statistics.
6. The 45 credit hours of courses required above must include at least 6 credit hours from a course sequence listed below, other than MATH 441-442.
7. 1-3 hours of MATH 490 or MATH 492 Capstone Experience.

Course Sequences

Advanced calculus: MATH 510 and 525

Algebra: MATH 453, and 505 or a higher-level algebra course

Analysis: MATH 441, and 442 or a higher-level analysis course

Geometry: MATH 462, and 561 or a higher-level geometry course

Differential equations: MATH 520, and 537 or higher-level differential equations course

Modeling: MATH 426, and 417 or a higher-level modeling course

Numerical analysis: MATH 414, and CSCI 515 or a higher-level numerical analysis course

Probability and Statistics: Two STAT courses numbered 311 or higher

Scientific computing: CSCI 475 and 476

Theoretical computer science: CSCI 340 and 470

APPLIED MATHEMATICS OPTION

Graduates with training in applied mathematics are employed in business, industry, and government. They would probably work as part of a team and would often need to communicate mathematical ideas to persons trained in other subjects. In many instances, they would need to formulate problems for solution on a computer and then interpret the answers. Thus, besides a fundamental knowledge of mathematics, a knowledge of what computers can do is essential. This option is also a good preparation for graduate study in applied mathematics, computer science, statistics, and engineering.

The Area IV major requirements are as follows:

1. Core curriculum: MATH 163, 164, 261, 262, and 351.
2. MATH 414 Numerical Methods.
3. MATH 510 Vector Calculus.
4. Mathematical modeling: MATH 417 *or* 426.
5. 15 additional credit hours in mathematics or statistics courses at the 300 level or higher. Courses in computer science or courses in other departments of the School of Science that have an appropriate mathematical content may be selected with the approval of the advisor. Normally, no more than 6 credit hours will be approved outside of mathematics and statistics.

6. The 45 credit hours of courses required above must include at least 6 credit hours in each of two of the course sequences listed below. Students planning on attending graduate school in mathematics are advised to take MATH 441-442.
7. 1-3 credit hours of MATH 490 or MATH 492 Capstone Experience.

Course Sequences

Advanced calculus: MATH 510 and 525

Algebra: MATH 453, and 505 or a higher-level algebra course

Analysis: MATH 441, and 442 or a higher-level analysis course

Differential equations: MATH 520, and 537 or a higher-level differential equations course

Geometry: MATH 462, and 561 or a higher-level geometry course

Modeling: MATH 426, and 417 or a higher-level modeling course

ACTUARIAL SCIENCE OPTION

The goal of this option is to prepare students to take the first two and possibly the third actuarial exams by the end of their senior year. In addition to the core curriculum, this option requires a one-year sequence in probability and mathematical statistics, another one-year sequence in actuarial models, and a course on the mathematical theory of interest. In addition, a minor in business and economics will be required to help prepare for the second exam. (This minor will serve as the secondary area of concentration.) As this bulletin goes to print, further details are not available. Contact the Department of Mathematical Sciences for an updated plan of study.

SECONDARY SCHOOL TEACHING OPTION

Students who wish to teach in secondary schools must meet the requirements for teacher certification in the state in which they expect to teach. Interested persons can obtain these requirements by writing to the Department of Public Instruction, Certification Office, in the capital city of any state.

In order to satisfy Indiana state law, a student should have 40 credit hours in general education courses and a specified core of professional education courses as part of the requirement for a teaching license. Students should be sure to see an advisor to ensure that these hours are properly distributed and that the professional education requirements are met. The IUPUI secondary teaching program that has been approved by the state of Indiana requires the completion of at least 36 credit hours of mathematics courses.

The Area IV major requirements are as follows:

1. Core curriculum: **MATH 163**, **164**, **261**, **262**, and **351**.
2. **MATH 300** Logic and the Foundations of Algebra.
3. **MATH 453** Abstract Algebra.
4. **MATH 463** Intermediate Euclidean Geometry for Secondary Teachers.

5. Probability and statistics: **STAT 311** or **350** or **416** or **511**.
6. **MATH 583** History of Elementary Mathematics.

Minor in the Mathematical Sciences

An undergraduate minor in mathematics would be useful in many fields. A scientist or engineer may need a knowledge of differential equations and linear algebra, while someone in business or a social science may need a background in probability or statistics.

Requirements

1. The calculus sequence **MATH 163**, **164**, and **261** (14 cr.).
2. Two additional courses selected from mathematics courses numbered 262 or higher or from statistics courses numbered 311 or higher.
3. 9 credit hours of the minor must be completed at IUPUI.
4. The grade in each course submitted for the minor must be C (2.0) or higher.

Correspondence courses may not be used to fulfill requirements for the minor.

Graduate Programs

The Department of Mathematical Sciences offers graduate training leading to the Purdue University Master of Science degree. Qualified students may be authorized to pursue the Ph.D. in mathematics at IUPUI in areas where a program has been arranged with Purdue, West Lafayette. The M.S. degree requires two years of graduate study, and the Ph.D. degree typically requires two to three additional years of study.

Admission Requirements

Students entering a graduate program in mathematics should have completed an undergraduate program containing as many courses as possible in abstract algebra, linear algebra, advanced calculus, differential equations, logic and foundations, and probability.

Students entering the graduate program in applied mathematics or the graduate program in industrial and applied mathematics should have completed an undergraduate program in mathematics or an undergraduate program in engineering or physical sciences that was strongly oriented toward mathematics.

Students entering the master's program in applied statistics must have a bachelor's degree from an accredited institution. The minimal mathematics requirement for admission to this program includes an undergraduate sequence in univariate and multivariate calculus (equivalent to **MATH 163**, **164**, **261**) and one mathematics course beyond the calculus level. Prospective applicants who do not have this background must take all or part of the calculus sequence prior to admission to the program.

Applicants who lack a course beyond the calculus sequence must complete such a course as soon as possible after conditional admission.

Application for Admission

Students who wish to pursue an advanced degree in the Department of Mathematical Sciences should fill

out a graduate student application form. Applicants are encouraged to submit GRE scores in mathematics. Foreign students for whom English is not their native language and who have not completed a bachelor's or master's degree program from an English-speaking university must submit TOEFL scores. While this application is being processed, the student may enter IUPUI as a temporary graduate student. No more than 12 hours of credit earned under this classification may be applied toward an advanced degree. Those who do not want to pursue an advanced degree, but who desire to take graduate courses for personal improvement, may also take courses under the temporary graduate student classification.

Transfer Credit

The Department of Mathematical Sciences will accept by transfer a maximum of 9 hours of graduate credit, in excess of undergraduate degree requirements, from approved institutions.

Assistantships and Fellowships

Financial support is available to qualified students in the form of University Fellowships, graduate teaching assistantships, and tuition scholarships. Additional summer support is available through summer teaching for students whose performance in course work and assistantship duties is satisfactory.

English Requirements

All advanced degree candidates are required to demonstrate acceptable proficiency in English composition.

Foreign students for whom English is not their native language and who have not completed a bachelor's or master's degree program from an English-speaking university must take the ESL exam administered by the IUPUI English as a Second Language Program. Students not scoring sufficiently high will be required to take designated courses in English while pursuing their graduate studies.

Master of Science

A minimum of 30 credit hours of course work is required for an M.S. degree. Course grades must be A or B with the possible exception of at most two grades of C. Neither a thesis nor a comprehensive examination is required. Several core courses are specific to an M.S. plan of study and vary according to the student's interest in (a) pure mathematics with a Ph.D. objective, (b) pure mathematics without a Ph.D. objective, (c) applied mathematics with a Ph.D. objective, or (d) applied mathematics without a Ph.D. objective. The remaining courses are selected by the student and his or her advisory committee.

Master of Science (Option for Teachers)

This nonthesis program requires a minimum of 30 credit hours of course work and is tailored for secondary school teachers and students who are preparing to become secondary school teachers. Core requirements include a course in geometry, a course in algebra, a course in analysis, a course in modeling/differential equations, and a course in probability. (See the Department of Mathematical Sciences for a more complete description of this program.) Course grades must be A or B with the possible exception of at most two grades of C.

Master of Science (Concentration in Industrial and Applied Mathematics)

The Master of Science degree with a concentration in Industrial and Applied Mathematics consists of a minimum of 30 credit hours. Course grades must be A or B with the possible exception of at most two grades of C. Candidates for this degree may choose a thesis option, a nonthesis option or an industrial internship option. The nonthesis option requires 18 credit hours in the core curriculum and 12 credit hours in elective courses. The core curriculum consists of two courses in each of the following areas: applied mathematical methods, applied computational methods, and mathematical modeling of physical systems. The elective courses should preferably be in an area of application outside mathematics, unless otherwise approved by the faculty advisor. Both the thesis and the industrial internship option require 18 credit hours in the core curriculum and 6 credit hours in elective courses; the remaining 6 credit hours involve the thesis or the industrial internship work.

Master of Science (Concentration in Applied Statistics)

The Master of Science degree with a concentration in applied statistics consists of a minimum of 30 credit hours. Course grades must be A or B with the possible exception of at most two grades of C. Candidates for this degree may choose either the thesis option or the nonthesis option. Both options require 15 credit hours in the core curriculum consisting of STAT 512, 514, 519, 524, and 528. The two-course sequence in probability and mathematical statistics (STAT 519, 528) must be taken by all degree candidates. A combined written and oral final examination is required.

The nonthesis option consists of 15 credit hours beyond the core curriculum, at least 9 of which must be statistics (STAT) courses. The remaining courses may be taken in mathematics or in areas relevant to statistical applications, subject to approval of the academic advisor.

The thesis option requires a thesis worth 6 credit hours on a topic approved by the candidate's academic advisor. At least 6 of the remaining 9 credit hours must be taken in statistics or in a subject related to statistical applications that has been approved by the advisor. An oral defense of the thesis is required.

Doctor of Philosophy

Qualified students may be authorized to pursue the Ph.D. in mathematics at IUPUI in areas where a program has been arranged with Purdue, West Lafayette. To be admitted to candidacy for the Ph.D. degree, the student must have fulfilled the following requirements and must have been accepted by the graduate committee of the Department of Mathematical Sciences.

Requirements

1. The student must satisfy, by one of the five options approved by the graduate school, the foreign language requirement in German, Russian, or French.

2. The student must pass qualifying examinations in four subject areas: abstract algebra, real analysis, and two additional areas chosen by the student from a list of approved areas. A student may attempt any particular qualifier examination up to three times, but there are time limits imposed by the department for passing all four examinations.
3. The student must submit to the graduate school through the department a plan of study including at least 42 credit hours of approved graduate course work.
4. The student must pass advanced topics examinations. These oral or written examinations may be taken only by students who have completed requirement 2.

A candidate will be recommended to the faculty to receive the Ph.D. degree after a thesis, submitted in final form, has been accepted by the advisory committee and presented before an open colloquium or seminar.

The department has set time limits for completion of the Ph.D. degree.

Courses in Mathematical Sciences (MATH)

Note: Statistics courses (STAT) follow MATH listings. P—prerequisite; C—corequisite; R—recommended; Fall—offered fall semester; Spring—offered spring semester; Summer—offered in the summer session. For courses with no designated semester, consult the *Schedule of Classes*. Equiv.—course is equivalent to the indicated course taught at Indiana University Bloomington, or the indicated course taught at Purdue University, West Lafayette.

Special Developmental Courses

M010 Pre-Algebra (3 cr.) Fall, spring, summer. Covers the required material for preparation for algebra courses. Whole numbers, fractions, decimals, percents, square roots, measurement, and rational numbers. Credit does not apply toward any degree.

001 Introduction to Algebra (4 cr.) P: M010 (minimum grade of C-) or placement. Fall, spring, summer. Covers the material in the first year of high school algebra. Numbers and algebra, integers, rational numbers, equations, polynomials, graphs, systems of equations, inequalities, radicals. Credit does not apply toward any degree.

002 Geometry (3 cr.) P or C: 001 or equivalent. This course is intended to provide one unit of geometry as a first encounter or as a review for those students with little or no geometry background and needing this prerequisite to pursue higher-level course work. Covers plane and solid geometry, right triangle trigonometry, and mathematical logic through a structure focused on problem-solving and critical thinking skills.

Undergraduate Level

Lower-Division Courses

110 Fundamentals of Algebra (4 cr.) P: 001 (minimum grade of C-) or placement. Intended primarily for liberal arts and business majors.

Integers, rational and real numbers, exponents, decimals, polynomials, equations, word problems, factoring, roots and radicals, logarithms, quadratic equations, graphing, linear equations in more than one variable, and inequalities. This course satisfies the prerequisites needed for M118, M119, 130, and STAT 301.

111 Algebra (4 cr.) P: 001 (minimum grade of C) or placement. Fall, spring, summer. Real numbers, linear equations and inequalities, systems of equations, polynomials, exponents, logarithmic functions. Covers material in the second year of high school algebra.

M118 Finite Mathematics¹ (3 cr.) P: 111 or 110 (minimum grade of C-) or equivalent. Fall, spring, summer. Set theory, logic, permutations, combinations, simple probability, conditional probability, Markov chains. An honors option is available in this course.

M119 Brief Survey of Calculus I (3 cr.) P: 111 or 110 (minimum grade of C-) or equivalent. Fall, spring, summer. Sets, limits, derivatives, integrals, and applications. An honors option is available in this course.

123 Elementary Concepts of Mathematics (3 cr.) P: None. Mathematics for liberal arts students; experiments and activities that provide an introduction to inductive and deductive reasoning, number sequences, functions and curves, probability, statistics, topology, metric measurement, and computers.

130 Mathematics for Elementary Teachers I¹ (3 cr.) P: 111 or 110 (minimum grade of C-) or equivalent; one year of high school geometry. Fall, spring, summer. Numeration systems, mathematical reasoning, integers, rationals, reals, properties of number systems, decimal and fractional notations, problem solving.

132 Mathematics for Elementary Teachers II¹ (3 cr.) P: 130. Fall, spring, summer. Rationals, reals, geometric relationships, properties of geometric figures, one-, two-, and three-dimensional measurement and problem solving.

136 Mathematics for Elementary Teachers¹ (6 cr.) P: 111 or 110 (minimum grade of C) or equivalent; one year of high school geometry. Fall, spring, summer. 136 is a one-semester version of 130 and 132. Not open to students with credit in 130 or 132.

151 Algebra and Trigonometry (5 cr.) P: 111 (minimum grade of B) or placement. Fall, spring, summer I. 151 is a one-semester version of 153-154. Not open to students with credit in 153 or 154. 151 covers college-level algebra and trigonometry and provides preparation for 163 and 164.

153 Algebra and Trigonometry I (3 cr.) P: 111 (minimum grade of C) or two years of high school algebra. Fall, spring, summer. 153-154 is a two-semester version of 151. Not open to students with credit in 151. 153 covers college-level algebra and provides preparation for 163 and 221.

154 Algebra and Trigonometry II (3 cr.) P: 153 (minimum grade of C) or five semesters of high school algebra. Fall, spring, summer. 153-154 is a two-semester version of 151. Not open to students with credit in 151. 154 covers college-level trigonometry and provides preparation for 163 and 221.

163 Integrated Calculus and Analytic Geometry I (5 cr.) P: 151 or 154 (minimum grade of C) or equivalent, and one year of geometry. Equiv. IU MATH M211. Fall, spring, summer I. Review of plane analytic geometry and trigonometry, functions, limits, differentiation, applications of differentiation, integration, the fundamental theorem of calculus, and applications of integration. An honors option is available in this course.

164 Integrated Calculus and Analytic Geometry II (5 cr.) P: 163 (minimum grade of C-) or equivalent. Equiv. IU MATH M212. Fall, spring, summer I. Transcendental functions, techniques of integration, indeterminate forms and improper integrals, conics, polar coordinates, sequences, infinite series, and power series. An honors option is available in this course.

179 Computers and Mathematics (3 cr.) P: 163. Exploration of some modern mathematical concepts, using the computer as an experimental tool. Possible topics include iteration, fixed points, convergence, stability/instability, chaos, fractals. Function approximation: polynomials, splines, computer graphics. Calculus: numerical approximations, symbolic manipulations. Arithmetic with large integers: prime numbers, factorization, encryption, unsolved problems in number theory.

190 Topics in Applied Mathematics for Freshmen (3 cr.) Treats applied topics in mathematics at the freshman level. Prerequisites and course material vary with the applications.

221 Calculus for Technology I (3 cr.) P: 151 or 154 (minimum grade of C-) or equivalent, and one year of geometry. Fall, spring, summer. Analytic geometry, the derivative and applications, the integral and applications.

222 Calculus for Technology II (3 cr.) P: 221 (minimum grade of C-). Fall, spring, summer. Differentiation of transcendental functions, methods of integration, power series, Fourier series, differential equations.

261 Multivariate Calculus (4 cr.) P: 164. Equiv. IU MATH M311. Fall, spring, summer. Spatial analytic geometry, vectors, curvilinear motion, curvature, partial differentiation, multiple integration, line integrals, Green's theorem. An honors option is available in this course.

262 Linear Algebra and Differential Equations (4 cr.) P: 164. R: 261. Fall, spring, summer. First-order equations, higher-order linear equations, initial and boundary value problems, power series solutions, systems of first-order equations, Laplace transforms, applications. Requisite topics of linear algebra: vector spaces, linear independence, matrices, eigenvalues, and eigenvectors.

290 Topics in Applied Mathematics for Sophomores (3 cr.) Treats applied topics in

mathematics at the sophomore level. Prerequisites and course material vary with the applications.

Upper-Division Courses

300 Logic and the Foundations of Algebra (3 cr.) P: 163. Fall. Logic and the rules of reasoning, theorem proving. Applications to the study of the integers; rational, real, and complex numbers; and polynomials. Bridges the gap between elementary and advanced courses. Recommended for prospective high school teachers.

351 Elementary Linear Algebra (3 cr.) P: 261. Not open to students with credit in 511. Fall, spring. Systems of linear equations, matrices, vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, applications.

375 Theory of Interest (3 cr.) P: 261. An introduction to the theory of finance including such topics as compound interest, annuities certain, amortization schedules, sinking funds, bonds, and related securities.

390 Topics in Applied Mathematics for Juniors (3 cr.) Treats applied topics in mathematics at the junior level. Prerequisites and course material vary with the applications.

414 Numerical Methods (CSCI 414) (3 cr.) P: 262 and a course in a high-level programming language. Not open to students with credit in CSCI 512. Error analysis, solution of nonlinear equations, direct and iterative methods for solving linear systems, approximation of functions, numerical differentiation and integration, numerical solution of ordinary differential equations.

417 Discrete Modeling and Game Theory (3 cr.) P: 262 and 351 or 511 or consent of instructor. Linear programming; mathematical modeling of problems in economics, management, urban administration, and the behavioral sciences.

424 The Teaching of Mathematics in Middle and Junior High Schools (2 cr.) Designed to prepare the prospective teacher to plan, present, and evaluate mathematics lessons, determine goals, manage instruction, and use a variety of instructional strategies.

425 The Teaching of Mathematics in Secondary Schools (2-3 cr.) Designed to prepare the prospective teacher to plan, present, and evaluate mathematics lessons, determine goals, manage instruction, and use a variety of instructional strategies.

426 Introduction to Applied Mathematics and Modeling (3 cr.) P: 262 and PHYS 152. Introduction to problems and methods in applied mathematics and modeling. Formulation of models for phenomena in science and engineering, their solution, and physical interpretation of results. Examples chosen from solid and fluid mechanics, mechanical systems, diffusion phenomena, traffic flow, and biological processes.

441 Foundations of Analysis (3 cr.) P: 261. Set theory, mathematical induction, real numbers, completeness axiom, open and closed sets in \mathbb{R}^n , sequences, limits, continuity and uniform continuity, inverse functions, differentiation of functions of one and several variables.

¹The sequence MATH M118, 130, 132 or MATH M118, 136 fulfills the mathematics requirement for elementary education majors.

442 Foundations of Analysis II (3 cr.) P: 441. Continuation of differentiation, the mean value theorem and applications, the inverse and implicit function theorems, the Riemann integral, the fundamental theorem of calculus, point-wise and uniform convergence, convergence of infinite series, series of functions.

453 Beginning Abstract Algebra (3 cr.) P: 351 or consent of the instructor. Basic properties of groups, rings, and fields, with special emphasis on polynomial rings.

456 Introduction to the Theory of Numbers (3 cr.) P: 261. Divisibility, congruences, quadratic residues, Diophantine equations, the sequence of primes.

462 Elementary Differential Geometry (3 cr.) P: 351. Calculus and linear algebra applied to the study of curves and surfaces. Curvature and torsion, Frenet-Serret apparatus and theorem, fundamental theorem of curves. Transformation of R^2 , first and second fundamental forms of surfaces, geodesics, parallel translation, isometries, fundamental theorem of surfaces.

463 Intermediate Euclidean Geometry for Secondary Teachers (3 cr.) P: 002 (or one year of high school geometry), and 300, or consent of instructor. History of geometry. Ruler and compass constructions, and a critique of Euclid. The axiomatic method, models, and incidence geometry. Presentation, discussion and comparison of Hilbert's, Birkhoff's, and SMSG's axiomatic developments.

490 Topics in Mathematics for Undergraduates (1-5 cr.) By arrangement. Open to students only with the consent of the department. Supervised reading and reports in various fields.

S490 Senior Seminar (3 cr.)

491 Seminar in Competitive Math Problem-Solving (1-3 cr.) Approval of the director of undergraduate programs is required. This seminar is designed to prepare students for various national and regional mathematics contests and examinations such as the Putnam Mathematical Competition, the Indiana College Mathematical Competition and the Mathematical Contest in Modeling (MCM), among others. May be repeated twice for credit.

492 Capstone Experience (1-3 cr.) By arrangement.

495 TA Instruction (0 cr.) For teaching assistants. Intended to help prepare TAs to teach by giving them the opportunity to present elementary topics in a classroom setting under the supervision of an experienced teacher who critiques the presentations.

Undergraduate and Graduate Level

504 Real Analysis (3 cr.) P: 441 or consent of the instructor. Completeness of the real number system, basic topological properties, compactness, sequences and series, absolute convergence of series, rearrangement of series, properties of continuous functions, the Riemann-Stieltjes integral, sequences and series of functions, uniform convergence, the Stone-Weierstrass theorem, equicontinuity, the Arzela-Ascoli theorem.

505 Intermediate Abstract Algebra (3 cr.) P: 453 or consent of the instructor. Group theory with emphasis on concrete examples and applications. Field theory: ruler and compass constructions, Galois theory, solvability of equations by radicals.

510 Vector Calculus (3 cr.) P: 261. Calculus of functions of several variables and of vector fields in orthogonal coordinate systems. Optimization problems, implicit function theorem, Green's theorem, Stokes' theorem, divergence theorems, applications to engineering and the physical sciences.

511 Linear Algebra with Applications (3 cr.) P: 261. Not open to students with credit in 351. Matrices, rank and inverse of a matrix, decomposition theorems, eigenvectors, unitary and similarity transformations on matrices.

519 Introduction to Probability (STAT 519) (3 cr.) P: 262. See STAT 519.

520 Boundary Value Problems of Differential Equations (3 cr.) P: 261 and 262. Sturm-Liouville theory, singular boundary conditions, orthogonal expansions, separation of variables in partial differential equations, spherical harmonics.

522 Qualitative Theory of Differential Equations (3 cr.) P: 262 and 351. Laplace transforms, systems of linear and nonlinear ordinary differential equations, brief introduction to stability theory, approximation methods, other topics.

523 Introduction to Partial Differential Equations (3 cr.) P: 262 and 510, or consent of instructor. Method of characteristics for quasilinear first-order equations; complete integral; Cauchy-Kowalewsky theory; classification of second-order equations in two variables; canonical forms; difference methods of hyperbolic and parabolic equations; Poisson integral method for elliptic equations.

525 Introduction to Complex Analysis (3 cr.) P: 261 and 262. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping.

526 Principles of Mathematical Modeling (3 cr.) P: 262 and 510, or consent of instructor. Ordinary and partial differential equations of physical problems, simplification, dimensional analysis, scaling, regular and singular perturbation theory, variational formulation of physical problems, continuum mechanics, and fluid flow.

527 Advanced Mathematics for Engineering And Physics I (3 cr.) P: 262. R: 511. Linear algebra, systems of ordinary differential equations, Laplace transforms, Fourier series and transforms, and partial differential equations.

528 Advanced Mathematics for Engineering and Physics II (3 cr.) P: 262. R: 510. Divergence theorem, Stokes' Theorem, complex variables, contour integration, calculus of residues and applications, conformal mapping, and potential theory.

530 Functions of a Complex Variable I (3 cr.) P or C: 544. Complex numbers, holomorphic functions, harmonic functions, linear transformations. Power series, elementary functions, Riemann surfaces, contour integration, Cauchy's theorem, Taylor and Laurent series, residues. Maximum and argument principles. Special topics.

531 Functions of a Complex Variable II (3 cr.) P: 530. Compactness and convergence in the space of analytic functions, Riemann mapping theorem, Weierstrass factorization theorem, Runge's theorem, Mittag-Leffler theorem, analytic continuation and Riemann surfaces, Picard theorems.

532 Elements of Stochastic Processes (STAT 532) (3 cr.) P: 519. See STAT 532.

535 Theoretical Mechanics (3 cr.) P: 262 and PHYS 152. Kinematics and dynamics of systems of particles and of rigid bodies; Lagrange and Hamilton-Jacobi equations; oscillations about equilibrium; Hamiltonian systems; integral invariants; transformation theory.

536 Perturbation and Asymptotic Analysis (3 cr.) P: 525 or 530, and 523. Matched asymptotic expansions, inner and outer expansions, strained coordinates and multiple scales, turning point analysis.

537 Applied Mathematics for Scientists and Engineers I (3 cr.) P: 261, 262, and consent of instructor. Covers theories, techniques, and applications of partial differential equations, Fourier transforms, and Laplace transforms. Overall emphasis is on applications to physical problems.

544 Real Analysis and Measure Theory (3 cr.) P: 441 or consent of instructor. Algebras of sets, real number system, Lebesgue measure, measurable functions, Lebesgue integration, differentiation, absolute continuity, Banach spaces, metric spaces, general measure and integration theory, Riesz representation theorem.

545 Principles of Analysis II (3 cr.) P: 544. Continues the study of measure theory begun in 544.

546 Introduction to Functional Analysis (3 cr.) P: 545. By arrangement. Banach spaces, Hahn-Banach theorem, uniform boundedness principle, closed graph theorem, open mapping theorem, weak topology, Hilbert spaces.

547 Analysis for Teachers I (3 cr.) P: 261. Set theory, logic, relations, functions, Cauchy's inequality, metric spaces, neighborhoods, Cauchy sequence.

548 Analysis for Teachers II (3 cr.) P: 547. Functions on a metric space, continuity, uniform continuity, derivative, chain rule, Riemann integral, fundamental theorem of calculus, double integrals.

549 Applied Mathematics for Secondary School Teachers (3 cr.) P: 262 and 351. Summer, odd-numbered years. Applications of mathematics to problems in the physical sciences, social sciences, and the arts. Content varies. May be repeated for credit with the consent of the instructor.

550 Algebra for Teachers I (3 cr.) P: 351. Definitions and elementary properties of groups, rings, integral domains, fields. Intended for secondary school teachers.

551 Algebra for Teachers II (3 cr.) P: 550. Polynomial rings, fields, vector spaces, matrices.

552 Applied Computational Methods II (3 cr.) P: 559 and consent of instructor. The first part of the course focuses on numerical integration techniques and methods for ODEs. The second part concentrates on numerical methods for PDEs based on finite difference techniques with brief surveys of finite element and spectral methods.

553 Introduction to Abstract Algebra (3 cr.) P: 453 or consent of instructor. Group theory: finite abelian groups, symmetric groups, Sylow theorems, solvable groups, Jordan-Hölder theorem. Ring theory: prime and maximal ideals, unique factorization rings, principal ideal domains, Euclidean rings, factorization in polynomial and Euclidean rings. Field theory: finite fields, Galois theory, solvability by radicals.

554 Linear Algebra (3 cr.) P: 351. Review of basics: vector spaces, dimension, linear maps, matrices, determinants, linear equations. Bilinear forms; inner product spaces; spectral theory; eigenvalues. Modules over principal ideal domain; finitely generated abelian groups; Jordan and rational canonical forms for a linear transformation.

559 Applied Computational Methods I (3 cr.) P: 262 and 351 or 511. Computer arithmetic, interpolation methods, methods for nonlinear equations, methods for solving linear systems, special methods for special matrices, linear least square methods, methods for computing eigenvalues, iterative methods for linear systems; methods for systems of nonlinear equations.

561 Projective Geometry (3 cr.) P: 351. Projective invariants, Desargues' theorem, cross-ratio, axiomatic foundation, duality, consistency, independence, coordinates, conics.

562 Introduction to Differential Geometry and Topology (3 cr.) P: 351 and 442. Smooth manifolds, tangent vectors, inverse and implicit function theorems, submanifolds, vector fields, integral curves, differential forms, the exterior derivative, DeRham cohomology groups, surfaces in E^3 , Gaussian curvature, two-dimensional Riemannian geometry, Gauss-Bonnet and Poincaré theorems on vector fields.

563 Advanced Geometry (3 cr.) P: 300 or consent of instructor. Topics in Euclidean and non-Euclidean geometry.

571 Elementary Topology (3 cr.) P: 441. Topological spaces, metric spaces, continuity, compactness, connectedness, separation axioms, nets, function spaces.

572 Introduction to Algebraic Topology (3 cr.) P: 571. Singular homology theory, Eilenberg-Steenrod axioms, simplicial and cell complexes, elementary homotopy theory, Lefschetz fixed point theorem.

578 Mathematical Modeling of Physical Systems I (3 cr.) P: 262, PHYS 152 and 251 and consent of Instructor. Linear systems modeling, mass-spring-damper systems, free and forced vibrations, applications to automobile suspension, accelerometer, seismograph, etc., RLC circuits, passive and active filters, applications to crossover

networks and equalizers, nonlinear systems, stability and bifurcation, dynamics of a nonlinear pendulum, van der Pol oscillator, chemical reactor, etc., introduction to chaotic dynamics, identifying chaos, chaos suppression and control, computer simulations and laboratory experiments.

581 Introduction to Logic for Teachers (3 cr.) P: 351. Not open to students with credit in 385. Logical connectives, rules of sentential inference, quantifiers, bound and free variables, rules of inference, interpretations and validity, theorems in group theory, introduction to set theory.

583 History of Elementary Mathematics (3 cr.) P: 261. A survey and treatment of the content of major developments of mathematics through the eighteenth century, with selected topics from more recent mathematics, including non-Euclidean geometry and the axiomatic method.

585 Mathematical Logic I (CSCI 585) (3 cr.) P: 351. Formal theories for propositional and predicate calculus with study of models, completeness, compactness. Formalization of elementary number theory; Turing machines, halting problem, and the undecidability of arithmetic.

587 General Set Theory (3 cr.) P: 351. Informal axiomatization of set theory, cardinal numbers, countable sets, cardinal arithmetic, order types, well-ordered sets and ordinal numbers, axiom of choice and equivalences, paradoxes of intuitive set theory, Zermelo-Fraenkel axioms.

588 Mathematical Modeling of Physical Systems II (3 cr.) P: 578. Depending on the interests of the students, the content may vary from year to year. Emphasis will be on mathematical modeling of a variety of physical systems. Topics will be chosen from the volumes "Mathematics in Industrial Problems" by Avner Friedman. Researchers from local industries will be invited to present real-world applications. Each student will undertake a project in consultation with one of the instructors or an industrial researcher.

598 Topics in Mathematics (1-5 cr.) By arrangement. Directed study and reports for students who wish to undertake individual reading and study on approved topics.

Graduate Level

611 Methods of Applied Mathematics I (3 cr.) P: Consent of Instructor. Introduction to Banach and Hilbert spaces, linear integral equations with Hilbert-Schmidt kernels, eigenfunction expansions, and Fourier transforms.

612 Methods of Applied Mathematics II (3 cr.) P: 611. Continuation of theory of linear integral equations; Sturm-Liouville and Weyl theory for second-order differential operators, distributions in n dimensions, and Fourier transforms.

626 Mathematical Formulation of Physical Problems I (3 cr.) P: Graduate standing and consent of instructor. Topics to be chosen from the following: Tensor formulation of the field equations in continuum mechanics, fluid dynamics, hydrodynamic stability, wave propagation, and theoretical mechanics.

627 Mathematical Formulation of Physical Problems II (3 cr.) P: 626. Continuation of 626.

642 Methods of Linear and Nonlinear Partial Differential Equations I (3 cr.) P: 520, 523, and 611. Topics from linear and nonlinear partial differential equations, varied from time to time.

646 Functional Analysis (3 cr.) P: 546. Advanced topics in functional analysis, varying from year to year at the discretion of the instructor.

672 Algebraic Topology I (3 cr.) P: 572. Continuation of 572; cohomology, homotopy groups, fibrations, further topics.

673 Algebraic Topology II (3 cr.) P: 672. Sequel to 672 covering further advanced topics in algebraic and differential topology such as K-theory and characteristic classes.

692 Topics in Applied Mathematics (1-3 cr.)

693 Topics in Analysis (1-3 cr.)

694 Topics in Differential Equations (1-3 cr.)

697 Topics in Topology (1-3 cr.)

699 Research Ph.D. Thesis (cr. arr.)

Courses in Statistics (STAT)

Undergraduate Level

Upper-Division Courses

STAT 301 Elementary Statistical Methods I (3 cr.) P: MATH 111 or 110 or equivalent. Not open to students in the Department of Mathematical Sciences. Fall, spring. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout.

STAT 302 Elementary Statistical Methods II (3 cr.) P: 301 or equivalent. Continuation of 301. Multiple regression and analysis of variance, with emphasis on statistical inference and applications to various fields.

STAT 311 Introductory Probability (3 cr.) P: MATH 261 or equivalent. Not open to students with credit in 416. Fall. Fundamental axioms and laws of probability; finite sample spaces and combinatorial probability; conditional probability; Bayes theorem; independence; discrete and continuous random variables; univariate and bivariate distributions; binomial, negative binomial, Poisson, normal, and gamma probability models; mathematical expectation; moments and moment generating functions.

STAT 350 Introduction to Statistics (3 cr.) P: MATH 163 or equivalent. Fall, spring. A data-oriented introduction to the fundamental concepts and methods of applied statistics. STAT 350 is intended primarily for majors in the mathematical sciences (mathematics, actuarial sciences, mathematics

education). The objective is to acquaint the students with the essential ideas and methods of statistical analysis for data in simple settings. It covers material similar to that of STAT 511 but with emphasis on more data-analytic material. Includes a weekly computing laboratory using Minitab.

STAT 416 Probability (3 cr.) P: MATH 261 or equivalent. Not open to students with credit in 311. Fall, spring. An introduction to mathematical probability suitable as preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability, Bayes theorem, discrete and continuous random variables, moments and moment generating functions, continuous distributions and their properties, law of large numbers, and central limit theorem.

STAT 417 Statistical Theory (3 cr.) P: 416. R: 350 or equivalent. Spring. An introduction to the mathematical theory of statistical inference, emphasizing inference for standard parametric families of distributions. Properties of estimators. Bayes and maximum likelihood estimation. Sufficient statistics. Properties of test of hypotheses. Most powerful and likelihood-ratio tests. Distribution theory for common statistics based on normal distributions.

STAT 490 Topics in Statistics for Undergraduates (1-5 cr.) Supervised reading and reports in various fields.

Undergraduate and Graduate Level

STAT 511 Statistical Methods I (3 cr.) P: MATH 164. Descriptive statistics; elementary probability; random variables and their distributions; expectation; normal, binomial, Poisson, and hypergeometric distributions; sampling distributions; estimation and testing of hypotheses; one-way analysis of variance; correlation and regression.

STAT 512 Applied Regression Analysis (3 cr.) P: STAT 511. Inference in simple and multiple linear regression, estimation of model parameters, testing and prediction. Residual analysis, diagnostics and remedial measures. Multicollinearity. Model building, stepwise and other model selection methods. Weighted least squares. Nonlinear regression. Models with qualitative independent variables. One-way analysis of variance. Orthogonal contrasts and multiple comparison tests. Use of existing statistical computing package.

STAT 513 Statistical Quality Control (3 cr.) P: 511. Control charts and acceptance sampling, standard acceptance plans, continuous sampling plans, sequential analysis, and response surface analysis. Use of existing statistical computing packages.

STAT 514 Designs of Experiments (3 cr.) P: 512. Fundamentals, completely randomized design, randomized complete blocks. Latin squares, multiclassification, factorial, nested factorial, incomplete blocks, fractional replications, confounding, general mixed factorial, split-plot and optimum design. Use of existing statistical computing packages.

STAT 515 Statistical Consulting Problems (1-3 cr.) P: Consent of advisor. Consultation on real-world problems involving statistical analysis under the guidance of a faculty member. A detailed written report and an oral presentation are required.

STAT 516 Basic Probability and Applications (3 cr.) P: MATH 261 or equivalent. A first course in probability intended to serve as a foundation for statistics and other applications. Intuitive background; sample spaces and random variables; joint, conditional, and marginal distributions; special distributions of statistical importance; moments and moment generating functions; statement and application of limit theorems; introduction to Markov chains.

STAT 517 Statistical Inference (3 cr.) P: 511 or 516. A basic course in statistical theory covering standard statistical methods and their applications. Includes unbiased, maximum likelihood, and moment estimation; confidence intervals and regions; testing hypotheses for standard distributions and contingency tables; introduction to nonparametric tests and linear regression.

STAT 519 Probability Theory (3 cr.) P: MATH 261 or equivalent. Sample spaces and axioms of probability, conditional probability, independence, random variables, distribution functions, moment generating and characteristic functions, special discrete and continuous distributions — univariate and multivariate cases, normal multivariate distributions, distribution of functions of random variables, modes of convergence and limit theorems including laws of large numbers and central limit theorem.

STAT 520 Time Series and Applications (3 cr.) P: 519. A first course in stationary time series with applications in engineering, economics, and physical sciences. Stationarity, autocovariance function and spectrum; integral representation of a stationary time series and interpretation; linear filtering; transfer function models; estimation of spectrum; multivariate time series. Use of existing statistical computing packages.

STAT 521 Statistical Computing (3 cr.) C: STAT 512 or equivalent. A broad range of topics involving the use of computers in statistical methods. Collection and organization of data for statistical analysis; transferring data between statistical applications and computing platforms; techniques in exploratory data analysis; comparison of statistical packages.

STAT 522 Sampling and Survey Techniques (3 cr.) P: 512 or equivalent. Survey designs; simple random, stratified, and systematic samples; systems of sampling; methods of estimation; ratio and regression estimates; costs. Other related topics as time permits.

STAT 523 Categorical Data Analysis (3 cr.) P: 528 or equivalent, or consent of instructor. Models generating binary and categorical response data, two-way classification tables, measures of association and agreement, goodness-of-fit tests, testing independence, large sample properties. General linear models, logistic regression, probit and extreme value models. Loglinear models in two and higher dimensions; maximum likelihood estimation, testing

goodness-of-fit, partitioning chi-square, models for ordinal data. Model building, selection, and diagnostics. Other related topics as time permits. Computer applications using existing statistical software.

STAT 524 Applied Multivariate Analysis (3 cr.) P: 528 or equivalent, or consent of instructor.

Extension of univariate tests in normal populations to the multivariate case, equality of covariance matrices, multivariate analysis of variance, discriminant analysis and misclassification errors, canonical correlation, principal components, factor analysis. Strong emphasis on the use of existing computer programs.

STAT 525 Intermediate Statistical Methodology (3 cr.) C: 528 or equivalent, or consent of instructor. Generalized linear models, likelihood methods for data analysis, diagnostic methods for assessing model assumptions. Methods covered include multiple regression, analysis of variance for completely randomized designs, binary and categorical response models, and hierarchical loglinear models for contingency tables.

STAT 528 Mathematical Statistics (3 cr.) P: STAT 519 or equivalent. Sufficiency and completeness, the exponential family of distributions, theory of point estimation, Cramer-Rao inequality, Rao-Blackwell Theorem with applications, maximum likelihood estimation, asymptotic distributions of ML estimators, hypothesis testing, Neyman-Pearson Lemma, UMP tests, generalized likelihood ratio test, asymptotic distribution of the GLR test, sequential probability ratio test.

STAT 529 Applied Decision Theory and Bayesian Analysis (3 cr.) C: STAT 528 or equivalent. Foundation of statistical analysis, Bayesian and decision theoretic formulation of problems; construction of utility functions and quantifications of prior information; methods of Bayesian decision and inference, with applications; empirical Bayes; combination of evidence; game theory and minimax rules, Bayesian design and sequential analysis. Comparison of statistical paradigms.

STAT 532 Elements of Stochastic Processes (MATH 532) (3 cr.) P: 519 or equivalent. A basic course in stochastic models including discrete and continuous time processes, Markov chains, and Brownian motion. Introduction to topics such as Gaussian processes, queues and renewal processes, and Poisson processes. Application to economic models, epidemic models, and reliability problems.

STAT 533 Nonparametric Statistics (3 cr.) P: 516 or equivalent. Binomial test for dichotomous data, confidence intervals for proportions, order statistics, one-sample signed Wilcoxon rank test, two-sample Wilcoxon test, two-sample rank tests for dispersion, Kruskal-Wallis test for one-way layout. Runs test and Kendall test for independence, one- and two-sample Kolmogorov-Smirnov tests, nonparametric regression.

STAT 536 Introduction to Survival Analysis (3 cr.) P: 517 or equivalent. Deals with the modern statistical methods for analyzing time-to-event data. Background theory is provided, but the emphasis is on the applications and the interpretations of results. Provides coverage of survivorship functions and

censoring patterns; parametric models and likelihood methods, special life-time distributions; nonparametric inference, life-tables, estimation of cumulative hazard functions, the Kaplan-Meier estimator; one- and two-sample nonparametric tests for censored data; and semiparametric proportional hazards regression (Cox Regression), parameters' estimation, stratification, model fitting strategies, and model interpretations. Heavy use of statistical software such as Splus and SAS.

STAT 598 Topics in Statistical Methods (1-3 cr.)

P: Consent of instructor. Directed study and reports for students who wish to undertake individual reading and study on approved topics.

STAT 698 Research M.S. Thesis (6 cr.) P: Consent of advisor. M.S. thesis in applied statistics.

Department of Physics

Professor Emeritus Kaplan, Meiere, Novak, Paik, Seubert

Associate Professors Gavrin, Kleinhans, Ou, Thatcher, Vemuri, Wassall

Assistant Professor Decca

Departmental Academic Advisors Gavrin and Vasavada

Physics is the study of matter and energy, from the smallest scale, as in the study of elementary particles, to the largest, as in the study of the formation and evolution of stars and galaxies. In this sense, physics is the science that underlies all of the other sciences. In principle, as well as in practice, physics is involved in virtually all scientific and technical endeavors (e.g., biophysics, geophysics, health physics, etc.).

Physicists tend to view themselves primarily as solvers of problems, especially problems that can be expressed in mathematical terms. Physics students are trained to solve complex problems by learning to analyze complex relations in mathematical terms, often with the help of today's fast computers. Because of this broadly based and flexible problem-solving background, physics graduates find employment in a variety of fields, many of which are not directly associated with physics.

The Department of Physics offers a program leading to a Bachelor of Science degree from Purdue University. In addition, the department offers courses in physics and astronomy for non-majors. The department also offers graduate courses that lead to a Purdue Master of Science degree. Qualified students may be authorized to pursue the Ph.D. degree in physics at IUPUI in areas where a program has been arranged with Purdue, West Lafayette.

Members of the department conduct research in several disciplines of physics and participate in joint projects with a number of other research groups, such as the Indianapolis Center for Advanced Research and the IU School of Medicine. Student participation in these projects is welcomed and encouraged.

Students majoring in physics consolidate their undergraduate studies by putting what they have learned to use in a capstone experience in one of the department's research laboratories. Each student joins a member of the faculty in a project that provides experience in a professional setting. The student must obtain the approval of a faculty member and register for Physics 490.

Guide to Service Courses

Each student should consult an advisor in the department in which a degree is sought to determine which service course is appropriate. A general guide to the schools served by these courses is as follows:

AST 100-105: General science courses for students in all majors.

AST 130: Focused short courses for students in all majors.

PHYS 140: Focused short courses for students in all majors.

PHYS 100: For students in allied health, business, and liberal arts (a traditional survey course).

PHYS 200: For students in education, SPEA, and liberal arts (a nontraditional course).

PHYS 218-219: A noncalculus sequence for technology students.

PHYS P201-P202: A noncalculus sequence for preprofessional students.

PHYS 152-251-342: For students in science and engineering requiring a calculus-based sequence.

Bachelor of Science

Areas I, II, III Minimum requirements for the School of Science are given in this bulletin (see the School of Science requirements under "Undergraduate Programs"). The second semester of English composition may be satisfied only with ENG W132 (or ENG W150), W231, W250, W290, W331, W350, or TCM 320. The Department of Physics has the following additional requirements:

Area IIIC Physical and Biological Sciences

Courses must include CHEM C105/C125 and C106/C126 with laboratory or their approved equivalent.

Area IIID Mathematical Sciences 24 credit hours of courses in mathematics, which must include MATH 163, 164, 261, and 262 or equivalent, plus 6 more credit hours approved by the Department of Physics. The computer science requirement of the School of Science may be satisfied with CSCI 230, N305, N331, or any higher-level CSCI course.

Area IV Physics Concentration A concentration program in physics must include PHYS 152, 251, 300, 310, 330, 342, 342L, 353, 400, 401, 416, 442, and 490.

Courses taken outside the Schools of Science and Liberal Arts must receive departmental approval. No more than 6 credit hours of clinical, athletic, or

performing arts courses will be approved. See the departmental advisor for details.

The Department of Physics recommends the following sample program leading to the degree of Bachelor of Science.

Bachelor of Science (124 cr. required)

Freshman Year

First Semester

CHEM C105/C125 Principles of Chemistry I	5
ENG W131 Elementary Composition I	3
MATH 163 Integrated Calculus and Analytic Geometry I	5
SCI 120 Windows on Science	1
	<hr/> 14

Second Semester

PHYS 152 Mechanics	4
CHEM C106/C126 Principles of Chemistry II	5
MATH 164 Integrated Calculus and Analytic Geometry II	5
Second Composition Course	3
	<hr/> 17

Sophomore Year

Third Semester

PHYS 251 Heat, Electricity, and Optics	5
MATH 261 Multivariate Calculus	4
HIST H114 History of Western Civilization II	3
CSCI Course	3
	<hr/> 15

Fourth Semester

PHYS 300 Introduction to Elementary Mathematical Physics	3
PHYS 342 Modern Physics	3
PHYS 342L Modern Physics Laboratory	1
COMM R110 Fundamentals of Speech Communication	3
MATH 262 Linear Algebra and Differential Equations	4
One Course from the H, S, or C List	3
	<hr/> 17

Junior Year

Fifth Semester

PHYS 310 Intermediate Mechanics	4
One Course from Remaining Two H, S, or C Lists	3
One Course from Remaining H, S, or C Lists	3
MATH Course	3
Elective	3
	<hr/> 16

Sixth Semester

PHYS 330 Intermediate Electricity and Magnetism	3
PHYS 353 Electronics Laboratory	2
MATH Course	3
Physical or Biological Science	3
Junior/Senior Integrator	3
Elective	3
	<hr/> 17

Senior Year

Seventh Semester

PHYS 400 Physical Optics	3
PHYS 401 Physical Optics Laboratory	2
PHYS 442 Quantum Mechanics	3
Physical or Biological Science	3
Elective	3
	<hr/> 14

Eighth Semester

PHYS 416 Thermal Physics	3
PHYS 490 Undergraduate Research and Capstone Experience	1-3
Elective	8-10
CAND 991 Candidate for Graduation	0
	<hr/> 14

Teaching Option:

For the middle/secondary school teaching option, the Department of Physics may substitute other science courses for the 400-level courses and recommend education courses in order to meet teacher certification requirements.

Minor in Physics

The Department of Physics offers an undergraduate minor in physics with the following requirements:

- The introductory physics sequence: PHYS 152 and 251.
- Modern Physics and Modern Physics lab: PHYS 342 and 342L.
- 6 more credit hours chosen from PHYS 300, 310, 330, 400, 416, or 442.
- The grade for each course submitted for the minor must be a C (2.0) or higher.

Correspondence courses may not be used to fulfill requirements for the minor.

Graduate Programs

The Department of Physics offers graduate programs leading to Purdue University Master of Science and Doctor of Philosophy degrees. For master's degree students, both thesis and nonthesis options are available.

Admission Requirements

Students who seek to enroll in the physics graduate program should have a baccalaureate degree from an accredited institution and have a background in the usual undergraduate courses in physics, mathematics, and other sciences. A grade point average of 3.0 (B) or better in physics courses is expected. Graduates from related fields of study in pure and applied science or engineering may be accepted on a probationary basis until they have completed any necessary undergraduate courses in physics. The Graduate Record Examination (GRE) is normally expected of all applicants. The GRE physics test is recommended, but not required.

Transfer Credit

The Department of Physics will normally accept, from approved institutions, a maximum of 6 transfer hours of graduate credit that are in excess of undergraduate degree requirements.

Application for Admission

Application materials and information can be obtained by writing to the chairperson of the graduate committee; Department of Physics; Science Building; 402 N. Blackford Street; IUPUI; Indianapolis, IN 46202-3273; telephone (317) 274-6900. While the application is being processed, it is possible to enter IUPUI as a temporary graduate student. Generally only 12 hours of credit earned under this classification may be counted toward an advanced degree.

Financial Assistance

Most physics graduate students receive financial support. Types of support available include teaching and research assistantships, fellowships, and tuition remission.

Master of Science

The general requirements include admission to regular graduate status, completion of the English requirement, a passing score on the Physics Qualifying Examination, satisfactory completion of an approved plan of study, and 30 hours of graduate credit as outlined below.

The English requirement for candidates whose native language is English is satisfied by having no undergraduate grades below B in English composition or by scoring 600 or higher on the Verbal Aptitude Section of the Graduate Record Examination. Students who do not satisfy the English requirement by either of the above methods may take a written examination administered by the Department of English to demonstrate their proficiency. Students whose native language is not English must pass the TOEFL examination with a grade of 550 or better and take a diagnostic test when they arrive at IUPUI. The score on this test will determine what English courses are required.

The Physics Qualifying Examination is administered throughout the Purdue graduate system and must be taken, at the latest, after completing the introductory graduate courses. Two attempts are permitted to obtain a passing grade.

The student's plan of study is worked out in cooperation with the student's graduate advisor and committee. It must be submitted and accepted by the graduate school no later than the semester before the one in which the student plans to graduate. The English requirement must be satisfied before the plan of study may be filed.

The master's degree requires the satisfactory completion of 30 credit hours of course work at the 500 and 600 level. Twenty-four credit hours must be in physics and biophysics, including one laboratory course. In the thesis option, 6 of the physics credit hours will be earned by enrolling in PHYS 698 Research M.S. Thesis. This option requires a written thesis. In the nonthesis option, 6 of the physics credit hours will typically be earned through enrollment in PHYS 590 Reading and Research. This option requires a written report. Six credit hours must be in mathematics, which may be replaced in part by PHYS 600 Methods of Theoretical Physics. The grade requirements are A or B in 500-level courses; A, B, or C in 600-level courses; A, B, or C in mathematics courses; and a minimum grade point average of 2.8.

Doctor of Philosophy

Qualified students may be authorized to pursue the Ph.D. degree at IUPUI in areas where a program has been arranged with Purdue, West Lafayette. Students are usually expected to complete an M.S. degree before pursuing the Ph.D. degree. Interested students should contact the Department of Physics for further details.

Research Interests and Facilities

The department's major research strengths and facilities are in the area of biological physics and magnetic resonance, in experimental and theoretical laser physics and quantum optics, and in experimental materials physics. The physics faculty directs use of four magnetic resonance spectrometers in two locations. In addition, the school has a high performance absorption spectrometer equipped to examine cryogenic samples, as well as other instrumentation for biophysical research. Current experimental research includes EPR and NMR investigations of cells, enzymes, proteins, and model membranes. Theoretical work involves calculations and computer simulations of magnetic resonance lineshapes, studies of the biophysics of photosynthesis, and theoretical condensed matter physics. The optics labs are equipped with argon ion, titanium sapphire, diode, and helium-neon lasers, in addition to state-of-the-art equipment, including digital oscilloscopes and spectrum analyzers, which allow students and faculty to probe fundamental issues in laser noise and the quantum nature of light. The materials lab includes an advanced magnetron sputter deposition system, and systems for the measurement of magnetic and electronic properties of thin film materials. All students have access to the IUPUI computing facilities, which include dedicated Unix machines, as well as the minicomputers in the department. Several ongoing projects involve collaborations with the IU School of Medicine, Methodist Hospital of Indiana, and other departments in the School of Science.

Courses in Physics (PHYS)

The courses in this section are not listed in strict numerical order; courses are grouped according to levels of difficulty.

Note: P—prerequisite; C—corequisite; Fall—offered fall semester; Spring—offered spring semester; Summer—offered in the summer session; Day—offered as a daytime section; Night—offered as an evening section; Equiv.—course is equivalent to the indicated course taught at Indiana University Bloomington, or the indicated course taught at Purdue University, West Lafayette.

Undergraduate Level

010 Pre-Physics (3 cr.) P: MATH 151, or MATH 153 and 154, or equivalent. Fall, spring. For students not ready to take the algebra- and trigonometry-based courses in physics (218 and P201). Basic concepts of physics. Methods of analyzing physics problems. Setting up equations for physics problems. Interpreting information in physics problems. Analyzing and presenting the results of laboratory measurements. Extensive drill in these topics.

100 Physics in the Modern World (5 cr.) P: Introductory high school mathematics. Spring, day. Ideas, language, methods, and impact of physics today.

140 Short Courses in Physics (1 cr.) Five-week short courses on a variety of topics related to the physical world. Examples of topics include: Waves and Particles are the Same Thing, Relativity, Quarks and Other Inhabitants of the Zoo, Why Things Work and

Why They Don't, Lasers and Holography, Physics of Star Trek.

200 Our Physical Environment (3 cr.) P: None. Fall, night; Spring, night. A nonmathematical introduction to physical concepts and methods by means of examples from daily life and current technological applications.

218 General Physics (4 cr.) P: MATH 151 or equivalent. Fall, night; Spring, night; Summer, day. Newtonian mechanics, wave motion, heat, and thermodynamics for students in technology fields.

219 General Physics (4 cr.) P: 218. Fall, night; Spring, night; Summer, day. Electricity, light, and modern physics.

P201 General Physics I (5 cr.) P: MATH 151 or equivalent. Fall, day; Spring, night; Summer, day. Newtonian mechanics, wave motion, heat, and thermodynamics. Application of physical principles to related scientific disciplines, especially life sciences. Intended for students preparing for careers in the life sciences and the health professions. Three lectures, one discussion section, and one two-hour laboratory period each week.

P202 General Physics II (5 cr.) P: P201. Fall, night; Spring, day; Summer, day. Electricity and magnetism; geometrical and physical optics; introduction to concepts of relativity, quantum theory, atomic and nuclear physics. Three lectures, one discussion section, and one two-hour laboratory period each week.

152 Mechanics (4 cr.) P or C: MATH 164. Equiv. IU PHYS P221. Fall, day; Spring, day, night; Summer, day. Statics, uniform and accelerated motion; Newton's laws; circular motion; energy, momentum, and conservation principles; dynamics of rotation; gravitation and planetary motion; properties of matter; simple harmonic and wave motion. For more information, visit our World Wide Web page at webphysics.iupui.edu/introphysics.

251 Heat, Electricity, and Optics (5 cr.) P: either P201 or 152. P or C MATH 261. Equiv. IU PHYS P222. Fall, day, night; spring, day; summer, day. Heat, kinetic theory, elementary thermodynamics, heat transfer. Electrostatics, electrical currents and devices. Magnetism and electromagnetic radiation. Optics. For more information, visit our Web page at webphysics.iupui.edu/introphysics.

299 Introduction to Computational Physics (2 cr.) P: 152. Fall. Application of computational techniques to physical concepts. Topics include Mechanics, Oscillations, Chaos, Random processes, etc.

300 Introduction to Elementary Mathematical Physics (3 cr.) P: either P202 or 251 and MATH 261. Spring. Brief but practical introduction to various mathematical methods used in intermediate-level physics courses. Vector analysis, orthogonal coordinate systems, matrices, Fourier methods, complex numbers, special functions, and computational methods. Emphasis will be on worked examples and the application of these methods to physics problems.

310 Intermediate Mechanics (4 cr.) P: either P202 or 251 and either 300 or MATH 262. Fall. For students familiar with calculus. Elements of vector algebra; statics of particles and rigid bodies; theory of couples; principle of virtual work; kinematics;

dynamics of particles and rigid bodies; work, power, and energy; elements of hydromechanics and elasticity.

330 Intermediate Electricity and Magnetism (3 cr.) P: either P202 or 251 and either 300 or MATH 262. Spring. Electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's equations; electromagnetic waves.

342 Modern Physics (3 cr.) P: either P202 or 251 and MATH 261. Equiv. IU PHYS P301. Spring. A survey of basic concepts and phenomena in atomic, nuclear, and solid state physics.

342L Modern Physics Laboratory (1 cr.) Laboratory experiments to accompany 342.

353 Electronics Laboratory (2 cr.) P: 251. Spring. Introduction to electronic circuits and test equipment for scientists. Circuits including LRC networks, diodes, transistors, amplifiers, and digital components will be constructed and measured using oscilloscopes, function generators, and digital multimeters. Results will be analyzed in terms of basic circuit properties such as impedance and frequency response.

400 Physical Optics (3 cr.) P: 330. Fall. Electromagnetic waves; wave theory of reflection, refraction, diffraction, and interference. Spatial and temporal coherence. Fourier optics, coherent imaging, and holography. Polarization phenomena; Jones vectors and matrices.

401 Physical Optics Laboratory (2 cr.) P: 330. C: 400 (majors). Experiments to accompany PHYS 400 in reflection, refraction, and interference using lasers. Interferometry. Diffraction patterns with emphasis on Fourier analysis and Fourier transformations. Polarization, Brewster's angle. Coherence length of lasers.

416 Thermal Physics (3 cr.) P: 342 and either 310 or 330. Spring. Temperature, equations of state, first and second laws of thermodynamics, entropy and applications, kinetic theory, transport processes, statistical mechanics.

442 Quantum Mechanics (3 cr.) P: 342 and either 310 or 330. Fall. Inadequacies of classical physics; wave packets and Schrödinger equation, one-dimensional problems; operator formulation of quantum mechanics; linear harmonic oscillator; angular momentum; hydrogen atom; Pauli principle and application to helium atom.

470 Reading in Special Topics (1-3 cr.)

480 Solar Energy Usage (3 cr.) P: MATH 164 or equivalent, and two terms of general physics. Theoretical and practical aspects including collector design, modeling of solar systems, economic evaluation of solar alternatives, and photovoltaics.

490 Undergraduate Reading and Research (1-3 cr.) Independent study for undergraduates.

Undergraduate and Graduate Level

501 Physical Science (3 cr.) P: None. Fall, spring. Survey of the physical sciences with emphasis on methods of presentation appropriate to the elementary school. Graduate credit is extended only for elementary school teacher programs.

510 Physical Mechanics (3 cr.) P: 310 or equivalent, and courses in calculus and differential equations. Mechanics of particles, rigid bodies, and vibrating systems.

515 Thermodynamics (3 cr.) P: 310 and 330 and a course in differential equations or advanced calculus. Equilibrium states, the concept of heat, and the laws of thermodynamics; the existence and properties of the entropy; different thermodynamic potentials and their uses; phase diagrams; introduction of statistical mechanics and its relation to thermodynamics; treatment of ideal gases.

517 Statistical Physics (3 cr.) P: 342, 510, and 515 or equivalent. Laws of thermodynamics; Boltzmann and quantum statistical distributions, with applications to properties of gases, specific heats of solids, paramagnetism, black-body radiation, and Bose-Einstein condensation; Boltzmann transport equation and transport properties of gases; Brownian motion and fluctuation phenomena.

520 Mathematical Physics (3 cr.) P: 310, 322, 330, or consent of instructor. Vectors and vector operators, tensors, infinite series, analytic functions and the calculus of residues, partial differential equations, special functions of mathematical physics. When interests and preparation of students permit, calculus of variations and/or group theory are covered.

522 Coherent Optics and Quantum Electronics (3 cr.) P: 330, 442, and 550, or ME 587. Recent experimental and theoretical developments in optics emphasizing concepts of coherence. Fourier optics and the quantum theory of radiation. Applications to lasers and masers, nonlinear optics, holography, and quantum electronics.

530 Electricity and Magnetism (3 cr.) P: 330 or equivalent. Electrostatic problems; theory of dielectrics; theory of electric conduction; electromagnetic effects due to steady and changing currents; magnetic properties of matter; Maxwell's equations; electromagnetic radiation.

533 Principles of Magnetic Resonance (3 cr.) P: 550 or equivalent. Magnetic resonance in bulk matter; classical and quantum descriptions, relaxation, CW and pulse experiments, interactions and Hamiltonians. Magnetic interactions between electrons and nuclei; nuclear quadrupole interaction, crystal field interactions, effect of molecular motion. High resolution NMR spectra; EPR of free-radical solutions; powder patterns.

545 Solid-State Physics (3 cr.) P: Any undergraduate course in modern physics. Crystal structure; lattice vibrations; free electron theory of solids; band theory of solids; semiconductors; superconductivity; magnetism; magnetic resonance.

550 Introduction to Quantum Mechanics (3 cr.) P: 342 and at least one other junior-level course in each of mathematics and physics or equivalent. Brief historical survey; waves in classical physics; wavepackets; uncertainty principle; operators and wave functions; Schrödinger equation and application to one-dimensional problems; the hydrogen atom; electron spin; multielectron atoms; periodic table; molecules; periodic potentials; Bloch wave functions.

556 Introductory Nuclear Physics (3 cr.) P: 550 or equivalent. Theory of relativity; brief survey of systematics of nuclei and elementary particles; structure of stable nuclei; radioactivity; interaction of nuclear radiation with matter; nuclear reactions; particle accelerators; nuclear instruments; fission; nuclear reactors.

570 Selected Topics in Physics (3 cr.) Specialized topics in physics selected from time to time.

590 Reading and Research (1-3 cr.)

593 Advanced Physics Laboratory (3 cr.)

Graduate Level

600 Methods of Theoretical Physics (3 cr.) P: Graduate standing in physics or consent of instructor. 600 is designed to provide first-year physics graduate students with the mathematical background for subsequent studies of advanced mechanics, electrodynamics, and quantum theory. Topics include functions of a complex variable, ordinary and partial differential equations, eigenvalue problems, and orthogonal functions. Green's functions, matrix theory, and tensor analysis in three and four dimensions.

601 Methods of Theoretical Physics II (3 cr.) P: 600 or equivalent. A continuation of 600.

610 Advanced Theoretical Mechanics (3 cr.) P: 510 or equivalent. Lagrangian and Hamiltonian mechanics; variational principles; canonical transformations; Hamilton-Jacobi theory; theory of small oscillations; Lagrangian formulation for continuous systems and field.

617 Statistical Mechanics (3 cr.) P: 660 or equivalent. Classical and quantum statistical mechanics.

630 Advanced Theory of Electricity and Magnetism (3 cr.) P: 530 and 600, or equivalent. The experimental origins of Maxwell's equations. Electrostatics and magnetostatics; solution of boundary value problems. Quasi-static currents. Electromagnetic energy and momentum and the Maxwell stress tensor. Foundations of optics. Radiation from antennas, multipole expansion; waveguides.

631 Advanced Theory of Electricity and Magnetism (3 cr.) P: 630 or equivalent. Covariant formulation of electrodynamics; Lienard-Wiechert potentials; radiation from accelerated particles; Cerenkov radiation; dynamics of relativistic particles; radiation damping; introduction to magnetohydrodynamics.

633 Advanced Topics in Magnetic Resonance (3 cr.) P: 533 or consent of instructor. Rotation operators, coupling of angular momenta, Wigner-Eckhart theorem, density matrix; theory of magnetic resonance, relaxation in liquids, chemical exchange, double resonance, cross-polarization, magic angle spinning; two-dimensional NMR, correlation spectroscopy, exchange and NOE spectroscopies; application to biological macromolecules; time domain EPR; lineshape under slow motion.

660 Quantum Mechanics I (3 cr.) P: 530, 550, 600, and 610, or equivalent. Origins of the quantum theory, the uncertainty and complementarity principles. The Schrödinger equation and its solutions for simple physical systems. Mathematical formulation of the quantum theory. Applications: simple harmonic oscillator, theory of angular momentum, hydrogen atom. Time-independent and time-dependent perturbation theory. The Pauli exclusion principle. Spin of the electron. Elementary theory of scattering.

661 Quantum Mechanics II (3 cr.) P: 601, 630, and 660, or equivalent. Symmetry and conservation

laws. The Klein-Gordon and Dirac equations. Interaction of radiation with matter. Applications of quantum mechanics to atomic structure. Scattering theory.

670 Selected Topics in Physics (1-3 cr.) P: Consent of instructor. Specialized topics in physics, varied from time to time.

685 Physics Seminar (0-1 cr.) Offered on Pass/Fail basis only. May be repeated for credit. Weekly physics seminar presented by faculty and invited speakers from outside the department.

698 Research M.S. Thesis (cr. arr.)

699 Research. (cr. arr.) Ph.D. thesis.

Courses in Astronomy (AST)

The Department of Physics has academic, advising, and administrative responsibility for the courses in astronomy offered at IUPUI.

AST A100 The Solar System (3 cr.) P: None. Fall. Survey of the solar system, including the Earth, sun, moon, eclipses, planets and their satellites, comets, laws of planetary motion, etc. Discussion of the origin of the solar system, life on earth, and the possibilities of extraterrestrial life. Also astronomical instruments and celestial coordinates.

AST A105 Stars and Galaxies (3 cr.) P: None. Spring. Survey of the universe beyond the solar system, including stars, pulsars, black holes, principles of spectroscopy and the H-R diagram, nebulae, the Milky Way, other galaxies, quasars, expanding universe, cosmology, and extraterrestrial life.

A130 Short Courses in Astronomy (1 cr.) Five-week short courses on a variety of topics in astronomy. Examples of topics include: The Big Bang, Black Holes, Astronomy From Your Back Yard, How to See Stars, The Birth and Death of Our Sun.

Professors Appleby, Bond (*Chancellor's Professor*), Bringle, Fetterman (*Chairperson*), Goodlett, Kremer, Murphy, Rajecski, Tzeng

Professors Emeriti Davis, Hanford

Associate Professors Borden, Evenbeck, Fastenau, Felsten (IUPUI Columbus), Hazer, Johnson, June, Lauer, McGrew, Neal-Beliveau, Rytting (IUPUI Columbus), Svanum, Ware, Williams

Associate Professors Emeriti Fleener, Fortier, Goldberg

Assistant Professors Bigatti, Devine, Evans

Lecturer Kroupa

Adjunct Professors Alexy, Austin, Besing, Cofresi, Combs, Feinberg, Grahame, Haskins, Jackson,

Lysaker, Mermis, Metzner, Shain, Sharp, Trexler, Tomusk, Wagner, Zimet

Psychology is the study of behavior. Psychologists apply the scientific method to increase their understanding of human and animal behavior. Behavior is enormously diverse, and psychologists seek answers to a range of questions that are as varied as how eyes perceive light and form, how children develop a sense of morality, and under what conditions people help in emergencies. As an applied profession, psychologists use research results to solve personal and social problems.

Because the subject matter of psychology is broad, psychologists have become specialized. Specialization allows each psychologist to apply the general principles of science and behavior to a given area of interest. These include motivation and learning, child and adult development, social behavior of humans and animals, personality, thought processes, consumer behavior, and many more. Psychologists who function as applied professionals specialize in areas that include clinical, counseling, health care, rehabilitation, and industrial psychology.

The IUPUI Department of Psychology provides a varied undergraduate curriculum that leads to either the Bachelor of Arts or the Bachelor of Science degree in psychology from Purdue University. Graduate programs include Master of Science degrees in two specialty areas of psychology— industrial/organizational and clinical rehabilitation—and Doctor of Philosophy degrees in clinical rehabilitation psychology and psychobiology of addictions. Besides this professional and preprofessional training, the department serves the needs of students in many other fields by providing introductory and advanced courses in psychology. Students in the undergraduate program can choose to focus broadly on various aspects of psychology, or they can elect to concentrate on more specialized areas in which graduate training is offered.

The choice of a particular program for majors should be made in consultation with one of the academic advisors. Contact the Psychology Advising Office (LD 123, 274-6765) to schedule an appointment with an academic advisor. The course Orientation to a Major in Psychology (PSY B103) is recommended for students currently exploring psychology as a potential major. The department strongly recommends that undergraduate majors become involved with the Psychology Club or the honorary society, Psi Chi.

The Department of Psychology also offers several opportunities for students to gain research experience with faculty. Two courses entitled Readings and Research (B292 Fr/So and B492 Jr/Sr) offer students the opportunity to earn 1-3 credits for successfully participating in a research project under the direction of a faculty mentor. The SPUR (Supporting Psychology Undergraduate Research) program is available for students who have maintained a GPA of 3.2 or higher, and who have successfully completed B305 (Statistics) and B311 (Introductory Laboratory in Psychology). Eligible students must apply to the program and interview with potential faculty mentors. Students who are accepted into the program will enroll in Capstone Individual Research (B497) and

complete an independent year-long research project. Finally, the department offers Capstone Honors Research credit (B499) for students who complete an honors thesis under the direction of a faculty mentor. Both Capstone Individual Research (B497) and Capstone Honors Research (B499) fulfill the departmental capstone requirement, as described below. For a more detailed description of departmental research programs, please review the Psychology Department Web page (www.psynt.iupui.edu) or consult with an academic advisor.

Bachelor of Arts

Degree Requirements

The School of Science requirements for a Bachelor of Arts degree are listed in this bulletin (see the School of Science requirements under “Undergraduate Programs”).

Area I See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied with ENG W132 (or ENG W150) or ENG W231.

Area II A first-year proficiency in a modern foreign language is required. See the School of Science requirements under “Undergraduate Programs” for details.

Area IIIA See the School of Science requirements under “Undergraduate Programs” in this bulletin. Note that courses taken from the S (Social Sciences) list cannot be psychology courses.

Area IIIB One course from a list of Junior/Senior Integrator courses is required for this area (see academic advisor for details). The Junior/Senior Integrator is designed to integrate the areas of humanities, social sciences, and science. Prerequisites: at least junior standing, ENG W131, a second composition course applicable to Area I, one course applicable to Area IIIC, one course applicable to Area IIID, HIST H114, and two courses taken from two of the H, S, and C lists.

Area IIIC and IIID See the School of Science requirements under “Undergraduate Programs” in this bulletin. The computer requirement may be satisfied with any computer science course *except* CSCI N100-level courses or CSCI N241. CSCI N207 Data Analysis Using Spreadsheets is recommended.

Area IV See the following section, “Major in Psychology (B.A. or B.S.).”

Bachelor of Science

Degree Requirements (all except Behavioral Neuroscience Track)

The School of Science requirements for a Bachelor of Science degree are listed in this bulletin under “Undergraduate Programs.”

Area I See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied with ENG W132 (or ENG W150) or ENG W231.

Area II No foreign language is required.

Area IIIA See the School of Science requirements under “Undergraduate Programs” in this bulletin. Note that courses taken from the S (Social Sciences) list cannot be psychology courses.

Area IIIB One course from a list of Junior/Senior Integrator courses is required for this area (see academic advisor for details). The Junior/Senior Integrator is designed to integrate the areas of humanities, social sciences, and science. Prerequisites: at least junior standing, ENG W131, a second composition course applicable to Area I, one course applicable to Area IIIC, one course applicable to Area IIID, HIST H114, and two courses taken from two of the H, S, and C lists.

Area IIIC and IIID See the School of Science requirements under “Undergraduate Programs” in this bulletin. Two of the required four courses must be biology and/or chemistry courses. Recommended course sequences are CHEM C101-C110, or CHEM C105-C106, or BIOL N212-213 and N214-215. Courses in astronomy (AST A100, AST A105) are not acceptable. The computer requirement may be satisfied with any computer science course *except* CSCI N100-level courses or CSCI N241. CSCI N207 Data Analysis Using Spreadsheets is recommended.

Area IV See the following section, “Major in Psychology (B.A. or B.S.).”

Bachelor of Science (Behavioral Neuroscience Track)

Degree Requirements

Area I See the School of Science requirements under “Undergraduate Programs” in this bulletin. The second semester of English composition may be satisfied with ENG W132 (or ENG 150) or ENG W231.

Area II No foreign language is required.

Area IIIA See School of Science requirements under “Undergraduate Programs” in this bulletin. Note that courses taken from the S (Social Sciences) list cannot be psychology courses.

Area IIIB One course from a list of Junior/Senior Integrator courses is required for this area (see academic advisor for details). The Junior/Senior Integrator is designed to integrate the areas of humanities, social sciences, and science. Prerequisites: at least junior standing, ENG W131, a second composition course applicable to Area I, one course applicable to Area IIIC, one course applicable to Area IIID, HIST H114, and two courses taken from two of the H, S, and C lists.

Area IIIC Physical and Biological Sciences

BIOL K101, BIOL K103, BIOL K322, CHEM C105, CHEM C125, CHEM C106, CHEM C126

Area IIID Mathematical and Computer Sciences

MATH M118 and MATH M119, or MATH 153 and 154. CSCI N207 is recommended

Area IV Psychology See the following section, “Major in Psychology.” Students must take B320, B398, and either B394 or B396, and either B497 or B499.

Major in Psychology (B.A. or B.S.)

The Department of Psychology at IUPUI has a program for majors that requires 40 credit hours of selected course work. Students pursuing a B.S. degree must select a Capstone Lab, Capstone Independent Research (PSY B497), or Capstone Honors Research (PSY B499) as the capstone course (see below). Students are encouraged to consult with an academic advisor for determination of whether to pursue a B.A. or a B.S. degree.

Introductory Psychology

(Three courses; 7 credit hours)

B103
B104
B105

Research Methods

(Two courses; 6 credit hours)

B305
B311

Core Areas

(Six courses; 18 credit hours)

Select six courses from the following:

B307	B310	B320	B334
B340	B344	B356	B358
B370	B380	B398	B424

Psychology Specialization (Two courses; 6 credit hours)

Any two different numbered upper-level (300 or above) psychology courses.

Capstone (One course; 3 credit hours)

Select one course from the following options:

Advanced Lab or Honors Research (B.S. degree requires one of these research courses)

B423	B425	B431	B445	B457
B461	B471	B481	B497	B499

Practicum (does not fill requirement for B.S. degree)
B462 B482

Capstone Seminar (does not fill requirement for B.S. degree)
B454

Concentrations

The psychology department invites students to develop a concentration in a particular subdiscipline of psychology by selecting specialization and capstone courses that are aligned with one of three tracks listed below. Concentrations are particularly recommended for students who are considering applying to graduate school in one of these areas. Students who have successfully completed the three courses within one of the three concentration areas (two specialization courses, plus capstone) will receive a certificate of completion from the department. Students should consult with their academic advisors for more information on pursuing a concentration within the major.

TRACK	CORE AREA COURSES	SPECIALIZATION COURSES	CAPSTONE
Clinical Rehabilitation Psychology	<i>Prerequisites:</i> B380: Abnormal Psychology <i>Recommended:</i> B307: Tests and Measurement B320: Behavioral Neuroscience	B322: Introduction to Clinical Rehabilitation B365: Stress and Health B386: Introduction to Counseling	B482: Capstone Practicum in Clinical Rehabilitation (B.A. only) ¹ B481: Capstone Laboratory in Clinical Rehabilitation (B.A. or B.S.) B497/B499: Capstone/Honors Research (B.A. or B.S.) ²
Industrial/Organizational Psychology	<i>Prerequisites:</i> B358: Introduction to Industrial / Organizational Psychology <i>Recommended:</i> B307: Tests and Measurement	B366: Concepts and Applications in Organizational Psychology B368: Concepts and Applications in Personnel Psychology	B462: Capstone Practicum in Industrial/Organizational Psychology (B.A. only) ¹ B471 Capstone Laboratory in Social Psychology (B.A. or B.S.) B497/B499: Capstone/Honors Research (B.A. or B.S.) ²
Behavioral Neuroscience	<i>Prerequisite:</i> B320: Behavioral Neuroscience <i>Recommended:</i> B344: Learning B356: Motivation	B394: Drugs and Behavior B396: Alcohol, Alcoholism, and Drug Abuse <i>Required:</i> B398: Brain Mechanisms of Behavior	B497/B499: Capstone/Honors Research (B.A. or B.S.) ²

¹ B462 and B482 fulfill the capstone requirement only for students enrolled in the B.A. program. Students enrolled in the B.S. program may take a Capstone Practicum as an elective, but it will not satisfy the capstone requirement. Admission to Capstone Practica is highly competitive. Students should consult with their academic advisors on how to best prepare for applying to take Capstone Practica, and to develop an alternative plan should admission to a particular practicum be denied.

² Students who elect to complete Capstone or Honors Research must select a project that is directly related to the concentration that they are pursuing. Students should consult with their faculty mentor or their academic advisor before identifying a research project.

Minor in Psychology

The Department of Psychology offers an undergraduate minor program in psychology that requires 18 credit hours of selected course work. Interested students should obtain information from and submit an application to the psychology secretary. Applications must be approved by the Department of Psychology. Course requirements are as follows:

Introductory Psychology (Two courses; 6 credit hours)

B104
B105

Core Areas (Three courses; 9 credit hours)

Select three courses from the following:

B307 B310 B320 B334
B340 B344 B356 B358
B370 B380 B398 B424

Psychology Elective (One course; 3 credit hours)

Any additional upper-level (300 or above) psychology course.

No grade lower than C– is acceptable for any course in the minor.

A minimum grade point average of 2.0 in minor courses is required.

A minimum of 6 credit hours of the minor must be taken at IUPUI.

Correspondence courses may not be used to fulfill requirements for the minor.

Psychology Plans of Study

There is no single semester-by-semester plan of study for either the B.A. or the B.S. degree. However, one possible sequence of courses for the B.A. degree and one for the B.S. degree is given in the sample program that follows. Variations from these examples should be made based on students' career plans, through consultation with an academic advisor. For career and graduate school information related to psychology, please read "Life Beyond the Bachelor's Degree: A Primer for Psychology Majors" (www.psynt.iupui.edu/bulletin/primer.htm) or refer to "Preparing for Graduate School" or "Preparing for a Job" listed under "Other Links" on the Psychology Department Web page (www.psynt.iupui.edu).

Bachelor of Arts Sample Program (124 cr. required)

Freshman Year

Undergraduate Honors Program in Psychology

Psychology majors admitted to the IUPUI Honors Program will be eligible to participate in all psychology honors courses and to graduate with honors in psychology. Usually honors credit is based on individual student-faculty agreement to enhance normal course requirements. Students who are not in the IUPUI Honors Program, but who meet the minimum GPA criterion will be able to participate in honors courses, but will not receive honors credit. For currently enrolled students who have completed at least 12 credit hours, the GPA criterion for admission to the honors program is 3.3. For new students, the criteria for admission are recentered SAT scores of 1200 or graduation in the top 10 percent of the high school class.

To graduate with honors, students may choose one of two tracks. *Track 1:* The student must earn at least 24 hours of honors credit, 6 of which must be in psychology and 6 of which must be outside of psychology (the remaining 12 can be either). At least 3 hours of this credit must be PSY B499 Honors Research, which should culminate in an honors thesis. *Track 2:* The student must earn at least 21 hours of honors credit, 6 of which must be in psychology and 6 of which must be outside of psychology (the remaining hours can be from either). At least 6 hours of the credit must be a research project culminating in a psychology thesis. In this track the university honors council must approve the project proposal. In both tracks only grades of A or B will count for honors credit. To graduate with honors, the student must have an overall GPA of 3.3 with a GPA of at least 3.5 in honors and psychology courses.

For additional information, contact the director of the IUPUI Honors Program, University College, 3140, 815 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5154; telephone (317) 274-2660, or see a psychology advisor.

Psi Chi Honorary Society To become a member of the Psi Chi Honorary Society, undergraduate psychology majors must have an overall GPA of 3.0 and a GPA of 3.5 in psychology. The current membership fee is \$45. Interested students should submit an application to the Psi Chi faculty advisor.

Graduate Programs

The department offers Purdue University Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) degree programs. At the M.S. level, programs are offered in industrial/organizational psychology and clinical rehabilitation psychology. At the Ph.D. level, programs are offered in clinical rehabilitation psychology and psychobiology of addictions.

M.S. Programs

Graduate training at the M.S. level is designed to provide students with theory and practice that will enable them to apply psychological techniques and findings in a subsequent job setting. Depending on the program, the M.S. degree may be completed on a full- or part-time basis and normally takes two or three years to finish. Depending on the case, a minimum of 36 credit hours is required, including departmental core, area core, and elective courses.

Industrial/Organizational Psychology This emphasis is designed to prepare individuals for positions in industry or for entry into an industrial/organizational doctoral program. Students are familiarized with the scientist-practitioner model, which emphasizes both research and the application of problem-solving skills to organizational problems. Students in the program are taught analytic methods for diagnosing work-related problems, developing solutions, and evaluating the effectiveness of those solutions. While the primary focus of the curriculum is on the traditional personnel psychology areas of selection, training, and performance evaluation, students also learn about topics such as decision-making, motivation, leadership, and organizational effectiveness.

Clinical Rehabilitation Psychology This program is designed to prepare students to be effective mental health counselors, particularly in health and rehabilitation settings. The program consists of 48 credit hours and takes approximately two to two-and-a-half years to complete. Academic course work in counseling techniques, assessment, and basic psychological principles is interwoven with supervised practicum placements in varied settings. The program has a strong health and rehabilitation focus, evident in both course work and practicum placements. The program is designed to meet most of the educational requirements for licensure as a mental health counselor in the state of Indiana.

Ph.D. Programs

Clinical Rehabilitation Psychology Using a scientist-practitioner model, this program integrates the assessment and intervention skills traditionally associated with clinical psychology and rehabilitation psychology. The emphasis is on optimizing the adaptation to the community of persons with disabilities and chronic illnesses. Graduates of the program will be qualified to assume positions as direct-service providers, planners, academicians, trainers, evaluators, researchers, and consultants. The program emphasizes rigorous academic training, which is combined with practical application in a wide variety of rehabilitation centers in Indianapolis and elsewhere. Full-time study and a minimum of 85 credit hours (postbaccalaureate) are required, and the program is expected to take five years to complete. The program includes diverse training in psychology, including a psychology core, statistics and measurement, rehabilitation psychology, internships and practica, and an empirical thesis and doctoral dissertation. Rehabilitation specialty courses covering a broad range of disabling conditions and intervention techniques are offered. A course in ethics is also required.

Psychobiology of Addictions This program is designed to promote a comprehensive understanding of the neurobiological bases of behavior, with an emphasis on the behavioral and neurobiological aspects of drugs of abuse and addictive behaviors. General goals of the program are to develop knowledge and expertise in the neurobiological mechanisms of behavior, to develop skills in applying methods of behavioral neuroscience research to the problems of alcohol and drug abuse and addiction, and to train competence in communication and teaching of knowledge and research skills. Students will obtain broad-based training in the combined disciplines of the neurosciences (e.g., behavioral and developmental neuroscience, psychopharmacology, neurobiology) and in the behavioral sciences (e.g., experimental psychology, cognitive psychology, learning, experimental design and analysis, animal models of drug abuse and addiction). The psychobiology of addictions program is an IUPUI program that is regulated through the Department of Psychological Sciences at Purdue, West Lafayette. Students take coursework at IUPUI, but must meet all Purdue requirements and must have at least two committee members from Purdue for significant program milestones, such as Ph.D. preliminary examinations and dissertation research committees. A minimum of 85 credit hours (postbaccalaureate) are required, plus approval of the course of study by the student's advisory committee. The program intends to train students seeking careers in teaching and/or research in academic environments, medical institutions, pharmaceutical firms, and governmental agencies.

Financial Support

Financial support for eligible graduate students at both the M.S. and Ph.D. levels is available through teaching and research assistantships, tuition stipends, and fellowships. Full assistantships require a minimum of 20 hours of work per week and include at least partial tuition remission in addition to salary.

Admission Requirements

Industrial/Organizational Psychology

Undergraduate training in psychology, mathematics, and the physical sciences is highly desirable, though not required. Applicants should have had at least one undergraduate course in statistics, as well as one in tests and measurements. If those courses have not been completed, the student will be required to complete them as prerequisites for admission to the program. To be considered for admission without probation, applicants must obtain (a) a baccalaureate degree from a college or university of recognized standing, (b) a GPA of 3.0 or higher on a 4.0 scale, (c) a minimum subtotal on the GRE verbal and quantitative of 1100 with a quantitative score of at least 550, (d) three favorable letters of recommendation. The student who does not meet the above standards, but shows potential for graduate studies could be recommended for conditional admission.

Clinical Rehabilitation Psychology

Undergraduate training in psychology, mathematics, and the physical sciences is highly desirable, though not required. Undergraduate course work must include psychology courses in (1) tests and

measurement, (2) statistics, (3) human physiology or physiological psychology, and (4) abnormal psychology. If those courses have not been completed, the student will be required to complete them as prerequisites for admission to the program.

Students may apply directly to the Ph.D. program or to the terminal M.S. program (or both simultaneously). For an applicant to be considered for admission to the M.S. program, the applicant must obtain (a) a baccalaureate degree from a college or university of recognized standing, (b) a GPA of 3.0 or higher on a 4.0 scale, (c) a minimum subtotal on the GRE verbal and quantitative of 1100 with a quantitative score of at least 550, (d) three favorable letters of recommendation.

The Ph.D. program seeks talented and motivated persons who have an interest in psychology and rehabilitation and who have the potential to make creative contributions as clinical rehabilitation psychologists. Admission to the Ph.D. program is competitive and only under unusual circumstances will students be considered for admission if they fail to meet the following minimum standards: (a) an undergraduate and graduate grade point average of 3.2 or higher on a 4.0 scale, (b) a minimum composite GRE score (verbal and quantitative) of 1200, (c) three favorable letters of recommendation, and (d) a personal statement expressing an interest in the field of rehabilitation psychology. Prior clinical and research experience is recommended, but not required, for admission.

Psychobiology of Addictions This Ph.D. program is designed for individuals interested in academic or research careers studying the physiological bases of addictive behaviors and drugs of abuse. Successful applicants typically have (a) an undergraduate and graduate grade point average of 3.2 or higher on a 4.0 scale, (b) a minimum composite GRE score (verbal and quantitative) of 1200, (c) three favorable letters of recommendation, and (d) a personal statement expressing an interest in the psychobiology of addictions. Students with undergraduate degrees in psychology or the life sciences (e.g., biology, chemistry) are encouraged to apply.

Admission Information

Students are admitted only for fall enrollment, and the deadline for receipt of application materials is February 1. Students interested in information about admission to graduate programs in psychology should write directly to the graduate program coordinator, Department of Psychology, Indiana University-Purdue University Indianapolis, Science Building LD124, 402 N. Blackford Street, Indianapolis, IN 46202-3275; telephone (317) 274-6945.

Research Facilities

The Department of Psychology has extensive laboratory and computer facilities to support faculty and student research. More than 8,000 square feet of laboratory space in the School of Science complex is devoted to psychological research in the areas of clinical rehabilitation psychology, industrial/organizational psychology, life span development, cognition, and sensation and perception. Separate animal quarters and modern laboratories are also available to support research in

animal experimental psychology and psychobiology. Computer support includes microcomputer clusters and networks within the department and terminal connections to several mainframe computers. Internship and practicum sites are available at the Indiana University Medical Center and with numerous other organizations in metropolitan Indianapolis.

Transfer Credit

A maximum of 12 credit hours can be transferred into the M.S. program, and a maximum of 36 credit hours can be transferred into the doctoral program. Transfer hours will be accepted only if they are appropriate and judged acceptable by the student's plan-of-study committee.

Temporary Student Status

A student may enroll in some graduate program courses without formal admission after making application as a temporary graduate student. No more than 12 hours of credit may be applied to an advanced degree program if an individual is later admitted as a regular graduate student. However, if an application to a regular degree program is approved during the session in which a person is enrolled for the 12th credit hour as a nondegree registrant, then all credits taken prior to and during that term will be eligible for inclusion in a plan of study for a degree program. For inclusion, the courses must be appropriate to the degree program and acceptable to the department and the graduate school. No course in which a grade of less than B (e.g., B-) has been received will be permitted in a plan of study if the course was taken while the student was enrolled as a nondegree registrant. Nondegree registrants may be required to secure consent from each of the departments in which they would like to register for courses.

Research Interests of Faculty

Major research interests of faculty include applied social psychology, biofeedback, cross-cultural investigations, industrial/organizational psychology, quantitative psychology, measurement theory and development, physiological psychology, program planning and evaluation, clinical rehabilitation psychology, behavioral psychopharmacology, addictions, cognitive developmental psychology, learning, and student/faculty performance. A current and more detailed listing of faculty research interests is available from the department.

Courses in Psychology (PSY)

Note: P—prerequisite; C—corequisite; Fall—offered fall semester; Spring—offered spring semester; Summer—offered during the summer session. For courses with no designated semester, consult the *Schedule of Classes*. **Equiv.**—course is equivalent to the indicated course taught at Indiana University Bloomington, or the indicated course taught at Purdue University, West Lafayette.

Undergraduate Level

B103 Orientation to a Major in Psychology (1 cr.) This course will help students establish goals for their academic experience in three areas: career,

relationships, and personal life. They will be introduced to psychological resources on campus, the faculty, and student organizations. They also will make a curriculum plan to meet their learning objectives.

B104 Psychology as a Social Science (3 cr.)

Equiv. to IU PSY P102 and PU PSY 120. Fall, spring, summer. Introduction to scientific method, individual differences, personality, developmental, abnormal, social, and industrial psychology.

B105 Psychology as a Biological Science (3 cr.)

Equiv. to IU PSY P101 and PU PSY 120. Fall, spring, summer. Research methods and content areas of learning, sensation-perception, psychophysiology, motivation, emotions, and statistics.

B252 Topics in Psychology (1-3 cr.) Topics in psychology and interdisciplinary applications. May be repeated, provided different topics are studied, for a maximum of 4 credit hours.

B292 Readings and Research in Psychology (1-3 cr.)

P: Consent of instructor. Fall, spring. Independent readings and research on psychology problems. For freshmen and sophomores only.

B305 Statistics (3 cr.) P: B104 or B105, and 3 credits of math that carry School of Science credit. Equiv. to IU PSY K300, K310, and PU PSY 201. Fall, spring, summer. Introduction to basic statistical concepts; descriptive statistics and inferential statistics.

B307 Tests and Measurement (3 cr.) P: 3 credit hours of psychology and B305. Equiv. to IU PSY P336 and PU PSY 202. An introduction to psychological measurement, including psychophysics, scaling techniques, psychological testing, and individual differences.

B310 Life Span Development (3 cr.) P: 3 credit hours of psychology. Fall, spring, summer. Equiv. to PU PSY 230. Emphasizes the life span perspective of physical and motor, intellectual and cognitive, language, social and personality, and sexual development. Commonalities across the life span, as well as differences among the various segments of the life span, are examined. Theory, research, and practical applications are stressed equally.

B311 Introductory Laboratory in Psychology (3 cr.)

P: B105 and B305 or consent of instructor. Equiv. to IU PSY P211, and PU PSY 203. Fall, spring. Introductory laboratory in experimental methods and statistical treatment of data in several areas of psychology; introduction to experimental report writing.

B320 Behavioral Neuroscience (3 cr.)

P: B105. Equiv. to IU PSY P326 and PU PSY 220. Review of necessary background in neurophysiology and neuroanatomy followed by the relationship of physiology to sensory processes, motivation, and learning. Emphasis on research with animals.

B322 Introduction to Clinical Rehabilitation Psychology (3 cr.)

P: 3 credit hours in psychology. This course surveys various aspects of the practice of clinical rehabilitation psychology from a scientist-practitioner perspective. Aspects of the historical framework of clinical psychology will be discussed. In addition, various aspects of the present state of

clinical psychology will be covered in addition to directions for the future. Specific topics to be addressed include health psychology, new trends in diagnosis and assessment, changing health care patterns and the impact of managed care, and specific areas of rehabilitation and case management.

B334 Perception (3 cr.) P: B105. Equiv. to IU PSY P329 and PU PSY 310. Consideration of the concepts and research in perception. Relation of sense organ systems to human behavior. Some attention to social and cultural factors.

B340 Cognition (3 cr.) P: B105 or consent of instructor. Equiv. To IU PSY P335, and PU PSY 200. A survey of information-processing theories from historical antecedents through current theories. Research methodology and theory will be emphasized throughout the discussion of issues such as perception, attention, memory, reasoning, and problem solving.

B344 Learning (3 cr.) P: B105. Equiv. to IU PSY P325 and PU PSY 314. History, theory, and research involving human and animal learning and cognitive processes.

B354 Adult Development and Aging (3 cr.) P: B310 or consent of instructor. Equiv. to PU PSY 367. Examines changes that occur with age in the following areas: intelligence, memory, personality, sexuality, health, living environments, economics, developmental disorders, and treatment for developmental disorders.

B356 Motivation (3 cr.) P: 3 credit hours of psychology. Equiv. to IU PSY P327 and PU PSY 333. Study of motivational processes in human and animal behavior, how needs and incentives influence behavior, and how motives change and develop.

B358 Introduction to Industrial/ Organizational Psychology (3 cr.) P: 3 credit hours of psychology or consent of instructor. Equiv. to IU PSY P323, and PU PSY 372. This course surveys various aspects of behavior in work situations using the scientist-practitioner perspective. Traditional areas covered from personnel psychology include selection, training, and performance appraisal; areas surveyed from organizational psychology include leadership, motivation, and job satisfaction.

B360 Child and Adolescent Psychology (3 cr.) P: 3 credit hours of psychology. Equiv. to IU PSY P316 and PU PSY 235. Development of behavior in infancy, childhood, and adolescence, including sensory and motor development and processes such as learning, motivation, and socialization.

B362 Practicum in Child Psychology (3 cr.) P: Consent of instructor. Experience working with children in field setting. May be repeated once.

B365 Stress and Health (3 cr.) P: 3 hours of psychology. Stress is examined from biological, psychological, and social perspectives. Topics include sources of stress, factors that influence stress and coping, effects of stress on psychological and physical well-being and performance, and stress-management techniques.

B366 Concepts and Applications in

Organizational Psychology (3 cr.) P: B358 or consent of instructor. Some organizational psychology topics introduced in the I/O psychology survey course are covered in more depth. Advanced information is presented for each topic, and students have the opportunity for several different hands-on applications including case projects and computer exercises. Example topics are organizational culture, employee attitudes, motivation, and leadership.

B368 Concepts and Applications in Personnel Psychology (3 cr.)

P: B358 or consent of instructor. Some personnel psychology topics introduced in the I/O psychology survey course are covered in more depth. Advanced information is presented for each topic, and students have the opportunity for several different hands-on applications including case projects and computer exercises. Example topics are job analysis, selection, performance appraisal, and training.

B370 Social Psychology (3 cr.)

P: 3 credit hours of psychology. Equiv. to IU PSY P320 and PU PSY 240. Fall, spring, summer. Study of the individual in social situations including socialization, social perception, social motivation, attitudes, social roles, and small group behavior.

B374 Group Dynamics Theory and Research (3 cr.)

P: B370. An intensive survey of research and theory on the behavior of small groups and the research methods by which groups are studied.

B376 The Psychology of Women (3 cr.)

P: 3 credit hours of psychology. Equiv. to IU PSY P460, and PU PSY 239. A survey of topics in psychology as related to the biological, social, and psychological development of women in modern society.

B380 Abnormal Psychology (3 cr.)

P: 3 credit hours of psychology. Equiv. to IU PSY P324 and PU PSY 350. Fall, spring, summer. Various forms of mental disorders with emphasis on cause, development, treatment, prevention, and interpretation.

B382 Practicum in Community Psychology (3 cr.)

P or C: B370 or B380 and consent of instructor. Experience working with individuals who may have a wide range of psychological problems. Focus is upon both the individual and helping agency as factors in the community.

B386 Introduction to Counseling (3 cr.)

P: B104, B310, B380. This course will help students acquire a repertoire of basic counseling interview skills and strategies and expose students to specific helping techniques. This will be an activity-based course and students will enhance the general education goals of listening and problem solving.

B394 Drugs and Behavior (3 cr.)

P: B105. Equiv. to PU PSY 428. An introduction to psychopharmacology, the study of drugs that affect behavior, cognitive functioning, and emotions, with an emphasis on drugs of abuse. The course will explore how drugs alter brain function and the consequent effects, as well as the long-term consequences of drug exposure.

B396 Alcohol, Alcoholism, and Drug Abuse (3 cr.)

Provides introduction to the use, misuse, and dependent use of alcohol and other mood-altering

drugs. Topics include basic principles of drug action, the behavioral and pharmacological effects of drugs, and the factors that influence use, abuse, and addiction. Addiction assessment, treatment, and treatment outcome also will be covered.

B398 Brain Mechanisms of Behavior (3 cr.) P: B320 Spring. An advanced topical survey of the neurobiological basis of behavior, focusing on the neural substrates and the cellular and neurochemical processes underlying emotions, motivation and goal-directed behavior, hedonic experience, learning, and cognitive function. Integrates experimental research across different levels of analysis (genetic, molecular, cellular, neural systems).

B420 Humanistic Psychology (3 cr.) A comprehensive survey of the field of humanistic psychology. Explores human experience as a focal point in the study of psychology. Use of didactic and experiential teaching methods.

B422 Professional Practice (1-3 cr.) P: Consent of instructor. Can include a professional internship in the community, peer advising in the Psychology Advising Office, or teaching internship in the department. Faculty mentor must approve and oversee activity. Academic work will be required to earn credit.

B423 Capstone Laboratory in Physiological Psychology (3 cr.) P: B311, B305, and B320. Equiv. to IU PSY P426. Experiments and demonstrations in physiological psychology.

B424 Theories of Personality (3 cr.) P: 3 credit hours of psychology. Equiv. to IU PSY P319 and PU PSY 420. Methods and results of the scientific study of personality, including the development, structure, and functioning of the normal personality.

B425 Capstone Laboratory in Personality (3 cr.) P: B311, B424, and B305. Demonstrations and experiments in personality research.

B431 Capstone Laboratory in Sensation and Perception (3 cr.) P: B311, B305, or B334. Equiv. to IU PSY P424. Experiments and demonstrations in sensation and perception with an emphasis on their physiological basis.

B445 Capstone Laboratory in Learning (3 cr.) P: B311, B305, and B344. Equiv. to IU PSY P436. Experiments and demonstrations involving learning and cognitive processes.

B452 Seminar in Psychology (1-3 cr.) P: B305 and B311. Topics in psychology and interdisciplinary applications. May be repeated, provided different topics are studied, for a maximum of 6 credit hours.

B454 Capstone Seminar in Psychology (3 cr.) P: B305 and B311 or consent of instructor. Topics in psychology and interdisciplinary applications, which have been approved to fulfill the capstone course requirement.

B457 Capstone Laboratory in Motivation (3 cr.) P: B311, B305, and B356. Equiv. to IU PSY P436. Experiments and demonstrations in motivation.

B460 Behavior Management (3 cr.) P: Consent of instructor. Equiv. to IU PSY P430, and PU PSY 380. Conducted as a seminar and a practicum for psychology majors and teachers in the principles and methods of behavior management.

B461 Capstone Laboratory in Developmental Psychology (3 cr.) P: B311, B305, and B310 or B360. Equiv. to IU PSY P429. Principal research methods in developmental psychology and their application to selected problems.

B462 Capstone Practicum in Industrial/Organizational Psychology (3 cr.) P: B366 or B368 or equivalent and consent of instructor. Provides students with work experience, one day per week, in local organizations. Practice will be obtained in using the applied skills of industrial psychology to solve actual organizational problems.

B471 Capstone Laboratory in Social Psychology (3 cr.) P: B311 and B305. P or C: B370. Equiv. to IU PSY P421. Observational, correlational, and experimental studies in social psychology.

B472 Practicum in Group Dynamics (3 cr.) P: 6 credit hours of psychology and consent of instructor. Equiv. to IU PSY P321. Application in the field of group dynamics through experience as a participant in group sensitivity training.

B481 Capstone Laboratory in Clinical Rehabilitation Psychology (3 cr.) P: B305 and B311, B380. Principal research methods in clinical rehabilitation psychology and their application to selected problems.

B482 Capstone Practicum in Clinical Rehabilitation Psychology (3 cr.) P: B386 and consent of instructor. Students are placed in a clinical/community setting and gain applied practicum experience working with individuals who have psychological, medical and/or physical health problems. Relevant multi-cultural issues will be addressed.

B492 Readings and Research in Psychology (1-3 cr.) P: Consent of instructor. Equiv. to IU PSY P495 and PU PSY 390 and 391. Fall, spring, summer. Independent readings and research on psychological problems.

B497 Capstone Individual Research (3 cr.) P: B305, B311, and consent of instructor. Independent research project. This course requires the student to develop a research question, design a research study, and complete a research paper. Additionally, students are required to present their research at an approved conference. This activity has been approved to fulfill the capstone course requirements.

B499 Capstone Honors Research (cr. arr.) P: Consent of instructor. Equiv. to IU PSY P499. Fall, spring, summer. Independent readings and research resulting in a research paper.

Graduate Level

518 Memory and Cognition (3 cr.) A graduate-level survey of theories and research concerned with the acquisition, retention, and retrieval of information. Topics include amnesia, eyewitness memory, forgetting, developmental trends in memory,

related issues in attention, language processing, and problem solving.

540 History of Psychology (3 cr.) P: 9 credit hours of psychology. A review of the philosophical, theoretical, and methodological issues that entered into the development of modern psychology. Emphasis on historical themes that continue to be active in the science and profession of psychology.

I544 Psychobiology of Learning and Motivation (3 cr.) P: B320 or equivalent. The course examines past and present biologically based theories of learned and motivated behavior. Neural processes of feeding, drinking, aggression, fear, anxiety, and sexual behavior will be emphasized. Selected coverage of behavioral research principles used to investigate these processes also will be discussed.

I545 Psychopharmacology (3 cr.) P: 615 or consent of instructor. A survey of the effects of drugs on behavior, cognitive functioning, and emotions. Emphasis will be placed on the practical advantages of understanding how psychotropic drugs work, and on how the brain functions in health and disease. Students will be exposed to the most current theories and research in the field.

I549 Introduction to Vocational Rehabilitation (3 cr.) P: 9 credit hours of psychology. Philosophy, procedures, and practices underlying the vocational rehabilitation movement, including the historical, social, cultural, and economic factors and legislation that have contributed to its rapid development.

I555 Medical and Psychosocial Aspects of Chronic Illness (3 cr.) P: 9 credit hours of psychology including I549. Provides medical information for rehabilitation counselors and introduces students to medical terminology. Includes knowledge of the etiology, prognosis, methods of treatment, and effects of disabling conditions, and implications for the rehabilitation counselor. Counselor relationships with other health-related personnel are emphasized.

565 Interpersonal Relations (3 cr.) P: 9 credit hours of psychology. Review of major current theoretical formulations of the interpersonal relationship, including a discussion of some of the more prominent research. Focus is primarily on two-person interpersonal relations.

570 Industrial Psychology (3 cr.) Survey of the applications of psychological principles and of research methodology to the various human problems in the industry, such as personnel selection and appraisal, the organizational and social context of human work, the job and work situation, human errors and accidents, and psychological aspects of consumer behavior.

572 Organizational Psychology (3 cr.) A survey of basic behavioral science research and thinking as these contribute to the understanding of individual, dyadic, group, intergroup, and other large organization behavioral phenomena. The topics covered include motivation, perception, attitudes and morale, communication, leadership, conflict, problem solving, behavior change, and organizational effectiveness.

574 Psychology of Industrial Training (3 cr.) P: 3 credit hours of psychology. Use of psychological measurement techniques in assessing training needs and evaluating training effectiveness and the application of learning research and theory to industrial training.

1578 Occupational Analysis (3 cr.) P: 570. Survey of systematic study of human work, including techniques for analyzing jobs and occupations for personnel and related purposes. Survey of occupational research and related topics. Practice in job analysis.

1580 Survey of Clinical Approaches with Children and Adolescents (3 cr.) P: 9 credit hours in psychology. Introduction to the following as they relate to children and adolescents: (1) psychopathological disorders and behavior problems, (2) theories of psychopathology and behavior problems, (3) evaluation techniques, and (4) therapeutic and behavioral change procedures. This is a lecture course.

590 Individual Research Problems (1-3 cr.) P: 12 credit hours of psychology and consent of instructor. Opportunity for students to study particular problems in any field of psychology or to learn research techniques under the guidance of a faculty member.

1591 Psychopathology (3 cr.) P: Student enrolled in psychology graduate program or consent of instructor. An intensive survey of the methods, theories, and research concerning the nature, causes, and development of psychopathology. An evaluation of current systems of assessment and classification of abnormal behavior is emphasized.

1595 Seminar in Teaching Psychology (0-3 cr.) P: Consent of the Department of Psychology. A problem-solving approach to teaching psychology at IUPUI. Planning the course; anticipating problems; dealing with ongoing teaching problems. Current faculty members will present their innovative techniques. Participants will evaluate each other's classroom performance.

600 Statistical Inference (3 cr.) P: Degree-seeking student in psychology graduate program or permission of instructor and B305 or equivalent. Emphasis on principles underlying both parametric and nonparametric inference.

601 Correlation and Experimental Design (3 cr.) P: 600. Continuation of 600 with emphasis on the design and analysis of experiments.

605 Applied Multivariate Analysis (3 cr.) P: 600. A survey of the most frequently employed multivariate research techniques, such as multivariate generalizations of univariate tests and analysis of variance, principal components, canonical analysis, and discriminant analysis. A central theme of the course is the general linear model, both univariate and multivariate. A multipurpose program for this model provides the student with practical experience in conducting multivariate research.

608 Measurement Theory and the Interpretation of Data (3 cr.) P: 600 and B307, or equivalent. The theory of measurement and the development of reliability and the Spearman-Brown equations, true scores and variables, and correction

for attenuation. Variance or covariance of combinations of variables. Item analysis and test construction strategies. Reliability and validity of measurements and the influence of measurement error and measurement threats to research design.

611 Factor Analysis (3 cr.) P: 600. Theory and applications of factor analysis in psychological research.

1613 Psychiatric Rehabilitation (3 cr.) P: Consent of instructor. A seminar examining recent developments in the rehabilitation of persons with severe psychiatric disabilities. Covers assertive case management, vocational approaches, clubhouse models, residential alternatives, psychoeducation, and the consumer movement. Field observations complement classroom instruction. Issues in program planning and cost effectiveness will be discussed.

1614 Behavioral Medicine in Rehabilitation (3 cr.) P: Consent of instructor. The theory and practice of behavioral medicine will be explored. Emphasis is on the application of behavioral principles to individuals suffering from various chronic diseases or disabilities including spinal cord injury, chronic pain, cancer, diabetes, strokes, cardiovascular diseases, and epilepsy.

615 Introduction to Psychobiology (3 cr.) P: Consent of instructor. A survey of the integrated neurosciences emphasizing physiological psychology. Neural processes of sensory and motor function, arousal and sleep, motivation, learning and memory, language function, and personality disorders will be presented with selected coverage of neuroanatomy, neurophysiology, neuropharmacology, and neuroendocrinology. Both normal and pathological functions will be covered.

1618 Interventions in Health Psychology (3 cr.) P: Consent of instructor. The goal of the course is to familiarize students with clinical interventions and research relevant to health problems and lifestyle. This will enable students to critically evaluate the work that has been accomplished, and to design and implement intervention protocols.

622 Animal Learning (3 cr.) A survey of the methods, problems, and research in Pavlovian, instrumental, and operant conditioning. Current issues and attempts at theoretical integration are highlighted. Emphasis is also given to the empirical and conceptual foundations of the present views on the mechanisms governing learned behavior.

624 Human Learning and Memory (3 cr.) P: A first course in human learning and consent of instructor. Selected survey of important problems in the encoding, storage, and retrieval of laboratory and naturalistic events.

628 Perceptual Processes (3 cr.) This course is an advanced introduction to the psychology of perception. The course emphasizes visual and auditory perception, reviewing basic concepts, methodologies, research findings, and theoretical approaches. Theories of direct perception, constructivist perception, and computational vision are discussed in detail.

640 Survey of Social Psychology I (3 cr.) P: B370 or equivalent. An extensive survey of methods, research, and theory in social psychology.

1643 Field Methods and Experimentation (3 cr.) P: 600. Covers methods appropriate for field experimentation and program evaluation. Topics will include quasi-experimental designs, sampling procedures, and issues associated with program evaluation.

646 Seminar in Social-Personality Psychology (3 cr.) P: Consent of instructor. A seminar covering a special topic in personality or social psychology. Specific topic varies from seminar to seminar.

1650 Developmental Psychology (3 cr.) Major concepts, principles, and facts concerning the biological and environmental influences on behavioral and psychological development. Particular emphasis on essential principles of ontogenetic development (life span) emerging from current research in genetics and psychology.

655 Cognitive Development (3 cr.) P: Consent of instructor. An analysis of research findings and current theories relevant to the development of cognitive processes. Emphasis on the changing characteristics of some fundamental cognitive processes. Special attention is given to verbal behavior and language.

1664 Psychological Assessment in Rehabilitation I (3 cr.) P: Consent of instructor. Presentation of general principles of psychological assessment, professional practice, interviewing, intelligence/cognitive assessment, and psychological report writing. Supervised practice in the development of direct service skills in interviewing, behavioral observation, and psychometric assessment of cognitive abilities. Emphasis on functional implications of test results for rehabilitation populations.

1665 Intervention I: Counseling Approaches (3 cr.) P: Consent of instructor. Introduces doctoral students to intervention procedures used in rehabilitation psychology. The course has both didactic and clinical skills components, involving traditional counseling interventions, behavior therapy, and biofeedback. Applications to disabled populations will be emphasized.

1666 Intervention II: Cognitive Behavioral Interventions (3 cr.) P: Consent of instructor. Theory, research, and clinical application of cognitive-behavioral therapy (CBT). Addresses the history and development of CBT, assessment and intake interview process, CBT intervention techniques, and CBT treatment of several disorders. Relevant multicultural issues will also be discussed.

1669 Psychological Assessment in Rehabilitation II (3 cr.) P: 1664 and consent of instructor. Presentation of psychometric foundations and the basic prediction model in personality/interest assessment. Coverage of the history of personality, assessment, personality development, and supervised clinical practice in personality/interest assessment in rehabilitation. Emphasis on prediction of everyday functioning.

1670 Ethical Legal and Cultural Issues in Psychology (3 cr.) P: Admission to graduate training in psychology or consent of instructor. Exploration of models of ethical decision-making. Examination of

ethical principles and legal mandates that apply to professional psychology including psychologists' roles in health care service delivery, consultation (clinical and organizational), research, and teaching. Examination of cultural issues including issues related to ethnicity, age, gender, religion, and sexual orientation.

I675 Human Neuropsychology (3 cr.) P: Admission to graduate training in psychology or consent of instructor. Review of essential neuroanatomy, survey of experimental and correlational research methods in the study of brain-behavior relationships, and overview of the history of neuropsychology. Critical examination of neural models for human behavior: hemispheric specialization and integration, sensation/perception, motor skills, language, spatial processing, attention, memory, executive operations, and gender differences.

I676 Principles of Clinical Neuropsychology (2 cr.) P: Admission to graduate training in Clinical Rehabilitation Psychology or consent of instructor. Application of theoretical models of brain-behavior relationships to evaluation of patients with suspected nervous system disorders. Review of neuropsychological profiles associated with various neurological and psychiatric disorders. Examination of ethical/cultural issues in neuropsychological evaluation. This course does not provide training in test administration (see PSY I677).

I677 Neuropsychological Assessment Lab (1 cr.) P: I664 and I669 and admission to graduate training in Clinical Rehabilitation Psychology. Students must register for I676 concurrently with I677. Training and supervised practice in neuropsychological assessment techniques and procedures. Critical review of the psychometric properties of prevailing assessment tools. Review models of interpretation/reporting. Development of proficiencies in administering prominent neuropsychological tests, neuropsychological interviewing, and writing of reports that integrate multidisciplinary data.

680 Seminar in Industrial-Personnel Psychology (3 cr.) P: 570, 572, and 601. Extensively surveys the various areas of industrial-personnel psychology (e.g., selection, placement, training, performance appraisal). Provides a critical and up-to-date review of recent and classical research in these areas.

681 Seminar in Research Methodologies of Industrial/Organizational Psychology (3 cr.) P: 570, 572, 601, or consent of instructor. Intensive analysis of application of various research and statistical methods to the study of human behavior in organizational settings.

682 Advanced Seminar in Industrial/Organizational Psychology (3 cr.) P: 570, 572, or equivalent. Special topics in industrial and organizational psychology are offered on a rotating basis. Examples of the special topics are work motivation, leadership, advanced selection and placement, and performance appraisal. One topic will be treated each semester.

683 Seminar in Industrial-Social Psychology (3 cr.) P: 570, 572, or equivalent. Study of research and theory emphasizing social perception, attitudes, supervisory behavior, employee participation, motivation, and organizational structure.

684 Practicum in Industrial/Organizational Psychology (3 cr.) P: 570, 572, and consent of instructor. Practical experience in the development and implementation of field research in organizational settings. Gives students the opportunity to spend eight hours per week within local business organizations to gain experience and skills in industrial/organizational psychology.

I689 Practicum in Clinical Rehabilitation Psychology (3 cr.) P: I549 and consent of instructor. Supervised practice of rehabilitation psychology in a community agency or organization.

I691 Seminar in Clinical Rehabilitation Psychology (3 cr.) P: Consent of instructor. Current trends, problems, and developments in rehabilitation. Students pursue a special interest and share information and experience with the group. Individual reports and group discussions.

I697 Internship in Clinical Psychology (0-9 cr.) P: Consent of instructor. Opportunities for application of theory and practice of rehabilitation psychology and case management in a rehabilitation setting under supervision of the Department of Psychology and the agency.

698 Research M.S. Thesis (3 cr.)

699 Research Ph.D. Thesis (0-12 cr.)

General Science

General Science courses offer opportunities for interdisciplinary study for both beginning and advanced students.

Courses in General Science (SCI)

Note: P—prerequisite; Fall—offered fall semester; Spring—offered spring semester

120 Windows on Science (1 cr.) P: None. Fall, spring. Designed for new and prospective science majors, the course covers an integrative overview of science, examining science and society, the scientific method and community of scientists, undergraduate research, professional ethics, an exploration of science-based careers, and strategies for success as a science major.

495 Readings and Research in Science (1-3 cr.) P: Junior or senior standing, consent of instructor(s), and approval of review committee. Every semester, time arranged. Independent, interdisciplinary study and research in science and science-related fields. A major paper must be submitted. May be repeated for a maximum of 6 credit hours.

Administrative Officers

DAVID L. STOCUM, Ph.D., *Dean*

JOSEPH E. KUCZKOWSKI, Ph.D., *Associate Dean for Academic Programs and Student Development*

KIM S. NGUYEN, Ed.D., *Assistant Dean for Recruitment and Special Projects*

KATHRYN J. WILSON, Ph.D., *Associate Dean for Research and Graduate Studies*

N. DOUGLAS LEES, Ph.D., *Chairperson, Department of Biology*

RAIMA M. LARTER, Ph.D., *Chairperson, Department of Chemistry*

MATHEW J. PALAKAL, Ph.D., *Chairperson, Department of Computer and Information Science*

ANDREW P. BARTH, Ph.D., *Chairperson, Department of Geology*

BENZION BOUKAI, Ph.D., *Chairperson, Department of Mathematical Sciences*

B. D. NAGESWARA RAO, Ph.D., *Chairperson, Department of Physics*

J. GREGOR FETTERMAN, Ph.D., *Chairperson, Department of Psychology*

Resident Faculty

Abramovich, Yuri A., *Professor of Mathematical Sciences (1989); M.S., 1968, Ph.D., 1972, Leningrad State University, U.S.S.R. Specialty: Functional Analysis.*

Alexy, William D., *Adjunct Assistant Professor of Psychology (1992); B.A., 1971, Concord College; M.A., 1972, Radford University; Ph.D., 1981, State University of New York at Buffalo. Specialty: Rehabilitation Counseling.*

Allen, Ruth D., *Associate Professor of Biology (1993); B.Sc., 1983, Ph.D., 1986, University of New Castle, Australia. Specialty: Immunology.*

Aliprantis, C. D., *Adjunct Professor of Mathematical Sciences, School of Science, and Adjunct Professor of Economics, School of Liberal Arts (1975); B.S., 1968, University of Athens, Greece; M.S., 1971, Ph.D., 1973, California Institute of Technology. Specialties: Functional Analysis, Operator Theory, Mathematical Economics.*

Appleby, Drew C., *Professor of Psychology (1999); B.A., 1969, Simpson College; M.S., 1971, Iowa State University; Ph.D., 1972, Iowa State University. Specialty: Teaching and Learning.*

Atekwana, Eliot A., *Assistant Professor of Geology (1998); B.S., 1984, University of Maryland, College Park; M.S., 1987, Howard University; Ph.D., 1996, Western Michigan University. Specialties: Hydrogeology, Hydrogeochemistry, Stable Isotope Geochemistry.*

Bard, Martin, *Professor of Biology (1975); B.S., 1965, City College of New York; Ph.D., 1971, University of California, Berkeley. Specialty: Biochemical Genetics.*

Barman, Charles R., *Adjunct Associate Professor of Biology (1994); B.S., 1968, University of Wisconsin-Oshkosh; M.S.T., 1972, University of Wisconsin-Superior; Ed.D., 1974, University of Northern Colorado. Specialty: Teacher Education.*

- Barth, Andrew P., *Chairperson and Associate Professor of Geology* (1989); B.S., 1981, M.S., 1985, *California State University, Los Angeles*; Ph.D., 1989, *University of Southern California*. Specialties: Petrology, Geochemistry.
- Belecky-Adams, Teri L., *Assistant Professor of Biology* (2001); B.S., 1985, *University of Wyoming*; Ph.D., 1994, *University of Cincinnati College of Medicine*. Specialties: Developmental Biology, Retinal Regeneration.
- Bigatti, Silvia M., *Assistant Professor of Psychology* (2000); B.A., 1995, *San Diego State University*; Ph.D., 2000, *San Diego State University/University of California, San Diego Joint Doctoral Program in Clinical Psychology*. Specialty: Behavioral Medicine.
- Bittinger, Marvin, *Professor of Mathematical Sciences* (1968); B.S., 1963, *Manchester College*; M.S., 1965, *The Ohio State University*; Ph.D., 1968, *Purdue University*. Specialty: Mathematics Education.
- Blazer-Yost, Bonnie J., *Associate Professor of Biology* (1993); B.S., 1973, *Lebanon Valley College*; Ph.D., 1984, *University of Pennsylvania*. Specialty: Physiology.
- Bleher, Paul M., *Professor of Mathematical Sciences* (1994); M.S., 1970, *Moscow State University*, U.S.S.R.; Ph.D., 1974, *Institute of Applied Mathematics of the Russian Academy of Sciences*, U.S.S.R. Specialties: Probability Theory, Mathematical Physics, Statistical Physics.
- Bond, Gary R., *Chancellor's Professor of Psychology* (1983); B.S., 1966, *Michigan State University*; M.A., 1972, Ph.D., 1975, *University of Chicago*. Specialties: Psychiatric Rehabilitation, Program Evaluation.
- Borden, Victor, M. H., *Associate Professor of Psychology and Director of Information Management and Institutional Research* (1992); B.A., 1979, *University of Rochester*; M.S., 1983, Ph.D., 1987, *University of Massachusetts-Amherst*. Specialties: Statistical Methods, Multivariate Analysis, Secondary Data Analysis, Student Life Research.
- Boschmann, Erwin, *Associate Vice President for Distributed Education and Professor of Chemistry* (1968); B.A., 1963, *Bethel College (Kansas)*; M.S., 1965, Ph.D., 1968, *University of Colorado*. Specialties: General Chemistry, Inorganic Chemistry, Bioinorganic Chemistry.
- Boukai, Ben Zion, *Chairperson and Professor of Mathematical Sciences* (1990); B.A., 1983, M.A., 1985, *University of Haifa, Israel*; Ph.D., 1988, *State University of New York at Binghamton*. Specialties: Statistical Theory, Applied Statistics, Applied Probability.
- Boyd, Donald, *Research Professor of Chemistry* (1986); B.S., 1963, *Pennsylvania State University*; Ph.D., 1968, *Harvard University*. Specialty: Organic Chemistry.
- Breen, John J., *Assistant Professor of Chemistry* (1992); B.S., 1981, *Providence College*; Ph.D., 1988, *Pennsylvania State University*. Specialties: Analytical Chemistry, Surface Probe Microscopy.
- Brenner, Mark L., *Professor of Biology, Vice Chancellor* (1998); B.S., 1964, *University of Massachusetts*; M.S., 1965, *University of Massachusetts*; Ph.D., 1970, *Michigan State University*. Specialties: Horticulture, Landscape Architecture.
- Bringle, Robert Gordon, *Professor of Psychology* (1974); B.A., 1969, *Hanover College*; M.S., 1972, Ph.D., 1974, *University of Massachusetts*. Specialties: Social Psychology, Program Evaluation, Methodology.
- Brothers, Timothy S., *Adjunct Associate Professor of Geology* (1984); B.A., 1978, *University of California, Davis*; M.A., 1981, Ph.D., 1985, *University of California, Los Angeles*. Specialties: Biogeography, Human Impacts on Vegetation.
- Bukhres, Omran A., *Professor of Computer Science* (1995); B.S., 1984, *Indiana University*; M.S., 1986, *University of Dayton*; Ph.D., 1990, *North Dakota State University*. Specialties: Distributed Database Systems; Mobile Computing Applications, Workflow Management Systems, Database Issues in Chem-Bioinformatics.
- Burkinshaw, Owen, *Professor of Mathematical Sciences*, (1972); B.S., 1966, M.S., 1968, *Ohio University*; Ph.D., 1972, *Purdue University*. Specialty: Functional Analysis.
- Chandrasekhar, Srinivasan, *Adjunct Assistant Professor of Biology* (1987); B.Sc., 1970, M.S., 1973, *University of Madras, India*; M.Sc., 1977, Ph.D., 1981, *State University of New York at Albany*. Specialty: Developmental Biology.
- Chernoff, Ellen A. G., *Associate Professor of Biology* (1986); B.A., 1973, Ph.D., 1978, *University of Chicago*. Specialties: Developmental Biology, Neural Regeneration.
- Chin, Raymond C. Y., *Professor of Computer and Information Science* (1990); B.A.E., 1962, M.A.E., 1964, *Rensselaer Polytechnic Institute*; Ph.D., 1970, *Case Western Reserve University*. Specialties: Parallel Solution of Partial Differential Equations, Asymptotic-numerical Methods.
- Clack, James W., *Assistant Professor of Biology* (1990, *IUPUI Columbus*); B.A., 1974, *Indiana University*; Ph.D., 1982, *Purdue University*. Specialties: Neurobiology, Visual Physiology.
- Cohen, Michael R., *Adjunct Professor of Geology* (1968); B.S., 1960, *City University of New York*; M.A., 1963, *Columbia University*; M.S.T., 1964, Ph.D., 1968, *Cornell University*. Specialties: Science and Environmental Education.
- Cooley, Judy E., *Lecturer in Mathematical Sciences* (1999); B.A., 1975, M.S., 1979, *Indiana State University*. Specialty: Mathematics Education.
- Crowell, Dring N., *Associate Professor of Biology* (1991); B.S., 1981, *Illinois State University*; Ph.D., 1987, *University of Wisconsin*. Specialty: Molecular Biology.
- Crowell, Pamela L., *Associate Professor of Biology* (1993); B.A., 1981, *Augsburg College*; Ph.D., 1988, *University of Wisconsin-Madison*. Specialties: Cancer Biology, Pharmacology.
- Cutshall, Theodore W., *Associate Professor Emeritus of Chemistry* (1961); B.S.Ch.E., 1949, *Purdue University*; M.S., 1959, Ph.D., 1964, *Northwestern University*. Specialty: Organic Chemistry.
- Davis, Robert, *Professor Emeritus of Psychology* (1976); B.S., 1958, *Salisbury State University*; M.Ed., 1962, *Pennsylvania State University*; Ed.D., 1968, *University of Maryland*. Specialties: Rehabilitation Psychology, Family Therapy.
- de Caprariis, Pascal, *Associate Professor of Geology* (1978); B.S., 1964, M.S., 1967, *Boston College*; Ph.D., 1973, *Rensselaer Polytechnic Institute*. Specialty: Quantitative Hydrology.
- Decca, Ricardo S., *Assistant Professor of Physics* (2000); M.S., 1988, *Universidad Nacional de Cordoba and Instituto Balseiro, Universidad Nacional de Cuyo, Argentina*; Ph.D., 1994, *Instituto Balseiro, Universidad Nacional de Cuyo, Argentina*. Specialties: Condensed Matter, Near-Field Scanning Optical Microscopy (NSOM).
- Devine, Dennis J., *Assistant Professor of Psychology* (1996); B.S., 1990, *University of Illinois, Urbana-Champaign*; M.A., 1993, Ph.D., 1996, *Michigan State University*. Specialties: Expert-Novice Differences, Group Decision Making, Team Selection and Training.
- Dey, Tamal Krishna, *Adjunct Assistant Professor of Computer and Information Science* (1992); B.E., 1985, *Jadavpur University, India*; M.E., 1987, *Indian Institute of Science, India*; Ph.D., 1991, *Purdue University*. Specialties: Analysis of Algorithms, Computational Geometry, Computer Graphics.
- Dubin, Paul, *Professor of Chemistry* (1981); B.S., 1962, *City University of New York*; Ph.D., 1970, *Rutgers University*. Specialties: Analytical Chemistry, Polymer Chemistry.
- Dykstra, Clifford E., *Chancellor's Professor of Chemistry* (1990); B.S. (Chemistry) and B.S. (Physics), 1973, *University of Illinois*; Ph.D., 1976, *University of California, Berkeley*. Specialties: Theoretical and Computational Chemistry.
- Ernst, Michael D., *Assistant Professor of Mathematical Sciences* (1999); B.A. (Mathematics) and B.A. (Statistics), 1992, *St. Cloud State University*; M.S., 1994, Ph.D., 1997, *Southern Methodist University*. Specialties: Nonparametric Statistics, Statistical Graphics, Statistical Education.
- Evans, Jovier D., *Assistant Professor of Psychology*, (1998); B.A., 1989, *Emory University*; M.S., 1991, *University of Miami*, Ph.D., 1995, *University of Miami*. Specialties: Neuropsychology, Health Psychology.
- Evenbeck, Scott E., *Associate Vice Chancellor for Undergraduate Education, Dean of University College, and Associate Professor of Psychology* (1972); A.B., 1968, *Indiana University*; M.A., 1971, Ph.D., 1972, *University of North Carolina*. Specialties: Social Psychology, Program Evaluation, Methodology.
- Fang, Shiao-fen, *Assistant Professor of Computer Science* (1996); B.S., 1983, M.S., 1986, *Zhejiang University, China*; Ph.D., 1992, *University of Utah*. Specialties: Computer Graphics and Visualization.
- Fastenau, Philip S., *Associate Professor of Psychology* (1996); B.A., 1984, *Concordia Teachers College*; M.A., 1988, *Appalachian State University*; Ph.D., 1994, *Michigan State University*. Specialties: Clinical Neuropsychology, Test Construction.
- Felsten, Gary, *Associate Professor of Psychology* (1993, *IUPUI Columbus*); B.A., 1974, *Cornell University*; M.S., 1977, Ph.D., 1979, *Purdue University*. Specialty: Health Psychology.
- Fetterman, J. Gregor, *Chairperson and Professor of Psychology* (1989), B.A., 1973, *Alma College*; M.A., 1977, *Hollins College*; Ph.D., 1982, *University of Maine*. Specialty: Learning.

- Fife, Wilmer K., *Professor of Chemistry (1971)*; B.S., 1955, *Case Institute of Technology*; Ph.D., 1960, *The Ohio State University*. Specialties: General Chemistry, Organic Chemistry, Biochemistry.
- Filippelli, Gabriel M., *Assistant Professor of Geology (1994)*; B.S., 1986, *University of California, Davis*; Ph.D., 1994, *University of California, Santa Cruz*. Specialties: Sedimentary Geochemistry, Paleoclimatology, Paleogeography, Paleoclimatology.
- Fisher, Timothy G., *Adjunct Assistant Professor of Geology (1996)*; B.Sc., 1987, *University of Alberta*; M.Sc., 1989, *Queen's University*; Ph.D., 1993, *University of Calgary*. Specialties: Glacial Geology, Glacial Sedimentology.
- Fleener, Don E., *Associate Professor Emeritus of Psychology (1966)*; B.S. (Ed), 1949, *Indiana Central College*; Ph.D., 1967, *Indiana University*. Specialties: Behavioral Medicine, Clinical Psychology, Developmental Psychology.
- Forsythe, Kelsey M., *Assistant Scientist (2001)*; B.S., 1992, *Truman State University*; Ph.D., 1998, *University of Illinois*. Specialties: Physical and Computational Chemistry.
- Fortier, Robert H., *Associate Professor Emeritus of Psychology (1966)*; B.S., 1947, Ph.D., 1952, *Western Reserve University*. Specialties: Child Psychology, Personality.
- Frankel, Michael L., *Professor of Mathematical Sciences (1984)*; M.S., 1971, *Novosibirsk State University, U.S.S.R.*; Ph.D., 1984, *Tel Aviv University, Israel*. Specialty: Applied Mathematics.
- Fricke, Gordon H., *Associate Dean for External Development, School of Science, and Associate Professor of Chemistry (1972)*; B.A., 1964, *Goshen College*; M.S., 1966, *State University of New York at Binghamton*; Ph.D., 1970, *Clarkson College of Technology*. Specialties: General Chemistry, Analytical Chemistry.
- Gavrin, Andrew D., *Associate Professor of Physics (1995)*; B.S., 1983, *Massachusetts Institute of Technology*; M.A., 1986, Ph.D., 1992, *The Johns Hopkins University*. Specialty: Materials Physics.
- Geller, William, *Associate Professor of Mathematical Sciences (1994)*; A.B., 1982, *Harvard University*; Ph.D., 1989, *University of California, Berkeley*. Specialty: Dynamical Systems.
- Ghosh, Swapna K., *Adjunct Associate Professor of Geology (1988)*; M.S., 1973, *University of Wisconsin, Milwaukee*; Ph.D., 1975, *Syracuse University*. Specialties: Geochemistry, Sedimentology, Environmental Chemistry.
- Goldberg, Carlos I., *Associate Professor Emeritus of Psychology (1969)*; B.S., 1961, *Brooklyn College*; M.A., 1964, Ph.D., 1969, *City University of New York*. Specialties: Social Psychology, Panic Disorder, Agoraphobia, Obsessive-Compulsive Disorder.
- Goodlett, Charles R., *Professor of Psychology (1993)*; B.S., 1977, *University of Kentucky*; M.A., 1981, Ph.D., 1983, *State University of New York at Binghamton*. Specialty: Biopsychology.
- Haitjema, Hendrick M., *Adjunct Associate Professor of Geology (part-time), School of Science, and Associate Professor of Public and Environmental Affairs, School of Public and Environmental Affairs (1989)*; M.S., 1976, *Delft University of Technology, Netherlands*; Ph.D., 1982, *University of Minnesota*. Specialties: Groundwater Mechanics, Groundwater Flow Modeling, Soil Mechanics.
- Hall, Robert D., *Professor of Geology (1974)*; B.S., 1963, *Purdue University*; M.S., 1966, *University of Colorado*; Ph.D., 1973, *Indiana University*. Specialties: Geomorphology, Environmental Geology, Quaternary Geology, Glacial Geology, Soils.
- Hanford, Peter V., *Professor Emeritus of Psychology (1960)*; B.S., 1952, M.S., 1953, Ph.D., 1958, *Pennsylvania State University*. Specialties: Experimental Analysis of Behavior, Motivation.
- Harris, Andrew J., *Lecturer in Computer and Information Science (1995)*; B.S., 1990, *Indiana University-Purdue University Indianapolis*. Specialties: General Computing, Computer Programming.
- Hazer, John T., *Associate Professor of Psychology (1975)*; B.A., 1970, *Miami University*; M.A., 1974, Ph.D., 1976, *Bowling Green State University*. Specialties: Industrial/Organizational Psychology, Human Resource Management.
- Heiman, Mark L., *Adjunct Assistant Professor of Biology (1996)*; B.A., 1974, *University of New Orleans*; Ph.D., 1978, *Louisiana State University Medical School*. Specialties: Physiology, Neuroendocrinology.
- Holladay, Susan R. H., *Lecturer in Chemistry (2002)*; B.S., 1990, *Miami University*; M.S., 1995, Ph.D., 2001, *Purdue University*. Specialty: Chemical Education.
- Huang, Jeffrey, *Assistant Professor of Computer Science (2000)*; B.S., 1986, *Kaohsiung Medical College, Taiwan, R.O.C.*; M.S.E., 1992, *Catholic University*; Ph.D., 1998, *George Mason University*. Specialty: Computer Vision, Pattern Recognition, Machine Learning, Multimedia.
- Its, Alexander R., *Professor of Mathematical Sciences (1993)*; M.S., 1974, Ph.D., 1977, *Leningrad State University, U.S.S.R.* Specialty: Mathematical Physics.
- Its, Elizabeth, *Lecturer in Mathematical Sciences (1997)*; M.S., 1975, Ph.D., 1980, *Leningrad State University, U.S.S.R.* Specialties: Mathematical Geophysics, Applied Mathematics.
- Ji, Ronghui, *Associate Professor of Mathematical Sciences (1986)*; B.S., 1982, *University of Science and Technology of China, China*; Ph.D., 1986, *State University of New York at Stony Brook*. Specialties: Operator Algebras, K-Theory.
- Johnson, Kathy E., *Associate Professor of Psychology (1993)*; B.S., 1987, M.S., 1989, *University of Massachusetts-Amherst*; Ph.D., 1992, *Emory University*. Specialty: Cognitive/Developmental Psychology.
- Juillerat, Florence, *Associate Professor of Biology (1966)*; B.S., 1962, M.S., 1967, Ph.D., 1974, *Purdue University*. Specialties: Cell Biology, Biology for Teachers, Biology for Nonmajors.
- June, Harry L., *Associate Professor of Psychology (1992)*; B.S., 1979, *South Carolina State College*; M.A., 1986, *University of the District of Columbia*; M.S., 1987, Ph.D., 1990, *Howard University*. Specialty: Behavioral Psychopharmacology.
- Kaminker, Jerome Alvin, *Professor of Mathematical Sciences (1973)*; B.A., 1963, *University of California, Berkeley*; M.A., 1965, Ph.D., 1968, *University of California, Los Angeles*. Specialties: Operator Algebras, K-Theory.
- Kaplan, Jerome I., *Professor Emeritus of Physics (1974)*; B.S., 1950, *University of Michigan*; Ph.D., 1954, *University of California, Berkeley*. Specialties: Condensed Matter, Solar Energy, Biological Physics.
- Keck, Robert William, *Professor of Biology (1972)*; B.A., 1962, M.S., 1964, *University of Iowa*; Ph.D., 1968, *The Ohio State University*. Specialty: Plant Physiology.
- Kemple, Marvin D., *Professor of Physics (1977)*; B.S., 1964, *Purdue University*; M.S., 1965, Ph.D., 1971, *University of Illinois*. Specialties: Magnetic Resonance, Biological Physics.
- Kleinhans, Frederick W., *Associate Professor of Physics and Adjunct Professor of Geology (1972)*; B.S., 1965, *University of Michigan*; Ph.D., 1971, *The Ohio State University*. Specialties: Biological Physics, Computational Physics.
- Kleyle, Robert M., *Professor of Mathematical Sciences (1973)*; B.A., 1960, *Duquesne University*; M.S., 1962, *University of Pittsburgh*; Ph.D., 1968, *Harvard University*. Specialty: Statistics.
- Klimek, Slawomir, *Associate Professor of Mathematical Sciences (1991)*; M.Sc., 1983, Ph.D., 1988, *Warsaw University, Poland*. Specialties: Mathematical Physics, Noncommutative Geometry.
- Kremer, John E., *Professor of Psychology (1975)*; B.A., 1966, *St. Meinrad College*; M.S., 1969, *University of Notre Dame*; M.S., 1974, Ph.D., 1975, *Loyola University*. Specialties: Clinical Psychology, Evaluating Teaching, Program Evaluation.
- Krishnan, Gary, *Adjunct Assistant Professor of Biology (1999)*; B.Sc., 1987, *University of Bombay*; M.Sc., 1989, *University of Bombay*; Ph.D., 1994, *Texas A & M University*. Specialty: Developmental Biology.
- Kroupa, Shenan L., *Lecturer in Psychology (2000)*; B.A., 1993, *University of Wisconsin-Madison*; M.S., 1996, Ph.D., 1999, *Purdue University*. Specialties: Developmental Psychology, Social Psychology.
- Kuczkowski, Joseph E., *Associate Dean for Academic Programs and Student Development, School of Science, and Professor of Mathematics (1966)*; B.S., 1961, *Canisius College*; M.S., 1963, Ph.D., 1968, *Purdue University*. Specialties: Semigroup Theory, Mathematics Education.
- Larter, Raima M., *Chairperson and Professor of Chemistry (1981)*; B.S., 1976, *Montana State University*; Ph.D., 1980, *Indiana University*. Specialty: Theoretical Physical Chemistry.
- Lauer, Joan B., *Associate Professor of Psychology (1973)*; A.B., 1964, Ph.D., 1973, *Indiana University*. Specialties: Clinical Psychology, Physiological Psychology, Learning.
- Lees, Norman Douglas, *Chairperson and Professor of Biology (1973)*; A.B., 1967, *Providence College*; Ph.D., 1973, *Northwestern University*. Specialties: Microbiology, Molecular Biology.
- Licht, Kathy J., *Assistant Professor of Geology (2000)*; B.S., 1992, *St. Norbert College*; M.S., 1995, Ph.D., 1999, *University of Colorado*. Specialty: Geomorphology.
- Lindsey, Greg H., *Adjunct Associate Professor of Geology (1996)*; B.A., 1977, *University of Illinois*; M.A. (*Environmental Studies*), 1987, *Northeastern Illinois University*; M.A. (*Geography and Environmental Engineering*), 1989, Ph.D., 1992, *The Johns Hopkins University*. Specialties: Environmental Planning and Policy, Environmental Science.

- Lipkowitz, Kenneth B., *Professor of Chemistry* (1976); B.S., 1972, *State University of New York College at Geneseo*; Ph.D., 1975, *Montana State University*. Specialties: Theoretical and Synthetic Organic Chemistry.
- Liu, Wei-min, *Associate Professor of Computer and Information Science* (1987); B.S., 1968, *Shanghai College of Mechanical and Electrical Engineering, China*; M.S., 1981, *Shanghai Institute of Biochemistry, China*; M.S., 1986, Ph.D., 1987, *Cornell University*. Specialties: Dynamical Systems Theory, Differential Equations, Biomathematics.
- Liu, Zhiqing, *Assistant Professor of Computer and Information Science* (1997); B.Eng., 1989, *Tsinghua University, Beijing*; M.S., 1992, Ph.D., 1995, *New York University*. Specialty: Computer Systems.
- Long, Eric C., *Associate Professor of Chemistry* (1991); B.S., 1984, *Albright College*; Ph.D., 1989, *University of Virginia*. Specialties: Biological Chemistry, Peptide and Metallopeptide-DNA Interactions.
- Luke, Jon, *Associate Professor of Mathematical Sciences and Associate Professor of Computer and Information Science* (1975); B.S., 1962, M.S., 1963, *Massachusetts Institute of Technology*; Ph.D., 1966, *California Institute of Technology*. Specialty: Applied Mathematics.
- Malik, David J., *Professor of Chemistry* (1980); B.S., 1968, M.S., 1969, *California State University*; Ph.D., 1976, *University of California, San Diego*. Specialties: Theoretical Physical Chemistry, Chemical Physics.
- Marrs, Kathleen, *Assistant Professor of Biology* (1998); B.A., 1984, *Illinois Wesleyan University*; Ph.D., 1990, *University of Illinois-Chicago*. Specialties: Science Teaching, Plant Molecular Biology.
- McGrew, John H., *Associate Professor of Psychology* (1991); B.M.E., 1977, *GMI Engineering and Management Institute*; M.S.E., 1977, *University of Michigan*; Ph.D., 1991, *Indiana University*. Specialties: Psychiatric Rehabilitation, Health Psychology.
- McIntyre, John A., *Adjunct Professor of Biology* (1987); A.B., 1966, *Rockford College*; Ph.D., 1971, *Wake Forest University*. Specialties: Immunology, Reproductive Biology.
- Meiere, Forrest T., *Professor Emeritus of Physics* (1969); B.S. (Physics) and B.S. (Math), 1959, *Carnegie-Mellon University*; Ph.D., 1964, *Massachusetts Institute of Technology*. Specialties: High Energy Physics, Biological Physics.
- Metzner, Barbara S., *Adjunct Assistant Professor of Psychology* (1986); A.B., 1962, M.S., 1964, *Indiana University*; B.A., 1979, *Purdue University*; Ed.D., 1983, *Indiana University*. Specialty: Educational Research.
- Miller, John Grier, *Associate Professor of Mathematical Sciences* (1978, *IUPU Columbus*); S.B., 1963, S.M., 1964, *University of Chicago*; Ph.D., 1967, *Rice University*. Specialty: Geometric and Algebraic Topology.
- Mirsky, Arthur, *Professor Emeritus of Geology* (1967); B.A., 1950, *University of California, Los Angeles*; M.S., 1955, *University of Arizona*; Ph.D., 1960, *The Ohio State University*. Specialties: Urban Geology, Environmental Geology, Geowriting, Evolution of the Earth.
- Misiurewicz, Michal, *Professor of Mathematical Sciences* (1992); M.A., 1971, Ph.D., 1974, *Warsaw University, Poland*. Specialties: Dynamical Systems, Ergodic Theory.
- Molnar, Bob, *Lecturer in Computer and Information Science* (2000); B.A., 1994, *Indiana University, Bloomington*; B.S., 1996, *Indiana University, Bloomington*. Specialties: General Computing, Web Development, Multimedia.
- Moser, William H., *Assistant Professor of Chemistry* (1998); B.A., 1991, *St. Olaf College*; Ph.D., 1995, *Colorado State University*. Specialties: Organic Chemistry, Organometallic Chemistry.
- Muhoherac, Barry B., *Associate Professor of Chemistry* (1985); B.S., 1972, *Louisiana State University*; Ph.D., 1978, *University of Virginia*. Specialty: Biophysical Chemistry.
- Mukhin, Evgeny, *Assistant Professor of Mathematical Sciences* (2001); M.S., 1992, *Moscow State University, U.S.S.R.*; Ph.D., 1998, *University of North Carolina at Chapel Hill*. Specialties: Modern Analysis, Representation Theory.
- Mukhopadhyay, Snehasis, *Associate Professor of Computer Science* (1994); B.E., 1985, *Jadavpur University, Calcutta*; M.E., 1987, *Indian Institute of Science, Bangalore*; M.S., 1991, Ph.D., 1994, *Yale University*. Specialties: Neural Networks, Artificial Intelligence, Information Agents.
- Murphy, James M., *Professor of Psychology* (1989); B.A., 1971, *Edinboro University of Pennsylvania*; M.A., 1974, Ph.D., 1978, *Bowling Green State University*. Specialties: Psychopharmacology and the Neurobiology of Behavior, Alcoholism and Drugs of Abuse.
- Naumann, Christoph A., *Assistant Professor of Chemistry* (1999); Diploma, 1990, *University of Leipzig*; Ph.D., 1995, *Technical University of Munich*. Specialty: Biological Chemistry, Physical Chemistry, Biomaterials.
- Neal-Beliveau, Bethany S., *Associate Professor of Psychology* (1993); B.S., 1980, *Purdue University*; M.S., 1985, Ph.D., 1987, *University of Minnesota*. Specialty: Psychopharmacology.
- Ng, Bart, *Professor of Mathematical Sciences* (1975); B.S., 1968, *St. Joseph College*; M.S., 1970, Ph.D., 1973, *University of Chicago*. Specialty: Applied Mathematics.
- Nguyen, Marie, *Lecturer in Chemistry* (1994); B.S., 1983, M.S., 1993, *Purdue University*. Specialty: Physical Chemistry and Chemical Education.
- Novak, Gregor M., *Professor Emeritus of Physics* (1964); M.S., 1964, *University of Chicago*; Ph.D., 1975, *Indiana University*. Specialties: Physics Education, Mathematical Physics.
- Nurok, David, *Associate Professor of Chemistry* (1978); B.Sc., 1959, Ph.D., 1966, *University of Capetown, South Africa*. Specialties: Analytical Chemistry, Chromatography.
- O'Donnell, Martin J., *Professor of Chemistry* (1975); B.S., 1968, *University of Iowa*; Ph.D., 1973, *Yale University*. Specialty: Organic Chemistry.
- Olson, Andrew M., *Associate Professor of Computing and Information Science* (1984); B.S., 1959, *University of Wyoming*; M.S., 1961, *University of Wisconsin*; D.Sc., 1969, *Washington University*. Specialties: Computational Mathematics, Advanced Computing Environments, Software Engineering.
- Ou, Zhe-Yu (Jeff), *Associate Professor of Physics* (1992), B.S., 1984, *Beijing University, China*; M.S., 1986, Ph.D., 1990, *University of Rochester*. Specialties: Experimental Physics, Quantum Optics.
- Pachut, Joseph E., Jr., *Associate Professor of Geology* (1978), B.A., 1972, *State University of New York College at Oneonta*; Ph.D., 1977, *Michigan State University*. Specialties: Invertebrate Paleontology, Paleocology, Geobiology, Biometrics, Evolution of the Earth.
- Palakal, Mathew J., *Chairperson and Professor of Computer and Information Science* (1988); B. Comp. Sci., 1979, M. Comp. Sci., 1983, Ph.D., 1987, *Concordia University, Canada*. Specialty: Artificial Intelligence, Speech Recognition, Pattern Recognition, Artificial Neural Networks.
- Patterson, Richard R., *Associate Professor of Mathematical Sciences and Associate Professor of Computer and Information Science* (1974); B.A., 1961, *DePauw University*; Ph.D., 1966, *University of California, Berkeley*. Specialty: Geometric Modeling.
- Pearlstein, Robert M., *Professor of Physics* (1982); A.B., 1960, *Harvard University*; Ph.D., 1966, *University of Maryland*. Specialties: Biological Physics, Statistical Mechanics.
- Penna, Michael A., *Professor of Mathematical Sciences and of Computer and Information Science* (1973); B.A., 1967, *Union College*; A.M., 1968, Ph.D., 1973, *University of Illinois*. Specialty: Differential Geometry.
- Perry, Allen O., *Adjunct Professor of Geology* (2001); B.S., 1961, *Indiana University*; M.S., 1972; Ph.D., 1977, *Purdue University*. Specialties: Environmental Geology, Engineering Geology, Processing, and Mined Land Reclamation.
- Petolino, Joseph E., *Adjunct Assistant Professor of Biology* (1994); B.A., 1976, M.S., 1978, *Rutgers University*; Ph.D., 1982, *University of Maryland*. Specialties: Biotechnology, Plant Genetics.
- Pflanzer, Richard Gary, *Associate Professor of Biology, School of Science, and Associate Professor of Physiology and Biophysics, School of Medicine* (1969); A.B., 1964, Ph.D., 1969, *Indiana University*. Specialty: Medical Physiology.
- Podgorski, Krzysztof, *Associate Professor of Mathematical Sciences* (1994); M.Sci., 1986, Ph.D., 1991, *Technical University of Wrocław, Poland*; Ph.D., 1993, *Michigan State University*. Specialties: Mathematical Statistics, Applied Probability.
- Prezbindowski, Dennis R., *Adjunct Associate Professor of Geology* (1991); B.S., 1973, *Indiana University*; M.S., 1974, *Michigan State University*; Ph.D., 1981, *University of Texas at Austin*. Specialties: Environmental Geochemistry, Sedimentology, Hydrogeology, Petroleum Geology.

- Raje, Rajeev R., *Assistant Professor of Computer and Information Science* (1996); B.E., 1984, *University of Bombay*; M.S., 1994, Ph.D., 1994, *Syracuse University*. Specialties: Distributed Processing and Programming, Object-Oriented Design and Programming, Programming Languages.
- Rajecki, D. W., *Professor of Psychology* (1980); B.A., 1968, *Kent State University*; Ph.D., 1972, *University of Michigan*. Specialty: Attitudes and Public Opinion.
- Randall, Stephen K., *Associate Professor of Biology* (1990); B.S., 1976, *University of Connecticut*; Ph.D., 1982, *Indiana University*. Specialties: Biochemistry, Cell Biology.
- Rangazas, Sharon Z., *Lecturer in Mathematical Sciences* (1989); B.S., 1984, M.A.T., 1987, *Indiana University*. Specialty: Curriculum Development.
- Rao, B. D. Nageswara, *Chairperson and Professor of Physics* (1978); B.S., 1955, M.S., 1956, *Andhra University, India*; Ph.D., 1961, *Aligarh Muslim University, India*. Specialties: Nuclear Magnetic Resonance, Biological Physics.
- Reid, William H., *Adjunct Professor of Mathematical Sciences* (1989); B.S., 1949, M.S., 1951, *University of California, Berkeley*; Ph.D., 1955, Sc.D., 1968, *Cambridge University, U.K.* Specialty: Applied Mathematics.
- Rhodes, Simon J., *Associate Professor of Biology* (1995); B.Sc., 1984, *University of Sheffield*; Ph.D., 1991, *Purdue University*. Specialties: Cell Biology, Endocrinology.
- Rigdon, Robert, *Associate Chairperson and Associate Professor of Mathematical Sciences* (1975); A.B., 1965, *Princeton*; Ph.D., 1970, *University of California, Berkeley*. Specialty: Algebraic Topology.
- Roberts, Michele, *Lecturer in Computer Science* (1998); B.S., 1976, *Central College*; M.S., 1978, *Indiana State University*; M.B.A., 1994, *Indiana Wesleyan University*. Specialties: Application Courses for Non-Majors, Web Authoring, Instructional System Design.
- Robinson, Bret A., *Adjunct Assistant Professor of Geology* (1991); B.A., 1984, *Indiana University*; M.S., 1986, Ph.D., 1991, *Southern Illinois University*. Specialties: Fluvial Geomorphology, Hydrogeology.
- Rosenberg, Gary D., *Associate Professor of Geology* (1979); B.S., 1966, *University of Wisconsin*; Ph.D., 1972, *University of California, Los Angeles*. Specialties: Biomineralization, Evolution, Paleobiochemistry, Historical Geology.
- Rothman, Neal J., *Professor Emeritus of Mathematical Sciences* (1982); B.S., 1951, *University of Delaware*; M.S., 1954, *Tulane University*; Ph.D., 1958, *Louisiana State University*. Specialties: Functional Analysis, Harmonic Analysis.
- Rytting, Marvin, *Associate Professor of Psychology and Assistant Dean for Academic Programs* (1975, *IUPUI Columbus*); B.S., 1971, *Brigham Young University*; M.S., 1973, Ph.D., 1975, *Purdue University*. Specialties: Personality Theory, Social Psychology, Human Sexuality.
- Salgoe-Simmel, Jill, *Adjunct Professor of Geology* (2001); B.S., 1990, *Ball State University*; M.S., 1984, *Indiana State University*; Ph.D., 1997, *Oregon State University*. Specialties: Resource Geography, Spatial Analysis, and GIS Policy and Planning.
- Sarkar, Jyotirmoy, *Associate Professor of Mathematical Sciences* (1991); B.Stat., 1985, M.Stat., 1987, *Indian Statistical Institute, India*; Ph.D., 1990, *University of Michigan*. Specialties: Mathematical and Applied Statistics, Applied Probability, Applied Mathematics.
- Schild, John H., *Adjunct Assistant Professor of Biology* (1999); B.S., 1983, *Case Western Reserve University*; M.S., 1988, *Case Western Reserve University*; Ph.D., 1994, *Rice University*. Specialty: Sensory Electrophysiology, Computational Neuroscience.
- Schoepp, Darryle D., *Adjunct Assistant Professor of Biology* (1989); B.S., 1978, *North Dakota State University*; Ph.D., 1982, *West Virginia University*. Specialty: Pharmacology.
- Schultz, Franklin A., *Professor of Chemistry* (1987); B.S., 1963, *California Institute of Technology*; Ph.D., 1967, *University of California, Riverside*. Specialties: Analytical Chemistry, Electrochemistry.
- Scott, William L., *Research Professor of Chemistry* (2002); B.A., 1967, *Williams College*; Ph.D., 1972, *UCLA*. Specialty: Organic Chemistry.
- Sen, Asok K., *Professor of Mathematical Sciences* (1981); B.S., 1972, *Indian Institute of Technology, India*; M.S., 1975, *University of Minnesota*; Ph.D., 1979, *Cornell University*. Specialty: Applied Mathematics.
- Sen, Stephanie E., *Associate Professor of Chemistry* (1992); B.A., 1984, *Bryn Mawr College*; Ph.D., 1989, *State University of New York at Stony Brook*. Specialties: Organic Chemistry, Biological Chemistry.
- Seubert, James W., *Associate Professor Emeritus of Physics* (1968); A.B., 1958, *Washington University*; M.S., 1964, Ph.D., 1968, *Indiana University*. Specialty: Nuclear Physics.
- Shen, Zhongmin, *Associate Professor of Mathematical Sciences* (1992); B.S., 1983, *University of Science and Technology of China, China*; M.S., 1986, *Academia Sinica, China*; Ph.D., 1990, *State University of New York at Stony Brook*. Specialty: Differential Geometry.
- Siddiqui, Rafat Ali, *Adjunct Associate Professor of Biology* (1996); B.Sc., 1978, M.Sc., 1980, *University of Karachi*; Ph.D., 1988, *Australian National University*. Specialty: Biochemistry.
- Smith, Charles K. II, *Adjunct Assistant Professor of Biology* (1994); B.S., 1973, *University of Pittsburgh*; Ph.D., 1979, *University of New Hampshire*. Specialty: Animal Science.
- Smith, Rosamund C., *Adjunct Assistant Professor of Biology* (1991); B.A., 1979, *Cambridge University, U.K.*; Ph.D., 1983, *Oxford University, U.K.* Specialty: Developmental Biology.
- Souch, Catherine J., *Adjunct Associate Professor of Geology* (1990); B.A., 1982, *University of Cambridge, U.K.*; M.S., 1984, Ph.D., 1990, *University of British Columbia, Canada*. Specialties: Climate Change, Paleoenvironmental Reconstructions.
- Srour, Edward F., *Adjunct Assistant Professor of Biology* (1996); B.S., 1979, M.S., 1981, *American University of Beirut*; Ph.D., 1986, *University of Illinois*. Specialties: Immunology, Virology.
- Stillwell, William H., *Professor of Biology* (1978), B.S., 1967, *State University of New York at Albany*; M.S., 1973, Ph.D., 1974, *Pennsylvania State University*. Specialties: Biochemistry, Membranes, Origin of Life.
- Stocum, David, *Dean of the School of Science and Professor of Biology* (1989); B.A., 1961, *Susquehanna University*; Ph.D., 1968, *University of Pennsylvania*. Specialty: Developmental and Cell Biology.
- Sunderwirth, Stanley, *Professor of Chemistry* (1988, *IUPUI Columbus*); B.A., 1951, *Tarkio College*; Ph.D., 1955, *The Ohio State University*. Specialties: General Chemistry, Organic Chemistry.
- Svanum, Soren, *Associate Professor of Psychology, School of Science, and Adjunct Associate Professor of Clinical Psychology in Psychiatry, School of Medicine* (1976); A.B., 1971, *San Francisco State University*; M.A., 1973, Ph.D., 1976, *University of Montana*. Specialties: Clinical Psychology, Alcoholism, Health Care Psychology.
- Swope, R. Jeffrey, *Assistant Professor of Geology* (2000); B.S., 1983, M.S., 1988, *Ohio State University*; Ph.D., 1997, *University of Colorado*. Specialty: Mineralogy.
- Tam, Richard Yiu Hang, *Associate Professor of Mathematical Sciences* (1986); B.S., 1980, *University of Alberta, Canada*; M.Sc., 1982, *Virginia Polytechnic Institute and State University*; Ph.D., 1986, *Cornell University*. Specialty: Applied Mathematics.
- Tedesco, Lenore P., *Associate Professor of Geology, Director of Center for Earth and Environmental Science* (1991); B.A., 1984, *Boston University*; Ph.D., 1991, *University of Miami*. Specialties: Sedimentation, Marine Geology, Sedimentary Petrology, Carbonate Diagenesis, Coastal Processes.
- Terrell, Mark A., *Assistant Professor of Biology* (2001); B.S., 1995, *State University of New York, Fredonia*; M.S., 1997 (Geology); M.A., 1999 (Educational Psychology); Ed.D., 2002 (Biology), *Ball State University*. Specialties: Biology Education, Ecology.
- Thatcher, Frederick C., *Associate Professor of Physics* (1970); B.S., 1961, *University of Chicago*; M.S., 1964, *DePaul University*; Ph.D., 1969, *University of California, Riverside*. Specialties: Condensed Matter Physics, Applied Optics.
- Trexler, Lance E., *Adjunct Assistant Professor of Psychology* (1990); B.A., 1974, *Indiana University*; M.S., 1976, *Ball State University*; Ph.D., 1979, *Purdue University*. Specialty: Neuropsychology.
- Tuceryan, Mihran, *Associate Professor of Computer Science* (1997); B.S., 1978, *Massachusetts Institute of Technology*; Ph.D., 1986, *University of Illinois*. Specialties: 3D Computer Graphics and Visualization, Augmented Reality/Virtual Reality, User Interfaces, Image Processing and Computer Vision, Pattern Recognition.

Tzeng, Oliver C. S., *Professor of Psychology (1976)*; B.Ed., 1966, *Taiwan Normal University, Republic of China*; M.S., 1969, *University of Wisconsin-Stout*; Ph.D., 1972, *University of Illinois*. Specialties: Quantitative Psychology, Cross-Cultural Social Psychology, Personality.

Vasavada, K. V., *Professor of Physics (1970)*; B.S., 1958, *University of Baroda, India*; M.S., 1960, *University of Delhi, India*; Ph.D., 1964, *University of Maryland*. Specialties: High Energy Physics, Biological Physics.

Vemuri, Gautam, *Associate Professor of Physics (1992)*; B.Sc., 1984, *Delhi University, India*; M.S., 1986, *Brown University*; Ph.D., 1990, *Georgia Institute of Technology*. Specialties: Laser Physics, Nonlinear Optics.

Vlahos, Chris J., *Adjunct Assistant Professor of Biology (1999)*; B.S., 1984, *Santa Clara University*; M.S., 1984, Ph.D., 1987, *University of Michigan*. Specialties: Cell Biology, Signal Transduction.

Wagner, Patrick A., *Adjunct Assistant Professor of Psychology (1992)*; A.B., 1969, M.S., 1971, Ph.D., 1976, *Indiana University*. Specialty: Rehabilitation Counseling.

Wang, Qi, *Associate Professor of Mathematical Sciences (1991)*; B.S., 1982, *Nankai University, China*; M.S., 1988, Ph.D., 1991, *The Ohio State University*. Specialties: Computational Mathematics, Non-Newtonian Fluid Dynamics, Nonlinear Differential Equations.

Wang, Xianzhong, *Assistant Professor of Biology (2001)*; B.A., 1986, *Zhejiang University*; M.S., 1989, *Academia Sinica*; Ph.D., 1999, *Ohio State University*. Specialties: Ecology, Plant Physiological Ecology.

Ware, Joseph Roger, *Associate Professor of Psychology (1972)*; B.S., 1957, M.S., 1961, *University of Louisville*; Ph.D., 1972, *University of Kentucky*. Specialties: Humanistic Psychology, Group Dynamics, Psychological Type.

Wassall, Stephen R., *Associate Professor of Physics (1984)*; B.Sc., 1973, *Southampton University, U.K.*; Ph.D., 1981, *Nottingham University, U.K.* Specialties: Nuclear Magnetic Resonance, Biological Physics.

Watson, John C., *Associate Professor of Biology (1994)*; B.S., 1975, *Butler University*; Ph.D., 1982, *Indiana University*. Specialties: Plant Physiology, Biochemistry, Molecular Biology.

Watt, Jeffrey X., *Associate Chairperson and Associate Professor of Mathematical Sciences (1988)*; B.S., 1983, *Michigan Technological University*; M.S., 1985, *Purdue University*; Ph.D., 1990, *Indiana University*. Specialties: Curriculum and Instruction of Mathematics, Educational Statistics, Assessment.

Williams, Jane R., *Associate Professor of Psychology (1995)*; B.A., 1989, *College of St. Benedict*; M.A., 1992, Ph.D., 1995, *University of Akron*. Specialty: Performance appraisal.

Wilson, Kathryn J., *Associate Dean for Research and Graduate Studies, School of Science, and Associate Professor of Biology (1976)*; B.A., 1971, *University of Wisconsin-Madison*; M.A., 1976, Ph.D., 1976, *Indiana University*. Specialties: Plant Developmental Anatomy and Morphology, Electron Microscopy.

Wojciechowski, Krzysztof P., *Professor of Mathematical Sciences (1989)*; M.S., 1977, *Poznan University, Poland*; Ph.D., 1982, *Mathematical Institute of Polish Academy of Science, Poland*.

Specialties: Modern Analysis, Representation Theory. Wyma, Richard J., *Associate Professor of Chemistry (1969)*; A.B., 1958, *Hope College*; M.S., 1960, Ph.D., 1964, *University of Michigan*. Specialties: General Chemistry, Physical Chemistry.

Yost, Robert W., *Lecturer in Biology (1993)*; B.S., 1973, *Lebanon Valley College*; Ph.D., 1984, *University of Pennsylvania*. Specialties: Physiology, Biochemistry.

Young, Bruce A., *Assistant Scientist (2001)*; B.S., 1984, *Moravian College*; Ph.D., 1989, *The University of Kentucky*.

Yovits, Marshall C., *Dean Emeritus, School of Science, and Professor of Computer and Information Science (1980)*; B.S., 1944, M.S., 1948, *Union College*; M.S., 1950, Ph.D., 1951, *Yale University*. Specialties: Information Systems, Decision Making.

Zevin, Miles R., *Lecturer in Biology (1980)*; B.S., 1969, M.S., 1977, *University of Chicago*. Specialty: Anatomy.

Zheng, Jiang Y., *Associate Professor of Computer and Information Science (2001)*; B.S. Comp. Sci., 1983, *Fudan University, China*; M.S., 1987, Ph.D., 1990, *Control Eng., Osaka University, Japan*. Specialty: Computer Vision, Image Processing, Computer Graphics, Virtual Reality, Robotics.

Ziemian, Krystyna, *Lecturer in Mathematical Sciences (1992)*; M.S., 1977, Ph.D., 1985, *Warsaw University, Poland*. Specialties: Dynamical Systems, Ergodic Theory.

Zuckerman, Steven H., *Adjunct Assistant Professor of Biology (1988)*; B.S., 1973, *New York University*; Ph.D., 1977, *University of Minnesota*. Specialty: Immunology.

School of Social Work

Indiana University has a long history of providing preparation for entry into social work practice. Courses in this area were offered in 1911 through the Department of Economics and Sociology. Between 1911 and 1944, various administrative and curricular changes were put into effect, and degree programs at both the undergraduate and graduate levels were offered. In 1944, the Indiana University Division of Social Service was established by action of the Trustees of Indiana University. The organizational status was changed in 1966 when the Graduate School of Social Service was created. In 1973 the name was changed to School of Social Service in recognition of the extent and professional nature of the school's graduate and undergraduate offerings. It became the School of Social Work in 1977 in order to reflect more clearly its identification with the profession.

The school provides opportunities for study leading to the associate, baccalaureate, master's, and Ph.D. degrees. The Associate of Science (A.S.) program prepares students for paraprofessional practice; the Bachelor of Social Work (B.S.W.) program prepares students for generalist social work practice; the Master of Social Work (M.S.W.) program prepares graduate students for advanced social work practice in an area of specialization; and the Ph.D. program prepares professional social workers for leadership roles in research, education, and policy development.

Although the degree programs vary in their emphases and levels of complexity, the school's curricula embody features that are systemic in their educational effects:

1. The total curriculum articulates the relationship of the undergraduate and graduate levels as components of a continuum in education for social service;
2. The program of instruction provides opportunity for a range of experiences in substantive areas of interest to students and of importance to society;
3. The program focuses on problem-solving and strength-enhancing experiences involving the classroom, the learning resources laboratory, and field experience;
4. Excellent library and computer lab resources make social work students effective users of social science information;
5. An exploration of educational procedures and arrangements optimize effective training. This includes institutional self-study of the entire curriculum as well as the exploration of specific educational tools, as in the audiovisual center.

Although the school's major location is in Indianapolis, courses or programs are also offered on IU's campuses at Bloomington, Gary (Northwest), Kokomo, Richmond (East), South Bend, and at the Columbus center. Reference to some of these offerings will be made in the text that follows.

Graduates of the school move into a broad variety of social service settings, including those concerned with aging, family and child welfare, corrections, mental

and physical health, and adjustment in schools. In anticipation of such professional activities, the school provides field instruction placements throughout the state where students engage in services to individuals, groups, families, and communities or function in planning and management roles.

Both the Bachelor of Social Work and Master of Social Work programs are accredited by the Council on Social Work Education (CSWE). The school is a member of the International Association of Schools of Social Work. The school's administrators are active participants in the National Association of Deans and Directors of Schools of Social Work, the Association of Baccalaureate Social Work Program Directors, and the Group for the Advancement of Doctoral Education.

Mission Statement

Adopted by action of the faculty on February 8, 1995.

The mission of the Indiana University School of Social Work is to educate students to be effective and knowledgeable professional social workers prepared for practice in the twenty-first century. Such practitioners are committed to the alleviation of poverty, oppression, and discrimination. The school is dedicated to the enhancement of the quality of life for all people, particularly the citizens of Indiana, and to the advancement of just social, political, and economic conditions through excellence in teaching, scholarship, and service. Within the context of a diverse, multicultural, urbanized, global, and technologically oriented society, the school prepares social workers who will shape solutions to a wide range of interpersonal and social problems by developing and using knowledge critically while upholding the traditions, values, and ethics of the social work profession.

Teaching

The teaching mission is to educate students to become professional social workers equipped for a lifetime of learning, scholarship, and service. Graduates embrace person-in-environment and strengths perspectives that are linked to the welfare of individuals, families, groups, organizations, and communities. They learn to keep abreast of advances in knowledge and technology, be self-reflective, and apply best practice and accountable models of intervention. The school prepares social work practitioners and scholars ready to assume leadership roles at the B.S.W., M.S.W., and Ph.D. levels.

Scholarship

The scholarship mission includes the discovery, integration, application, dissemination, and evaluation of client-centered and solution-focused knowledge for and with social work professionals and other consumers. Innovative forms of scholarship are encouraged in developing knowledge for use in practice, education, and service concerning social needs and social problems.

Service

The service mission is dedicated to the promotion of the general welfare of all segments of society. Service includes work in the school, university, profession, and community and reflects the school's expertise in

teaching, scholarship, and social work practice. Service in the interest of persons at greatest risk is consistent with the social work profession's attention to social justice.

Policy on Nondiscrimination

Based on the tradition of the social work profession and consistent with Indiana University's Equal Opportunity Policy, the Indiana University School of Social Work affirms and conducts all aspects of its teaching, scholarship, and service activities without discrimination on the basis of race, color, gender, socioeconomic status, marital status, national or ethnic origin, age, religion or creed, disability, and political or sexual orientation.

The School of Social Work has a strong commitment to diversity and nondiscrimination. Indeed, diversity is celebrated as a strength. This perspective is demonstrated by the composition of its faculty and student body, curriculum content, and recruitment and retention activities; by participation in university committees dealing with oppressed populations; by numerous service activities, including advocacy on behalf of the disadvantaged; and by its selection of field practicum sites.

Undergraduate Programs

Associate of Science in Human Services

This program is offered by the Indiana University School of Social Work through Indiana University East. The degree prepares students for paraprofessional employment; i.e., its purpose is to enable students to develop skills at the technician level to assist other professionals in community settings. Within the associate degree, concentrations include child care, institutional life, neighborhood work, public housing, rehabilitation, homemaker services, and so forth. For an application form and information about admission to this program, contact:

Edward Fitzgerald, M.S.W., J.D.
Indiana University East
2325 Chester Blvd.
Richmond, IN 47374-1289
Telephone: (765) 973-8222

Bachelor of Social Work

This four-year degree program prepares students for generalist social work practice. It helps students develop the competence to apply knowledge, values, and skills to practice with individuals, small groups, organizations, and communities. The program also prepares students for graduate education. The B.S.W. equips the practitioner to work with people who are encountering problems related to personal or social circumstances. In addition, highly qualified graduates may apply for advanced standing to the Indiana University School of Social Work or other M.S.W. programs nationwide.

Following a minimum of two postgraduate years of supervised social work practice experience, B.S.W. graduates of Indiana University are eligible to apply for licensure by the state of Indiana. Upon receipt of a complete application and a passing score on the standardized examination, the Indiana State Health Professions Bureau designates the B.S.W. graduate a Licensed Social Worker (L.S.W.).

The required social work courses at the freshman, sophomore, and junior levels are offered on the Indianapolis (IUPUI), Bloomington, and Richmond (East) campuses. A few social work courses are offered on the Columbus and Kokomo campuses. The senior-level courses are offered only on the Indianapolis and Richmond campuses. Students in the B.S.W. program must complete all sophomore and junior social work courses and achieve senior standing before enrolling in the senior social work courses. Bloomington students should expect to spend their senior year on the Indianapolis campus in full-time residence.

For specific information regarding the B.S.W. program, contact the appropriate campus below:

B.S.W. Program

Human Services Program and B.S.W. Program
Indiana University East
2325 Chester Boulevard
Richmond, IN 47374-1289
Telephone: (765) 973-8222

Admission Requirements

Enrollment in the B.S.W. program requires formal admission to the School of Social Work. The following are the minimum requirements for consideration for admission to the program:

1. Regular admission to the university.
2. Completion of a minimum of 12 credit hours. Although we encourage early application, advanced students may also apply.
3. Satisfactory completion (grade of C or higher) of the required course S141 Introduction to Social Work.
4. A cumulative grade point average (GPA) of 2.5 on a 4.0 scale.
5. Evidence of characteristics or potential required for competent social work practice as defined in the mission statement of the school. Such evidence may be derived from application materials, letters of reference, pertinent work or volunteer experience, and performance in the introductory course.

Applicants have a priority date of **April 1**. BSW applications received (not postmarked) by the priority date will receive written decision notification by May 31. All applications received after the priority date will be considered, as space is available.

Admission information may be obtained from:

B.S.W. Admissions
School of Social Work
IUPUI
Education/Social Work Building 4138
902 W. New York Street
Indianapolis, IN 46202-5154

Web: iussw.iupui.edu
E-mail: kabrown@iupui.edu

Educational Requirements

A total of 122 credit hours is required for the B.S.W. degree. In addition to School of Social Work requirements and electives, the following outlines general liberal arts requirements:

General Requirements (8 courses)

1. English Composition (2 courses)
ENG W131 Elementary Composition I
ENG W231 Professional Writing Skills
2. Modern American History
HIST H106 American History II
3. Two courses designated arts and humanities from the following departments:
Afro-American Studies
American Sign Language
Communications and Theatre
English (excluding the basic composition course)
Fine Arts
Folklore
Foreign Languages and Cultures (100 level and above)
History
Music (non-performance courses)
Philosophy
Religious Studies
Women's Studies
4. Human Biology (1 course) from the following:
BIOL N200 The Biology of Women
PSY B105 Psychology as a Biological Science
5. Mathematics and Physical Sciences (2 courses)
Computer Science. On the IUPUI campus, it is strongly recommended that students take SWK S300 Computer Technology for Social Work
Select one course from the following departments
Astronomy
Chemistry
Geology
Mathematics (110 or higher)
Physics
Physical Geography
Statistics (strongly recommended)

Supportive Area Requirements (6 courses)

1. POLS Y103 Introduction to American Politics
2. ECON E101 Survey of Current Economic Issues and Problems, E201 Introduction to Microeconomics, or E202 Introduction to Macroeconomics
3. SOC R00 Introduction to Sociology
4. ANTH A104 Cultural Anthropology

5. PSY B104 Psychology as a Social Science
6. PSY B380 Abnormal Psychology or PSY B424 Theories of Personality

Social Work Requirements (16 courses)

Select from the following:

- S100 Understanding Diversity in a Pluralistic Society (3 cr.)
- S141 Introduction to Social Work (3 cr.)
- S221 Human Behavior and Social Environment I: Individual Functioning (3 cr.)
- S231 Generalist Social Work Practice I: Theory and Skills (3 cr.)
- S251 Emergence of Social Services (3 cr.)
- S322 Human Behavior and Social Environment II: Small Group Functioning (3 cr.)
- S323 Human Behavior and Social Environment III: Community and Organizational Functioning (3 cr.)
- S332 Generalist Social Work Practice II: Theory and Skills (3 cr.)
- S352 Social Service Delivery Systems (3 cr.)
- S371 Social Work Research (3 cr.)
- S381 Social Work Practicum I (3 cr.)
- S400 Practicum Seminar (1 cr.)
- S433 Generalist Social Work Practice III: Theory and Skills (3 cr.)
- S442 Practice-Policy Seminar in Fields of Practice (2 courses, 3 cr. each)
- S472 Practice Evaluation (3 cr.)
- S482 Social Work Practicum II (5 cr.)

Selected Educational Policies

For continuance in and graduation from the program, students are required (1) to maintain a minimum cumulative GPA of 2.5 in all letter-graded courses, (2) to maintain a minimum cumulative GPA of 2.5 (or its equivalent) in all required social work courses, (3) to attain a minimum grade of C (2.0) or Satisfactory in each required social work course, and (4) to carry out professional activity in conformity with the values and ethics of the profession.

In the event of failure to meet such requirements, students will be ineligible to continue in the program. Such students are encouraged to consult with their faculty advisor regarding realistic planning for the future, including the right to petition for administrative review. Detailed descriptions of student continuation policies are in the *B.S.W. Student Handbook* (iussw.iupui.edu).

Repeated Courses A course in which a lower than acceptable grade is attained must be repeated or a comparable course substituted that has been approved by the School of Social Work faculty. Required social work courses may be repeated only after the student is reinstated in the program with permission from the school.

Pass/Fail Grades Students can take a maximum of four non-social work elective courses as Pass/Fail. All general requirements and supportive area requirements need a letter grade. All required social work courses receive a letter grade except for S482 Practicum II, which is graded as Satisfactory/Fail.

Courses by Correspondence A maximum of six courses taken by correspondence may be applied toward completion of the B.S.W. degree requirements.

Of these, no more than four courses can be allowed in the general requirements and no more than two courses in the supportive area requirements.

Liability Insurance Students are required to carry professional liability insurance. Under the school's blanket policy, the cost of insurance is included in the student's practicum course fee.

Credit for Life Experience Academic credit for life experience and previous work experience is not given in whole or in part toward the social work degree.

Graduate Programs

Master of Social Work

In recognition of the time and geographic constraints of many students who seek professional social work education, the Indiana University School of Social Work offers 6 programs of study leading to the 60 credit hour M.S.W. degree. The Indianapolis campus offers a two-year full-time program, a three-year part-time weekday program, a three-year part-time evening program, a three-year part-time Saturday program, and an Advanced Standing Program. (The Advanced Standing Program is designed for students with a strong academic record who have earned a Bachelor of Social Work (B.S.W.) degree, within five years of their admission date, from a program accredited by the Council of Social Work Education.) Indiana University South Bend offers a three-year part-time evening program. Indiana University Northwest offers a four-year part-time program.

The general intent of the programs is preparation for advanced social work practice. In addition to generic knowledge and skills, the programs provide an opportunity for development of special competence in interpersonal practice or MACRO Practice. (MACRO is an acronym for Management/Administration, Advocacy, Community, Research/Evaluation and Organization.) Educational resources for students in the program include a substantial library, an audiovisual center, student computer modules, and diversified field instruction settings throughout the state.

Admission Requirements

Professional social work education requires students at the master's level to undertake a rigorous program of classroom and practice work. The Indiana University School of Social Work seeks to admit individuals who have demonstrated competency though previous academic work, professional achievements, and volunteer commitments. A strong commitment to social justice and service to others should be evident in the application.

Admission information for all of the M.S.W. programs may be obtained from:

M.S.W. Admissions
IUPUI School of Social Work
Education/Social Work Building 4134

E-mail: msw@iusb.edu

Enrollment in the M.S.W. program requires official admission to the Indiana University School of Social Work. A limited number of students are admitted each year. The following items are the minimum requirements for consideration for admission:

1. An earned bachelor's degree from an accredited college or university.
2. Evidence of course work in liberal arts.
3. Successful completion of a minimum of six courses in social or behavioral sciences, as defined in the application packet.
4. Successful completion of a course in statistics.
5. Successful completion of a course in research methods.
6. Successful completion of a course in human biology.
7. An earned cumulative undergraduate grade point average (GPA) of at least 3.0 on a 4.0 scale.
8. Submission of the completed application packet by the due date.

Applications are available in early August of the year preceding admission. Information pertaining to the deadlines, requirements, and program details can be found in the application packet. Applicants can apply to only one location and one specific program. All applicants are encouraged to submit applications as soon as possible and well before the final application priority date. The M.S.W. admissions committee will make all decisions and notify students in early spring. Applications are evaluated on the basis of the eight criteria outlined above. Admission is competitive and the instructional resources of the school determine total enrollment.

International Students Applicants who are not citizens of the United States should apply as early as possible preceding the fall in which they wish to enter. They must fill out the international application and the Indiana University School of Social Work application by the posted deadlines. They also must provide proof of their ability to pay fees and support themselves adequately during the period of their study and,

through examinations designated by the school, must demonstrate an ability to comprehend, write, and speak English at an acceptable level.

International students applying to study at IUPUI should request an international application from the following address:

Office of International Affairs
IUPUI
620 Union Drive, Room 207
Indianapolis, IN 46202-5167
Telephone: (317) 274-7294

Transfer Students A limited number of transfer students from other accredited M.S.W. programs may be accepted each year. Master of Social Work students interested in transferring to Indiana University must complete an application for admission to the program. Upon receipt of the completed application, the M.S.W. program director and the chair of the Admissions Committee will review the materials and decide if the applicant will be accepted into the program. If accepted, the M.S.W. program director will analyze the student's transcript and course syllabi to determine which credits earned in another accredited social work program will transfer to Indiana University. In all circumstances, however, the transfer student must complete all required courses in their chosen Concentration Curriculum.

Non-M.S.W. Students With permission of the school, Indiana University students enrolled in other graduate degree programs or persons possessing the M.S.W. degree may request permission to enroll in selected *elective courses* within the program. Enrollment of nondegree students is restricted by the availability of space and faculty. Persons interested in such enrollment are required to request such permission in writing to the M.S.W. admissions coordinator of the school.

M.S.W. Programs of Study—INDIANAPOLIS

Indiana University School of Social Work provides several programs of study leading to the M.S.W. degree. Each program requires 60 credit hours of graduate-level course work.

Two-Year Full-Time Program

The Two-Year Full-Time Program consists of two years of course work taken over four academic semesters. Elective courses may be taken during the summer.

Part-Time Day Program

The Part-Time Day Program enables students to complete the foundation curriculum over two calendar years. Students attend classes during the academic year, starting in August. The complete program requires three calendar years.

Part-Time Saturday Program

The Part-Time Saturday Program enables students to complete the Foundation Curriculum (the first 30 credit hours of the program) over two calendar years. Classroom courses are offered on Saturdays. Students begin this program in late June by enrolling in their

first course during the summer II session. Following completion of the Foundation Curriculum, part-time Saturday students are required to complete the Concentration Curriculum (the final 30 credit hours of the program) with most classes and internships held during the week (usually Monday through Thursday). The complete program requires three calendar years.

Part-Time Evening Program

The Part-Time Evening Program enables students to complete the Foundation Curriculum (the first 30 credit hours of the program) over two calendar years. Classroom courses are offered on weekday evenings. Students begin this program in late June by enrolling in their first course during the summer II session. Part-time evening students are required to complete the Concentration Curriculum (the final 30 credit hours of the program) with most classes and internships held during the week (usually Monday through Thursday). The complete program requires three calendar years.

Advanced Standing Program

Students holding undergraduate social work degrees may be eligible for this program, which begins in May of each year. The following are specific requirements for consideration for admission to the Advanced Standing Program:

1. Graduation within five years from a baccalaureate social work program accredited (or admitted to candidacy for accreditation) by the Council on Social Work Education.
2. Successful completion of a statistics course.
3. A cumulative grade point average of at least 3.0 on a 4.0 scale.
4. A cumulative grade point average of at least 3.0 in all social work courses taken prior to Admissions Committee action. Accordingly, applicants to the Advanced Standing Program must provide the Admissions Committee with an official transcript. Senior B.S.W. students must provide a transcript including the fall semester (or winter quarter) grades of their senior year.
5. Evidence of characteristics and/or potentials required for competent social work practice as defined in the mission statement of the school. Such evidence may be derived from application materials, letters of reference, and/or pertinent work or volunteer experience.
6. A reference letter is required from the B.S.W. program director of the applicant's undergraduate program.

Students admitted with advanced standing will receive credit by credentials for all first-semester courses (14 credits). Candidates who have successfully completed a practice evaluation course *beyond* a research methodology course may receive an additional 3 credits by credential for this course. During the summer preceding the Concentration Year, students will satisfy the remaining second-semester course requirements of the Foundation Year. They can complete the concentration curriculum in one year.

Any eligible B.S.W. graduate applying for a program option other than the Advanced Standing Program may petition to test out of all first-semester course work.

Master of Social Work Curriculum

Social work is a dynamic profession concerned with changing needs of persons and the society. To respond to such needs, the curriculum of the School of Social Work undergoes continuing review by the faculty with the participation of students, members of the practice community, and others. Students must complete 60 credit hours of graduate-level course work in order to meet the minimum requirements for the Master of Social Work degree. All students complete a common 30 credit Foundation Curriculum that emphasizes a *generalist perspective* for social work practice. The Foundation Curriculum includes a one-semester practicum of a minimum of 320 clock hours. Following that, students complete a Concentration Curriculum that prepares them for (1) *advanced interpersonal social work practice* or (2) *advanced MACRO social work practice*. The Concentration Practicum of a minimum of 640 clock hours is usually completed over two semesters. All Foundation Curriculum course work must be completed before students are eligible to enroll in any required courses in the Concentration Curriculum.

The overall objectives of the Foundation Year of the M.S.W. program include development of

1. basic, generalist competence applicable to a broad range of social work practice
2. basic competence in both interpersonal practice and MACRO practice
3. basic competence for practice in social service delivery systems

The overall objectives of the Concentration Year include development of special competence in interpersonal practice or MACRO practice.

Typical course arrangements for students admitted to the Two-Year Full-Time Program are shown below.

Foundation Curriculum

First Semester (14 cr.)

- S500 Social Welfare and the Social Work Profession (3 cr.)
- S510 Human Behavior and the Social Environment: Individuals, Families, Groups (3 cr.)
- S511 Human Behavior and the Social Environment: Organizations, Communities, Societies (3 cr.)
- S540 Social Work Practice I: Theory and Skills (5 cr.)

Second Semester (16 cr.)

- S520 Evaluation Processes in Social Work (3 cr.)
- S530 Social Policy and Services I (3 cr.)
- S541 Social Work Practice II: Individuals, Families, Groups (3 cr.)
- S542 Social Work Practice II: Organizations, Communities, Societies (3 cr.)
- S550 Social Work Practicum I (4 cr.)

Concentration Curriculum

Courses presented over the two semesters of the Concentration Year will include the following:

Interpersonal Practice Requirements (21 cr.)

- S621 Social Work Research: Interpersonal (3 cr.)
- S643 Social Work Practice III: Individuals (3 cr.)
- S644 Social Work Practice III: Families (3 cr.)
- S645 Social Work Practice III: Groups (3 cr.)

- S651 Social Work Practicum II: Interpersonal (4 cr.)
- S652 Social Work Practicum III: Interpersonal (5 cr.)

MACRO Concentration Requirements (21 cr.)

- S622 Social Work Research: Macro (3 cr.)
- S646 Community Organization and Social Action (3 cr.)
- S647 Program Planning and Development (3 cr.)
- S648 Enhancing Task-Oriented Skills in Macro Practice (3 cr.)
- S653 Social Work Practicum II: Macro Practice (4 cr.)
- S654 Social Work Practicum III: Macro Practice (5 cr.)

Both Concentrations (9 cr.)

- S600 Elective 1 (3 cr.)
- S600 Elective 2 (3 cr.)
- S631 Social Policy and Services II [required] (3 cr.)

Educational Requirements

Students are admitted on the assumption that they have the potential academic ability and personal suitability for completing the professional program in which they are enrolled. All students in the M.S.W. program are expected to maintain the standards established by the School of Social Work and those held by the social work profession. In order to detect possible problems, the School of Social Work reviews students' performance periodically.

The Master of Social Work degree is recommended by the school and conferred by the university. Students must successfully complete 60 credit hours of required and elective courses carrying graduate credit. Each student is expected to follow the university and school schedules and dates for completion of requirements, including completion of all work within seven calendar years from the time of first enrollment.

Liability Insurance Students are required to carry professional liability insurance. Under the school's blanket policy, the cost of insurance is included in the student's practicum course fee.

Credit for Life Experience Academic credit for life experience and previous work experience is not given in whole or in part toward the social work degree.

Ph.D. Program

Admission Requirements

All applicants to the Ph.D. program must have a master's degree in social work or a related field. Admission to the Ph.D. program is based on evaluations of (1) the applicant's professional resume, (2) professional experience beyond the M.S.W. degree, (3) undergraduate and graduate transcripts, (4) three letters of reference, (5) an example of the applicant's scholarly writing, (6) a 500-word statement of purpose, and (7) Graduate Record Examination General Test scores.

Application Deadlines

Applications are accepted at any time, but a deadline of January 1 is required in order to be considered for a University Fellowship. All applications must be received by April 1 in order to be considered for

admission to the program for the following fall semester. For application materials and further information, write to

Ph.D. Admissions
School of Social Work
IUPUI
Education/Social Work Building 4138
902 W. New York Street
Indianapolis, IN 46202-5154
Telephone : (317) 274-6730
Web: iusswk.iupui.edu
E-mail : madamek@iupui.edu

Educational Requirements

The student must complete a total of 90 credit hours, including dissertation and research internship. Candidates for the Ph.D. degree may offer up to 30 hours of graduate credit from other institutions as follows:

1. Of the 30 graduate transfer credit hours counted toward the Ph.D. degree in social work, 15 of these credits must be in an area directly related to research (e.g., research methods, statistics, a mentored research project, etc.)
 - Of these 15 research-related credit hours, at least 6 credits must have been completed within three calendar years prior to the date the student enrolls in his/her first doctoral class following acceptance into the Ph.D. program.
 - All 15 research transfer credits must have been successfully completed as prerequisites for the two advanced research methods courses (S726 and S727), the Research Internship (S725), and the Advanced Statistics course.
 - Any or all of the 15 research transfer credits may be taken prior to acceptance into the Ph.D. program and in addition to the 9 credit hours associated with the pre-doc program.
2. All students must have successfully completed a graduate-level statistics course within three calendar years prior to enrolling in the required Advanced Statistics course. Students who have completed a statistics course more than three years prior to enrolling in the Advanced Statistics course may petition the director of the Ph.D. program to test out of this requirement.
3. Any research transfer credits not completed prior to acceptance into the Ph.D. program must be completed as part of the student's doctoral studies in accordance with the above provisions.

All courses credited toward the Ph.D. degree must have a minimum grade of B and must receive written approval of the School of Social Work Ph.D. Program Committee and the dean of the University Graduate School. Specific program requirements include (1) professional social work component, 33 credit hours; (2) specialization component, 18 credit hours; (3) research component, 21 credit hours; (4) research internship, 6 credit hours; and (5) dissertation, 12 credit hours.

All students in the Ph.D. program, with the approval of the program director, will select three faculty members to serve as their academic advisors

throughout their doctoral studies, one of whom will represent the student's area of specialization outside the School of Social Work.

Qualifying Examination Process

The qualifying examination process is comprehensive and integrative in nature. Specific guidelines for the completion of the qualifying process are available from the Ph.D. program director.

Admission to Candidacy

Following the passing of the qualification examination and the completion of all course work, the student's advisory committee will submit a Nomination to Candidacy Form to the University Graduate School. Upon approval of the dean, the student will be admitted to candidacy and awarded a Certificate of Candidacy.

Research Proposal

After nomination to candidacy, the student, with the approval of the program director, will select a research committee of no fewer than three faculty members, including a member outside of the School of Social Work. This committee must approve the proposed dissertation topic.

Final Examination

The final examination is the oral defense of the dissertation.

Pre-Doc Exploration Option

The Pre-Doc Exploration Option allows prospective doctoral students who are not yet able to, or not yet certain that they want to, apply to the Ph.D. program, to test their interest and commitment to doctoral education. Providing students with the time to gain the information and experience needed to make an informed decision about the program, this option permits qualified students to enroll in up to three of the school's regular Ph.D. foundation courses and to complete up to 9 credit hours of doctoral course work before deciding to apply formally to the program. If a student later applies and is accepted to the regular Ph.D. program, credits earned during the pre-doc phase will automatically apply toward the Ph.D. degree.

Participation in the Pre-Doc Exploration Option does not guarantee acceptance into the Ph.D. program. It does, however, provide a unique opportunity for students to explore that possibility. Courses counted toward the Ph.D. degree must be completed within seven years of passing the required qualification examination.

The selection of candidates for enrollment in the Pre-Doc Exploratory Option is based on the following criteria:

1. An earned master's degree in social work or a related field.
2. A graduate grade point average of at least 3.5 on a 4.0 scale.
3. Official copies of all baccalaureate- and master's-level transcripts.
4. A 500-word written statement that outlines the

applicant's reasons for seeking enrollment in the Pre-Doc Exploratory Option.

5. One letter of reference.
6. A professional resume.
7. Approval by the Ph.D. Program Committee.

Applications for the Pre-Doc Exploratory Option must be postmarked by June 15 for fall admission and by October 31 for spring admission.

Students enrolled in the Pre-Doc Exploratory Option are strongly encouraged to complete the S721 Preparing to Publish: Seminar in Advanced Scholarship Skills (3 credit hours) as part of their program of studies. The following is a list of other S700-level courses:

- S710 Proseminar on Client Systems (3 cr.)
- S720 Philosophy of Science and Social Work
- S726 Advanced Social Work Research Methods, Qualitative Research (3 cr.)
- S727 Advanced Social Work Research Methods, Quantitative Research (3 cr.)
- S730 Proseminar on Social Work Policy Analysis (3 cr.)
- S740 Social Work Practice: Theory and Research (3 cr.)

For additional information, contact:

Ph.D. Program Director
Indiana University
School of Social Work
902 W. New York Street
Indianapolis, IN 46202-5154
Telephone: (317) 274-6730

E-mail: madamek@iupui.edu

Certificates

The School of Social Work offers two certificates: a Certificate in Case Management offered at the undergraduate level and a Certificate in Family Life Education offered at the undergraduate and graduate level. Both certificates are open to social work and non-social work students.

The requirements for the Certificate in Case Management are as follows:

- S200 Introduction to Case Management
- S221 Human Behavior and Social Environment I: Individual Functioning
- S231 Generalist Social Work Practice I: Theory and Skills
- S251 Emergence of Social Services
- S300 Crisis Intervention
- S332 Generalist Social Work Practice II: Theory and Skills
- S371 Social Work Research
- S381 Social Work Practicum or S482 Social Work Practicum II (or S280 for non-social work students)
- S442 Practice Policy Seminar in Field of Practice: Case Management

The requirements for the Certificate in Family Life Education at the undergraduate level are as follows:

Students take each of the following courses (15 cr.):
 F401 Introduction to Teaching and Learning
 S221 Human Behavior and Social Environment I:
 Individual Functioning
 S300 Working with Families
 S300/S400 Family Life Education
 S371 Social Work Research

Select one of the following (3 cr.):
 F255 Human Sexuality
 K380 Human Sexuality and the Health Professional
 R320 Sexuality and Society
 S300/S400 Human Sexuality

Select one of the following (3 cr.):
 F458 Family Law and Public Policy
 L100 Personal Law
 R430 Families and Social Policy
 S442 Practice-Policy Seminar in Fields of Practice:
 Family and Children

The requirements for the Certificate in Family Life Education at the graduate level are as follows:
 F500 Introduction to Teaching and Learning
 G567 Marriage and Family Counseling, or S644,
 Social Work Practice III: Families
 S510 Human Behavior and the Social Environment:
 Individuals, Families, Groups or P514 Lifespan
 Development Birth to Death
 S543 Family Life Education or S600 Family Life
 Education
 S600 Human Sexuality
 S631 Social Policy and Services II or P650 Children's
 Rights and Child Development
 Select one of the following:
 S520 Evaluation Processes in Social Work
 Y520 Strategies for Educational Inquiry
 Y535 Evaluation Models and Techniques
 Y611 Qualitative Inquiry in Education

For further information, please contact Katrina Brown at kbrown@iupui.edu or by phone at (317) 274-8359.

Professional and Academic Integrity

Students' Rights and Responsibilities

Social work students in the B.S.W., M.S.W., and Ph.D. programs have a right to participate in decision-making activities about the educational program and the School of Social Work. Students regularly contribute to the continued development and growth of our programs. Indeed, the school values students' input in several critical areas: faculty and course evaluation, school committee work, faculty hiring, and student field placements.

All students enrolled at Indiana University have an opportunity each semester to evaluate their courses and instructors. At the end of each course, students are given standardized faculty evaluation forms to complete. These evaluations are confidential, and the results are computer generated. The evaluations are returned to the faculty to use for strengthening content and learning methods to improve instruction.

Through their elected and/or volunteer representatives, social work students provide input to

and learn from each of the following committees: B.S.W., M.S.W., Ph.D., and various others that might be convened throughout the year. Student representatives are viewed as valuable members of these committees.

Students have the opportunity to meet both informally and formally with any candidates being considered for faculty positions.

Each student has the opportunity to have input into the selection of his or her field practicum assignments. The field practicum coordinator works closely with the student to negotiate a suitable placement.

Social work students have the right to provide feedback about school policies and procedures as well as the behavior of faculty and staff members. In providing either positive or critical feedback, students are expected to follow professional social work norms, values, and ethics. For example, if a student believes that a faculty or staff member's behavior is discourteous or ineffective, she or he should discuss the concern directly with the person or people in question. If the student has reason to believe that in addressing the person directly, she or he would be placed in some jeopardy, then the student should register the concern with the director or campus coordinator of the program, who will address and respond to the issue.

If a student believes that she or he has been treated unfairly or unprofessionally by a faculty or staff member or that a policy or procedure is unjust or unwise, then the student may submit in writing a formal grievance petition to the dean of the school. Grievance petitions are reserved for those issues or incidences that warrant formal investigation and full exploration. Such petitions should be submitted in a professional manner, consistent with social work norms, values, and ethics.

Student complaints regarding discrimination, sexual harassment, racial harassment, and harassment on the basis of sexual orientation have established complaint procedures available in the Indiana University *Code of Student Rights, Responsibilities, and Conduct*.

Academic and Scholarly Guidelines

Students admitted to any Indiana University School of Social Work program have already demonstrated potential for superior academic work. Most social work students are therefore very familiar and comfortable with high academic and scholarly standards. Obviously, students are expected to attend classroom and practicum course meetings. Regular attendance is viewed as the personal and professional responsibility of each social work student. Active participation in course activities is the expected norm. In participating, it is expected that students reflect interest in, and respect for, their colleagues in a manner that is congruent with the values, ethics, and skills of the profession.

In written assignments, students are expected to prepare documents in a scholarly and professional manner. Submissions should be typewritten in double-

spaced format and carefully edited for spelling and grammar. All direct quotations, paraphrases, empirical research findings, and other restatements of the research, scholarship, or creative work of others must be appropriately annotated using the standard bibliographic citation methods set out by the American Psychological Association in the most recent edition of the *Publication Manual*. The *APA Manual* serves as the guide for style and format of all papers submitted in the School of Social Work.

Competent and effective social work practice requires well-developed and refined communication skills, including the use of the written word. Writing well helps social workers communicate information accurately and concisely to others involved in helping client systems. For this reason, formal writing assignments in social work courses will be evaluated on both the basis of the quality of the scholarly content as well as the quality of its presentation.

Electronic Communication

Students are expected to follow appropriate e-mail etiquette when communicating with faculty, staff, and peers. Correct grammar is expected at all times. Inappropriate use of email will be grounds for student review. For specific guidelines, please visit www.itpo.iu.edu/policies.html and www.itpo.iu.edu/computeruse.html.

Student Misconduct

The following is based on Indiana University (1997), *Code of Student Rights, Responsibilities, and Conduct* (Part III, pp. 17-18), Bloomington, IN: Indiana University, and on Indiana University-Purdue University Indianapolis (1997), *Code of Student Rights, Responsibilities, and Conduct* (Part III, pp. 28-29), Indianapolis, IN: Indiana University-Purdue University Indianapolis.

A. Academic Misconduct.

Indiana University School of Social Work and/or the university may discipline a student for academic misconduct defined as any activity that tends to compromise the academic integrity of the institution and undermine the educational process. Academic misconduct includes, but is not limited to, the following:

1. Cheating.

- A student must not use external assistance on any "in-class" or "take-home" examination, unless the instructor specifically has authorized such assistance. This prohibition includes, but is not limited to, the use of tutors, books, notes, and calculators.
- A student must not use another person as a substitute in the taking of an examination or quiz.
- A student must not steal examinations or other course materials.
- A student must not allow others to conduct research or to prepare any work for him or her without advance authorization from the instructor to whom the work is being submitted. Under this prohibition, a student must not make any unauthorized use of materials obtained from commercial term paper companies or

from files of papers prepared by other persons.

- A student must not collaborate with other persons on a particular project and submit a copy of a written report that is represented explicitly or implicitly as the student's own individual work.
- A student must not use any unauthorized assistance in a laboratory, at a computer terminal, or on fieldwork.
- A student must not submit substantial portions of the same academic work for credit or honors more than once without permission of the instructor to whom the work is being submitted.
- A student must not alter a grade or score in any way.

2. Fabrication.

A student must not falsify or invent any information or data in an academic exercise including, but not limited to records or reports, laboratory results, and citations to the sources of information.

3. Plagiarism.

A student must not adopt or reproduce ideas, words, or statements of another person without an appropriate acknowledgment. A student must give due credit to the originality of others and acknowledge an indebtedness whenever he or she does any of the following:

- quotes another person's actual words, either oral or written
- paraphrases another person's words, either oral or written
- uses another person's idea, opinion, or theory
- borrows facts, statistics, or other illustrative material, unless the information is common knowledge

4. Interference.

- A student must not steal, change, destroy, or impede another student's work. Impeding another student's work includes, but is not limited to, the theft, defacement, or mutilation of resources so as to deprive others of the information they contain.
- A student must not give or offer a bribe, promise favors, or make threats with the intention of affecting a grade or the evaluation of academic performance.

5. Violation of Course Rules.

A student must not violate course rules as contained in a course syllabus or other information provided to the student.

6. Facilitating Academic Dishonesty.

A student must not intentionally or knowingly help or attempt to help another student to commit an act of academic misconduct.

Indiana University School of Social Work Policy Regarding Individuals Convicted of Sex Offenses against Children

Policy Statement

It is the policy of the School of Social Work that no students or applicants who have been convicted of sex offenses against children shall be eligible for admission or matriculation into the B.S.W., M.S.W., or Ph.D. programs.

Procedure

1. **Responsible Office.** The Office of Student Services, in conjunction with the Admissions Committee of each program, shall administer the Sex Offenders Screening Policy as it relates to student admissions and transfers.
2. **Periodic Review.** Periodically program committees will review the policy and will make recommendations to the dean of the school regarding any possible changes to the policy and procedures for implementation.
3. **Preadmission and Transfer Screening.** Applicants will be asked to self-report any history of convictions of sexual offenses against children. As well, once students are accepted into the program, their names will be forwarded to the Office of the Registrar for screening against the registry. Any applicant or new admittee whose name is on the registry will be ineligible for admission or transfer and shall be notified of nonacceptance or termination from the respective program.
4. **Students in Affected Programs.** Any student who is already in an Indiana University School of Social Work Program and whose name appears on the registry during the time of matriculation, or who has been convicted of an offense for which the student can be listed on the registry, shall be ineligible for continuation or completion of the affected program. Any faculty member, student, field instructor, or other person within the school who becomes aware of such a situation should bring it to the attention of the respective program director for appropriate action.
5. **Notice.** The school bulletin shall include a statement giving notice to potential applicants that criminal convictions may render persons ineligible for certain practica.
6. **Nonexclusive Policy.** Nothing in this policy shall be deemed to preclude the school from taking other appropriate action in such cases, or in the case of applicants or students involved in other conduct or criminal activities not covered in this policy.
7. **Right to Appeal.** Any applicant or student already admitted to an Indiana University School of Social Work program who is deemed ineligible for admission or continuation based upon a record of criminal conviction may appeal to the dean of the school for reconsideration if she or he

believes there are extenuating circumstances that might mitigate the findings. The dean will appoint a review panel of three full-time faculty members to consider the student's appeal. The review panel, in consultation with the Office of University Counsel, will consider all pertinent information and make a ruling that shall be considered final.

For other policies, please visit iussw.iupui.edu

Student Services— Indianapolis Campus

Career Information

Information about employment in specific careers is available from Indiana University Career and Employment Services, Business/SPEA Building 2010, (317) 274-2554, career@iupui.edu, and the School of Social Work's Office of Student Services.

Financial Assistance

Opportunities for financial aid for graduate students are different from those for undergraduates. It is important to understand that graduate students are only eligible for loans from IU financial aid. Additionally, the School of Social Work has some limited funds available for tuition assistance. Persons interested in financial aid should contact the following office:

Office of Financial Aid
IUPUI
Cavanaugh Hall, CA 103

Information regarding financial awards from the School of Social Work is made available to social work students at the beginning of the academic year.

Student Organizations

Students of the school maintain B.S.W. and M.S.W. Social Work Student Associations, which sponsor program meetings and social affairs during the year. Through elected officers and committees, the associations serve as important channels for communication between students and faculty. In addition, these organizations appoint student representatives to various school committees. Students also are encouraged to participate in organizations related to the social work profession. Information about these organizations can be found in the B.S.W. and M.S.W. student handbooks.

Students with Disabilities

By anticipating some common problem areas, the university makes every effort to help students with physical or learning disabilities make the transition to university life. A detailed list of services is available through the Office of Adaptive Educational Services, 425 University Boulevard, (317) 274-3241, TDD/TTY (317) 278-2050.

Furthermore, the Indiana University School of Social Work makes every reasonable attempt to accommodate participants in our programs.

Courses of Instruction

In the following course listings, the abbreviation “P” refers to prerequisite and “C” indicates corequisite courses. This bulletin lists only prerequisite and corequisite social work courses. A list of the specific prerequisite and corequisite courses from the general and supportive area requirements needed for social work courses can be requested from the B.S.W. program office on the campus of your choice. The number of hours of credit given to a course is indicated in parentheses following the course title.

B.S.W. Courses

The following course listing includes B.S.W. required courses and selected elective courses.

S100 Understanding Diversity in a Pluralistic Society (3 cr.) Theories and models that enhance understanding of our diverse society. It provides content about differences and similarities in the experiences, needs, and beliefs of selected minority groups and their relation to the majority group.

S141 Introduction to Social Work (3 cr.) Examination of characteristics, function, and requirements of social work as a profession. Emphasis on ideological perspectives of the profession and the nature of professional function and interaction.

S200 Introduction to Case Management (3 cr.) Explores current models of case management. It addresses emerging case manager's functions and roles within the contemporary network of human services. Students may use this course to fulfill requirements for the Certificate on Case Management, or may take it as an elective.

S221 Human Behavior and Social Environment I: Individual Functioning (3 cr.) P: S141 or consent of the instructor. Understanding of human behavior and the social environment as a basis for social work practice. Focuses on understanding the interaction between person and environment. Coverage of major theories of individual functioning, life cycle development, and the family context. Exploration of inequality, discrimination, and differential access to opportunities for diverse populations.

S231 Generalist Social Work Practice I: Theory and Skills (3 cr.) P or C: S221. Development of a critical understanding of social work practice. It focuses on the beginning phase of the helping process and related skills. Topics include the nature of the helping relationship, NASW Code of Ethics, practice as it relates to oppressed groups, assessment, and practice evaluations.

S251 Emergence of Social Services (3 cr.) P: S141 or consent of the instructor. Examination of the evolution of social services in response to human needs and social problems as related to economic, political, and social conditions.

S280 Introduction to Field Experience (1-3 cr.) P: consent of the instructor. Introductory field experience for testing interest in a social work career.

S300 Computer Technology for Social Workers (3 cr.) Broad overview of computer software applications and Internet and World Wide Web, with an emphasis on their utilization in the social work profession. Ethical and social implications of computer technology for the social work profession, highlighting considerations specific to at-risk populations. Students may use this course to fulfill the computer course requirement or they may take it as an elective.

S300 Crisis Intervention (3 cr.) Focuses on the increasing number of complex and painful personal, couple, and family crisis situations encountered by social workers in the course of service delivery. Students may use this course to fulfill requirements for the Certificate on Case Management, or as an elective.

S300 Working with Families (3 cr.) Exploration of family relationships and roles in the 21st century. Examination of challenges encountered by families across the family life cycle.

S300/S400 Family Life Education (3 cr.) An understanding of the general philosophy and broad principles of family life education in conjunction with the ability to plan, implement, and evaluate such educational programs.

S322 Human Behavior and Social Environment II: Small Group Functioning (3 cr.) P: S221. Examination of the significance of the small group as context and means for social development of individuals and as agent of change in the social environment. Discussion of the individual as a member of a variety of groups, including the family. The course considers the formal organization as a composite of groups.

S323 Human Behavior and Social Environment III: Community and Organizational Functioning (3 cr.) P or C: S322. Provision of a theoretical and conceptual foundation on community and formal organizations necessary to social work practice. Topics include conceptual approaches for understanding communities and organizations; community research; institutional discrimination; distribution of community resources; and power and control as they relate to oppressed groups.

S332 Generalist Social Work Practice II: Theory and Skills (3 cr.) P: S231, S251. P or C: S352. C: S381. Examination of middle and ending phases of the helping process and related skills. Topics include the helping relationship with various client system sizes; impact of agency policies and procedures upon practice and resolution of clients' problems; and practice evaluation.

S352 Social Service Delivery Systems (3 cr.) P: S251. Examination of policies, structures, and programs of service delivery systems at local, regional, and national levels with emphasis on relations among such systems as formal organizations. Students acquire knowledge of the policy development process, which helps them establish beginning capacity for policy analysis and policy practice.

S371 Social Work Research (3 cr.) P: junior standing. Examination of basic research methods in social work, the relevance of research for social work practice, and the selection of knowledge for use in social work.

S381 Social Work Practicum I (3 cr.) P: S231, S251. P or C: S352. C: S332. Guided field practice experience (12 hours per week) for application of generalist practice concepts and principles and the development of basic practice skills. Students are to intern in a human service organization for a minimum of 192 clock hours, which includes a bimonthly seminar.

S400 Practicum Seminar (1 cr.) P: all junior-level social work courses. C: S433, S472, S482. Discussion of practice issues as experienced in S482.

S433 Generalist Social Work Practice III: Theory and Skills (3 cr.) P: all junior-level social work courses. C: S400, S472, S482. Development of the ability to work differentially with selected situations and varied system sizes. Students learn to identify clients' needs as the primary factor influencing the choice of intervention. Special consideration is given to working with groups and communities. The impact of emerging technologies on clients is explored.

S442 Practice-Policy Seminar in Fields of Practice (2 courses required) (3 cr.) P: S433, S472, S482. Addresses practice and policy issues in specific fields of practice such as child and family, aging, addictions, and developmental disabilities.

S472 Practice Evaluation (3 cr.) P: S371 and all other junior-level social work courses. C: S433, S482. Develops the knowledge and skills necessary for students to evaluate their own practice with individuals, groups, communities, and organizations. The use of selected software is explored.

S482 Social Work Practicum II (5 cr.) P: All junior-level social work courses. C: S433, S472. Guided field practice experience (20 hours per week) for application of concepts and principles and development of skills for generalist practice with selected social systems. Students are to practice in a human service organization for a minimum of 320 clock hours.

S490 Independent Study (1-6 cr.) P: permission of instructor. An opportunity to engage in a self-directed study of an area related to the school's curriculum in which no formal course is available.

M.S.W. Courses (Graduate Standing is Required)

S500 Social Welfare and the Social Work Profession (3 cr.) Orients students to the profession of social work by examining the history of social work in the context of its values and ethics and by discussing the social welfare framework within which the profession exists.

S510 Human Behavior and the Social Environment: Individuals, Families, Groups (3 cr.) Focuses on individual development and functioning at all system levels with particular emphasis on the interplay of individual, family, and group system needs and resources over time. Special attention is given to issues of values and ethics and to the impact of inequality, discrimination, and differential access to opportunity within society on the development and functioning of the individual, family, and group systems.

S511 Human Behavior and the Social Environment: Organizations, Communities, Societies (3 cr.) Presents theoretical frameworks for understanding organizations, communities, and society as both targets and instruments of change, focusing on the ways that organizational, community, and societal structures and processes enhance or inhibit the well-being of people. Course content includes selected social problems. Special attention is given to the impact of inequality, discrimination, and differential access to opportunity on the larger systems as well as on individuals and groups within them.

S520 Evaluation Processes for Social Work (3 cr.) Introduces students to the knowledge and skills needed to evaluate their own practice and the effectiveness of social service programs within which they work.

S530 Social Policy and Services (3 cr.) Examines the political and legislative processes as these influence the development of social policy and services. Included are legislative and political processes, models of policy analysis, service delivery, and policy implementation. The effects of these on people are considered from global, political, economic, and social policy perspectives.

S540 Social Work Practice I: Theory and Skills (5 cr.) Introduces students to knowledge, values, and skills for generalist social work practice. The course prepares students to enhance the well-being of people and to ameliorate environmental conditions that affect them adversely. Includes laboratory experiences to provide opportunities for students to develop basic social work skills through experiential and simulation activities. Focus is on the core interactional skills of social work practice differentially applied at all system levels and with diverse populations.

S541 Social Work Practice II: Individuals, Families, and Groups (3 cr.) Focuses on generalist social work practice with individuals, families, and groups.

S542 Social Work Practice II: Organizations, Communities, Societies (3 cr.) This course is concerned with helping communities and other social units to empower themselves and eradicate oppressive situations and practices through networking, political participation, leadership development, mobilization, utilization of resources, and other strategies and techniques.

S550 Social Work Practicum I (4 cr.) This course is an educationally directed practice experience (16-20 hours per week) in social work practice settings with approved field instructors; 320 clock hours.

S621 Social Work Research: Interpersonal (3 cr.) Course provides content from various research methodologies, including qualitative and quantitative designs, to support advanced interpersonal social work practice.

S622 Social Work Research: Macro Practice (3 cr.) This course helps the student acquire knowledge and competence in quantitative and qualitative evaluation, research, and needs/resource assessment in relation to macro practice.

S631 Social Policy and Services II (3 cr.) A group of courses covering topics or content including social problems, special populations, particular social service delivery areas, and social indicators that predict areas of future social policy transformations.

S643 Social Work Practice III: Individuals (3 cr.) Focuses on theory and skills needed for advanced social work practice with and on behalf of individuals.

S644 Social Work Practice III: Families (3 cr.) Focuses on theory and skills needed for advanced social work practice with and on behalf of families.

S645 Social Work Practice III: Groups (3 cr.) Focuses on theory and skills needed for advanced social work practice with and on behalf of natural and formed groups.

S646 Community Organization and Social Action (3 cr.) Focuses on theory and skills needed by social workers for advanced community organization and social action.

S647 Program Planning and Development (3 cr.) This is a skills course in which the student learns how to develop a program plan and all its components as well as the strategy for its implementation.

S648 Enhancing Task-Oriented Skills in Macro Practice (3 cr.) This is a skills course in which the student learns and uses a framework for social advocacy and social justice as applied to "community" and "organization and social development."

S651 Social Work Practicum II: Interpersonal (4 cr.) Agency-based field experience (16 hours per week) for interpersonal practice concentration students; 256 clock hours.

S652 Social Work Practicum III: Interpersonal (5 cr.) Agency-based field experience (16-24 hours

per week) for interpersonal practice concentration students; 386 clock hours.

S653 Social Work Practicum II: Macro Practice (4 cr.) Agency-based field experience (16 hours per week) for macro practice concentration students; 256 clock hours.

S654 Social Work Practicum III: Macro Practice (5 cr.) Agency-based field experience (16-24 hours per week) for macro practice concentration students; 386 clock hours, usually over 2 semesters.

S680 Special Social Work Practicum (1-9 cr.) An educationally directed field experience in addition to the required practicum courses.

S690 Independent Study (1-6 cr.) An opportunity to engage in a self-directed study of an area related to the school's curriculum in which no formal course is available. (In order to enroll in S690, approval from an academic advisor and the director of the M.S.W. program is required.)

S600 Electives Vary in subject matter. Scheduling of these courses will be announced prior to semester registration.

Ph.D. Courses

In addition to the required courses listed below, all students must complete a minimum of 12 credit hours outside the School of Social Work related to their area of specialization. An advanced course in *measurement and statistics* also is required and is typically taken as part of the student's area of specialization. All students enroll for 6 elective credits, which may be taken within or outside the School of Social Work with the approval of the student's advisory committee.

S700 Integrative Seminar (3 cr.) P: completion of specialization requirements or consent of instructor. This seminar is scheduled at the conclusion of the didactic component of the program and is intended to provide an opportunity for students to examine within the context of a social work perspective the relevant research and practice issues that have emerged as a consequence of having participated in an educational program that includes content taken both within and outside the School of Social Work.

S710 Philosophy of Science and Social Work (3 cr.) This seminar focuses on the converging forces that have shaped the development, dissemination, and utilization of the human behavior knowledge base of social work. It specifically examines the social and behavioral science theory and research that provide the foundation for social work practice across a variety of system levels.

S720 Philosophy of Science and Social Work (3 cr.) This course examines the nature and sources of social work knowledge and considers a range of epistemological issues involved in the selection, development, evaluation, and use of knowledge for social work.

S721 Preparing to Publish: Seminar in Advanced Scholarship Skills (3 cr.) This course prepares doctoral students for academic scholarship. Topics include expectations and standards for scholarly discourse, critical and analytic thinking

skills, logical argument, scholarly writing publication, and the development of a research agenda. Web-based peer and instructor review of successive drafts of writing assignments culminate in a synthesized review of literature.

S726 Advanced Social Work Research Methods, Qualitative Research (3 cr.) This course provides an opportunity for students to initiate a research project using qualitative research methods. Topics covered will include developing the research question, exploring the literature, writing an interview guide, interviewing, analyzing data, computer analysis, writing reports, subjectivity and bias, ethics, role of theory, trustworthiness, and audits.

S727 Advanced Social Work Research Methods, Quantitative Research (3 cr.) This course on quantitative research explores the similarities and differences in the various research methods and provides an opportunity to formulate and test a research question. Students will formulate and refine a research question based on interest and a thorough review of the literature. They will learn how to choose an appropriate design for answering testable problems, questions, or hypotheses. The role of theory, fundamentals of sampling, the role of informants, and steps of preparatory work will be explored. Students will generate, test, and refine interview questions or instruments appropriate to their chosen design. They will identify potential funding opportunities and current research through online data searches. Computer demonstrations and experiential computer exercises will expose students to research software and available databases. At the conclusion of the semester, students will have developed a research proposal and field tested their data collection instruments.

S725 Social Work Research Internship (6 cr.) P: S720, S721, foundation statistics course, and at least one of the following: S710, S730, or S740. This supervised field internship provides practical experience in conducting research relevant to social work practice. Students participate in a new or ongoing faculty-supervised research project involving the design and implementation of a study, including the collection and analysis of data and the development of appropriate research reports. Internship may be registered for up to three times.

S730 Proseminar on Social Work Policy Analogies (3 cr.) This seminar focuses on the development and application of analytical tools necessary to critically examine and evaluate social policy theory and research germane to social work, including the values and ideologies that undergird social problem construction, social policy creation, and social program design. Specific attention is devoted to the application of this schemata for diverse populations.

S740 Interpersonal Social Work Practice: Theory and Research (3 cr.) This seminar provides an in-depth orientation to the place of research in social work. It focuses on epistemological, methodological, practical, and ethical issues that affect the way in which research relevant to the profession of social work is conducted and used.

S790 Special Topics in Social Work Practice, Theory, and Research (Var: 1-3 cr.) P: approval by appropriate instructor. This course provides students with an opportunity to engage in focused study of a substantive area of social work practice directly related to the student's identified area of theoretical and research interest. It is completed with the approval and under the guidance of a member of the Ph.D. faculty.

S800 Ph.D. Dissertation Research (12 cr.)

School Alumni

Graduates of the school maintain an active Alumni Association whereby they continue to participate in the improvement of the programs and the achievement of the school's progressive goals. Leadership is provided by officers and an executive committee elected biennially.

University College

University College is the academic unit at IUPUI that provides a common gateway to undergraduate programs for entering students. The University College coordinates existing university resources and develops new initiatives to promote academic excellence and enhance students' persistence. It provides a setting where faculty, staff, and students join to make IUPUI a supportive and challenging environment for learning.

The University College provides advising and support services for beginning undergraduate students. University College's staff and faculty assist students who have not yet decided on a major, who are still learning what a college education entails, or who have not yet been admitted to the school of their choice. Students will be transferred as soon as possible to one of the degree-granting schools or divisions of the university.

The mission of the University College is to

1. Promote student learning
2. Focus on individual student success
3. Establish its own traditions and recognition of accomplishments
4. Provide a quality first-year experience
5. Develop strong connections with the degree-granting units
6. Promote faculty and staff development
7. Create a community that values diversity
8. Implement collaborative governance built on individual responsibility
9. Promote intentional reflection and assessment

Honors Certificates

Certificates are awarded to eligible students for either honors or highest honors status in an academic year. Students with a GPA from 3.7 to 4.0 receive highest honors; those from 3.30 to 3.69 receive high honors; and those from 3.0 to 3.29 receive honorable mention. On average, more than 3,000 students in University College are awarded certificates in an academic year.

Laptop Program

The University College has a Laptop Program for undergraduate students. Laptops equipped with the latest software are loaned to students for use on the second floor of the University College building when students need to complete reports, papers, graphic presentations, and e-mail correspondence. Students can pick up laptops at the Learning Center, UC 2006. For more information, call (317) 274-4818.

A Partnership for Academic Excellence

Students enter into a partnership with University College for their academic success. University College asks students to commit to this partnership. As part of this partnership, the university will provide resources to help students reach their academic goals. The students' responsibility is to work at their highest academic level and to strive for academic excellence in their studies.

University College's role in this partnership is to help students

- acquire information needed to take advantage of the educational opportunities available to them;
- define their goals and plan appropriate academic programs and strategies; and
- meet requirements for entry into a degree-granting school.

University College carries out this role by providing

- Mentoring
- Learning Communities
- Academic Advising
- Student Resource Center
- University Writing Center
- Technology Support
- Career Counseling
- Honors Program
- Student Activities
- Community Service Projects
- Adaptive Educational Services
- Math Assistance Center
- Structured Learning Assistance

The students' role in this partnership is to

- get to know their professors. Visit their offices. Ask questions. Take advantage of their love of teaching and their intellectual excitement for their subject area.
- stay in contact with their academic advisors. Feel welcome to discuss any factors that may affect their work and success at IUPUI.
- attend all classes.
- complete all assignments on time.
- allow sufficient time for learning out of class. We recommend three hours of outside study (assignments, reading, academic clubs, service projects, etc.) per week for each credit hour of class.
- enjoy the intellectual challenges and opportunities that the decision to attend IUPUI brings.

This Partnership for Academic Excellence is a cooperative approach to academic success between the University College and students. Each student understands and agrees to the roles and responsibilities stated. This is not a binding contract or a legal document; rather it is a sincere good faith expression of a partnership to help students achieve their academic goals.

Learning Communities

All IUPUI Learning Communities include a first-year experience class. Some Learning Communities link two or more classes, and some are specifically designed to introduce students to their majors. All Learning Communities offer students increased opportunities to make new friends and to meet members of the faculty and staff who are especially interested in first-year students. Students enrolled in Learning Communities are encouraged to get to know each other, to form study groups, and to learn how to take full advantage of their college experience.

Each Learning Community has an instructional team led by a faculty member and includes a student

mentor, an academic advisor, and a librarian. The instructional team shapes the learning environment to provide participants with as much academic support as possible. The student mentor works with students inside and outside of class to increase academic success. The librarian and the academic advisor work with students throughout the semester in each Learning Community to ensure that students are comfortable using the library and that they have important information about course requirements, career and major selections, university regulations, and academic policies. Learning Community students also learn to use the computer systems on the IUPUI campus and to communicate through e-mail.

The IUPUI Learning Community program offers a wide selection of classes. Each Learning Community has its own special characteristics. Descriptions of all the Learning Communities are available. The University College academic advisors assist students in selecting the one that best suits their needs. Students then register for their Learning Community when they register for their other classes. Learning Community programs are a joint project between the University College and undergraduate schools, including the Schools of Allied Health Sciences, Business, Education, Engineering and Technology, Liberal Arts, Music, Nursing, Physical Education, Public and Environmental Affairs, Science, and Social Work, as well as the Department of Informatics.

What are the advantages of participation in Learning Communities? Students who have been enrolled in Learning Communities report that they get to know a small group of classmates quickly. They learn to study together, collaborate on projects, and depend on each other for additional support in the classroom.

Learning Center

The Learning Center is devoted to students helping students. The center, which includes the Resource Center and the Student Mentor Program, is on the second floor of the University College Building (UC).

The Resource Center is a student-staffed referral service open to all IUPUI students. Students find tutors, campus resource numbers, help with studying and time management, techniques for taking exams, and information on the Student Mentor Program. All services are confidential and free of charge. For information about the Resource Center, call (317) 274-4818.

The Student Mentor Program

Groups of students work together with a student mentor to better understand difficult course material. This collaboration provides an enriching environment where students strengthen academic skills and build community.

Mentors are students who have successfully completed a course and are available to help other students review material in undergraduate courses such as psychology, math, economics, chemistry, and biology. They also share helpful study skills and test-taking techniques. The Student Mentor Program is free to IUPUI students. For more information, contact the Learning Center in the University College at (317) 274-4818.

Academic Advising

The advisors in the University College help students choose an appropriate major, develop a plan for completing the requirements for transferring to a school as quickly as possible, and identify university resources students can use to improve their academic standing. Most students find it helpful to meet with their advisor at least once a year to review their academic plans and to check on changes in degree requirements. In addition, most schools join the University College in offering information sessions that review degree requirements and procedures for admission to the major. Students can call the school they are interested in for information about the date and location of these sessions. All students are required to meet with their advisor during the first semester at IUPUI.

Checksheets

The University College provides checksheets outlining academic requirements for each major area. After students have obtained student codes from Integrated Technologies in the Technology Building, they may also review checksheets at any time through the University College Web site at www.universitycollege.iupui.edu. (Click on "Academic Advising" and then "College Degree/Requirements.")

In addition to the checksheets, University College provides all its students with the University College Student Manual, which contains articles on many topics vital to beginning students. The following excerpt from the manual provides hints for maximizing each advising session. Students should consult the manual for other helpful sections.

Do's and Don'ts of Advising at the University College's Advising Center

Academic advising is a must. To get the most out of the experience, remember these do's and don'ts:

Do

Do see your University College advisor.

Do see your advisor when he or she can spend time with you. Periods after registration tend to be less hectic for students and the University College. Late afternoon is a good time for walk-in meetings with your advisor.

Do keep your own records (e.g., grade reports, classes taken, etc.). Bring them with you to assist your advisor.

Do assert yourself. Ask questions! Repeat questions and clarify answers.

Do take responsibility for reading about those rules and requirements that affect you.

Do get answers in writing, with a copy for you and one for your file.

Do ask for another advisor if you want to change your advisor at any time.

Don't

Don't take advice from just anyone.

Don't wait until registration periods to see your advisor.

Don't assume that your advisor has access to all of your records. Keep your materials together to assist the advisor.

Don't assume that your advisor will automatically tell you everything you need to know.

Don't assume that only your advisor (and not you) should be familiar with the university's rules and regulations.

The Merkler Style Preference Inventory (MSPI)

This inventory is available to all IUPUI students free of charge at computer clusters on campus and online at the Web site (<http://testing.tc.iupui.edu/online/merkler/>). With this very user-friendly resource, students can start identifying their unique values, personality, interests, and skills and determine their preferred style of learning, working, and dealing with the world. It takes about 30 minutes and must be completed in one session because responses will be erased when the student exits the program. After completion of the test, students need to make an appointment with a University College exploratory advisor to discuss the 7- to 14-page computer-printed report, which includes students' profiles and lists of the IUPUI courses and appropriate majors. With this information, the advisor can interpret the report and help identify academic majors and specific courses that may lead the student to a satisfying career. Students need to call (317) 274-6623 for an appointment and must bring the printed report for interpretation.

Major Decisions Workshops

Academic advisors from the University College and the IUPUI Career Center provide free, one-hour workshops several times a semester. The workshop gives students an overview of the career decision-making process, discusses the relationship between majors and careers, and engages students in exercises that will start the major decision process. For information or to reserve a seat in one of these workshops, call (317) 274-2554.

Retention, Probation, Dismissal, and Reinstatement Policy

Probation

Students whose cumulative grade point average (GPA) falls below 2.0 will be placed on probation and will be required to meet standards set by IUPUI in order to continue in college. All students will be allowed at least one semester of probation prior to being academically dismissed. Students will be informed of their probationary status by letter. While on probation, students must meet with an advisor before enrolling each semester.

Students may continue on probation when their semester GPA is 2.0 or above but their cumulative GPA is below 2.0.

Students will be removed from their probationary status once their cumulative GPA is at least 2.0.

Dismissal

Students on probation who have completed a minimum of 12 IUPUI GPA hours are subject to dismissal if they fail to attain a GPA of at least 2.0 in

any two consecutive semesters (fall and spring) and their cumulative GPA is below 2.0.

Students who are dismissed for the first time must sit out for a minimum of one regular (fall or spring) semester and petition by the established deadlines to be reinstated. Reinstatement is not automatic. Students' chances of readmission will be enhanced by taking workshops, removing grades of incomplete, undertaking assessment of their academic problems, and providing evidence of their ability to do successful academic work upon their reinstatement to IUPUI.

Students dismissed two or more times must remain out of school for two regular (fall and spring) semesters and petition by the established deadlines to be reinstated. Readmission after a second dismissal is extremely rare. Students' chances of readmission will be enhanced by taking workshops, removing grades of incomplete, undertaking assessment of their academic problems, and providing evidence of their ability to do successful academic work upon their reinstatement to IUPUI.

Reinstatement

Students petitioning for reinstatement after being dismissed from IUPUI must demonstrate by petitions and interviews that they have prepared themselves to have a reasonable chance of success in their study at IUPUI. Reinstatement will be the decision of the school to which the students are petitioning.

Students who are reinstated will be classified as probationary students until their cumulative GPA is 2.0. During the first regularly enrolled term on probation, the student must achieve a semester GPA of at least 2.3. In each subsequent semester on probation, the student must achieve a semester GPA of 2.0. Failure to meet the semester GPA requirement will result in dismissal.

Note

In order to ensure equity between intercampus transfer students and transfer students from outside the IU system, only IUPUI grades will be considered in determining probation and dismissal.

The School of Liberal Arts, School of Science, and University College, in agreement with a common policy, will honor a student's academic probation and dismissal status from any of these units.

University College policy concerning academic dismissal requires that students who are dismissed for the first time from IUPUI, IU Bloomington, IU regional campuses, or other IUPUI schools, sit out for a minimum of one regular (fall or spring) semester and petition by the established deadlines to be reinstated.

Students who were reinstated before spring semester 2002 will follow the requirements of their current contract until their cumulative GPA is 2.0.

Students who have been academically dismissed and have not been enrolled at IUPUI for five or more years do not need to petition for readmission.

University College will assess the academic dismissal reinstatement fee of \$50.00 to students who have been dismissed for academic reasons and wish to return to university study. The fee will be assessed at University College at the time a readmission petition is submitted.

Certification to a Degree-Granting School

The University College will certify (transfer) students to a degree-granting school when they have met the following criteria:

1. Completed the minimum number of credit hours and specific courses required for admission to a particular school.
2. Achieved the required grade point average for admission to a specific school.
3. Indicated to an academic advisor their choice of a major area of study.

Upon completion of 56 credit hours, students must be certified to a degree-granting school. Some schools have competitive admission and require submission of an application at least a month before the start of a semester. In addition, if students are uncertain about degree requirements or can't decide on a major, it is essential that they talk with an academic advisor before reaching the 56 credit hour limit.

Faculty

University College provides a forum for general education through the teaching, advising, and curriculum-development activities of the faculty appointed to the university. The faculty represents a unique governing body that comes together across disciplinary lines for the purpose of enhancing students' learning experience.

Halverson, Randall S., B.S. (*South Dakota State University, 1976*); M.Ed. (*South Dakota State University, 1990*); M.S. (*South Dakota State University, 1992*); M.L.S. (*Emporia State University, 1998*); *Assistant Librarian, University Library*

- Hamilton, Sharon, B.A. (*University of Winnipeg, 1969*); B.Ed. (*University of Manitoba, 1978*); M.Ed. (1982); Ph.D. (*University of London, 1986*); Professor of English; Chancellor's Professor; Director of Campus Writing; Director of the IU Faculty Colloquium for Excellence in Teaching
- Hatcher, Julie A., B.S. (*Indiana University, 1975*); M.S. (*Indiana University, 1988*); Research Associate, Service Learning; Associate Director, Center for Service and Learning; Adjunct Instructor, School of Education; Adjunct Instructor of Philanthropic Studies
- Huehls, Frances, B.A. (*Indiana University, 1973*); M.L.S. (*Indiana University, 1992*); M.A. (*Indiana University, 1998*); Ph.D. (*Indiana University, 2001*); Assistant Librarian, University Library
- Jackson, Barbara Dale, B.A. (*Hunter College, 1965*); M.A. (*University of Minnesota at Minneapolis-St. Paul, 1967*); Ph.D. (1973); Associate Dean of the University College; Associate Professor of Anthropology; Adjunct Associate Professor of Women's Studies
- Juillerat, Florence L., B.S. (*Purdue University, 1962*); M.S. (*Purdue University, 1967*); Ph.D. (*Purdue University, 1974*); Associate Professor of Biology, School of Science; Adjunct Associate Professor, Women's Studies, School of Liberal Arts
- Kuczkowski, Joseph, B.S. (*Canisius College, 1961*); M.S. (*Purdue University, 1963*); Ph.D. (*Purdue University, 1968*); Professor of Mathematical Sciences and Associate Dean for Academic Programs and Student Development, School of Science
- Kulsrud, William N., Ph.D. (*University of Texas at Austin, 1980*); Associate Professor of Accounting; Chair, Master of Professional Accountancy Program
- Langsam, Miriam Z., B.A. (*Brooklyn College, 1960*); M.S. (*University of Wisconsin, Madison, 1961*); Ph.D. (*University of Wisconsin, Madison, 1967*); Associate Dean of Student Affairs and Professor of History, School of Liberal Arts
- Lees, Norman Douglas, A.B. (*Providence College, 1967*); Ph.D. (*Northwestern University, 1973*); Chairperson and Professor of Biology
- Little, Monroe H., B.A. (*Denison University, 1971*); M.A. (*Princeton University, 1973*); Ph.D. (1977); Associate Professor of History and Director of Afro-American Studies
- Lowenkron, Ann, R.N. (*Columbia University, 1969*); D.N.S. (*Indiana University, 1995*); Assistant Professor of Nursing and Undergraduate Coordinator for the Family Health Department, School of Nursing
- MacKinnon, Joyce L., B.A. (*Ohio Wesleyan University, 1972*); M.P.T. (*Baylor University, 1974*); Ed.D. (*North Carolina State University, 1987*); Professor and Associate Dean for Academic Affairs, School of Allied Health Sciences
- Magjuka, Richard J., Ph.D. (*University of Chicago, 1986*); Associate Professor of Business Administration and Chairperson, M.B.A. Program and Distance Education — Indianapolis
- Malik, David J., B.S. (*California State University, 1968*); M.S. (1969); Ph.D. (*University of California, San Diego, 1976*); Professor of Chemistry, School of Science
- Marrs, Kathleen A., B.A. (*Illinois Wesleyan University, 1984*); Ph.D. (*University of Illinois, 1991*); Assistant Professor of Biology, School of Science
- McCormick, Martha, B.A. (*Earlham College, 1984*); M.L.S. (*Indiana University, 1987*); M.A. (*Emory University, 1992*); Graduate Certificate, Women's Studies (*Emory University, 2000*); Assistant Librarian, University Library
- Mesch, Debra J., Ph.D. (*Indiana University, 1990*); Assistant Professor of Public and Environmental Affairs, Graduate School, IUPUI
- Mikesky, Alan E., Ph.D. (*University of Texas, 1987*); Professor of Physical Education and Director of the Human Performance and Biomechanics Laboratory
- Mullen, E. Theodore, Jr., B.A. (*Davidson College, 1970*); Ph.D. (*Harvard University, 1976*); Associate Dean of the University College; Director of the Honors Program; and Professor of Religious Studies
- Ng, Bart, B.S. (*St. Joseph College, 1968*); M.S. (1970); Ph.D. (*University of Chicago, 1973*); Professor of Mathematical Sciences
- Nickolson, Richard Emory, B.F.A. (*Maryland Institute of Art, 1968*); M.F.A. (*Indiana University, 1972*); Associate Professor of Painting
- Nnaemeka, Obioma G., B.A., (*University of Nigeria, 1972*); M.A. (*University of Minnesota, 1977*); Ph.D. (1989); Associate Professor of French and Women's Studies; Adjunct Associate Professor of Afro-American Studies
- Orme, William, M.L.S. (*Indiana University, 1981*); Associate Librarian; Instructional Teams Leader; and Adjunct Faculty for School of Library and Information Science
- Osgood, Robert L., B.A. (*University of Oregon, 1976*); M.Ed. (*University of Vermont, 1982*); Ph.D. (*Claremont Graduate School, 1989*); Associate Professor of Education, School of Education
- Papke, David Ray, A.B. (*Harvard College, 1969*); J.D., M.A. (*Yale University, 1973*); Ph.D. American Studies (*University of Michigan, 1984*); R. Bruce Townsend Professor of Law and Professor of Liberal Arts
- Parrish-Sprowl, John, B.S. (*Ball State University, 1976*); M.A. (*Miami University, 1977*); Ph.D. (*Bowling Green State University, 1983*); Chairman, Department of Communication Studies, School of Liberal Arts
- Parsons, Michael, Ph.D. (*Indiana University, 1994*); Assistant Professor of Education
- Porter, Rebecca, Ph.D. (*Indiana University, 1991*); P.T. (1972); Associate Professor of Physical Therapy; Interim Executive Director of Enrollment Services; Interim Associate Vice Chancellor for Student Services
- Queiro-Tajalli, Irene, B.S.W. (*University of Buenos Aires, 1967*); M.S.W. (*Tehran School of Social Work, 1974*); Ph.D. (*University of Illinois, 1983*); Professor of Social Work; Director of Undergraduate Studies, School of Social Work
- Sauer, Mary L., B.A. (*Augustana College, 1968*); M.A.L.S. (*Valparaiso University, 1969*); Lecturer in English
- Sinha, Akhouri S.C., B.S. (*Mathematics, Bihar University, India, 1957*); B.S. (*Electrical Engineering, Banaras Hindu University, India, 1961*); M.S. (*Electrical Engineering, 1966*); Ph.D. (*Electrical Engineering, University of Missouri, 1969*); Professor of Electrical Engineering
- Stokes, Lillian, B.S.N. (*North Carolina Central University, 1966*); M.S.N. (*Indiana University, 1969*); Ph.D. (*Indiana University, 1997*); Associate Professor, School of Nursing
- Sunderwirth, Stanley, B.A. (*Tarkio College, 1951*); Ph.D. (*Ohio State University, 1955*); Professor of Chemistry, IUPUI Columbus
- Sutton, Susan B., B.A. (*Bryn Mawr College, 1969*); M.A. (*University of North Carolina, 1973*); Ph.D. (1978); Professor of Anthropology; Adjunct Professor of Women's Studies and Philanthropic Studies; Adjunct Professor of Anthropology, School of Arts and Sciences (IUB)
- Van Dis, Margot, B.S. (*University of Michigan, 1975*); D.D.S. (*University of Michigan, 1980*); M.S. (*University of Texas, 1985*); Associate Dean for Student Affairs and Professor of Dental Diagnostic Sciences, School of Dentistry
- Vermette, Rosalie A., B.A. (*University of Maine, 1968*); M.A. (*University of Iowa, 1970*); Ph.D. (1975); Professor of French and Adjunct Professor of Women's Studies
- Ward, Richard E., B.A. (*University of North Colorado, 1972*); M.A. (*University of Colorado, 1976*); Ph.D. (1980); Professor of Anthropology, School of Liberal Arts; Professor of Oral Facial Genetics

Watt, Jeffrey X., B.S. (*Michigan Technological University, 1983*); M.S. (*Purdue University, 1985*); Ph.D. (*Indiana University, 1990*); Associate Chair and Associate Professor of Mathematical Sciences, School of Science

Webb, Dorothy, B.S. (*Southern Illinois University, 1957*); M.S. (1958); Ph.D., (*Indiana University, 1970*); Professor of Communication Studies

Wolter, Robert Michael, B.S. (*Purdue University, 1997*); Visiting Lecturer in Organizational Leadership and Supervision

Zwirn, Enid E., R.N. (*Beth Israel Medical Center, 1962*); B.S. (*New York University, 1967*); M.P.H. (*University of Michigan, 1970*); Ph.D. (*Indiana University, 1997*); Associate Professor of Nursing

Labor Studies

As a discipline, labor studies deals with work, the workplace, and workers and their organizations. It advances a body of knowledge that reflects the concerns of modern labor organizations.

As a program, labor studies enables students to serve more effectively as members and leaders in their organizations. Students can also gain a sense of the past and present contexts of work and unionism. Because union leaders need to be familiar with economics, communications, and other subjects, labor studies can assist them in mastering a broad range of learning.

The program encourages students to make socially useful choices in carrying out the many responsibilities of union membership, union leadership, and community citizenship.

Division of Labor Studies

The Division of Labor Studies traces its origin to the establishment of the Bureau of Industrial and Labor Services on the Bloomington campus in 1955. Renamed the Labor Education and Research Center (LERC) in 1964, this unit had a small staff conducting noncredit courses, conferences, and institutes around the state.

In the early 1970s, LERC grew and began to establish offices on other Indiana University campuses. In 1976, LERC became the Division of Labor Studies within the School of Continuing Studies. Programs were established leading to the Certificate in Labor Studies and to the Associate and Bachelor of General Studies degrees with concentrations in labor studies. In 1985, these two degree concentrations were extensively revised and became full-fledged majors in Associate of Science and Bachelor of Science degrees.

Beginning in the fall semester of 2002, the Division of Labor Studies will offer courses for graduate credit. For updated information concerning graduate courses in Labor Studies, consult the Web version of this bulletin by visiting bulletin.iupui.edu.

The Division of Labor Studies continues to offer an extensive noncredit Union Education Program (UEP) to meet the needs of unions throughout the state. For more information, see "Union Education Program."

Certificate, Minor, and Degrees

Through the Division of Labor Studies, Indiana University offers a Certificate in Labor Studies, a minor in labor studies, an Associate of Science in Labor Studies degree, and a Bachelor of Science in Labor Studies degree. Each combines work in a core of labor studies subjects with courses in other disciplines.

The division has a long history of working with unions in the state of Indiana to develop and deliver educational programs. These programs are

coordinated by members of the Division of Labor Studies faculty. They, along with associate faculty members, also instruct the courses. Faculty qualifications typically combine academic credentials with union backgrounds.

Labor studies programs are also available to people who cannot enroll in classroom-based courses on Indiana University campuses where the program is offered. By enrolling in labor studies courses through correspondence study, one can complete a growing number of courses. The Division of Labor Studies works closely with the Division of Extended Studies and its Independent Study Program.

Both classroom and correspondence methods offer the ability to transfer course work completed at most other accredited colleges and universities to Indiana University. On-campus students have the option of applying for credit for self-acquired competency (SAC) by completing a substantial portfolio and an interview. Credit for military service and for successful completion of College Level Examination Program (CLEP) tests in several subjects is available. Students may also mix classroom and correspondence study courses.

Labor Studies (LSTU) Courses

The following labor studies courses are offered in the classroom, as scheduled on the Indiana University campuses where the degrees are offered. Starred (*) courses are currently available through correspondence. Courses marked with a double star (**) are under development for correspondence. The abbreviation "P" refers to the course prerequisite(s), and "C" refers to the course corequisite(s).

The basic separation in the course list is between core courses (all 100- and 200-level courses, except L199, L290, and L299) and advanced courses (300-400 level).

Core Courses

L100 Survey of Unions and Collective Bargaining (3 cr.)* A survey of labor unions in the United States, focusing on their organization and their representational, economic, and political activities. Includes coverage of historical development, labor law basics, and contemporary issues.

L101 American Labor History (3 cr.)* A survey of the origin and development of unions and the labor movement from colonial times to the present. The struggle of working people to achieve dignity and security is examined from social, economic, and political perspectives.

L105 Contemporary Labor Problems (3 cr.)* An examination of some of the major problems confronting society, workers, and the labor movement. Topics may include automation, unemployment, international trade, and conglomerates; environmental problems; minority and women's rights; community relations; changing government policies.

L110 Labor and Society (3 cr.) An introduction to the changing role of labor in society. The course will emphasize a comparative approach to issues confronting labor organizations.

L200 Survey of Employment Law (3 cr.) Statutes and common-law actions protecting income, working conditions, and rights of workers. Topics include workers' compensation, unemployment compensation, fair labor standards, Social Security, retirement income protection, and privacy and other rights.

L201 Labor Law (3 cr.)* A survey of the law governing labor-management relations. Topics include the legal framework of collective bargaining, problems in the administration and enforcement of agreements, and protection of individual employee rights.

L203 Labor and the Political System (3 cr.)* Federal, state, and local governmental effects on workers, unions, and labor-management relations; political goals; influences on union choices of strategies and modes of political participation, past and present; relationships with community and other groups.

L210 Workplace Discrimination and Fair Employment (3 cr.) Examines policies and practices that contribute to workplace discrimination and those designed to eliminate it. Explores effects of job discrimination and occupational segregation. Analyzes Title VII, the Americans with Disabilities Act, and related topics in relation to broader strategies for addressing discrimination.

L220 Grievance Representation (3 cr.)* Union representation in the workplace. The use of grievance procedures to address problems and administer the collective bargaining agreement. Identification, research, presentation, and writing of grievance cases. Analysis of relevant labor law and the logic applied by arbitrators to grievance decisions.

L230 Labor and the Economy (3 cr.)* Analysis of the political economy of labor and the role of organized labor within it. Emphasis on the effect on workers, unions, and collective bargaining of unemployment, investment policy, and changes in technology and corporate structure. Patterns of union political and bargaining responses.

L240 Occupational Health and Safety (3 cr.)* Elements and issues of occupational health and safety. Emphasis is on the union's role in the implementation of workplace health and safety programs, worker and union rights, hazard recognition techniques, and negotiated and statutory remedies—in particular the OSHA Act of 1970.

L250 Collective Bargaining (3 cr.)* The development and organization of collective bargaining in the United States, including union preparation for negotiations; bargaining patterns and practices; strategy and tactics; economic and legal considerations.

L251 Collective Bargaining Laboratory (1-3 cr.) P or C: L250. Provides collective bargaining simulations and other participatory experiences in conjunction with L250.

L255 Unions in State and Local Government (3 cr.) Union organization and representation of state and municipal government employees, including patterns in union structure, collective bargaining, grievance representation, and applicable law.

L260 Leadership and Representation (3 cr.)

Organizational leadership issues for union, community, and other advocate organizations. Analyzes leadership styles, membership recruitment, and leadership development. Examines the role of leaders in internal governance and external affairs, including committee building, delegation, negotiations, and coalition building.

L270 Union Government and Organization (3 cr.)

An analysis of the growth, composition, structure, behavior, and governmental processes of U.S. labor organizations, from the local to the national federation level. Consideration is given to the influence on unions of industrial and political environments; to organizational behavior in different types of unions; and to problems in union democracy.

L280 Union Organizing (3 cr.) Explores various approaches and problems in private- and public-sector organizing. Traditional approaches are evaluated in light of structural changes in labor markets and workforce demographics. Topics range from targeting and assessments to committee building and leadership development.

L285 Assessment Project (1 cr.) Capstone experience for associate degree students.

Other Courses**L199 Portfolio Development Workshop (1 cr.)**

Emphasis on developing learning portfolios as foundation documents for academic self-assessment and planning and as applications for self-acquired competency (SAC) credit. Applies only as elective credit to labor studies degrees.

L290 Topics in Labor Studies (1-3 cr.)*

A variable title course, L290 can be repeated for credit with different subjects. The transcript will show a different subtitle each time the course is taken. Some courses focus on contemporary or special areas of labor studies. Others are directed toward specific categories of employees and labor organizations. Inquire at Division of Labor Studies offices.

L299 Self-Acquired Competency in Labor Studies (1-15 cr.) See page 6 of this bulletin for a description of Self-Acquired Competency.

Advanced Courses

L315 The Organization of Work (3 cr.) Examines how work is organized and how jobs are evaluated, measured, and controlled. Explores social and technical elements of work through theories of scientific management, the human relations school of management, and contemporary labor process literature.

L320 Grievance Arbitration (3 cr.)*

(Recommended only after L220 or with permission of instructor.) The legal and practical context of grievance arbitration, and its limitations and advantages in resolving workplace problems. Varieties of arbitration clauses and the status of awards. Students analyze, research, prepare, and present cases in mock arbitration hearings.

L350 Issues in Collective Bargaining (3 cr.)

Readings and discussion of selected problems. Research paper usually required.

L360 Union Administration and Development (1-3 cr.)

Practical and theoretical perspectives on strategic planning, budgeting, and organizational decision making. Addresses the needs and problems of union leaders by studying organizational change, staff development, and cohesiveness within a diverse workforce. May be repeated for up to 3 credits with department approval.

L375 Comparative Labor Movements (3 cr.)*

Labor movements and labor relations in industrial societies from historical, analytical, and comparative perspectives. Emphasis on interaction between unions and political organizations, national labor policies, the resolution of workplace problems, the organization of white collar employees, and the issues of worker control and codetermination.

L380 Theories of the Labor Movement (3 cr.)*

Perspectives on the origin, development, and goals of organized labor. Theories include those that view the labor movement as a business union institution, an agent for social reform, a revolutionary force, a psychological reaction to industrialization, a moral force, and an unnecessary intrusion.

L385 Class, Race, Gender, and Work (3 cr.)

Historical overview of the impact and interplay of class, race, and gender on shaping U.S. labor markets, organizations, and policies. Examines union responses and strategies for addressing class, race, and gender issues.

L390 Topics in Labor Studies (1-3 cr.)*

A variable title course, L390 can be repeated for credit with different subjects. The transcript will show a different subtitle each time the course is taken. Some courses focus on contemporary or special areas of labor studies. Others are directed toward specific categories of employees and labor organizations. Inquire at Division of Labor Studies offices.

L420 Labor Studies Internship (1-6 cr.)*

Application of knowledge gained in the classroom in fieldwork experience.

L430 Labor Research Methods (3 cr.) Study of research design, methods, techniques, and procedures applicable to research problems in labor studies.

L480 Senior Seminar or Readings (3 cr.)*

Designed as either a classroom seminar or directed reading course. Addresses current issues, historical developments, and other labor-related concerns. Topics may vary each semester.

L495 Directed Labor Study (1-6 cr.)*

A variable credit course, L495 may be repeated for a maximum of 6 credit hours. Students arrange to study with an individual labor studies faculty member, designing a course of study to suit their individual and varied needs and interests. The contract might include reading, directed application of prior course work, tutorials, or internships. Competencies are assessed through written papers, projects, reports, or interviews.

L499 Self-Acquired Competency in Labor Studies (1-15 cr.) See page 23 of this bulletin for a description of self-acquired competency.

Beginning in the fall semester of 2002, the Division of Labor Studies will offer courses for graduate credit. For updated information concerning graduate courses in Labor Studies, consult the Web version of this bulletin by visiting bulletin.iupui.edu.

Labor Studies Certificate and Degree Requirements

Courses from three groupings are used by students to complete certificate and degree requirements. These groupings are: labor studies courses, required areas of learning, and electives. The chart below shows the credit hour distribution required for each certificate and degree in labor studies.

Additional Requirements

For the Associate of Science in Labor Studies degree, at least 12 credit hours must be earned from Indiana University, 10 of these after admission to the School of Continuing Studies. No more than 15 credit hours may be earned within a single subject other than labor studies.

For the Bachelor of Science in Labor Studies degree, at least 24 credit hours must be earned from Indiana University, 20 of these after admission to the School of Continuing Studies. No more than 21 credit hours may be earned within a single subject other than labor studies. Thirty (30) credit hours must be earned in 300- and 400-level courses, and at least 12 of the 30 credit hours must be earned in labor studies courses. Credits earned by self-acquired competency, DANTES, and CLEP cannot be applied to these requirements.

For the Certificate in Labor Studies and both the associate and bachelor's degrees, an overall minimum grade point average of 2.0 (C) must be maintained. Courses in which grades of D are received may be counted only as electives. For the associate and bachelor's degrees, courses within a major area must be in at least two different subjects. For additional standards, see the section of this bulletin titled "Academic Policies."

A minor in labor studies requires the completion of 15 credit hours consisting of 6 credits from our list of core courses and 9 additional credits to be determined through consultation with the campus faculty.

Required Areas of Learning

Following are representative subjects and courses falling under each of the three major areas of learning listed under certificate and degree requirements. Note that ENG W131 and one additional writing course within the arts and humanities area are required for degree programs. Also, only one computer technology course applies to the science and mathematics requirement. Additional courses in computer technology count as electives. For information about subjects not listed here (for example, women's studies) and about specific courses, contact a Division of Labor Studies office.

Labor Studies Credit Hour Requirements

Group	Subgroup	Certificate in Labor Studies	Associate of Science in Labor Studies	Bachelor of Science in Labor Studies
Labor studies	Core courses	15	15	15
	Additional labor studies	3	12	27
	Arts and humanities	3	12 ¹	12 ¹
	Social and behavioral sciences	3	9 ²	12 ²
	Science and mathematics	3	6 ³	15 ⁴
	Additional credit hours from one area above	3		12
Electives			6	27
Total credit hours		30	60	120

¹ENG W131 and one additional writing course required

²One course in economics required; microeconomics recommended

³One course in computer science/technology recommended

⁴One course in computer science/technology required

Anthropology
Economics
Geography
Linguistics
Political Science
Psychology
Sociology

Electives

Students may select any of the courses offered by Indiana University to fulfill elective requirements. Students are encouraged to consult with their academic advisors and to concentrate their elective course work in related subject fields.

Application and Admission

The certificate and degree programs in the Division of Labor Studies are open to all qualified high school graduates or persons with the General Education Development (GED) certificate. Adults over 21 who do not meet these requirements may be admitted on a provisional basis and may apply for regular admission upon successful completion of 12 credit hours. Applicants must submit the following:

1. A completed application for admission to the Labor Studies Program.
2. A nonrefundable application fee payable to Indiana University, if the applicant has not previously been admitted to Indiana University.
3. A high school transcript, if there is no college work.
4. An official transcript of previous college work, mailed by the college.

Applicants should forward all application materials to the Division of Labor Studies office on the campus where they intend to enroll. For addresses, see the list on page 12 of this bulletin. Applicants who do not live within commuting distance of a campus and who wish to participate through Independent Study by Correspondence should send materials to the Bloomington office, attention External Study. International students should request the international application for admission and related materials from the Bloomington office.

Citizens of other countries, including those in the United States on immigration visas, must also submit TOEFL scores and a 300- to 500-word handwritten essay. The essay is to be written on a topic of the student's choice and may include autobiographical information. Students who intend to pursue the degree on an Indiana University campus must also submit the international application for admission.

Transferring Credit

When official transcripts are received, they will be forwarded to the admissions office for evaluation.

Within a few weeks the applicant should receive official notice of admission and a credit transfer report indicating which courses are accepted at Indiana University (generally those in which the applicant earned grades of C or better from accredited institutions). The Division of Labor Studies office will then prepare a summary of how these courses apply to labor studies certificate and degree requirements.

At this point, if not before, students should proceed to plan their programs in consultation with their advisors and to enroll in courses. Students should check with the Division of Labor Studies office on the campus where they plan to enroll for schedules and directions.

Correspondence students should contact the Bloomington office for advising and should use the booklet titled *Independent Study University Courses*.

Application Fees

Applicants who have not previously attended Indiana University must pay a nonrefundable application fee at the time they submit their application. Application fees vary from campus to campus and are subject to change. Current fees for U.S. citizens/international students are as follows:

University-wide (non-campus-based)	\$30
IU Bloomington	\$35
IUPUI (Indianapolis)	\$35
IU Kokomo	\$30
IU Northwest (Gary)	\$25
IPFW (Fort Wayne)	\$30
IU South Bend	\$35
International Students	\$50

Deadlines

Students who wish to take regular on-campus courses should check with the Division of Labor Studies office on that campus for any application and enrollment deadlines.

Progress Options

One or more of the methods listed in this section may provide the labor studies student with a means of receiving Indiana University credit without taking conventional classroom-based courses. This allows accelerated progress toward a labor studies degree. With prior approval, a maximum of 6 credit hours of graduate-level course work can be applied to the Bachelor of General Studies degree. The application of more than 6 graduate credit hours must have the dean's approval.

College Level Examination Program

The College Level Examination Program (CLEP) has tests available in a variety of subject areas. Students whose scores exceed a certain level on tests accepted by Indiana University receive credit (3 credit hours for most exams). CLEP brochures are available at Division of Labor Studies offices.

Independent Study by Correspondence

Students who do not have access to an Indiana University campus may take courses through Independent Study by correspondence. Campus-based students may also complete degree requirements through correspondence study.

The Indiana University Independent Study Program offers more than 200 university-level correspondence courses. Students enrolling in independent study courses receive a learning guide that contains reading assignments for the required textbooks, discussion sections, and written assignments. Lessons are sent to an instructor, who comments on and grades student work. Most courses have one or more examinations, which must be taken under supervision at an accredited school. Students are allowed one year to complete a course.

External labor studies students should request course listings and enrollment forms from the Bloomington office. This office advises and maintains academic records for all persons not based on an Indiana University campus.

Credit for Military Service

Depending on the length and type of training received, students may receive up to 6 credit hours based on military service. Additional credit may be awarded for special training programs in the military. This credit can be applied only as elective credit for the labor studies degrees. To apply, students should present their DD-214 form and, if applicable, training completion certificates to the Division of Labor Studies office.

Credit for Self-Acquired Competency

Upon successful completion of 12 credit hours in labor studies, students may apply for up to 15 hours of self-acquired competency (SAC) credit to go toward the Associate of Science degree and up to 30 (including any applied to the associate degree) toward the Bachelor of Science degree. SAC credit can be awarded for learning gained outside the university and may be based on a wide variety of experiences. Labor studies students can apply for SAC credit on the basis of learning derived from their union activities.

Self-acquired competency refers to learning, or competency, that can be documented. SAC credit is not granted simply for "time served." Thus, it is not granted on the basis of the number of terms served as a union officer. Nor is it multiplied by the number of times the same experience has been repeated. A secretary-treasurer who has performed the same functions for four terms is not likely to receive significantly more credit than one who has performed the same functions, and has learned as much, from one or two terms.

SAC credit is of two types: (1) Course-specific credit is granted where the applicant's competency is substantially equivalent to the competency that is expected after completion of an Indiana University course. Credit for the specific course is awarded. (2) General credit is granted for competency that is not the exact equivalent of competency gained from completing a specific IU course but is nevertheless the equivalent of college learning. This is the only form of SAC credit available outside of the Division of Labor Studies.

Tuition for SAC credit is the same as for Independent Study courses.

In general, the following procedures and limitations govern the awarding of credit for self-acquired competency:

- A student must be admitted to the Labor Studies Program, have successfully completed 12 credit hours in Labor Studies, and be in good standing before any credit for self-acquired competency is awarded.
- A maximum of 15 credit hours of self-acquired competency credit may be applied to the Associate of Science in Labor Studies and a maximum of 30 hours of credit to the Bachelor of Science in Labor Studies.

How to Apply

The process of building a SAC portfolio is time-consuming. It begins with the development of a resume and the listing of experiences that may have led to college-level competency. The portfolio is then organized and phrased to demonstrate the connection to specific labor studies courses or to general areas of knowledge in labor studies. Finally, appropriate documentation is added.

Each portfolio is evaluated by two members of the Division of Labor Studies faculty, who also interview the applicant. Supplementary materials and counseling are available from labor studies faculty on campuses offering the program. Students applying for SAC credit may be required to come to an Indiana University campus for an interview as part of the SAC evaluation.

Transfer of Self-Acquired Competency Credit within Indiana University

Self-acquired competency credit awarded by the faculty of one Indiana University campus is recorded and explained on the student's permanent record. Such credit will be honored, therefore, on any other Indiana University campus to which the student may transfer in order to complete the associate or bachelor's degree in labor studies. The student should be aware, however, that such credit will not necessarily be honored by other degree programs of Indiana University or by other institutions.

Academic Policies

Student's Responsibility

It is the responsibility of the student to be aware of all published academic regulations.

Grades

Division of Labor Studies instructors may assign plus and minus grades. Letter grades carry the following grade points:

A and A+	4.0
A—	3.7
B+	3.3
B	3.0
B—	2.7
C+	2.3
C	2.0
C—	1.7
D+	1.3
D	1.0
D—	0.7
F	0.0

Grade Point Average

Grade point averages (GPAs) are computed by multiplying the grade points for the letter grade

received by the number of credit hours for each course, adding these points, then dividing by the total credit hours. The GPA of a student who has earned a C+ and a B, each in 3 credit hour courses, would be computed as follows:

$$(2.3 \times 3) + (3.0 \times 3) = 15.9$$

$$15.9 \div 6 \text{ (credit hours)} = 2.65 \text{ GPA}$$

Incompletes

If a student is not in attendance during the last weeks of a semester, the instructor may report a grade of Incomplete (I)—indicating that the course work completed is satisfactory but that the entire course has not been completed—if the instructor believes that the absence was beyond the student's control; if not, a grade of F is assigned.

Incompletes are given only under rare circumstances. These circumstances do not include being "tied up," "getting behind," etc. The grade of I is normally given only when the student has completed three-fourths of the course work. The grade of I will be removed from the student's record once the required course work has been satisfactorily completed. The student is expected to make up the uncompleted course work by the end of the next regular semester, or earlier if stipulated. Incompletes not removed within the time specified by the instructor of the course automatically change to an F one calendar year after the Incomplete was given.

Pass/Fail Option

Students who are working toward a bachelor's degree and are in good standing (i.e., not on academic probation) may take up to eight *elective* courses on a Pass/Fail basis (no letter grade assigned). A Pass/Fail course may not be used to satisfy any of the area requirements, nor may it be counted as part of the student's course requirements. Pass/Fail courses may, however, be used to meet the 300- to 400-level course requirement.

Decisions to take courses Pass/Fail must be made no later than the seventh week of classes for regular sessions and no later than midway through any summer session. A grade of P is not counted when computing grade point averages. A grade of F is computed. A grade of P *cannot be changed* later to a grade of A, B, C, or D.

Academic Standing and Progress

1. Grades of D+ or lower may apply only as elective credit. Courses in which such a grade is received may not be used to fulfill Division of Labor Studies or major areas of learning course requirements.
2. A student who fails to maintain a minimum grade point average of 2.0 over any successive 12 credit hour sequence is placed on academic probation.
3. If the academic deficiency resulting in probation is not made up in the subsequent 12 credit hours in which the student is enrolled, the student is subject to dismissal from the university.
4. Students admitted on a provisional basis may be dismissed if they fail to achieve a minimum GPA of 2.0 during the first 12 credit hours of course work completed.
5. Students who fail to execute timely withdrawals from classes jeopardize their academic standing and run the risk of receiving failing grades.

Students who do not properly add courses to their schedules risk not receiving credit for course work completed.

6. The completion of 0 to 25 credit hours signifies freshman class standing; 26 to 55 credit hours, sophomore; 56 to 85 credit hours, junior; and 86 or more credit hours, senior class standing.

Academic Probation

Students are automatically placed on academic probation when their cumulative grade point average for a full-time semester or a 12 credit hour unit of work falls below 2.0. Their course work (and that of students who have been admitted on probation) will be evaluated upon completion of an additional 12 credit hours at Indiana University. Students are removed from probationary status if their grade point average of these 12 credit hours increases to at least 2.0 and if their cumulative grade point average increases to at least 2.0. If the cumulative grade point average remains below 2.0, probationary status continues for another 12 credit hour unit of work, during which time the cumulative grade point average must be raised to at least 2.0.

Dismissal

Students are dismissed from the university when they have ceased to make satisfactory progress toward the degree. Students are dismissed whenever their grade point average for a full-time semester or a 12 credit hour unit of course work falls below 1.0 and their cumulative grade point average falls below 2.0. Probationary students are dismissed if their grade point average for the additional 12 credit hours of course work falls below 2.0. Students whose probationary status has been continued for a second 12 credit hour unit of course work and who fail to achieve a cumulative grade point average of at least 2.0 after completing this unit are also dismissed.

Retaking Courses Previously Failed—FX Policy

Undergraduates who have retaken a course previously failed may, upon request, have only the second grade in that course counted in the determination of their grade point average. The student's transcript records both grades; the original grade is marked FX. This option may be invoked for a total of three courses or 10 credits, whichever comes first.

Cheating and Plagiarism

Cheating on examinations or other course work, alteration of records, or illegal use of examinations is considered dishonesty. Anyone who permits or helps others to cheat is as guilty as the persons assisted.

Plagiarism is the presentation of the work of another as one's own. Honesty requires that *ideas or materials taken from another source be fully acknowledged*. The language or ideas taken from another may range from isolated formulas, sentences, or paragraphs to entire articles copied from books or from the writing of other students. The work of others should be clearly identified, generally through the use of quotation marks and footnotes.

A faculty member who suspects cheating or plagiarism initiates the process of determining guilt or innocence. No action is taken before the student has

been informed of the charges and has had an opportunity to reply. This process may result in disciplinary action and dismissal from the university.

For further regulations, refer to the Indiana University *Code of Student Rights, Responsibilities, and Conduct*, which can be obtained from the School of Continuing Studies.

Academic Forgiveness Policy for Former IU Students

Students with academic deficiencies (a cumulative grade point average that has fallen below 2.0 [C]) in course work done at Indiana University may be admitted to the Labor Studies Program on probation. The student must achieve a minimum grade point average of 2.0 for all courses taken at Indiana University before and after admission to the program in order to obtain a degree. Students who have been dismissed from another academic unit of Indiana University may not be admitted to the Labor Studies Program until at least one calendar year has passed from the date of dismissal.

A student prevented from attaining a cumulative 2.0 grade point average because of poor performance in an IU semester that was completed five or more years before enrollment in the Labor Studies Program may ask the Division of Labor Studies to strike the records. All credit earned during this one semester is also removed from the internal grade point average by the Division of Labor Studies under this forgiveness policy. In general, such a request is granted automatically, particularly when the student would fail to graduate because of one poor semester.

A similar request may be made for the forgiveness of a poor semester completed at Indiana University within five years prior to admission to the Labor Studies Program. Approval of such requests is usually dependent, however, on the successful completion of 12 credit hours in the Labor Studies Program. Because all credit earned during the forgiven semester is removed from the grade point average, students are advised to consult with their counselor concerning the advisability of this procedure. If granted, all courses and grades remain on the transcript. Forgiveness is internal to Labor Studies only.

This policy is designed to avoid placing an excessive burden on students who, in the past, have made a poor start at Indiana University. It is not intended to permit students with chronically poor performance in the university to stay in school, nor to raise false hopes for students who are not making progress toward a degree.

Academic Forgiveness Policy for Students Dismissed from Other Institutions

Students who have been dismissed from another postsecondary institution may not be admitted to the Labor Studies Program until at least one calendar year has passed since the date of the dismissal.

University regulations require that the admissions office indicate any deficiencies in grade point average (average grade below 2.0 on a 4.0 scale) at another institution on the credit transfer report. Indiana

University's policy is to calculate a student's grade based only on course work done at Indiana University. These grades must be at least average, or C, quality (2.0 on 4.0 scale) in order to earn a degree. If the cumulative grade point average from another institution is below 2.0, however, the student is admitted on probation.

Graduation

All schools and colleges establish certain academic requirements that must be met before a degree is granted. Advisors, directors, and deans will help a student meet these requirements, but the student is responsible for fulfilling them. At the end of the course of study, the faculty and the Board of Trustees vote on the conferring of the degree. If requirements have not been satisfied, the degree will be withheld pending adequate fulfillment. For this reason, it is important that students become acquainted with all regulations, remain currently informed, and keep track of their own progress.

Degrees are awarded every December, May, and August. Students expecting to graduate must file written notice of intent, citing the degree and expected date of graduation, with the appropriate Division of Labor Studies office at least three months prior to graduation.

Graduation with Honors

Students who complete a minimum of 30 credit hours for the Associate of Science in Labor Studies or 60 credit hours for the Bachelor of Science in Labor Studies at Indiana University graduate with honors if they attain the appropriate grade point averages: 3.90, highest distinction; 3.75, high distinction; 3.50, distinction. No more than 10 percent of a graduating class may receive distinction.

Confidentiality of Student Records

Indiana University, in compliance with the General Education Provisions Act, Section 438, titled Family Educational Rights and Privacy Act, provides that all student records are confidential and available only to the student and to the student's parents, if the student is under 21 and dependent as defined by IRS standards. Students may review their records upon request and may ask for deletions or corrections of the record in a hearing process described in detail in the *Code of Student Rights, Responsibilities, and Conduct*. References, recommendations, and other similar documents may carry a voluntary waiver relinquishing the student's right to review this specific material. The student may also release the record to others by signing a written release available in the offices that maintain records. Further details regarding the provisions of the Privacy Act and a list of offices where student records are kept may be found in the *Code of Student Rights, Responsibilities, and Conduct*.

Withdrawal from Courses

Since periods and deadlines for withdrawal from courses may vary by campus and/or school, students should check with the current campus *Schedule of Classes* to verify deadlines and procedures. Correspondence students should follow the deadlines and procedures in the current edition of *Independent Study University Courses*.

Union Education Program

The Division of Labor Studies offers an extensive noncredit program, the Union Education Program (UEP).

UEP open enrollment courses and conferences are available to workers in communities throughout the state; they are offered in local union halls, on the various campuses of Indiana University, and on the campuses of other educational institutions.

Classes usually meet weekly for 4 to 10 weeks. They are open to participants from both large and small unions, craft and industrial unions, and public- and private-sector unions. Typical topics for these classes are labor law, collective bargaining, steward training, communications, OSHA, and arbitration.

Other programs meet the educational needs of individual unions. Local or international unions may contract with the Division of Labor Studies to conduct these programs. Enrollments are limited to members of the contracting union.

There are no special entrance requirements, tests, or grades. Participants who complete a class or conference are awarded a Certificate of Achievement from the Division of Labor Studies. Upon completion of 150 classroom hours in the UEP, the participant is awarded a Certificate of Recognition. There is a nominal charge for UEP classes and conferences.

Fees and Fee Refund Policies and Schedule

Independent Study and On-Campus Courses

Credit hour and special fees are approved by action of the Trustees of Indiana University and are subject to change. Please consult the appropriate school or campus bulletin or Schedule of Classes for the current fee information and the fee refund schedule. Bulletins and appropriate class schedules are available at Division of Labor Studies offices.

Self-Acquired Competency

The fee per credit hour recorded for self-acquired competency is the fee charged per credit hour by the Independent Study Program, School of Continuing Studies, for university correspondence courses.

Fee Reductions and Financial Aid

Scholarships and Financial Aid

Students can obtain information about loans and part-time employment through the financial aid office and through their school or department.

Employment

The financial aid office on each campus lists openings for part-time jobs in various offices and organizations of the university.

Fee Courtesy

Full-time employees of Indiana University and their spouses and children may receive a fee courtesy when enrolling in Independent Study courses and on-campus courses. Additional information is available from the campus personnel office.

VA Benefits

Veterans enrolled solely in Independent Study courses may be eligible for fee reimbursement by the Veterans Administration upon completion of courses.

Veterans in an on-campus degree program may be eligible for an education allowance if at least 51 percent of their enrollment credit hours are in on-campus courses. Further information and assistance are available from Adaptive Education Services in Cavanaugh Hall or from the veterans representatives in the Office of the Registrar in Cavanaugh Hall at IUPUI.

DANTES and SOC

Indiana University is one of a number of universities participating in the SOC (Servicemen's Opportunity College) program and the DANTES (Defense Activity for Non-Traditional Education Support) program, which provide educational support for the voluntary education programs of all military departments. Members of the armed forces should consult their education officers or their nearest education center concerning individual enrollments. Interested persons may also consult the DANTES independent study catalogs for additional information about courses.

The SOC program permits the student to enroll at the university while still in service.

A representative on each campus has been named by the university. Military service personnel can obtain information from the base education officer.

Labor Studies Administrative Officers

CHARLES DAVIS, Ph.D., *Director of the Division of Labor Studies*

Department of Military Science

Philosophy

The theory of offering the Army Reserve Officers' Training Corps (ROTC) to students on college campuses is perhaps best explained in the words of Lee S. Dreyfus, former chancellor of the University of Wisconsin—Stevens Point: "ROTC is not the presence of the military in the university, but rather the presence of the university in the military."

Through ROTC the Army gains officers with diverse educational backgrounds and contemporary ideas.

ROTC enhances a student's education by providing unique leadership and management experience found in few college courses. It helps develop self-discipline, physical stamina, and poise. Students develop qualities that lead to success in any worthwhile career. They earn commissions in the U.S. Army while earning their college degrees. They can serve as officers in the Army National Guard or the U.S. Army Reserve or request active duty.

Roy Hudson, former president of Hampton Institute, sums it up as follows: "Our youth need to be guided and inspired by people and organizations dedicated to principles encouraging and permitting the full development of the whole person, intellectually and personally. In my estimation, ROTC is such an organization."

Objectives

Army ROTC has the following objectives:

1. Offer competent military instruction to interested students;
2. Identify eligible students for Army commissions and to ensure they meet all requirements for those commissions; and
3. Provide college-trained officers for the U.S. Army, the Army National Guard, and the U.S. Army Reserve.

Faculty

Active-duty Army personnel are assigned to the Department of Military Science with the consent of the ROTC Faculty Advisory Committee at Indiana University—Purdue University Indianapolis (IUPUI) and the dean of faculties as confirmed by the Trustees of Indiana University. Such personnel spend an average of three years as instructors in the department. Each faculty member has a blend of practical military experience and solid educational background. The composition of the faculty is as follows:

Army Grade	Faculty Position
Lieutenant Colonel	Professor of Military Science and Department Chair
Major	Senior Assistant Professor of Military Science
Captain	Assistant Professor of Military Science
Master Sergeant	Senior Tactical Instructor
Sergeant First Class	Principal Drill Instructor

Administration

The faculty is supported by a full-time staff that has clerical, administrative, and logistical responsibility. The staff includes the military property custodian (a university employee) and the military personnel clerk (a Department of the Army civilian).

Admission Requirements

Policy

The ROTC Basic Course (see "Curriculum, Basic Course" in this bulletin) is open to all IUPUI, IUPU Columbus, Butler University, Franklin College, Marian College, University of Indianapolis, and Ivy Tech—Community College of Indiana students without any prerequisites or allied requirements. Students who are not U.S. citizens must check with the Department of Military Science administrative office prior to course attendance to ensure that they have the proper permission from their home country embassy for military training.

The ROTC Advanced Course is open to all students who have completed the Basic Course or who qualify for advanced placement (see "Advanced Placement" in this bulletin). Entry requirements are specified below.

Standards

Applicants for the Advanced Course must have completed the Basic Course (courses G101, G102, G201, and G202) or be eligible for advanced placement (see "Advanced Placement" in this bulletin) prior to acceptance.

Applicants also must meet the following entrance requirements.

Academic Performance

Applicants must have a minimum grade point average of 2.0 (C) throughout the first two years of college work.

Medical Evaluation

Applicants must pass a standard Army medical evaluation, provided free of charge.

Physical Fitness Test

Applicants must obtain a passing grade on the Army Physical Fitness Test (APFT) consisting of push-ups, sit-ups, and a two-mile run.

Age

Entrance into the commissioning program is predicated on students not having reached age 30 by June 30 of the year they receive their officer's commission. Scholarship recipients must be less than 31 years of age at the date of commissioning. Extensions of up to three years may be granted for veterans of active duty. Waivers may be granted up to age 32 for non-scholarship students.

Dependents

To be eligible, an individual must not have more than three dependents (spouse and two children).

Citizenship

Applicants for the Advanced Course must be U.S. citizens by birth or naturalization.

Veterans

Prior service personnel entering the program must have a qualifying reenlistment code.

Student Status

Advanced Course students must be full-time university students; that is, they must enroll for 12 hours of undergraduate credit or 9 hours of graduate credit each semester.

Marginal Students

In accordance with Army regulations, students who do not meet the academic or physical fitness requirements of the Advanced Course may be disenrolled from the program.

Personal History

All applicants must meet loyalty and integrity requirements established by Congress for military officers.

Interview

The professor of military science will personally interview all applicants and is the final authority on a candidate's eligibility for the program.

Emphasis

Students entering the Advanced Course must matriculate in a curriculum that will lead to a four-year bachelor's degree or a two-year graduate degree. Any curriculum offered by IUPUI or other institution served by this department is acceptable.

Curriculum

The following are the requirements to be commissioned as a second lieutenant in the U.S. Army:

1. Completion of a bachelor's degree.
2. Completion of 18 credit hours of military science.
3. Completion of the professional military education component of the ROTC program.
4. Successful completion of Advanced Camp.

Basic Course (G101, G102, G120, G121, G201, and G202)

The Basic Course is usually taken in the freshman and sophomore years. All necessary textbooks and materials are furnished without cost to the student, and all tuition and fees are paid for through university fee remission. No prior military experience is required and no commitment is incurred during this time. Students may withdraw at any time through the end of the second year.

Individual courses cover the areas of management; national defense; military history; leadership

development; military tactics, discipline, and customs; individual weapons; crew-served weapons; land navigation; and U.S. military tactics. Various social and professional activities are available in conjunction with the military science program.

100-level courses are 1 credit hour, and 200-level courses are 2 credit hours, for a total of 6 credit hours in the Basic Course. In essence, this course is intended to introduce the student to the Army and ROTC. Theoretical concepts are covered in the classroom, and practical military skills are learned in a field-training environment.

Students are encouraged to attend optional weekend activities, weekly leadership lab (two hours), and physical fitness training (M, W, F; 6:45–7:45 a.m.).

Army Physical Fitness (E130 and E230)

Any student enrolled in any military science course may attend these 2 credit hour Army Physical Fitness classes free of charge; however, no credit will be given in such cases. Students must pay for these courses if they are taken for credit. These courses are offered through the School of Physical Education.

Advanced Course (G301, G302, G401, and G402)

After completing the Basic Course or its equivalent (see “Advanced Placement” in this bulletin) and 54 credit hours of course work with a grade point average of at least 2.0 (C), students who have demonstrated officer potential and who meet Army physical standards are eligible to enroll in the Advanced Course.

The Advanced Course is normally taken in the final two years of college. Instruction includes further leadership development, organization and management, tactics, and administration.

A paid five-week Advanced Camp is held during the summer between the junior and senior years. This camp permits cadets to put into practice the principles and theories they have learned in the classroom. It also exposes them to Army life in a tactical or field environment.

All cadets in the Advanced Course receive uniforms, necessary military science textbooks, and payment for attending Advanced Camp, and an allowance of up to \$3,000 each school year.

Before entering the Advanced Course, a student must sign a contract that certifies an understanding of the service obligation. This obligation may be fulfilled in various ways, depending on the individual's personal preference and the needs of the Army. Scholarship graduates serve four years on active duty (if selected by Cadet Command) and four in the Army Guard or Army Reserve, unless they receive a Guaranteed Reserve Forces Duty scholarship. If that scholarship is received, the graduate serves entirely with the Guard or Reserve. Nonscholarship graduates may serve three years on active duty (if selected by Cadet Command) and the remaining five years in the Guard or Reserve.

If the nonscholarship graduate selects reserve force duty, the eight-year obligation is spent in the Guard or Reserve. There, officers assume duties for three years with a troop unit, and the last five years of the eight-year obligation requires no participation (readiness status only).

The Advanced Course comprises four 3 credit hour courses (totaling 12 credit hours) and the summer Advanced Camp. The 300-level courses stress the military skills that will be needed to successfully complete the Advanced Camp. The 400-level courses concentrate on those skills needed by an officer about to go on active duty. In addition, a student battalion is organized in which students are given various command and staff positions based on an order of merit established by their prior performance in the program.

Advanced Course students are required to attend weekly leadership labs (two hours), and some weekend field-training exercises.

Professional Military Education Requirements

This component of the ROTC program is designed to provide the cadet with the type of academic foundation necessary to support continued intellectual growth. As an integral part of their undergraduate education, prospective officers are required to take at least one course in each of the following three fields of study: computer science, communication skills, and American military history. It is recommended that cadets take courses in national security policy, math reasoning, human behavior, and management. Authorized courses are listed in the course description section of this bulletin.

Off-Campus Training

One of the major advantages of the ROTC program is the opportunity for cadets to attend actual Army training courses during the summer vacation months. Attendance at one or more of these courses has multiple benefits for the ROTC student. The cadet learns firsthand how the Army trains. Cadets are exposed to a unique learning experience. They live in an actual Army environment and gain an appreciation for the people with whom they will be working during their period of service. Students are selected for this training on a merit basis (academic and physical) from volunteers wishing to take advantage of this opportunity. The following list describes the five types of off-campus training programs. Cadets are not paid to attend these training courses; however, travel, lodging, and meals are provided.

Airborne School

This course is taught at Fort Benning, Georgia, and lasts three weeks. Students completing this course are fully qualified paratroopers. The first week (ground week) consists of rigorous physical training and instruction designed to prepare the student to make a parachute jump and land safely. The second week (tower week) perfects individual skills and stresses

team effort. Jump skills are taught through the use of the swing landing trainer, the suspended harness, and the 250-foot free-fall tower. The final week (jump week) consists of five parachute jumps from U.S. military aircraft.

Air Assault School

This two-week course is taught at several locations throughout the United States. Key areas of training include obstacle course, rappelling, rigging, and helicopter sling loading, and a 12-mile march. Students are evaluated at the end of each training phase.

Mountain Warfare School

This two-week course emphasizes military mountaineering. It is taught at the Vermont National Guard Mountain Warfare School (MWS) in Jericho, Vermont.

Northern Warfare School

This course is taught at the Northern Warfare Training Center, Fort Greeley, Alaska, and lasts three weeks. The course is intended to familiarize junior leaders with military operations in northern areas. Emphasis is placed on movement in mountainous terrain, on glaciers, and on inland waterways.

Cadet Troop Leader Training

Cadet Troop Leader Training (CTLT) gives cadets who have completed Advanced Camp firsthand experience in the duties of an Army officer by providing three weeks of duty in an active Army unit or initial entry training unit (basic training), where cadets serve as platoon leaders.

If a cadet is assigned to a unit on parachute status and the cadet is already airborne qualified, the cadet may participate in unit parachute jumps with approval from the commanding officer.

Academic Policy

No student with a history of marginal academic performance (below a 2.0 [C] cumulative GPA) will be admitted to the ROTC Advanced Course.

Students who have been admitted to the Advanced Course but fail to maintain good academic standing will be disenrolled from ROTC.

No student will be commissioned as an officer in the U.S. Army if not in good academic standing at the time of commissioning, even if the student has finished all military science academic requirements. Students must receive the bachelor's degree to be commissioned.

The chairperson of the military science department admits all Advanced Course students to the program, continuously monitors their progress, disenrolls marginal performers, and certifies each candidate for a commission.

Partnership Schools

The Department of Military Science at IUPUI offers participation in Army ROTC at six other Indianapolis-area institutions of higher education. A student on these six campuses may cross-enroll in the IUPUI

ROTC program and earn an Army commission. Partnership students are eligible for the same benefits as IUPUI students and must meet the same admission requirements. The partnership institutions are:

Butler University

Students register and pay fees for ROTC courses just as they would for any Butler University course. Students must commute to the IUPUI campus for ROTC classes not offered at Butler University. Students may fulfill Butler University's physical education requirement through ROTC. Military science grades are applied to the student's overall GPA.

IUPU Columbus

Students register and pay fees for ROTC courses just as they would for any IUPU Columbus course. Students must commute to IUPUI for all ROTC classes.

Franklin College

Students enroll in military science courses through the Consortium for Urban Education, Indianapolis, and the Franklin College registrar's office. Students must commute to the IUPUI campus for all ROTC classes.

Marian College

Students enroll in military science courses through the Consortium for Urban Education, Indianapolis, and the Marian College registrar's office. Students must commute to the IUPUI campus for all ROTC classes.

University of Indianapolis

Students enroll in military science courses through the Consortium for Urban Education, Indianapolis, and the University of Indianapolis registrar's office. Students must commute to the IUPUI campus for all ROTC classes.

Ivy Tech–Community College of Indiana

Students register and pay fees for ROTC courses just as they would for any Ivy Tech–CCI course. Students may or may not have to commute to the IUPUI campus for ROTC classes. Students may fulfill an elective requirement through ROTC. Military science grades are applied to the student's overall GPA.

Support Services

Library

The Department of Military Science maintains its own library facility with books, journals, and training aids particular to the curriculum.

Awards

Students who merit special recognition receive it through the military science department's awards program. This program includes the following three types of awards:

Functional Awards

Made on merit, these awards provide the student with additional educational experience. For example, the Marshall Foundation Award provides for a student's

attendance at a three-day seminar in the Washington, D.C., area where national security concerns are discussed by the highest-ranking members of the Army and civilian members of the Department of the Army.

Recognition Awards

The Army and many civilian organizations such as the American Legion, Veterans of Foreign Wars, and Daughters of the American Revolution provide awards to deserving students, recognizing accomplishments in academic and leadership efforts.

University Awards

IUPUI, in honor of Dr. and Mrs. Otis R. Bowen, presents a trophy every year to the most outstanding ROTC student.

Social

The Department of Military Science provides ample opportunity for its students and faculty to meet in a social environment as well as in the classroom. Social activities include a picnic each semester, and cadet-sponsored parties. Awards and commissioning ceremonies are followed with social hours. The primary social event of the year is a formal military ball.

Intramural Program

It is the policy of the Department of Military Science to enter teams or individuals, as appropriate, in all university intramurals. In essence, the department acts as a vehicle for those students wishing to participate in athletics.

Career Counseling

The Department of Military Science maintains a vigorous counseling program. Student progress and performance level are constantly monitored. Students are periodically counseled on their status in the program, and those in academic trouble are offered assistance. The purpose of this program is to ensure that students are commissioned in the proper career field upon successful completion of the ROTC program.

Advanced Placement

(Army ROTC Two-Year Program)

Although Army ROTC is normally a four-year course of instruction, a program is available to allow students to complete ROTC in just two years. Students must have two years of course work remaining to complete degree requirements upon entering the Advanced Placement program. Under the two-year program, students who attended a junior or community college, students at four-year institutions who have not taken ROTC during their first two years of undergraduate study, and students entering a two-year postgraduate course of study may enroll in the ROTC program. In addition, students who have past military experience may participate in this program. Students who are awarded advanced placement may go directly into the ROTC Advanced Course. In order to qualify for Advanced Course placement, the applicant must fulfill one of the following requirements:

Leader's Training Course

This five-week camp is held at Fort Knox, Kentucky, each summer and is repeated several times between June and early August. Successful completion of this camp allows direct entrance into the ROTC Advanced Course. Students' travel expenses are paid, and lodging and most meals are provided. In addition, participating students earn about \$600. ROTC scholarships are offered to more than 50 percent of students who complete the course and meet Advanced Course eligibility requirements. Training covers rappelling, map reading/land navigation, rifle marksmanship, basic leadership techniques, physical training/marches, individual and unit tactics, communications, first aid, drills/parades/ceremonies, military courtesy/traditions, and water survival.

During this training, students learn some fundamental things about the Army—weapons, combat tactics, drill, and ceremonies. Students also learn some basic things about themselves—their physical endurance, leadership capabilities, and ability to think and perform under pressure. Students finish the summer with some other basics—discipline, pride, and confidence—that will be important to them in all their future endeavors. Applications for Leader's Training Course are taken each year from November through May.

Veterans

Veterans of prior military service with any branch of the armed services are authorized advanced placement if they meet program admission requirements.

Junior ROTC (JROTC)

Students who have completed at least two years of Junior ROTC in high school may receive advanced placement of one year in the ROTC program, and students with three years of Junior ROTC may receive advanced placement of two years in the ROTC program if they meet Advanced Course admission requirements.

Simultaneous Membership Program (SMP)

This program is for those who desire to serve in an Army National Guard or Army Reserve unit while earning a commission through ROTC. Scholarship students are not eligible for the SMP. If a guard or reserve member accepts an ROTC scholarship, he or she must be released and discharged from the guard or reserve unit.

Students wishing to participate in the SMP must qualify for enlistment in a guard or reserve unit. If a vacancy is available, students who qualify for enlistment join an Army National Guard or Army Reserve unit and become officer trainees. Students who are already members of such a unit may apply for the SMP either through their commanding officer or through the professor of military science at the college they attend.

As an officer trainee in the SMP, students are exempt from the ROTC Basic Course and may enroll directly in the Army ROTC Advanced Course at host colleges or at nearby institutions that permit cross-enrollment.

There are also opportunities for tuition assistance with the SMP units.

Financial Aid

Army ROTC Scholarships

Army ROTC scholarships are offered for two, three, and four years. The two- and three-year scholarships are awarded competitively to students who are enrolled in college. Recipients of these scholarships may be cross-enrolled at Butler University, Marian College, Franklin College, or the University of Indianapolis.

Applications for two- and three-year scholarships are available from the professor of military science and must be submitted no later than March 1 for the following fall semester. Recipients will be notified prior to the end of the spring semester.

The host ROTC unit awards—based upon quotas allocated by Cadet Command—the three- and four-year Advanced Designee scholarships. These scholarships are awarded to U.S. citizens who will be entering college as freshmen. Scholarship winners must enroll at the institution (or partnership school) that awarded them the scholarship. Completed applications must be received by July 15 for early consideration, and by November 15 for final consideration. For more information on scholarship availability and selection procedures, contact the Department of Military Science.

Three-year Advanced Designee scholarships are awarded like four-year scholarships, except that the benefits commence with the student's sophomore year, if the student continues to meet eligibility requirements.

The value of the tuition/fee portion of the scholarship depends on the amount charged by the institution attended. Students may receive up to \$16,000 per year for tuition/fees; however, students may also receive lesser scholarships. In addition to tuition and fees, scholarship recipients receive \$300 per semester for books (\$600 per year), and a subsistence allowance of at least \$200 per month while school is in session (\$2,000 per year).

Fee Remission

All freshmen and sophomores taking the Basic Course do not have to pay tuition for G101, G102, G201, and G202, since these courses are eligible for university fee remission. Note: The student must pay for G120, G121, E130, and E230 to receive academic credit.

Books/Supplies

All books, supplies, and materials needed in the Basic and Advanced Courses are supplied to the student by the Department of Military Science free of charge.

Subsistence Allowance

Each Advanced Course student and three- and four-year scholarship recipient receives a tax-free allowance of at least \$200 per month up to 10 months per year. Additionally, students are paid approximately \$600 for each summer training camp they attend.

Simultaneous Membership Program (SMP)

SMP students draw pay from two sources. First, as advanced ROTC students, they receive \$300 a month for each month of the major academic term and approximately \$600 for attending their two weeks of summer training/annual training.

Meanwhile, as officer trainees in an Army National Guard or Army Reserve unit, students attend monthly drills and annual training and receive pay equivalent to a sergeant's (E-5) or the highest grade attained if they have prior military rank.

The ROTC stipend and Army National Guard or Army Reserve pay, including annual training, provides students with approximately \$7,000 per year, depending on the nature of their SMP participation.

Institutional Scholarships

IUPUI Army ROTC awards three semester-based scholarships. The ROTC cadre interviews each applicant. The cadet battalion commander is present for each interview as an observer only. Students must have a minimum grade point average of 2.5 to be eligible for these scholarships.

Student Employment

The department manages a limited amount of student employment. Students may apply for part-time employment. Student employees are paid on an hourly basis.

Employment Opportunities

The Department of Military Science is unique in that it publishes the salary of its active-duty graduates. The current total pay and allowances for a beginning lieutenant start at approximately \$32,000 annually and end with a senior general officer at \$137,000 (salaries based on 2000 pay scale). Salaries are adjusted for cost-of-living each year.

Suggested Schedule of Courses

The following matrix shows the progression through the military science curriculum. It is a suggested approach; however, ROTC intends to be as flexible as possible in allowing a student to complete course requirements.

Freshman Year

1st Semester	G101 Military Science Written communications course
2nd Semester	G102 Military Science Computer literacy course

Sophomore Year

1st Semester	G201 Military Science Military history course
2nd Semester	G202 Military Science

Junior Year

1st Semester	G301 Military Science
2nd Semester	G302 Military Science
Summer	Attend ROTC Advanced Camp Selected students attend Airborne, Air Assault, or Cadet Troop Leader Training

Senior Year

1st Semester	G401 Military Science
2nd Semester	G402 Military Science
May	Commissioned as a Second Lieutenant in the U.S. Army

Military Science Courses

Basic Course

The Basic Course comprises first- and second-year ROTC courses—G101, G102, G201, and G202—which are designed for beginning students who want to qualify for entry into the Advanced Course and for those students who would like to explore the area of military science without any service obligations. A number of popular or challenging extracurricular activities are associated with these courses. Students who do not complete the Basic Course can qualify for entry into the Advanced Course by completing the Leader's Training Course during the summer after the sophomore year.

G101 Introduction to ROTC (1 cr.) Make your first peer group at college one that is committed to performing well and enjoying the experience. Increase self-confidence through team study and activities in basic drill, physical fitness, rappelling, leadership, first aid, making presentations, and basic marksmanship. Learn fundamental concepts of leadership in both classroom and outdoor laboratory environments. Students taking this course may participate in G120 Leadership Laboratory, which meets for one two-hour session each week; one one-hour session of E130/E230 Basic Course Physical Fitness each week; and one weekend exercise during the semester. Participation in these activities is optional but is highly encouraged.

G102 Introduction to Leadership (1 cr.) Learn and apply principles of effective leadership. Reinforce self-confidence through participation in physically and mentally challenging exercises with upper-division ROTC students. Develop communication skills to improve individual performance and group interaction. Relate organizational ethical values to the effectiveness of a leader. Students taking this course may participate in G121 Leadership Laboratory, which

meets for one two-hour session each week; one one-hour session of E130/E230 Basic Course Physical Fitness each week; and one weekend exercise during the semester. Participation in these activities is optional but is highly encouraged.

G201 Self/Team Development (2 cr.) Learn and apply ethics-based leadership skills that develop individual abilities and contribute to the building of effective teams. Learn to make effective oral presentations, write concisely, plan events, and coordinate group efforts. Develop skills in advanced first aid, land navigation, and basic military tactics. Learn fundamentals of ROTC's Leadership Assessment Program. Students taking this course may participate in G120 Leadership Laboratory, which meets for one two-hour session each week; two one-hour sessions of E130/E230 Basic Course Physical Fitness each week; and one weekend exercise during the semester. Participation in these activities is optional but is highly encouraged.

G202 Individual/Team Military Tactics (2 cr.) Learn individual and team aspects of military tactics in small unit operations. Course covers radio communication, making safety assessments, movement techniques, planning for team safety and security, and pre-execution checks methods. Engage in practical exercises with upper-division ROTC students, and learn techniques for training others as an aspect of continued leadership development. Students taking this course may participate in G121 Leadership Laboratory, which meets for one two-hour session each week; two one-hour sessions of E130/E230 Basic Course Physical Fitness each week; and one weekend exercise during the semester. Participation in these activities is optional but is highly encouraged.

E130 Basic Course Physical Fitness (1 cr.) Open to students enrolled in Basic Course classes (G101, G102, G201, and G202). Students in any Basic Course class may attend sessions for no credit without formally enrolling; however, if students desire credit for this course, they must formally enroll and pay for the course. Participate in and learn to lead a physical fitness program through assuming different leadership roles at different levels of the Basic Course. Course emphasizes development of an individual fitness program and the role of exercise and fitness in one's life.

G120 and G121 Principles of Leadership and Program Planning (1-6 cr.) Enrollment in these classes must be arranged through the Department Chair. Cadets that demonstrate a desire to become an Army officer may enroll in these courses. These courses teach advance principles of training, physical fitness, marksmanship, survival and program planning.

Leader's Training Course A rigorous five-week summer leadership training camp, similar to Army basic training, conducted at an Army post. Participating students are paid about \$600, and the Army defrays the cost of travel, lodging, and most meals. Camp Challenge is open only to students who have not taken all four Basic Course classes—G101, G102, G201, and G202—and who pass a physical examination (paid for by ROTC). Completion of Camp

Challenge qualifies a student for entry into the ROTC Advanced Course. The camp is offered several times during the summer, and the Army limits space in each camp. Candidates may apply for a space at any time during the academic year. The camp is graded on a pass/fail basis.

Advanced Course

The Advanced Course comprises upper-level ROTC courses—G301, G302, G401, and G402. The Advanced Course is open only to students who have completed the Basic Course or earned placement credit for it. The Advanced Course is designed to qualify students for commissioning as officers in the U. S. Army. Students must complete all courses in the Advanced Course and attend Advanced Camp, a five-week camp usually completed in the summer between the junior and senior years. The advanced ROTC courses must be taken in sequence unless the professor of military science approves an exception. Students enrolled in the Advanced Course receive \$300-\$400 per month during the academic year.

G301 Leading Small Organizations I (3 cr.) Series of practical opportunities to lead small groups in situations of increasing complexity and to receive encouragement and assessments of leadership performance. Students taking this course must attend Advanced Course Leadership Laboratory, which meets for one two-hour session each week and one weekend exercise during the semester. One or two more weekend exercises may be offered for optional participation.

G302 Leading Small Organizations II (3 cr.) Continues methodology of G301. Learn to analyze tasks, prepare written or oral guidance for team members to accomplish tasks, delegate tasks, and supervise accomplishment of tasks. Develop ability to plan for and adapt to the unexpected in organizations under stress, examine and apply lessons from leadership case studies, and examine the importance of ethical decision making in setting a positive climate that enhances team performance. Students taking this course must attend Advanced Course Leadership Lab, which meets for one two-hour session each week and one weekend exercise during the semester. Two more weekend exercises will be offered for optional participation.

ROTC Advanced Camp A five-week camp conducted at an Army post. The camp is open only to (and required of) students who have completed G301 and G302. Participating students are paid about \$600, and the Army defrays the cost of travel, lodging, and most meals. The Advanced Camp environment is highly structured and demanding, stressing leadership of small units under varying and challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The Advanced Camp leadership and skills evaluations weigh heavily in the subsequent selection process that determines the type of commission a student receives upon graduation.

ROTC Nurse Summer Training Program (Nursing students who enter this training program may, with the approval of their academic advisors, enroll in

K490 and receive up to 4 hours of credit.) Program consists of three weeks serving as a nurse in a military medical treatment facility. Open only to nursing students who have completed G303 and G304. Participating students are paid about \$300, and the Army defrays the cost of travel, lodging, and most meals. The clinical environment is demanding, and it stresses leadership and nursing under varying and challenging conditions. Individual leadership and basic skills performance are evaluated throughout.

G401 Leadership Challenges and Goal Setting (3 cr.) Learn to plan, conduct, and evaluate activities of the ROTC cadet organization; articulate goals and enact plans to attain them; and assess organizational cohesion and develop strategies to improve it. Develop leadership and resource management skills. Learn and apply various Army policies and programs. Students taking this course must attend Advanced Course Leadership Laboratory, which meets for one two-hour session each week and one weekend exercise during the semester. One or two more weekend exercises may be offered for optional participation.

G402 Transition to Lieutenant (3 cr.) Continues methodology of G401. Learn to identify and resolve ethical dilemmas, refine counseling and motivating techniques, and examine aspects of tradition and law as they relate to leading as an officer in the Army. Prepare for a future as a successful Army lieutenant. Students taking this course must attend Advanced Course Leadership Laboratory, which meets for one two-hour session each week and one weekend exercise during the semester. One or two more weekend exercises may be offered for optional participation.

E230 Advanced Course Physical Fitness (2 cr.) Students may attend sessions for no credit without formally enrolling; however, if students desire credit for this course, they must formally enroll and pay for the course. Participate in and learn to plan and lead physical fitness programs through assuming various leadership roles at different levels of the Advanced Course. Develop the physical fitness required of an officer in the Army. Emphasis is on the development of an individual fitness program and the role of exercise and fitness in one's life.

Professional Military Education Elective Courses

The following is a list of the courses that may be used to fulfill the professional military education requirement at the schools served by this detachment. Students wishing to substitute courses or receive credit for courses transferred from other institutions must petition the Department of Military Science in writing. To be considered, this written request must contain the course name/number, area in which credit is sought, catalog/bulletin description of the course, name of the institution where it was taken, and grade received.

Rules Determining Resident and Nonresident Student Status for Indiana University Fee Purposes

These Rules establish the policy under which students shall be classified as residents or nonresidents upon all campuses of Indiana University for University fee purposes. Nonresident students shall pay a nonresident fee in addition to fees paid by a resident student.

These Rules shall take effect February 1, 1974; provided, that no person properly classified as a resident student before February 1, 1974, shall be adversely affected by this Rule, if he or she attended the university before that date and while he or she remains continuously enrolled in the university.

1. "Residence" as the term, or any of its variations (e.g., "resided"), as used in the context of these Rules, means the place where an individual has his or her permanent home, at which he or she remains when not called elsewhere for labor, studies, or other special or temporary purposes, and to which he or she returns in seasons of repose. It is the place a person has voluntarily fixed as a permanent habitation for himself or herself with an intent to remain in such place for an indefinite period. A person at any one time has but one residence, and a residence cannot be lost until another is gained.
 - (a) A person entering the state from another state or country does not at that time acquire residence for the purpose of these Rules, but except as provided in Rule 2(c)¹, such person must be a resident for 12 months in order to qualify as a resident student for fee purposes.
 - (b) Physical presence in Indiana *for the predominant purpose* of attending a college, university, or other institution of higher education, shall not be counted in determining the 12-month period of residence; nor shall absence from Indiana for such purpose deprive a person of resident student status.
2. A person shall be classified as a "resident student" if he or she has continuously resided in Indiana for at least 12 consecutive months immediately preceding the first scheduled day of classes of the semester or other session in which the individual registers in the University, subject to the exception in (c)¹ below.
 - (a) The residence of an unemancipated person under 21 years of age follows that of the parents or of a legal guardian who has actual custody of such person or administers the property of such person. In the case of divorce or separation, if either parent meets the residence requirements, such person will be considered a resident.²
 - (b) If such person comes from another state or country for the predominant purpose of attending the University, he or she shall not be
 - admitted to resident student status upon the basis of the residence of a guardian in fact, except upon appeal to the Standing Committee on Residence in each case.¹
 - (c) Such person may be classified as a resident student without meeting the 12-month residence requirement within Indiana if his or her presence in Indiana results from the establishment by his or her parents of their residence within the state and if he or she proves that the move was predominantly for reasons other than to enable such person to become entitled to the status of "resident student."¹
 - (d) When it shall appear that the parents of a person properly classified as a "resident student" under subparagraph (c) above have removed their residence from Indiana, such person shall then be reclassified to the status of nonresident; provided, that no such reclassification shall be effective until the beginning of a semester next following such removal.
 - (e) A person once properly classified as a resident student shall be deemed to remain a resident student so long as remaining continuously enrolled in the university until such person's degree shall have been earned, subject to the provisions of subparagraph (d) above.
3. The foreign citizenship of a person shall not be a factor in determining resident student status if such person has legal capacity to remain permanently in the United States.
4. A person classified as a nonresident student may show that he or she is exempt from paying the nonresident fee by clear and convincing evidence that he or she has been a resident (see Rule 1 above) of Indiana for the 12 months prior to the first scheduled day of classes of the semester in which his or her fee status is to be changed. Such a student will be allowed to present his or her evidence only after the expiration of 12 months from the residence qualifying date, i.e., the date upon which the student commenced the 12-month period for residence. The following factors will be considered relevant in evaluating a requested change in a student's nonresident status and in evaluating whether his or her physical presence in Indiana is for the predominant purpose of attending a college, university, or other institution of higher education. The existence of one or more of these factors will not require a finding of resident student status, nor shall the non-existence of one or more require a finding of nonresident student status. All factors will be considered in combination, and ordinarily resident student status will not result from the doing of acts which are required or routinely done by sojourners in the state or which are merely auxiliary to the fulfillment of educational purposes.
 - (a) The residence of a student's parents or guardians.
 - (b) The situs of the source of the student's income.
 - (c) To whom a student pays his or her taxes, including property taxes.
 - (d) The state in which a student's automobile is registered.
 - (e) The state issuing the student's driver's license.
 - (f) Where the student is registered to vote.
 - (g) The marriage of the student to a resident of Indiana.
 - (h) Ownership of property in Indiana and outside of Indiana.
 - (i) The residence claimed by the student on loan applications, federal income tax returns, and other documents.
 - (j) The place of the student's summer employment, attendance at summer school, or vacation.
 - (k) The student's future plans including committed place of future employment or future studies.
 - (l) Admission to a licensed profession in Indiana.
 - (m) Membership in civic, community, and other organizations in Indiana or elsewhere.
 - (n) All present and intended future connections or contacts outside of Indiana.
 - (o) The facts and documents pertaining to the person's past and existing status as a student.
 - (p) Parents' tax returns and other information, particularly when emancipation is claimed.
5. The fact that a person pays taxes and votes in the state does not in itself establish residence, but will be considered as hereinbefore set forth.
6. The registrar or the person fulfilling those duties on each campus shall classify each student as resident or nonresident and may require proof of all relevant facts. The burden of proof is upon the student making a claim to a resident student status.
7. A Standing Committee on Residence shall be appointed by the president of the university and shall include two students from among such as may be nominated by the student body presidents of one or more of the campuses of the university. If fewer than four are nominated, the president may appoint from among students not nominated.
8. A student who is not satisfied by the determination of the registrar has the right to lodge a written appeal with the Standing Committee on Residence within 30 days of receipt of written notice of the registrar's determination, which committee shall review the appeal in a fair manner and shall afford to the student a personal hearing upon written request. A student may be represented by counsel at such hearing. The committee shall report its determination to the student in writing. If no appeal is taken within the time provided herein, the decision of the registrar shall be final and binding.

¹Rules 2(b) and 2(c) apply only to unemancipated persons under 21 years of age.

²Invocation of the provision in Rule 2(a) that applies to cases of divorce or separation requires appropriate legal documentation.

9. The Standing Committee on Residence is authorized to classify a student as a resident student, though not meeting the specific requirements herein set forth, if such student's situation presents unusual circumstances and the individual classification is within the general scope of these Rules. The decision of the committee shall be final and shall be deemed equivalent to a decision of the Trustees of Indiana University.
10. A student or prospective student who shall knowingly provide false information or shall refuse to provide or shall conceal information for the purpose of improperly achieving resident student status shall be subject to the full range of penalties, including expulsion, provided for by the university, as well as to such other punishment which may be provided for by law.
11. A student who does not pay additional monies which may be due because of his or her classification as a nonresident student within 30 days after demand, shall thereupon be indefinitely suspended.
12. A student or prospective student who fails to request resident student status within a particular semester or session and to pursue a timely appeal (see rule 8) to the Standing Committee on Residence shall be deemed to have waived any alleged overpayment of fees for that semester or session.
13. If any provision of these rules or the application thereof to any person or circumstance is held invalid, the invalidity does not affect other provisions or applications of these rules which can be given effect without the invalid provision or application, and to this end the provisions of these rules are severable.

Campus Calendars for 2002-07

The following material provides the official dates for numerous critical campus dates such as when classes start and end, final weeks, numerous items related to

registration and financial aid, and holidays. For information about years beyond 2007, see registrar.iupui.edu/accal.html.

The campus also provides numerous ways to find out what social, athletic, and intellectual activities are occurring. The dates of campus events such as the schedules of athletic or social events, lectures,

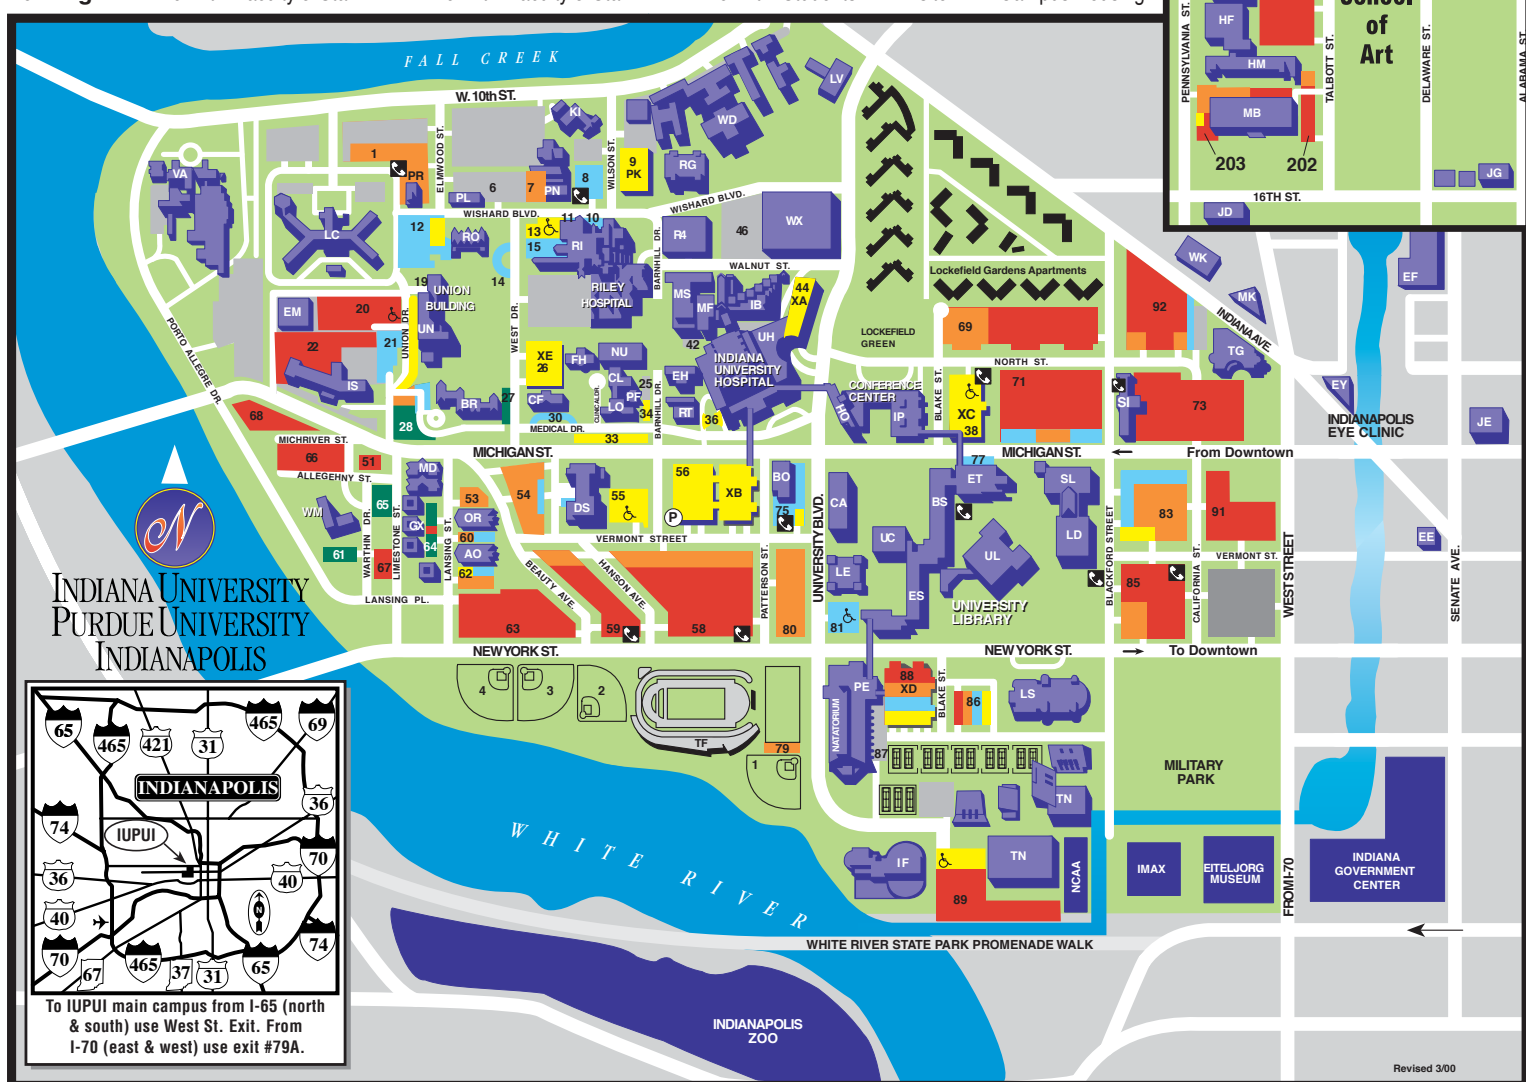

movies, and major campus celebrations can be found:

- through e-mail from *JagNews*
- posted on various bulletin boards around campus
- in the weekly *Sagamore* especially on the page devoted to student-sponsored events
- events.iu.edu/iupui.html on the Web

Campus Calendars: Fall 2002 through Summer 2007

First Semester (Fall)	Day	2002	2003	2004	2005	2006
