

IUPUI students learn through curiosity

The Center of Earth and Environmental Science provide a site where students can learn hands-on about the environment.

Date: October 26, 2009

Duration: 0:51

Transcript

[R. Barr] Science continues every day, and science is curiosity, and as long as we have people thinking and asking questions, they're doing science, so at this site, what we hope they'll do is stop and pause and say, "hmm, why is this like this? What makes this happen? Why did this tree grow here, or why doesn't grow over there" and at this site they can actually make the measurements and make the observations to help understand that. There is more that we don't know than we know about how the environment works, so there's so much to accomplish, and we hope that they get some, some insight into that when they're here with us. We don't have all the answers. There's a lot to learn.
