[Amazing Student] Hi, I’m [NAME]. I’m a senior student at the Purdue School of Engineering and Technology, and I’m the president of the Society of Women Engineers. The first thing I learned about IUPUI was that they do have a variety of opportunities, a great recognized school, Purdue School of Engineering and Technology, and also all the different options for engineering. So I knew a little about engineering but I didn’t know specifically what I wanted to do. So the variety and diversity of IUPUI is what drove me to choose it as the university that I wanted to go to.

There are ways that you can interact with graduate students that help you and mentor you towards that. They also tell you how important it is to have a mentor and work with a mentor. The Purdue School of Engineering has a myriad of projects that is a program dedicated to research that guides you towards getting a master’s degree, getting a Ph. D. Just ways to enhance your career and take a step farther. I’ve had the chance to do research, and the facilities and the equipment here are designed especially for us engineering students.

The faculty is willing to help you. They are small classes. Therefore, we have the opportunity to have access to our faculty more easily than a bigger classroom when there are a lot more students in a classroom. Those things are what I would recommend for a high school student to consider IUPUI as one of their choices.
