WELLS CENTER FOR PEDIATRIC RESEARCH ATTRACTS COUNTRY'S TOP DOCS

Some of the nation's top molecular researchers and clinicians in the field of pediatric hematology and oncology have joined faculty at the Medical Center to develop what many predict will be one of the country's top cancer and blood disease centers. The effort is possible through the support of the IUMC and the Riley Memorial Association which have established the Herman B Wells Center for Pediatric Research at Riley. David Williams, M.D., who directs the center, returns to Indiana to from Harvard to continue his work in the use of gene transfer as a therapy to treat blood disorders. Among those joining him is Philip P. Breitfield, M.D., associate professor and Klingler Investigator of Pediatrics, who has moved here from the U. of Massachusetts Medical School. Richard Schreiner, M.D., chairman of pediatrics at I.U. and medical director of Riley, pointed with pride to the new pediatric program. Robert Baxter, executive director of the Riley Memorial Association, said the program is "the most significant project since we built the hospital in 1922." He also said, "The funding dedicated to this program is a long-term commitment and will surpass any other we've ever made."--P. Perry.
