AND THE INDIANA UNIVERSITY CENTER FOR AGING RESEARCH

INDIANA UNIVERSITY CENTER FOR AGING RESEARCH 2013 - 2014 ANNUAL REPORT TO PRESIDENT McROBBIE

BY THE NUMBERS

The mission of the IU Center for Aging Research is to test innovative strategies to improve the quality of healthcare and self-care of older adults.

Our research is inherently collaborative and always conducted among teams of scientists and often with community partners. IU-CAR is the hub for aging research at Indiana University and our success reflects the investment efforts of Indiana University, the Regenstrief Institute, Eskenazi Health, Indiana University Health, and other partners. Our success also reflects the hard work of the dedicated group of creative investigators and professional staff within IU-CAR. This year we especially congratulate Nancy Buchanan, MA for her two decades of support in building IU-CAR. Nancy was part of our very small team that launched IU-CAR in 1997 and we wish her "All the best!"

In this annual report, we describe our success over the past 17 years

"by the numbers". We define success by growth in life sciences jobs, grant funding, and scientific publications. These are the metrics of our industry. We also define success by growth in the number of older adults whose healthcare and self-care is improved by our research. This is the metric of our key stakeholders: older adults and their families. This year we are redoubling our efforts to make IU-CAR a marketplace of ideas, a community of scholars, and a destination for creative scientists seeking to do their best work.
