

Review #5

As I reviewed the proposal, I looked primarily to make sure that students would leave the program having had instruction in providing individual and group art therapy for children, families, adults. I also looked to see evidence that students would be able to work with diverse populations and needs. This proposal has very clearly addressed these needs. Also, insuring that graduates of the program will also have met requirements pertinent to licensure as mental health counselors in Indiana is extremely important because this will increase opportunities for employment for your graduates. Overall, the proposal was well researched and I did not see any areas within it that seemed to not meet standards in the field.
