IUPUI Bulletins

IUPUI - "Where Impact is Made..."

IUPUI is a part of two great public university systems-Indiana University and Purdue University-and offers the greatest number and widest range of degrees in the state of Indiana. They range from certificates to Ph.D. and professional degrees. All degrees bear either the IU or Purdue designation. Students are, therefore, affected by policies of Indiana University, Purdue University, or both. Such university-wide policies and procedures are set by either the Board of Trustees or the faculty with trustee approval.

University College

University College was established in 1997 as a gateway for entering undergraduate IUPUI students. New and transfer students are granted admission to University College (either full admission or dual admission with a degree-granting school). Students remain in University College until they have declared a major and meet the necessary conditions for transfer to a degree-granting school. University College provides many programs and services to ensure that students move into their majors as efficiently as possible, including academic advising, academic support programs, first-year seminars, career planning, peer mentoring, orientation, scholar support, and themed learning communities.

The Schools

Fields of study or disciplines are housed in schools at IUPUI. School policies and procedures govern all the students within each school. Most fields of study are housed in departments within the schools, but in some schools they may be called by other names, such as divisions. The departments and schools themselves determine degree requirements and whether students are eligible to receive a degree. Students must be in a school and take a specific number of courses at IUPUI (residence requirements) to be eligible for a degree. A current list of degree programs appears online at www.iupui.edu/academic/schoolsdepts.htm.

Web pages in this bulletin cover each school at IUPUI. For each school, pages are dedicated to admission, overview, course listings, and undergraduate and graduate programs which contain specific degree requirements for all degrees offered by the school, policies and procedures, and current faculty. Special teacher certification and honors information is also included where relevant.

Indiana University Purdue University Columbus

For Columbus-specific information relating to admission, registration, financial aid, scholarships, placement testing, academic advising, orientation, and student activities, see the IUPUC section in this bulletin.

IUPUI Honors College

Our Honors College offers a dynamic academic experience to high ability students seeking a unique experience in an urban research environment, and links students to world-class faculty engaged in cutting edge and translational research, creating a community of scholars which will make a difference. For additional information see the IUPUI Honors College section in this bulletin.

The IUPUI University Library

A leader among academic libraries, the IUPUI University Library moved to its present location in 1993. The building was designed by renowned architect Edward Larrabee Barnes and was envisioned as one of the most technologically advanced libraries in the country. Today the library continues to focus on leveraging technology to support student success with 30 full-time faculty librarians, plus programs in information literacy and digital preservation of rare resources and scholarly research. With over 80,000 electronic serial titles and thousands of e-books and databases, the library's resources are always available to students online.

IUPUI, Indiana University, and Purdue University Administration

IUPUI Administration

- Charles R. Bantz, Ph.D., IU Executive Vice President and Chancellor, Indiana University Purdue University Indianapolis
- Uday Sukhatme, Ph.D., Executive Vice Chancellor and Dean of the Faculties
- Trudy W. Banta, Ed.D., Senior Advisor to the Chancellor for Academic Planning and Evaluation
- Kody Varahramyan, Ph.D., Vice Chancellor for Research
- Dawn Rhodes, M.B.A., Vice Chancellor for Finance and Administration
- Amy Warner, M.A., Vice Chancellor for External Affairs
- Zebulun Davenport, Ph.D., Vice Chancellor for Student Life
- Kenneth B. Durgans, Ed.D., Assistant Chancellor for Diversity, Equity and Inclusion
- Mrwan A. Wafa, Ph.D., Vice Chancellor and Dean, Indiana University Purdue University Columbus
- Andrew R. Klein, J.D., Chief of Staff

Indiana University Administration

- Michael A. McRobbie, Ph.D., President of the University
- Charles R. Bantz, Ph.D., IU Executive Vice President And Chancellor, Indiana University Purdue University Indianapolis
- Lauren Robel, J.D., Interim Executive Vice President And Provost, Indiana University Bloomington
- D. Craig Brater, M.D., Vice President And Dean And Walter J. Daly Professor, Indiana University School Of Medicine
- Tom Morrison, Ed. D.,Vice President For Capital Planning And Facilities
- Dorothy J. Frapwell, J.D., Vice President And General Counsel
- Edwin C. Marshall,O.D., Vice President For Diversity, Equity, And Multicultural Affairs

- David Zaret, Ph.D.,Vice President For International Affairs
- Jorge José, Ph.D., Vice President For Research
- Michael M. Sample, B.A., Vice President for Public Affairs and Government Relations
- William B. Stephan, Ph.D., Vice President For Engagement
- Neil. D Theobald, Ph.D., Vice President And Chief Financial Officer
- Bradley C. Wheeler, Ph.D., Vice President For Information Technology And Chief Information Officer
- John Applegate, J.D., Executive Vice President For University Regional Affairs, Planning And Policy
- Mary Frances McCourt, M.B.A, Treasurer Of The University
- Nasser H. Paydar, Ph.D., Chancellor Of Indiana University East
- Michael A. Wartell, Ph.D., Chancellor Of Indiana University Purdue University Fort Wayne
- Michael Harris, Ph.D., Chancellor Of Indiana University Kokomo
- William J. Lowe, Ph.D., Chancellor Of Indiana University Northwest
- Una Mae Reck, Ph.D., Chancellor Of Indiana University South Bend
- Sandra R. Patterson-Randles, Ph.D., Chancellor Of Indiana University Southeast
- Kenneth R. R. Gros Louis, Ph.D., University Chancellor

Purdue Administration

- France A. Cordova, Ph.D., President
- Timothy D. Sands, Ph.D., Exec. VP For Academic Affairs And Provost
- Al V. Diaz Executive Vice President For Business And Finance And Treasurer
- Lisa D. Calvert, Vp For Development
- James S. Almond, M.B.A., Senior Vice President For Business Services And Assistant Treasurer
- Teri Lucie Thompson Vice President For Marketing And Media
- M.J.T. Smith, Ph.D., Dean Of The Graduate School
- Victor L. Lechtenberg, Ph.D., Vice Provost For Engagement
- Richard O. Buckius, Vice President For Research
- Luis E. Lewin, Vice President For Human Resources
- Rabindra N. Mukerjea, M.A.S.C., Director For Strategic Planning And Assessment
- Melissa E. Exum, Vice President For Student Affairs
- Alysa C. Rollock, J.D., Vice President For Ethics And Compliance
- A. Dale Whittaker, Ph.D., Vice Provost For Undergraduate Academic Affairs
- Beth McCuskey, Vice President For Housing And Food Services
- Timothy J. Sanders, Associate Vice President For Government Relations

Overview

Vision of IUPUI

The VISION of IUPUI is to be one of the best urban universities, recognized locally, nationally, and internationally for its achievements.

Mission of IUPUI

Indiana University-Purdue University Indianapolis (IUPUI), a partnership between Indiana and Purdue Universities, is Indiana's urban research and academic health sciences campus. IUPUI's mission is to advance the State of Indiana and the intellectual growth of its citizens to the highest levels nationally and internationally through research and creative activity, teaching and learning, and civic engagement.

By offering a distinctive range of bachelor's, master's, professional, and Ph.D. degrees, IUPUI promotes the educational, cultural, and economic development of central Indiana and beyond through innovative collaborations, external partnerships, and a strong commitment to diversity.

In pursuing its mission and vision, IUPUI provides for its constituents excellence in:

- Teaching and Learning
- Research, Scholarship, and Creative Activity
- Civic Engagement, Locally, Nationally, and Globally

With each of these core activities characterized by:

- Collaboration within and across disciplines and with the community,
- A commitment to ensuring diversity, and
- Pursuit of best practices

History

Founded in 1969, IUPUI is an urban campus with the dynamic flavor of a metropolitan city of 1.4 million. The campus is just west of downtown Indianapolis, within walking distance of the state capitol and other governmental offices, and the site of numerous businesses and art, sports, education, and health facilities.

IUPUI is one of eight campuses of Indiana University and includes two Purdue University schools. The campus offers more than 240 degrees provided by 20 different schools. Its 30,000 students represent 49 states and 125 countries. Approximately 22,000 of those students are undergraduates, with about 70 percent traditional age and 30 percent adult age students. Undergraduate students annually use more than $83 million in financial assistance as they juggle jobs, families, community service, and academic pursuits. Each year some 6,500 students earn IU or PU degrees.

IUPUI includes the second largest medical school in the country, the only dental school in the state, the nation’s largest nursing school, and the country’s oldest school of physical education. IUPUI is among the top 20 campuses in the nation for graduate professional degrees conferred. With strong traditions in professional education, IUPUI is simultaneously developing new strengths in interdisciplinary inquiry, linking disciplines with professions in ways that advance research, professional service, and

learning. With external support of over $330 million in 2010, IUPUI is the second-largest site for research in Indiana. With more than 1,300 full-time faculty members, IUPUI is proud of its teaching record and works to improve its teaching with on-going assessment and professional development.

IUPUI is accredited by the North Central Association of Colleges and Schools. Individual school and academic programs are also accredited. For example, the Kelley School of Business and the School of Engineering and Technology programs are accredited by the American Assembly of Collegiate Schools of Business (AACSB) and the Accreditation Board for Engineering and Technology (ABET), respectively. IUPUI has over 140,000 alumni living worldwide and an expanding and active alumni relations program to serve the growing IUPUI campus. More than 67 percent of alumni live in Indiana, with two-thirds of that number in the Indianapolis area. The rest are spread around the world with strong contingents in far-flung places such as Malaysia.

Indiana University–Purdue University Columbus, created in 1970 (one year after the creation of IUPUI), is located one hour south of Indianapolis in the sophisticated, yet rural, town of Columbus, Indiana. This well-known town has been called an “architectural mecca,” boasting the exciting works of numerous internationally known architects. IUPUC has 53 full-time facultly members, who are highly regarded both nationally and internationally, and 125 adjunct faculty. IUPUC partners with the Purdue University College of Technology, which has 12 full-time faculties. Both full-time and adjunct faculties teach at the Columbus campus and at its regional centers in Greensburg and Seymour. The service area of IUPUC includes the counties of Bartholomew, Brown, Dearborn, Decatur, Jackson, Jennings, Johnson, Ripley, and Shelby.

Over 35 degree programs are offered at IUPUC. Over 1,700 students are enrolled. Approximately 60 percent are full time, and nearly 70 percent are female. IUPUC offers the advantages of affordability and small class size, along with the high quality students would expect at any IU or Purdue campus.

See the IUPUC section in this bulletin for more specific information.

A Distinctive Structure

The IU and Purdue Systems

IUPUI is a part of two great public university systems-Indiana University and Purdue University-and offers the greatest number and widest range of degrees in the state of Indiana. They range from certificates to Ph.D. and professional degrees. All degrees bear either the IU or Purdue designation. Students are, therefore, affected by policies of Indiana University, Purdue University, or both. Such university-wide policies and procedures are set by either the trustees or the faculty with trustee approval. In many areas, especially at the undergraduate level, IUPUI sets its own campus policies and procedures.

University College

Entering IUPUI students are granted admission to University College (either full admission or dual admission with a degree-granting school). Students remain in University College until they meet the admission requirements for their field of study or complete 56 credit hours of course work. University College provides many programs and services to ensure that students move into their majors as efficiently as possible, including academic advising, academic support programs, first-year seminars, career planning, peer mentoring, orientation, scholar support, and themed learning communities.

The Schools

Fields of study or disciplines are housed in schools at IUPUI. School policies and procedures govern all the students within each school. Most fields of study are housed in departments within the schools, but in some schools they may be called by other names, such as divisions. The departments and schools themselves determine degree requirements and whether students are eligible to receive a degree. Students must be in a school and take a specific number of courses at IUPUI (residence requirements) to be eligible for a degree. A current list of degree programs appears online at www.iupui.edu/academic/schoolsdepts.htm.

The Columbus Campus

The mission of Indiana University-Purdue University Columbus is to provide the educational leadership and the resources for teaching and learning, research and creative activity, and service and civic engagement needed to enrich the intellectual and cultural environment, enhance the economic opportunities, and improve the quality of life of the diverse citizens and communities in south central Indiana.

For Columbus-specific information relating to admission, registration, financial aid, scholarships, placement testing, academic advising, orientation, and student activities, see the IUPU Columbus section in this bulletin.

Degrees

IUPUI offers numerous degree programs with credentials ranging from Certificates to Ph.Ds. and Professional degrees in Dentistry, Law, and Medicine. Click here for a current listing of the IUPUI degree programs.

Graduate Programs

Master's Programs

Outstanding students wishing to continue their education may begin graduate work after the completion of their bachelor's degrees. Most master's degree programs require applicants to take standardized national examinations such as the Graduate Record Examination (www.gre.org) and apply for the program in the spring prior to admission. The graduate program in business requires students to take the Graduate Management Admission Test (GMAT) (www.gmat.org) as part of the admission process. Most students continue to study in their undergraduate major field. Students wishing to switch fields may be required to take undergraduate course work as preparation for admission to a master's program, which presumes prior preparation in the area of study. Generally master's work is more narrowly focused, and degrees require one to two years of full-time study. Some graduate programs may be taken on a part-time basis.

Doctor of Philosophy and Education

The doctorate is the highest degree awarded and requires course work, comprehensive examinations, original research, and a dissertation. Three years of study beyond the master's is minimal, and most students require additional time to complete the course work and research.

Graduate Certificate Program

Graduate-level certificate programs, often in professional areas of specialization, resemble minors but generally require more credit hours. Some certificate programs are a stand-alone program, which means that a student does not have to be working toward a graduate degree to complete a certificate program. Only courses in which students receive at least a C (2.0) can be applied to the certificate program. Specific requirements can be found in the Schools section.

Non-Degree Programs

The Community Learning Network (CLN) offers hundreds of continuing education (noncredit) classes and serves over 11,000 learners annually. With more than 18 noncredit certificate programs in areas as diverse as photography and stress management, CLN's noncredit program helps learners to take the first step in career development. These courses provide educational opportunities for a lifetime of learning. Visit the Community Learning Network Web site (www.cln.iupui.edu) to find out more about noncredit offerings.

Professional Programs

IUPUI offers professional degrees in Dentistry (D.D.S.), Law (J.D.), Medicine (M.D.), and Physical Therapy (D.P.T). All of these degrees require prior study at the bachelor's level as a condition for admission to the program.

Undergraduate Programs

Bachelor's Degree (Baccalaureate) Programs

The typical undergraduate degree program is either a bachelor of science or a bachelor of arts degree. The degree typically takes four years for full-time students and substantially longer for part-time students. IUPUI's bachelor's degrees are awarded in the professional schools and within the arts and sciences.

Associate Degree Programs

Some schools award an associate degree after the completion of two years of full-time college course work. Usually the course work completed for the associate degree will count toward the bachelor's degree in the same discipline.

Certificate Programs

Certificate programs resemble minors but generally require more credit hours. Some certificate programs are a stand-alone program, which means that a student does not have to be working toward a two- or four-year degree to complete the certificate program. Specific requirements can be found in the section for the school offering the certificate.

Non-Degree Programs

The Community Learning Network (CLN) offers hundreds of continuing education (noncredit) classes and serves over 11,000 learners annually. With more than 18 noncredit certificate programs in areas as diverse as photography and stress management, CLN's noncredit program helps learners to take the first step in career development. These courses provide educational opportunities for a lifetime of learning. Visit the Community Learning Network Web site (www.cln.iupui.edu) to find out more about noncredit offerings.

Undergraduate Overview

Admission

The best and most complete information source on admission standards and procedures is the *IUPUI Beginning Freshman Admissions Guide and Financial Aid Information* booklet or the *Transfer and Visiting Student Admissions Guide and Financial Aid Information* booklet, which are published annually and contain an application form, fee schedules, detailed instructions, numbers to call, and the relevant deadlines. The Enrollment Center's Web site also provides information about admission for undergraduates and graduates, financial aid information, and links to other key offices' Web sites. Prospective students may download a paper application or complete an application for admission online (http://enroll.iupui.edu).

Criminal Activity Disclosure

IUPUI is committed to maintaining a safe environment for all members of the university community. As part of this commitment, the university requires applicants who have been convicted of any felony or a misdemeanor such as simple battery or other convictions for behavior that resulted in injury to a person(s)or personal property to disclose this information as a mandatory step in the application process. A previous conviction or previous conduct does not automatically bar admission to the university, but does require review. For more information contact the Admissions Center at apply@iupui.edu or visit enroll.iupui.edu/admissions/undergraduate/freshmen/disclosure.html.

- When to Apply
- Types of Freshmen Admission and Qualifications
- Types of Transfer Admission and Qualifications
- Visiting Students
- International Students

When to Apply

When to Apply

Generally, you may apply as early as one year in advance of your proposed enrollment.

If you file an application with all required credentials and the application fee by the priority date, you will receive full consideration for the semester requested. If admitted, you will be invited to an orientation program during which you will register for classes. If you file an application after the priority date, you will be considered on a space-available basis and if admitted, you will likely attend a later orientation session and register for classes during the last

days of registration. After the priority date admission may close without advance notice. The Web site will contain current admission review status for each approaching term.

Application Deadlines

Priority date	Term
June 1	Fall (begins late August or early September)
November 1	Spring (begins in early January)
March 15	Summer I (begins in early May)
May 1	Summer II (begins in mid-June)

Please note that Dental Hygiene & Dental Assisting (http://www.iusd.iupui.edu/departments/periodontics-and-allied-dental-programs/dental-hygiene/), Social Work(http://iupui.socialwork.iu.edu/), and all the Undergraduate Medical School Health Profession Programs(http://admissions.medicine.iu.edu/applying-to-the-iu-school-of-medicine/applicant-instructions/) have strict application deadlines for those students who have met all entrance requirements and who wish consideration for entry directly into the major. See appropriate Web page for deadline information.

Letters of Admission

With the admission letter, students receive information about placement testing, New Student Orientation reservations, transfer of credits, and a temporary parking permit is enclosed. All beginning students are admitted to University College, where they attend the New Student Orientation program, enroll in a first-year seminar, work with an advisor, and learn about University College support services such as the Bepko Learning Center. Some students, particularly those with outstanding high school records, will be granted dual admission to University College and the academic school offering their desired major. Some transfer students are also admitted to University College and remain there until they complete the necessary prerequisites for their program of study.

- Types of Freshman Admission and Qualifications
- Types of Transfer Admission and Qualifications
- Visiting Students
- International Students

Types of Freshman Admission and Qualifications

IUPUI offers beginning freshmen enrollment as degree-seeking or visiting students. Visiting student status is for only the Summer II term in June after graduation from high school.

Degree-Seeking Students
If you wish to enter an undergraduate certificate, associates, or bachelor's degree program, apply as a degree-seeking student (even if you are unsure of which degree program). As a beginning freshman, you must not have enrolled in any college, business, or vocational school after high school graduation.

For a beginning student, we will examine your high school record including courses completed; grades earned, and standardized test results. The trend in your grades and the difficulty of your courses are also important.

High School Graduates Admission Requirements

- Graduated from high school or will graduate before enrolling.
- The best preparation for college studies is the completion of a strong college-prep curriculum. If you are a current Indiana high school student, you are expected to complete Core 40 and are strongly encouraged to earn the Academic Honors Diploma.

If you are not in an Indiana high school, you should complete the following core of classes to be considered for admission:

- 4 years of college-prep English
- 3-4 years of mathematics, including second-year algebra (We highly recommend 4 years.)
- 3 years of social sciences
- 3 years of laboratory science
- 4 years of some combination of foreign language, computer science or additional mathematics, laboratory sciences, social sciences, or English courses. Some IUPUI schools require additional courses.
- You must provide the results of your SAT or ACT, including the Writing Section of the test (scores must be received at IUPUI by May 1). If your class has graduated and a fall semester has passed since you graduated, you do not need to take the SAT or ACT. (However, if you did take the test, we would like to see the results.) The results of the writing section assist you and your academic advisor with placement into a writing course. Though test results are considered during the admission review, we do not deny students strictly based on their test results. The SAT or ACT is most important when considering you for dual admission to your intended major and scholarship consideration.
- Though no grade point average guarantees admission to IUPUI, we generally expect to see students with a "B" average when reviewing applications. The trend in your grades and the difficulty of your courses are also very important, and we review favorably those students who have improved their grades in their junior and senior years. The two most important factors will be the courses you attempted and the grades you earned.
- Adult students over the age of 21 should note that SAT or ACT scores are not required and, although a high school transcript is the primary criteria for admission, the Admissions Committee also considers such things as military experience, life experiences, and job responsibilities after leaving high school.
- Returning adult students should note that SAT or ACT scores are not required and although a high school transcript is required, the admissions committee also considers such things as military experience, life experiences, and job responsibilities when reviewing applications.

If you have significant deficiencies in either academic preparation or performance, IUPUI will defer your acceptance until you complete designated courses at Ivy Tech Community College or another regionally accredited two-year or four-year college. A deferral contract outlining the courses to complete will be sent to you.

GED Admission Requirements
Students enrolling at IUPUI who have not attended college after earning a GED are considered beginning freshmen students. The following are the admission requirements:

- Earned the GED.
- If you are under 19 years of age, you must provide the results of an ACT or SAT test.

Depending on your GED score, you will either be granted admission or deferred to complete coursework at Ivy Tech Community College or another regionally accredited two-year or four-year institution. Visit http://enroll.iupui.edu/admissions/apply/ for the most up-to-date score requirements.

Visiting Students during Summer after Graduation
Students graduating from high school may enroll at IUPUI as a visiting student for the June summer session. As a student applying under this status, you must do the following:

- Verify with the Admissions Office of the institution you will attend in the fall that they will accept the course credits.
- Submit an IUPUI application as a visiting student.
- Submit a copy of your high school transcript and test scores.
- Submit a copy of your letter of acceptance.
- Submit the application fee.

Note:

1. You are not eligible for financial aid as a visiting student, according to federal regulations.
2. If admitted, you must complete IUPUI placement tests in reading, writing, and mathematics. These must be done before you can register for classes.
3. You may apply only for the June semester and you are encouraged to do this no later than the beginning of May.

Types of Transfer Admission and Qualifications

Transfers from Other IU Campuses
Students who are eligible to transfer to IUPUI as degree candidates from another campus of Indiana University must meet the degree requirements of the IUPUI school from which they expect to graduate. Students who plan to obtain a degree from another campus should contact and remain in contact with the dean of their prospective school for specific information on course, degree, and residency requirements.

A student at another Indiana University campus, whether coming to IUPUI on a temporary or permanent basis, should review the information about intercampus transfer at http://enroll.iupui.edu/admissions/undergraduate/intercampus/.

If a student has earned college credits at another school after leaving the IU campus, the student must provide an official transcript to the IUPUI Office of Undergraduate Admissions (420 University Blvd., CE 255, Indianapolis, IN 46202).

Transfers from Other Purdue Campuses
A Purdue University student from another campus must complete an official undergraduate application through the IUPUI Office of Admissions (http://enroll.iupui.edu). If credits have been earned outside of Purdue, an official transcript from the non-Purdue schools must be provided. An application fee does not need to be paid.

Note: Courses with grades from C- to D- from other Purdue campuses appear on the IUPUI transcript. The grades are not calculated in a student's IUPUI GPA; however, individual schools and programs may choose to use the courses to satisfy degree requirements.

Transfers from Other Universities
A student from any other college or university must complete an official undergraduate application through the IUPUI Office of Admissions (http://enroll.iupui.edu). Applicants are required to provide official transcripts from all post-secondary institutions they have attended.

IUPUI has increasing numbers of articulation agreements with Ivy Tech Community College that permit credits to transfer to IUPUI. No courses completed before the fall 1990 semester will transfer. For more information, visit the transfer student portion of http://enroll.iupui.edu.

IUPUI offers transfer students two categories of undergraduate admission (degree-seeking and visitor).

Degree-Seeking Students
If you wish to enter an undergraduate certificate, associate's, or bachelor's degree program, you will apply as a degree-seeking student (even if you are unsure of which degree program).

Admission Standards General Policy
If you have fewer than 26 hours of transferable work, you must provide a high school transcript as well as transcripts of your college work. If you were not admissible from high school, you must complete freshman writing, a college-level mathematics course, and a minimum of three transferable courses with grades of C or higher and with a minimum cumulative GPA of 2.0 at another school or university before being able to transfer to IUPUI.

If you were admissible from high school or you have more than 26 hours of transferable work, you must have a cumulative grade point average of at least 2.0 on a 4.0 scale and be eligible to return to your previous college. If you do not have a 2.0 or you not eligible to return to your former school, you must sit out for one regular semester. Students transferring from another Purdue campus are exempt from this policy unless they are on drop status or are required to sit out one or more semesters by Purdue University. Summer sessions do not count. If you have been dismissed twice, you must be out of school for two full semesters to be considered for admission. Please mail a statement with your application explaining what caused the low grades and how you will approach your studies at IUPUI.

Admission on Probation
Assuming you were admissible from high school but your GPA is below a 2.0, you will be considered for admission on probation provided you have met or are

meeting the required length of time out of school. If you were not admissible from high school, you must complete freshman writing, a college-level mathematics course, and a minimum of three transferable courses with grades of C or higher and have a cumulative GPA of 2.0 at another school or university before being able to transfer to IUPUI.

In some cases, students with GPA's below a 2.0 will be required to file a petition and perhaps schedule an interview. After reviewing your application, the Office of Undergraduate Admissions will advise you if you must take these steps.

Credentials Needed

- Official college transcript from every college attended.

An official copy is one that has the embossed or raised seal of the school. Fax copies, photocopies, and grade reports are not considered official.

- High school transcript or GED results if you have fewer than 26 credit hours of transferable work. (IUPUI will accept a faxed high school transcript provided it is sent directly from the high school with the school fax number on the faxed pages.)

Please note that you are responsible for mailing the request to your former colleges and paying whatever fee is charged.

Transfer Credit

Acceptance of credit from other accredited institutions, including Purdue University, is performed by the IUPUI Office of Admissions, Campus Center, Indianapolis, IN 46202-5143, (317) 274-4591.

If the work was completed elsewhere, only courses with grades of C (2.0) or higher are transferred for possible use toward an IUPUI degree. No courses with grades of C- or lower will transfer to IUPUI. None of the grades transferred from other colleges or universities count in the IUPUI grade point average. Some schools, however, may consider such grades for admission purposes and other academic matters.

Course work taken at another institution for which there is an equivalent Indiana University course or Purdue University course (in terms of course description, level, and prerequisites) will generally be transferred as credit in the equivalent courses. Other course work will be transferred as undistributed and reviewed by the appropriate department or school to determine how it will be counted toward degree requirements. In addition, the university does not accept the transference of special credit by examination awarded by another college or university.

Courses taken at another institution on a quarter system rather than a semester system will be evaluated as carrying fewer credit hours (e.g., a 3 credit hour course taken on a quarter system will transfer as 2 credit hours). Many course equivalences for most Indiana colleges may be found on the IUPUI admissions Web site at enroll.iupui.edu.

Courses taken at foreign institutions that are accredited at the same level as IUPUI will be transferred into IUPUI as undistributed credit rather than as specific courses. In general, the international admissions evaluator will designate the credit as lower-division course work with a 100 number, though if it is clear that the course work warrants a 200 or 300 number, such designations will be used. If students want courses to count for specific classes, they must obtain an official translation of the course description and any other material, such as a syllabus, that explains the course content. With that material, the department offering the course can determine whether there is an equivalent IUPUI course. An individual within each department or school will be responsible for making the determination and informing the Office of International Affairs, using the Undistributed Transfer Credit Departmental Evaluation Form. Subsequently, the appropriate changes will be made on the student's official transcript.

The decision about which courses are counted in a student's IUPUI GPA depends on where the courses were taken. Course work taken at another Indiana University campus will be counted in a student's IUPUI GPA. IUPUI students in Purdue University programs who have previously taken course work at another PU campus may have those grades counted toward their IUPUI GPA. Contact specific schools or look at their material in this bulletin for more information. Purdue students are exempt from this policy unless they are on drop status or are required to sit out one semester.

How accepted credit is applied to program requirements is determined by the school and/or department that offer the course(s). Courses that were completed 10 years ago (or even more recently) may not be accepted in some programs and must be approved by the individual school and department awarding the degree.

Visiting Students

If you are working on a degree from another institution and wish to take courses at IUPUI, apply as a visiting (non-degree status) student. You are responsible for verifying that your home institution will accept the IUPUI course credits. Your permission to enroll is for one term; however, an admissions counselor can authorize enrollment for additional terms if you are completing your final courses for a degree or if you are in the area on an internship or co-op program. *You are not eligible for financial aid as a visiting student.*

If you have earned a bachelor's degree and wish to take additional undergraduate coures either for personal enrichment or to meet entrance requirements for a second undergraduate degree or graduate or professional school, you must apply as a visiting student. While enrolled in this status, you may only take undergraduate courses.

Required Credentials and Qualifications

- Must be a current college student (enrolled within the last 12 months). If you have not enrolled within the past 12 months, provide a letter from either the dean or your academic advisor at your home institution stating that you have permission to transfer credits from IUPUI to the degree program.
- Provide a copy of your most recent grade report or transcript.
- Have a cumulative grade point average of at least 2.0 on a 4.0 scale. (Purdue students are eligible regardless of grade point average provided they are not on drop status.)

International Students

Step-by-step information for international students, including links to academic program information and online application options, is available at http://iapply.iupui.edu/or on request from the Office of International Affairs (OIA), iapply@iupui.edu.

Beginning undergraduate applicants must have successfully completed secondary school including a university-preparation track, or be in the final year of secondary school. The U.S. primary and secondary education system consists of 12 years of study. International applicants should have studied for a similar number of years in primary and secondary school to be eligible for university admission. Applicants from countries with at least 11 standard years in the primary and secondary system and a strong academic record may be considered.

Secondary school programs should have included study of a student's native language, English or other foreign languages, mathematics, natural and/or physical science, humanities, and social sciences. Secondary credentials required by country to establish eligibility for undergraduate study are listed at iapply.iupui.edu.

Depending on the admission requirements of their desired majors, applicants are considered for admission to University College or for dual admission to University College and the school of their intended major. Regardless of the admission category, all undergraduate students participate in the University College Orientation program, advising, and support services as part of a comprehensive orientation program coordinated for international students by the Office of International Affairs. The goal of these programs is to ensure a successful transition to IUPUI.

Last Updated on Thursday, November 17, 2011.

Academic Advising

New and transfer students receive their initial academic advising during orientation. Continuing students meet with a University College advisor, who helps them chart their first few semesters and prepares them to transfer to their degree-granting schools. Students with dual admission will most likely be advised by staff or faculty from their intended schools or programs.

Once students transfer to degree-granting schools, they should meet with their school's advisors to chart the completion of required courses, discuss post-graduation careers or further educational options, and get help with academic difficulties. Students may be assigned an advisor, but if not, they should ask for one.

Civic Engagement

Office of Student Involvement

The Office of Student Involvement is a unit within the IUPUI Division of Student Life. The Office of Student Involvement adds value to the collegiate experiences of students by providing multiple opportunities for them to become involved in extra- and co-curricular activities.

The Office of Student Involvement serves to enhance student involvement through co-curricular involvement opportunities, including: campus programming, support for nearly 300 student organizations, fraternity and sorority life, cultural and diversity programming, social justice education, leadership education, community service, civic engagement, first-year programs, and the Multimedia Production Center.

For more information, contact the Office of Student Involvement, Campus Center 370, (317) 274-3931, or visit http://life.iupui.edu.

Financial Aid & Scholarships

- Types, Eligibility, and How to Apply
- Satisfactory Academic Programs
- Scholarship Information

Types of Financial Aid

Financial aid at IUPUI is based on financial need, enrollment status, and academic progress. The Office of Student Financial Aid Services (OSFAS) administers federal, state, and university funds. Assistance is available in the form of grants, fee scholarships, loans, and part-time employment.

Eligibility

To be considered for most types of aid, students must be accepted for at least half-time enrollment at IUPUI in a degree-granting program or University College. If a student enrolls and later drops a class, the financial aid awards may be changed to the level appropriate to the new enrollment. Students should always check with a financial aid counselor before dropping classes.

How to Apply for Financial Aid

To apply for financial aid, students must file the Free Application for Federal Student Aid (FAFSA) or a renewal FAFSA. Students are encouraged to submit FAFSA data electronically using FAFSA on the Web (www.fafsa.ed.gov). Computers are available in the Campus Center within the Office of Student Financial Aid Services, in the Enrollment Center, and in computer clusters on campus. You may obtain the FAFSA via U.S. mail by calling (317) 274-4162. The IUPUI priority deadline for filing the FAFSA is March 1. Award notificatons for new students are sent in April with continuing student award letters sent in May.

Satisfactory Academic Progress

Federal regulations require IUPUI to establish and apply reasonable standards of Satisfactory Academic Progress for the purpose of receiving financial assistance. To receive financial aid, a student must maintain a minimum grade point average of 2.0.

In addition to GPA standards, there are policies regarding course enrollment and completion rates, duration of

eligibility, repeating classes, and unofficial withdrawals. Students failing to meet standards of satisfactory academic progress will be placed on financial aid probation and will be given an opportunity to meet the standards of satisfactory academic progress. If students fail to meet these standards, they will be denied financial aid until satisfactory progress is achieved. Students may submit an appeal with documented mitigating circumstances.

Course Enrollment and Completion
In addition to GPA standards, students must complete a minimum of 75 percent of the credit hours for which they receive a grade each semester. Example: If students enroll in 12 or more credit hours (full time) they must complete 9 credit hours. Completion of a course for credit requires a grade that indicates students have finished all work for the course during the semester for which assistance was received. Course work grades of A, B, C, D, P (pass), or S (satisfactory), are indicators that meet Satisfactory Academic Progress (SAP). Grades that do not indicate course completion are W (withdrawal), F (failing), and I (incomplete).

Duration of Eligibility
In addition to meeting the minimum GPA and course completion requirements, a student must also meet the duration of eligibility requirements. Undergraduate students may not exceed 150 percent of the published length of the educational program. All courses in which students receive a grade will be counted toward the duration of eligibility. All transfer credit hours that appear on the academic transcript will be counted toward the duration of eligibility. For second undergraduate degree students, only credit hours that apply toward that degree are counted toward the duration of eligibility. Once students have exceeded the 150 percent level of their program, they will no longer be eligible for financial assistance as undergraduate students.

The duration of eligibility is divided into yearly increments. The maximum number of credit hours for which students can receive assistance is as follows:

Freshman	47 credit hours
Sophomore	93 credit hours
Junior	140 credit hours
Senior	186 credit hours
Graduate	(Not Applicable)

Failure to meet this schedule will result in denial of financial assistance until students complete enough credit hours to advance to the next grade level. Also, failure to meet any of the other SAP requirements may result in loss of financial aid eligibility.

Unofficial Withdrawals
If students receive all grades of F or a combination of all F, FN, and W grades, the financial aid office will determine the last date of attendance by a review of the Office of the Registrar's records. Financial aid for that term will be re-calculated based upon the date of the unofficial withdrawal and may result in repayment of all grants and loans by students.

Financial Aid Probation
Each academic year, the OSFAS will review academic transcripts to confirm that the standards of SAP are being met. Students who have not met the requirements above will be placed on financial aid probation.

Probation will give the student a period of time to meet satisfactory academic standards. Students who continue to not meet these terms will be denied financial aid until satisfactory academic progress is achieved.

Mitigating Circumstances and Appeals
If mitigating circumstances affect students' ability to meet the SAP policy, those students are required to submit a detailed explanation of the reasons for poor academic performance. In addition, an academic advisor's recommendation is required. Possible mitigating circumstances are the death of a relative, an injury to or illness of the student, and other special circumstances that can be documented on a case-by-case basis. Appeal forms may be printed from the financial aid Web site (www.iupui.edu/finaid).

Contacting the Office of Student Financial Aid Services:
Web site: www.iupui.edu/finaid
Phone: (317) 274-4162
Fax: (317) 274-5930
Walk-in Counseling: Monday–Thursday, 8 a.m. to 6 p.m.; Friday, 9 a.m. to 5 p.m.; Saturday 9 a.m. to noon

Scholarship Information

IUPUI offers many unique scholarship opportunities for undergraduate students. Once enrolled at IUPUI, you are on your way to being eligible for these scholarships. The IUPUI Office of Student Scholarships (OSS) has over $250,000 to award to continuing students based on factors such as cumulative GPA, enrollment, major, and being a single parent. In addition, individual academic units sponsor separate scholarship opportunities for students in specific programs. We recommend that you contact your academic school with your intended major directly to research other scholarship opportunities. A comprehensive list of scholarships and downloadable applications, are available on the Scholarship Central Web site. You may also pick up applications in Cavanaugh Hall, Room 103. The Office of Student Scholarships also maintains a scholarship bulletin board in the hallway of Cavanaugh Hall, outside Room 103. The board is frequently updated with news of private-sector scholarships and award competitions. For additional information, call the Office of Student Scholarships at (317) 274-5516 or e-mail the office at escholar@@..

Below are a few of the continuing student scholarships available at IUPUI. See the Scholarship Central Web site for a more detailed listing with points of contact for various academic unit scholarships and awards.

McCracken Assist Scholarship
Up to $1,000—Created to assist single, custodial parents at IUPUI pursuing their first undergraduate degree to help meet their educational goals. Student must have financial need as determined by the FAFSA. U.S. citizens and/or permanent residents who are also Indiana residents are eligible. Contact the OSS for more details. Deadline: March 15.

Adult Outstanding Scholarships
Up to $1,000—Motivated adult (30+) returning students with at least 12 credit hours, GPA 3.3 in all courses since

returning. Contact the Office of Student Scholarships for more information. Deadline: March 15.

Robert E. Cavanaugh Memorial Scholarships
Up to $2,000—Students of all majors who have earned at least 26 credit hours at IUPUI, who have graduated from an Indiana high school, who demonstrate leadership abilities, and have demonstrated some financial need are encouraged to apply. Must have at least 26 credits at IUPUI and be currently enrolled. Deadline: March 15.

Charles O. McGaughey Leadership Award
Up to 2,000—This leadership award was established to recognize IUPUI upper class students who have demonstrated leadership abilities. Applicants must have a minimum 3.5 cumulative GPA to be eligible. Preference is given to students in liberal arts, science or business. Deadline: March 15.

IUPUI Continuing Honors Scholarship
$1,500/$750 part-time-This one-year scholarship is primarily for students participating in the Honors Program, although students, who are not in the Honors Program but have taken honors courses, are also eligible to apply. All applicants must have completed at least 12 credit hours with at least a 3.2 cumulative GPA. Applications are available in the Honors College office in Taylor Hall, Room 3140. Deadline: May 15.

Sam H. Jones Community Service Scholarships
$750 - 4,000-The scholarship recognizes students who have records of exemplary community and university service. Students can get involved in the community through programs such as Community Partner Scholars, Service Learning Assistants, Democracy Plaza Leaders and Community Work Study Team Leaders. For more information about these scholarships, contact the IUPUI Center for Service Learning at (317) 278-2662 located in BS 2010.

Norman Brown Diversity and Leadership Program
Up to $3,000 – This scholarship is designed to train diverse students with academic potential in valuable leadership skills. Transfer students and currently enrolled students who have previously completed 24 (but no more than 60) credit hours with a minimum cumulative GPA of 3.0 are eligible to apply. Underrepresented students are encouraged to apply. Students must be U.S. citizens. Additional funding may be available for those students with financial need. Contact the OSS for more details. Deadline: March 1.

IUPUI Undergraduate Research Opportunity Program
Amount varies—UROP offers undergraduate research grants and travel funds to encourage and recognize undergraduates who participate in research and other creative projects with faculty in all disciplines, including music and art. Formal research credits may be earned toward graduation. Contact the UROP Program Administrator, (317) 278-0644 for more information.

National Scholarship Opportunities
For information on national scholarship opportunities, visit the National Collegiate Honors Council Web site at www.nchchonors.org/hs-students-counselors-parents/scholarships/.

Graduate students should contact their departments for information about financial support.

Three Million Dollars in Scholarships from External Sources
In recent years, IUPUI students (graduates and undergraduates) have brought nearly $3 million annually in private sector scholarships and awards with them to help pay for their education. Students can find information on such opportunities from high school guidance offices, from scholarship source books, and from the online scholarship search databases available at no charge to the public. These free connections are available from the Scholarship Central Web site. Search services have different scholarship information, so students should consult several of them. Many IUPUI students have had luck with larger search services such as FastWeb, which have efficient filters in place that eliminate scholarship entries for which students are not eligible. FastWeb even has applications for many of its scholarships available online.

Remember, students should never pay for scholarship or financial aid information!

Graduation Requirements

Applying for Graduation

Candidates for graduation initiate the certification process by filing an Intent to Graduate form with the recorder of their school at least one year prior to their expected graduation date. Purdue degree candidates must register for CAND 991. Details concerning the application deadlines of specific schools and any additional requirements related to graduation are available from the recorder or the school sections of this bulletin.

Completion of Degree Requirements

When students contact the recorder about graduation, they should double-check that they in fact will have completed graduation requirements. The “My Degree Progress” option in the self-service area in OneStart shows what courses students still need to take and whether all transfer work has been entered. Some schools perform degree audits either when students file for graduation or at the beginning of their senior year. Students should go over audits with their advisors to make sure they are accurate and contact the school recorder with questions. Common mistakes that result in students’ failure to graduate are unacceptable grades and not registering for necessary courses, dropping them during the last semester, or otherwise failing to complete required courses. Students may graduate with incompletes on their record, provided they are not for required courses. Residency requirements also affect graduation eligibility. For more information visit registrar.iupui.edu.

Required Grade Point Average

In addition to completing all the required course work, students must have a specific overall grade point average and a specific GPA in their major to graduate. Most schools also require grades of C or higher in major courses. Students should familiarize themselves with the policies of their program.

Honors College

The IUPUI Undergraduate Honors College:

Philosophy and Requirements

The IUPUI Honors College, housed in Taylor Hall, challenges students to strengthen and enrich their university education. The program raises student academic achievement and increases intellectual vitality throughout the campus, the Indianapolis community, the state, and beyond. The Honors Program accomplishes this by being highly inclusive and offering students a number of different access points. Unlike most traditional honors programs, IUPUI's program accommodates the educational needs of beginning traditional and nontraditional students, returning students, and part-time students, while consistently maintaining an emphasis on academic excellence.

Participation in Honors
The Honors Program is available to students at all levels of university study. All qualified undergraduates, including entering freshmen, may take courses offered through the Honors Program. Students receive permission to register for honors work based on merit criteria, which stress aptitude, motivation, and past attainment.

The Honors Program recognizes that motivation, enthusiasm, and interest are often equally important indicators of success as numerical criteria. This flexibility assures that honors opportunities are available to all interested students.

Freshmen
Entering freshmen are automatically invited to participate in the Honors Program when they (1) have a minimum combined SAT mathematics, critical reading, and written score of 1800 or ACT composite score of 26 (2) will graduate in the upper 10 percent of their high school class; and (3) have maintained a grade point average (GPA) of 3.5 or higher in challenging, academic course work. Entering students who have been unconditionally admitted to University College are eligible to participate in honors courses.

Honors learning communities address the needs and interests of honors students and are available to qualifying full-time entering honors students. Since all new full-time freshmen are required to participate in learning, insofar as is possible, honors students will be placed in an honors learning community.

Transfer Admission
Transfer students who have completed at least 12 transferable credit hours at their previous institution with an overall GPA of 3.2 or higher are encouraged to apply to the Honors Program.

Continuing IUPUI Student Admission
Freshmen and sophomores who are already enrolled at IUPUI are invited to apply to the Honors Program once they have completed at least 12 credit hours of non-remedial course work with a GPA of 3.2 or higher.

Current IUPUI juniors who are interested in applying should have a GPA of 3.3 or higher and have completed at least 9 credit hours of honors course work previously.

Honors Students and Bachelor's Degrees
The Honors Program offers students the opportunity not only to take honors courses, but also to earn honors credit that can lead to completing their degree "with honors."

Completion of the Honors Notation signifies that the student has performed at an exceptional level and has been exposed to the principles of undergraduate learning as well as to interdisciplinary course work.

Students may earn a General Honors Notation by completing the following prescribed program of honors study. This notation signifies that the student has performed in an outstanding manner across a broad spectrum of study in diverse fields of the arts and sciences. When successfully completed, the General Honors Notation is listed on the student's IUPUI transcript. Students who graduate with a degree from Indiana University may have the notation also listed on their diploma. Purdue University does not provide this option on its diplomas.
Requirements to graduate with the General Honors Notation, students must:
Complete 18 credit hours of honors credits:

- 9 credit hours must be completed in regular Honors course work.
- The remaining 9 credit hours may be completed with some combination of course work, independent research, culture studies, etc., as noted under "Credit Options" below.

Maintain the following grade requirements:

- A GPA of 3.3 in all university course work completed.
- A GPA of 3.3 in all Honors course work completed.
- To count for credit toward the Honors Notation, a grade of B or higher must be obtained in the course (i.e., courses in which a grade of B- or lower is received will not count toward the 18 hour credit requirement).
- Submit an Application for Honors Notation by the second week of the semester in which the student will graduate.

Credit Options
Honors courses form the common academic core.

- A minimum of 9 credit hours are required.
- Choose from honors-designated courses (H399, H499) and other honors-approved courses (e.g., "S" prefix courses).

"H" Option courses enable students to design an Honors experience in selected courses with individual faculty.

- Up to 9 credit hours of H Option credit will count toward the notation.
- Application for "H" Option credit is required after consultation with the course instructor.

Research course work provides students with valuable research experience as well as excellent preparation for graduate or professional study.

- Up to 6 credit hours of H399 Honors Independent Research will count toward the notation.
- Up to 6 credit hours of H499 Honors Senior Thesis/ Project will count toward the notation.
- Students normally pursue a research emphasis that is related to their chosen major or that may serve as their capstone experience.

- Students may receive financial support through the Undergraduate Research Opportunities Program.

Graduate course work enables students to become familiar with graduate education while delving further into their major field.

- Up to 6 credit hours of approved graduate course work will count toward the notation.

Community service offers valuable professional experience and enables students to give back to communities while examining how their academic programs intersect with the world at large.

- Up to 3 hours of community service "equivalent credits"* will count toward the notation.
- For each 30 hours of approved service, students will earn 1 "credit equivalent" upon completion of a six- to ten-page reflection paper on the significance of this service to their academic growth.
- Service learning course work is also available under regularly offered Honors Courses.

International Experiences and Culture Studies develop informed, empathic, and globally experienced leaders.

- Up to 6 credits will count toward the notation for participation in an approved study abroad program.
- Three "equivalent credits"* can be earned by completing four semesters of a foreign language (including American Sign Language).
- Three "equivalent credits"* can be earned by completing two semesters of non-honors courses that focus on cultures other than those of Western Europe. Courses may be selected from a list of qualified courses available online or in the Honors Program Office. Students must choose two courses in the same cultural sphere. Note: Courses used in this way may not be double-counted for another Honors category.

*Equivalent credits are not counted toward official degree requirements but are granted toward qualification for the General Honors Notation. They are internal to the Honors Program only and are not included in official credit hour calculations by the Office of the Registrar.

Honors Associate Notation
Candidates for the Honors Associate Notation must complete the 9 credit hours of Honors work as outlined above. Six of these credit hours should be in Honors-designated courses. Students must also complete all regular associate degree requirements with a minimum overall GPA of 3.3 and at least a 3.3 GPA in honors courses.

Departmental or School Honors Programs

In addition to the General Honors Program that is open to all qualified students, there are currently honors programs in nine departments, each with its own requirements: Departments of Biology, Chemistry, Communication Studies, French, Geology, German, Philosophy, Political Science, and Psychology. Honors degrees also are offered by the Kelley School of Business, the School of Nursing, and the School of Public and Environmental Affairs. For information on the requirements for these programs, see each school's section in this bulletin.

Honors House
Honors House is located in the Campus River Walk Apartments and is open to Honors-eligible students. A full-time resident assistant, who serves as a mentor, guide, and resource person for residents, lives on site and assists in program development and implementation as well as meeting the individual needs of each resident.

Honors programming is offered throughout the year and creates excellent opportunities for Honors students and faculty to interact. Regular weekly and monthly events help build a stronger sense of community and supplement classroom activities. Students create their own Honors House Student Council that oversees House activities and provides direction for the future growth and development of Honors House. The Honors Program maintains an office on site to provide academic advising, administrative assistance, and special program support for Honors House residents.

Honors Club
The Honors Club is dedicated to uniting people interested in maximizing their educational opportunities. The club provides social, educational, and community service opportunities for the student body and faculty that enhance the learning environment at IUPUI and in the community. Membership is open to all university students, faculty, and staff. Monthly meetings, along with specially planned activities, offer students, faculty, and staff numerous opportunities for enhancing their educational endeavors. Students should e-mail their interest in joining the club to honors@iupui.edu.

Bepko Scholars and Fellow Program
The Bepko Scholars and Fellows Program is a comprehensive undergraduate and graduate scholarship program that aims to develop engaged scholars-students who view service and learning as keys not only to personal growth, but also to the growth and vitality of the communities in which they live.

Students begin as Bepko Scholars their freshman year. An enriched and integrated liberal arts curriculum supplements the in-depth training they receive within their majors. Scholars have access to the full range of state-of-the-art facilities available at IUPUI while faculty committed to undergraduate teaching serve as mentors. They also have supplemental programming-including access to distinguished state, national, and international leaders as well as conversations with civic and nongovernmental organizations-supplements classroom activities. Opportunities for study abroad and internships as well as intensive preparation for graduate and professional school admission are provided.

An integral part of the program is service learning. Scholars are expected to become actively engaged in service endeavors: from volunteering with local organizations to research with public service offices, scholars are involved in a large variety of civic activities. When scholars remain at IUPUI for their graduate or professional studies, they become Bepko Fellows. Fellows continue their civic engagement activities and serve as mentors for new scholars. Colloquia and seminars supplement their extensive graduate training. Admission to the program is highly selective, with approximately 20 scholars admitted each year. Students must apply as freshmen (transfer and graduate students

are not eligible for this award) and for the fall semester-awards are not available to students who begin their studies in the spring or summer.

To be eligible for consideration, students must present excellent academic credentials, have a demonstrated commitment to community service, and clear objectives for both their undergraduate and graduate degree program. Students must apply by December 1.
The scholarship provides full tuition and fees at the Indiana resident rate as well as books for four years of undergraduate study. On-campus housing expenses are also provided for the freshmen year. When scholars become fellows at IUPUI, the program will provide $5,000 in tuition support for up to four years of graduate or professional study. Further information and application instructions are available at www.BepkoScholars.iupui.edu.

Orientation

All new students and transfer students beginning at IUPUI for their first degree-seeking semester must attend the New Student Orientation program. The orientation program has two specially designed programs. The first is a full-day orientation for new students and transfer students who will be transferring in less than 18 credit hours. An overview of campus resources will be provided, and students will receive information about the school or program in which they are interested, work with current IUPUI students, meet with an academic advisor, register for classes, participate in several interactive information sessions, and receive their student ID card (the Jagtag).

The second program offered is for transfer students bringing in more than 18 credit hours. Transfer students will have the opportunity to meet with their academic advisor, participate in a technology session, take a campus tour, get their student ID (the Jagtag), and receive assistance with registration.

Students are required to obtain their technology account before attending orientation (see Office of Admissions materials). They also must pay a new student enrollment fee that is assessed of all students who are beginning their first semester in a degree-seeking program, including intercampus transfers and students seeking a second degree. The fee is not contingent on participation in the program.

Reservations are required. For more information or to schedule an orientation session, please go online at welcome.iupui.edu or call (317) 274-4240.

Placement Testing

Placement tests (mathematics, chemistry, English as a Second Language, and world languages) are administered by the IUPUI Testing Center from 8 a.m. to 8 p.m., Monday through Friday, and 8 a.m. to 5 p.m. on Saturday. Students are responsible for scheduling their placement tests when they reserve their New Student Orientation. Reservations can be made with a valid username and passphrase online through the self-service system at welcome.iupui.edu or by calling the Office of Orientation Services at (317) 274-4240 between 8 a.m. and 5 p.m., Monday through Friday. Placement tests should be scheduled at least two weeks prior to orientation to ensure that the students' placement test results will be available for advising purposes. (Results are valid for up to one year.)

Each placement test will take approximately 45 minutes to 1 hour to complete. (For more information on placement testing, see the IUPUI Testing Center Web site at tc.iupui.edu.) Students obtain their placement test results from their academic advisors at the New Student Orientation program. If students have not taken the placement tests or their results are not available, they may be limited to a restricted list of courses that do not require placement tests.

All beginning undergraduate students whose programs require mathematics are required to take placement tests in mathematics before enrolling for the first semester at IUPUI. Some applicants may be directed by the Office of Admissions to complete placement tests before the office will finalize an admission decision. The placement test results indicate the students' level of preparedness and the proper or recommended course placement for mathematics. Mathematics placement scores are good for one year from the test date.

Students who have not yet successfully completed one college-level English composition course (ENG W131) are required by the Department of English to reflect on their writing experiences using structured materials before attending New Student Orientation. This guided self-placement (GSP) process offers students a structured opportunity to participate in selecting an appropriate writing course. For more information on the guided self-placement process for English writing courses and preparing for placement tests, students can visit the IUPUI Testing Center website (http://tc.iupui.edu/testing) or the website for the Writing Program (http://english.uc.iupui.edu).

Students who have successfully completed college-level work in English (with a grade of C or above in ENG W131 within the last two years) and mathematics (with a grade of C or above in MATH 11000 or equivalent courses within the last two years) are exempt from the guided self-placement process and taking math placement tests. Students may call the Office of Orientation Services at (317) 274-4240 to determine whether they are exempt from any or all of the placement tests.

Placement tests for world languages (French, German, and Spanish), and chemistry are also available. Students who plan to take these subjects in their first semester should be tested prior to New Student Orientation. Reservations can be made with a valid username and passphrase online through the self-service system at welcome.iupui.edu or by calling the Office of Orientation Services at (317) 274-4240. Call (317) 274-6872 for more information about the chemistry placement test.

Completing your placement tests to the best of your ability is important. Retakes will only be granted for extenuating reasons, and students must receive an academic advisor's signature. The most recent score will be taken when determining student placement. (For more information about preparing for placement testing, please see http://www.act.org/compass/sample/math.html.)

- Testing for Students Whose Native Language is Not English/English for Academic Purposes (EAP) Placement Testing

- Accommodations for Placement Testing
- Cost for Placement Testing
- External and National Testing

Testing for Students Whose Native Language is Not English/English for Academic Purposes (EAP) Placement Testing

All new students—graduate and undergraduate—whose native language is not English are required to take the EAP placement test prior to registration. This test is administered by the Testing Center on behalf of the English for Academic Purposes Program. All inter-national students from non–English speaking countries as well as U.S. permanent residents and others referred by the Office of Admissions take the EAP placement test in lieu of the English Placement Test that native speakers of English are required to take.

Those who need to further develop their English writing skills will be assigned to appropriate EAP classes. These courses are required and should be completed as soon as possible. This requirement has been established in recognition of the vital importance of language competency to the academic success of students.

The intermediate courses—ENG G009 and G010—and the advanced courses— ENG G011 and G012—focus on fundamental language skills. This sequence is designed to improve reading and grammar skills as well as listening comprehension and speaking proficiency. Credits from these courses do not count toward IUPUI degrees; however, grades awarded will be included in the student's grade point average.
Undergraduate EAP students are also placed in an appropriate EAP section of the IUPUI writing courses, ENG W001 or W131. These courses carry the same credit and the same requirements as the regular Department of English sections. ESL W131 fulfills part of the communication core requirement focusing on writing skills for undergraduate students. The credit from this course counts toward IUPUI undergraduate degrees, providing that students receive a grade of C or higher. A few undergraduate programs accept a grade of C–.

Graduate EAP students who need to improve writing skills are placed in ENG G013, which focuses on the special writing demands of graduate-level classes. Those who need to improve listening and speaking skills are placed in G020, which focuses on the verbal and aural skills required in professional settings.

All new international students should contact the Office of International Affairs at (317) 274-7000 to complete the admission process. To register for the EAP placement test, new admitted undergraduate students should schedule the EAP placement test through the Office of Orientation Services at (317) 274-4240, and admitted graduate students should schedule the EAP test directly with the Testing Center at (317) 274-2620. For more information about the EAP Program, call (317) 274-2188 or visit the Web site for the EAP Program (http://eap.iupui.edu).

Accomodations for Placement Testing

Students who, because of disabilities, need special equipment, extended time, or tests taken in separate rooms—whether for placement testing, orientation, or for actual classes—must contact the Office of Adaptive Educational Services (AES) before or at the same time they schedule placement tests. Since registering with AES and providing them with documentation takes time, as does the arrangement of services, students must contact AES (317) 274-3241 or go to Joseph T. Taylor Hall (UC), Room 137, as soon as possible before classes start.

Cost for Placement Testing

There is no exam fee associated with the IUPUI placement tests in English, reading, mathematics, chemistry, and world languages. However, students who change their placement test reservations less than 24 hours in advance or who fail to attend their scheduled test dates will be assessed $7 for each rescheduling.

External and National Testing

In addition to placement testing, the IUPUI Testing Center administers a variety of tests for Course Test Out, credit by examination, career counseling, and student development purposes. The Testing Center also administers classroom make-up tests, diagnostic academic skills tests, and a variety of admissions, certification, and licensure tests. For more information (including fee rates), contact IUPUI Testing Center, Union Building, Suite G003, 620 Union Drive, Indianapolis, IN 46202-5168; (317) 274-2620; Web site: tc.iupui.edu/testing/.

Principles of Undergraduate Learning

The Principles of Undergraduate Learning are the essential ingredients of the undergraduate educational experience at Indiana University–Purdue University Indianapolis. These principles form a conceptual framework for all students' general education but necessarily permeate the curriculum in the major field of study as well. Other specific expectations for IUPUI's graduates are determined by the faculty in a student's major field of study. Together, these expectations speak to what graduates of IUPUI will know and what they will be able to do upon completion of their degree.

Core Communication and Quantitative Skills
Definition: The ability of students to write, read, speak and listen, perform quantitative analysis, and use information resources and technology—the foundation skills necessary for all IUPUI students to succeed.

Outcomes: This set of skills is demonstrated, respectively, by the ability to: express ideas and facts to others effectively in a variety of written formats; comprehend, interpret, and analyze texts; communicate orally in one-on-one and group settings; solve problems that are quantitative in nature; and make efficient use of information resources and technology for personal and professional needs.

Critical Thinking
Definition: The ability of students to analyze carefully and logically information and ideas from multiple perspectives.

Outcomes: This skill is demonstrated by the ability of students to analyze complex issues and make informed decisions; synthesize information in order to arrive at reasoned conclusions; evaluate the logic, validity, and relevance of data; solve challenging problems; and use knowledge and understanding to generate and explore new questions.

Integration and Application of Knowledge
Definition: The ability of students to use information and concepts from studies in multiple disciplines in their intellectual, professional, and community lives.
Outcomes: This skill is demonstrated by the ability of students to apply knowledge to enhance their personal lives; meet professional standards and competencies; and further the goals of society.

Intellectual Depth, Breadth, and Adaptiveness
Definition: The ability of students to examine and organize disciplinary ways of knowing and to apply them to specific issues and problems.

Outcomes: Intellectual depth describes the demonstration of substantial knowledge and understanding of at least one field of study; intellectual breadth is demonstrated by the ability to compare and contrast approaches to knowledge in different disciplines; and adaptiveness is demonstrated by the ability to modify one's approach to an issue or problem based on the contexts and requirements of particular situations.

Understanding Society and Culture
Definition: The ability of students to recognize their own cultural traditions and to understand and appreciate the diversity of the human experience, both within the United States and internationally.

Outcomes: This skill is demonstrated by the ability to compare and contrast the range of diversity and universality in human history, societies, and ways of life; analyze and understand the interconnectedness of global and local concerns; and operate with civility in a complex social world.

Values and Ethics
Definition: The ability of students to make judgments with respect to individual conduct, citizenship, and aesthetics.

Outcomes: A sense of values and ethics is demonstrated by the ability of students to make informed and principled choices regarding conflicting situations in their personal and public lives and to foresee the consequences of these choices; and recognize the importance of aesthetics in their personal lives and in society.

Programs Available

Undergraduate Programs

Bachelor's Degree (Baccalaureate) Programs

The typical undergraduate degree program is either a bachelor of science or a bachelor of arts degree. The degree typically takes four years for full-time students and substantially longer for part-time students. IUPUI's bachelor's degrees are awarded in the professional schools and within the arts and sciences.

Associate Degree Programs

Some schools award an associate degree after the completion of two years of full-time college course work. Usually the course work completed for the associate degree will count toward the bachelor's degree in the same discipline.

Certficate Programs

Certificate programs resemble minors but generally require more credit hours. Some certificate programs are a stand-alone program, which means that a student does not have to be working toward a two- or four-year degree to complete the certificate program. Specific requirements can be found in the section for the school offering the certificate.

Non-Degree Programs

The Community Learning Network (CLN) offers hundreds of continuing education (noncredit) classes and serves over 11,000 learners annually. With more than 18 noncredit certificate programs in areas as diverse as photography and stress management, CLN's noncredit program helps learners to take the first step in career development. These courses provide educational opportunities for a lifetime of learning. Visit the Community Learning Network Web site (www.cln.iupui.edu) to find out more about noncredit offerings.

Registration

Registration for first-time students takes place in conjunction with orientation. In subsequent semesters, students register themselves online via OneStart (onestart.iu.edu). Information about registration is available on the Office of the Registrar website (www.registrar.iupui.edu). Information on distance education, Weekend College, and off-campus classes is also available on the CLN Web site.

Students can change their addresses online through OneStart (onestart.iu.edu).

All students are issued university e-mail addresses. Should students choose to use a different e-mail provider, they should forward their university e-mail to their preferred service provider in order to be sure to receive important university announcements.

- Waitlisting
- Enrollment Permissions and Holds
- Dropping and Adding Classes
- Registration Agreement
- Nontraditional Scheduling Options
- Fees

Waitlisting

Occasionally, students will be unable to register in a class because it is filled to capacity. Seats may open up, however, if registered students drop the class during the registration period. Through an automated waitlisting system, the first person to make a waitlist request for a class is placed at the top of the list. When a seat opens up, as long as there are no other restrictions or conflicts, that person is registered automatically for the course. At that time, an email message is sent from the Office of the

Registrar to the student's University email account. For more information, check the Registrar website.

Enrollment (Class) Permissions and Holds

Class Permissions: Schools may restrict enrollment in particular courses, so students should review the course descriptions or view course offerings on the Registrar website, paying particular attention to class notes. For instance, some courses, such as upper-division courses in business, are open only to students officially enrolled in certain schools. Other courses may be restricted to students with sophomore, junior, senior, or graduate student status. Finally, some courses require a student to have completed one or more courses prior to enrollment (known as "prerequisites"). Otherwise ineligible students who believe their personal preparation overrides the restrictions of a class may seek the department's or instructor's permission to enroll in the class. If achieved, an official in the department will add a class permission to that student's record which students may view in their Student Center from OneStart. Once the class permission has been added, the student may add the class.
Holds: On occasion, students have a hold placed on their enrollment. When this occurs, they cannot register for courses because they have failed to meet some requirement of the university or school and cannot proceed until the problem is resolved. Problems that result in a hold include academic probation or dismissal or failure to pay tuition or other fees. Students with unpaid library fines, outstanding parking tickets, or a disciplinary problem also may be placed on hold. Students can review their status on OneStart, and if they find they have such a hold, they should contact the office(s) listed on that hold to resolve the problem.

Dropping and Adding Classes

Before dropping a class, each student should discuss options with their academic advisor as dropping a class should only be done when truly necessary. To drop a course and make a successful transition into another class, students are encouraged to drop and add before classes begin even though drop and add is available through the first week of classes for major semesters. Students who drop before or during the first week of classes will receive no grade and pay no late drop fees. Students wishing to add a course after the start of the term should do so as close to the start of the semester as possible, as instructors may refuse students admission into classes if they believe that students have already missed too much work in the new class. Note: There is a University College policy restricting the number of drops for a University College students. If you are a University College student, please seek the advise of your advisor.

During summer school, students should drop and add during the first three days of classes.

During the first four weeks of regular semesters, partial refunds are given for dropped courses and depending on the time of year, signatures of advisors and instructors are needed. To drop a class in the final part of the semester, students who have a serious and documented reason, such as a serious medical problem, need all of the previous signatures plus the dean's signature.

During this final part of the semester, instructors have the authority to assign the grade of F if a student's work has been unsatisfactory, even if permission to withdraw has been obtained. For complete information on drop/add procedures and deadlines visit the Registrar website on drop and add (http://registrar.iupui.edu/drop.html) along with the Academic Calendar for that term (http://registrar.iupui.edu/accal.html).
Students who choose to withdraw from a semester must officially drop all classes. Failing to attend class does not mean a student has dropped a class but rather will result in an F in the course(s). Failing to pay for the course(s), once registered, will result in both an F and a bill for the course. For more information on dropping and adding classes, students should see a later section in this bulletin, "Academic Policies and Procedures," the *Schedule of Classes,* or the Web site registrar.iupui.edu.

Registration Agreement

When students register, the university reserves specific class spaces for those students; and commits resources to provide the instruction that has been selected. The students, then, assume the responsibility for paying those course fees or for notifying the university if they decide not to attend. The availability of courses is subject to change. A class may be cancelled due to low enrollment or departmental staffing considerations. The department canceling a class will notify registered students and help them make alternate arrangements, if necessary. Registered students also will be notified if the meeting time and/or location of a course has changed since the student registered.

Registration will not automatically be cancelled for nonpayment of fees. Students must either pay their fees or drop all of their classes by the end of the first week of classes if they do not intend to return to IUPUI for the semester. Canceling registration by the first week of classes releases class spaces in time to be available to other students. Students who decide to cancel their registration should log on to OneStart (onestart.iu.edu) Self Service, go to Student Center, click on Drop/Add Classes and proceed to drop all classes.

Nontraditional Scheduling Options

IUPUI offers numerous educational options outside the traditional classroom. These Distance Learning Delivery Systems are found at convenient locations, at times stretching over seven days and nights, and, in addition to regular course formats, are offered online, on TV, and through the U.S. mail. For more information on course and credit program options, see the Registrar Special Course Listings (http://registrar.iupui.edu/splashcln.html) or the IUPUI Community Learning Network at www.cln.iupui.edu.
See also information about CUE (Consortium for Urban Education), http://registrar.iupui.edu/cue.html a group of Indianapolis colleges and universities that augments IUPUI's traditional on-campus courses. Students in some programs may be registered on more than one campus simultaneously. Check with either the school involved or the Office of the Registrar for more information.

Distance Learning
IUPUI's Community Learning Network (CLN) offers classes off campus year-round and on the weekends.

Through television, CLN connects college-bound learners in metropolitan Indianapolis and central Indiana with the academic and technical resources at IUPUI. Lectures are delivered over public television, WFYI-TV Channel 20, Time Warner Channel 19, Comcast Cablevision Channel 39, or by videotapes purchased from the IUPUI Bookstore. Syllabi are offered online. Students interact with peers and faculty through computers, fax, telephone conferencing, and voice messaging systems. Students may complete all requirements for the School of Liberal Arts Associate of Arts and the School of Continuing Studies Associate of Arts in General Studies degrees through CLN. Each semester, new courses are offered over the Internet. Visit www.cln.iupui.edu for more information.

Internet and Online Courses
Increasingly, Internet programs are part of the way IUPUI offers classes. Internet programs use e-mail, the Internet, computer conferencing, and other Internet-based applications. Students often can complete program requirements without going to a learning center. Currently, course descriptions are online, and over 2,600 courses have their syllabi and, in some cases, all class materials online via Oncourse.

Off-Campus Sites
In 1979, the nation's first major off-campus Learn and Shop College Credit Program began offering classes in the training rooms of major department stores in three suburban Indianapolis shopping centers and in area high schools. The program now teaches at two permanent sites: Glendale Mall and the Carmel Community Life and Learning Center. Students may satisfy the requirements for the School of Liberal Arts Associate of Arts degree and the School of Continuing Studies Associate of General Studies by taking courses exclusively in off-campus locations. The Weekend College Office is located in the Enrollment Center, open Saturdays and Sundays during the fall and spring semesters.

Correspondence Courses
IU's Independent Study Program offers numerous credit courses through home study. Instructors and students communicate in writing, by phone, or by e-mail. Students start these courses any time and complete them at their own pace. This flexibility is especially valuable to adult learners or people with swing-shift jobs, for whom regular classes are virtually impossible to attend. These courses, however, do not count toward a full- or part-time load for the purpose of financial aid. Students need to check with their academic units to determine which, if any, correspondence courses can be used to meet requirements for their degree programs. The Independent Study Program booklet is available in most school offices and by calling (800) 334-1011. For additional information, see Independent Study Program in the School of Continuing Studies section of this bulletin or the Web site scs.indiana.edu.

Indiana College Network (ICN)
This system delivers classes from seven Indiana universities and several independent colleges over satellite, intercampus television networks, the Internet, CD-ROM, or through correspondence. The ICN evolved from the earlier Indiana Higher Education Telecommunication System (IHETS), which delivered programs by satellite to 300 receiving sites. For information, visit www.icn.org.

Fees
IUPUI tuition is set annually by the Trustees of Indiana University. Current fees appear on the Office of the Bursar (formerly Student Account Services) Web site (http://www.bursar.iupui.edu). Rules that determine whether a student is a resident or nonresident for fee purposes reside within the IUPUI Registrar Office. Please click on the Customer Service link on the left side of the page to use and view a fee estimator.

The fee estimator will give an estimate of fees for the number of credit hours and program for which you register. Some fees not included in the estimate: New students are charged a New Student Enrollment fee one time; parking, books and supplies. There is various payment options listed within the Customer Service link.

Bills are sent electronically via the student IU email address. If the student is eligible for Financial Aid the aid will either appear as an anticipated aid credit if prior to ten days before the start of the semester or as a credit on the student account. Please check your student account via OneStart (www.onestart.iu.edu) for your student account, financial aid information, and much more student information.

Honors Program
The IUPUI Undergraduate Honors Program: Philosophy and Requirements

The IUPUI Honors College, housed in Taylor Hall, challenges students to strengthen and enrich their university education. The program raises student academic achievement and increases intellectual vitality throughout the campus, the Indianapolis community, the state, and beyond. The Honors Program accomplishes this by being highly inclusive and offering students a number of different access points. Unlike most traditional honors programs, IUPUI's program accommodates the educational needs of beginning traditional and nontraditional students, returning students, and part-time students, while consistently maintaining an emphasis on academic excellence.

Participation in Honors
The Honors Program is available to students at all levels of university study. All qualified undergraduates, including entering freshmen, may take courses offered through the Honors Program. Students receive permission to register for honors work based on merit criteria, which stress aptitude, motivation, and past attainment.

The Honors Program recognizes that motivation, enthusiasm, and interest are often equally important indicators of success as numerical criteria. This flexibility assures that honors opportunities are available to all interested students.

Freshmen
Entering freshmen are automatically invited to participate in the Honors Program when they (1) have a minimum combined SAT mathematics, critical reading, and written score of 1800 or ACT composite score of 26 (2) will graduate in the upper 10 percent of their high school class; and (3) have maintained a grade point average (GPA) of 3.5 or higher in challenging, academic course work. Entering students who have been unconditionally admitted to University College are eligible to participate in honors courses.

Honors learning communities address the needs and interests of honors students and are available to qualifying full-time entering honors students. Since all new full-time freshmen are required to participate in a learning, insofar as is possible, honors students will be placed in an honors learning community.

Transfer Admission
Transfer students who have completed at least 12 transferable credit hours at their previous institution with an overall GPA of 3.2 or higher are encouraged to apply to the Honors Program.

Continuing IUPUI Student Admission
Freshmen and sophomores who are already enrolled at IUPUI are invited to apply to the Honors Program once they have completed at least 12 credit hours of nonremedial course work with a GPA of 3.2 or higher.

Current IUPUI juniors who are interested in applying should have a GPA of 3.3 or higher and have completed at least 9 credit hours of honors course work previously.

Honors Students and Bachelor's Degrees
The Honors Program offers students the opportunity not only to take honors courses, but also to earn honors credit that can lead to completing their degree “with honors.” Completion of the Honors Notation signifies that the student has performed at an exceptional level and has been exposed to the principles of undergraduate learning as well as to interdisciplinary course work.

Students may earn a General Honors Notation by completing the following prescribed program of honors study. This notation signifies that the student has performed in an outstanding manner across a broad spectrum of study in diverse fields of the arts and sciences. When successfully completed, the General Honors Notation is listed on the student’s IUPUI transcript. Students who graduate with a degree from Indiana University may have the notation also listed on their diploma. Purdue University does not provide this option on its diplomas.
Requirements to graduate with the General Honors Notation, students must:
Complete 18 credit hours of honors credits:

- 9 credit hours must be completed in regular Honors course work.
- The remaining 9 credit hours may be completed with some combination of course work, independent research, culture studies, etc., as noted under “Credit Options” below.

Maintain the following grade requirements:

- A GPA of 3.3 in all university course work completed.
- A GPA of 3.3 in all Honors course work completed.
- To count for credit toward the Honors Notation, a grade of B or higher must be obtained in the course (i.e., courses in which a grade of B- or lower is received will not count toward the 18 hour credit requirement).
- Submit an Application for Honors Notation by the second week of the semester in which the student will graduate.

Credit Options
Honors courses form the common academic core.

- A minimum of 9 credit hours are required.
- Choose from honors-designated courses (H399, H499) and other honors-approved courses (e.g., “S” prefix courses).

“H” Option courses enable students to design an Honors experience in selected courses with individual faculty.

- Up to 9 credit hours of H Option credit will count toward the notation.
- Application for “H” Option credit is required after consultation with the course instructor.

Research course work provides students with valuable research experience as well as excellent preparation for graduate or professional study.

- Up to 6 credit hours of H399 Honors Independent Research will count toward the notation.
- Up to 6 credit hours of H499 Honors Senior Thesis/ Project will count toward the notation.
- Students normally pursue a research emphasis that is related to their chosen major or that may serve as their capstone experience.
- Students may receive financial support through the Undergraduate Research Opportunities Program.

Graduate course work enables students to become familiar with graduate education while delving further into their major field.

- Up to 6 credit hours of approved graduate course work will count toward the notation.

Community service offers valuable professional experience and enables students to give back to communities while examining how their academic programs intersect with the world at large.

- Up to 3 hours of community service “equivalent credits”* will count toward the notation.
- For each 30 hours of approved service, students will earn 1 “credit equivalent” upon completion of a six- to ten-page reflection paper on the significance of this service to their academic growth.
- Service learning course work is also available under regularly offered Honors Courses.

International Experiences and Culture Studies develop informed, empathic, and globally experienced leaders.

- Up to 6 credits will count toward the notation for participation in an approved study abroad program.
- Three “equivalent credits”* can be earned by completing four semesters of a foreign language (including American Sign Language).
- Three “equivalent credits”* can be earned by completing two semesters of non-honors courses that focus on cultures other than those of Western Europe. Courses may be selected from a list of qualified courses available online or in the Honors Program Office. Students must choose two courses in the same cultural sphere. Note: Courses used in this way may not be double-counted for another Honors category.

*#Equivalent credits are not counted toward official degree requirements but are granted toward qualification for the General Honors Notation. They are internal to the Honors Program only and are not included in official credit hour calculations by the Office of the Registrar.

Honors Associate Notation
Candidates for the Honors Associate Notation must complete the 9 credit hours of Honors work as outlined above. Six of these credit hours should be in Honors-designated courses. Students must also complete all regular associate degree requirements with a minimum overall GPA of 3.3 and at least a 3.3 GPA in honors courses.

Departmental or School Honors Programs

In addition to the General Honors Program that is open to all qualified students, there are currently honors programs in nine departments, each with its own requirements: Departments of Biology, Chemistry, Communication Studies, French, Geology, German, Philosophy, Political Science, and Psychology. Honors degrees also are offered by the Kelley School of Business, the School of Nursing, and the School of Public and Environmental Affairs. For information on the requirements for these programs, see each school’s section in this bulletin.

Honors House

Honors House is located in the Campus River Walk Apartments and is open to Honors-eligible students. A full-time resident assistant, who serves as a mentor, guide, and resource person for residents, lives on site and assists in program development and implementation as well as meeting the individual needs of each resident.

Honors programming is offered throughout the year and creates excellent opportunities for Honors students and faculty to interact. Regular weekly and monthly events help build a stronger sense of community and supplement classroom activities. Students create their own Honors House Student Council that oversees House activities and provides direction for the future growth and development of Honors House. The Honors Program maintains an office on site to provide academic advising, administrative assistance, and special program support for Honors House residents.

Honors Club

The Honors Club is dedicated to uniting people interested in maximizing their educational opportunities. The club provides social, educational, and community service opportunities for the student body and faculty that enhance the learning environment at IUPUI and in the community. Membership is open to all university students, faculty, and staff. Monthly meetings, along with specially planned activities, offer students, faculty, and staff numerous opportunities for enhancing their educational endeavors. Students should e-mail their interest in joining the club to honors@iupui.edu.

Bepko Scholars and Fellow Program

The Bepko Scholars and Fellows Program is a comprehensive undergraduate and graduate scholarship program that aims to develop engaged scholars—students who view service and learning as keys not only to personal growth, but also to the growth and vitality of the communities in which they live.

Students begin as Bepko Scholars their freshman year. An enriched and integrated liberal arts curriculum supplements the in-depth training they receive within their majors. Scholars have access to the full range of state-of-the-art facilities available at IUPUI while faculty committed to undergraduate teaching serve as mentors. Access to supplemental programming–including distinguished state, national, and international leaders as well as conversations with civic and nongovernmental organizations–supplements classroom activities. Opportunities for study abroad and internships as well as intensive preparation for graduate and professional school admission are provided.

An integral part of the program is service learning. Scholars are expected to become actively engaged in service endeavors: from volunteering with local organizations to research with public service offices, scholars are involved in a large variety of civic activities. When scholars remain at IUPUI for their graduate or professional studies, they become Bepko Fellows. Fellows continue their civic engagement activities and serve as mentors for new scholars. Colloquia and seminars supplement their extensive graduate training. Admission to the program is highly selective, with approximately 20 scholars admitted each year. Students must apply as freshmen (transfer and graduate students are not eligible for this award) and for the fall semester —awards are not available to students who begin their studies in the spring or summer.

To be eligible for consideration, students must present excellent academic credentials, have a demonstrated commitment to community service, and clear objectives for both their undergraduate and graduate degree program. Students must apply by December 1.
The scholarship provides full tuition and fees at the Indiana resident rate as well as books for four years of undergraduate study. On-campus housing expenses are also provided for the freshmen year. When scholars become fellows at IUPUI, the program will provide $5,000 in tuition support for up to four years of graduate or professional study. Further information and application instructions are available at www.BepkoScholars.iupui.edu.

Internships

Internships are designed to help students obtain professional work experience related to their fields of study. Students will learn how to conduct effective

internship job searches and will receive assistance throughout the internship experience.

Internship positions may be full or part time, paid or unpaid, credit earning or noncredit. Academic credit may be offered at the discretion of the participating school or department. Credit-earning internships are similar to traditional courses in that documentation such as term papers will be required, adding credit to a student's transcript.

In order to participate in an internship, generally, students must meet the following eligibility requirements: (1) current enrollment in a degree or certificate program at IUPUI, (2) at least sophomore status, (3) cumulative GPA of 2.5 or higher, and (4) complete one full semester at IUPUI before the start of the internship. In addition, credit-earning internships are subject to the eligibility requirements of their academic departments.

For more information regarding internships in your school or department, see http://www.iupui.edu/career/inventory.

Reserve Officers' Training Corps (ROTC)

Army ROTC

A very active Army ROTC Program is available to all qualified students. Army ROTC is the primary source of the commissioned officers that lead our nation's army. Upon graduation from college and commissioning as a second lieutenant in the Army, an ROTC graduate is guaranteed employment and gains valuable life experiences while serving in one of our country's most prestigious professions. A young second lieutenant routinely commands 30 or more personnel. In the corporate world it would take decades for an individual to reach that level of responsibility. It is for this reason that ROTC graduates are so valued in the Armed Forces as well as in Fortune 500 Companies after they complete military service. Army ROTC at IUPUI, referred to as "the best leadership course in America," will prepare the qualified student for these challenges.

Students may enroll in the ROTC program on a voluntary or exploratory basis during the first two years. Books, tuition, and supplies are provided free of charge. Elective credit hours are awarded for the freshman and sophomore classes. Students do not incur any military obligation until enrollment in the third-year course, or upon accepting an ROTC scholarship.

Four-, three-, and two-year scholarships are awarded on a merit basis. Scholarships will pay 100 percent of tuition, as well as $900 annually toward books, laboratory, graduation, and educational fees. A $2,000–$4,000 tax-free stipend is paid each year the scholarship is in effect, based upon the student's class standing.

Advanced placement is available to veterans and members of the Army Reserve or National Guard. Non-scholarship third-year students also receive a $3,000–$4,000 tax-free stipend per year. In most cases, active reservists and veterans receiving the GI Bill may participate in the ROTC program with no loss of benefits. Army ROTC is also offered to transfer and graduate students. Completion of the program leads to a commission as a second lieutenant in the Army, Army Reserve, or Army National Guard. For more information about the Army ROTC, call (317) 274-2691, send e-mail to goarmy@iupui.edu, or visit the Web site www.iupui.edu/~armyrotc.

Air Force ROTC

Eligible and qualified men and women may elect to earn credits leading to a commission as a second lieutenant in the United States Air Force through a program located on the Bloomington campus. Credits earned in the Air Force ROTC may be applied toward the required number of credit hours for graduation. For more information on the Air Force ROTC, call (812) 855-0917.

Rise to the IUPUI Challenge

The RISE to the IUPUI Challenge encourages undergraduate students to include into their Bachelor's degree program at least two RISE experiences in Research, International Study, Experiential or Service Learning. After successful completion of at least two of the four possible experiences, a notation will be placed on the student's official transcript recognizing this milestone. This initiative begins with IUPUI courses as of Fall 2009. For more information about the RISE Challenge, click here.

School Honors

Dean's List

All schools recognize outstanding academic achievement through the undergraduate Dean's List. Each school's requirements may vary for full- and part-time students but are based on students' work for one regular semester. Students should check their own school's materials in this bulletin for more information.

Graduation with Distinction

In the Indiana University schools, students in the top 10 percent of their class are awarded bachelor's degrees with three levels of distinction: distinction; high distinction; and highest distinction. The level of distinction is determined by the overall Indiana University GPA, and the specific minimum GPA requirements are determined each year by the individual schools. Students must have taken 60 graded credit hours at Indiana University. The level of distinction is printed on both the final transcript and the diploma. At commencement ceremonies, these graduates wear cream and/or crimson cords, depending on the level of distinction.

In the Purdue schools, students receiving Purdue degrees receive high and highest distinction, while geology students who receive IU degrees may be awarded distinction, high distinction, and highest distinction. To be eligible, candidates must complete all their degree programs' requirements and meet the following conditions: (1) a minimum of 65 credit hours of course work from Purdue University or Indiana University applicable to the graduation index (degree grade point average) must be on record; (2) the minimum graduation index for distinction (Purdue and IU degrees) shall be no less than the 90th percentile of the graduation indexes of all the graduates in the school for the spring semester, provided that the index is at least 3.30. The minimum graduation indexes determined for the spring semester for graduation with distinction, high distinction, and highest distinction shall be applied for graduation with those respective levels

of distinction for the subsequent summer sessions and fall semester. At Commencement ceremonies, these graduates wear black and/or gold cords. Consult the sections for the School of Engineering and Technology and the School of Science for more information.

Discipline-Based Honoraria's

Many professions and disciplines at IUPUI have chapters of the undergraduate national honoraria associated with their field of study and regularly induct outstanding students majoring in their fields into these organizations.

Service Learning

Service learning is a course-based educational experience. Students in a service learning class participate in an organized service activity in the community. Through reflecting on their community experience, students gain further understanding of course content, a broader appreciation of the discipline, and an enhanced sense of personal values and civic responsibility.

For example, students in a writing course may complete a writing project for a not-for-profit agency as part of their course work, or students in environmental science may participate in a wetlands planting project. Students in an introductory psychology course may read with children in a local elementary school, or sociology students may work with community organizations to reduce crime.

Service learning provides an opportunity for students to be actively involved in the learning process. Service experiences help to clarify career goals and develop personal competencies and leadership skills. A variety of service learning courses are offered at IUPUI, and a list can be found in the class offerings on the registrar web site: registrar.iupui.edu under “Service Learning” or by contacting the Center for Service and Learning, BS 2010, (317) 278-2662 or visit csl.iupui.edu.

Special Credit Opportunities (Waivers and Credit)

Special credit policies and procedures vary with individual schools.

Special credit may be awarded to degree-seeking IUPUI students who possess, by previous education or experience, a background in a discipline represented by an IUPUI program. The categories under which students are awarded credit are (1) credit by credentials, (2) credit by experience, and (3) credit by examination. Each school and many disciplines have different policies that define how these mechanisms apply to students seeking credit.

Not all schools accept special credit, and special credit does not transfer to IUPUI from other universities. Changing schools at IUPUI may result in special credit awards not being used to meet degree requirements of the new school.

Students who establish eligibility for special credit must apply for the credit in the course department. The credit will be awarded at the following fee rate: no credit hour fee for freshmen who apply for special credit during the first three consecutive semesters after entering the university, and a nominal fee per credit hour for undergraduate transfer students if they apply during the first semester after entering the university. The nominal fee per credit hour also applies to students receiving special language credit for lower-level language courses, following the satisfactory completion of a higher-level course. Students who do not qualify for the above will pay the standard fee per credit hour at the appropriate resident or nonresident rate currently in place. Visit registrar.iupui.edu/specred.html for more information.

Special Credit for Military Service

Some IUPUI schools grant college credit for military course work. Eligible students should submit a copy of their DD214 or DD295 form or military transcripts to the Office of Admissions, Campus Center, CE 260. Students should check with their schools for more information.

Advanced Placement (AP) Credit

The College Board Advanced Placement (AP) tests are offered by participating high schools. IUPUI encourages high schools and their students to participate in the AP program and awards college credit at no charge in all subjects to students who receive scores of 4 or 5. Some departments give credit for scores of 3 as well. Contact the Office of Admissions to receive an informational brochure or visit enroll.iupui.edu.

CLEP Credit

The College Board College-Level Examination Program (CLEP) is also recognized by IUPUI, and it is available to both current high school students and to students who have already graduated from high school. The same brochure mentioned above shows how CLEP credit is handled. Information is also available at enroll.iupui.edu.

DANTES Credit

The Defense Activity for Non-Traditional Education Support (DANTES) Subject Standardized Test (DSST) is a subject-matter examination in college and technical subjects. Contact the Office of Admissions for information on the IUPUI policy for acceptance of DANTES credit. Information is also available at enroll.iupui.edu.

International Baccalaureate Exams

For those students participating in the International Baccalaureate exams, IUPUI grants college credits for all higher-level subject exams with scores of 4 or higher.

Departmental or School Proficiency Examinations

Many departments/programs award special credit to students who have demonstrated skills and/or knowledge equivalent to that taught in a given course. Some departments allow students to take a comprehensive final to show such competencies. Such special credit is normally indicated with a grade of S, although some departments may award a grade of A if a student’s performance on a departmental examination clearly merits it. In some cases, students will be charged a fee for the special credit. Consult the departments and programs about such tests, and see the Registration Guide for more information on the fees.

Special Credit for English W131

Some students are eligible to apply for special credit for English W131 Elementary Composition I. This option is open to students who have taken the IUPUI English placement test and placed into honors (English W140), and to transfer students whose previous institutions waived composition requirements without awarding credit. Eligible students can get more information about the special credit portfolio requirements from the English Department's Writing Program office, CA 343. Students who are eligible to submit special credit portfolios should be aware that credit is not always awarded; portfolios are evaluated by a faculty committee that determines whether credit should be awarded based on the essays submitted in the portfolio.

Special Credit for Foreign Languages

Students who have previously studied a foreign language may receive special credit by taking a placement examination and completing the course into which they were placed with a grade of C or higher. The student may then apply for credit for the lower-division courses that was skipped. Students seeking such special language credit through the credentialing process described above must file an application for special credit and pay a nominal fee per credit hour for the additional credits. See the Department of Foreign Languages and Cultures in Cavanaugh Hall 408, and your home school for additional information.

There are restrictions for international students who are taking courses in their native language. They may earn credit at the 300 level but not at a lesser level.

Self-Acquired Competency Credit (Experiential Learning)

Credit may be granted in some schools for experience acquired outside of normal college courses. Credit may be available for course-specific learning or for non-course specific learning within a discipline. Faculty will evaluate the experience and determine whether and how much credit should be awarded. Students may be asked to prepare a portfolio, take examinations, or document their learning in other suitable ways so that the faculty can make a judgment. While General Studies accepts up to 15 credit hours for the Associate and up to 30 for the Bachelor of General Studies, most schools either do not accept such credit or limit the number of acceptable credits to 12 credit hours toward a degree. If a student changes schools within IUPUI, self-acquired competency credit awarded by one school may not count in the new school.

Consortium for Urban Education (CUE)

IUPUI is a member of the Consortium for Urban Education (CUE), Indianapolis. Through CUE, an IUPUI student can enroll in and receive credit for courses not offered by IUPUI but available at another member college. An IUPUI student registered in such courses is subject to IUPUI's fees and payment procedures. Visit registrar.iupui.edu/cue.html for more information.

Study Abroad Programs

IUPUI Study Abroad Opportunities

IUPUI currently operates more than 65 programs throughout the world, including such places as Australia, China, Croatia, UK, Germany, Greece, France, Kenya, Mexico, and Poland. The schools and departments that offer such programs include Engineering and Technology, Business, Art, Liberal Arts, Science, Social Work, Law, Tourism and Convention Management, Nursing, Dentistry, and Medicine.

For study abroad advising, please contact:
Office of International Affairs, ES 2126
(317) 274-2081, abroad@iupui.edu
http://abroad.iupui.edu
The Study Abroad office also provides information on scholarships and financial aid.

Indiana University Study Abroad Programs

IUPUI students are eligible to participate in international study programs run by Indiana University. Both IU and Purdue majors may apply for IU programs overseas. The IU programs include full academic year, semester programs, and a wide variety of summer programs for students wishing to study abroad. At present, there are over 200 opportunities for studying abroad through Indiana University.

Participants receive regular Indiana University credit, not transfer credit. 3-6 credit hours are customary for summer programs, 15-16 credit hours in semester programs, and 30-32 in the academic year programs. Students may apply for financial aid or a number of scholarships.

Detailed information can be found on the Web site of IU Overseas Study (www.indiana.edu/~overseas) or by contacting the Office of International Affairs, (317) 274-2081.

Undergraduate Research Programs

IUPUI has established the campus wide Undergraduate Research Opportunities Program (UROP) to encourage and recognize undergraduates who participate in research and other creative projects with faculty in all disciplines, including music and art. This program provides students with connections to faculty research projects across campus and urges undergraduates to participate in research as early as possible. An annual Undergraduate Research Symposium is held each year to showcase student work. Students may apply for grant support for their projects and travel money to facilitate their participation in professional meetings within their discipline. Formal research credits may be earned toward graduation. Further information may be obtained from the UROP director, Kathryn Wilson, Science Building, LD 222; e-mail kjwilson@iupui.edu; telephone (317) 278-1028.

University College

The mission of University College is to provide students with holistic support and an engaging first-year experience to ensure that all entering students make a smooth transition to IUPUI, are academically successful, and are certified to the academic schools of their choice as quickly as possible. New and transfer students are granted admission to University College (either full admission

or dual admission with a degree-granting school) and remain in University College until they have declared a major and meet the necessary conditions for transfer to a degree-granting school. University College provides many programs and services to ensure that students move into their majors as efficiently as possible.

- Administrative Withdrawal
- FLAGS
- From University College to a Degree Program
- Learning Center/Academic Assistance
- Learning Communities
- Partnership for Excellence
- Time on Task (Absence Policies)
- Transfer Students on Probation

Administrative Withdrawal

Students who miss more than 50 percent of their class meetings of a given section during the first four weeks of the fall or spring semesters may be administratively withdrawn from that course unless documentation of contact with their course instructor, academic unit, or academic advisor is provided. Undergraduate students may be administratively withdrawn regardless of class level. For a full description of this policy, please see http://registrar.iupui.edu/withdrawal-policy.html.

FLAGS (Fostering Learning, Achievement, and Graduation Success)

IU's Early Student Performance Alert

In support of campus efforts to increase student retention and 4-year graduation, all faculty teaching undergraduate students are asked to provide feedback early and often on student attendance/performance in their class. Effective Fall 2011, this feedback from the faculty is being accomplished online using the Student Performance Roster as part of the FLAGS System. Feedback from the faculty using these rosters allows for quick and intentional intervention with those students who may need assistance. Based on faculty roster feedback, reports will be readily available to advisors and other school officials to take action.

The student performance roster will also be the mechanism for providing administrative withdrawal feedback for those classes that have been so approved as well as reporting attendance for the Registrar/Financial Aid Compliance enrollment audit. This one Student Performance Roster will satisfy all three needs and will be the ONLY roster faculty will be asked to process.

Course Syllabus/Oncourse Class Announcement

Faculty teaching undergraduate classes are encouraged to provide an explanation on the class syllabus and/or via an Oncourse announcement. A sample notice is provided here:

This semester I will be using IU's FLAGS System to provide real-time feedback on your performance in this course. Periodically throughout the semester I will be entering data on factors such as your class attendance, participation, and success with coursework, among other things. This information will provide feedback on how you are faring in the course and offer you suggestions on how you might be able to improve your performance. You will be able to access this information in the student center: Onestart > Student Services page > Student Center > My Academics and Grades > My Grades.

Standard DEADLINES:

1. Student Performance Feedback: Beginning second week of classes until final grade rosters are created.
2. Administrative Withdrawal Requests: Beginning the day after 25% refund period until the week prior to Automatic W grading period.
3. Attendance Feedback for Enrollment Audit: Beginning the day after 25% refund period until the week prior to Automatic W grading period.

NOTE: Specific dates by term are available on the Resources for Faculty site.

From University College to a Degree

Selecting a Major

Students who meet the regular admission criteria for IUPUI, as well as any additional school admission criteria, and who indicate the major/program that they wish to study when they apply, are granted dual admission to University College and the degree-granting school housing their major. This dual admission is offered on the conditions that students (1) are not required to take refresher courses following their placement tests, (2) are enrolled in a first-year seminar, (3) have attended orientation and have been advised, and (4) have had satisfactory midterm performance.

Other students will move to their schools during their first 56 credit hours of study, during which time students should be completing general-education requirements and other courses necessary for admission into their chosen school or program. Since these courses vary widely from one program to the next, students should refer to the University College degree planning sheets and this bulletin to ensure that courses count toward their degree.

Additional Options Available

Double Majors

While most students complete only one major within their program of study, some schools permit students to complete two majors within a school. To do so, the student must complete the requirements for each of the two majors as well as all other school requirements for a degree. Students seeking a double major must consult advisors from each of the departments in which they propose to study. Usually, the student must receive the approval of the school advisor or school dean of students to do so.

Dual Degrees

While most students work on a single degree at a time, a student may work on what is essentially two degrees in two different schools at IUPUI simultaneously (e.g., a B.A. from Indiana University in English and a B.S. from Purdue University in psychology). Such a dual degree can be obtained by completing all requirements in the two schools for the two different degrees. Some, but not all, courses can be used to satisfy requirements in both schools. Working on dual degrees must be approved by the appropriate advisors and deans in both schools.

Minors

Students in many schools may take one or more minors along with their majors. Minors do not appear on the student's transcript until graduation. Students majoring in one school often can elect to complete minors in other schools. Minors are structured programs generally of 15 to 18 credit hours, though they may require more. They are of three types: (1) departmental or single-discipline minors, (2) interdisciplinary or cross-discipline minors, and (3) thematic minors. In most schools, only courses in which students receive at least a C (2.0) can be applied to the minor. Listings of minors available and the specific requirements for minors are described in each school's bulletin section.

Certificates
Certificate programs resemble minors but generally require more credit hours. Some certificate programs are a stand-alone program, which means that a student does not have to be working toward a two- or four-year degree to complete a certificate program. In most schools, only courses in which students receive at least a C (2.0) can be applied to the certificate program, while in some schools students may be permitted to average all grades required in the certificate program. Specific requirements and grade policies can be found in the section for the school offering the certificate.

Second Undergraduate Degrees
Normally, holders of bachelor's degrees seeking further education are encouraged to enter graduate programs; in certain cases, however, students may prefer to work toward a second bachelor's degree. IUPUI strongly recommends that students discuss current requirements with an advisor before starting work on a second undergraduate degree. If admitted by a school to candidacy for a second degree, students may count credits earned in their first bachelor's degree. However, they must meet the school's requirements, including residence requirements, distribution course work, work in the major, and other requirements not fulfilled by earlier work. Some schools may specify the number of credit hours that must be taken above and beyond the credit hours from the first degree.

Changing Units

University College's goal is to launch students on a successful college career. Once the transition from high school to college, or from workplace to college, has occurred, University College focuses on moving students into their degree-granting programs and schools. Each academic school establishes the requirements for students to certify into its programs. Many programs require a formal application for admission. Students should check the website of the school to which they wish to be admitted for more information. Refresher courses do not count toward students' degrees, but do count toward the students' standing as full- or part-time degree-seeking students for financial aid and insurance purposes. Students on probation must fulfill their contractual agreements and achieve a minimum cumulative GPA of 2.0 to be removed from probationary status. When students meet the admission requirements for their degree-granting school requirements, they are eligible for certification to that school. Students remain in University College until they (1) meet the conditions for admission into their desired school or (2) earn too many credit hours to remain in University College (see the section below titled "The 56 Credit Hour Rule.").

Admission into Degree-Granting Programs from University College
Some schools accept all students with a minimum GPA of 2.0 or other specified GPA. In such schools, students can change schools or programs by officially declaring a major with their advisor and/or contacting the school to which they wish to be admitted. To be sure that they are eligible to transfer, students should consult the school recorder. Other schools require both a set GPA and the completion of a set of specific courses with a specific GPA. In such schools, it is more difficult to determine a student's eligibility. Such schools often have a formal application.

Admission into Capped (Limited Enrollment) Programs
Admission to IUPUI schools is often competitive. Schools may limit their applicant pool to students with a specified minimum GPA, and if selected for application, students may be asked to take part in an interview as part of the admission process. It is important for students to fully understand the entrance requirements of the school or program in which they hope to enroll. Students who are not accepted after one or two tries should work with an advisor to select an alternate program of study.

The 56 Credit Hour Rule
IUPUI encourages students to explore a variety of majors, but after accumulating about 26 credit hours, students should select a degree program. Once a student has completed 56 credit hours (or has 56 credit hours of transfer credit), he or she will be granted 24 credit hours to complete the requirements to be accepted into a degree program or to apply to the General Studies degree program. The 56 credit hour rule may be waived for students pursuing academic programs that require the completion of more than 80 credit hours for admission.

Procedures for Changing Schools/Programs at IUPUI
To transfer from one IUPUI school to another, students should contact the recorder of the school to which they wish to transfer to find out if they have met the necessary requirements. University College students should contact the University College recorder. Acceptance by the new school requires the approval of the appropriate school dean.

Students may also wish to change majors within a school, for instance, changing from criminal justice to urban affairs in the School of Public and Environmental Affairs (SPEA) or from chemistry to biology in the School of Science. Again, students should contact their school's recorder to determine their eligibility and consider the consequences of such a change.

Change of IU Campus
IU students who want to enroll at another Indiana University campus on a temporary or permanent basis should initiate the process by visiting enroll.iupui.edu/admissions. More information on enrollment at another IU campus, including any restrictions and deadlines, can be found on the site. To enroll at another Purdue University campus, students should contact the Office of Admissions at the appropriate Purdue campus.

Students considering permanent transfers should remember that degree requirements vary on different campuses, whether at IU or Purdue. Transferring may require a year or more of additional full-time study, especially if the transfer is made in the junior or senior year.

The Bepko Learning Center

The Bepko Learning Center is devoted to students helping students. The center, which includes the Office of Academic Mentoring, the Office of Tutorial Support, and the Office of Academic Enrichment, is located on the second floor of Taylor Hall (UC 2006). The Bepko Learning Center's programs are based on a belief that highly successful academic students can play an integral role in the academic development of their peers. Collaborative learning, role modeling, peer interaction, and peer support are all components of this process. For more information, call (317) 274-4818 or visit blc.uc.iupui.edu.

First-Year Seminars/Learning Communities

First-year seminars, academic courses required of entering students, are offered by all IUPUI undergraduate schools. The courses facilitate student transition to college by introducing key information and skills needed to succeed and by offering opportunities to connect with faculty, staff, and other students. Each course is taught by an instructional team, including a faculty member who sets academic goals and is the team leader, a student mentor who serves as a role model and peer guide to the college experience, a librarian who introduces library resources and literacy information, and an academic advisor who provides information on academic policies and procedures and works with students to begin academic planning as well as major and career decision making. First-year seminars are often linked with other entry-level courses to form learning communities, where faculty may collaborate in creating class assignments.

Partnership for Academic Excellence

Students enter into a partnership with University College for their academic success. University College asks students to commit to this partnership. As part of this partnership, the university provides resources to help students reach their academic goals. The students' responsibilities include attending classes, completing assignments on time, participating in out-of-class learning, staying in contact with their academic advisors, and striving for academic excellence in their studies. Please visit http://advising.uc.iupui.edu/Support/StayonTrack/PartnershipforAcademicExcellence.aspx for more information about the Partnership for Academic Excellence.

Time on Task (Absence Policies)

Regardless of whether an explicit absence policy appears on the syllabus, students are expected to attend all classes and are responsible for completing all course work required. Unless the instructor has a different procedure for absences, when students are unable to attend class, they should contact the instructor prior to or immediately following the absence. Students should identify someone in class who is willing to share notes or discuss what was missed. Some instructors may provide videotapes of missed classes, but it is not the instructor's job to repeat a class for a student who is unable to attend class. Exams or other work missed during absences can be made up only with the approval of the instructor. Instructors may choose to count a student absent who comes late or leaves early. Discontinuing class attendance without officially dropping the class will result in the student receiving a grade of F. The student will be responsible for tuition and fees.

Transfer Students on Probation

Transfer students admitted to University College on probation will be placed on transfer probation and are required to complete 15 credits with a 2.0 cumulative GPA or higher. Students are not eligible for certification to a degree-granting school until this requirement has been met. Exceptions may be made for students with 56 or more credits attempted or by request from the school. All other probation and dismissal policies apply.

Graduate & Professional Program Overview

Students can earn an Indiana University graduate or professional degree, an Indiana University Graduate School graduate degree, or a Purdue University Graduate School degree on the IUPUI campus.

A few of the degrees offered at IUPUI are offered in conjunction with either the Bloomington or West Lafayette campus and may require work on one of these two campuses. For specific information about a degree program on the IUPUI campus, please refer to the school or department offering the degree. For a complete listing of IUPUI graduate and professional degree programs see http://www.iupui.edu/graddegrees/.

Admission

Students are strongly encouraged to apply online and must navigate to the online application through the informational materials provided on each department's Web site to obtain the most program-specific information.

The following bulletin pages provide general information about various programs on the IUPUI campus. Please see the Graduate Office website at http://www.iupui.edu/~gradoff/ for additional information and resources.

- Indiana University Graduate Programs
- Purdue Graduate Programs in Engineering
- Purdue Graduate Programs in Science
- Graduate Nondegree Programs
- Professional Programs

IU Graduate Programs

The Indiana University Graduate School is represented on the IUPUI campus by the IUPUI Graduate Office. There are two categories of admission to the University Graduate School:

1. Admission to pursue a degree
2. Admission to take courses in a specific school, department, or program as a special student

Undergraduate Requirements (All Admission Categories)

The Indiana University Graduate School will consider applications from students holding bachelor's degrees from accredited four-year collegiate institutions. Students

from unaccredited institutions may be admitted as special students for one semester; if their records are satisfactory and their department, program, or school recommends them, they will then be given full standing. Ordinarily, a minimum grade point average of 3.0 in an undergraduate major is required for admission to the Indiana University Graduate School. Students may be admitted with deficiencies as graduate nondegree students (GND) or as special students (see below).

Indiana University Bachelor's Degree Candidates

Candidates for bachelor's degrees at Indiana University may apply for conditional admission to the Indiana University Graduate School and may enroll for graduate credit for that portion of their program not required for completion of the bachelor's degree, provided:

1. they are within one semester of meeting bachelor's degree requirements. If the bachelor's degree is not completed within that semester, graduate credit earned may not be counted toward an advanced degree.
2. the total course load does not exceed that ordinarily taken by a full-time graduate student.
3. the courses taken for graduate credit are authorized to carry such credit. (In certain instances, graduate credit is allowed for undergraduate courses.)

Special Students

Students who have applied but have not been admitted to a degree program but who intend to study primarily in one department may be admitted by that department with the approval of the dean of the Indiana University Graduate School as special students. They must apply to a department just as degree students do and should indicate their desired status. After 12 credit hours in a single department, special students must either be accepted into a degree program or change to nondegree status.

Visiting/Transient Students

Visiting students in good standing in any accredited graduate school who wish to enroll for one semester or summer session and who plan to return thereafter to their former institution may be admitted as visiting/transient students if their enrollment can be accommodated. Visiting/transient students should register as graduate nondegree students. Information and IU University Graduate School bulletins may be obtained from the IUPUI Graduate Office, Union Building 518; (317) 274-1577. Material restricted to the programs offered on the IUPUI campus can be found in this bulletin. Nondegree applications are available from the Enrollment Center or the Graduate Office. Nondegree students are advised by the graduate nondegree counselor in the IUPUI Graduate Office.

Application to Indiana University Graduate Degree Programs

Prospective graduate students, including graduates of Indiana University, must make formal application to a department, which will forward its recommendation to the dean. Online applications are normally sent to the departments for consideration within two working days, but the review and approval process may take several weeks; paper applications take much longer to process and are discouraged. Students should navigate to the online application through the informational materials provided on each department's Web site to obtain the most program-specific information. It is recommended that applications be made well before the following dates:

Semester of Matriculation	Deadline for Application
Fall	February 15
Spring	September 1
Summer	January 1

All applications must be accompanied by two complete transcripts of previous college and university course work and should be submitted directly to the department in which the student wishes to work. Indiana University graduates should ask the registrar to send unofficial copies of their transcripts to that department.

Admission (except for visiting and continuing graduate nondegree students) is made to a particular department for a specific degree, and no student shall be permitted to work toward a degree without first having been admitted. Students who want to change departments should contact their department to initiate the change in departments. Requests for change of degree status must be approved by the department and approved by the dean of the Indiana University Graduate School.

Following the notice of admission to the Indiana University Graduate School, an applicant normally has two calendar years in which to enroll. Supplementary transcripts of any additional academic course work undertaken during that period are required, and a department may request additional letters of recommendation. Should the updated material prove unsatisfactory, the admission may be cancelled. If the applicant fails to enroll within two years, a completely new application is required.

Graduate Record Examinations

Applicants may be required to take the Graduate Record Examination General Test, Subject Test, or both (see the department or school sections of this bulletin). Information concerning these examinations may be obtained from the Graduate Record Examinations Educational Testing Service (www.gre.org).

For additional information about the IU Graduate School programs, financial support, academic regulations, and specific courses, consult the specific departments and the IU Graduate School section in this bulletin and its separate bulletin.

Purdue Graduate Programs in Engineering

The Purdue School of Engineering and Technology offers graduate degrees in four areas:

- Biomedical Engineering (the Doctor of Philosophy [Ph.D.] and the Master of Science [M.S.Bm.E.]);
- Electrical and Computer Engineering (the Master of Science [M.S.], the Master of Science in Engineering [M.S.E.], and the Master of Science in Electrical and Computer Engineering [M.S.E.C.E.];
- Mechanical Engineering (the Master of Science [M.S.], the Master of Science in Engineering [M.S.E.], and the Master of Science in Mechanical Engineering [M.S.M.E.]).

Another degree program, leading to the Master of Science in Industrial Engineering (M.S.I.E.), is administered with approval of the School of Industrial Engineering at Purdue University, West Lafayette.

Qualified students may be authorized to pursue the Ph.D. degree in electrical engineering or mechanical engineering at IUPUI; these programs are administered with the respective approval of the School of Electrical Engineering and the School of Mechanical Engineering at Purdue University, West Lafayette. Students are usually expected to complete the M.S.E.E. or M.S.M.E. before pursuing the Ph.D. degree.
Graduate courses are usually offered in the evenings to meet the needs of part-time students employed in the Indianapolis area, as well as traditional students who are preparing for careers in research-directed areas.

For more information, call (317) 278-4960 or visit www.engr.iupui.edu.

Admission Policies and Procedures

To be considered for admission into the graduate engineering programs mentioned above, an applicant ideally should have graduated from an engineering program accredited by ABET, the Accreditation Board for Engineering and Technology, Inc. The final undergraduate grade point average should be at least 3.0 (out of 4.0) or equivalent as shown on the official transcript.

All applicants are encouraged to take the General Aptitude Test of the Graduate Record Examination (GRE), but all international applicants are required to take the GRE. Information about the GRE can be viewed at www.gre.org. Students whose native language is not English are required to take the TOEFL (Test of English as a Foreign Language) and earn a score of 550 (paper-based test) or 213 (computer-based test). Information about the TOEFL can be viewed at www.toefl.org. and can also be obtained from the Office of International Affairs, Education/Social Work Bldg 2126; telephone (317) 274-7000.

Graduates from non-ABET-accredited programs and others who do not meet the above requirements may be considered for admission to the Master of Science degree program or for admission to the Master of Science in Engineering program. Candidates must be graduates of fully accredited (e.g., by the North Central Association of Colleges and Secondary Schools, or comparable accrediting agency) four-year programs, including four-year technology programs. Formal admission to either the M.S. or the M.S.E. programs requires departmental approval as well as the completion of the following requirements:

1. Graduating grade point average (GPA) of at least 3.0 (on a scale of 4.0) or equivalent from an accredited bachelor's degree program with a strong emphasis in engineering, mathematics, or the physical sciences.
2. Completion of the engineering calculus sequence:
    - MATH 163 and MATH 164 Integrated Calculus and Analytic Geometry I and II (10 cr.)
    - MATH 261 Multivariate Calculus (4 cr.)
    - MATH 262 Linear Algebra and Differential Equations (4 cr.)
3. Completion of a number of undergraduate courses in electrical or mechanical engineering, or equivalent course work, depending on the specialty of the student. Equivalence of courses is determined by the graduate committees of the respective engineering programs. For more information, see the graduate program handbooks of the respective programs.

Admission as a Regular Graduate Student

Applications for admission may be obtained by writing to the Office of Graduate Engineering Programs, or to either the Department of Electrical and Computer Engineering or the Department of Mechanical Engineering at the Purdue School of Engineering and Technology. Address: 723 W. Michigan St., IUPUI, Indianapolis, IN 46202-5132; telephone (317) 278-4960. Electronic application is available on the school's Web site: www.engr.iupui.edu.

International students should allow at least six months for the processing of their applications. Students residing in the United States should apply at least three months before the beginning of the semester in which they wish to enroll. Applicants will be formally advised of the final admission decision by the dean of the Graduate School, Purdue University, West Lafayette.

Admission as a Graduate Nondegree Student

This classification is intended for those who want to pursue study beyond the bachelor's degree but who do not have specific degree objectives. It is not intended to be a form of probationary admission to a regular degree program. It is possible for a student registered in this classification to apply for admission to the Graduate School as a regular graduate student. However, if admitted as a regular graduate student, an individual may apply no more than 12 credit hours earned as a temporary graduate student to an advanced degree program. The grade for each course involved must be at least a B.

Students who have already earned 12 credit hours under the temporary classification will not be able to count toward their degree programs the credit earned during the semester in which acceptance as a regular graduate student is pending, unless admission is approved before the end of that semester. Furthermore, credit earned in courses taken while admission is pending may be applied to the advanced degree only if those courses are appropriate to the degree program and acceptable to both the School of Engineering and Technology and the Graduate School. No more than 12 hours of credit resulting from a combination of excess undergraduate credit and credit earned in post baccalaureate status may be applied toward an advanced degree. Students should consult their advisors for further guidance.

Students interested in the Graduate Nondegree program and planning to enroll in graduate courses or a combination of graduate and undergraduate courses may apply online by visiting http://www.iupui.edu/%7egradoff/gnd/.

Undergraduate and Transfer Credit

Course credits earned while an undergraduate at IUPUI or other regionally accredited institutions of higher learning may be applied toward an advanced degree if these credits are in excess of any requirements for the bachelor's degree. Such credits must be certified as available for graduate credit by the institution from which

the student received the bachelor's degree, and they will be accepted only if all of the following conditions are met: (1) the student had senior standing when taking the course, (2) the student received a grade of B or higher, (3) the course was designated as a graduate course, and (4) the course was taken at the graduate level.

No more than 12 hours of credit resulting from a combination of excess undergraduate credit and credit earned in post baccalaureate status may be applied toward any advanced degree. Any additional conditions under which excess undergraduate credit may be used for graduate credit will be determined by the School of Engineering and Technology.

Credits earned for graduate study at other universities may be applied toward an advanced degree as transfer credit, subject to the following restrictions: (1) A student must have earned a grade of B or higher in any graduate course whose credit hours are to be transferred; (2) course work used to satisfy the requirements of one master's degree may not be used on the plan of study for another master's degree; and (3) course work from one (and only one) master's degree may be used on the plan of study for a doctoral degree. Any additional conditions under which credit transfers may be made will be determined by the School of Engineering and Technology.

Graduate Degree Requirements in the Purdue School of Engineering

To earn a master's degree, students must satisfy the following requirements:

1. Students must maintain regular graduate student standing.
2. All regular students are required to demonstrate acceptable proficiency in English composition before a plan of study may be filed or an advanced degree obtained. If the necessary substantiation of English proficiency as outlined below is contained in the application, English clearance will be given automatically upon acceptance into a degree program. If substantiation is lacking on the application, the student is expected to satisfy this requirement during the first term of enrollment. A student whose first language is English may meet the English requirement in any of three ways:
   - by receiving a grade of B or higher in all undergraduate courses in English composition;
   - by submitting an official record from the Educational Testing Service, showing a scaled score of 600 or higher on the verbal portion of the GRE aptitude test;
   - by passing the English proficiency examination administered by the English department at IUPUI. For further ESL test registration and course and program information, contact the ESL program, (317) 274-2188, Cavanaugh Hall 301, or contact esl@iupui.edu. Those students with deficiencies are required to take an English composition or communications course within the first year of graduate study.

   A student whose first language is not English—and who has scored higher than 550 (paper-based test) or 213 (computer-based test) on the TOEFL—may meet the English proficiency requirement by successfully passing the English proficiency examination administered by IUPUI's Department of English. Those students with deficiencies are required to take an English composition or communications course within the first year of graduate study (ENG W131, TCM 460, or equivalent).

   Nonnative speakers of English who are U.S. citizens or permanent residents and who hold a bachelor's degree or a higher degree from a non-U.S. institution or from an institution in a country where English is not the predominant language may meet the English proficiency requirement by successfully passing the English proficiency examination administered by IUPUI's Department of English.
3. Students must file a plan of study appropriate to meet their needs in their chosen field of study. A tentative plan should be drawn up by the student and the graduate advisor in advance of registration for the first semester of graduate work. The formal plan of study must be filed as soon as possible thereafter but before the completion of 15 credit hours toward graduation. Students who have not filed a plan of study before the completion of 15 credit hours may not be allowed to register for the following term. The plan of study must be approved by the advisory committee and the Graduate School. The English requirement must be fulfilled before the plan of study can be filed.
4. Students must meet credit, grade, and index requirements. The number of required credit hours varies between 30 and 33 among the master's degree programs offered at IUPUI. Only grades of A, B, or C are acceptable in fulfilling Graduate School requirements for any plan of study. An advisory committee may require a grade of B or higher in certain courses. Pass/Fail grades are not acceptable in fulfilling degree requirements. Incomplete course grades must be cleared by the twelfth week of the second semester after the session in which the Incomplete was awarded. All graduate students are expected to maintain a minimum cumulative grade point average of 3.0 out of a possible 4.0. Students who do not have a cumulative GPA of 3.0 are considered under probation. Those students who are on probation are required to take additional graduate courses, as required by their respective graduate committees, before they are permitted to graduate.
5. Students must pass the required oral and written examinations. A final examining committee, usually the advisory committee, is appointed for each master's degree candidate. The committee must certify to the Graduate School either that the student has passed the required examination or that the committee is satisfied with the accomplishment of the student as based on a committee conference.

This bulletin lists each program's the admission requirements, curricula, graduation requirements, and course descriptions that were in effect at the time of printing. Course content and curricula may be changed to reflect the needs of business, industry, and government.

Students are responsible for obtaining the latest course and curriculum information from their academic advisors.

Purdue Graduate Programs in Science

Purdue Master of Science degrees are offered in biology, chemistry, computer science, mathematics, physics, and psychology. An Indiana University Master of Science degree is offered in geology. Departments in the School of Science strive to provide programs that serve the state and surrounding community, and students should consult their departments for any new programs or program emphases. Master's programs are at least 30 credit hours (some programs require more) and may be either non-thesis or thesis degrees. A Purdue Ph.D. is offered in clinical rehabilitation psychology. Purdue Ph.D. degrees, with all the work completed at IUPUI, are offered through West Lafayette in all departments except geology. For further information on Ph.D. programs, consult the "School of Science" section of this bulletin.

General Admission Requirements

Students seeking graduate degrees in the School of Science will be admitted as degree-seeking graduate students if they meet the following general qualifications:

1. They ordinarily will be expected to hold a baccalaureate degree from a college or university of recognized standing.
2. They must submit an official transcript from each college or university attended. Other evidence of academic accomplishment and aspirations may be required by some departments. Three letters of recommendation are required.
3. For unconditional admission to a degree program, a B or higher average in prior study is required. Individual departments may set higher grade requirements and may require the submission of additional evidence of academic performance.
4. A minimal score of 79 on the internet-based TOEFL (Test of English as a Foreign Language), 213 on the computer-based TOEFL), or 550 on the paper-based TOEFL is required for all international applicants whose native language is not English. Some departments may have higher standards. Applicants may substitute the IUPUI English as a Second Language (ESL) Placement Examination for the TOEFL in some circumstances, with the approval of the International Office and the Graduate Office. A brochure about this test is available from the Office of International Affairs, ES 2126, or online from the Educational Testing Service (http://www.ets.org/portal/site/ets/menuitem.).
5. All graduate students who are nonnative speakers of English who are being offered positions that involve direct student contact are required to take the Speaking Proficiency English Assessment Kit (SPEAK) Test administered by the English as a Second Language (ESL) Program. Students must receive a score of at least 40 to be approved for direct student contact. Departments can provide further information about this test.

Graduate Record Exams

All degree-seeking applicants are encouraged to take the Graduate Record Examination (GRE). Most programs in the School of Science require this examination. Specific GRE score requirements are specified by each department.

General Requirements for Degree Completion

Once a student is admitted to a graduate degree program in the School of Science, there are several general requirements to complete a degree.

1. Each student must file a plan of study that includes a primary area and may include a related area or areas that are chosen on the basis of the student's interests and needs. A tentative plan of study should be drawn up in advance of registration for the first semester of graduate work. The student and the individual graduate advisor should prepare this plan. The formal plan of study should be submitted as soon as possible and before the final semester.
2. Only grades of A+ to C are acceptable in fulfilling Graduate School requirements in any plan of study. An advisory committee or department may require higher performance than C in certain courses. A grade of "Pass" is not acceptable. Specific cumulative grade point average requirements, if any, are up to the individual departments.
3. Students must complete the credit hours of work required, which may vary by department. Students must meet the Graduate School's resident study requirements.
4. Students must fulfill departmental requirements regarding oral and written examinations. The Graduate School has no general requirement for oral and written examinations for the non-thesis master's degree. In any department, a final examination may be waived if the student meets the minimum requirements of the department. In any event, a final examining committee is appointed for each candidate for the master's degree. The committee must certify to the Graduate School either that the student has passed the required examinations of the department in which the major graduate study has been taken or that the committee is satisfied with the accomplishment of the student as based on a committee conference. Ph.D. programs all require qualifying examinations early in the course of study. After the student has completed most of the formal study to the satisfaction of the advisory committee, the student becomes eligible to take the preliminary examination. The results of these written and oral examinations are reported to the Graduate School by the examining committee with an appropriate recommendation for the student's admission to candidacy, continued preparatory study, or discontinuation. All Ph.D. programs require a Ph.D. thesis.

Other regulations or requirements may be found in the Purdue and Indiana University Graduate School bulletins and in the section of this bulletin for the School of Science.

Graduate Nondegree Status

A student who has previously earned a bachelor's degree may enroll in graduate courses without submitting a formal application as a degree-seeking student. Application as a graduate nondegree student is, however, required and may be accomplished through the IUPUI Graduate Office, Union Building 207; phone (317) 274-1577, or

preferably online by visiting www.iupui.edu/~resgrad. A maximum of 12 credit hours of courses completed as a graduate nondegree student may be used in completing the requirements of a Purdue degree upon acceptance as a degree-seeking student and upon departmental approval.

Financial Support

All departments in the School of Science offer some financial support available in the form of tuition-refund assistantships, associate faculty positions, fellowships, and stipends from local industry.

Industrial and Business Co-op Programs

Several departments in the School of Science have co-op programs associated with their degrees. In co-op programs, research is conducted at the university and at a local industrial laboratory or business. The project is usually the result of a collaborative arrangement between a faculty member and an industrial scientist or a business firm. These programs provide workplace experience and an opportunity to participate in research applied to special industry and business needs.

Geology Graduate Program

Consult the Indiana University Graduate School and the Department of Geology within the School of Science section of this bulletin for information about this IU program. A maximum of 9 credit hours of course work completed as a graduate nondegree student may be used in completing the requirements of a degree upon acceptance as a degree-seeking student and upon departmental approval.

Graduate Nondegree Programs

The Graduate Non-Degree (GND) Program is for applicants with a bachelor's degree or higher degree, who wish to enroll in graduate courses only or a combination of graduate and undergraduate courses in the same semester. All Graduate Non-Degree students pay graduate tuition rates. Graduate course work in Medicine, Dentistry, Law, Business, Informatics, Education, Library and Information Science, Nursing, and Social Work is typically not available to GND students.

Since GND students are not eligible to take graduate courses in several graduate programs, before you apply to any program, please contact the graduate department in which your interest lies to determine your best admission and course options. All GND applicants should consult the online materials and use the online application at http://www.iupui.edu/~gradoff/gnd/application.html.

For those who have a bachelor's degree and wish to enroll in undergraduate courses only, please complete the undergraduate admissions visiting student application (www.enroll.iupui.edu/visiting.shtml.)

Students who are initially admitted as nondegree students, but who later wish to obtain a graduate degree, must make formal application for admission to a departmental degree program. Once admitted, the department may recommend to the dean of the Indiana University Graduate School that credit earned as a nondegree student be applied to degree requirements. Students should be aware that certain departments and schools specifically prohibit course work taken under nondegree status from counting toward a degree after a student has been admitted to a degree program.

Professional Programs

IUPUI offers professional degrees in Dentistry (D.D.S.), Law (J.D.), Medicine (M.D.), and Physical Therapy (D.P.T). All of these degrees require prior study at the bachelor's level as a condition for admission to the program.

Aid for Graduate and Professional Students

Graduate and professional students must file the Free Application for Federal Student Aid (FAFSA) or a renewal FAFSA to apply for financial aid. The FAFSA is available at http://www.fafsa.ed.gov/. The priority deadline is March 1.

IUPUI Graduate Office

The IUPUI Graduate Office is the administrative center for graduate and graduate/professional programs on the Indianapolis campus. Although no graduate degrees are granted by IUPUI itself, more than 8,000 students pursue one of the 165 graduate-level certificates and degrees offered on the IUPUI campus by the Indiana University Graduate School, the Purdue University Graduate School, and individual schools at IUPUI. The director of the graduate office serves as dean of students for all IUPUI post baccalaureate students in collaboration with the IUPUI dean of students. In addition to the director, the Graduate Office has an assistant director, an assistant dean, a graduate non-degree coordinator, a curriculum coordinator, and other support staff.

As the locus of graduate administrative activity, the IUPUI Graduate Office processes applications and GRE scores for all graduate and professional programs and receives theses and dissertations for the graduate schools of both IU and PU. The office provides staff support for all graduate administrative committees, sponsors student organizations (e.g., the Graduate Student Organization), counsels post baccalaureate and prospective students, conducts workshops, and organizes Graduate School commencement activities. The IUPUI Graduate Office also connects IUPUI to a wider graduate community through organizations such as the Council of Graduate Schools (CGS), the Committee on Institutional Cooperation (CIC), and the Midwest Association of Graduate Schools (MAGS). Perhaps most importantly, the IUPUI Graduate Office is the answer center for a wide range of questions pertaining to graduate study, graduate programs, and graduate student life. In addition, the IUPUI Graduate Office supports other offices, such as the Enrollment Center and the Community Learning Network, in providing information and documents for general inquiries. The staff of the IUPUI Graduate Office under the primary direction of the assistant dean also recruit for campus graduate programs.

Research, Fellowships, and Assistantships

IU and IUSM offer many excellent research and internship programs for high school, pre-med, graduate, and

medical students. Opportunities may be found at: http://
medicine.iu.edu/research/student-research-opportunities/.

IU Herron School of Art and Design

Welcome to the Herron School of Art and Design!

Indiana University's Herron School of Art and Design is the only professional art school in Indiana. As a tightly knit community of artists, scholars, art educators, and designers who push their work to its potential and themselves to exceptional careers, we carefully maintain our focus on the quality education that has fostered the successes of top artists and designers for more than a century. Our responsibility to push creative boundaries, to foster analytical skills necessary for creative problem solving, and to challenge students to be innovative is the foundation for Herron's success. We offer:

Undergraduate Degrees

- Bachelor of Fine Arts (B.F.A.) with majors in Ceramics, Furniture Design, Painting, Photography, Printmaking, Sculpture, Visual Communication, General Fine Arts
- Bachelor of Art Education (B.A.E.)
- Bachelor of Arts (B.A.) with a major in Art History

Minors

- Minor in Art History
- Minor in Book Arts

Graduate Degrees

- Master of Fine Arts (M.F.A.) in Visual Art and Public Life with emphases in Furniture Design, Printmaking, Sculpture, Ceramics, Photography and Intermedia, Painting and Drawing
- M.F.A. in Visual Communication
- Master of Art Education (M.A.E.)
- Master of Arts (M.A.) in Art Therapy

Accreditation & Licenses

Since 1952, the Herron School of Art and Design has been an accredited institutional member of the National Association of Schools of Art and Design (NASAD). Herron is also accredited as a school of Indiana University by the Higher Learning Commission of the North Central Association of Colleges and Schools and by the Teacher Training Licensing Commission of the Indiana State Board of Education.

Community Learning Programs

Saturday School - Fall, Spring

Herron's Saturday School, established in 1922, provides quality art instruction to youths in grades 2 to 12 and adults seeking to learn artistic techniques, improve art and design skills, try new art forms, and build a portfolio of work. Classes take place in spring and fall semesters and are held at Herron's Eskenazi Hall and at Herron's Sculpture and Ceramics building. Class offerings include drawing, painting, illustration, ceramics, photography, printmaking, and elementary art. Instructors are capable junior and senior Herron students and alumni working under supervision of Community Learning/Art Education. The combination of quality instruction and an art and design school environment encourages exceptional development of creative skills. Partial scholarships are available through teacher recommendations. For more information, contact (317) 278-9400, sschool@iupui.edu, or visit:

www.HerronCommunity.org.

Evenings At Herron - Fall, Spring

Evenings At Herron, started in 2008, provides non-credit art classes that meet one night a week at Herron's Eskenazi Hall. Classes target adult and high school students with offerings ranging from oil painting to drawing from life and handbuilding with clay. Class sizes are limited. For more information, contact (317) 278-9400, sschool@iupui.edu, or visit:

www.HerronCommunity.org.

Honors Art and Design - Summer

Honors Art and Design is a rigorous, two-week pre-college summer program for high school juniors, seniors and recent graduates who want to build their art making skills and portfolio, plus receive guidance in planning an education in art and design. For more than thirty years, the program has attracted talented high school students who want to experience a "taste" of art and design school. Each summer, two sessions of Honors Art and Design are held at Herron's Eskenazi Hall. Workshops in drawing, painting, design, printmaking, and theory - equivalent to those given to first-year Herron students - are carefully developed to build basic studio and visual communication skills. In addition, field trips provide meaningful exposure to nearby Indianapolis cultural sites. Moderate class sizes lead to quality instruction provided by Herron faculty members and alumni. To qualify for Honors Art and Design, a student must have completed the sophomore year of high school and should write a short statement of interest. For more information, contact (317) 278-9400, sschool@iupui.edu, or visit:

www.HerronCommunity.org.

Youth Art Camp - Summer

Launched in 2002, Herron's Youth Art Camp is a summer day camp for young people entering grades 2 to 10. One-week or two-week camp sessions offered full day, Monday through Friday, are held during the months of June and July at Herron's Eskenazi Hall. Teachers guide campers in a fun, productive series of studio art activities where imaginative thinking and creative visual processes and expression are stressed. Campers learn basic art making skills and concepts, work with Visiting Artists, and take field trips to nearby cultural sites. Each camp culminates with an art exhibition recognizing participants' successes. Art becomes a valid way to communicate, problem-solve, and learn. Tuition waivers are available on a first come, first served basis for those in need of financial assistance. For more information, contact (317) 278-9400, sschool@iupui.edu, or visit:

www.HerronCommunity.org.

Facilities

Eskenazi Hall

Eskenazi Hall is a 169,000 square-foot facility tripling Herron's previous square footage. The building provides the students with more than 70 art and design studios, graduate studios, four galleries, sculpture gardens, a comprehensive art library, a grand hall, a student lounge, conference rooms, up-to-date technologies, and other amenities to enhance all of the schoo'ls academic and community outreach programs.

Sculpture and Ceramics Building

The Sculpture and Ceramics Building is on the north edge of the IUPUI campus and provides state of the art technology, studios, facilities, and exhibition spaces for the Sculpture and Ceramics programs. Expansion plans to enlarge this facility are currently underway.

Herron Galleries

The Herron Galleries consist of the Eleanor Prest Reese and Robert B. Berkshire Galleries, the Marsh Gallery, and the Basile Gallery. The Galleries provide the community, local high school students, and IUPUI students, faculty, and staff with firsthand exposure to contemporary works of art created by local, regional, national, and international artists.

The Eleanor Prest Reese Gallery, Dorit & Gerald Paul Gallery, and Robert B. Berkshire Galleries

These Galleries are committed to a program of several exhibits each year that explore all areas of visual artistic expression. Each exhibit is accompanied ban announcement and a public opening. The yearly schedule is coordinated with the school's lecture series to provide a broader understanding of the works presented in the Galleries. In addition, workshops are conducted by visiting artists, designers, curators, art historians, and scholars to give students and community members the opportunity to work directly with recognized professionals. The Marsh Gallery is generally reserved for student-led projects while the Basile Gallery usually displays artwork by Herron faculty and alumni. All three Galleries are intended to be educational resources for students as well as the community. A mailing list exists for anyone interested in receiving information about talks, workshops, and other events associated with the Galleries. The Galleries are open throughout the year. Gallery hours may vary. All shows are free and open to the public. Interested persons may call (317) 278-9423 for current gallery hours and an exhibition schedule, or go to the Galleries website at:

www.Herron.IUPUI.edu/Galleries

Museums, Art Galleries, and Culture

Situated in the heart of Indianapolis' White River State Park Cultural District, Herron's location on the campus of IUPUI enables greater student and community access to cultural programming, gallery exhibitions, lectures, and special events. This ideal location also fosters more partnerships with surrounding nonprofit organizations, including the renowned Eiteljorg Museum of American Indians and Western Art, the Indiana State Museum, the Indiana Historical Society, and the Indianapolis Zoo. The Children's Museum and the Indianapolis Museum of Art are just a few miles away. Downtown galleries are numerous and many are within walking distance of Herron.

Career Counseling and Placement

Careers in art are almost as varied as the artists themselves. Graduates of the Herron School of Art and Design can be found in professional positions throughout the United States and in various parts of the world. Many fine art graduates go on to graduate schools to continue their art preparation. Many also go directly into art professions, some working full time producing their art, others working as artists and illustrators for private and public agencies, in museums, in galleries, and in many other settings. Graduates of the Visual Communication Program have many career options open to them, including design positions in business, industry, and academic settings, as well as advertising agencies and design studios. Art Education graduates from Herron have certification to teach in the public schools in Indiana. Many also teach in private settings or work with museums or public agencies concerned with art and recreational media. Some graduates in Art Education go on to earn masters degrees and become permanently certified. Information about employment in specific careers is available from placement offices, admissions offices, and department coordinators. IUPUI, in cooperation with the Herron School of Art and Design, works on the local and national levels to assist students and alumni in career placement. Counseling coordinators provide recommendations and maintain a schedule of on-campus recruiting dates by corporate and governmental representatives. Herron School of Art and Design has a website for all students and graduates who are seeking jobs. It is updated weekly and lists part-time, full-time, and freelance jobs for all fine arts majors. The job line page is located in the student services section of the Herron website at:

http://www.herrontalent.com

History

The Herron School of Art and Design boasts a rich tradition. The roots of the school were planted in 1877, when it was established as the first school in Indiana dedicated to the teaching of art on a professional level. A professional art school, as defined by Herron's accrediting body, the National Association of Schools of Art and Design, is one in which 65% or more of the curriculum is comprised of studio art and Art History courses. After several years of intermittent instruction, the school resumed on a permanent basis in 1902. In 1967, Herron became a school of Indiana University.

Two years later, with the creation of Indiana University-Purdue University Indianapolis (IUPUI), Herron became part of this innovative approach to higher education. In 1999, Herron launched its first ever capital campaign to raise funds for a new school. Completion of part one of this two-stage process was celebrated in 2000 with the opening of its new state-of-the-art Sculpture and Ceramics Facility, just north of the IUPUI campus. Five years later, Herron opened the doors to its new home, Eskenazi Hall, on the campus of IUPUI. This 169,000 square foot facility tripled Herron's previous square footage and brought all remaining art programs together under one roof. The new building provides the students with more than 70 art and design studios, graduate studios, four galleries, sculpture gardens, a comprehensive art library, a grand hall, a student lounge, conference rooms, up-to-date technologies, and other amenities to enhance all of the school's academic and community outreach programs. Herron has completed more than 100 years of education in the visual arts. Throughout its history, the school has educated numerous successful artists, educators, curators, and designers and will continue to be a nationally recognized arts institution.

International Travel

The experience and wisdom gained through travel abroad is vital to a student's artistic and intellectual growth. Students emerge from their adventures abroad with an expanded knowledge of art, a deeper appreciation for other cultures and ways of life, and a different perspective on how they view art. Herron has long recognized the value of such experiences and offers a variety of travel options. These have included Belgium, China, Italy, England, France, Germany, Greece, and the Netherlands, and range from one to three weeks. The school continues to expand on these offerings as resources become available, and as new relationships develop with other schools around the world. Scholarship opportunities are available through Herron on a competitive basis. Programs are administered in cooperation with the IUPUI Study Abroad Office. Please see Herron's website under Academic Programs for specific information, or contact the IUPUI Study Abroad Office.

Mission

The primary mission of the Herron School of Art and Design is to provide quality education for students committed to careers in the visual arts, including Ceramics, Painting, Photography, Printmaking, Sculpture, Visual Communication, Furniture Design, Art Education, and Art History. Herron also offers community outreach programs to people of all ages interested in learning more about art. The schools size, numerous programs, and location in downtown Indianapolis create multiple opportunities for students to grow within their own disciplines. For more information about Herron School of Art and Design, visit:

.

Admission

Undergraduate Programs Admission

Admission to Herron School of Art and Design is based on the student's previous school record and may also require a visual portfolio. All Herron applicants must first be admitted to IUPUI. Students may be admitted to Herron based upon outstanding academic achievements. Other students who qualify for admission to IUPUI may be admitted to Herron through a visual portfolio. Students enrolled at other schools or divisions of IUPUI may apply for Herron admission the semester before beginning Herron courses. To transfer, they must have at least 12 credit hours that apply toward a Herron degree and a 2.5 cumulative grade point average (GPA). IUPUI students must file an application for priority admission by October 1 for spring admission and March 1 for summer or fall admission. Please contact the Herron Student Services Office at (317) 278-9400 for more information. All students are admitted into Herron as pre-fine art, Art History, or pre-art education majors. To be admitted to a Fine Art or Art Education major, a student must go through the portfolio review process, which occurs after students complete the freshman Foundation Program courses and nine or more credit hours of sophomore-level studio work. Students interested in Art History may be directly admitted into that program and do not have to go through the portfolio review process.

Admission with Transfer Credit

Students with transfer credits from other colleges or universities may be considered for admission to Herron.

Transfer students may receive credit for successfully completing academic courses (grade of C or higher) of equivalent content from other regionally accredited institutions. Transfer credit for studio art courses, however, is granted only from institutions with National Association of Schools of Art and Design (NASAD) accreditation. Credits for studio art courses from institutions not accredited by NASAD may be eligible for evaluation toward a Herron degree program. Transfer students ready to register for 300-level studio courses must submit a portfolio for review. Students who are eligible for advancement will be notified by the Herron Student Services Office after admission to the university. Review dates and guidelines will be determined by the individual degree programs.

AP Credit

A score of 5, 4, or 3 on the Art History AP Exam will be counted as either HER-H 101 or HER-H 102. Students should contact their advisors to elect which course they prefer to use the AP credit towards. A score of 5, 4, or 3 on the AP Fine Arts Exam will be counted as a studio elective. Herron will not accept an AP score of 2 or 1.

Readmission of Former Students

Former students in good standing who withdraw in accordance with the regulations of the school and who desire to return within two years of their departure should contact the IUPUI Office of Admissions. Students who have been gone for two or more calendar years must follow the current bulletin requirements and meet all departmental curriculum requirements offered at the time of their return. All B.F.A. students who interrupt their major course of study for more than five calendar years are required to pass a faculty portfolio review prior to enrollment in 300- or 400-level studio courses. B.A.E. students who interrupt their art education program for more than five years must re-apply to the program and complete the requirements in place at the time of return. For Visual Communication students, no major course completed more than five years previously will be accepted toward the Visual Communication graduation requirements. Former students whose standing was not satisfactory at the time of withdrawal, former students who withdrew without compliance with the regulations of the school, and former students who were terminated on the basis of performance, must apply in writing to the Herron Student Services Office, 735 West New York Street, Indianapolis, IN 46202, for consideration by the Student Affairs Committee. See section on "Petition for Readmission." Petitions are due to Herron Student Services Office by October 15 for spring admission and April 15 for fall admission.

Academic Sequencing

The studies at the Herron School of Art and Design are sequential, in that a student moves through definite programs of prescribed and optional studies on a year-to-year basis until all the requirements for a particular degree are fulfilled. Students who fall behind in fulfilling degree requirements at a particular year's level will be expected to fulfill those requirements in sequence, either in conjunction with or in place of courses offered at the next level. Conflicts in scheduling may occur when students try to make up requirements, and they may find that their enrollment must be extended beyond the original graduation date. Students are therefore strongly advised to carefully plan their academic schedule.

Awarding of Credit

Herron School of Art and Design awards credit in accordance with the standards and guidelines of the National Association of Schools of Art and Design.

An undergraduate credit hour corresponds to approximately 3 hours of work per week for a period of one semester. Thus, a 3-credit course corresponds to approximately 9 hours per week for a period of one semester. A 3-credit lecture/discussion course typically meets with the instructor 2.5 - 3 hours per week, with the expectation that students will work, on average, 6 or more hours outside of class per week. A 3-credit studio course typically meets with the instructor 4.5 – 6.5 hours per week, with the expectation that students will work, on average, 3-5 hours per week in the studio outside of class meeting time.

When a course is offered for a period shorter than or longer than one semester, or when the course is taught in a hybrid or alternative format, the credit hours are calculated on the basis of the norms described above. Since students work at different rates, the amount of time an individual spends preparing the work required for class may differ from the averages on which credit hours are calculated. Credit is only awarded when students complete all course requirements and demonstrate the competencies defined for the course. Ultimately, the amount of credit awarded per course reflects the expectation for students' acquisition of competencies rather than the number of hours required to achieve those competencies.

Advanced courses typically require students to work more independently than introductory courses. Faculty contact for graduate courses may reflect both the expectation of significant independent work and the type of work done during class meetings.

Herron Expenses

A Herron student will spend approximately $1,300 on books and supplies during a school year. Lab fees are charged for materials used in certain studio classes. A Herron program fee is assessed to all Herron students based on the number of credit hours taken each semester. The lab and program fees are subject to change. Current information can be found at the Bursar's website at www.bursar.iupui.edu.

Portfolio Review for Advancement

In order for students to be admitted into the majors in which they will earn their degrees at Herron School of Art and Design, they are required to pass a portfolio review for advancement (this requirement does not apply to Art History majors). To be admitted to the upper level courses required for the majors, students must pass the portfolio review. Therefore, completion of portfolio review requirements does not guarantee advancement into the major. The decision of the faculty conducting reviews is subject to review by the Dean of the School. The Dean's decision is final.

Policies for Sophomore Advancement Review in Fine Arts, Visual Communication, Art Education

The purpose of Sophomore Advancement Review at Herron is to evaluate student achievement in the first two years of their education at Herron prior to being accepted into the major field of study and undertaking the advanced sequence of coursework. Review is an occasion to assess minimum technical competencies, to assure that students are beginning to integrate their areas of learning at a level appropriate for a sophomore level student, and to remedy any deficiencies. The review is also an occasion for programs to assess their own effectiveness, allowing faculty to observe and respond to areas of strength and weakness in their curricula.

Eligibility for review:

Note: A student may only undergo review three times.

1. Completion of Foundation year studio courses

2. Completion of 6 credits of Art History

3. Completion of 9-18 credits of 200-level studio courses (specific courses may be specified by department)

4. Minimum GPA in Herron studio courses: 2.5 B.F.A./ 3.0 B.A.E.

5. Minimum cumulative GPA in all IU courses: 2.5 B.F.A./ 2.8 B.A.E.

6. B.A.E. candidates must pass the PSST or be exempted by sufficient SAT, ACT, or GRE scores, or a master's degree from a regionally accredited institution

7. Completion of ENG-W 131*

8. B.F.A. candidates must complete ENG-L 105 or ENG-L 115*

9. B.A.E. candidates must complete HER-M 220 Art Education and New Media*

10. B.A.E. candidates must complete COMM R110*

*Students may stand for review prior to taking ENG W131, L105, L115, or COMM R110, but must complete these courses prior to embarking upon 300-level coursework. Completion during the summer before the junior year may be required.

OR

Students transferring to Herron with the AFA degree from Ivy Tech Community College will be eligible for sophomore advancement review after taking 9 credits of studio art at Herron. The following courses are strongly recommended for students in their first semester at Herron as they prepare for sophomore advancement review:

HER-D 202 Drawing IV (3 cr.)

ENG-L 105/115 English Literature or any literature class (3 cr.)

HER-X 2XX 200-level studio course in area of intended major (3 cr.)

HER-X XXX Any studio course within or outside of the intended major (3 cr.)

HER-H 103 Introduction to Contemporary Art (3 cr.)

Faculty review teams may base their recommendations on:

1. Consideration of students' grades in all or in selected courses taken. Grades may count for up to 25% of the evaluation.

2. Students' work presented at Review and their ability to speak and write about it as directed. The work and students' presentations of their work may count for at least 50% of the evaluation.

3. Assessment of students' likelihood of success in their intended majors. This evaluation may be based on students' oral or written responses to questions posed during review or in the preparatory materials, evidence in the work presented at review, or students' conduct during the review process. This may count for up to 25% of the evaluation.

Review Recommendations:

Passed: Students advance into their chosen majors and register for upper level courses. No further reviews are required.

Probation: Students are advised of areas of weakness and are given remedial instructions to address these areas. These may include specific courses to be taken before advancing into upper level coursework, or courses to be taken in conjunction with advancing into upper level coursework. Summer course offerings should address the need for remedial work as much as possible. Students will be assigned a faculty mentor to assist them with improving the identified weaknesses. Subsequent review may be required and should be available to students within seven months.

Denied: Students may not advance into upper level coursework. Students may continue to enroll in 100- and 200-level courses and may present themselves for review in the same department or another at the time of their own choosing. A student who is denied advancement may schedule a meeting with a member of their review committee to discuss their portfolio. Denials should be rare.

After review:

The review committees will submit their recommendations to the Dean and the department chairs.

Students will be informed of their official results by Student Services staff within two weeks.

Last updated: March 2012

Graduate Admission

The Master of Fine Arts in Visual Art with Emphasis Areas in Furniture Design, Sculpture, Printmaking, Photography and Intermedia, Painting and Drawing, or Ceramics

Admission into the program is competitive. Applicants must demonstrate a commitment and capability to develop sustained creative activity as a visual artist at the professional level and the ability to complete graduate work. Applicants must have: (1) an undergraduate degree, preferably a Bachelor of Fine Arts degree with a studio art emphasis from an accredited institution, but other backgrounds will be considered by the graduate

admissions committee, (2) a minimum GPA of 3.0 on 4.0 scale, and (3) a portfolio documenting past visual artwork. Some otherwise qualified applicants may not have all the necessary coursework and background experience to prepare them to fully succeed in their graduate coursework. These persons will be required to make up curricular deficiencies by enrolling in appropriate undergraduate courses prior to taking specific courses in the graduate program. Current admissions requirements, deadlines for admissions, application procedures, and information about financial aid are available on the website for Herron School of Art and Design.

The Master of Fine Arts in Visual Communication

Admission into the Visual Communication graduate program is competitive. The Department of Visual Communication seeks graduate candidates who have strong skills for thinking critically about complex issues and working collaboratively in teams that represent a diversity of perspectives. Applicants ordinarily will be expected to hold baccalaureate degrees from colleges or universities of recognized standing prior to registering as graduate students. Applicants for a master's degree program should have achieved a 3.0 (out of 4.0) grade point average or higher for the baccalaureate degree or have other indicators of outstanding academic performance. Students entering the M.F.A. degree program in Visual Communication are not required to have an established background in design or art. The Visual Communication Design program at Herron encourages cross-disciplinary research approaches and experiences. However, applicants who do not have a prior educational background in design or professional design experience may be required to successfully complete foundational pre-graduate studies in design before being accepted to initiate the M.F.A. curriculum. One or two semesters of foundational pre-graduate studies may be required before full admission into the M.F.A. program in Visual Communication. Foundational pre-graduate courses in design may be offered for graduate credit, but the credit hours do not apply toward completion of the 60-credit hour requirements in the M.F.A. degree. Decisions regarding admission into the Foundational Pre-Graduate program are made on an individual basis.

The Master of Arts in Art Therapy

Admission into the Art Therapy graduate program is competitive. Applicants must have (1) an undergraduate degree with transcripts that reflect 18 or more credit hours of studio art and 12 credit hours of psychology, including developmental and abnormal psychologies /or/ 9 credit hours of psychology including developmental and abnormal psychology, plus 3 credit hours of sociology, (2) a minimum GPA of 3.0 on 4.0 scale, and (3) a portfolio of artwork that shows experience with different media and an ability to understand the motivations of one's personal art making process. Current admissions requirements, deadlines for admissions, application procedures, and information about financial aid are available on the website for Herron School of Art and Design.

The Master of Art Education

Students interested in entering the Master of Art Education (M.A.E.) program must possess a teaching certificate in art and a 3.0 on a 4.0 scale cumulative grade point average. Students holding an undergraduate degree in visual art, but not certification requirements of the Indiana Professional Standards Board, must complete these requirements through the certification courses in the Bachelor of Art Education degree before pursuing the M.A.E. In addition to the application, applicants must also submit a portfolio of studio work including lessons/units with examples of student work and a personal statement.

Degree Programs

Bachelor of Arts (B.A.)

- Art History

Bachelor of Art Education (B.A.E.)

- Art Education
- Art Education and Bachelor of Fine Arts - dual degree

Bachelor of Fine Arts (B.F.A)

- Ceramics
- Furniture Design
- General Fine Arts
- Painting
- Photography
- Printmaking
- Sculpture
- Visual Communication

Dual Degree - B.A.E. & B.F.A

Adding the second degree (B.F.A.) certifies students to teach art K-12 and provides a strong studio foundation. The B.F.A. requires more than 30 additional hours in studio/history. Students wishing to pursue the double major should consult with both advisors for the B.F.A. and B.A.E. each semester. Electives in one degree may be met by fulfilling requirements in the other degree; advisors can counsel on the most efficient path for completion of the program. The double major takes five and one half years to complete, including summer school. Students must successfully pass both portfolio reviews (Art Education and Fine Arts Reviews).

- Admission into the Art Education Program
- Maintain a 2.5 GPA at all times and no lower than a C in all methods courses.
- Complete and pass all sections of the PPST before the fall of sophomore year.
- Pass the Sophomore Review into the Art Education Program in the fall semester of the sophomore year.
- Apply to the Teacher Education Program, School of Education by February 1 of sophomore year.
- Admission into the Teacher Education Program

- Have been advanced into a Fine Arts Program (Sophomore Review).
- Maintain a minimum GPA of 2.5.
- Complete formal application to the Teacher Education Program by February 1 of the sophomore year. This online application can be accessed through the IUPUI School of Education website; select the All Grade application option.

Timeline Requirements

Freshman Year

- Obtain and read both the Herron and School of Education sections of the IUPUI Campus Bulletin concerning Art Education programs and student teaching for students in all grades. Planning your academic progress in this school is your responsibility. Please meet with your advisors prior to registration each semester to be sure all your requirements are being fulfilled.
- Register to take the PRAXIS 1: PPST- Pre-Professional Skills Test (http://www.ets.org/praxis/in/). Information and sample test items are available from School of Education Student Services. This test can be taken on computer or in a classroom. Even by computer, the written component takes six weeks to score, so plan accordingly. Failure to pass this test by January 1 of sophomore year will delay your advancement into Art Education/School of Education programs for one year. Study guides and workshops are available. Students will not be advanced into Art Education/School of Education programs until this test is passed. (Keep a record of your scores.)
- Maintain a minimum GPA of 2.5 in all major area courses and professional education courses, and a 2.0 in Speech COMM-R 110 and English Composition ENG-W 131.

Sophomore Year

(completion of at least 36 hours of course work)

- Be sure all parts of the Pre-Professional Skills Test (PPST) have been passed with scores by January 1.
- Prepare a portfolio of work and sign up for an advancement session in late fall.
- Complete formal application to the Teacher Education Program by February 1, sophomore year.
- Upon acceptance into the Teacher Education Program, sign up and attend the orientation program.

Junior Year

(completion of at least 56 hours of course work)

- Register for student teaching in the fall ONE FULL ACADEMIC YEAR PRIOR to the academic year in which you plan to student teach. Failure to register in time will detain student teaching for one full year, no exceptions. Consult the section on student teaching for All-Grade Education (K-12 license) in the School of Education section of the IUPUI Campus Bulletin or website.
-

Senior Year

(completion of at least 86 hours of course work)

- Register for the National Teachers Exam Art Education Specialty Area the semester prior to student teaching. Results from this exam take several months to receive and can delay hiring. Teachers cannot be hired in Indiana without proof of passing test scores on this exam. Study guides are available in the Curriculum Resource Center, ES1125, and NTE Bulletins in the School of Education.
- Apply for the B.A.E. degree in the Herron Office of Student Services by October 15 of the academic year in which you plan to graduate.
- If you plan on teaching in Indiana, apply for a teaching certificate in the School of Education. Obtain a form and directions from Education Office of Student Services prior to student teaching. Students are responsible for understanding all requirements for graduation and for completing them by the time they expect to graduate. Please call the Education Student Services Office for more information about the School of Education programs and keep in close contact with your Art Education advisor.

Last updated: March 2012

Bachelor of Art Education

Students who wish to become certified to teach in public schools may pursue either a Bachelor of Art Education or certification within the Master of Art Education at Herron. The Art Education Program of the Herron School of Art is offered in conjunction with the School of Education and the Indiana Professional Standards Board. These bodies have established certain academic requirements for earning a degree and/or licensure in Art Education in all grades (K-12) in Indiana.

The Bachelor of Art Education (B.A.E.) Program leads to certification (teaching license) in Art Education in all grades (K-12) in the state of Indiana. The program features a commitment to practical experience integrated with a strong studio program. Throughout the program, students increase skill and knowledge in the content of Art Education today, including Art History, criticism, aesthetics, studio, and teaching methodology. Students gain experience by teaching school-age students in a variety of programs and settings including Art Talks (surrounding elementary and secondary schools), Visiting Artist: Art to School (Herron Gallery), Saturday School (Herron campus), Indianapolis Museum of Art, Eiteljorg Museum of the American Indian and Western Art, and student teaching. In addition, students observe and participate in art programs and events citywide.

Students enrolled in the Bachelor of Fine Arts degree program at the Herron School of Art may also pursue an All-Grade Indiana State Teachers License in Art. Students wishing to pursue certification need to declare a second

major (B.A.E.) and follow the requirements for this degree as well as the B.F.A. Students should meet regularly with advisors from both major areas to ensure efficient completion of both degrees.

Curriculum Requirements for the B.A.E. Degree

Certification Requirements, License 2002, Indiana Professional Standards Board

Academic Requirements—Distributive

Art History: 12 cr.

- HER-H 101
- HER-H 102
- HER-H 103
- 3 additional Art History credit hours

Humanities: 12 cr.

- English Composition ENG-W 131*
- Communication Studies COMM-R 110*
- 3 cr. in another writing or public speaking course. See an advisor for a list of current classes that fulfill this oral/written skills requirement.

3 cr. from the following:

- Communication Studies
- Comparative Literature
- English
- Folklore
- Foreign Language
- Journalism
- Music
- Philosophy
- Religious Studies

Life and Physical Sciences: 9 cr.

From the following group (a minimum of 3 cr. in biology is required):

- Anatomy
- Astronomy
- Biology (Required)
- Chemistry
- Computer Science
- Food and Nutrition
- Mathematics
- Physics
- Physical Geography
- Physiology

Social and Behavioral Sciences: 9 cr.

From the following group:

- Anthropology
- Business
- Economics
- History
- Nonphysical Geography
- Political Science
- Psychology
- Public and Environmental Affairs
- Social Work
- Sociology

Professional Education: 30-33 cr.*

The following education courses are required in order to fulfill requirements of the Indiana Professional Standards Board:

- EDUC-M 199 PRAXIS 1: Pre-Professional Skills Test (PPST) (0 cr.)
- Block One
- EDUC-M 322/M301 Diversity and Learning (7 cr.)
- Block Two
- EDUC-M 420/M 469/M 303 Literacy in Middle School (7 cr.)
- Block Three
- EDUC-M 482 Student Teaching: All Grades (16 cr.) (8 weeks each in elementary/secondary.)

Art Education: 10 cr.

The following required courses must be taken in the proper block sequence:

- Block One
- HER-M 371 Foundations of Art Education (4 cr.)
- Block Two
- HER-M 472/M 400 Teaching Art in Elementary Schools (3 cr.) and Lab/Field experience
- Block Three
- HER-M 473/M 401Teaching Art in Secondary Schools (3 cr.) and Lab/Field experience
- Studio: 47 cr.
- Foundation-Year Program 20
- HER-M 311: Art Education Studio (3 cr.)
- Her-D 201-D 202: Drawing II and IV (6 cr.)
- Three-dimensional studio
- Ceramics, furniture design, sculpture (6 cr.)
- Herron studio course 300/400 level (6 cr.)
- Herron studio electives (6 cr.)

Suggested Plan of Study for B.A.E. Degree and Certification

Freshman Year

Fall

- HER-D 101 Drawing I (3 cr.)
- HER-F 121 Two-Dimensional Design (3 cr.)
- HER-F 123 Three-Dimensional Design (3 cr.)
- HER-H 101 History of Art I (3 cr.)
- HER-X 101 Foundation Resources Workshop (1 cr.)
- ENG-W 131 Elementary Composition I (3 cr.)

Total: 16 cr.

Spring

- HER-D 102 Drawing II (3 cr.)
- HER-F 122 Color Concepts (3 cr.)
- HER-F 100 Creative Processes (3 cr.)
- HER-H 102 History of Art II (3 cr.)
- HER-X 102 Foundation Capstone (1 cr.)
- COMM-R 110 Speech Communication (3 cr.)

Total: 16 cr.

Students must pass the Pre-Professional Skills Test (PPST) before their sophomore year.

Sophomore Year

Fall

- HER-M 220 Art Education & New Media-21ST CENT (3 cr.)
- HER-D 201 Drawing III (3 cr.)
- HER-H 102 Art History II (3 cr.)
- Three-dimensional studio elective (3 cr.)
- Herron studio elective (3 cr.)
- Social and Behavioral Science elective (3 cr.)

Total: 18 cr.

Students must apply to the School of Education and pass the Art Education Sophomore Review.

Spring

- HER-D 202 Drawing IV (3 cr.)
- Three-dimensional studio elective (3 cr.)
- Herron studio elective (3 cr.)
- Oral or written expression (3 cr.)
- Humanities elective (3 cr.)
- Life and Physical Science (3 cr.)

Total: 18 cr.

Junior Year

Fall

- HER-M 371 Foundations of Art Education (4 cr.)
- EDUC-M 322/M 301 Diversity and Learning/Field experience (7 cr.)
- Herron 300/400 level studio elective (3 cr.)
- Social and Behavioral Science elective (3 cr.)

Total: 17 cr.

Spring

- HER-M 311 Art Education Studio Survey (3 cr.)
- HER-M 472/M 400 Teaching Art in the Elementary School/Field experience (3 cr.)
- EDUC-M 420/M 469/M 303 Middle School Literacy/ Field Experience (7 cr.)
- Life and Physical Science elective (3 cr.)

Total: 16 cr.

Senior Year

Fall

- HER-M 473/M 401 Teaching Art in the Secondary Schools (3 cr.)
- Art History elective (3 cr.)
- Herron 300/400 level studio elective (3 cr.)
- Social and Behavioral Science elective (3 cr.)
- Life and Physical Science elective (3 cr.)

Total: 15 cr.

Spring

- EDUC-M 482 Student Teaching: All Grades (16 cr.)

Total: 16 cr.

*These courses must be taken with a grade of C or higher. Failure to pass these courses or the PPST will prohibit student from further study in the Art Education Program. Please see your academic advisor before registering for classes.

A minimum total of 132 credit hours is required. Students may exceed this amount depending on courses selected. Please see an Art Education advisor before registering for classes. All Art Education students must maintain a grade point average of 2.5.

Last updated: March 2012

B.A. in Art History

Herron School of Art and Design offers both a major and a minor in art history. The Bachelor of Arts major in Art History gives the undergraduate student an opportunity to study the visual culture of humankind from prehistoric times to the art of today and to understand the significant role played by visual art in societies worldwide. The minor in Art History enables students majoring in other areas to expand their knowledge of Art History and gain valuable career-building experience.

Unlike the studio B.F.A. degrees at Herron, the B.A. in Art History parallels a liberal arts major program leading to the B.A. degree. Art history majors take 36 credit hours of surveys and seminars in their major field, covering at least three of the following areas: ancient, medieval, Renaissance and Baroque, American, world art, modern and contemporary art, and art theory. Majors must take at least 6 credit hours of studio art as well as a variety of core requirement courses in the humanities and sciences, including at least one foreign language. Specific requirements for the Art History major are outlined later in this section.

An Art History minor takes 15 hours of Art History credits from at least two historical periods or subject areas. Residency requirement: At least 6 credits at the 200-level or above must be taken at Herron.

Through the study of Art History, students develop skills in key areas: visual analysis, critical thinking, research, and writing. These abilities enhance visual literacy, enrich life experiences, and provide a foundation for a variety of rewarding career opportunities. Fields such as teaching, museum work, art conservation and restoration, historic preservation, architecture, art dealership, auctioneering and collecting, art criticism and journalism, advertising, filmmaking, exhibition design and preparation, historical research and writing, interior and commercial design, art librarianship, consulting, and publishing can build on an education in Art History. Art history also enriches the life of the practicing artist.

- Academic Requirements
- Minor in Art History

Academic Requirements

Academic Requirements for a B.A. in Art History

• A minimum of 125 credit hours is required to complete the Bachelor of Arts in Art History degree.

• A minimum cumulative grade point average of 2.0(C) is required for graduation.

Art History majors must fulfill the following general education requirements:

• 1 credit hour in a first-year seminar

• 6 credit hours in English composition

• 3 credit hours in speech communication

• 10 credit hours in foreign language (8 in some languages)

• 6 credit hours in analytic skills

• 6 credit hours in natural science

• 6 credit hours in history

• 6 credit hours in arts and humanities

• 6 credit hours in social and behavioral sciences

• 6 credit hours in studio art

• 15 credit hours in advanced courses

• A minimum of 36 credit hours of Art History courses are required. HER-H 100 Art Appreciation and HER-H 221 Art Past and Present may not be counted for the Art History major or minor requirements, but may be used for general elective credit. However, HER-H 100 and HER-H 221 may count toward elective credit in the major only if taken before HER-H 101, HER-H 102, and HER-H 103. No course in Art History in which a student receives a grade below C (2.0) may be used to fulfill the 36 credit hour requirement.

• A minimum of 19 credit hours of electives is required.

• A minimum of 26 credit hours of 300- and/or 400-level courses must be completed at Herron/IUPUI.

• A maximum of eight courses may be taken Pass/Fail but no more than two Pass/Fail courses may be taken in any one academic year. Pass/Fail courses can be used only as electives or no major 300- or 400-level requirements.

• A maximum of 12 credit hours may be taken by correspondence through the Indiana University School of Continuing Studies. Authorization from the Art History Program faculty and the Student Services Office at Herron School of Art and Design is required prior to registration.

• Once a course has been applied toward one requirement, it cannot be used again to satisfy a second requirement except where explicitly stated otherwise. In addition, except in cases of variable title courses, internships, and other special topics courses, no course number can be counted more than once toward graduation.

• Credits in the following courses will not be accepted toward the Art History degree: ENG-W 001, ENG-G 010, ENG-G 011, ENG-G 012, or ENG-G 013; MATH 130, 132, or any mathematics course lower than M118.

Last updated: March 2012

Distribution Requirements

First-Year Seminar: 1 credit

This course introduces students to the university's culture and values; familiarizes them with campus resources, including academic uses of technology; and provides them with skills for dealing with life at Herron/IUPUI. This requirement may be waived for transfer students or returning students, with the permission of the Art History faculty. This requirement may be satisfied by completing one of the following courses:

• HER-X 101 Foundation Resources Workshop or UCOL-U 110 First-Year Seminar

Communication Core: 19 credits

The communication core provides work in written and spoken English and foreign language study to prepare students for organizing and presenting their thoughts effectively. Further, skills in one or more foreign languages are necessary for a liberally and broadly educated person and are especially important to the professional art historian. Students should enroll in these courses as early in their college careers as possible.

English Composition (6 credits)

This requirement may be satisfied in one of the following ways:

- by completing ENG-W 131 or Honors ENG-W 140 and ENG-W 132 or Honors ENG-W 150 with a grade of C (2.0) or higher; or
- by testing out of ENG-W 131 through the IUPUI English Placement Exam and completing ENG-W 132 with a grade of C (2.0) or higher;
- for transfer students, by completing course work equivalent to ENG-W 131 and ENG-W 132 with a grade of C (2.0) or higher at another campus or institution.

Public Speaking/Rhetoric (3 credits)

- This requirement may be satisfied by taking COMM-R 110 or COMM-R 350. Students with previously acquired competency in public speaking may be eligible for special credit and exemption from this requirement.

Foreign Language (8-10 credits)

First-year competency is required, and second-year competency is strongly recommended. This requirement may be satisfied in one of the following ways:

- by completing first-year courses (10 credit hours, 8 in some languages) with passing grades;
- by completing a second-year course with a grade of C (2.0) or higher; or
- by attaining a satisfactory score on a placement test.

Students for whom English is not a first language may be exempted from this requirement, without credit, by completion of ENG-W 131 and ENG-W 132 with the required grade of C or higher. Note: Special English-as-a-second language sections of ENG-W 131 have been designated for students whose first language is not English.

Native speakers of languages other than English are not permitted to receive credit for 100- and 200-level courses in their native language. Similarly, native speakers of English who have achieved elementary or intermediate

proficiency in a foreign language by living or studying in country where the language is spoken ordinarily will not receive credit for taking 100- and 200-level courses in that foreign language.

In all cases, individual foreign language departments are responsible for determining a student's placement and for recommending a specific number of credit hours for prior work. Before registering for foreign language courses, native speakers of languages other than English should confer with the academic advisor in the relevant department.

Basic Courses: 30 credits outside the major

Analytic Skills (6 credits)

These courses provide the student with insight into processes of logical reasoning. This requirement may be satisfied by completing 6 credits selected from the following courses:

- Mathematics MATH-M 118, MATH-M 119, MATH 12300, MATH 15100, MATH 15300, MATH 15400, MATH 15900 or above
- Philosophy PHIL-P 162 or PHIL-P 265 (Logic)
- Computers and Information Science CIT N10000, CIT N19900, CIT N20100, CIT N20700, CIT N21100, or CIT N24100
- Statistics
- Kelly School of Business BUS-A 200 Foundations of Accounting
- Purdue School of Engineering and Technology CIT 21200 Web Site Design

Natural Sciences (6 credits)

This area allows for choice of courses treating the "natural" phenomena of the world according to models of scientific thought. The 6 credits are to be selected from at least two of the following subjects:

- Astronomy
- Biology (including anatomy, botany, microbiology, physiology and zoology)
- Chemistry
- Geography (up to 3 credits may count: G107, G303, or G307 may be counted toward this requirement)
- Geology
- Physics
- Psychology PSY-B 105

History (6 credits)

Courses exploring patterns and processes of history are essential for making decisions in the present, giving the background necessary for students to more capably assume societal responsibility. This requirement is fulfilled by completing two semesters of the following courses:

- HIST-H 108 or HIST-H 113 and HIST-H 109 or HIST-H 114
- HIST-H 108/HIST-H 109 Perspectives on the World to 1800 and since 1800
- HIST-H 113/HIST-H 114 History of Western Civilization I and II
- Transfer students who have taken history courses other than those listed above should consult with the Art History faculty about transfer credit.

Arts and Humanities (6 credits)

Courses lead to viewing the world from more than one perspective and learning something about its social, cultural, intellectual, and spiritual dimensions. The 6 credits must be divided between two of the following four areas:

- Fine Arts: Music MUS-M 174 or Communication Studies COMM-T 130
- English Literature ENG-L 105 or ENG-L 115
- Philosophy PHIL-P 110 or PHIL-P 120
- Religious Studies REL-R 133

Transfer credits in the arts and humanities that are not the content equivalent to the courses listed above may be used to fulfill this requirement as follows:

- Subject to review and approval of the Art History faculty, introductory courses in any of the arts and humanities may count toward this requirement.
- With approval of the Art History faculty, where it seems appropriate to the breadth of the course, survey courses may count toward this requirement.
- Other arts and humanities courses will be counted toward this requirement on a 2-for-1 basis (6 credit hours satisfying 3 credit hours of this requirement).
- The following will not satisfy this requirement: creative writing, drawing, performance, or studio courses.

Social Sciences (6 credits)

An examination of the complexities of human behavior, society, and human interaction, this area uses procedures and information developed in social and behavioral studies. The 6 credits must be divided between two of the following areas:

- Anthropology ANTH-A 103 or ANTH-A 104
- Economics ECON-E 201 or ECON-E 202
- Geography GEOG-G 110
- Political Science POLS-Y 101 or POLS-Y 103
- Psychology PSY-B 104
- Sociology SOC-R 100

Transfer credits in the social sciences that are nonequivalent to the courses listed above may be used to fulfill this requirement as follows:

- With the approval of the Art History faculty, introductory survey courses in any of the social sciences may count toward this requirement.
- With approval of the Art History faculty, where it seems appropriate to the breadth of the course, survey courses may count toward this requirement.
- Other social science courses will be counted toward this requirement on a 2-for-1 basis (6 credit hours satisfying 3 credit hours of this requirement).

Studio Art Courses (6 credits)

Studio art courses enable Art History majors to gain valuable firsthand understanding of the formal, technical, and conceptual skills involved in the creation of works of art and design. This requirement may be satisfied by any Foundation Program or beginning Fine Arts or Visual Communication courses or by Elective Arts courses. Students must meet any prerequisites for these courses.

Advanced Courses (300-400 level): 15 credits outside Art History

In addition to cultivating expertise in Art History, the degree student should conduct in-depth study of other appropriate subject areas. Offerings on the 300- and 400-levels of at least four departments or programs of the School of Liberal Arts, the School of Science, the Department of Music and Arts Technology in the School of Engineering and Technology, or Herron School of Art and Design may count toward satisfying this requirement. In order to register for any 300- or 400-level course, the student must meet prerequisite requirements. Advanced courses may include those that involve significant cross-disciplinary input, e.g., appropriately designed honors courses or specially designed liberal arts topics courses. Herron advanced courses outside Art History may be counted toward satisfying the advanced courses requirement. Please contact the Herron Student Services Office for more information regarding prerequisites for upper level courses at Herron outside Art History.

Major Requirements (100-400 level): 36 credits

Includes both HER-H 101-HER-H 102 History of Art I-II, no fewer than 12 credits at the 300 level, and no fewer than 12 credits at the 400 level. The 300- and 400-level courses should be distributed among at least three different areas of Art History selected from the following: ancient, medieval, Renaissance and Baroque, American, modern and contemporary, world art, or art theory. At least 3 credit hours must be taken in Art History after 1900. HER-H 103 Introduction to Contemporary Art may be taken to satisfy this requirement.

At least 15 of the 36 credits must be completed in-residence at IUPUI; of these 15 credits, two courses at the 300 level and two courses at the 400 level must normally be completed to fulfill this requirement. With permission of the Art History faculty, a 200-level course may substitute for a 300-level course.

Any course in which the student receives a grade below C (2.0) may not be used to fulfill this requirement. However, courses in which C-/D+/D/D- is received may be counted toward the total 125 credits required for graduation.

Electives: 18 credits

Elective subjects allow students to adjust their curricula to satisfy additional personal needs and interests. These subjects may be used to add an even greater diversity to a program or provide opportunity for in-depth reinforcement of required studies. Art history and studio art courses not used to satisfy previously listed requirements may be counted as electives.

Other Requirements

Diversity/World Cultures.

All Art History majors should take at least 3 credits of course work that enhances their understanding of cultural diversity, dealing with experiences outside the European and Euro-American tradition or with minority experiences in the United States. This requirement does not add to the total 125 credits required for graduation, but can be satisfied by any course in diversity/world cultures within the distribution requirements, major requirements, or electives described above. Credits earned through international travel experiences may be used to satisfy this requirement provided the international program takes place outside Europe or subject to individual approval.

Capstone Experience. As the culminating experience of their studies, all Art History majors are required to write a substantial research paper or complete a capstone project designed in consultation with a faculty mentor in their final year of study. A special capstone seminar is often scheduled during spring semester and is highly recommended as the venue for completing the capstone requirement. The capstone seminar may count as a 400-level course toward the major requirements. Alternatively, a student may undertake the capstone paper or project within the context of a 300- or 400-level Art History course or as an independent study.

Ceramics

The B.F.A. in Ceramics is a professional undergraduate degree for students desiring extensive studio experience with an emphasis in Ceramics. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of the ceramicist's craft.

The Ceramics curriculum develops an understanding of ceramics as an expressive artistic medium in contemporary society. The study of ceramic materials and techniques is balanced with the study of historical tradition and contemporary trends. The ceramic studio is well equipped so that students experience the variety of technologies used by contemporary artists. The program provides a solid foundation for students pursuing graduate studies or a studio art career.

Prior to being admitted into the major in Ceramics, students must successfully pass sophomore advancement review.

Ceramics Suggested Plan of Study
Sophomore Year

Fall

- HER-C 204 Beginning Ceramics, Hand Building (3 cr.)
- HER-D 201 Drawing III (3 cr.)
- HER-H 103 Introduction to Contemporary Art (3 cr.)
- Herron studio elective (3 cr.)
- Humanities elective (3 cr.)

Total: 15 credit hours

Spring

- HER-C 206 Beginning Ceramics, Wheel Throwing (3 cr.)
- HER-D 202 Drawing IV (3 cr.)
- Herron studio elective (3 cr.)
- Art History elective (3 cr.)
- Social/Behavioral Science elective (3 cr.)
- Humanities elective (3 cr.)

Total: 18 credit hours

Junior Year

Fall

- HER-C 304 **or** HER-C 308 Ceramics III **or** Intermediate Wheel Throwing (3 cr.)
- HER-C 307 Clay and Glaze Materials (3 cr.)
- Herron studio elective (3 cr.)
- Art History elective (3 cr.)
- Social/Behavioral Science elective (3 cr.)
- Life and Physical Science elective (3 cr.)

Total: 18 credit hours

Spring

- HER-C 305 Ceramics IV (3 cr.)
- Herron studio electives (9 cr.)
- Life and Physical Science elective (3 cr.)

Total: 15 credit hours

Senior Year

Fall

- HER-C 400 Individual Research in Ceramics (3 cr.)
- Herron studio elective (3 cr.)
- 400-level Ceramics studio (3 cr.)
- HER-J 410 A Critical Approach to Art (3 cr.)
- Academic elective (3 cr.)

Total: 15 credit hours

Spring

- HER-C 400 Individual Research in Ceramics (3 cr.)
- HER-C 405 Individual Research in Ceramics (3 cr.)
- 400-level Ceramics studio (3 cr.)
- Herron studio elective (3 cr.)
- Academic elective (3 cr.)

Furniture Design

The B.F.A. in Furniture Design is a professional undergraduate degree for students desiring extensive studio experience with an emphasis in Furniture Design. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of the furniture designer's craft.

Herron School of Art has established a tradition of providing a rich and stimulating environment for aspiring studio art furniture makers. The Furniture Design Program curriculum provides students the framework for their development as designers and makers. The Furniture Design Program's commitment to excellence is reflected in the high standards of professionalism achieved by its graduates.

Courses are taught by experienced and accomplished faculty. Students have the use of a well-equipped and maintained woodworking shop/studio. Introductory courses stress the importance of drawing, conceptualizing skills, design research and development, construction techniques and technologies, model making, art furniture history, and the completion of full-size furniture prototypes.

Intermediate and advanced courses challenge students to continue to develop their technical skills and begin to forage personal design aesthetic. Career goals and strategies are explored and developed. Classes are augmented with visiting artists, field trips, student/ professional design competitions and shows, and other pertinent professional activities.

Prior to being admitted into the major in furniture design, students must successfully pass sophomore advancement review.

Furniture Design Suggested Plan of Study
Sophomore Year

Fall

- HER-D 201 Drawing III (3 cr.)
- HER-H 103 Introduction to Contemporary Art (3 cr.)
- HER-Q 241 Beginning Furniture Design I (3 cr.)
- Herron studio elective (3 cr.)
- Humanities elective (3 cr.)

Total: 15 credit hours

Spring

General Fine Arts

The B.F.A. in General Fine Arts is a professional undergraduate degree for students desiring the flexibility to pursue studies in more than one area to achieve their individual, artistic goals. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of artistic practice.

The General Fine Arts Program allows students to participate in a wide range of studies without the need to specify a single medium. Through careful counseling, individual goals and directions are established, and the students assisted in setting up a well-coordinated program of arts studies. The flexibility of this program enables the student to combine studies in Ceramics, Drawing, Painting, Printmaking, Sculpture, Furniture Design, etc., to achieve objectives in keeping with specific goals. Opportunities following graduation are essentially the same as for students identifying with a single program.

Prior to being admitted into the major in General Fine Arts, students must successfully pass sophomore advancement review.

General Fine Arts Suggested Plan of Study
Sophomore Year

Fall

- HER-D 201 Drawing III 3 cr.

Painting

The B.F.A. in Painting is a professional undergraduate degree for students desiring extensive studio experience with an emphasis in Painting. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of the painter's craft.

The Painting Program features balanced instruction and a diverse faculty presenting a wide range of viewpoints. This well-rounded educational preparation provides students with the opportunity to acquire the knowledge and ability essential to creative activity.

Prior to being admitted into the major in Painting, students must successfully pass sophomore advancement review.

Painting Suggested Plan of Study
Sophomore Year

Last updated: February 2012

Photography

The B.F.A. in Photography is a professional undergraduate degree for students desiring extensive studio experience with an emphasis in Photography

and associated media. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of the photographer's craft.

As digital technology effectively blurs the line between films, periodicals, television, and photographs, students of photography are constantly challenged to define and reexamine the photographer's role in contemporary art practices.

A photography student will approach the study of Photography beginning with traditional black and white materials and progress to color processes with a concentrated examination of contemporary still and moving digital medias. By examining the history of photography, students will understand the roles photography played in culture throughout the past and its current position as an art form and cultural phenomena. Technical proficiency, personal growth, as well as conceptual and aesthetic development are emphasized equally.

Herron's photography facilities are among the best in the nation. With our new facilities on the campus of IUPUI, the department has multiple black and white labs, individual color and advanced darkrooms, a computer lab, shooting studio, a dedicated finishing area, and gallery. This permits students to work in a variety of formats and media, including basic black and white printing, Type color and Ilfochrome color printing, advanced black and white printing and developing, mixed and alternative processes, digital media, and video. Students will have access to professional equipment, including medium format, 4x5, Polaroid, and video cameras, studio lighting kits, light meters, tripods, and state of the art digital equipment.

Mastering technical processes and developing your own artistic vision prepares you for a choice of multiple careers in photography and related fields. Employment opportunities include working perhaps as a studio artist and exhibiting work in fine art galleries and museums; being employed as a documentarian, publishing work in newspaper and other print venues or working in museum documenting works of art; as a commercial photographer; or as a portraitist. Many of our graduates work in emerging digital media, still, moving, and the worldwide web.

Prior to being admitted into the major in photography, students must successfully pass sophomore advancement review.

Photography Suggested Plan of Study
Sophomore Year

Fall

- HER-D 201 Drawing III (3 cr.)
- HER-H 103 Introduction to Contemporary Art (3 cr.)
- HER-K 201 Photography I (3 cr.)

Last updated: April 2012

Printmaking

The B.F.A. in Printmaking is a professional undergraduate degree for students desiring extensive studio experience with an emphasis in Printmaking. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of the printmaker's craft.

The Printmaking curriculum provides a broad and intensive experience for printmaking majors and

studio elective opportunities for other fine arts, visual Communication, and Art Education students. Course work in lithography and etching is offered at beginning, intermediate, and advanced levels every semester. Processes covered include plate and stone lithography and the intaglio processes of etching, engraving, and aquatint. Additional courses include printing in monotype, woodcut, and silkscreen. Spacious, well-equipped, accessible facilities for the study of these traditional approaches to printmaking are augmented by additional facilities for the investigation of digital and photomechanical processes.

Basic courses establish a solid, comprehensive foundation of traditional technical skills unique to the printed image, while instruction emphasizes the development of drawing, self-expression, and concept. At the intermediate and advanced levels, students continue to acquire new technical skills. There is extensive work in color, as the emphasis shifts to imagery, concept, and critical thinking.

Advanced students are given considerable autonomy, working largely in self-defined directions in consultation with faculty while focusing on printing technologies most appropriate for individual development. Group critiques, field trips, portfolio projects, student exhibition opportunities, and workshops and lectures by visiting artists complement the studio experience by providing critical discussion, participation, incentives, and role models.

Prior to being admitted into the major in Printmaking, students must successfully pass sophomore advancement review.

Printmaking Suggested Plan of Study

Sophomore Year

Last updated: April 2012

Sculpture

The B.F.A. in Sculpture is a professional undergraduate degree for students desiring extensive studio experience with an emphasis in Sculpture. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn both traditional and contemporary aspects of the sculptor's craft.

Herron's Sculpture Program encourages consistent growth, from the introductory three-dimensional experience through the fourth and final year of advanced work. The multimedia fabrication and foundry facilities provide a level of sophisticated technical experience unique to the undergraduate level.

As sophomores, Sculpture students are introduced to a wide spectrum of techniques and processes, which include metal fabrication, casting, woodcarving, construction, resins, plastics, and stone carving, as wells work in nontraditional materials. Through a team teaching approach, students are exposed to a broad base of practical information, critical analysis, and creative discourse.

As juniors and seniors, students continue investigations and creative pursuits begun in their sophomore year. Juniors and seniors work more independently as they sharpen their individual focus and prepare for graduate school or professional work. Graduates of the sculpture program have had the opportunity to investigate all three-dimensional media and are prepared to continue independent development.

Prior to being admitted into the major in Sculpture, students must successfully pass sophomore advancement review.

Sculpture Suggested Plan of Study

Bachelor of Fine Arts

Bachelor of Fine Art Degree Programs

Ceramics, Furniture Design, General Fine Arts, Painting, Photography, Printmaking, Sculpture, Visual Communication

General Academic Requirements

Students in Herron B.F.A. degree programs must successfully complete a program of general academic courses, as well as more concentrated studies within their specialties, to earn their degrees. Students are required to have 9-15 credit hours of art history and 30 credit hours distributed in the humanities, life and physical sciences, and social and behavioral science. The list that follows provides details on general academic requirements for ceramics, furniture design, general fine arts, printing, photography, printmaking, sculpture, and visual communication. Students not scoring well on the writing placement test will be required to register for W130 Fundamentals of English, a developmental course, before taking W131 Elementary Composition I.

- Art History HER-H 101*, HER-H 102,* HER-H 103 (not required for Visual Communication),
- **AND** 6 additional credit hours in Art History (3 credits required for Visual Communication).

Total: 15 credits

Humanities

- English ENG-W 131* **and** ENG-L 115 **or** ENG-L 105*

6 additional credit hours selected from the following departments:

- Africana Studies
- Classical Studies
- Communications Studies
- Comparative Literature
- English
- Film Studies
- Folklore
- Foreign Language
- Journalism
- Music
- Philosophy
- Religious Studies
- Speech and Hearing

Total: 12 credits

Life and Physical Science

6 credits from the following departments:

- Anatomy
- Astronomy
- Biology
- Chemistry
- Computer Science
- Food and Nutrition
- Geology
- Informatics/New Media

- Mathematics (starting with MATH-M 118, MATH 00100,11000, 11100 will not be allowed to count toward a Herron degree)
- Physical Geography (GEOG-G 107, GEOG-G 303, and GEOG-G 404 ONLY)
- Physics

Total: 6 credits

Social and Behavioral Science

6 credits from the following departments:

- Anthropology
- Business
- Economics
- History
- Labor Studies
- Nonphysical Geography
- Political Science
- Psychology
- Public and Environmental Affairs
- Social Work
- Sociology

Total: 6 credits

Academic Electives

An additional 6 credits must be taken from one or more of the above groups, i.e., humanities, life and physical sciences, social and behavioral science. Art history may not be used to satisfy this academic elective requirement.
Total: 6 credits

* Accomplished as part of the Foundation Program.

BFA First-Year Foundation Program

The Foundation Program serves as a base for future work at Herron. In the Foundation Program, students develop drawing skills, powers of observation, an understanding of visual principles, and a working knowledge of materials and techniques, while becoming more knowledgeable about art history. The program is constructed so that students, through self-examination and faculty counseling, will be able to select intelligently the area in which they will major when the Foundation Program has been completed. Much of the success of Herron programs has been due to the comprehensive strength of the Foundation Program and the basic preparation that it provides.

The Foundation Program, or its equivalent in previously earned credit (as determined by the Admissions Committee), is a prerequisite for work in the fine arts and education degree programs.

Foundation Program Curriculum

Semester I Credits

- HER-D 101 Drawing I (3 cr.)
- HER-F 121 Two-Dimensional Design (3 cr.)
- HER-F 123 Three-Dimensional Design (3 cr.)
- HER-H 101 History of Art I (3 cr.)
- HER-X 101 Foundation Resources Workshop (1 cr.)
- ENG-W 131 Elementary Composition I* (3 cr.)

Semester II Credits

- HER-D 102 Drawing II (3 cr.)
- HER-F 100 Creative Processes (3 cr.)
- HER-F 122 Color Concepts (3 cr.)
- HER-H 102 History of Art II (3 cr.)
- HER-X 102 Foundation Capstone (1 cr.)
- ENG-L 115 or ENG-L 105 Literature for Today or Appreciation of Literature (3 cr.)

Total credit hours 32

BFA Degree Programs

- Ceramics
- Furniture Design
- General Fine Arts
- Painting
- Photography
- Printmaking
- Sculpture
- Visual Communications

Last updated: February 2012

Visual Communication

The B.F.A. in Visual Communication is a professional undergraduate degree for students desiring theoretical and studio experience with an emphasis in design. Students in the program develop critical thinking skills, refine their intellectual and creative processes, and learn contemporary aspects of design and design thinking.

Degree programs in the Department of Visual Communication prepare design leaders to proactively manage change and innovation processes toward improving the civic, cultural, and commercial experiences that people encounter in their daily lives. The programs focus on a collaborative design process for identifying root problems and facilitating meaningful solutions to complex issues. This approach is intended to harness the power of design to clarify, humanize, and energize the issues that are central to life in a pluralistic society.

As members of a professional art and design school on the IUPUI campus, Visual Communication majors prepare for a design career by integrating learning in visual studies with coursework in the liberal arts and sciences. The learning experience is structured to equip students with the knowledge and skills necessary to compete in a field that requires both highly specialized skills and the ability to make intellectual connections within a broad range of general knowledge. Successful students achieve all the learning outcomes that have been defined by the National Association of School of Art and Design and AIGA (the professional association for design) as essential competencies for design professionals. These include: the ability to solve communication problems, including the skills of problem identification, research and information gathering, analysis, generation of alternative solutions, prototyping and user testing, and evaluation of outcomes; the ability to describe and respond to the audiences and contexts which communication solutions must address, including recognition of the physical, cognitive, cultural, and social human factors that shape design decisions; the ability to create and develop visual form in response to communication problems, including an understanding of principles of visual organization/composition, information hierarchy, symbolic representation, typography, aesthetics, and the construction of meaningful messages; an understanding of tools and technology, including their roles in the creation, reproduction, and distribution

of visual messages. Relevant tools and technologies include, but are not limited to, drawing, offset printing, photography, and time-based and interactive media (film, video, computer multimedia); the ability to perform basic business practices, including organizing design projects and working productively as a member of teams.

Students must pass Sophomore Advancement Review before being admitted into the major in Visual Communication.

Visual Communication Suggested Plan of Study

Sophomore Year

Fall

- HER-V 210 VC 1: Elements & Principles (3 cr.)
- HER-V 211 Type/Image 1 (3 cr.)
- HER-V 214 History of Design (3 cr.)
- Studio Elective (3 cr.)
- Humanities Elective (3 cr.)

Total: 15 credit hours

Spring

- HER-V 220 VC 2 (6 cr.)
- HER-V 221 Type 2/Image 2 (3 cr.)
- Studio Elective (3 cr.)
- Social Science (3 cr.)

Total: 15 credit hours

Junior Year

Fall

- HER-A 341 Production for Design (3 cr.)
- HER-V 310 VC 3: Identifying Problems (6 cr.)
- HER-V 311 Type 3/Image 3 (3 cr.)
- Life Science (3 cr.)

Total: 18 credit hours

Spring

- HER-V 320 VC 4: Facilitating Solutions (6 cr.)
- HER-V463 **or** V461 VC elective: VC Design Practicum **or** Internship (3 cr.)
- Studio elective (3 cr.)
- Humanities elective (3 cr.)
- Social/Behavioral Science elective (3 cr.)

Total: 18 credit hours

Senior Year

Fall

- HER-V 410 VC 5: Designing for Innovation (6 cr.)
- HER-V 401 or HER-V 421 VC studio elective in declared track (3 cr.)
- Studio elective (3 cr.)
- Life/Physical Science elective (3 cr.)

Total: 15 credit hours

Spring

- HER-V 420 VC 6: Capstone Portfolio (3 cr.)
- HER-V 402 **or** HER-V 422 VC studio elective in declared track (6 cr.)
- Academic elective (6 cr.)

Total: 15 credit hours

Book Arts Minor

Minor in Book Arts

The emphasis of this minor is to provide students with a focused course of study to develop skills and conceptual understanding specific to the Book Arts. The objectives are: to help students build fundamental skills in each of the areas that comprise the Book Arts, bookbinding, letterpress, typography, book design, and papermaking; to familiarize and integrate historic and contemporary aspects of the Book Arts. The minor aims to develop a level of technical and conceptual proficiency that will give students a professional platform from which to proceed to more sophisticated engagements with the medium. While the course of study is committed to developing excellence in work by hand, it provides opportunities for integrating digital tools.

Procedure

The Book Arts minor is open to all IUPUI students. Students intending to pursue the minor should contact Herron Student Services to register, review the requirements, and plan their program of study.

15 credits total

At least 6 credits must be taken at the 300 or 400 level.

Required core courses: 9 credits/3 courses (Courses are open to all students.)

Choose 3 from the following:

• HER-G 206 Bookbinding

• HER-G 208 Letterpress Typesetting

• HER-G 308 The Visual Book

• HER-G 310 The Printed Book

Paper technologies: 3 credits/1 course (Courses are open to all students.)

Chose one of the following:

• HER-G 210 Paper Engineering

Electives: 3 credits/ 1 course (Eligibility for courses varies. Elective Arts courses are open to non-Herron majors; many VC and Fine Arts courses are limited to majors.)

Choose 1 from the following:

• Any 200 or 300 level Printmaking course: Intaglio, Lithography, Silkscreen, Monotype, or Relief Printing

• Any 200 or 300 level Visual Communication course focusing on typography or image

• Any 200 or 300 level Fine Arts or Elective Arts course

• HER-G 405 Individual Research in Book Arts

If approved in advance by Printmaking faculty, a 300 level experiential learning internship (applicable to the RISE initiative) in the field, for example at the National Bindery in Indianapolis, or apprenticing with a local book artist, or working in the Main Library (IUPUI or IU Bloomington) book conservation lab, or in the Historical Society/IMA book conservation lab, may count as one 3-credit elective course.

Last updated: April 2012

Minor in Art History Requirements

15 credits in Art History as follows:

- Any two of the following three introductory survey courses:
  - HER-H 101, H 102, H 103 (6 cr.)
- Upper-level courses (200-level optional, 300-and 400-level) 9 cr.
  - At least one 400-level course recommended.
  - The 9 credits must include courses in at least two of the following five historical periods or subject categories:
    - Ancient & Medieval;
    - Early Modern (Renaissance through Neoclassicism);
    - Modern (1800-1950);
    - Post-1950;
    - World Art.
- Only courses completed with a grade of C (2.0) or higher will count toward the minor.
- In the case of transfer students, at least 6 credits at the 200-level or higher must be taken at Herron.
- Consult the bulletin and Schedule of Classes for regular and cross-listed courses.
- HER-H 100 Art Appreciation and HER-H 221 Art Past and Present are not eligible to be counted toward the minor (or major) requirements.

Procedure

Students interested in minor in art history should contact Herron Student Services to register, review the requirements, and plan their program of study.

Last updated: March 2012

Undergraduate Programs

First-Year Foundation Program

The Foundation Program serves as a base for future work at Herron. In the Foundation Program, students develop drawing skills, powers of observation, an understanding of visual principles, and a working knowledge of materials and techniques, while becoming more knowledgeable about art history. The program is constructed so that students, through self-examination and faculty counseling, will be able to select intelligently the area in which they will major when the Foundation Program has been completed. Much of the success of Herron programs has been due to the comprehensive strength of the Foundation Program and the basic preparation that it provides.

The Foundation Program, or its equivalent in previously earned credit (as determined by the Admissions Committee), is a prerequisite for work in the fine arts and education degree programs.

Foundation Program Curriculum

Semester I		Credits
HER-D 101	Drawing I	3
HER-F 121	Two-Dimensional Design	3
HER-F 123	Three-Dimensional Design	3
HER-H 101	History of Art I	3
HER-X 101	Foundation Resources Workshop	1
ENG-W 131	Elementary Composition I	3
Semester II		
HER-D 102	Drawing II	3
HER-F 100	Creative Processes	3
HER-F 122	Color Concepts	3
HER-H 102	History of Art II	3
HER-X 102	Foundation Capstone	1
ENG-L 115 or ENG-L 105	Literature for Today or Appreciation of Literature	3
	Total credit hours	32

Student Learning Outcomes

- Bachelor of Arts in Art History
- Bachelor of Art Education
- Bachelor of Fine Arts*
- Bachelor Fine Arts in Visual Communication

*Includes Ceramics, General Fine Arts, Painting, Furniture, Design, Printmaking, Sculpture, Photography

Bachelor of Arts in Art History (B.A.)

Graduates of the Art History program will demonstrate the following:

1. Students will be able to describe connections between art and social and cultural contexts across history and throughout the world.
2. Students will be able to evaluate and critique works of art from a range of methodological perspectives.
3. Students will be able to conceive and carry out research involving: formulating a question; gathering information using a variety of tools and techniques; critically evaluating information; making an argument; and defending a conclusion in speech and writing.
4. Students will be able to compare and contrast the underlying value systems that inform the aesthetic decisions of art makers and viewers in different cultures.

5. Students will be able to recognize perspectives from a range of disciplines in the arts and sciences.
6. Students will be able to apply their visual literacy to make informed and ethical judgments in their own lives.
7. Students will be able to interpret works of art using visual analysis, historical research, and defined theoretical perspectives.
8. Students will be able to describe and discuss a substantial body of knowledge about and understanding of their own art historical traditions and the traditions of others.

Bachelor of Art Education (B.A.E.)

Upon completion of the Bachelor of Art Education at Herron students will demonstrate the following competencies:

Philosophy

Demonstrate critical reflection on the aesthetic and artistic purposes of art in P-12 learners; articulate and apply personal philosophy in classroom practice.

Communication

Communicate ideas clearly through speech, writing, and visual forms about issues of personal importance and human significance in local and global communities; and apply this to classroom practice.

Content Knowledge - Studio Art

Demonstrate expertise in basic expressive, technical, procedural and organization skills in a wide variety of media and demonstrate mastery in conceptual insights and visual thinking developed through studio experiences; and make these aspects of the discipline accessible and meaningful for P-12 learners.

Content Knowledge - Art History and Analysis

Understand the major styles and periods of art history, the analytical methods and theories of criticism; understand development of past and contemporary art forms, including visual culture, and, understand contending philosophies of art and the relationship of all of these to the making of art; and, make these aspects of the discipline accessible and meaningful for P-12 learners.

Content Knowledge - Innovation/Ideation

Understand and apply processes of idea generation, imagination, and innovative thinking from a range of disciplines to problems in their artwork and their lives; and develop abilities of creative problem solving and critical inquiry and authentic meaning making in P-12 learners.

Learner Development

Understand the developmental needs and diverse social and cultural constructions of identity in all learners and implement a variety of appropriate visuals, tools, media, technology, and other disciplines to differentiate learning in inclusive, multicultural, and urban classrooms.

Learning Environment

Construct a learning environment that promotes student achievement, utilizes social learning and group dynamics, promotes respect and collaboration among of all learners, and incorporates multiple contexts where art exists outside the classroom including museums, galleries, homes, and public sites.

Instructional Strategies

Understand and implement curriculum and a variety of instructional strategies that develop in-depth, complex student skills and knowledge in art content, and integrate art across disciplines.

Bachelor of Fine Arts (B.F.A.)

Graduates of a Fine Arts program will achieve the following:

1. Students will develop a personal aesthetic that will be demonstrated in the characteristics of their artwork, writings, and speech.
2. Students will demonstrate a mastery of visual thinking and the technical demands and craft appropriate to their discipline and artwork.
3. Students will be able to describe historic and contemporary art directions, movements, and theory and place their own artwork in a contemporary context.
4. Students will write and speak effectively about their artwork and ideas.
5. Students will do research and construct their own aesthetic problems utilizing creative process strategies and critical thinking to provide multiple solutions to the problems.
6. Students will exhibit an openness to different or new ideas and a willingness to examine and reconsider familiar ways of thinking.
7. Students will be able to critique their own and others art work in a theoretically and historically informed manner.
8. Students will apply ideas and methods of thinking from a range of disciplines to problems in their artwork and their lives.
9. Students will be able to engage with diverse communities through personal and creative activities.
10. Students will apply their knowledge of art in a professional context, and will utilize the best practices and ethics held by their profession.

Includes Ceramics, General Fine Arts, Painting, Furniture Design, Printmaking, Sculpture, Photography

Bachelor of Fine Arts in Visual Communication (B.F.A.)

Graduates of the Visual Communication program will achieve the following:

1. Students will be able to *identify, describe,* and *summarize* communication problems through user-centered research and analysis.
2. Students will be able to *generate* and *evaluate* solutions to communication problems by creating alternative solutions, prototyping and conducting user testing.
3. Students will *recognize, describe,* and *respond* to social, cultural, physical and cognitive issues embedded within audiences and contexts.
4. Students will be able to *demonstrate* an understanding of visual form in response to communication problems through visual organization/composition, information hierarchy, symbolic representation, typography, aesthetics and the construction of meaningful messages.

5. Students will *understand* and *apply* appropriate tools and technology in the*creation*, reproduction and distribution of visual messages, including but not limited to, drawing, offset printing, photography and time-based media and interactive media.
6. Students will be able to *address* and *discuss* design from a variety of historical, theoretical, social, cultural, technological and economic perspectives.
7. Students will be able to *discuss* and *demonstrate* basic business practices, including the ability to organize design projects and work productively as a member of teams.

Admissions

- Master of Art Education
- Master of Arts in Art Therapy
- Master of Fine Arts in Visual Art and Public Life
- Master of Fine Arts in Visual Communcation Design

Art Education

Students interested in entering the M.A.E program must possess a teaching certificate in art and a 3.0 cumulative grade point average. Students holding an undergraduate degree in visual art, but not certification requirements of the Indiana Professional Standards Board, must complete these requirements through the certification courses in the Bachelor of Art Education degree before pursuing the M.A.E.

Application Deadlines

Fall admission: May 1

Spring admission: November 1

Summer admission: March 1

How to Apply

Submit the IUPUI Graduate Online Application. Please include the following items and information within the application:

1. A personal goals statement explaining academic and career objectives.
2. The contact information (including names, street addresses, phone numbers and email addresses) of two people who will submit your letters of recommendation via the online application system. You can enter this information in the "Department Information" tab. The online recommendations should address your potential for academic success in a graduate program.

Mail the following the items and information to the Herron School of Art and Design.

1. Official transcripts from all colleges and universities attended (except Indiana University).
2. A portfolio of studio work.

The portfolio should demonstrate the following:

- Visual sensitivity: ability to effectively organize structure/composition in two and three dimensional media.
- Technical skill: ability to control media in ways that convincingly communicate.
- Ability to generate, refine, and execute ideas that show inventiveness and personal meaning.
- Lessons/units with examples of student work produced under your teaching.

The portfolio represents your view of yourself and your work. We encourage inclusion of documentation of your ongoing involvement with art and teaching such as: sketch book/journal, awards, exhibitions or articles on your work, honors, or teaching publications.

Art Therapy

1. **Complete the Online Application**

   You must provide the following information in the online application:

   - 2-3 page personal statement and a resume outlining professional and volunteer experiences. The personal statement should speak to how you developed an interest in art therapy, what led you to the art therapy program at Herron, and what your future goals are as an art therapist.
   - The contact information (including names, street addresses, phone numbers and email addresses) of three faculty members or professional contacts who will submit your letters of recommendation via the online application system. The online recommendations should address your potential for academic success in the art therapy graduate program.

2. **Submit Your Portfolio Online**
   Submit your portfolio online at www.herron.slideroom.com. When submitting the portfolio online, be sure to select the M.A. in Art Therapy program. The portfolio should represent 10-15 pieces of artwork that show experience with different media and an ability to understand the motivations of one's personal art making process. If you are selected to participate in an in-person interview, your portfolio will be reviewed with you as a part of the interview process.

3. **Pay the Application Fees**
   The cost for submitting the application for the M.A. in Art Therapy is $70. The $70 application fee is comprised of a $60 fee paid upon submission of the online application and a $10 fee paid upon submission of the online portfolio. The application fees are non-refundable.

4. **Mail Your Transcripts**
   Mail official transcripts from all of your undergraduate institutions attended, as well as from any graduate programs (if applicable). The transcript must demonstrate a minimum cumulative GPA of 3.0 on a 4.0 scale. Your transcripts must reflect 18 or more credit hours of studio art. It must also reflect 12 credit hours of psychology, including developmental and abnormal psychologies /or/ 9 credit hours of psychology including developmental and abnormal

psychology, plus 3 credit hours of sociology. For international students, if the original documents are not in English, a verified translation must be sent with your official transcripts in your native language. If you are in the process of completing a Bachelor's degree when you apply, a transcript showing your first three years of study is acceptable. If admitted to Herron, you must submit a final, official transcript verifying the completion and award of your degree directly to Herron prior to your matriculation.

Mail transcripts to:

Graduate Admissions c/o Student Services Office #

Herron School of Art and Design

735 W. New York St.
Indianapolis, IN 46202-5222

5. **Submit Your TOEFL Results**(*International students only)*Test of English as a Foreign Language (TOEFL) scores are required for international students unless the applicants undergraduate degree is from a university in an English-speaking country. Applicants must request that an official copy of their test results be sent directly to IUPUI by the Educational Testing Service. The IUPUI reporting code for the TOEFL is 1325. Other tests or ELS coursework may be accepted in order to verify English proficiency. For a list of all options and minimum scores required, please visit the IUPUI International Admissions webpage.
6. **Interview** Semi-finalists will be contacted for an on-campus interview as the final step of the application process. Candidates should be prepared to discuss their portfolio during the interview.

Application deadline: Submit all of the following application components by January 30, 2012
Notification of admission decision: April 15, 2012

Last updated: April 2012

M.F.A. in Visual Art and Public Life

The application steps below are for students interested in pursuing an M.F.A. in Visual Art and Public Life with an emphasis in one of the following areas: Ceramics, Furniture Design, Painting and Drawing, Photography and Intermedia, Printmaking, and Sculpture.

Your application must demonstrate a strong commitment and potential for developing sustained creative activity as a visual artist at the professional level and the ability to complete graduate work.

1. **Complete the Online Application**
   You must provide the following information in the online application:
   - A personal statement describing your intentions for applying to this program, including a concise description of your past experiences qualifying you for this program. Please also describe your future career goals. The statement must be 500 words in length. Please clearly indicate in your personal statement the program you intend to pursue: sculpture, furniture design, printmaking, photography and intermedia, painting and drawing or ceramics.
   - The contact information (including names, street addresses, phone numbers and email addresses) of two people who will submit your letters of recommendation via the online application system. The online system will then email your contacts with instructions on how to submit their references online. The online recommendations should address your potential for academic success in a graduate program.
   - When asked to indicate your Academic Plan, please select “Visual Art and Public Life” in the drop down menu.

2 **Submit Your Portfolio Online**
Submit your portfolio online at www.herron.slideroom.com. When submitting the portfolio online, click on the blue "Start a New Submission" button. Then click on "Graduate Programs" under the "Categories" heading. Finally, click on the blue "Apply Now" button next to the emphasis in which you are interested to access the application. It is possible to submit time-based work using Slideroom.com. The cost to submit your portfolio online is $10. The portfolio should contain 18-20 images.

3 **Pay the Application Fees**
The cost for submitting the application for the M.F.A. in Visual Art and Public Life is $70. The $70 application fee is comprised of a $60 fee paid upon submission of the online application and a $10 fee paid upon submission of the online portfolio. The application fees are non-refundable.

4 **Mail Your Transcripts**
Mail official transcripts from all of your undergraduate institutions attended, as well as from any graduate programs (if applicable). The transcript must demonstrate a minimum cumulative GPA of 3.0 on a 4.0 scale. For international students, if the original documents are not in English, a verified translation must be sent with your official transcripts in your native language. If you are in the process of completing a Bachelor's degree when you apply, a transcript showing your first three years of study is acceptable. If admitted to Herron, you must submit a final, official transcript verifying the completion and award of your degree directly to Herron prior to your matriculation.

Mail transcripts to:
Graduate Admissions c/o Student Services Office
Herron School of Art and Design
735 W. New York St.
Indianapolis, IN 46202-5222

5 **Submit Your TOEFL Results**(*International students only)*
Test of English as a Foreign Language (TOEFL) scores are required for international students unless the applicants undergraduate degree is from a university in an English-speaking country. Applicants must request that an official copy of their test results

be sent directly to IUPUI by the Educational Testing Service. The IUPUI reporting code for the TOEFL is 1325. Other tests or ELS coursework may be accepted in order to verify English proficiency. For a list of all options and minimum scores required, please visit IUPUI's International Admissions page.

NOTE: The Graduate Record Examination (GRE) is not a requirement.

M.F.A. in Visual Communication

Admission to the graduate program is competitive. There is no specific standard type of ideal applicant; we encourage diversity and evaluate each applicant on an individual basis. We do seek a mixed group of people with varied backgrounds and experiences.

Application Checklist

1. online application form and fee
2. GRE scores (optional)
3. TOEFL scores
4. official academic transcript
5. personal statement of intent
6. three letters of professional reference, submitted online
7. professional resume
8. portfolio of work

Application Process

STEP 1

Read the Admissions Q + A document.

STEP 2

Complete the online application. In the online application, please provide the contact information of three professional references. The application system will contact your references via email and request that they submit their recommendations through the online system. The fee for the application is $60. You will be asked to submit payment online upon the completion of your application.

STEP 3

Submit GRE or GMAT scores if you feel the score will help your application. The IUPUI reporting code for standardized tests is 1325. GRE (General Test) or GMAT scores are optional. Scores submitted to the admission committee must be for tests completed within the last four years.

TOEFL is required for applicants from countries whose native language is not English. TOEFL scores must be from tests taken within the last two years. The TOEFL requirement is waived for applicants with a degree from a university in an English-speaking country.

STEP 4

Send one package including official academic transcript, personal statement of intent, a current professional resume, and portfolio to the following address:

Master of Art Education

The Masters of Art Education Degree

The Masters of Art Education (M.A.E.) Program strengthens and revitalizes student artistic and professional experience. The underlying philosophy of the program is a strong belief in the artist-teacher. Course work for this degree is divided equally between art content (studio, history, criticism, and aesthetics) and professional methodology. Degree requirements must be completed within five years from the time the first classes are taken. Graduates are expected to maintain a 3.3 GPA or higher in graduate course work. Any graduates with a GPA of lower than 3.0 are subject to probation and dismissal.

Students wanting to enter the graduate program at the Herron School of Art and Design must apply online or by mail. A statement of professional goals, two professional recommendations may be submitted in the online application. A portfolio of studio work should be mailed to Graduate Admissions at the Herron School of Art and Design. Students holding an undergraduate degree in visual art, but not certification requirements of the Indiana Professional Standards Board, must complete these requirements through the certification courses in the BAE. To be accepted to the M.A.E. program, the student must have a teaching certificate in art or be working toward this concurrently with the M.A.E., a 3.0 cumulative grade point average, and must pass the portfolio review

Academic Requirements Distributive

Art

Select from 500-level courses in:

- Studio Art
- Art History/Criticism

Total: 18 cr. hrs.

Note: All graduate students must consult with the appropriate faculty advisor to determine the distribution of credit.

Advanced Art Education

Choose four classes from:

- HER-Z 500 Advanced Art Education

- HER-Z 510 Art for Teachers of Exceptional Children
- HER-Z 511 Non studio Approaches to Art Instruction
- HER-Z 512 Improving Studio Instruction in Art
- HER-Z 513 Special Topics in Art Education
- HER-Z 532 Curriculum and Assessment in Art Education
- HER-Z 590 Directed Independent Study in Art Education
- HER-Z 700 Practicum in Art Education
- HER-R 511 Research in Art Education

Total: 12 cr. hrs.

Choose two classes from:

Educational Psychology

- EDUC-P 510 Psychology in Teaching
- EDUC-P 516 Adolescent Development
- EDUC-P 540 Learning and Cognition in Education
- EDUC-P 515 Child Development
- EDUC-P 525 Psychological Issues in Education

Educational History and Theory

- EDUC-H 504 History of American Education
- EDUC-H 520 Education and Social Issues
- EDUC-H 530 Philosophy of Education
- EDUC-H 538 Critical Thinking and Education

Educational Inquiry

- EDUC-Y 501 Statistical Methods Applied to Education
- EDUC- Y507 Testing in the Classroom

Total: 6 cr. hrs.

Total: 36 cr. hrs.

*Most Professional Art Education courses are offered in the summer sessions.

Degrees Programs

Master of Art Education (M.A.E.)
Master of Fine Arts in Visual Art and Public Life (M.F.A.)

- Ceramics
- Furniture Design
- Painting and Drawing
- Photography and Intermedia
- Printmaking
- Sculpture

Master of Fine Arts in Visual Communication (M.F.A.)
Master of Arts in Art Therapy (M.A.)

MFA in Visual Art and Public Life

The Master of Fine Arts (M.F.A.) in Visual Art and Public Life is a 60-credit hour program of study that provides students with an in-depth, professional-level understanding of visual art planning, production, and presentation. Students may pursue one of six emphasis areas for this program: Ceramics, Furniture Design, Painting/Drawing, Photography/Intermedia, Printmaking, or Sculpture. The program consists of a systematic sequence of educational opportunities for students to gain fluency in the practices and issues involved in creating original works of visual art and developing their careers within contemporary society. The Master of Fine Arts degree is recognized by the art and design professions as the terminal degree in the studio arts.

The objectives of the program are: (1) to create coursework and experiences in which students examine and learn to shape the formal, thematic, theoretical, social, cultural, cognitive, and technological aspects of visual art; (2) to develop university and community based collaborations that facilitate learning and research opportunities; (3) to provide opportunities for developing leadership in the professional practice of visual art and to prepare graduates for a range of specialized careers, from university-level teaching to creative entrepreneurship to employment by urban arts organizations to work as independent artists; (4) to foster an exploration of visual art as an intellectual and experimental practice that is rooted in a specific time and place; (5) to engage students in studio activity that is placed in a professional context, from making work to its presentation, installation, marketing, and critical analysis; and (6) to provide students with the intellectual flexibility to research, plan, design, fabricate, and complete work utilizing a variety of processes in a variety of settings for a variety of purposes.

To complete the degree, students are required to present a final, substantial body of original art in an exhibition (or other significant public presentation of a major body of work), documentation of the exhibition, and completion of a written thesis, all demonstrating professional-quality achievement. The thesis project is a culmination of the graduate experience in which students develop professional expertise in their field as active studio artists including professional practice and research.

Areas of Emphasis

• Ceramics

• Furniture Design

• Painting and Drawing

• Photography and Intermedia

• Printmaking

• Sculpture

MFA Thesis Advisory Committee

The MFA Thesis Advisory Committee will provide regular, systematic feedback to the graduate student about her/his development of professional-level skills, cognitive development, specific assessment of the body of artwork being created, and will provide guidance for the thesis project/exhibition and written thesis statement.

1. Each graduate student in the M.F.A. in Visual Art program will be assigned an academic advisor. The academic advisor will be a full-time faculty member from the student's area of studio emphasis and will oversee all aspects of tracking the student's progress through all phases of the curriculum. The academic advisor will also serve as Chair of the graduate student's M.F.A. Thesis Advisory Committee. Students are assigned academic advisors at the start of the program. academic advisors

are appointed by the Chair of Fine Arts and Associate Dean.

2. The full committee should be formed immediately after the completion of a student's first 15 credit hours applicable to the degree. The selection is made by the student with the approval of the Chair of the Advisory Committee. Students must complete the MFA Advisory Committee Membership Form and obtain the signatures of all faculty on the committee. The form must be submitted to the Associate Dean.

3. The Thesis Advisory Committee is comprised of:

• ACADEMIC ADVISOR/CHAIR: A full-time, tenure-track or tenured Herron faculty member from the grad student's major area of emphasis.

• COMMITTEE MEMBER: A full-time Herron faculty member who is NOT from the area of emphasis. Selected by the grad student working in consultation with his/her academic advisor.

• COMMITTEE MEMBER: A full-time Herron faculty member who can be from the area of emphasis or not, selected by the grad student working in consultation with his/her academic advisor.

• OPTIONAL COMMITTEE MEMBER: An optional fourth member of the Graduate Advisory Committee may be someone from another academic unit at IUPUI /or/ from the professional field. Selected by the grad student working in consultation with his/her academic advisor.

4. The committee will meet with the student a minimum of three times during the course of study to complete the degree in order to advise and make recommendations on the student's development. The student must pass all three reviews in order to remain eligible for continuation in the program and completion of the degree requirements. The reviews will take place at the following times:

a. At the completion of 30 credit hours (midpoint): Consists of a committee review.

b. At the completion of 45 credits hours: Consists of a committee review. Certifies student is ready to complete work for final exhibition/project. Approves plans for culminating Thesis exhibition/project. Advice on written thesis statement.

c. The Final Review consist of acceptance of the graduate student's culminating Thesis project (an exhibition of artwork completed as the final culminating body of work / or/ a substantial public art project completed as the final culminating project) and written thesis at the completion of the full 60-credits required for the degree.

Grade Requirements

Only grades of a minimum of "C" will count towards the completion of the M.F.A. degree. Only a minimum of a "B" grade will count in courses in the student's major area of studio emphasis. Each graduate student must maintain an overall minimum g.p.a. of 3.0 to remain in the M.F.A. program. A minimum grade of "B+" must be achieved in the course "Studio Emphasis IV: Thesis Exhibit/Project."

Note: Additional information about policies and procedures, including further information about the MFA Advisory Committee, the review process, and the MFA Culminating Experience, is available in the MFA Handbook, provided to each entering graduate student in the MFA in Visual Art and Public Life program.

Additional policies

Students should consult the MFA Graduate Student Handbook given to them at orientation for additional policies, procedures, documents, and forms.

Last Updated: April 2012

Admission

Admission into the program is competitive. Applicants must demonstrate a commitment and capability to develop sustained creative activity as a visual artist at the professional level and the ability to complete graduate work.

Applicants must have

1. An undergraduate degree, preferably a Bachelor of Fine Arts degree with a studio art emphasis from an accredited institution, but other backgrounds will be considered by the graduate admissions committee,
2. A minimum GPA of 3.0 on a 4.0 scale,
3. A portfolio documenting past visual art work.

Some otherwise qualified applicants may not have all the necessary coursework and background experience to prepare them to fully succeed in their graduate coursework. These persons will be required to make up curricular deficiencies by enrolling in appropriate undergraduate courses prior to taking specific courses in the graduate program.

Complete, current admissions requirements, deadlines for admissions, application procedures, and information about financial aid are available on the website for Herron School of Art and Design.

Financial Assistance and Fellowships

Graduate Fellowships may be assigned in the following categories of responsibility: Teaching Assistant, Instructor, Technician, Gallery Assistant, and Graduate Assistant to Center for Art, Design and Public Life, and other assignments. Graduate students may be awarded scholarships based on their qualifications documented in their applications to the program.

Furniture Design

Herron School of Art and Design has an established reputation in Furniture Design based on the long-standing strength of its undergraduate program. As a graduate student in Furniture Design at Herron, students develop their creative vision making use of an exceptionally well-equipped and maintained woodworking shop/studio which is housed in Herron's state-of-the-art 163,000 square foot facility that opened in 2005. Coursework stresses the development of professional mastery in conceptualizing, design research and development, and construction techniques and technologies. Students develop a body of work emphasizing a personal design aesthetic.

Career goals and strategies are explored and developed, and a systematic sequence of coursework at the graduate level provides students with the experience and knowledge necessary to pursue professional commissions, to work in collaboration with other artists, craftsmen and creative thinkers, and to understand how

to develop a successful professional career in the 21st century. Coursework is augmented with visiting artists, field trips, design competitions, exhibition opportunities, public art projects, and other pertinent professional activities.

Furniture Design Suggested Plan of Study
First Year Course Work

Fall		Credits
HER-Q 510	Studio Emphasis I: Materials and Methods in Furniture Design	6
HER-R 529	Interdisciplinary Collaboration in the Visual Arts	3
HER-H 560	Visual Culture: A Visual Studies Approach	3
HER-J 530	University Visual Art Teaching Practicum /or/ Free Elective	3
	Total	15

Spring		Credits
HER-Q 520	Studio Emphasis II: Theory into Practice in Furniture Design	6
HER-R 539	Urban Art Context (may be repeated)	3
HER-J 520	Project Management/ Public Art	3
HER-H 5xx	Art History	3
		15

Second Year Course Work

Fall		Credits
HER-Q 560	Studio Emphasis III: Advanced Practice in Furniture Design	6
HER-R 539	Urban Art Context (if repeated)	0-3
	Graduate Studio Elective	3-6
HER-H 610 or HER-J 501	Art Theory & Criticism or A Critical Approach to Art	3
	Academic Elective	0-3
	Total	15

Spring		Credits
HER-R 599	Studio Emphasis IV: Thesis	6
	Graduate Studio Elective	6-9
	Art History /or/ Academic Elective	0-3
	Total	15

Program total: 60 credits

Printmaking

The Printmaking curriculum provides a broad and intensive experience for printmaking graduate students. Students will be able to explore and experiment in a wide variety of media and processes, including plate and stone lithography and the intaglio processes of etching, engraving, and aquatint. The printmaking program also supports work in monotype, woodcut, and silkscreen.

Spacious, well-equipped facilities for the study of traditional approaches to printmaking are augmented by additional facilities for the investigation of digital and photomechanical processes. The printmaking graduate program is housed within Herron's state-of-the-art 163,000 square foot facility that opened in 2005.

At the graduate level, students will acquire new technical skills and refine skills students have developed already to an advanced professional level while students are challenged to undertake an extensive and intensive examination of the thematic and theoretical content that fuels their creative work.

Graduate students are given considerable autonomy for working in self-defined directions in consultation with faculty while focusing on printing technologies most appropriate for individual development.

Graduate group and individual critiques, field trips, portfolio projects, exhibition opportunities, collaborative public art projects, and workshops and lectures by visiting artists complement the studio experience by providing critical discussion, and a broader framework for professional development.

Sculpture

Herron's commitment to sculpture is reflected in the opening of a state-of-the-art Sculpture and Ceramics building in January of 2000. Students have access to a 26,000 square foot facility, outfitted with a full complement of professional-grade tools and equipment, with designated areas for casting, welding, woodworking, resins, outdoor working, and new technologies, plus a large student gallery/critique space.

Herron's multimedia and foundry facilities provide access to a level of technical sophistication that fosters an intense, experimental approach to the creative process. The Sculpture Program includes developed areas for sound and video, digital media and computer aided drafting, resin and other non-traditional casting methodologies. Sculpture graduate students also have access to the classes and resources provided at Herrons other primary facility, Eskenazi Hall, a 163,000 square foot state-of-the-art facility, which opened in 2005 for the study of art and design.

The Sculpture Program at Herron is particularly strong in the wealth of techniques and processes that are explored, as well as its emphasis on providing students experience in planning and executing public sculpture projects (both permanent and temporary, large-scale and smaller). Herron's sculpture faculty includes highly productive artists with strong, national accomplishments in their own research programs. Sculpture is one of Herron's most highly visible programs with a strong history of projects undertaken in the public arena, and working in partnership with a wide variety of organizations in both the private and non-profit sectors.

In the Graduate Sculpture Program, students will develop a refined mastery of technical skills, with opportunities for exploration in a diverse range of materials. Along with the development of sophisticated skills in construction and form-building, students will gain increasing sophistication in their handling of three-dimensional formal properties. Additionally, students will be challenged to explore the incorporation of time, site, and audience in the conceptualization of their creative work. Students in the program are exposed to a broad base of practical information, critical analysis, and creative discourse.

Program Total: 60 credits

M.F.A. in Visual Communication

Herron's graduate program in Visual Communication design emphasizes applied research in design thinking and design methods. The program advances mastery (and the invention, development, and refinement) of design research methods as a path for any and all of the following outcomes:

1. to prepare professional designers for valuable (and valued) roles as collaborative leaders of creative problem-solving in organizations, institutions, and communities;
2. to advance excellence in the processes and practices of designing as a set of professional activities;
3. to prepare design leaders for evolving (and challenging) roles as design mentors and educators to future generations; and
4. to expand the disciplinary knowledge of designing through scholarship.

Research activities in the program are interdisciplinary in nature and focus inquiry in the following areas:

1. Designing as a set of creative problem solving processes including identifying patterns & framing insights, exploring ideas and conceiving plans, prototyping & optimizing proposals, and implementing solutions.
2. Designing as a set of innovation creation processes including breaking patterns (inventing) and optimizing patterns (improving).
3. Designing as a set of human-centered understanding processes including modeling experiences, advocating empathy, untangling complexity, and visualizing relationships.

All research occurs within a defined territory that investigates, defines, and advances the role of design thinking, and design action for driving business innovation, stewarding organizational leadership, shaping public policy, and enhancing direct democracy.

In the first year, students focus on the mastery of design research methodologies with particular emphasis on understanding audiences and contexts. Students conduct primary research using advanced design research methods. Students apply user-centered research findings by participating in real-world community-based projects. All students engage in the design process using a creative problem-solving framework that requires collaborative and cross-disciplinary approaches.

In the second year, students focus on the mastery of design leadership skills for managing processes for change and innovation to improve the experiences of businesses, institutions, organizations, communities, and individuals. Students define, develop, and defend an applied action research thesis project to serve as a case study demonstration of the power of design to clarify, humanize, and energize the issues that are central to life in a pluralistic society.

The interdisciplinary, collaborative nature of the program requires students to participate in the program as a cohort of colleagues. Thus, the majority of the work in the program is performed within a shared learning community that requires students to be present throughout the graduate residency experience.

The program of study is 60 credit hours distributed equally across four semesters. Fifteen credit hours of course work each semester will be coordinated and co-requisite. The M.F.A. graduate program in Visual Communication requires full-time study within an academic residency.

- Plan of Study
- Thesis

Admission

Admission into the Visual Communication graduate program is competitive. The Department of Visual Communication seeks graduate candidates who have strong skills for thinking critically about complex issues and working collaboratively in teams that represent a diversity of perspectives.

Applicants ordinarily will be expected to hold baccalaureate degrees from colleges or universities of recognized standing prior to registration as graduate students. Applicants for a master's degree program should have achieved a 3.0 (out of 4.0) grade point average or higher for the baccalaureate degree, or have other indicators of outstanding academic performance.

Students entering the M.F.A. degree program in Visual Communication Design are not required to have an established background in design or art. The Visual Communication Program at Herron encourages cross-disciplinary research approaches and experiences. However, applicants who do not have a prior educational background in design or professional design experience may be required to successfully complete foundational

pre-graduate studies in design before being accepted to initiate the M.F.A curriculum.

One or two semesters of foundational pre-graduate pre-graduate studies may be required before full admission into the M.F.A. program in Visual Communication Design. Foundational pre-graduate courses in design may be offered for graduate credit but the credit hours do not apply to completing the 60-credit hour requirements in the M.F.A. degree. Decisions regarding admission into the Foundational Pre-Graduate program are made on an individual basis.

Financial Assistance and Fellowships

Plan of Study

First Year - 30 credits

- Focus on design research for innovation (with particular emphasis on understanding users and contexts)
- Focus on design analysis for innovation (with particular emphasis on identifying patterns and framing insights)
- Focus on design synthesis for innovation (with particular emphasis on exploring ideas and conceiving plans)
- Focus on design optimization for innovation (with particular emphasis on prototyping and creating solutions)

Second Year - 30 credits

- Focus on design leadership as agent for transformation
- Transitioning from graduate school to new professional contexts
- Focus on design thesis formulating the research problem / opportunity

Thesis

To complete the degree, students are required to define, develop, and defend a written thesis and companion capstone project. A master thesis is a document authored by a student that describes results of original research undertaken by that student and asserts a position that is defensible in an academic context.

This position should not be construed to prohibit joint or collaborative research endeavors. It is expected, however, that in such a situation, unique aspects of the broad problem will be explored by each individual and that the thesis written and presented to the final examining committee will be a personal document describing the student's creative effort and contribution.

Students should speak with their advisor early in their graduate careers when considering a collaborative thesis project. An downloadable version of the Guide to Preparation of Theses and Dissertations is available by visiting http://www.iupui.edu/~gradoff/students/IU_Format_Guide2008.doc.

Master of Arts in Art Therapy

The Master of Arts in Art Therapy degree is a two-year program that prepares students with academic, clinical, and research experience in preparation for the credentials of Registration as an Art Therapist (ATR) according to the educational guidelines established by the American Art Therapy Association (AATA) and Licensure as a Mental Health Counselor (LMHC) in Indiana.

Positioned within the urban campus Indiana University Purdue University-Indianapolis (IUPUI) and built in partnership with the Indiana University School of Medicine, this two-year, full-time residential program is the only one of its kind in the state of Indiana. The program provides a foundation in art therapy where the general concepts of science, art, and the creative process are understood and applied in a therapeutic context.

This program is supported through a partnership with Riley Hospital for Children. Students are required to engage in clinical training within the IU Health system and surrounding Indianapolis community as a part of their coursework.

Honoring the dynamic nature of the psyche, the art therapist calls upon the theoretical and practical application of psychotherapeutic principles through a variety of interventions and in myriad settings including mental health, medical, educational, and forensic facilities.

Students will be trained from didactic and experiential models that encourage personal art making within Herron's studios. The use of imagery to conceptualize symbolic communication and expression of the unconscious is taught through the application of present-day assessment and intervention strategies in areas such as neuroscience and trauma, and through research methodologies including art-based and evidence-based practices.

Policies

Students should consult the handbook given to them at orientation for policies and procedures pertaining to their degree progress.

Admissions

Students seeking admission to the MA in Art Therapy degree program should demonstrate commitment to the professional goal of helping others as art therapists. Prerequisites for admission to the program meet the requirements mandated for all programs approved by the American Art Therapy Association. Herron requires that students have all these prerequisites completed before starting the program. If all prerequisites have not been met at the time of application, acceptance to the program can only be made pending successful completion of the prerequisites before the start of fall classes.

- A bachelor's degree
- 18 credits of studio art
- 12 credits of psychology including developmental psychology and abnormal psychology OR 9 credits of psychology including developmental and abnormal psychology and 3 credits of sociology
- A portfolio of artwork demonstrating experience with different media and an ability to understand the motivations behind one's personal art making process.

Details of the admissions process are described on Herron's website: http://herron.iupui.edu

Suggested plan of study (Any revisions to this curriculum made after this bulletin goes to press will be posted on the Herron website.)

Year 1 Fall Semester

- History, Theory and Practice of Art Therapy
- Counseling Theory and Practice for Art Therapists
- Art Therapy with Children and Adolescents
- Introduction to Group Counseling
- Studio Art Elective

Year 1: Spring Semester

- Assessment and Evaluation in Art Therapy
- Art Therapy with Families and Adults
- Ethical and Legal Issues in Counseling and Art Therapy
- Lifespan Development
- Individual Appraisal: Principles and Procedures
- Practicum/Internship I

Summer Semester

- Career Counseling Theory and Practice

Year 2: Fall Semester

- Cultural and Social Diversity in Counseling and Art Therapy
- Studio Art Elective
- Strategies for Educational Inquiry
- Advanced Clinical Internship I

Year 2: Spring Semester

- Art Therapy and Counseling with Specialized Populations
- Professional Issues Capstone
- Advanced Clinical Internship II

Last updated: April 2012

Graduate Programs

The Herron School of Art and Design educates students seeking professional careers in the fine arts, visual communication, art history, and art education.

Undergraduate degrees currently offered are the

- Bachelor of Fine Arts (B.F.A.)
- Bachelor of Arts (B.A.) in Art History
- Bachelor of Art Education (B.A.E.)

Graduate degrees currently offered are the

- Master of Art Education (M.A.E.)
- Master of Arts in Art Therapy (M.A.)
- Master of Fine Art in Visual Art and Public Life (M.F.A.)
- Master of Fine Art in Visual Communication (M.F.A.)

Last updated: March 2012

Student Learning Outcomes

Students will achieve the objectives set for the following graduate degrees:

- Master of Art Education (M.A.E.)
- Master of Fine Arts (M.F.A.) in Visual Arts and Public Life
- Master of Fine Arts (M.F.A.) in Visual Communication
- Master of Arts (M.A.) in Art Therapy

Master of Art Education (M.A.E.)

Upon completion of the Masters of Art Education students will:

1. Develop a comprehensive, critical understanding of the field of art education by investigating the ways in which art education has evolved and continues to change in response to cultural, economic, social, political, and technological conditions.
2. Examine and explore critical approaches to new media and directions in contemporary art practices, understanding innovative methodologies of professional artists in order to develop new approaches to elementary and secondary art instruction.
3. Understand the importance and roles of diverse learning environments appreciating both formal and informal art learning sites and studio environments in order to construct learning spaces that promote creative production, social learning and collaboration, as well as incorporate multiple contexts including museums, galleries, homes, and other pertinent public sites.
4. Develop in-depth conceptually based curricula with an understanding of local and global communities, and of the benefits and challenges of promoting democratic values in our culturally diverse society.
5. Demonstrate the ability to cultivate critical and creative thinking skills in others and to assert art's role in fostering multi-cultural, intercultural, and interdisciplinary understandings.
6. Demonstrate breadth of knowledge and skills in art history emphasizing contemporary art forms and visual culture, in analytical methods and theories of criticism, and in contending philosophies of art, and understand the foundational relationship of these components to authentic studio practice; and make these accessible and meaningful to P-12 learners.
7. Develop leadership roles and become an active participant in peer seminars, classroom tutorials, presentations, and reflective processes.
8. Understand, articulate, and continue to nurture the roles of Artist/Teacher/Researcher in their own professional practice and demonstrate increased breadth and depth of competence in studio skills, knowledge, and application.
9. Conduct professional research that demonstrates advanced levels of analysis, insight, design, and methods appropriate for art education settings and audiences. Utilize relevant applications for such research and professional publications.
10. Demonstrate reflective, critical thought, and scholarship as well as a commitment to ongoing professional development, and; contribute to the growth of the profession through disseminating scholarly activity as artist/teacher/researcher at local, state and national professional venues.

Master of Fine Arts (M.F.A.) in Visual Art and Public Life

Upon graduation from the Master of Arts in Visual Art and Public Life degree program, students will:

1. Be able to analyze and explain in writing and speech the meaning and effectiveness of works of art including their formal, thematic, theoretical, social, cultural, cognitive, and technological aspects.
2. Be able to conduct original creative research by controlling the formal, thematic, theoretical, social, cultural, cognitive, and technological aspects of works of visual art the student makes.
3. Be able to conduct original creative research that results in a cohesive group of art works produced at a professional level of quality in terms of formal, technical, and thematic consistency.
4. Have acquired knowledge of the professional factors, including the ethical responsibilities, of developing artworks in university and community-based collaborations.
5. Be able to critically analyze and communicate the analysis of works of visual art as an intellectual and experimental practice that is rooted in a specific time and place.
6. Have acquired knowledge of how to maintain a creative studio practice in a professional context, from making work to its presentation, installation, marketing, and critical analysis.
7. Be able to research, plan, design, fabricate, and complete their own art works (alone and in collaboration with others) utilizing a variety of technical processes in a variety of public and private settings for a variety of aesthetic and intellectual purposes.

Master of Fine Arts (M.F.A.) in Visual Communication

Upon graduation from the Master of Arts in Visual Communications, students will demonstrate the ability to:

1. Identify, comprehend, and analyze multiple diverse theoretical perspectives that designing is a set of human-centered understanding processes including modeling experiences, advocating empathy for users, and visualizing relationships to untangle complexity and generate shared perspectives of issues in situations.
2. Identify, comprehend, and analyze multiple diverse theoretical perspectives that designing must respond to the audiences and contexts which design solutions must address, including recognition of the physical, cognitive, cultural, and social human factors that shape design decisions.
3. Identify, comprehend, and apply specific synthetic methodologies to yield specific types of data sets to support various phases of a people-centered design process including design research, design analysis, design synthesis and design evaluation.
4. Evaluate the appropriateness of the selection and application of specific synthetic methodologies within a specific design context by analyzing the relevance of research outcomes.
5. Identify, comprehend, and apply design processes & design process skills for interdisciplinary collaborative action research by identifying patterns & framing insights, exploring ideas and conceiving plans, prototyping & optimizing proposals, and implementing solutions.
6. Analyze, synthesize, and evaluate design processes & design process skill for interdisciplinary collaborative action research by facilitating, coaching and mentoring others to apply processes and process skills while reflecting in action.
7. Comprehend and apply scholarly research processes including the performance of literature reviews, interviewing, fieldwork and reporting.
8. Analyze, synthesize, and critically evaluate published work and source materials, through thesis research, practice and writing, with an appreciation of the relationship of the thesis theme to the wider field of knowledge.
9. Synthesize, through the thesis paper and design project, a distinct contribution to a body of knowledge through an original investigation or testing of ideas, worthy in part of publication.

Master of Art Therapy (M.A.)

Upon completion of the Masters of Art Therapy students will:

1. Students will be able to synthesize and critically evaluate research in art therapy.
2. Students will be able to describe the distinction between empirically supported and applied art therapy interventions and will develop an advanced research skill set comprised of theory, methodology, and data analytical skills in the preparation for future study in the field of art psychotherapy.
3. Students will be able to demonstrate knowledge of the historical and theoretical underpinnings of art therapy and its development as a medical and healthcare profession.
4. Students will be able to clearly articulate and demonstrate how the art making process and products are used to elicit verbal associations and responses to accomplish treatment goals within the context of the therapeutic relationship.
5. Students will develop the knowledge and skills in art therapy assessment, diagnostic formulation, treatment plan development and intervention for psychological and psychosocial disorders.
6. Students will develop an ethical approach of professionalism, maturity, responsibility and self-presentation in all aspects of art therapy and verbal psychotherapy assessment and intervention that is accordance with the Art Therapy Credentials Board (ATCB) and the American Art Therapy Association (AATA).
7. Students will be able to design, implement and evaluate art therapy services and art therapy programs in a variety of medical, healthcare, community, and educational settings and will apply individual and group dynamics to interactions with staff and administration.
8. Students will demonstrate sensitivity and understanding of how human diversity impacts art therapy treatment and intervention.
9. Students will be able to establish and maintain a dignified and safe holding environment in which to

facilitate the therapeutic process by understanding both client and therapist feelings, perceptions, and responses within the therapeutic relationship.

Non-Majors

Elective Courses

An important component of the Herron School of Art and Design is the Elective Arts Program. As part of our mission to provide an educational experience in the visual arts for the university and community, Herron offers a wide range of studio courses in this program.

Elective Arts serves a varied constituency; the basic objective is to provide a studio experience to students who do not wish to pursue a degree in visual arts. These courses also provide a setting for students to be introduced to the visual arts before beginning their study at Herron or to fulfill requirements for other degree programs. Beginning level classes in two-dimensional and three-dimensional media are offered each semester to fulfill this mission.

Generally, the courses have either no prerequisites or modest prerequisite requirements. Students can develop an appreciation for the visual arts through drawing, painting, photography, or ceramics. Enrollment in any of these elective courses does not in itself constitute admission to any of the Herron School of Art degree programs.

Whether for personal enrichment or as a required component of a major outside of Herron, Elective Arts students develop artistic skills and gain a keen understanding of aesthetics through their own artwork. For complete information, including detailed course listings and admissions procedures, please contact the Herron Student Services Office at (317) 278-9400.

Last Updated: March 26, 2012

Community Learning

Community Learning Programs

Saturday School - Fall, Spring

Herron's Saturday School, established in 1922, provides quality art instruction to youth ages 7-17 and adults seeking to learn artistic techniques, improve art skills, try new art forms, and build a portfolio of work. Classes take place during 10-week semesters and are held at Herron's Eskenazi Hall and at Herron's Sculpture and Ceramics building. Class offerings include drawing, painting, illustration, sculpture, ceramics, photography, printmaking, computer imagery, and elementary art. Instructors are capable junior and senior Herron students and alumni working under supervision of Community Learning / Art Education. The combination of quality instruction and an art school environment encourages exceptional development of creative skills. Partial scholarships are available through local high school teachers. For more information, contact (317) 278-9404, sschool@iupui.eduor visit

http://www.herron.iupui.edu/community/classes.

Tuesday Night Classes - Fall, Spring, Summer

Tuesday Night Classes, started in 2008, are 10-week, non-credit art classes that meet on Tuesday evenings at Herron's Eskenazi Hall. Classes target adult students with offerings ranging from oil painting to drawing from life. In the summer, a new offering includes Tuesday Night for Teens. Class sizes are limited. For more information, contact (317) 278-9404 or visit

http://www.herron.iupui.edu/community/classes.

Honors Art Program – Summer

Herron's Honors Art is a rigorous, 2-week summer program of instruction for high school juniors, seniors, and recent graduates who want to build their art makings kills and portfolio, plus receive guidance in planning an education in art. Each summer, two sessions of Honor Art are held at Herron's Eskenazi Hall. Lessons in drawing, painting, design, printmaking, and theory - equivalent to those given to first-year Herron students - are carefully designed to build basic studio skills. In addition, a series of planned field trips provides meaningful exposure to Indianapolis' cultural sites. Moderate class sizes lead to quality instruction provided by Herron faculty members, alumni, and graduate students. To qualify for Honors Art, a student must have completed the sophomore year of high school and write a short statement. For more information, contact (317) 278-9404 or visitwww.herron.iupui.edu/community/classes.

Weekend Workshops – Fall

Herron's Weekend Workshops provide an intensive, two week end course of study for high school students and adults to sharpen skills in drawing from life or strengthen their portfolio for admission to art school and for applying for art school scholarships. Workshops are held at Herron's Eskenazi Hall. For more information, contact (317) 278-9404 or visit

http://www.herron.iupui.edu/community/classes.

Youth Art Camp – Summer

Launched in 2002, Herron's Youth Art Camp is a weekly summer day camp for youth ages 5 to 16 held at Herron's Eskenazi Hall. Participants actively engage in a productive series of studio art activities geared toward personal and artistic development. Instructors instill the value of art as a means of personal and cultural expression, communication, and problem solving. Each week of Youth Art Camp culminates with an art exhibition where families, friends, and teachers are invited to view work created at art camp. Tuition waivers are available for those in need of financial assistance. For more information, contact (317) 278-9404 or visit http://www.herron.iupui.edu/community/classes.

Continuing Education

Noncredit adult education courses at IUPUI are open to adults regardless of age or educational background. These courses are intended for persons who, for personal or professional enrichment purposes, want to expand their knowledge. Formal admission to the university is not required for enrollment in the continuing education programs. For complete information, please call the IUPUI

Division of Continuing Studies, Noncredit Programs, (317) 274-4501.

Undergraduate Policies

Attendance

The work of the school is intensive; therefore, prompt and regular attendance is required. If at any time a student has a legitimate reason for not attending class, immediate notification should be made to the instructor. Attendance requirements are set by individual instructors. Students should stay informed of these requirements and are held responsible for fulfilling them.

Dean's List

Degree-seeking students in good standing who have a GPA of 3.50 or higher with a course load of 12 or more credit hours for a given semester will be placed on the Dean's List for that semester. Students carrying 12 credit hours and a grade of Incomplete in one or more classes will not be placed on the Dean's List. Student's carrying12 credit hours and taking a course as Pass/Fail will not qualify for the Dean's List.

Technical Standards Policy

Herron School of Art & Design applicants and enrolled students must be able to fulfill the requirements and demands of the courses for the degree program they have chosen. Reasonable accommodations will be made for students who are registered with IUPUI Adaptive Educational Services.

Research Compliance

Students and faculty conducting research, including the making of art, must comply with Indiana University policies on the use of human or animal subjects. For research involving human subjects, investigators must receive final approval from the Indiana University Institutional Review Board (IRB) before starting a research study. For research involving animals, investigators must receive approval from the IU School of Medicine's Institutional Animal Care and Use Committee (IACUC).

Academic Probation

Students in the Herron School of Art and Design are expected to maintain a cumulative GPA of at least a 2.0. If they do not, the Dean will give them formal written notice of probation. Students will be placed on academic probation for the academic session following the one in which they failed to attain the 2.0 cumulative GPA.They will also be placed on academic checklist, which will prohibit them from registering for future semesters until they meet the requirements set out by the Student Services Office.

Academic Dismissal

A student in the Herron School of Art and Design maybe dismissed from the school when, in the judgment of the faculty, the student has ceased to make satisfactory progress toward a degree. When an undergraduate student fails to attain a C (2.0) cumulative GPA in any two academic semesters, the student is automatically considered to be making unsatisfactory progress toward a degree and is therefore eligible for dismissal. The student will be informed in writing by the Dean of the school. The student will be withdrawn from any courses in which he or she is currently enrolled and will be placed on academic checklist, which will prevent registration for future semesters. Any student who has been dismissed under these provisions may be readmitted only after one year has passed.

Petition for Readmission

Students who have been dismissed may appeal in writing to the Herron Student Affairs Committee. The committee may readmit the student if it decides that evidence of changed circumstances indicates the probability of improved academic performance. Each petition is considered individually, and a decision is based on the student's academic history and personal circumstances. Petitions are due to Herron Student Services Office by October 15 for spring admission and April 15 for fall admission. Students readmitted through this appeal process must earn a minimum cumulative semester GPA of 2.3 or above for the returning semester. Readmitted students failing to achieve the cumulative 2.3 GPA are permanently dismissed from the Herron School of Art and Design.

Academic Forgiveness

The Herron School of Art and Design academic forgiveness policy applies to former IUPUI students pursuing a first undergraduate degree who have been away from IUPUI and have not attended any other college or university, including any campus of IU, for at least three years. Only students who meet the three-year requirement and have a GPA not greater than 2.0 will be considered for the forgiveness policy. If the student's petition is approved, all previously taken courses will remain on the permanent record but will not count toward the student's GPA. Only course credits with grades of A through C, P, and S will count toward degree completion but again will not count towards the student's GPA. If a student's petition for forgiveness is approved, the student enters Herron with a recalculated cumulative GPA of 0.0, after which all the rules of academic probation and dismissal for Herron School of Art and Design will apply. After approval, t he student must complete a minimum of 32 credit hours at IUPUI. All eligible students will be admitted under the Herron School of Art and Design curriculum in place at the time of admittance. If the petition is approved, the Herron Student Affairs committee has the authority to impose stipulations or conditions upon the enrollment of the student. Herron School of Art and Design reserves the right to deny the acceptance of credits from obsolete courses when the student has been away from Herron for three or more years. Forgiveness may be invoked only once.

Pass/Fail Option

The Pass/Fail option is available to Herron undergraduate students in good standing for a maximum of 12 credit hours of academic elective study within the total degree requirements. This option may not be used for studio courses or the required freshman English courses, and it is limited to two courses per year, including summer instruction. Under the Pass/Fail option, a grade of P (Pass) will not be used in computing the GPA, but an F grade will be so used. A grade of P will not be subsequently changed to an A, B, C, or D. Students electing to take the Pass/Fail option in an elective course must complete the required form in the Herron Student

Services Office before the deadline published each semester in the IUPUI Schedule of Classes.

Graduation

Students expecting to complete a course of study leading to the degree of Bachelor of Fine Arts, Bachelor of Art Education, Bachelor of Arts, Master of Fine Art, Master of Arts, or Master of Art Education must be in good standing and file an application with the Herron Student Services Office by October 15 during the academic year in which they wish to graduate, which includes graduates of December, May, June, and August. After they file this application, their records will be reviewed, and they will be notified of graduation status.

General Requirements for a Baccalaureate Degree

- Complete the minimum credit hours as required by degree program.
- Achieve a minimum overall GPA of 2.0.
- Achieve a minimum Herron studio GPA of 2.0.
- Be in residence at Herron for at least two semesters, and complete, while at Herron, at least 24 credit hours of studio work at the 300 level or higher.

Requirements for a Second Degree

Holders of bachelor's degrees who have additional academic objectives may, if admitted by the Herron School of Art and Design, pursue a second bachelor's degree. The student must earn a minimum of 24 additional credit hours in residence and meet the requirements of the Herron School of Art and Design and of the program in which they are enrolled.

Last updated: March 26, 2012

Faculty

The Herron School of Art and Design faculty is made up of artists, designers, and scholars engaged in the integrated activities of teaching and research. Faculty in the school believe a high level of professional activity not only enhances teaching, but also provides students with models upon which to pattern their own careers.

The faculty is consistently recognized with awards, commissions, exhibitions, and publications, both regionally and nationally. The expertise of the Herron faculty is further extended by a program of visiting artists and lecturers from the Indianapolis community and beyond.

Resident Faculty and Staff

Herron School of Art Administrative Officers

- VALERIE EICKMEIER, *Dean of the School*
- CRAIG McDANIEL, *Associate Dean of Academic and Student Affairs*
- JENNIFER LEE, *Associate Dean of Academic and Student Affairs*
- PEG FREY, *Assistant Dean of Fiscal and Administrative Affairs*
- AMY MAIDI, *Director of Student Services*
- PAM HACKER, *Academic Advisor*
- ABBEY PINTAR CHAMBERS, *Academic Advisor/ Student Recruiter and Associate Faculty*
- EMILY CLOSSIN, *Academic Advisor/Student Recruiter*
- STACY FILES, *Student Services Specialist*
- KIM HODGES, *Director of Development*
- ROB BOLLOCK, *External Affairs & Development Specialist*
- BRITT BOORAM, *Human Resources Specialist*
- JASON McCLELLAN, *Technology Manager*
- JUSTIN ESCUE, *Video Production Specialist*
- KIM GIBSON, *Assistant Business Manager*
- SUSAN GRADE, *Community Learning Coordinator*
- PAULA KATZ, *Director of Galleries*
- KATHY PATALUCH, *Director, Basile Center for Art, Design and Public Life*
- LUKAS SCHOOLER, *Gallery Specialist*
- GLENDDA McGANN, *Assistant Dean of Development and External Affairs*
- MARSHALL JONES, *Communications Design Specialist*

Resident Faculty

- Ahga, Anila, *MFA, University of North Texas, 2004; BFA, National College of Art, Lahore, Pakistan, 1989; Assistant Professor of Drawing*
- Baker, Lesley, *MFA, Rhode Island School of Design,2000; BED, Texas A & M University, 1986; Assistant Professor of Ceramics*
- Borgmann, Cindy Bixler, *Ed.D., Indiana University, 1981; MS, Indiana University, 1976; BS, Purdue University,1973; Associate Professor of Art Education*
- Chambers, Abbey Pintar, *MA, Indiana University, 2006; BS, Kendall College of Art and Design, 2004;Associate Faculty*
- Differding, Paula, *BFA, Indiana University Herron School of Art, 1979; BS, Purdue University, 1976; Associate Professor of Visual Communication*
- Doty, Stephanie, *MFA, Indiana State University, 1994; BFA, Indiana State University; Coordinator of Art Appreciation and Lecturer*
- Engel, Emily, *PhD, University of California, 2009; MA, University of California, 2004; BA, Boston College, 2000; Assistant Professor of Art History*
- Eickmeier, Valerie, *MFA, Washington University, 1982; BFA, Kansas City Art Institute, 1979; Dean and Professor of Sculpture*
- Farrow, Vance, *MFA, University of Cincinnati, 1996; BFA, Murray State University, 1993; Associate Professor of Foundation Studies*
- Furqueron, Reagan, *MFA, Rochester Institute of Technology, 2004; AOS, Rochester Institute of Technology, 1999; BFA, Texas Tech University, 1991; Director of Foundation Studies and Assistant Professor*
- Giddings, Anita, *MFA, Indiana State University, 1995;BFA, Indiana University Herron School of Art, 1983; Elective Art Coordinator and Senior Lecturer*
- Goodine, Linda Adele, *MFA, Florida State University,1983; MS, Ithaca College, 1981; BA, University of Rochester, 1977; Professor of Photography*
- Groshek, Matthew, *MFA, University of Wisconsin, 1986;BFA, University of Wisconsin, 1982; Associate Professor of Visual Communication*

- Hong, Young Bok, *MFA, The School of the Art Institute of Chicago, 2001; BA, Ewha University 1993; Associate Professor of Visual Communication*
- Hull, Greg, *MFA, University of Delaware, 1991; BFA, Kansas City Art Institute, 1985; Associate Professor of Sculpture*
- Jacobson, Marc, *MFA, University of Wisconsin, Milwaukee, 1985; BFA, University of Wisconsin, Milwaukee, 1976; Professor of Foundation Studies and Painting and Coordinator, Division I of Fine Arts*
- Jefferson, Corey, *MFA, University of Cincinnati, 2001; BFA Miami University, 1998; Senior Lecturer in Ceramics and Foundation Studies*
- King, Juliet, *MA, Hahnemann University, 1998; BA, Bloomsburg University, 1994; Director of Art Therapy and Assistant Professor*
- Kinsman, R. Patrick*, Ph.D., Indiana University, 2000;MA, Indiana University, 1998, BA, Trinity College,1993; Lecturer in Art History*
- Lee, Flounder, *MFA, California State University Long Beach, 2007; BFA, University of Florida Gainesville, 2003; Assistant Professor of Photography and Coordinator, Division II of Fine Arts*
- Lee, Jennifer, *Ph.D., Emory University, 2003, MA, Archaeology, University of Sheffield, U.K., 1994, BA, Wesleyan University, 1990; Associate Professor of Art History*
- McDaniel, Craig, *MFA, Ohio State University, 1986; M. S., Urban Mgmt., Drexel University, 1976; MFA, University of Montana, 1975; BS, University of Pennsylvania, 1970;Associate Dean and Professor of Fine Art*
- Morrison, David L., *MFA, University of Wisconsin, 1985;BFA, University of South Dakota, 1981; Professor of Printmaking*
- Murdock, Jason, *BFA, Indiana University Herron School of Art and Design, 2003, Lecturer in Visual Communication*
- Nemeth, Jeanne*, Ph.D., Indiana University, 2007, MFA, University of Cincinnati, 2000, MS, Indiana University, South Bend, 1983, BS, Indiana University, 1976, Assistant Professor of Art Education*
- Nordgulen, Eric, *MFA, Indiana University, 1985; BFA, East Carolina University, 1982; Associate Professor of Foundation Studies and Sculpture*
- O'Connell, Kathleen, *MFA, Syracuse University, 1988;BFA, Indiana University Herron School of Art, 1982;BA, Indiana University, 1976; Associate Professor of Illustration*
- Petranek, Stefan, *MFA, Rochester Institute of Technology, 2006; BA, Bowdoin College, 1999; Assistant Professor of Photography*
- Potter, William, *MFA, University of Cincinnati, 1997; BFA, Columbus College of Art and Design, 1995; Associate Professor of Foundation Studies*
- Richardson, Mark, *MFA, Indiana University, 1980; BFA, University of Massachusetts, 1976; Associate Professor of Ceramics*
- Riede, Danielle, *MFA, Virginia Commonwealth, 2005; BA, The University of Virginia, 1998; Assistant Professor of Painting*
- Roberts, Eva, *MA, North Carolina State University, 1976; BS, North Carolina State University, 1973; Visual Communication Department Chair and Professor of Visual Communication*
- Robertson, Jean, *Ph.D., The University of Pennsylvania,1983; MA, The University of Pennsylvania, 1973; BA, The University of Pennsylvania, 1971; Professor of Art History and Professor, Women's Studies*
- Robinson, Cory, *MFA, San Diego State University, 2002;BFA, Herron School of Art, 1999; Associate Professor of Furniture Design and Fine Arts Department Chair*
- Sanematsu, Helen, *MFA, School of Art, Yale University,1998; BA Occidental College, 1989; Assistant Professor of Visual Communication*
- Setser, Meredith*, MFA, University of Wisconsin-Madison,2004, BFA, Herron School of Art, 1997, Assistant Professor of Fine Arts*
- Stone, Sherry, *BFA, Indiana University Herron School of Art, 1981; Senior Lecturer in Foundation Studies*
- Streekstra, Holly, *MFA, Louisiana State University, 2006, BFA, University of Minnesota, 2001, Assistant Professor of Sculpture*
- Tennant, Phillip, *BFA, New York State University at Alfred, 1971; Professor of Furniture Design*
- Vander Kooi, Lee, *MGD, North Carolina State University,2004; BFA, University of Akron, 2000; Assistant Professor of Visual Communication*
- Vice, Christopher, *MFA, California Institute of the Arts, 1992; BS, North Carolina State University, 1989; Associate Professor of Visual Communication*
- Winship, Andrew, *MFA, The School of the Art Institute of Chicago, 1998; BFA, University of Michigan School of Art and Design, 1995; Associate Professor of Painting and Printmaking*

Courses

Art Courses for Nonmajor

HER-E 101 Beginning Drawing I (3 cr.) Introduction to drawing, exploring a wide range of techniques. Study from nature and still-life objects and sketching from the model.

HER-E 102 Beginning Drawing II (3 cr.) Introduction to drawing, exploring a wide range of techniques. Study from nature and still-life objects and sketching from the model.

HER-E 103 Two-Dimensional Design Theory (3 cr.) Comprehensive study of design elements and principles through the investigation of two-dimensional space. Students explore basic two-dimensional concepts such as figure/ground, grouping principles, grid, symmetry, rhythm, and pattern. As a result of this course, students develop a visual language for analyzing, organizing, and communicating two-dimension principles.

HER-E 105 Beginning Painting I (3 cr.) Introduction to the techniques of painting. Aspects of pictorial composition; wide range of media. Painting from still life and live model.

HER-E 106 Beginning Painting II (3 cr.) Introduction to the techniques of painting. Aspects of pictorial composition; wide range of media. Painting from still life and live model.

HER-E 109 Color and Design for Non-Art Majors (3 cr.) Introduction to basic design and color theory through the manipulation of imagery in two-dimensional media. Equal emphasis on thought process and manual skills.

HER-E 111 Metalsmithing and Jewelry Design (3 cr.) Introduction of metalsmithing techniques used to create fine art jewelry and metal sculpture. Course will cover metalsmithing processes, materials, tools and equipment, as well as historic and contemporary jewelry design. Topics include: sawing, cold connecting sheet metal, stone setting, craftsmanship, and studio safety.

HER-E 113 Introduction to Sculpture (3 cr.) Provides an overview of basic skills used to create three-dimensional art to explore traditional and contemporary sculpture materials. Emphasis is on both additive and subtractive methods of working. Goals include acquiring technical skills, understanding the physical and expressive possibilities of sculpture, and learning safe, appropriate use of tools and materials.

HER-E 201 Photography I for Non-Art Majors (3 cr.) Introduction to the basics of black-and-white fine art photography for non-art majors only. Students provide their own fully manual 35mm camera.

HER-E 202 Photography II for Non-Art Majors (3 cr.) Introduction to the basics of black-and-white fine art photography for non-art majors only. Students provide their own fully manual 35mm camera.

HER-E 205 Portrait Painting I (3 cr.) Includes the study of features and basic construction of the head. Exploration of various media. Emphasis on rendering flesh tones, form, and colors with respect to the model.

HER-E 209 Drawing for Interior Design (3 cr.) P: HER-E 101, INTR 103, ART 117. Applied drawing with an emphasis on communicating ideas and developing schematic drawing skills. Students will learn to define their ability to think in three dimensions and to represent ideas for three-dimensional space in drawing.

HER-E 214 Visual Learning: From The Simpsons to the Guerrilla Girls (3 cr.) Designed for the novice, this class facilitates viewers in interpreting powerful images from our contemporary world, starting with art and moving across popular culture and academic disciplines. Classes involve making and interpreting images. Essential questions help students examine how visual images impact their lives. Convenes at Herron with off-site visits to museums and public spaces.

HER-E 220 Exploring Art (1-3 cr.) Introduction to materials, techniques, and uses of a specific art media. Course will focus on a material or artistic approach to introduce students to art making. Demonstrations, lectures, and critiques support art assignments. Topics change to coordinate with current faculty expertise and interest in the community.

HER-H 100 Art Appreciation (3 cr.) An understanding and appreciation of outstanding works of art through analysis of artistic purposes and techniques, and knowledge of historical style and subject matter. Not counted as credit toward the B.F.A. or B.A.E. degree, nor toward the major or minor requirements in art history.

HER-H 221 Art Past and Present (3 cr.) An introduction to the methods and issues within the discipline of Art History. Offers a chronological overview of the history of art. Students will learn to look critically at art, learn about its place in society and history, and develop an understanding of art. This is a course for non-majors and does not count toward a Herron degree.

Art Education

HER-M 220 Art Education and New Media in the 21st Century (3 cr.) This course will provide Art Education students with a theoretical and practical framework for integrating new media into teaching and learning in Art Education. Examples of new media will be examined and how they are reshaping teaching, and learning in Art Education. This course includes a significant lab component.

HER-M 311 Art Education Studio Survey (3 cr.) A course intended to ensure broad knowledge of the type and scope of media likely to be encountered in elementary and secondary art programs with consideration of inclusion students. Required for all art education majors.

HER-M 371 Foundations of Art Education (3 cr.) Historical, sociological and philosophical foundations of art education; curriculum development; individualized and interdisciplinary learning; instructing K-12 audiences; K-12 school organization; and general processes and practices of teaching art including the creative problem solving process. School and museum field experiences included.

HER-M 400 Laboratory/Field Experience: Elementary School (0-3 cr.) C: M471. Supervised laboratory or field experience in elementary school(s).

HER-M 401 Laboratory/Field Experience: Secondary School (0-3 cr.) C: M473. Supervised laboratory or field experience in secondary school(s).

HER-M 472 Teaching Art/Elementary School (3 cr.) Develops understanding and appreciation of teaching, with emphasis on teaching in the elementary schools. Includes curriculum and lesson planning, organization of materials and ideas, and techniques of classroom management.

HER-M 473 Teaching Art: Secondary Schools (3 cr.) P: M371 C: M401 This course is designed to develop an understanding for teaching art in secondary school settings. Readings and discussions about characteristics of secondary art education, curriculum development, teaching strategies, and classroom management will be emphasized. Observations of middle school and high school art classes and teaching a curriculum art unit will be part of the practicum component.

HER-Z 200 The Artist Within: Art Making for Teachers (3 cr.) Art making for the art novice/general educator, nurturing the artist within. Introspective, creative meaning making, exploring big ideas through introductory materials and processes in drawing, painting, collage, sculpture, and digital printing. Instruction in adaptations for general classroom use. Studio lab. Will not count for fine arts or art education majors.

HER-Z 510 Art for Teachers of Exceptional Children (3 cr.) A course concerned with planning and presentation of art lessons and programs for children with a variety of special needs. The program involves presentations by guest professionals and field experiences. Emphasis is on public school applications.

HER-Z 511 Nonstudio Approaches to Art Instruction (3 cr.) Exploration of critical approaches to newer media, including film, video, and television, directed toward an art context. Emphasis on the development of critical skills and approaches to new media in the classroom.

HER-Z 512 Improving Studio Instruction in Art (3 cr.) Designed to examine major directions in art and the points of view of professional artists in order to develop new approaches to elementary and secondary art instruction.

HER-Z 513 Special Topics in Art Education (1-3 cr.) A variable topic course designed to cover current issues in art curriculum and assessment. Designed for the K-12 art specialist.

Art History

HER-H 100 Art Appreciation (3 cr.) An understanding and appreciation of outstanding works of art through analysis of artistic purposes and techniques, and knowledge of historical style and subject matter. Not counted as credit toward the B.F.A. or B.A.E. degree, nor toward the major or minor requirements in art history.

HER-H 101 History of Art I (3 cr.) Visual analysis of selected works from the history of Western art. First semester defines historical terms, processes, and principles of architecture, painting, and sculpture and covers the history of art from Prehistoric through Late Gothic. Second semester examines problems of style and subject matter from Early Renaissance to the twentieth century. Required of all Herron degree students.

HER-H 102 History of Art II (3 cr.) Visual analysis of selected works from the history of Western art. First semester defines historical terms, processes, and principles of architecture, painting, and sculpture and covers the history of art from Prehistoric through Late Gothic. Second semester examines problems of style and subject matter from Early Renaissance to the twentieth century. Required of all Herron degree students.

HER-H 103 Introduction to Contemporary Art (3 cr.) This course introduces the vocabulary of visual arts in the twentieth century. Major movements are briefly introduced with characteristic works. Painting, sculpture, photography, printmaking, computer graphics, video, and environmental and performance art in the past three decades are emphasized. Required of all Foundation Program students. Required for all Foundation Program students other than those planning to major in Visual Communication. For art history majors, H103 is not required, but if taken, may be counted for the required 20th/21st century requirement.

HER-H 203 Topics in Art History (3 cr.) Study of selected topics or issues in the history of the visual arts. Topics change in order to coordinate with current exhibitions, special events, or faculty expertise. Refer to the current Schedule of Classes for specific course descriptions.

HER-H 210 The Art of Art History (3 cr.) This course provides an introduction to theories and methods of art history, with emphasis on developing skills of visual analysis, research, and oral and written communication. Recommended for art history majors and minors who are preparing to take upper level classes. Open to anyone interested in thinking and writing about art.

HER-H 221 Art Past and Present (3 cr.) An introduction to the methods and issues within the discipline of Art History. Offers a chronological overview of the history of art. Students will learn to look critically at art, learn about its place in society and history, and develop an understanding of art. This is a course for non-majors and does not count toward a Herron degree.

HER-H 300 Black Visual Artists (3 cr.) A survey of the artistic traditions of Africans in the New World, from the period of slavery in North and South America through contemporary and expatriate African American artists. Equivalent to Afro-American Studies A352; students may not receive credit for both courses.

HER-H 302 Beginnings of Twentieth-Century Art: 1886-1914 (3 cr.) From the last impressionist group show of 1886 until the end of World War I, the foundation was laid for new visual expressions by both painters and sculptors. Course topics include postimpressionism,

symbolism, art nouveau, fauvism, expressionism, orphism, cubism, and futurism.

HER-H 303 Contemporary African American Art and Artists: 1920-80 (1 cr.) This distance education telecourse targets the African American visual artist, but it also includes the political and social non-art-related elements that contributed to the period's activities. The course presents an introduction to, and the foundations of, the African American visual artist. It begins with the pre- and post-Harlem Renaissance of the 1920s and journeys to modern African American art and its relation to post-World War II contemporary European and Euro-American art.

HER-H 304 Advanced Topics in Art History (1-6 cr.) Lecture/discussion of selected topics in history of art. No prerequisites. Some art history experience recommended. Topics change to coordinate with special exhibitions or other opportunities.

HER-H 310 Classical Archaeology (3 cr.) This course explores the material remains of the classical lands from prehistoric through Roman times and a variety of approaches by which they are understood. Archaeological theory and methods are illustrated through select sites, monuments, works of art, and other remains of cultural, artistic, and historical significance. (Equivalent to Classical Studies A301; students may receive credit for only one of these courses.)

HER-H 323 History of Printmaking I (3 cr.) This course explores the artistic evolution and cultural significance of printmaking from the invention of printing through the eighteenth century. Emphasis is given to the development of the woodcut, engraving, and etching processes and to the works of major printmakers such as Durer, Rembrandt, and Hogarth.

HER-H 325 Islamic Art (3 cr.) The course surveys the art, architecture, and culture of key periods in Islamic history. Students become familiar with styles, contexts, and functions of the arts in the Islamic world.

HER-H 326 Romanesque and Gothic Art (3 cr.) Romanesque and Gothic art covers the period from about 1000 until 1550, from the artist-craftsman tradition of monasteries and cathedrals to the end of the Age of Faith in Europe. Painting, sculpture, and stained glass will be considered in their social and architectural context.

HER-H 331 Italian Renaissance Art (3 cr.) This course covers the painting, architecture, sculpture and graphic arts of Renaissance Italy with emphasis on the changing role of artists in society, major stylistic movements, the use and reception of art, the work of major artists, and their cultural context.

HER-H 333 Art of the Renaissance (3 cr.) Introduction to the architecture, painting, sculpture, and graphic media of Renaissance Europe. Emphasis is placed on the political and social climate prevailing from 1400 to 1600, and its effect on the arts of Italy, Flanders, Spain, Holland, France, Germany, and England.

HER-H 334 Baroque Art (3 cr.) Exploration of the characteristics of Baroque art and its development in the seventeenth century. Special emphasis on selected Baroque artists such as Bernini, Rubens, Rembrandt, Velazquez, and Poussin, and on their personalities, styles, and positions in seventeenth-century society.

HER-H 304 Women in Art (3 cr.) This course analyzes the roles of women in the history of art. Topics may include women as patrons, viewers, and subjects of art as well as representations of women. The lives and work of women artists past and present will be featured.

HER-H 341 Nineteenth-Century Art (3 cr.) Focus is on the major movements and artists in European painting and sculpture from the French Revolution to postimpressionism. Topics include neoclassicism, romanticism, realism, and impressionism. Artists such as David, Ingres, Goya, Delacroix, Courbet, Manet, Monet, and Degas will be covered.

HER-H 342 From Dada to Abstract Expressionism: 1915-1950 (3 cr.) International movements in painting and sculpture from World War I until the emergence of the New York School after World War II including Dada activities in Europe and New York, the Bauhaus, European surrealism, and American art.

HER-H 343 Nineteenth-Century Architecture and City Planning (3 cr.) An analysis of significant architecture and city planning in Europe and North America from 1790 to 1886. Emphasis on aesthetic, spatial, and theoretical concepts of key architects and their solutions, technological advances, and social implications.

HER-H 344 Modern Architecture (3 cr.) Emphasis is given to European and American modern architecture since 1892 and to contemporary architecture in Indiana since 1942. Selected modern movements such as art nouveau, Chicago school, prairie, the Bauhaus, international style, and postmodernism will be studied. Special attention is directed to the American architects Henry Hobson Richardson, Louis Henri Sullivan, and Frank Lloyd Wright and to their contemporaries in Europe: Walter Gropius, Le Corbusier, and Ludwig Mies van der Rohe.

HER-H 345 American Art to 1913 (3 cr.) A multicultural and interdisciplinary stylistic approach will be used to study selected examples of American architecture, painting, and sculpture from the seventeenth century to the Armory Show of 1913. Some consideration will be given to Indiana architecture and painting.

HER-H 347 Art from 1950 to the Present (3 cr.) Deals with European and American painting and sculpture from abstract expressionism to the present. Topics include post-painterly abstraction, pop art, minimal art, conceptual art, body and performance art, photorealism, site and architectural sculpture, and installations.

HER-H 348 History of Photography (3 cr.) This course is a critical examination and in-depth study of photography from 1839 until the present. The general approach is from an artistic and cultural viewpoint, stressing the development of photography as a medium of personal artistic expression as well as its relationship to broader artistic ideas and sociocultural issues.

HER-H 351 African Art 1 (3 cr.) Course explores the styles, functions, and contexts of art in a selection of African cultures. Pre-colonial, post-colonial, and contemporary art may be considered, along with the

varying perspectives from which African art has been studied.

HER-H 361 Asian Art 1 (3 cr.) Major art forms from regions in western and central Asia, considered in their cultural and historical contexts.

HER-H 362 Asian Art II (3 cr.) Major art forms from regions in east Asia, considered in their cultural and historical contexts.

HER-H 400 Topics and Methods in Art History (1-3 cr.) Critical examination of important topics and methods from the history of art, using the seminar approach. Content may vary according to the specialty of the instructor. May be repeated up to three times for a maximum of 9 credits.

HER-H 402 The Roots of Modernism: 1905-1915 (3 cr.) This seminar deals with the decade in the early twentieth century that saw the rise of drastically new attitudes and styles in painting and sculpture. From the first group exhibit of the fauves in 1905 until the arrival of Marcel Duchamp in New York in 1915, the foundations for future developments in art were laid for the twentieth century.

HER-H 404 Art of the Past Two Decades (3 cr.) A seminar focusing on directed research into the art, critical writing, and conceptual attributes of current art. Topics include postmodernism, appropriation, feminism, multiculturalism, deconstruction, and semiotics.

HER-H 410 Art Theory and Criticism (3 cr.) This course examines a cross-section of theories that underpin current discussions and developments in the visual arts. This course also examines the nature and goals of art criticism, including how different theories help frame the primary concerns and controversies within art criticism.

HER-H 413 Art and Archaeology of Greece (3 cr.) Art and archaeology of Greece from about 1000 B.C. through the Hellenistic period. Special attention given to the development of Greek architecture, sculpture, and vase painting. Equivalent to Classical Studies C413; students may receive credit for only one of these courses.

HER-H 414 Art and Archaeology of Rome (3 cr.) Development of Roman architecture, sculpture, and painting from the beginning through the fourth century A.D. Consideration given to the major archaeological sites. Continuation of H413, but H413 is not a prerequisite. Equivalent to Classical Studies C414; students may receive credit for only one of these courses.

HER-H 418 Myth and Reality in Greek Art (3 cr.) An introduction to Greek iconography (the study of images) that explores contemporary approaches to narration and representation. The course examines the illustration of myth, history, and everyday life in relation to ancient society. Equivalent to Classical Studies A418; students may receive credit for only one of these courses.

HER-H 420 The Artist in the Renaissance (3 cr.) This course examines the changing role of artists in Renaissance cities, from anonymous craftsmen in the late Middle Ages to celebrity personalities in the sixteenth century. Workshop structure, relationships with patrons, and competition between artists provide contexts for interpreting Renaissance art and exploring questions central to Renaissance art history.

HER-H 431 The Gothic World (3 cr.) Seminar in the Gothic art of the high and late Middle Ages. Focus will be on the cultural, theoretical, and intellectual context of art and architecture of the twelfth through fifteenth centuries.

HER-H 460 Visual Culture (3 cr.) The study of visual culture investigates how we see and make sense of images, emphasizing vision's social dimensions. Students will use an interdisciplinary lens to look at diverse visual events, such as advertising, architecture, painting, photography, public art, maps, craft objects, exhibitions, and graphics.

HER-H 495 Problems in Art History (1-3 cr.) Directed study in art history for independent research and/or special external programs. May be repeated three times for a maximum of 9 credit hours. Research proposal and permission of Instructor required.

HER-H 497 Educational Opportunities Abroad (1-6 cr.) A variable-credit course designed to allow credit for exceptional opportunities in art history study and travel outside the United States.

HER-H 531 The Artist in the Renaissance (3 cr.) Graduate course examining the changing role of artists in Renaissance cities, from anonymous craftsmen in the late Middle Ages to celebrity personalities in the sixteenth century. Workshop structure, relationships with patrons, and competition between artists provide contexts for interpreting Renaissance art and exploring questions central to Renaissance art history.

HER-H 560 Visual Culture: A Visual Studies Approach (3 cr.) P: graduate student or consent of instructor. An introduction to visual studies, an interdisciplinary approach to the study of visual culture that emphasizes the social ramifications of the visual.

HER-H 590 Topics in Art History (3 cr.) Special topics in the history and study of the visual arts and visual culture. May be repeated with a different topic for a total of 9 credit hours.

HER-H 610 Art Theory and Criticism (3 cr.) This course examines a cross-section of theories that underpin current discussions and developments in the visual arts. This course also examines the nature and goals of art criticism, including how different theories help frame the primary concerns and controversies within art criticism.

Art Therapy

HER-T 200 Introduction to Art Therapy (3 cr.) The purpose of this course is to introduce students to the profession of art therapy. Students will learn the definition of art therapy, how and where it is practiced, with whom, and why. Students will explore the interface between art and various theories of psychotherapy and will begin to understand the relationship between the creative process and the unconscious. Students will see how art therapy is used to visually communicate thoughts, feelings, emotions and inner conflicts in the effort to understand self and other. Students will be exposed to first hand experience of the creative process as both a form of visual expression and as a therapeutic tool. Didactic and experiential methods of teaching, along with field trips and guest lectures, will provide the teaching mechanisms for this course.

HER-T 501 Art Therapy Practicum (3 cr.) A supervised practicum that prepares students for the internship and advanced internship experiences. Students observe and practice counseling, group counseling, and art therapy techniques in different settings. Minimum of 100 hours, including 40 hours in direct service with clients with at least 10 hours in group settings.

HER-T 502 Counseling Theory and Practice for Art Therapists (3 cr.) This is an introductory course on counseling and psychological theory and practice involving the history of mental health care services, the role of professional counselors, the basic skills of counseling and psychotherapy (basic interviewing, assessment and counseling skills), different theoretical perspectives on counseling and psychotherapy, treatment plans, ways of engaging the client, and an overview of the professional code of ethics for the American Counseling Association, American Psychological Association, and American Art Therapy Association. The class will require personal reflection by the students on their views of counseling, themselves and the role of theory in practice. Student will also engage in role playing to practice.

HER-T 503 History Theory and Practice of Art Therapy (3 cr.) Course on the history, theory and practice of art therapy. Course includes role playing and practice in art therapy, the development of art therapy as a therapeutic practice, and an overview of relevant psychotherapeutic theories.

HER-T 504 Ethics & Legal Issues in Art Therapy (3 cr.) This course features lectures, group discussions, readings, a research paper, and examinations that provide the graduate student an in-depth knowledge of ethical and legal issues relevant to the professional practice of art therapy. The course focus includes knowledge of historical development of ethical standards, and an understanding of the application of legal principles in today's professional practice.

HER-T 505 Art Therapy with Children and Adolescents (3 cr.) Course on an understanding of children and ways that art therapy can be effective in helping children resolve issues. Course includes a study of forms of trauma often experienced by children resolve issues. Course includes a study of forms of trauma often experienced by children and issues children face, including disorders, illness, behavioral problems, divorce, domestic violence, loss, and self-esteem. Ways to assist children in expressing and managing emotions is covered.

HER-T 507 Assessment & Evaluation in Art Therapy (3 cr.) This course features lectures, group discussions, readings, a research paper, and examinations that serve as an in-depth introduction to the processes of assessment and evaluation relevant to the professional practice of art therapy. The course focus includes a study of art therapy assessment, psychopathology, general principles of etiology, diagnosis, treatment, and prevention of mental and emotional disorders and dysfunctional behavior, and general principles, and practices of the promotion of optimal mental health.

HER-T 508 Cultural & Social Diversity in Counseling and Art Therapy (3 cr.) This course features lectures, group discussions, readings, a journal, examinations, and a final reflection paper and art project that serve as an in-depth introduction to cultural and social diversity, and to gain understanding of the historical, theoretical, and practical issues surrounding the professional practice of counseling and art therapy with individuals with diverse backgrounds and cultural perspectives.

HER-T 509 Advanced Art Therapy Practice--Specialized Populations (3 cr.) Designed as a progressive course to meet twenty-first century healthcare trends, this specialized training course will address three clinical populations in five (5) classes per unit: Medical, Addictions and Older Adults. Each unit will follow a similar outline of learning tailored to the clinical population. This will include a brief history of counseling and psychotherapy theory and treatment implications for each population and how art therapists tailor interventions to meet the specialized needs within the general framework of art therapy theory. Didactic instruction will include when and how to refer clients and families to support services, professional boundaries, issues of transference and countertransference, treatment planning and the development of goals.

HER-T 511 Art Therapy with Families and Adults (3 cr.) This course will explore the complicated and dynamic issues involved in family groups. There will be a brief look into families as a cultural institution as well as cultural differences. The course will explore of the many issues that arise in families and the best practices in art therapy that can be used to help. Students will also delve into the ways parents and children interact including discipline, care giving, behavioral problems, illness, communication, expectations, differentiation, and developmental transitions.

HER-T 600 Art Therapy Internship I (3 cr.) This course requires a minimum of 450 hours of supervised experience in an internship, to gain working experience in the professional practice of art therapy and counseling. Students will practice and enhance their basic counseling skills, art therapy skills, and ability to complete paperwork. This is a hands-on experience in which students make the transition to working professional. Students are required to provide appropriate documentation of their performance and attendance in all scheduled activities.

HER-T 601 Art Therapy Advanced Internship (3 cr.) This course requires a minimum of 450 hours of supervised experience in an internship, to gain working experience in the professional practice of art therapy. Students will practice and enhance their basic counseling skills, art therapy skills, and ability to complete paperwork. This is a hands-on experience in which students make the transition to working professional. There is an expectation in this course that students will be taking on an increasing amount of responsibility for the care of clients under the guidance of the site supervisor. Students are required to provide appropriate documentation of their performance and attendance in all scheduled activities.

HER-T 602 Professional Issues Capstone (3 cr.) This course features lectures, group discussions, readings, a research paper or project, and examinations that provide the graduate student an in-depth knowledge of the professional practice of art therapy and counseling. The course focus includes standards of practice in art therapy, professional preparation for credentialing, an examination of the function and methodology of research in art therapy, an understanding of the roles of mental health

counseling in context of the larger field of mental health services, ways in which a network of services is utilized to help clients and the differences in inpatient, outpatient, individual and group practice settings. Exploration on how to move forward into a practice as a professional will also be discussed. A research thesis or culminating project will be required.

Ceramics

HER-C 204 Beginning Ceramics, Hand Building (3 cr.) P: Foundation Program. Beginning studio introduction to handbuilding, glazing, and firing of clay as an expressive studio medium applicable to contemporary and sculptural concepts.

HER-C 206 Beginning Ceramics, Wheel Throwing (3 cr.) P: Foundation Program. Focus on wheel throwing as an expressive tool within an overall ceramic experience. Clay vessels will be utilized to develop an understanding of glazing and firing techniques. Traditional forms will be used to expand sensitivity to material, history, and wheel throwing techniques.

HER-C 208 Intermediate Wheel Throwing (3 cr.) P: C206. Designed for non-art majors who wish to pursue wheel throwing. Emphasis is on developing skill through an exploration of more complex forms and investigative advanced embellishment and firing techniques.

HER-C 304 Ceramics III (3 cr.) P: C204-C206 Advanced workshop. Focus on students' conceptual development and self-motivated projects. Heavy concentration on material testing and exploration of firing techniques. Emphasis will be placed on the merging of technique and concept to ready students for entry into a career as a ceramic artist or educator.

HER-C 305 Ceramics IV (3 cr.) P: C204-C206 Advanced workshop. Focus on students' conceptual development and self-motivated projects. Heavy concentration on material testing and exploration of firing techniques. Emphasis will be placed on the merging of technique and concept to ready students for entry into a career as a ceramic artist or educator.

HER-C 306 Indpt Research in Ceramics (3 cr.) P: HER-C 204, HER-C 206, and HER-C 304 This class is designed for students who have completed C204, C206, and C304 and wish to ursue specific independent research projects. students will work closely with the instructor to accomplish their specific goals. Students must present the independent project to the instructor and receive permission from the instructor prior to signing up for the class.

HER-C 307 Clay and Glaze Materials (3 cr.) P: C204, C206, and C304. This course is an investigation into the chemistry that makes up clays and glazes. Students develop an understanding of these materials and their interactions by systematically testing a variety of glazes and clay bodies that are used by contemporary ceramic studio artists. Topics include low and high fire glazes, clay bodies, specialty glazes, and clays.

HER-C 308 Intermediate Wheel Throwing (3 cr.) P: C204 and C206. Designed for art majors who wish to pursue wheel throwing as a main focus of expression. Assignments will focus on developing wheel throwing skills through an investigation of contemporary vessel makers as well as development of a personal style in vessel work.

HER-C 350 Ceramic Workshop (3 cr.) P: C204 and C206. This course is designed to offer specific focused topics of interest in the ceramic arts. Such topics may include kiln building, slip casting, mold making, making and using decalomania, and raku firing, to name a few.

HER-C 400 Individual Research in Ceramics (1-6 cr.) P: C305. This course is designed to investigate specific advanced ceramic techniques as used by contemporary artists. Areas of study will be offered on an alternate basis. Subject matter to be covered will include kiln construction and glaze calculations.

HER-C 405 Individual Research in Ceramics (1-6 cr.) P: C305 and C307. Study devoted to the student's independent research in ceramics. Emphasis placed on advanced techniques and the development of concepts and philosophies pertinent to the student's direction.

HER-C 510 Studio Emphasis: Materials and Methods in Ceramics (6 cr.) P: MFA student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in ceramics and related objects.

HER-C 511 3-D Design (3 cr.) This class is designed for graduate students who have little or no previous experience with the use of ceramics as an art material. The class will cover specific subjects covering the foundations of ceramic materials and processes.

HER-C 520 Study of the integration of studio practices in ceramics within the context of professional engagement (6 cr.)

HER-C 520 Study of advanced concepts and practices in designing and making contemporary ceramic sculpture (6 cr.)

Drawing

HER-D 201 Drawing III (3 cr.) P: Foundation Program. Investigation of nature and the human figure through drawing. Emphasis on structure, line, gesture, and movement.

HER-D 202 Drawing IV (3 cr.) P: Foundation Program. Investigation of nature and the human figure through drawing. Emphasis on structure, line, gesture, and movement.

HER-D 211 Communicative Drawing (3 cr.) P: Foundation Program. Emphasis is placed on communicating verbal concepts in a visual manner and developing drawing techniques.

HER-D 230 Figure Drawing (3 cr.) Students draw in a variety of media directly from the live model.

HER-D 251 Anatomy (3 cr.) P: HER-D 101, HER-D 102 This studio class focuses on the study of human anatomy and its function in the fine arts. Course work includes lectures and study of skeletal and muscular structure of the body and is supplemented by drawings from anatomical and live models to examine the surface form of the body and its relationship to artistic anatomy. Accurate observation and recording of individual and

cooperative bone and muscle structures of the human form are emphasized.

HER-D 301 Drawing V (3 cr.) P: D201-D202. Investigation of traditional and nontraditional elements of space in drawing. Emphasis placed on conceptual development and on drawing as an exploratory process and a means of producing finished works of art.

HER-D 302 Drawing VI (3 cr.) P: D201-D202. Investigation of traditional and nontraditional elements of space in drawing. Emphasis placed on conceptual development and on drawing as an exploratory process and a means of producing finished works of art.

HER-D 401 Drawing VII (3 cr.) P: D301-D302. Concerned solely with conceptual and technical capabilities in drawing necessary to satisfy the student's individual expressive needs. A primary aim of the course is to refine and extend analytical and verbal skills by means of participation in regularly scheduled open class critiques.

HER-D 402 Drawing VIII (3 cr.) P: D301-D302. Concerned solely with conceptual and technical capabilities in drawing necessary to satisfy the student's individual expressive needs. A primary aim of the course is to refine and extend analytical and verbal skills by means of participation in regularly scheduled open class critiques.

HER-D 501 Drawing (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-D 502 Drawing (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

Foundation Program

HER-D 101 Drawing I (3 cr.) P: Admission to Herron School of Art and Design. Introduction to the basic skills of drawing and development of sound observational skills. Working from nature, manufactured objects, and the human figure, students develop their draftsmanship with an emphasis on space, proportion, and structure.

HER-D 102 Drawing II (3 cr.) P: D101. This course serves as a continuation of issues addressed in D101 with a greater emphasis on compositional aspects and spatial configurations. The human figure serves as a major point of investigation with an emphasis placed on anatomical understanding and accurate portrayals of form and proportion.

HER-F 100 Creative Process (3 cr.) P: Admission to the Herron School of Art and Design, D101, F121, and F123. Students experience multiple art concepts and processes working with two faculty members in half-semester workshops. The course provides reinforcement of design concepts with a focus on problem solving, ideation, and the stages of creative process. Equal emphasis will be given to both two-dimensional and three-dimensional experience.

HER-F 121 Two-Dimensional Design (3 cr.) P: Admission to the Herron School of Art and Design. Comprehensive study of design elements and principles through the investigation of two-dimensional space. Students explore basic two-dimensional concepts such as figure /ground, grouping principles, grid, symmetry, rhythm, and pattern. As a result of this course, students develop a visual language for analyzing, organizing, and communicating two-dimensional principles.

HER-F 122 Color Concepts (3 cr.) P: Admission to the Herron School of Art and Design, F121 and F123. Introduction to basic design and color theory through the manipulation of imagery in two-dimensional and three-dimensional media. Equal emphasis on thought processes and manual skills.

HER-F 123 Three-Dimensional Design (3 cr.) P: Admission to the Herron School of Art and Design. This course introduces basic concepts of three-dimensional art and design through a series of assignments dealing with the organization of space and form using a variety of materials, processes, and tools. Students investigate formal, functional, and conceptual issues while developing effective material choices, construction methods, and safe studio working habits.

HER-X 101 Foundation Resources Workshop (1 cr.) This course serves to introduce students to the resources at Herron, IUPUI, and Indianapolis. This seminar, while teaching students how to develop study skills, time management, and utilization of resources needed for success in the university setting, will include content specific to Herron's curricular mission.

HER-X 102 Foundation Capstone (1 cr.) P: Admission to the Herron School of Art and Design and X101. This course serves to prepare students for sophomore advancement review, promote early career planning, develop skills in documenting and presenting their work, and aid in the selection of major studio emphasis.

Furniture Design

HER-Q 241 Beginning Furniture Design I (3 cr.) P: Foundation Program or permission of instructor. Beginning Furniture Design concentrates on the concept of art furniture through the design and building of functional objects. Furniture design focuses on both historical reference and contemporary theory. Works created in the courses range from utilitarian to non-utilitarian furniture forms. Students are introduced to wood as a material, its preparation, and furniture construction, including basic joinery, forming, shaping, and finishing techniques. Students learn to start from a working drawing, build a model, and construct a finished piece. Beginning projects generally focus on table and bench forms.

HER-Q 242 Beginning Furniture Design II (3 cr.) P: Foundation Program or permission of instructor. Beginning Furniture Design concentrates on the concept of art furniture through the design and building of functional objects. Furniture design focuses on both historical reference and contemporary theory. Works created in the courses range from utilitarian to non-utilitarian furniture forms. Students are introduced to wood as a material, its preparation, and furniture construction, including basic joinery, forming, shaping, and finishing techniques. Students learn to start from a working drawing, build a model, and construct a finished piece. Beginning projects generally focus on table and bench forms.

HER-Q 341 Intermediate Furniture Design III (3 cr.) P: Q241 and Q242. Intermediate Furniture Design concentrates on furniture as an art form as well as applications for everyday use. Furniture is defined as a

medium in how its formal concerns address conceptual motives. Students are required to undertake an in-depth investigation of furniture, its historical roots as well as contemporary individual artist-makers. Students learn advanced joinery and carcass construction with door and drawer assemblies. Alternative materials and experimentation are encouraged.

HER-Q 342 Intermediate Furniture Design IV (3 cr.) P: Q241 and Q242. Intermediate Furniture Design concentrates on furniture as an art form as well as applications for everyday use. Furniture is defined as a medium in how its formal concerns address conceptual motives. Students are required to undertake an in-depth investigation of furniture, its historical roots as well as contemporary individual artist-makers. Students learn advanced joinery and carcass construction with door and drawer assemblies. Alternative materials and experimentation are encouraged.

HER-Q 441 Advanced Furniture Design V (3 cr.) P: Q341 and Q342. Advanced Furniture Design offers the student an opportunity to define himself/herself as an artist in the field. Individual design aesthetic is emphasized. Complex furniture forms and advanced techniques are applied to each student's expertise.

HER-Q 442 Advanced Furniture Design VI (3 cr.) P: Q341 and Q342. Advanced Furniture Design offers the student an opportunity to define himself/herself as an artist in the field. Individual design aesthetic is emphasized. Complex furniture forms and advanced techniques are applied to each student's expertise.

HER-Q 510 Studio Emphasis I: Materials and Methods in Furniture Design (6 cr.) P: M.F.A. student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in the designing and making of furniture and related objects.

HER-Q 520 Studio Emphasis II: Theory into Practice in Furniture Design (3 cr.) P: Studio Emphasis I: Furniture Design. Study of designing and making studio furniture within the context of professional practice.

HER-Q 560 Studio Emphasis III: Advanced Practices in Furniture Design (3 cr.) P: Studio Emphasis II: Furniture Design. Study of advanced concepts and practices in designing and making furniture and related objects.

Graduate Course Descriptions

Art Education

HER-Z 510 Art for Teachers of Exceptional Children (3 cr.) A course concerned with planning and presentation of art lessons and programs for children with a variety of special needs. The program involves presentations by guest professionals and field experiences. Emphasis is on public school applications.

HER-Z 511 Nonstudio Approaches to Art Instruction (3 cr.) Exploration of critical approaches to newer media, including film, video, and television, directed toward an art context. Emphasis on the development of critical skills and approaches to new media in the classroom.

HER-Z 512 Improving Studio Instruction in Art (3 cr.) Designed to examine major directions in art and the points of view of professional artists in order to develop new approaches to elementary and secondary art instruction.

HER-Z 513 Special Topics in Art Education (1-3 cr.) A variable topic course designed to cover current issues in art curriculum and assessment. Designed for the K-12 art specialist.

Art History

HER-H 560 Visual Culture: A Visual Studies Approach (3 cr.) P: graduate student or consent of instructor. An introduction to visual studies, an interdisciplinary approach to the study of visual culture that emphasizes the social ramifications of the visual.

HER-H 531 The Artist in the Renaissance (3 cr.) P: graduate student or consent of instructor. Graduate course examining the changing role of artists in Renaissance cities, from anonymous craftsmen in the late Middle Ages to celebrity personalities in the sixteenth century. Workshop structure, relationships with patrons, and competition between artists provide contexts for interpreting Renaissance art and exploring questions central to Renaissance art history.

HER-H 590 Topics in Art History (3 cr.) Special topics in the history and study of the visual arts and visual culture. May be repeated with a different topic for a total of 9 credit hours.

HER-H 610 Art Theory and Criticism (3 cr.) This course examines a cross-section of theories that underpin current discussions and developments in the visual arts. This course also examines the nature and goals of art criticism, including how different theories help frame the primary concerns and controversies within art criticism.

Art Therapy

HER-T 200 Introduction to Art Therapy (3 cr.) The purpose of this course is to introduce students to the profession of art therapy. Students will learn the definition of art therapy, how and where it is practiced, with whom, and why. Students will explore the interface between art and various theories of psychotherapy and will begin to understand the relationship between the creative process and the unconscious. Students will see how art therapy is used to visually communicate thoughts, feelings, emotions and inner conflicts in the effort to understand self and other. Students will be exposed to first hand experience of the creative process as both a form of visual expression and as a therapeutic tool. Didactic and experiential methods of teaching, along with field trips and guest lectures, will provide the teaching mechanisms for this course.

HER-T 501 Art Therapy Practicum (3 cr.) A supervised practicum that prepares students for the internship and advanced internship experiences. Students observe and practice counseling, group counseling, and art therapy techniques in different settings. Minimum of 100 hours, including 40 hours in direct service with clients with at least 10 hours in group settings.

HER-T 502 Counseling Theory and Practice for Art Therapists (3 cr.) This is an introductory course on counseling and psychological theory and practice involving the history of mental health care services, the role of professional counselors, the basic skills of counseling and psychotherapy (basic interviewing, assessment and counseling skills), different theoretical perspectives on counseling and psychotherapy, treatment plans, ways of engaging the client, and an overview of the professional

code of ethics for the American Counseling Association, American Psychological Association, and American Art Therapy Association. The class will require personal reflection by the students on their views of counseling, themselves and the role of theory in practice. Student will also engage in role playing to practice.

HER-T 503 History Theory and Practice of Art Therapy (3 cr.) Course on the history, theory and practice of art therapy. Course includes role playing and practice in art therapy, the development of art therapy as a therapeutic practice, and an overview of relevant psychotherapeutic theories.

HER-T 504 Ethics & Legal Issues in Art Therapy (3 cr.) This course features lectures, group discussions, readings, a research paper, and examinations that provide the graduate student an in-depth knowledge of ethical and legal issues relevant to the professional practice of art therapy. The course focus includes knowledge of historical development of ethical standards, and an understanding of the application of legal principles in today's professional practice.

HER-T 505 Art Therapy with Children and Adolescents (3 cr.) Course on an understanding of children and ways that art therapy can be effective in helping children resolve issues. Course includes a study of forms of trauma often experienced by children resolve issues. Course includes a study of forms of trauma often experienced by children and issues children face, including disorders, illness, behavioral problems, divorce, domestic violence, loss, and self-esteem. Ways to assist children in expressing and managing emotions is covered.

HER-T 507 Assessment & Evaluation in Art Therapy (3 cr.) This course features lectures, group discussions, readings, a research paper, and examinations that serve as an in-depth introduction to the processes of assessment and evaluation relevant to the professional practice of art therapy. The course focus includes a study of art therapy assessment, psychopathology, general principles of etiology, diagnosis, treatment, and prevention of mental and emotional disorders and dysfunctional behavior, and general principles, and practices of the promotion of optimal mental health.

HER-T 508 Cultural & Social Diversity in Counseling and Art Therapy (3 cr.) This course features lectures, group discussions, readings, a journal, examinations, and a final reflection paper and art project that serve as an in-depth introduction to cultural and social diversity, and to gain understanding of the historical, theoretical, and practical issues surrounding the professional practice of counseling and art therapy with individuals with diverse backgrounds and cultural perspectives.

HER-T 509 Advanced Art Therapy Practice--Specialized Populations (3 cr.) Designed as a progressive course to meet twenty-first century healthcare trends, this specialized training course will address three clinical populations in five (5) classes per unit: Medical, Addictions and Older Adults. Each unit will follow a similar outline of learning tailored to the clinical population. This will include a brief history of counseling and psychotherapy theory and treatment implications for each population and how art therapists tailor interventions to meet the specialized needs within the general framework of art therapy theory. Didactic instruction will include when and how to refer clients and families to support services, professional boundaries, issues of transference and countertransference, treatment planning and the development of goals.

HER-T 511 Art Therapy with Families and Adults (3 cr.) This course will explore the complicated and dynamic issues involved in family groups. There will be a brief look into families as a cultural institution as well as cultural differences. The course will explore of the many issues that arise in families and the best practices in art therapy that can be used to help. Students will also delve into the ways parents and children interact including discipline, care giving, behavioral problems, illness, communication, expectations, differentiation, and developmental transitions.

HER-T 600 Art Therapy Internship I (3 cr.) This course requires a minimum of 450 hours of supervised experience in an internship, to gain working experience in the professional practice of art therapy and counseling. Students will practice and enhance their basic counseling skills, art therapy skills, and ability to complete paperwork. This is a hands-on experience in which students make the transition to working professional. Students are required to provide appropriate documentation of their performance and attendance in all scheduled activities.

HER-T 601 Art Therapy Advanced Internship (3 cr.) This course requires a minimum of 450 hours of supervised experience in an internship, to gain working experience in the professional practice of art therapy. Students will practice and enhance their basic counseling skills, art therapy skills, and ability to complete paperwork. This is a hands-on experience in which students make the transition to working professional. There is an expectation in this course that students will be taking on an increasing amount of responsibility for the care of clients under the guidance of the site supervisor. Students are required to provide appropriate documentation of their performance and attendance in all scheduled activities.

HER-T 602 Professional Issues Capstone (3 cr.) This course features lectures, group discussions, readings, a research paper or project, and examinations that provide the graduate student an in-depth knowledge of the professional practice of art therapy and counseling. The course focus includes standards of practice in art therapy, professional preparation for credentialing, an examination of the function and methodology of research in art therapy, an understanding of the roles of mental health counseling in context of the larger field of mental health services, ways in which a network of services is utilized to help clients and the differences in inpatient, outpatient, individual and group practice settings. Exploration on how to move forward into a practice as a professional will also be discussed. A research thesis or culminating project will be required.

Ceramics

HER-C 501 Ceramics (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-C 502 Ceramics (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor

Drawing

HER-D 501 Drawing (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-D 502 Drawing (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

Furniture Design

HER-Q 501 Furniture Design (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-Q 502 Furniture Design (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-Q 510 Studio Emphasis I: Materials and Methods in Furniture Design (6 cr.) P: M.F.A. student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in the designing and making of furniture and related objects.

HER-Q 520 Studio Emphasis II: Theory into Practice in Furniture Design (6 cr.) P: Studio Emphasis I: Furniture Design. Study of designing and making studio furniture within the context of professional practice.

HER-Q 560 Studio Emphasis III: Advanced Practices in Furniture Design (6 cr.) P: Studio Emphasis II: Furniture Design. Study of advanced concepts and practices in designing and making furniture and related objects.

Interdisciplinary, Capstone, and Research Courses

HER-J 520 Project Management/Public Art (3 cr.) P: Graduate student or consent of instructor. Examination of trends in public art in the 20th and 21st centuries. Course explores challenges, opportunities, and procedures for artists working in the public sphere.

HER-J 530 University Visual Art Teaching Practicum (3 cr.) P: Graduate student with a B.F.A. in studio art. Introduction to techniques, topics, and goals of teaching studio art courses at the undergraduate level.

HER-R 511 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 512 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 529 Interdisciplinary Collaboration in the Visual Arts (3 cr.) P: M.F.A. student or consent of instructor. A studio-based course designed to foster the cross-fertilization of ideas across media emphasis areas.

HER-R 539 Urban Art Context (3 cr.) P: HER R529 or consent of instructor. Introduction to the challenges, concepts, and techniques for public art and art projects designed for civic engagement.

HER-R 599 Studio Emphasis IV: Thesis Exhibit/Project (6 cr.) P: Studio Emphasis III and in final semester towards M.F.A. Completion and public presentation of a final body of work, showing professional compet-ence, documented by a written thesis statement.

Painting

HER-P 501 Painting (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-P 502 Painting (3 pr 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-P 510 Studio Emphasis I: Painting and Drawing (6 cr.) P: MFA student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in painting, drawing and related objects.

Photography

HER-K 501 Photography (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-K 502 Photography (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-K 510 Studio I: Photography and Intermedia (6 cr.) P: MFA student or consent of instructor. In Studio Emphasis 1: Photography and Intermedia, students will develop their conceptual, historical, and critical knowledge to form the basis for their personal studio research. Students will begin to build their own community through this class via group workshops, critiques, and seminars. Students will investigate and extend the framework of photography and intermedia. Intermedia incorporates theory and practice through integration of new technologies with non-static, time-based, sound, digital technologies, installation, through collaboration with areas of sculpture, ceramics, printmaking, painting, furniture and visual communications. In this program students will begin to examine and integrate connections between creative practice, cultural, scientific, critical and historical discourses as they relate and pertain to other artists, academic departments and community organizations. Throughout this process students will be exposed to a wide array of theoretical and reflective practices. Over the course of the semester the student will develop a graduate-level work ethic and lay the groundwork for intense, research-driven studio practice. Rationale: In the first semester of graduate study the student should establish a highly individual and concentrated studio practice based on adaptability, experimentation, and research. This course is designed to foster individual interests while demanding a high level of intellectual and critical development. Once an intense and flexible graduate practice is developed, the student will be better prepared to face the challenges inherent in the career of a professional artist.

HER-K 520 Studio II: Photography & Intermedia (3 cr.) This class will focus on the reasons, methods, and resources for artistic engagement that liberates art from

the studio and gallery. Studio Emphasis II: Photography and Intermedia continues the studio practice and seminar conversations begun in the first semester's Studio Emphasis I: Photography and Intermedia. Intermedia incorporates theory and practice through integration of new technologies with non-static, time-based, sound, digital technologies, installation, through collaboration with areas of sculpture, ceramics, printmaking, painting, furniture and visual communications. In this course students will continue to examine and integrate connections between creative practice, cultural, scientific, critical and historical discourses as they relate and pertain to other artists, academic departments and community organizations. Professional practices, such as, writing proposals, creation of curriculum vitae, and development grants will be discussed. Rationale: Removing the art making and exhibition process from the traditional studio and gallery setting is a large part of today's contemporary art world. While studio and gallery settings are still perfectly valid, we want to encourage students to take steps to engage outside these arenas. This course continues the individual research begun in K510 while extending the reach into alterative venues and modes of working. Developing skills necessary to be a professional artist is integral to the course.

HER-K 530 Photography and Intermedia Rotating Topics (3 cr.) In Photography and Intermedia Seminar students will develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics. The topics given in this proposal are the core of topics that current Herron faculty members feel are important for photography and intermedia students to encounter, but this list is not all inclusive and the proposal is for the class as an idea not exclusively these topics. Topics will be added and deleted as their relevancy to current students' need and faculty members' abilities change. Topics: Performance Image and Text Critical Theory Documentary Photography Installation Art Professional Photography Practices Sound Art Advanced Digital Art Rationale: In today's art world, many artists work with various media and many theoretical frameworks. This model seminar allows our faculty to accommodate this variety by focusing solely on one topic for an eight week period.

HER-K 560 Studio III: Photography & Intermedia (3 cr.) This course is designed to build on the experiences and experiments of the previous two semesters, and to allow the student an opportunity to further develop an individual and effective body of work. Students should have developed an original and intensive practice allowing for constant change and exploration, while also providing a useful framework within which to create intermedia art. Over the course of the semester the student will be working independently to develop a professional portfolio of work. Rationale: In order to complete the photography and intermedia program the student must achieve a high level of independence and self-motivation. The body of work created at this level should evidence awareness of contemporary theory as well as a highly individual set of interests, conceptual and formal concerns.

Printmaking

HER-G 501 Printmaking (3 or 6 cr.) P: Graduate-level printmaking. Visual research on a highly individual level with personal criticism by the instructor.

HER-G 502 Printmaking (3 or 6 cr.) P: Graduate-level printmaking. Visual research on a highly individual level with personal criticism by the instructor.

HER-G 510 Studio Emphasis I: Materials and Methods in Printmaking (6 cr.) P: M.F.A. student or consent of instructor. Introductory graduate course in the exploration of traditional and contemporary materials, methodologies, and concepts used in printmaking.

HER-G 520 Studio Emphasis II: Theory into Practice in Printmaking (6 cr.) P: Studio Emphasis I: Printmaking. Study of the integration of studio practices in printmaking within the context of professional engagement.

HER-G 560 Studio Emphasis III: Advanced Practices in Printmaking (6 cr.) P: Studio Emphasis II: Printmaking. Advanced exploration of printmaking, including studio practices and professional development.

Sculpture

HER-S 501 Sculpture (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-S 502 Sculpture (3 or 6 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-S 510 Studio Emphasis I: Materials and Methods in Sculpture (6 cr.) P: M.F.A. student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in the designing and making of contemporary sculpture.

HER-S 520 Studio Emphasis II: Theory into Practice in Sculpture (6 cr.) P: Studio Emphasis I: Sculpture. Advanced exploration of sculpture, including studio practices, professional development, and concerns about site and context.

HER-S 560 Studio Emphasis III: Advanced Practices in Sculpture (6 cr.) P: Studio Emphasis II: Sculpture. Study of advanced concepts and practices in designing and making contemporary sculpture.

Illustration

HER-A 311 Illustration I (3 cr.) P: D201or D211. Students receive a broad exposure to basic techniques of pictorial communication common to all phases of illustration.

HER-A 312 Illustration II (3 cr.) P: D201or D211. Students receive a broad exposure to basic techniques of pictorial communication common to all phases of illustration.

HER-A 411 Advanced Illustration (3 cr.) P: A312. Students are exposed to contemporary professional illustration. Students may participate in local and national competitions.

HER-A 412 Advanced Illustration (3 cr.) P: A312. Students are exposed to contemporary professional illustration. Students may participate in local and national competitions.

HER-A 414 Children's Book Illustration (3 cr.) Working with a preexisting children’s text, students will develop a layout and mock-up or “dummy” of a children’s picture book. Each student will then produce three finished

illustrations for interior pages and/or the cover. Issues of page composition, sequential imaging, visual flow, and use of techniques will be covered.

HER-A 415 Independent Study in Illustration (3 cr.) P: A311 and A312. Students will develop individualized projects that will explore a specific aspect of illustration or illustrations that are theoretically linked throughout the semester. All students will be responsible for submitting a written proposal which will outline the content goals and timelines for their projects.

HER-D 211 Communicative Drawing (3 cr.) P: Foundation Program. Emphasis is placed on communicating verbal concepts in a visual manner and developing drawing techniques.

Painting

HER-P 200 Painting (Rotating Topics) (3 cr.) This course will allow Painting students to develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics.

HER-P 201 Painting I (3 cr.) P: Foundation Program. Investigation of the figure and landscape in painting. Emphasis on composition, content, and the development of a working knowledge of painting processes.

HER-P 202 Painting II (3 cr.) P: Foundation Program. Investigation of the figure and landscape in painting. Emphasis on composition, content, and the development of a working knowledge of painting processes.

HER-P 205 Alternative Painting Methods (3 cr.) Includes the study of features and basic construction of the head. Exploration of various media. Emphasis on rendering flesh tones, form, and color, with respect to the model.

HER-P 209 Alternative Painting Methods (1-3 cr.) Introduction of materials, techniques and use of nonstandard painting media and methods. Course will focus on one or more specified materials or approaches. Students will research philosophy and history and explore methods to integrate the process into contemporary practices. Demonstrations, lectures,and critiques support studio assignments and instruction.

HER-P 210 Portrait Painting (3 cr.) Includes the study of features and basic construction of the head. Exploration of various media. Emphasis on rendering flesh tones, form, and colors with respect to the model.

HER-P 220 Watercolor Painting (3 cr.) Investigation of watercolor processes and techniques. Emphasis on individual creative objectives. Very intense study that will require exploration of watercolor to its fullest potential.

HER-P 222 Advanced Watercolor Painting (3 cr.) P: P220 This is a continuation of P220 watercolor. Students will work independently and be responsible for further investigation of concepts and ideas.

HER-P 300 Painting (Rotating Topics) (3 cr.) This course will allow Painting students to develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics.

HER-P 301 Painting III (3 cr.) P: D201-D202, P201-P202. Exploration of traditional and contemporary concepts in painting with emphasis on relationships between form and content.

HER-P 302 Painting IV (3 cr.) P: D201-D202, P201-P202. Exploration of traditional and contemporary concepts in painting with emphasis on relationships between form and content.

HER-P 303 Concepts in Figuration I (3 cr.) This class will explore the discipline of figure and figurative paint in both traditional and conceptual approaches. Emphasis will be placed on sound painting techniques, composition, drawing, color, and concept.

HER-P 304 Concepts in Figuration II (3 cr.) This class will explore the discipline of figure and figurative paint in both traditional and conceptual approaches. Emphasis will be placed on sound painting techniques, composition, drawing, color, and concept.

HER-P 311 Individual Research in Painting (3 cr.) This course will allow Painting students to develop their conceptual, technical, historical, and critical knowledge around an individual set of problems established by the instructor and the student. This course of study will parallel the traditional goals established in the 16 week semester, but will allow the instructor the opportunity to work with a student in an individual specialized approach.

HER-P 400 Painting (Rotating Topics) (3 cr.) This course will allow Painting students to develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics.

HER-P 401 Painting V (3 or 6 cr.) P: P301-P302. Emphasis on personal solutions to form and content in painting. Classroom format features scheduled criticisms and seminars. Special counseling in areas of graduate study, fellowships, assistantships, grants, exhibitions, and professional potential following graduation.

HER-P 402 Painting VI (3 or 6 cr.) P: P301-P302. Emphasis on personal solutions to form and content in painting. Classroom format features scheduled criticisms and seminars. Special counseling in areas of graduate study, fellowships, assistantships, grants, exhibitions, and professional potential following graduation.

HER-P 403 Individual Research in Painting I (3 cr.) Offered in conjunction with P401-P402 only. Research devoted to the student's own projects in painting.

HER-P 404 Individual Research in Painting II (3 cr.) Offered in conjunction with P401-P402 only. Research devoted to the student's own projects in painting.

HER-P 405 Digital Processes for Fine Art I (3 cr.) P: Junior or senior standing in a fine art major or HER A261. Concepts and skills common to several computer graphics software programs will be covered with an emphasis on the use of digital imagery to support the work of students who are doing more traditional studio disciplines. Photography

HER-P 406 Digital Processes for Fine Art II (3 cr.) P: Junior or senior standing in a fine art major or HER A261. Concepts and skills common to several computer graphics software programs will be covered with an emphasis on the use of digital imagery to support the work of students who are doing more traditional studio disciplines.

HER-P 501 Painting (3 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-P 502 Painting (3 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-P 510 Studio Emphasis I: Painting and Drawing (6 cr.) P: MFA student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in painting, drawing and related objects.

HER-P 520 Studio Emphasis II: Theory into Practice in Painting and Drawing (6 cr.) P: MFA student or consent of instructor. This graduate studio course continues the development of the students research and studio practice initiated in Studio I. Students may also engage in class/ group collaborative projects, such as site-specific works and collaborations with local community partners and other institutions. Students will be expected to continue experimentation and exploration of idea and form as they intensify their studio practice. The students? point of view in relation to other contemporary artists will be further refined, as well as the students? ability to realize their ideas and inspiration into creative works of art. While the focus in this course will be on the students? research, they will also be encouraged to seek gallery exhibitions and collaborative projects.

HER-P 560 Studio Emphasis III: Advanced Practices in Painting and Drawing (6 cr.) P: MFA student or consent of instructor. This course is designed to build on the knowledge and experience of the previous two semesters. In this course, students should demonstrate a well-developed understanding of the objectives and direction they will pursue for their thesis exhibition. Students should have developed an original, independent and intensive studio practice. Their work should show a fluent control of technical and formal issues relevant to their approach. A high level of research and experimentation will continue in consultation with their instructors and peers. The students? primary focus is now directed toward building a cohesive, personal and professional body of work.

Photography

HER-K 201 Photography 1 (3 cr.) P: Foundation Program. Introduction to black-and-white photography with an emphasis on the development of creative, personal, and photographic vision. The student must have a camera (standard 35mm or larger format) with an adjustable shutter and diaphragm. Film, paper, and film developer are supplied by the student.

HER-K 202 Photography II (3 cr.) P: Foundation Program. Introduction to black-and-white photography with an emphasis on the development of creative, personal, and photographic vision. The student must have a camera (standard 35mm or larger format) with an adjustable shutter and diaphragm. Film, paper, and film developer are supplied by the student.

HER-K 211 Introduction to Electronic Media (3 cr.) This course serves as an introduction to electronic photo-based media, including digital imaging and video. Students are introduced to both the technical and conceptual aspects of these media, specifically in relation to contemporary photography. This course will cover digital imaging technique through Adobe Photoshop as well as delve into discussions about digital artists, critical thinking, principles of the photographic language, and aesthetics that relate to and affect personal creativity and expression. No prior knowledge of the computer or video is expected.

HER-K 212 Topics in Photography (1-3 cr.) This course covers technical issues related to photography and each course will be specific to a topic. Topics include 4x5, Lighting, Final Cut Pro, Sound Techniques, and Alternative Processes with specifics changing from semester to semester. 4 credits

HER-K 300 Advanced Digital Imaging (3 cr.) P: K211 or permission of instructor. The course will cover time-based digital media techniques as well as delve into discussions about video artists and digital artists, critical thinking, language, and aesthetics as it relates to, and affects personal creativity and expression. This investigation will be accomplished through a combination of producing work, using Adobe Photoshop, Illustrator, After Effects, Premiere, and Macromedia Director; discussing the work of other photographers who work with digital imaging; and historical lectures. Prior knowledge of computer basics and Adobe Photoshop required.

HER-K 301 Photography III (3 cr.) P: K201-K202. Exploration of photography as an expressive visual medium and the relationship of photography to culture. Advanced controls over negative production and printing techniques are taught. Students learn to speak critically of their own work, as well as the work of their peers, and other artists. Alternative methods of presentation, beyond the window mat, are introduced.

HER-K 302 Photography IV (3 cr.) P: K201-K202. Exploration of photography as an expressive visual medium and the relationship of photography to culture. Advanced controls over negative production and printing techniques are taught. Students learn to speak critically of their own work, as well as the work of their peers, and other artists. Alternative methods of presentation, beyond the window mat, are introduced.

HER-K 303 Color Photography (3 cr.) P: K201-K202 or permission of the instructor. Students are introduced to a theoretical basis for color theory and the psychology of color. On a technical level, color balancing and regional color correction are stressed. In individual color darkrooms, students produce their own color-coupler prints, as large as 16 x 20 inches, from our on-site Kreonite processor. As in the department's other photo classes, there is an emphasis on developing good exposure and printing techniques. Students are encouraged to develop material conceptually, understand how work is produced, and speak about it.

HER-K 304 Advanced Color Photography (3 cr.) P: K303. Advanced color photography builds on the skills obtained in K303. Using knowledge gained in color balancing and regional color corrections, students experiment with advanced printing techniques, using materials such as Polaroid and transparency film, as well as alternative processes. Students further their study of significant historic and contemporary photographers and develop an understanding of the relationship of their work to that which has preceded theirs.

HER-K 311 Individual Research Photography (3 cr.) Junior-level course that will provide special arranged instruction within photography. May take form of a field

experience, in which case there will be close collaboration between specialized faculty member and work supervisor, who will jointly evaluate performance.

HER-K 330 Photo and Intermedia Seminar (Rotating Topics) (3 cr.) This course will allow Photo and Intermedia students to develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics.

HER-K 401 Advanced Photography (6 cr.) P: K301-K302, K303, photographic portfolio, and permission of the instructor. An advanced course taught as a seminar for graduating photo majors. During the course of the semester, the student produces two professional-quality exhibitions and a photographic portfolio. Within the context of this class, students may produce mixed media, performance, video, time-based work, as well as traditional black-and-white and color photography. Emphasis is placed on individual instruction, preparation for graduate study, and professional exhibition practice.

HER-K 402 Advanced Photography (6 cr.) P: K301-K302, K303, photographic portfolio, and permission of the instructor. An advanced course taught as a seminar for graduating photo majors. During the course of the semester, the student produces two professional-quality exhibitions and a photographic portfolio. Within the context of this class, students may produce mixed media, performance, video, time-based work, as well as traditional black-and-white and color photography. Emphasis is placed on individual instruction, preparation for graduate study, and professional exhibition practice.

HER-K 411 Individual Research in Photography (3 cr.) Senior-level course for students who have already taken K311. Will allow a student additional individualized instruction with a photography faculty member.

HER-K 412 Individual Research in Photography (3 cr.) Senior-level course for students who have already taken K311. Will allow a student additional individualized instruction with a photography faculty member.

HER-K 430 Photography and Intermedia Seminar (3 cr.) In Photography and Intermedia Seminar students will develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics. Topics can include: Performance, Image and Text, Critical Theory, Documentary Photography, Installation Art, Professional Photography Practices, Sound Art, and Advanced Digital Art.

HER-K 510 Studio I: Photography and Intermedia (6 cr.) P: MFA student or consent of instructor. In Studio Emphasis 1: Photography and Intermedia, students will develop their conceptual, historical, and critical knowledge to form the basis for their personal studio research. Students will begin to build their own community through this class via group workshops, critiques, and seminars. Students will investigate and extend the framework of photography and intermedia. Intermedia incorporates theory and practice through integration of new technologies with non-static, time-based, sound, digital technologies, installation, through collaboration with areas of sculpture, ceramics, printmaking, painting, furniture and visual communications. In this program students will begin to examine and integrate connections between creative practice, cultural, scientific, critical and historical discourses as they relate and pertain to other artists, academic departments and community organizations. Throughout this process students will be exposed to a wide array of theoretical and reflective practices. Over the course of the semester the student will develop a graduate-level work ethic and lay the groundwork for intense, research-driven studio practice. Rationale: In the first semester of graduate study the student should establish a highly individual and concentrated studio practice based on adaptability, experimentation, and research. This course is designed to foster individual interests while demanding a high level of intellectual and critical development. Once an intense and flexible graduate practice is developed, the student will be better prepared to face the challenges inherent in the career of a professional artist.

HER-K 520 Studio II: Photography & Intermedia (3 cr.) This class will focus on the reasons, methods, and resources for artistic engagement that liberates art from the studio and gallery. Studio Emphasis II: Photography and Intermedia continues the studio practice and seminar conversations begun in the first semester's Studio Emphasis I: Photography and Intermedia. Intermedia incorporates theory and practice through integration of new technologies with non-static, time-based, sound, digital technologies, installation, through collaboration with areas of sculpture, ceramics, printmaking, painting, furniture and visual communications. In this course students will continue to examine and integrate connections between creative practice, cultural, scientific, critical and historical discourses as they relate and pertain to other artists, academic departments and community organizations. Professional practices, such as, writing proposals, creation of curriculum vitae, and development grants will be discussed. Rationale: Removing the art making and exhibition process from the traditional studio and gallery setting is a large part of today's contemporary art world. While studio and gallery settings are still perfectly valid, we want to encourage students to take steps to engage outside these arenas. This course continues the individual research begun in K510 while extending the reach into alterative venues and modes of working. Developing skills necessary to be a professional artist is integral to the course.

HER-K 530 Photography and Intermedia Rotating Topics (3 cr.) In Photography and Intermedia Seminar students will develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics. The topics given in this proposal are the core of topics that current Herron faculty members feel are important for photography and intermedia students to encounter, but this list is not all inclusive and the proposal is for the class as an idea not exclusively these topics. Topics will be added and deleted as their relevancy to current students' need and faculty members' abilities change. Topics: Performance, Image and Text, Critical Theory, Documentary Photography, Installation Art, Professional Photography Practices, Sound Art, Advanced Digital Art. Rationale for the course is in today's art world, many artists work with various media and many theoretical frameworks. This model seminar allows our faculty to accommodate this variety by focusing solely on one topic for an eight week period.

HER-K 560 Studio III: Photography & Intermedia (3 cr.) This course is designed to build on the experiences and experiments of the previous two semesters, and to allow the student an opportunity to further develop an individual and effective body of work. Students should have developed an original and intensive practice allowing for constant change and exploration, while also providing a useful framework within which to create intermedia art. Over the course of the semester the student will be working independently to develop a professional portfolio of work. Rationale: In order to complete the photography and intermedia program the student must achieve a high level of independence and self-motivation. The body of work created at this level should evidence awareness of contemporary theory as well as a highly individual set of interests, conceptual and formal concerns.

Printmaking

Book Arts

HER-A 204 The Visual Book (3 cr.) Exploration of the communicative possibilities of the book format through lecture, studio projects, and field trips. Introduction to letterpress, binding, and typographic concerns.

HER-A 261 Introduction to Computer Imagery I (3 cr.) P: Foundation Program. An introductory course providing hands-on learning experiences in using the Macintosh computer and Adobe Photoshop, a pixel-based paint and image-editing software package, to create, scan, and manipulate images. A studio elective open to all Herron degree-seeking students with little or no computer experience who have completed the foundation year.

HER-A 262 INTRO COMPUTER IMAGERY II (3 cr.) P: A261 or permission of instructor. A continuing course that extends the student's abilities in using the Macintosh computer and Adobe Photoshop as a means of creative self-expression. A studio elective for all Herron degree-seeking students with the above prerequisites.

HER-A 291 Bookbinding (3 cr.) A beginning course in bookbinding dealing with traditional bookbinding and box-building techniques. Students are instructed on use of tools and materials. Projects are designed to encourage exploration and experimentation of book structure.

HER-G 206 Bookbinding (3 cr.) Introduction to traditional and non-traditional skills in bookbinding. Non-adhesive, experimental structures will be covered such as accordion, concertina, piano hinge and koptic binding as well as case binding, box making and slip cases. Goal is to develop the binding process as an expressive, visual language with attention to its tradition and contemporary presence as aesthetic medium.

HER-G 209 PAPERMAKING (3 cr.) Introduction to western principles of making paper by hand. Skills in pulp technology, sheet formation, 2D and 3D applications will be developed, such as stenciling, pulp-spraying, casting, and integration into book structures. Goal is to apply skills to expressive, conceptual frameworks with attention to historic and contemporary context of papermaking.

HER-G 310 The Printed Book (3 cr.) Integration of the print medium into the book structure. Development of prints as interactive structures and interdependence of multiple and three- and four-dimensional qualities of books. Skills in letterpress technology, type-high surface construction, bookbinding, and papermaking with attention to history and contemporary context of the book arts.

HER-G 201 Etching I (3 cr.) P: Foundation Program. Beginning course in intaglio printmaking, which introduces students to etching, engraving, and drypoint techniques. Students are instructed in basic printing processes and in use of the presses.

HER-G 202 Lithography I (3 cr.) P: Foundation Program. Beginning course in lithography dealing with basic techniques of black-and-white and color printing. Includes specific lectures in litho technology, materials, and application.

HER-G 203 Silkscreen Printing I (3 cr.) P: Foundation Program. Design and drawing for silkscreen processes, construction of equipment, and methods of making stencils (including photo stencils). Printing in black and white and in color.

HER-G 205 Monotype/Woodcut (3 cr.) P: Foundation Program. Beginning course in monotype and woodcut. Students learn traditional and experimental approaches to relief printmaking. Students are instructed on use of tools and materials and basic printing processes. Printing is in color and black and white.

HER-G 208 LETTERPRESS TYPESETTING (3 cr.) Introduction to setting and printing text by hand on the letterpress. Historic traditions such as setting lead and wooden typed and carved blocks will be combined with contemporary digital text and image appropriation through photo-polymer plates. Goal is to develop typ, print technology, and tradition into expressive visual frameworks.

HER-G 301 Etching II (3 cr.) P: D201, D202, G201, G202. An extensive introduction to color printing processes in etching is provided at the beginning of the course. Students are required to do at least a part of their work in color. Other etching techniques not covered in G201 will also be presented.

HER-G 302 Lithography II (3 cr.) P: D201-D202, G201-G202. Advanced study designed to extend students' ability to use their technical knowledge as a means of expression. Experimental printing in color and black and white.

HER-G 303 Etching III (3 cr.) P: D201, D202, G201, G202. An extensive introduction to color printing processes in etching is provided at the beginning of the course. Students are required to do at least a part of their work in color. Other etching techniques not covered in G201 will also be presented.

HER-G 304 Lithography III (3 cr.) P: D201-D202, G201-G202. Advanced study designed to extend students' ability to use their technical knowledge as a means of expression. Experimental printing in color and black and white.

HER-G 305 Photo Processes for Printmaking I (3 cr.) P: G201-G202, K201-K202, and/or permission of the instructor. C: Enrollment in a 300-, 400-, or 500-level printmaking course. Introduction to the use of light-sensitive materials in printmaking processes. Involvement with nonsilver photographic processes such as kallitype, photoetching, photo-lithography (using halftone and

contact materials), photo silkscreen, and gum printing. Color separation principles for printmaking processes.

HER-G 306 Photo Processes for Printmaking II (3 cr.) P: G201-G202, K201-K202, and/or permission of the instructor. C: Enrollment in a 300-, 400-, or 500-level printmaking course. Introduction to the use of light-sensitive materials in printmaking processes. Involvement with nonsilver photographic processes such as kallitype, photoetching, photo-lithography (using halftone and contact materials), photo silkscreen, and gum printing. Color separation principles for printmaking processes.

HER-G 307 Silkscreen Printing II (3 cr.) P: Foundation Program. The advanced process of silkscreen printing with the incorporation of digital printing processes. Printing in large format with color will be covered. Further Development of ideas and concepts in relation to the screenprinting process will be emphasized in this class.

HER-G 309 Monotype/Woodcut II (3 cr.) P: G205. Advanced study of monotype techniques, both traditional and nontraditional. Emphasis is placed on students gaining control of monotype process in order to accurately express their artistic vision. Students are encouraged to explore their individual goals and research into the various media available.

HER-G 401 Printmaking III Etching (3-6 cr.) A continuation of advanced processes in intaglio printmaking with demonstrations and experimentation with materials and techniques, including computer-assisted approaches. Individual and group critiques and discussions promote ongoing development of images and concepts.

HER-G 402 Printmaking IV Etching (3-6 cr.) A continuation of advanced processes in intaglio printmaking with demonstrations and experimentation with materials and techniques, including computer-assisted approaches. Individual and group critiques and discussions promote ongoing development of images and concepts.

HER-G 403 Individual Research in Printmaking I (3 cr.) Offered in conjunction with G401-G402 only. Research devoted to the student's own projects in printmaking.

HER-G 404 Individual Research in Printmaking II (3 cr.) Offered in conjunction with G401-G402 only. Research devoted to the student's own projects in printmaking.

HER-G 501 Printmaking (3 cr.) P: Graduate-level printmaking. Visual research on a highly individual level with personal criticism by the instructor.

HER-G 502 Printmaking (3 cr.) P: Graduate-level printmaking. Visual research on a highly individual level with personal criticism by the instructor.

HER-G 510 Studio Emphasis I: Materials and Methods in Printmaking (3 cr.) P: M.F.A. student or consent of instructor. Introductory graduate course in the exploration of traditional and contemporary materials, methodologies, and concepts used in printmaking.

HER-G 520 Studio Emphasis II: Theory into Practice in Printmaking (3 cr.) P: Studio Emphasis I: Printmaking. Study of the integration of studio practices in printmaking within the context of professional engagement.

HER-G 560 Studio Emphasis III: Advanced Practices in Printmaking (3 cr.) P: Studio Emphasis II: Printmaking. Advanced exploration of printmaking, including studio practices and professional development.

Sculpture

HER-S 201 Sculpture I (3 cr.) P: Foundation Program. Basic consideration of three-dimensional form in sculptural concept. Exposure to various related materials, techniques, and processes.

HER-S 202 Sculpture II (3 cr.) P: Foundation Program. Basic consideration of three-dimensional form in sculptural concept. Exposure to various related materials, techniques, and processes.

HER-S 220 Sculpture Seminar (Rotating Topics) (3 cr.) This course will allow Sculpture students to develop their conceptual, technical, historical, and critical knowledge on a variety of rotating topics.

HER-S 301 Sculpture III (3 and/or 6 cr.) P: D201-D202, S201-S202. Emphasis on creative expression through sculpture. Covers wood and plastic materials, metal casting, and industrial fabricating techniques.

HER-S 302 Sculpture IV (3 and/or 6 cr.) P: D201-D202, S201-S202. Emphasis on creative expression through sculpture. Covers wood and plastic materials, metal casting, and industrial fabricating techniques.

HER-S 401 Sculpture V (3 and/or 6 cr.) P: S301-S302. Concentrated, specialized study of sculpture, with emphasis on extensive research in pursuit of individual direction.

HER-S 402 Sculpture VI (3 and/or 6 cr.) P: S301-S302. Concentrated, specialized study of sculpture, with emphasis on extensive research in pursuit of individual direction.

HER-S 403 Individual Research in Sculpture I (3 cr.) Research devoted to the student's own projects in sculpture.

HER-S 404 Individual Research in Sculpture II (3 cr.) Research devoted to the student's own projects in sculpture.

HER-S 501 Sculpture (3 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-S 502 Sculpture (3 cr.) Visual research on a highly individual level with personal criticism by the instructor.

HER-S 510 Studio Emphasis I: Materials and Methods in Sculpture (3 cr.) P: M.F.A. student or consent of instructor. Introductory graduate course in the materials, methodologies, and general concepts used in the designing and making of contemporary sculpture.

HER-S 520 Studio Emphasis II: Theory into Practice in Sculpture (3 cr.) P: Studio Emphasis I: Sculpture. Advanced exploration of sculpture, including studio practices, professional development, and concerns about site and context.

HER-S 560 Studio Emphasis III: Advanced Practices in Sculpture (3 cr.) P: Studio Emphasis II: Sculpture. Study of advanced concepts and practices in designing and making contemporary sculpture.

Seminars

HER-J 400 Practical Concerns for Studio Artists (3 cr.) P: Senior standing. Course devoted to practical aspects of managing a studio and maintaining an artistic career. Subjects include artwork photography, gallery representation, legal and tax issues, and health hazards. This course is required for all fine arts students.

HER-J 410 A Critical Approach to Art: Seminar (3 cr.) P: Senior standing. A capstone seminar-style class in which students define and refine their personal artistic philosophies through analytic comparisons to various historical and contemporary ideas from the realms of philosophy, art history, critical theory, etc. In short weekly papers and open discussions, students address large-scale questions whose answers should help them develop the confidence to chart their conceptual and professional development after graduation.

Visual Communication

Elective Courses in Visual Communication

HER-A 261 Introduction to Computer Imagery I (3 cr.) P: Foundation Program. An introductory course providing hands-on learning experiences in using the Macintosh computer and Adobe Photoshop, a pixel-based paint and image-editing software package, to create, scan, and manipulate images. A studio elective open to all Herron degree-seeking students with little or no computer experience who have completed the foundation year.

HER-A 453 Professional Practice Internship (3 cr.) P: A301, A331 OR V310, V312 and A341. 3.0 GPA, and consent of instructor. Program offers students the opportunity to learn by working with professionals in a design studio or corporate design firm. Students must apply to the IUPUI Professional Practice Program and are required to interview by portfolio review.

HER-A 461 Professional Practice Studio (3 cr.) P: A301, A331 OR V310, V312 and A341. 3.0 GPA, and consent of instructor. Structured like a working design studio. Students are given an opportunity to design projects for clients of the Herron Design Center. Projects span all media from print to interactive multimedia and Web design. Managing time schedules, budget considerations, client/designer relationships, and general work ethics are covered.

Graduate Courses in Visual Communication

HER-A 453 Professional Practice Internship (3 cr.) P: A301, A331 OR V310, V312 and A341. 3.0 GPA, and consent of instructor. Program offers students the opportunity to learn by working with professionals in a design studio or corporate design firm. Students must apply to the IUPUI Professional Practice Program and are required to interview by portfolio review.

HER-A 461 Professional Practice Studio (3 cr.) P: A301, A331 OR V310, V312 and A341. 3.0 GPA, and consent of instructor. Structured like a working design studio. Students are given an opportunity to design projects for clients of the Herron Design Center. Projects span all media from print to interactive multimedia and Web design. Managing time schedules, budget considerations, client/designer relationships, and general work ethics are covered.

HER-V 501 Introduction to Design Thinking (1.5 cr.) Theorizing and evaluating design as a specialized way of thinking. Examining collaborative, cross-disciplinary innovation processes requiring skills for identifying and framing challenges and generating and optimizing solutions. Surveying essential processes and process skills to deploy design thinking for the development of creative solutions to complex systems level challenges.

HER-V 502 Introduction to Human Factors in Design (1.5 cr.) Investigating knowledge and theories to support people-driven innovation as an inclusive co-creative process. Identifying, analyzing synthesizing and evaluating many characteristics of audiences and contexts. These include physical, cognitive, cultural and social human factors as well as the economic, technological and environmental issues that inform and shape design responses.

HER-V 510 Collaborative Action Research in Design I (3 cr.) Application and integration of theory, methods and skills for designing as a cross-disciplinary collaborative process for innovation. Focusing on human-centered design research to support problem finding and fact finding phases of methodology for formulating problems/opportunities, formulating solutions and implementing solutions. Team approach to translation action research.

HER-V 511 People-Centered Design Research (1.5 cr.) Methods. Foundation in design research. Application and integration of theory, methods, and skills for initiating people-centered (and participatory) design research activities. Performing generative, evaluative, and experimental research to inform designing. Accounting for audiences and contexts including recognition of physical, cognitive, cultural, and social human factors that shape design responses.

HER-V 520 Collaborative Action Research in Design II (3 cr.) Studio. Application and integration of theory, methods and skills for designing as a cross-disciplinary collaborative process for innovation. Focusing on analytical techniques including mapping challenges to support the problem defininf phase of a methodology for formulating problems/opportunities, formulating solutions and implementing solutions. Team approach to translational action research.

HER-V 521 Methods for Design Analysis (1.5 cr.) Application and integration of theory, methods and skills for design analysis in the context of cross-disciplinary collaborative process for innovation. Identifying patterns and framing insights. Emphasis on defining problems in fuzzy situations. Surveying, performing and evaluating design analysis methodologies from multiple disciplinary perspectives. Techniques include challenge mapping and card sorting.

HER-V 530 COLLABRTV ACTN RSRCH IN DSGN 3 (1.5 cr.) Studio. Application and integration of theory, methods and skills for designing as a cross-disciplinary collaborative process for innovation. Focusing on techniques for synthesizing design research to support the idea finding phase of a methodology for formulating problems/opportunities, formulation solutions and implementing solutions. Team approach to translational action research.

HER-V 531 MMETHODS FOR DESIGN SYNTHESIS (1.5 cr.) Application and integration of theory, methods and skills for design synthesis in the context of a

cross-disciplinary collaborative process for innovation. Emphasizing divergent thinking, active deferral of judgment and ideation. Surveying, performing and evaluation design synthesis methods for exploring and conceiving plans. Techniques include lateral thinking, brainstorming and synetics.

HER-V 540 COCOLLABRTV ACTN RSRCH IN DSGN 4 (1.5 cr.) Studio. Application and integration of theory, methods and skills for designing as a cross-disciplinary collaborative process for innovation. Focusing on techniques for evaluating proposals to support the optimizing and implementing phases of a methodology for formulating problems/opportunities, formulating solutions and implementing solutions. Team approach to translational action research.

HER-V 541 METHODS FOR DESIGN EVALUATION (1.5 cr.) Application and integration of theory, methods, and skills for design evaluation, optimization and implementation in the context of a cross-disciplinary collaborative process for innovation. Emphasizing techniques to support decision-making. Surveying, performing, and comparing desgin evaluation and implementation tools including user studies, criteria grids, paired comparison analysis and action planning.

Required Courses for Visual Communication Majors

HER-A 341 Production for Design I (3 cr.) P: V220, V221, V222 Students learn to prepare graphic design work for commercial printing. Includes field trips, lectures, and discussions on various printing processes, ink and paper selection, proofing methods, and binding. In a final group project, students prepare artwork digitally to be printed on a four-color offset press.

HER-A 415 INDEPENDENT DESIGN PROBLEMS (3 cr.) P A301, A331, A341. For junior- and senior- level students, the course provides an opportunity for the student to choose and become involved in one extensive project. Students are required to write a proposal, establish goals, and obtain an instructor's approval. During the course, student are reviewed on a regular basis by faculty and peers.

HER-A 453 PROFESSIONAL PRACTICE INTRNSHP (3 cr.) P: A301, A331 OR V310, V312 and A341. 3.0 GPA, and consent of instructor. Program offers students the opportunity to learn by working with professionals in a design studio or corporate design firm. Students must apply to the IUPUI Professional Practice Program and are required to interview by portfolio review.

HER-A 453 PROFESSIONAL PRACTICE STUDIO (3 cr.) P: A301, A331 OR V310, V312 and A341. 3.0 GPA, and consent of instructor. Structured like a working design studio. Students are given an opportunity to design projects for clients of the Herron Design Center. Projects span all media from print to interactive multimedia and Web design. Managing time schedules, budget considerations, client/designer relationships, and general work ethics are covered.

HER-V 210 VC 1: Elements (3 cr.) P: Foundation Program. C: V211, V212. Studio course. Introductory skills development for visual communication majors. Exploring varied means of graphic representation utilizing formal elements and principles of visual communication design. Identifying, contrasting, and analyzing techniques for the invention of two-dimensional form with the purpose of communicating information, concepts, and emotions.

HER-V 211 Typography 1: Elements (3 cr.) P: Foundation Program. C: V210, V212. Studio course. Introductory skills development for visual communication majors. Typography as a medium of visual communication. Focusing on the formal properties of letterforms within the roman alphabet and the relationship between visual and verbal forms of language. Terminology, typographic history, and technical issues.

HER-V 212 Image 1: Elements (3 cr.) P: Foundation Program. C: V210, V211. Studio course. Introductory skill development for visual communication majors. Imagery as strategy for visual communication and symbolic representation. Focusing on the production and critical examination of visual forms and formats as indexes of representation. Basic visual semiotics. Using a learner-centered method to examine and find meaning in visual representations.

HER-V 214 A History of Visual Communication Design: 1800 to Present (3 cr.) P: ENG W131 or equivalent. Examining the cultural, social, political, economic comma and technological forces that shape visual communication design solutions. Focusing on the audiences and contexts to which designers must respond. A Western European and American perspective on the period from 1880 to the present.

HER-V 220 VC 2: Design Methodology (3 cr.) P: V210, V211, V212 and V214 C: V221 and V222. Studio course. Application and integration of knowledge and skills for visual communication majors. Defining communication problems; evaluating analytical, synthetic, intuitive approaches to problem solving; creating visual concepts to represent complex messages; and developing critical thinking. Integrating professional service for civic communication with reflection on personal values.

HER-V 221 Typography 2: Making Messages (3 cr.) P: V211. Studio course. Intermediate skills development for visual communication majors. Exploring communication potentials using text type and typographic technology. Focusing on congruency between visual and verbal hierarchies, formats for informational organizational problems, and technical details of typographic specifications and layout.

HER-V 222 Image 2: Narratives (3 cr.) P: V212 C: V220 and V221. Studio course. Intermediate skills for visual communication majors. Imagery as a strategy for visual communication and symbolic representation. Focusing on the production and critical examination of visual narratives within specific cultural contexts. Examining the roles of message makers, media, audiences, and contexts in the production and interpretation of meaning.

HER-V 310 Identifying Problems (3 cr.) P: V220, V221, V222. C: V311, V312. Studio course. Application and integration of knowledge and skills for visual communication majors. Methods of managing complex communication design needs of institutions. Directing inquiries in unstructured situations with undefined problems. Managing expressions and impressions. Integrating professional service for civic communication with reflection on personal values.

HER-V 311 Typography 3: Systems (3 cr.) P: V221 Studio course. Advanced skills development and applied research for visual communication majors. Structuring systems of typographic form according to information hierarchies, user needs, and multiple modalities of visual representation. Applications to the organization of tables, charts, displays, and publications.

HER-V 312 Image 3: Systems (3 cr.) P: V222. Studio course. Advanced skills development for visual communication majors. Focusing on production and critical examination of image making as strategy for persuasion and power within dominant and subcultural discourses. Examining the roles of message makers, media, audiences, and contexts in the manipulation and reinterpretation of meaning.

HER-V 320 VC 4: Facilitating Solutions (6 cr.) P: V310. Studio course. Application and integration of knowledge and skills for visual communication majors. Methods to facilitate solutions to unframed community issues. Exploring social roles of designers as researchers, reporters, and editors in collaborative teams. Integrating professional service for civic communication with reflection on personal values.

HER-V 401 Exhibition Planning and Design I (3 cr.) V401 prepares students to synthesize existing design practice and apply it to exhibition planning and design (EPD). This process is explored through integrated theory and practice. Students learn research methods, exhibit development, design process, and other skills through hands-on exercises. Students create design documents and contribute to the EPD process.

HER-V 402 Exhibition Planning and Design II (6 cr.) V402 builds on the basic skills and application learned in EDP I, with an emphasis on refining and developing greater interpretive capacity. Capacity is developed through exploration of relationships of visual and three-dimensional form, light, and materials. Students contextualize meaning by designing and planning relevant exhibit experiences through applied community-based projects.

HER-V 410 VC 5: Designing for Innovation (6 cr.) P: V320 or permission of instructor. Studio course with cross-disciplinary team collaboration. Application, integration, and synthesis of knowledge and skills for visual communication majors and subject matter experts. Advanced methods for designing for innovation. Discovering and shaping opportunities for socially relevant innovations. Integrating professional service for civic communication with reflection on personal values.

HER-V 420 VC 6: Capstone Portfolio (3 cr.) P: V410. Capstone studio course. Application, integration, synthesis, and evaluation of knowledge and skills for visual communication majors. Applying tools for managing complexity to develop professional career plans. Reflecting on personal, academic, preprofessional experiences. Analyzing and evaluating transferable skills. Developing portfolios that demonstrate depth, breadth, adaptiveness of knowledge, and critical thinking.

HER-V 421 Designing People-Centered Services I (3 cr.) An introduction to Service Design, exploring diverse concepts, theories and cases in service design, students will understand the difference between designing objects and designing experiences. In addition to a general understanding of service design, the course includes individual/group projects, which students identify opportunities to enhance human experience in various contexts.

HER-V 422 Designing People-Centered Services II (6 cr.) Built on the prerequisite course (HER-V 421), this course focuses on developing service offerings and customer experiences based on a systems-aware, holistic, and people-centered relationship model. Key concepts including: methods and process in co-designing, experience prototyping, design synthesis, optimization, and evaluations.

Visual Research

HER-R 201 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 202 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 311 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 312 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 411 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 412 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 511 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly

evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 512 Visual Research (Variable Title) (3 cr.) Specially arranged instruction within specialized subject area. May take form of field experience, in which case there will be close collaboration between specialized faculty member and the work supervisor, who will jointly evaluate performance. May be taken with approval of dean, who will confer with appropriate faculty.

HER-R 599 Studio Emphasis IV: Thesis Exhibit/Project (3 cr.) P: Studio Emphasis III and in final semester towards M.F.A. Completion and public presentation of a final body of work, showing professional compet-ence, documented by a written thesis statement.

IU Kelley School of Business

Welcome to the Kelley School of Business!

Message from the Associate Dean, Kelley School of Business

Thank you very much for your interest in the undergraduate program of the Kelley School of Business. The school's history can be traced to the early 1920's, when a select group of students and faculty had the foresight to undertake a program of study that has become known throughout the world as one of the finest of its kind. From both the Indianapolis and Bloomington campuses, the Kelley School of Business conducts operations across the globe.

The joint resources of Indiana University-Purdue University Indianapolis (IUPUI) and IU Bloomington allow us to offer outstanding programs in business administration to a significant percentage of Indiana's population.

IUPUI is Indiana University's capital-city campus. As Indiana's state capital and a major metropolitan area, Indianapolis is an ideal place to study business. Within city blocks of the Kelley School is the highest concentration of corporations, government offices and agencies, small businesses, health care providers, professional practices, and not-for-profit organizations in the state. The campus affords a unique and dynamic environment for learning, conducting research, teaching, and collaborating with businesses. It is difficult to imagine a richer context in which students of all ages can enhance their knowledge and leadership skills while maximizing their personal development.

The curriculum of the undergraduate program is based on a solid foundation of study in the liberal arts and sciences that develops strong interpersonal, communications, and decision-making skills. To this can be added specialized education in the fields of accounting, computer information systems, finance, management, human resource management, marketing, or supply chain management. But, in today's global environment, training in business functions alone is insufficient. For this reason, students broaden their programs of study with learning relevant to international business affairs. This requirement may be fulfilled in any of the following ways: language study, international business and economics courses, participation in an approved overseas study program, or approved liberal arts course work with an international focus. Our intent is to help prepare students for the global economic environment of the future.

The entire program is offered in a convenient, accessible way to both full and part-time students. High-tech delivery systems, joint programs with other schools at IUPUI, a challenging Honors Program, student organizations, and alumni activities make the Kelley School of Business an exciting place to be. Participation in the undergraduate program involves more than merely taking courses. We offer a comprehensive educational experience that prepares you to join the growing number of IU graduates providing leadership in business organizations around the world.

Philip L. Cochran
Associate Dean for Indianapolis Programs

Kelley's History

Today, the IU Kelley School of Business operates as one school on two campuses, Bloomington and Indianapolis. Business education at Indiana University began in Bloomington more than a century ago. The first Indiana University catalog (1830-31) included a course on political economy in the curriculum. From this first course developed a Department of Political Economy, which was later renamed the Department of Economics and Social Science. Early courses in these areas grew into what is now referred to as the "core program" of study in the Kelley School of Business.

In 1902, several business courses were introduced and listed in the university catalog. A two-year "commercial course," which required two years of precommerce work in liberal arts, was established. In 1904, the first business catalog, referred to by the commercial course number, was published. These commerce courses constituted the last years of a four-year course of study leading to a baccalaureate degree. The first two years were a precommerce requirement and included all the required courses of the liberal arts curriculum of that period.

Thus was established more than a century ago the pattern of building a program of professional education for business upon a liberal arts base-a pattern maintained throughout the years and currently emphasized in the education of U.S. business professionals. In 1920, a separate School of Commerce and Finance was organized. The school became a member of the American Assembly of Collegiate Schools of Business in 1921, and in 1933, was renamed the School of Business Administration and placed under the direct control of its own faculty. In 1938, the name of the school was shortened to the School of Business.

The Junior Division (now the University College) of the university was established in 1942 for all first-year

students. From that time until 1994, enrollment in the School of Business did not include freshmen. Graduate work in business administration, first authorized in 1936, expanded rapidly after World War II. Programs for the Master of Business Administration and Doctor of Business Administration degrees were instituted in 1947. In 1961, the designation of the area of study formerly referred to as the Graduate Division of the School of Business was changed to the Graduate School of Business. With the reorganization of the university in November 1974, the School of Business began operating at the Bloomington and Indianapolis campuses.

Although business courses were offered as early as 1916 on the Indianapolis campus, the bachelor's degree in business was not available at the Indianapolis campus until the 1969 merger with Purdue University. Beginning in 1969, divisional structure emerged in Indianapolis with an assistant chairperson at its head. In 1969-70, a complete undergraduate degree program for four major areas in business was offered, as well as three two-year certificate programs.

The terms "Graduate School of Business" and "undergraduate program" are used in this bulletin on appropriate occasions to designate the level of study concerned. When the term "Kelley School of Business" is used, reference is being made to the entire school, including both the Graduate School of Business and the undergraduate program on both campuses.

Updated 1-17-12

Overview

Mission

The Indiana University Kelley School of Business fosters learning about the creation, management, and continuing adaptation of organizations and enterprises in an ever-changing environment. This basic purpose requires that the school engage in:

- The generation and documentation of knowledge and the sharing of that knowledge with the academic community
- The organization and preservation of knowledge
- The transmission of knowledge to a broad mix of students and practicing executives
- The application of knowledge to benefit our many constituencies.

Responsibilities

The school will realize this vision to the extent that it succeeds in addressing the needs of its various constituencies, which have specific and often widely differing expectations. To meet these obligations, the school must balance its efforts along several dimensions.

- As an academic institution, the school is responsible for the quality and quantity of its research, for the preparation of new researchers, and for service to the university system and wider academic community.
- As a public institution, the school is responsible for the quality of the graduates from its programs and for sharing both its information and its expertise with the community at large.
- As a professional school, the school is responsible for serving the diverse segments of the business community in Indiana, across the nation, and around the world.
- As a state-assisted institution, the school has a continuing responsibility to serve the people of the state of Indiana.

Shared Values

Critical to the school's success is its distinctive culture. Certain key values and widely shared beliefs shape the essential character of the school and thereby become important criteria for basic decisions.

Quality Emphasis The school seeks to meet its goals with distinction and to do so consistently. This principle requires insight into its areas of competence, the aspirations of the faculty and staff, and the availability of resources.

Proactive Change Change in any organization is driven ultimately by the long-term forces that shape the body of constituencies it was created to serve. Business organizations constantly undergo change. The rate of change may vary, but the environment is always dynamic. The school is committed not only to responding to change via its research variety and curriculum emphases, but to anticipating basic changes as well.

Integrative Programs The school attracts faculty who have a broad understanding of business enterprises and a capacity for configuring and interrelating business functions. This capacity is demonstrated in the school's academic programs, which emphasize the interdependence of business functions, provide a solid grounding in the liberal arts, and recognize the importance of breadth of understanding to overall organizational success.

Programmatic Approach to Education The school's degree programs are more than just a set of requirements. Every step of the degree sequence comprises a carefully planned and coordinated set of activities. Support activities such as admissions and placement counseling, extracurricular activities, overseas study opportunities, and faculty involvement in student activities enrich the student's course work.

Balance and Diversity The school conscientiously seeks to achieve breadth in its research focus, curriculum, pedagogy, and faculty and student composition. Diversity of viewpoint and background is encouraged, and heterogeneity is nurtured. The school recognizes the need to provide students and faculty with a rich, balanced context for the study of business as well as a learning environment that is conducive to the lively exchange of ideas and intellectual stimulation necessary for productive, independent scholarship.

Citizenship Good citizenship is valued strongly in the school. Citizenship involves more than fulfilling formal academic requirements. It encompasses participation in multiple roles, a willingness to serve, and a commitment to perform activities that sustain the broader life of the school as an institution. Citizenship is manifested in both respect

for individual rights and acknowledgment of individual responsibilities to the institution.

Collegiality A spirit of collegiality is a hallmark of the school. It is grounded in the faculty's inherent respect for each other and for students as individuals. The goal is to maximize development of the specific abilities and potential each student brings to the institution. The school sustains this spirit through mutual trust and demonstrates it through the encouragement of student-faculty interaction and student consultation through organizations and advisory groups.

Undergraduate Principles On May 7, 1998, the IUPUI Faculty Council approved the adoption of the following six principles of undergraduate learning: core communication and quantitative skills; critical thinking; integration and application of knowledge; intellectual depth, breadth, and adaptiveness; understanding society and culture; and values and ethics. These principles provide the conceptual framework for the general-education component of the undergraduate curriculum at the Kelley School of Business.

Last updated 1-17-12

Organization of the School

The school's resident faculty of approximately 200 members is its basic governing body. The various programs and curricula, as well as all major policy considerations, are reviewed and approved periodically at meetings of the entire resident faculty. Administrative support for the school is provided by the Office of the Dean, by a chair in each of the school's eight academic departments, and by a chair of each academic program.

The Academic Council administers Kelley School of Business policy. The council is made up of those administrators mentioned above, with the addition of two elected faculty representatives. Additionally, a number of committees appointed by the dean recommend to the faculty various academic and operating policies. At times, these committees are also assigned specific administrative responsibilities.

The school's administration manages its programs on both the Bloomington and Indianapolis campuses. The Office of the Dean consists of the dean, the associate dean for academic programs on the Bloomington campus, the associate dean for Indianapolis operations, the associate dean of faculty and research in Bloomington, the associate dean of information technology in Bloomington, and the associate dean for Indianapolis research and programs.

It is assisted by various chairs and directors. Administrative support for instructional programs is provided by five organizational units: the Kelley School of Business Academic Programs Office in Indianapolis (Undergraduate, Evening M.B.A. Program, M.S.A. and M.S.T. Programs), the Kelley School of Business Undergraduate Program Office (Bloomington), the M.B.A. Office (Bloomington), the Doctoral Program (Bloomington), and Kelley Executive Partners. Admissions, student counseling and advising, and degree certification are provided by professional staff members assigned to each of these organizational units. (See "Graduate Programs" in this bulletin.)

Departmental and Curricular Structure The faculty of the Kelley School of Business is organized into nine academic departments. Most of the school's course offerings are provided by faculty in the organizational units. As indicated in the descriptions of the school's curriculum in this bulletin, a department may be responsible for several areas of specialization.

Although recognition is given to the importance of departmental units, the Kelley School of Business follows the general principle of flexibility in organization. Thus, some members of the faculty may have responsibilities in two or more departments, programs, or areas of specialization. As well as being responsible for a specific division of the school's operation, the chairs of the departments are considered to be general officers of the school.

Research Centers and Institutes In recent years, the Kelley School of Business has put new emphasis on the establishment and promotion of research centers and institutes. These organizational units are distinct from the traditional academic departments, and therein lies their strength. The centers have research and outreach to the business community as their primary objectives. This focus serves to make them more interdisciplinary in nature and more visible both inside and outside the university. The Kelley School of Business currently supports seven research centers, each with a specific mission and a natural constituency in the business world:

- Indiana Business Research Center (IBRC)
- Center for Education and Research in Retailing
- Center for Real Estate Studies
- Johnson Center for Entrepreneurship and Innovation
- Indiana Center for Econometric Model Research
- Center for International Business Education and Research (CIBER)
- Randall L. Tobias Center for Leadership Excellence

Publications The Kelley School of Business assists the faculty in preparing research results and other publications for communication to various audiences. In addition to periodic monographs and discussion papers, the school regularly distributes two publications, both appearing six times a year.

- *Indiana Business Review (IBR)*- This publication contains articles based on research analysis of the economic environment of the state and its regions, counties, and cities. Because of its importance to planners in both the public and private sectors, *IBR* is provided without charge to those who request it.
- *Business Horizons*- Since 1957, the Kelley School of Business has published a journal of analysis and commentary on subjects of professional interest to business executives and students of business. *Business Horizons* is managed by an editorial board drawn from the school's faculty. It publishes articles by many outside contributors as well as by the school's own faculty and students and is sent to a national and international audience on a subscription basis.

Executive Education The director of Kelley Executive Partners is responsible for coordinating all non-degree educational programs, notable custom-designed programs

for client companies, and special programs for company consortia.

Student Services and Campus Resources

Advising and Counseling

Our professional advising staff members are devoted to assisting students in making informed program and career choices. All undergraduates in the Kelley School of Business choose a major, such as accounting or finance. (See Departments and Majors in this bulletin.) Academic advisors who hold master's degrees are available to help students understand and plan for meeting major requirements.

Academic advisors for the Kelley School of Business are available in the Business/SPEA Building Rm. 3024, 801 W. Michigan Street. Please call (317) 274-2147 to schedule an appointment with an advisor. Students may also take advantage of our limited walk-in hours or our online advising. Students may also obtain counseling from the Kelley Career Placement Office, the Office of International Affairs, or the University College (UC).

International Affairs

International students may continue to seek general or personal support services through the Office of International Affairs after admission to the Kelley School of Business.

Undergraduates in the Kelley School of Business are eligible to participate in foreign study programs established by Indiana University. These programs offer undergraduates the opportunity to do part of their academic work abroad. Students can participate in summer programs in Finland, Germany, or the Netherlands; semester programs in Chile, France, the Netherlands, and Singapore; and regular academic year programs, as well as programs offered through the Center on Southeast Asia.

Students also may apply for overseas internships. Advanced standing, high scholarship, and strong language skills are required. In addition, IUPUI administers a number of short-term programs of interest to business students.

International students for whom English is a second language and who seek information about language tests or about academic assistance should contact the coordinator of English as a Second Language, Cavanaugh Hall, 425 University Boulevard, (317)274-2188.

On-campus housing is available for international students. (See Housing in this bulletin.)

For more information, contact the Office of International Affairs, ES 2126; phone (317) 274-7000.

Last Updated 1-17-12

Admission

Requirements

Admission to the Kelley School of Business is competitive and based on a combination of factors. The primary factor is academic performance or GPA. Students are eligible to apply for admission provided they meet the minimum requirements. The minimum requirements do not guarantee admission.

Admission to IU's Kelley School of Business at Indianapolis is possible at several different points in a student's academic career. Procedures and requirements for each option are described below.

Please note that all applications for admission to the university are submitted through the IUPUI Office of Undergraduate Admissions, Campus Center Rm. 255, 420 University Boulevard, Indianapolis, IN 46202-5140; phone: (317) 274-4591. Beginning students normally enter the University College (UC), where they are advised on enrolling in required general-education and prebusiness courses.

Dual Admission

Upon recommendation of the Office of Admissions, high school students who have been admitted to IUPUI for summer 2011 and after may be considered for admission into the Kelley School of Business as freshmen if they have meet the following criteria:

1. SAT (critical reading and math) score 1100 or higher (ACT composite score of 24 or higher)
2. SAT (math) score of 500 or higher (ACT math score of 21 or higher)
3. High School GPA of 3.2 or higher

If these students are admitted to the Kelley School of Business, they are dually admitted to both the School of Business and the University College. Students will retain early admission status as long as they are making satisfactory progress in their academic program, including business prerequisite courses. This option offers students special access to Kelley School of Business advisors and opportunities for early involvement in Kelley School of Business organizations and activities.

Updated 1/17/12

Option I Admission Criteria

The minimum requirements to be eligible to apply for admission under Option I admission standards are:

1. Complete at least 26 credit hours of college-level course work that count toward graduation. This course work may be taken at Indiana University or at another accredited institution offering a comparable program. (Students with more than 26 credit hours who apply for admission to the Kelley School of Business for the first time may do so using the Option I admission standards. This also applies to transfer students.)

2. Successfully complete the following courses with an average GPA of 2.7 or higher and a minimum grade of "C" or higher in each course. Must also have cumulative IU GPA of 2.7 or higher:

- BUS-A 100 Business Accounting Skills
- BUS-K 201 The Computer in Business

Note: BUS K201 or any equivalent course, is only good for five years before a student is admitted to Kelley

- BUS-X 100 Business Administration: Introduction
- BUS-X 103 Business Learning Community **or** BUS-X 203 Independent Study in Service Learning
- ENG-W 131 Elementary Composition I or equivalent
- MATH-M 118 Finite Mathematics
- MATH-M 119 Brief Survey of Calculus

3. Submit an application by the required deadline.

Fall Admission: January 15 through March 1

Spring Admission: August 15 through October 1

Applications are available online through the Kelley School of Business Web site at kelley.iupui.edu.

4. Students may apply only one time under Option I criteria.

Note: All students admitted under Option I must complete all Option II requirements before taking the Integrative Core (I-Core).

Updated 1-17-12

Option II Admission Criteria

Students who have been denied admission based upon Option I admission standards or have 56 or more credit hours may apply for Option II admission. Students are eligible to apply for admission provided they meet the minimum requirements. The minimum requirements do not guarantee admission. The minimum requirements to be eligible to apply for admission under Option II admission standards are:

1. Complete 56 credit hours of college-level course work that count toward graduation, with an overall cumulative GPA of 2.0 or higher. This course work may be taken at Indiana University or at another accredited institution offering a comparable program.

2. Successfully complete the following nine prerequisite courses, with an average GPA of 2.0 or higher:

- BUS-A 100 Business Accounting Skills
- BUS-A 201 Introduction to Financial Accounting
- BUS-A 202 Introduction to Managerial Accounting
- BUS-L 203 Commercial Law I
- ECON-E 201 Introduction to Microeconomics
- ECON-E 202 Introduction to Macroeconomics
- ECON-E 270 Introduction to Statistical Theory in Economics and Business
- MATH-M 118 Finite Mathematics
- MATH-M 119 Brief Survey of Calculus I

3. Complete the following courses with a grade of "C" or higher in each course:

- ENG-W 131 Elementary Composition I or equivalent
- BUS-K 201 The Computer in Business

Note: BUS K201 or any equivalent course, is only good for five years before a student is admitted to Kelley.

- BUS-X 100 Business Administration: Introduction
- BUS-X 103 Business Learning Community **or** BUS-X 203 Independent Study in Service Learning
- BUS-X 204 Business Communications
- COMM-R 110 Fundamentals of Speech Communication

4. File an application by the appropriate deadline for fall or spring admission. See details under "Option I Admission Criteria" in this section.

For additional information about admission to the Kelley School of Business, contact the program office at Business/SPEA Building 3024, 801 W. Michigan Street, Indianapolis, IN, 46202-5151; phone: (317) 274-2147.

Updated 1-17-12

Undergraduate Programs

The Undergraduate Program of the Kelley School of Business provides opportunities for breadth of education as well as for a reasonable amount of specialization. As a member of the Association to Advance Collegiate Schools of Business (AACSB), the school subscribes to the principle that a significant portion of a student's academic program should be in general-education subjects, complemented by study in the basic areas of business administration. This assures the planning of balanced study programs while enabling a student with an interest in one or more professional areas of business to specialize in those fields.

Integrative Core

All undergraduate study programs also include courses that ensure the development of a basic understanding of the principles and practices involved in the management of business firms in the dynamic economic, social, and political environment of the world today. At IUPUI, three interrelated, rigorous junior-level courses in the management of finance, marketing, and operations, known collectively as the Integrative Core, are required of all business majors.

Integrative Core studies emphasize the trends likely to shape the pattern of the world in the years ahead. Beyond these basic requirements, students are given an opportunity to pursue studies from a wide variety of subject areas.

Honors Courses

Honors courses are available to students with eligible records. A number of internship programs, industry studies, and overseas study programs are also available to students with specialized professional interests.

Leadership and Social Responsibility

To develop leadership skills and a sense of social responsibility, students are strongly encouraged to participate in one or more of the student organizations at IUPUI. Special emphasis is placed on volunteerism and the personal benefits derived from participating in community service. The Kelley School of Business Learning Community course, BUS-X103, involves freshmen in a service project in the local community. This course is an entrance requirement for admission to the school. The course BUS-X401 Community Service Learning offers students an opportunity to earn course credit for participation in a specific volunteer project.

Senior Standing

Upon attaining senior standing, students enjoy a broader range of elective courses and special opportunities for discussion and counseling with senior members of the faculty. Courses at the senior level ensure

widespread participation by students in the solution of case studies, projects, and special problems drawn from the contemporary business scene. Also, seniors typically hold offices in professional student organizations, which gives them exceptional extracurricular experience. The course BUS-X320 Business Career Planning and Placement prepares students for the transition to the world of business. This course also helps students locate and select employment opportunities that hold the greatest promise for them.

Program Objectives

Graduates of the undergraduate program of the Indiana University Kelley School of Business should:

1. Have a general knowledge and appreciation of human accomplishments in the physical sciences, arts, humanities, and social sciences
2. Possess a broad-based knowledge of business and the business firm, and the role business plays in our society
3. Understand the national, international, political, social, and economic environment that affects a firm's operations
4. Be able to articulate their thoughts orally and in writing and be computer literate
5. Have a sensitivity to and appreciation of ethical issues
6. Possess an appreciation of the opportunities and problems of managing complex organizations
7. Have the skills and ability to work effectively with others in the completion of joint tasks
8. Possess the ability to find and formulate problems, think analytically, and recommend solutions to problems

The undergraduate curriculum is designed to provide students with the above attributes. Graduates should have acquired an education that will serve them throughout their careers in business, not just prepare them for an entry-level position.

Honor Code

The Indiana University *Code of Student Rights, Responsibilities, and Conduct* is outlined and defined in an August 15, 1997 publication. This code exists as a guide for students, faculty, and staff and is available from the Program Office, or from the Office of the Dean of Students to assist students in the conduct of their affairs. In addition, the Indiana University Kelley School of Business has developed the following Honor Code to clarify and codify student conduct in the Undergraduate program. Students admitted to the program or taking undergraduate courses are bound by this code:

On my honor, as an Indiana University Kelley School of Business Indianapolis student, applicant, or student taking Kelley School of Business classes, I will conduct myself honestly with faculty, staff and fellow students. I promise my academic activities will support original and class specific work as defined in the IUPUI Code of Student Rights, Responsibilities and Conduct. I will report any knowledge of academic dishonesty to the appropriate person.

I promise to maintain a respectful attitude toward others as reflected by my conversations, written correspondence and classroom behavior. Furthermore, I will represent the Kelley School of Business with a high level of integrity and in a positive manner and I will require the same of others.

As a student of the Kelley School of Business, I promise to adhere to all elements of its Honor Code and understand that I will be held accountable for my actions and/or inactions.

The Kelley School may discipline a student for academic misconduct, defined as any activity that tends to compromise the academic integrity of the institution and undermine the educational process. Academic misconduct includes, but is not limited to the activities specifically prohibited above, interference with another person's right to learn, violation of course rules, and facilitating academic dishonesty. The school may also discipline a student for acts of personal misconduct that occur on university property, or in connection with university business. Such acts include, but are not limited to falsifying emergency warnings, release of access codes for university resources,lewd, indecent, or obscene conduct, unauthorized entry, damage to university or property belonging to others, sexual and racial harassment, verbal abuse, harassment or threats, and all other acts of personal misconduct as defined by the *Code of Student Rights, Responsibilities, and Conduct*.

Updated 2-2-2012

Awards, Recognition and Scholarships

Scholarships available through the Kelley School of Business are based on academic achievement and/or financial need. Eligible candidates must be certified as students in the Kelley School of Business. Ordinarily, a student transferring from another institution must complete at least 26 credit hours of study at IUPUI to be considered for a scholarship.

The following is a partial list of awards made to IUPUI students in the Kelley School of Business:

- Ginny Marzke Memorial Scholarship
- John W. Berry Memorial Scholarship
- Chancellor's Scholar Award
- Delta Sigma Pi Award
- Irwin Katz Accounting Excellence Award
- J. Dwight Peterson Key Award
- Outstanding Underclassmen Honors Awards
- Hazel P. Chattaway Scholarship
- Roger Jerman Scholarship
- American United Life Scholarship
- Bank One Outstanding Finance Student Scholarship
- United Parcel Service Scholarships
- Ralph L. Swingley Scholarship
- Data Processing Services, Inc., Scholarship
- Gordon C. Miller Scholarship
- Hoosier Warehousing Scholarship
- Indianapolis Traffic Club Scholarship
- Magnum Logistics Scholarship
- Vitran Express Marketing Distribution Scholarship
- Indiana Motor Truck Association Gold Club Scholarship
- HGI-Landacq Corporation Award

- KSBI Finance Award
- Klapper Scholarship
- First Indiana Bank Scholarships
- Tax Executives Institute Scholarship
- Slattery and Holman Scholarship
- Rolls-Royce Scholarships
- Key Bank Scholarship
- Hub Group Academic Scholarship
- Elliot and Estelle Nelson Family Scholarships
- William F. Buchanan Scholarship
- Women in Management Scholarship
- L. L. Waters Transportation Awards.

In addition, scholarships and awards are generally given to outstanding students in each major.

Academic Distinction

Academic distinction for excellence in scholarship is awarded at Commencement to a limited number of students graduating with the Bachelor of Science in Business degree. The number of students so honored will not exceed 10 percent of the graduating class in the school for that year.

Students whose grade point averages are in the highest 1 percent and who complete at least 60 credit hours at Indiana University graduate with "highest distinction." Those whose grade point averages are in the next highest 4 percent and who complete at least 60 credit hours at Indiana University graduate "with high distinction"; and the remaining 5 percent who complete at least 60 credit hours at Indiana University will graduate "with distinction."

The grade point averages necessary to achieve these levels of distinction vary depending on class statistics. Graduates receiving these honors have them so noted on their diplomas and in the Commencement program and are eligible to wear cream and crimson fourragères at Commencement.

Dean's Honor List

All undergraduate students in the Kelley School of Business who are taking at least 6 credit hours during a fall or spring semester and who have a semester grade point average of 3.5 or higher are placed on the Dean's Honor List. These honor students receive letters from the dean recognizing their meritorious efforts.

Degree Programs

Department of Accounting and Information Systems

- Bachelor of Science in Business - Accounting

Department of Finance

- Bachelor of Science in Business - Finance

Department of Management

- Bachelor of Science in Business - Human Resource Management
- Bachelor of Science in Business - International Studies
- Bachelor of Science in Business - Management

Department of Marketing

- Bachelor of Science in Business - Marketing

Department of Operations

- Bachelor of Science in Business - Supply Chain Management

Department of Accounting and Information Systems

Accounting Major

The accounting curriculum prepares students for careers in auditing, corporate accounting and management consulting, governmental and nonprofit organizations, and taxation. In addition, it equips the prospective business executive with tools for intelligent analysis, planning, control, and decision making. The accounting curriculum also provides excellent background for the student who wants to pursue graduate work in business, public administration, or law.

Beginning in the fall of 2006, the general-education requirement for accounting majors was reduced to 47 credit hours. This limit applies only to accounting majors. Nine additional credit hours are required for the nonaccounting concentration.

Accounting graduates who meet the requirements of the State Board of Public Accountancy of Indiana are eligible to sit for the Uniform CPA Examination in Indiana. Most accounting graduates will need to engage in further study to be eligible to sit for the exam. Those who wish to engage in public accounting practice in Indiana as certified public accountants should familiarize themselves with the rules and regulations issued by the Indiana State Board of Accountancy, Indiana Professional Licensing Agency, 302 W. Washington Street, Rm. E034, Indianapolis, IN 46204-2724; phone (317) 232-2980. Students planning practice outside Indiana should consult the CPA board in their state of residence. Call 1-800-CPA-EXAM for additional information.

Internships in business or government are available on a selective basis during the fall, spring, or summer. Fall is the ideal time to apply for an accounting internship, as the majority of public accounting internships are spring-semester positions. For further information about internships, contact the Kelley Career Placement Office, Business/SPEA Building 4090; phone (317) 278-7842.

Major Requirements

Junior and Senior Years

- BUS-A 311, BUS-A 312, BUS-A 325, BUS-A 328, BUS-A 337, BUS-A 424, and BUS-A302
- Two accounting electives from the following: BUS-A 375, BUS-A 335, BUS-A 339, BUS-A 380, BUS-A 422, BUS-A 439, BUS-A 460, BUS-A 490, or another approved accounting or systems course.
- Nonaccounting concentration (9 cr.): Students must use these hours to build a three-course sequence that comprises a concentration. The concentration creates an expertise that is typically in a nonaccounting business area (e.g., international business or finance). However, a concentration that includes non-business courses (e.g., courses in criminal justice or computer technology) may be acceptable. This concentration might be obtained in a number of ways. For example, students might construct a three-course sequence in a particular area such as finance, computer information systems, or something similar. Information about

preapproved concentrations may be obtained from the Kelley School of Business advisors. Students may construct their own concentration, but all proposed concentrations must have approval from an accounting or systems faculty member. Students also are encouraged to use this flexibility to double major in a business area or to earn an outside minor.

- One minor that is available to accounting students is the Criminal Justice Accounting minor offered through the School of Public and Environmental Affairs. Three of the courses for the minor will be used for the non-accounting concentration. Then students take only two more classes to complete the Criminal Justice Accounting minor. There is a PDF checksheet that will list all the courses required for the minor.

CPA Exam Preparation

Two accounting electives are required for the accounting degree. However, the accounting faculty strongly recommends that students who are interested in professional accounting careers and becoming a Certified Public Accountant (CPA) should take the following three elective courses:

- BUS-A 422 (Advanced Financial Accounting)
- BUS-A 339 (Advanced Income Tax)
- BUS-A 335 (Fund Accounting)

Additionally, the following course would be helpful in preparing for the CPA Exam.

- BUS-A 439 (Advanced Auditing)
- BUS-A 460 (Information Systems Security Assurance)

Internal Auditing Focus

Students who do not choose to pursue a career as a CPA, but who want to pursue a career in internal auditing, should select the following two electives.

- BUS-A 344 (Internal Auditing, Entrprise Risk Management and Assurance)
- BUS-A 469 (Information Systems Security Assurance)

Note: Most states (including Indiana) require accounting professionals who wish to be licensed as certified public accountants to complete 150 credit hours of education with an accounting major. Students must choose among three alternatives. Students who plan to forego CPA licensure may begin their careers after four years with a bachelor's degree. Students interested in licensure may either apply to the Master of Professional Accountancy program and continue for a fifth year to earn a master's degree (fulfilling the 150-hour requirement) or enter the workforce after four years (with the bachelor's degree) and continue to work toward the master's as part-time or returning students.

The Department of Accounting has created a Master of Professional Accountancy Program for students wishing to pursue licensure.

Updated 2-2-2012

Department of Finance

The finance undergraduate curriculum provides a high degree of flexibility while offering the basic preparation needed to deal with the complexities of the modern financial environment.

All students in the major must take a common core of three courses: BUS-A 310, BUS-F 303, and BUS-F 305. These three courses provide a basic grounding in financial accounting systems, the capital and money markets, and corporate financial decision making. An understanding of these areas is necessary for someone who is planning a career in finance.

Finance Major

The undergraduate curriculum in this major is designed to provide familiarity with the instruments and institutions of finance and with a financial approach for structuring and analyzing management decisions.
Course offerings are designed to integrate various aspects of the environment—such as the state of the economy, taxes, and legal considerations—into the decision-making process.

Study in finance, along with appropriate electives, provides academic preparation for careers in corporate financial management; commercial banking, savings and credit institutions; investment analysis; and the selling of financial instruments and services.

Candidates are encouraged to select electives in accordance with career objectives.

Major Requirements
Junior and Senior Years

A: Finance core requirements:

- BUS-A 310
- BUS-F 303
- BUS-F 305

B: Select two of the following:

- BUS-F 402
- BUS-F 420
- BUS-F 446
- BUS-F 494

C: Select three of the following:

- BUS-A 312
- BUS-A 325
- BUS-A 328
- BUS-R 305
- BUS-R 440
- BUS-R 443
- ECON-E 305
- ECON-E 470
    - May also choose from the following courses but cannot use courses chosen for B: to count for C:

- BUS-F 402
- BUS-F 420
- BUS-F 446
- BUS-F 494

NOTE: Double majors in finance and accounting may take any accounting course other than BUS-A 100, BUS-A 201, and BUS-A 202 as a Section C elective. In addition, double majors must take BUS-A 311 in lieu of BUS-A 310.

Updated 1-26-12

Department of Management

The Department of Management encompasses the areas of management, human resource management, organizational behavior, business policy, management of nonprofit organizations, entrepreneurship, and international business. The curriculum is designed to offer students either a broad-based background preparing them for entrance into managerial positions or specialized training in an area of concentration.

At the undergraduate level, the department offers a major in management, nonprofit management, or human resource management, as well as the option to pursue a second major in international studies.

Management Major

Society recognizes the importance of understanding both management itself and the complex nature of the organizations—in business, government, hospitals, and universities—in which managers operate. The faculty is devoted to improving this understanding through the study of individual and group behavior, organizational theory, and human resource development.

The undergraduate courses offered in this major focus not only on the broad aspects of management and organization, but also on developing skills for dealing with problems of motivation, organization design, and the increasingly complex problems of human resource allocations in our interdependent society.

This major provides the flexibility to accommodate students whose interests include preparation for corporate management training positions, application of behavioral science to management, personnel function in both line and staff capacities, and managing the small business.

Major Requirements
Junior and Senior Years

- BUS-W 430 and BUS-Z 340
- *Select four of the following (a minimum of two must be business courses):*
  - BUS-D 301, BUS-D 302, BUS-J 404, BUS-W 311, BUS-Z 494, BUS-Z 404, and BUS-Z 441
  - ECON-E 304
  - OLS 378
  - POLS-Y 302
  - PSY-B 370, PSY-B 374, and PSY-B 424
  - SOC-R 317 and SOC-R 478
  - SPEA-V 432
  - Any 400-level Kelley School of Business course approved by a business advisor

Entrepreneurship Emphasis

Within the management major there is a special emphasis in entrepreneurship and small business.

The image of business in the United States is often one of mammoth national and multinational corporations. Too often the role of the entrepreneur and the importance of small businesses in the economy are overlooked. A vital cornerstone in sustaining the free-enterprise system is the continual birth of new enterprises and the identification, encouragement, and nurturing of entrepreneurial aspirations.

The Indiana University Kelley School of Business, recognizing the contributions of entrepreneurs and the interest shown by students in creating and entering small businesses, has developed an entrepreneurship and small business emphasis within the management major. This emphasis focuses the requirements of a student concentrating in management toward small business.

Students interested in the entrepreneurship emphasis may satisfy the requirements by taking BUS-W 311, BUS-W 406, and an approved elective from the list of management major electives. (Note: BUS-W 490 requires the consent of the instructor and the department chairperson.)

Human Resource Management Major

This program is designed for students whose career objectives lie in the field of personnel management. From its early beginnings as a staff function involving the maintenance of records and the administration of benefit programs, personnel administration has grown to encompass the total development and deployment of human resources in organizations.

While company titles may vary from vice president of industrial relations to vice president for organization planning and development, few firms of any size or consequence today do not have a human resource management specialist reporting directly to the company's highest level. This practice reflects the awareness that the people who work in an organization are its greatest asset.

For this reason, the curriculum in human resource management is designed to acquaint the student with modern personnel management in its broadest sense. Included are both the traditional areas of personnel administration and labor relations (such as employment, management development, wage and salary administration, organizational planning, and contract negotiation) and developments in the behavioral sciences that have implications for a complete human resource management program.

The objectives at the undergraduate level are to provide students with the broad spectrum of knowledge they need for a career in organizational leadership, to prepare them for a career in human resource management, and to encourage and develop interest in further study and research in this area.

Major Requirements
Junior and Senior Years

- BUS-Z 340, BUS-Z 441, BUS-Z 443, and BUS-Z 445
- *Select two of the following:*
  - BUS-W 430, BUS-Z 404, and BUS-X 480
  - OLS 331

International Studies Major

In response to new and dynamic patterns of international business, U.S. business firms have progressed far

beyond the comparatively simple stage of import-export operations. Many companies are becoming multinational, with production units in numerous foreign countries. Private enterprise in the United States has become more intimately concerned with the economic, political, and social trends of foreign nations. The Kelley School of Business has recognized these developments in its global business programs.

All students may elect two courses dealing with the general problems involved in international business: BUS-D 301 and BUS-D 302. They also may participate in overseas programs, which offer an opportunity to see firsthand the problems treated in the course of study, as well as the opportunity to enhance their language facility.

Students who wish to continue studies in the international area may choose, as a second major, the international studies major.

The international studies major is a second major only. It cannot be listed as a first major.

The international studies major consists of 9 credit hours of course work taken in addition to the international dimension requirement. These 9 credit hours can be selected from the four options used for the international dimension requirement. (See the “General-Education Requirements” section of this bulletin.)

See a business advisor to discuss the possible combinations for fulfilling this major’s requirements.

Updated 1-26-12

Department of Marketing

Marketing Major

The study of marketing concerns all activities related to the marketing and distribution of goods and services from producers to consumers. Areas of study include customer behavior, the development of product offerings to meet consumer needs, pricing policies, institutions and channels of distribution (including retailers and wholesalers), advertising, selling, sales promotion, research, and the management of marketing to provide for profitable and expanding businesses.

The marketing curriculum endeavors to provide the business community with broadly trained graduates who can approach problems with a clear understanding both of marketing and of the interrelationships between marketing and other functions of the firm. Students planning careers in marketing management, advertising, sales, sales management, retailing, wholesaling, marketing research, or distribution normally major in marketing and then may pursue within the curriculum a modest degree of specialization in the area of their vocational interest.

Major Requirements

Junior Year

- BUS-M 303

Junior and Senior Years

Select four courses from the list below:

- BUS-M 401
- BUS-M 402
- BUS-M 405
- BUS-M 407
- BUS-M 412
- BUS-M 415
- BUS-M 419
- BUS-M 426
- BUS-P 320

Senior Year

- BUS-M 450

NOTE: If a student chooses to take BUS-P 320 and BUS-M 412 along with BUS-P 421, BUS-P 429 and two fo the following; BUS-M 401, M 402, M 407, M 419, the student completes requirements for the Marketing major as well as the Supply Chain Management major. This qualifies the student for certification from the American Society for Training and Logisitics (AST&L).

Updated 2/2/2012

Department of Operations

The Operations Department is responsible for the Supply Chain Management major. Over the years, the Operations Department has maintained a tradition of excellence that continues to evolve as the dynamic field of operations management continues to advance.

Supply Chain Management

Many of today’s most admired businesses—companies like FEDEX, Toyota, and Wal-Mart—dominate the competition using supply chains as competitive weapons. Supply chain management includes all the activities involved in planning, sourcing, making, and delivering goods and services between suppliers, manufacturers, intermediaries, and customers.

Its major areas of study revolve around products, information, and cash flows between supply chain partners as well as balancing supply and demand, managing supplier and customer relations, improving processes, fulfilling orders, developing logistics and transportation networks, and controlling returns.

Our curriculum not only provides students with the knowledge and skills to successfully launch a career in supply chain management, but also prepares graduates for advancement in terms of promotion and responsibilities. While some students concentrate on supply chain management, many others combine it with their interests in finance, marketing, information technologies, entrepreneurship, accounting, and international business as part of a double major. In most of today’s fast-paced, complex, and increasingly global businesses, a fundamental understanding of supply chain management is often crucial to success.

Major Requirements

Junior and Senior Years

- BUS-M 412, BUS-P 320, BUS-P 421, and BUS-P 429
- *Select three (3) of the following:*
  - BUS-M 303
  - BUS-M 401
  - BUS-M 402
  - BUS-M 407
  - BUS-M 419
  - BUS-W 311
  - BUS-Z 404

- BUS-D 301
- BUS-A 325
- BUS-A 337
- BUS-A 310 or BUS-A 460
- BUS-F 305
- BUS-F 494

Updated 1-26-12

General Requirements

To be awarded the Bachelor of Science in Business degree, students must meet the following requirements.

Complete a minimum of 124 credit hours of college-level work. Of this number, at least 48 credit hours must be in business and economics courses, and a minimum of 56 credit hours must be in courses other than business and economics. A maximum of 9 credit hours of economics will be counted as general-education credits in meeting this requirement. (For special requirements for accounting majors, see "Departments and Majors" later in this bulletin.)

1. Complete the specific degree requirements of the Kelley School of Business as listed below.
2. Complete the last 30 credit hours of the degree program at IUPUI.
3. Complete a minimum of 50 percent of the major requirements on the IUPUI campus. This requirement applies to all courses listed for each curricular major.
4. Maintain a level of scholarship necessary to meet graduation GPA requirements.

Students in the Kelley School of Business are responsible for understanding and for meeting the degree requirements. Approval for any exceptions or modifications in the degree requirements must be requested in writing and may be granted only by the Petitions Committee in consultation with the dean of the Kelley School of Business, the undergraduate program chairperson, the chairperson of the student's major, or the chairperson's administrative representative.

Students who would like assistance in planning an academic program or clarification of degree requirements may consult an academic advisor in the Kelley School of Business by calling (317) 274-2147 to schedule an appointment. Students are strongly urged to meet with a Kelley academic advisor at least once each year.

The undergraduate curriculum for the Bachelor of Science in Business degree consists essentially of three parts: (1) general-education courses, (2) basic business and economics courses, and (3) business majors courses.

General-Education Requirements (Minimum of 56 cr.)

Foundation Courses (12 cr.)[1]

- COMM-R 110 Fundamentals of Speech Communication (3 cr.)[2]
- ENG-W 131 Elementary Composition I (3 cr.)[2]
- MATH-M 118 Finite Mathematics (3 cr.)
- MATH-M 119 Brief Survey of Calculus (3 cr.)

Arts and Humanities (Minimum of 6 credit hours)

3 credit hours must be any History (HIST) course except from Indiana History

- Afro-American Studies (AFRO)
- Art (HER-H)
- Classical Studies (CLAS-C)
- Communications (COMM-T limit of 3 credit hours in COMM-T100)
- English Literature (ENG-L)
- Film Studies (FILM-C)
- Folklore (FOLK)
- History (HIST)
- Labor Studies (LSTU)
- Music (MUS-Z, excluding MUS-Z100)
- Philosophy (PHIL)
- Religious Studies (REL)
- Women's Studies (WOST)

Social Sciences (Minimum of 6 credit hours)

- Anthropology (ANTH)
- Geography (GEOG)
- Military Science (MIL) (Only 200-level or higher)
- Political Science (POLS)
- Psychology (PSY; except practicum)
- Public and Environmental Affairs (SPEA-J; & SPEA-V 160, 161, 221, 264, 272, & 376)
- Public Health (PBHL)
- Sociology (SOC)

Natural Sciences and Mathematics (Minimum of 5 credit hours)

- Astronomy (AST)
- Biology (BIOL)
- Chemistry (CHEM)
- Forensic and Investigative Science (FIS)
- Geology (GEOL)
- Mathematics (MATH 15300, 15400, 16400, & 20000-level or above)
- Physics (PHYS)

General-Education Electives

General-education courses are chosen from departments and schools throughout the university, excluding courses from the Kelley School of Business and the Department of Economics. The number of credit hours required in this category depends upon the manner in which the above requirements are met. At least 56 credit hours in general-education courses are required. (For special rules for accounting majors, see "Departments and Majors" in this bulletin.)

Note: The following courses do not count for credit toward any degree program in the Kelley School of Business: ENG-W 001 Fundamentals of English, ENG-W 130 Principles of Composition, MATH M001 Introduction to Algebra, MATH 00100 Introduction to Algebra, MATH 11000 Fundamentals of Algebra, and MATH 11100 Algebra. As a general rule, preparatory courses do not count for credit toward any degree program in the Kelley School of Business. Consult an advisor for specific information.

International Dimension Requirements

The international dimension requirement can be fulfilled in any combination of the following four ways. The requirement is 6 credit hours.

- Language courses: These courses must be at the 200 level or above in a language other than English or American Sign Language.
- International business and economics courses: Students can take BUS-D 301 The International Business Environment, BUS-D 302 International Business: Operation of International Enterprises,BUS-F 494 International Financial Management, BUS-L 411 International Law, BUS-M 401 International Marketing, ECON-E 303 International Economics, ECON-E 325 Comparative Economic Systems, ECON-E 430 Introduction to International Economics, and ECON-E 495 Economic Development.
- Overseas study: Students can participate in approved overseas study programs. Participation in non-IU programs may be possible, but students must have prior approval from the Kelley School of Business.
- International focus: Several international courses are offered in various disciplines, such as geography, history, and political science. See the Kelley School of Business Program Office in BS 3024 for a current list of approved international courses.

Kelley School of Business students from other countries will generally be considered to have fulfilled this requirement. To apply for this waiver, contact the Program Office, Business/SPEA Building 3024.

---

[1] Equivalent or approved substitute courses may be used to fulfill these course requirements. (See "Admission Requirements.")

[2] Must be completed with a minimum grade of C before admission to the Integrative Core (BUS-F 301, BUS-M 301, and BUS-P 301).

[3] BUS-F 301, BUS-M 301, and BUS-P 301 must be taken together as the Integrative Core. BUS-X 390 Integrative Experience (1 cr.) is required of transfer students who have completed all three courses of the Integrative Core at a campus other than IUPUI, IUPUC, or IU Bloomington. All prerequisites must be completed before beginning the Integrative Core. See an advisor if you have questions.

Basic Business and Economics Requirements

Freshman and Sophomore Years

- BUS-A 100 Basic Accounting Skills (1 cr.)
- BUS-A 201 Introduction to Financial Accounting (3 cr.)
- BUS-A 202 Introduction to Managerial Accounting (3 cr.)
- BUS-K 201 The Computer in Business (3 cr.)[2]
  - completed BUS K201 or its equivalent within 5 years of being admitted to Kelley.
- BUS-L 203 Commercial Law I (3 cr.)
- BUS-X 100 Business Administration: Introduction (3 cr.)[2]
- BUS-X 103 Business Learning Community (1 cr.)
- BUS-X 204 Business Communications (3 cr.)[2]
- ECON-E 201 Introduction to Microeconomics (3 cr.)
- ECON-E 202 Introduction to Macroeconomics (3 cr.)
- ECON-E 270 Introduction to Statistical Theory in Economics (3 cr.)

Junior Year

- BUS-F 301 Financial Management (3 cr.)[3]
- BUS-M 301 Introduction to Marketing Management (3 cr.)[3]
- BUS-P 301 Operations Management (3 cr.)[3]
- BUS-X 320 Business Career Planning and Placement (2 cr.)
- BUS-Z 302 Managing and Behavior in Organizations (3 cr.)
- BUS-Z 311 Leadership and Ethics in the Business Environment (1.5)
- BUS-Z 312 Human Resources and Negotiations (1.5) (depends on major)

Senior Year

- BUS-J 401 Administrative Policy (3 cr.)
- BUS-J 411 Analysis of Business Decisions (3 cr.)

For information about Kelley School of Business departments and areas of study, see "Departments and Majors" and "Course Descriptions."

Typical Program for Full-Time Students

A typical Kelley School of Business program for a full-time Indianapolis student (minimum total of 124 credit hours of college-level work) follows:

First Year (29-31 Total Credits)

Semester I:

- BUS-X 100 Basic Accounting Skills (3 cr.)
- BUS-X 103/203 Business Learning Community (1 cr.)
- MATH-M 119 (3 cr.)
- ENG-W 131 (3 cr.)
- HISTORY (3 cr.)

Semester II:

- BUS-A 100 Basic Accounting Skills (1 cr.)
- BUS-X 204 Business Communications (3 cr.)
- MATH-M 118 (3 cr.)
- COMM-R 110 (3 cr.)
- Social Science (3 cr.)
- Science (3-5 cr.)

Second Year (31-33 Total Credits)

Semester I:

- BUS-A 201 Introduction to Financial Accounting (3 cr.)
- BUS-K 201 The Computer in Business (3 cr.)
- BUS-L 203 Commercial Law I (3 cr.)
- ECON-E 201 Introduction to Microeconomics (3 cr.)
- ECON-E 270 Introduction to Statistical Theory in Economics (3 cr.)
- Humanities (3 cr.)

Semester II:

- BUS-A 202 Introduction to Managerial Accounting (3 cr.)
- ECON-E 202 Introduction to Macroeconomics (3 cr.)
- Social Science (1-3 cr.)
- General Education
- Requirement (6-7 cr.)

Third Year (30-31 Total Credits)

Semester I:

- BUS-F 301 Financial Management (3 cr.)
- BUS-M 301 Introduction to Marketing Management (3 cr.)
- BUS-P 301 Operations Management (3 cr.)
- BUS-X 320 Business Career Planning and Placement (2 cr.)
- BUS-Z 311* Leadership and Ethics in the Business Environment (1.5)
- BUS-Z 312* Human Resources and Negotiations (1.5) (depends on major)

Semester II:

- BUS-Z 302 Managing and Behavior in Organizations (3 cr.)
- International Dimension (3 cr.)
- Major/General Education/Free Electives** (10-11 cr.)

Fourth Year (30-32 Total Credits)

Semester I:

- BUS-J 401 Administrative Policy (3 cr.)
- International Dimension (3 cr.)
- Major/General Education/Free Electives** (9-11 cr.)

Semester II:

- BUS-J 411* Analysis of Business Decisions (3 cr.)
- Major/General Education/Free Electives** (12 cr.)

*Students admitted to the Kelley School of Business prior to Fall 2006 are not required to take BUS-Z 311, BUS-Z 312 or BUS-J 411.
**Students are required to complete a minimum of 124 credit hours. The number of electives and genearl education electives can vary by major.

Updated 1-26-12

Special Opportunities

Business Foundations Certificate Program

This program is designed for students who want to acquire a foundation of the fundamental business knowledge needed to improve the conduct of their personal business affairs, aid in their career development, or enhance their employability.

With careful planning, the certificate may be earned entirely via distance-learning technologies. Please note that students enrolling in the certificate program need access to, and proficiency in, computer and Internet resources.

In general, any student admitted to IUPUI is eligible to enroll in the certificate program; there are no prerequisites for required certificate courses.

For more information, see an advisor in the Kelley School of Business Undergraduate Office, 801 W. Michigan Street, BS 3024, Indianapolis, IN 46202-5151; phone (317) 274-2147. Information may also be obtained at http://kelley.iupui.edu/executive/certificate/certificate.cfm.

Honors Program

Timothy D. Bennett, *Director of Honors Program*

A Kelley student already knows the benefits of studying at one of the nation's premier business schools. Taking the advantages of a Kelley education steps further, the Honors Program offers a way for high-achieving students to capitalize on their academic experience.

Smaller classes, more opportunities for lively classroom discussion, and the chance to work in strategic partnership with a local company are just some of the exclusive benefits of enrolling in the Kelley Honors Program. More advantages include:

- Studying with other motivated honors students
- Professors experienced in teaching honors courses
- A unique Integrative Core case project developed specifically for honors-level students
- Increased interaction with Kelley faculty
- A special Kelley academic advisor dedicated to honors students
- An honors notation on college transcript
- Noteworthy achievements for resumes, job applications, and interviews
- Recognition as an honors program participant during graduation
- A value-added Kelly education at no additional cost

Although Kelley honors students cover the same course material as other students, classroom discussion builds upon what students learn independently when reading the text. This culminates in an engaging and insightful Integrative Core case project in which students work alongside an executive from a local company to tackle a pressing business issue.

Honors students are required to complete six Kelley honors-level sections of the standard courses all business students must take in order to graduate. In addition, honors students must complete 6 credit hours of Honors electives; maintain a GPA of 3.5 within their Honors courses, and maintain a cumulative GPA of 3.3 or above.

Students interested in applying for the Kelley Honors Program must:

- Have a minimum GPA of 3.3
- Have completed 26 credit hours
- Be admitted to or intend to apply for admission to Kelley

Applications can be completed online through the Kelley Indianapolis Web site.

Internships and Experiential Learning

Kelley Indianapolis students are encouraged to participate in internships within their fields of study and/or career interests. The Career Placement Office helps students locate and apply for internship positions and maintains an online job and internship database-KelleyCareers-that is available exclusively to Kelley Indianapolis students, year-round and around the clock.

All Kelley Indianapolis students, whether they are able to complete an internship or not, engage in experiential learning through their Integrative Core (I-Core) courses. Students work in a group with a local company and apply what they have learned in the classroom to a real business issue. Students who successfully complete all aspects of the Integrative Core curriculum will receive an experiential learning notation attached to these courses on their official transcripts.

Kelley Indianapolis students have the option to obtain credit for approved internship opportunities through the For-Credit Internship Program. In order to qualify for the program, students must have accepted an internship related to their major, completed and passed the Integrative Core, and maintained a 2.5 GPA. Students work with the internship coordinator and faulty advisor to complete all course work and receive a grade for the course.

For additional information, please contact:

Emily Murphy
Assistant Director, Career Planning Office
Indiana University, Kelley School of Business
801 West Michigan Street, BS4090
Indianapolis, IN 46202

www.kelley.iupui.edu/cpo

International Internships For information about overseas internships, contact the Office of International Affairs, ES 2126; phone (317) 274-7000.

Minor in Business

A minor in business has been established with a number of schools at IUPUI. Students are required to meet course prerequisites and entrance requirements with a GPA of 2.0 or higher. Students must take four of the seven required courses on the IUPUI campus (F300, M300, and P300 are strongly recommended). Minor requirements include completion of the following courses or equivalents:

- BUS-A 200 Foundations of Accounting
- BUS-F 300 Introduction to Financial Management
- BUS-K 201 The Computer in Business (with a C or higher)
- BUS-L 203 Commercial Law I
- BUS-M 300 Introduction to Marketing
- BUS-P 300 Introduction to Operations Management
- Either BUS-D 301 International Business Environment, BUS-Z 302 Managing and Behavior in Organziations, or BUS-Z 311 Leadership and Ethics in the Business Environment and BUS-Z 312 Human Resources and Negotiations.

Applications are available in the undergraduate office, Business/SPEA Building 3024; call (317) 274-2147 if you have questions.

Outside Minors for Business Students

Business students may complete the requirements for a minor through the other schools and departments that offer approved minors, which currently include the Schools of Liberal Arts, Science, and Journalism. The department offering the minor will define the requirements for completing the minor. Students will be required to follow the departmental rules regarding grades, IUPUI credit hours, and course requirements. Students must consult with an advisor in the department offering the minor. The minor will appear on the student's official transcript. No more than two minors may appear on the transcript.

Overseas Study Programs

The Kelley School of Business offers students the opportunity to study overseas for one semester so that they may gain exposure to other cultures and to international business and economic institutions. A study tour is incorporated into the program, enabling students to visit government and political institutions. Multinational firms are visited throughout the semester.

Qualified students may participate in programs in Australia, Chile, Finland, France, Germany, Japan, the Netherlands, and Singapore, among others. Additional information is available in the undergraduate office, Business/SPEA Building 3024.

The overseas study program will fulfill the international dimension requirement. (See the "Undergraduate Curriculum" section of this bulletin.)

Second Bachelor's Degree

Normally, the holder of a bachelor's degree who wishes to pursue further education is encouraged to seek admission to a graduate program. For example, students interested in taking the additional courses necessary to sit for the C.P.A. exam are encouraged to apply to the Master of Science in Accounting Program. In certain cases, however, the undergraduate program of the Kelley School of Business may admit students who have already earned a bachelor's degree in an area other than business. In such cases, candidates must earn at least 30 additional credit hours in residence and meet the requirements of the Kelley School of Business and of their selected majors. The candidate will, of course, be exempt from any requirements already fulfilled in acquiring the first bachelor's degree.

Students who have already earned a bachelor's degree in business are not eligible to earn a second bachelor's degree in business.

Updated 1-26-12

Student Learning Outcomes

The Kelley School of Business has adopted and supports these Principles of Undergraduate Business Learning. These principles are tailored and prioritized to the needs of a business education and reflect the intellectual

competence and cultural and ethical awareness that every Kelley School of Business graduate should attain.

Faculty members in each discipline have been charged with determining which of the principles will be taught and assessed in each of their courses – and what graduates in that major will know and be able to do to illustrate competence in each of the four areas addressed by these principles.

Instructors must distribute the principles to students with descriptions of how the principles are enacted in the course. These Student Learning Outcomes apply to all undergraduate degree programs.

1. **Critical Thinking**
   The ability to synthesize and analyze information and ideas from multiple sources and perspectives:
   1. to arrive at reasoned conclusions and informed decisions
   2. and to solve challenging problems
   3. by evaluating the logic, validity, and relevance of data
   4. and using knowledge in order to generate and explore questions.

2 **Management, Leadership, and Ethics**
   The ability to make judgments with respect to individual and organizational conduct concerning citizenship, ethics, and the value of diversity in business:
   1. in order to make informed and principled choices regarding conflicting situations in personal, business, and public lives
   2. and to foresee the consequences of those choices.

3 **Communication**
   1. *Written Communication*
      The ability to analyze, interpret, and comprehend information sources and technology:
      - to effectively express ideas and facts
      - in a variet of written and visual formats.

   2. *Collaboration and Oral Communication*
      The ability to engage in active and professional communications and dialogue in business and the community:
      - to encourage, examine, and comprehend the viewpoints of others
      - by being effective in one-on-one and in group settings
      - in order to operate with civility and cooperation in a complex, diverse, and global business and social world.

4 **Professional Skills and Competencies**
   The ability to obtain substantial knowledge and understanding in at least one field of study while gaining exposure and knowledge in other related disciplines:
   1. to meet professional standards and demonstrate important skills and competencies, and
   2. to make efficient use of information and technology resources for intellectual, professional, community and personal needs.

Awards, Recognition and Scholarships

Scholarships available through the Kelley School of Business are based on academic achievement and/or financial need. Eligible candidates must be certified as students in the Kelley School of Business. Ordinarily, a student transferring from another institution must complete at least 26 credit hours of study at IUPUI to be considered for a scholarship.

The following is a partial list of awards made to IUPUI students in the Kelley School of Business:

- Ginny Marzke Memorial Scholarship
- John W. Berry Memorial Scholarship
- Chancellor's Scholar Award
- Delta Sigma Pi Award
- Irwin Katz Accounting Excellence Award
- J. Dwight Peterson Key Award
- Outstanding Underclassmen Honors Awards
- Hazel P. Chattaway Scholarship
- Roger Jerman Scholarship
- American United Life Scholarship
- Bank One Outstanding Finance Student Scholarship
- United Parcel Service Scholarships
- Ralph L. Swingley Scholarship
- Data Processing Services, Inc., Scholarship
- Gordon C. Miller Scholarship
- Hoosier Warehousing Scholarship
- Indianapolis Traffic Club Scholarship
- Magnum Logistics Scholarship
- Vitran Express Marketing Distribution Scholarship
- Indiana Motor Truck Association Gold Club Scholarship
- HGI-Landacq Corporation Award
- KSBI Finance Award
- Klapper Scholarship
- First Indiana Bank Scholarships
- Tax Executives Institute Scholarship
- Slattery and Holman Scholarship
- Rolls-Royce Scholarships
- Key Bank Scholarship
- Hub Group Academic Scholarship
- Elliot and Estelle Nelson Family Scholarships
- William F. Buchanan Scholarship
- Women in Management Scholarship
- L. L. Waters Transportation Awards

In addition, scholarships and awards are generally given to outstanding students in each major.

Academic Distinction

Academic distinction for excellence in scholarship is awarded at Commencement to a limited number of students graduating with the Bachelor of Science in Business degree. The number of students so honored will not exceed 10 percent of the graduating class in the school for that year.

Students whose grade point averages are in the highest 1 percent and who complete at least 60 credit hours at

Indiana University graduate with "highest distinction"; those whose grade point averages are in the next highest 4 percent and who complete at least 60 credit hours at Indiana University graduate "with high distinction"; and the remaining 5 percent who complete at least 60 credit hours at Indiana University will graduate "with distinction."

The grade point averages necessary to achieve these levels of distinction vary depending on class statistics. Graduates receiving these honors have them so noted on their diplomas and in the Commencement program and are eligible to wear cream and crimson fourragres at Commencement.

Dean's Honor List

All undergraduate students in the Kelley School of Business who are taking at least 6 credit hours during a fall or spring semester and who have a semester grade point average of 3.5 or higher are placed on the Dean's Honor List. These honor students receive letters from the dean recognizing their meritorious efforts.

Updated 2-18-2010

Admissions

Evening M.B.A. Program

Whether you have previously applied as a Kelley non-degree student or you are applying for the first time, you should submit the following items by the appropriate deadline for the Evening M.B.A. program [April 1 for August admission and November 1 for January admission]:

1. Kelley Evening M.B.A. Application
2. IUPUI Graduate Application
3. Official GMAT scores (submitted from Pearson VUE; site code for the MBA program in Indianapolis: GKS-8M-27)
4. Official transcripts from all universities attended (You will not be required to send transcripts from any Indiana University institution.)
5. Two letters of recommendation
6. Resume
7. Essay (Question may be found on the Kelley Evening M.B.A. Application)

Submit your official transcripts from all college and/or universities attended and two letters of recommendation to the following address:

Kelley School of Business School
Evening MBA Program
801 West Michigan Street, BS 3024
Indianapolis, IN 46202-5151

For specific information about the Evening MBA admission process visit kelley.iupui.edu/evemba/Admissions/index.cfm.

M.S.A. Program

M.S.A. applications are now being accepted on a rolling basis.

1. M.S.A. Online Application
2. Indiana University Graduate School Online Application
3. Resume
4. GMAT Results (submitted from Pearson VUE; Kelley School of Business GMAT code: GKS-8M-02)
5. Official college and/or university transcripts from all institutions attended
6. Two letters of recommendation

Submit your official transcripts from all college and/or universities attended (except for Indiana University) and two letters of recommendation to the following address:

Kelley School of Business
MSA Program
801 West Michigan Street, BS 3024
Indianapolis, IN 46202-5151

For specific information about Kelley M.S.A. admissions visit kelley.iupui.edu/msa/admissions/index.cfm.

M.S.T. Program

Students may apply to the program after completing a bachelor's degree from an accredited college or university or during their senior year of college or have completed a law degree. An undergraduate major in accounting is not a requirement, however, applicants must have taken A201 Principles of Financial Accounting or the equivalent.

The evaluation of an admission application is primarily an appraisal of an applicant's capability to pursue graduate work at Indiana University. This appraisal involves both a quantitative and qualitative assessment. In the qualitative phase, letters of reference, any work experience and other elements of the applicant's resume are reviewed. The quantitative component assesses the applicant's academic credentials as based on his or her GPA and score on the Graduate Management Admissions Test (GMAT) or LSAT for lawyers or students enrolled in law school.

Online Application

Submit the M.S.A. Online Application and the IUPUI Graduate Application.

- Within the Kelley application, for the *Plan* choose **Taxation MS**.
- Within the University Application, for *Academic Program* choose **Kelley School of Business Master of Accounting** and for the *Major* choose **Taxation MS**.

Letters of Recommendation

The format for the Letters of Recommendation can either be a personal letter or completion of the M.S.A. form .

Transcripts, resume, and letters of recommendation should be sent to the address below:

Kelley School of Business Indianapolis
M.S.A./M.S.T. Program Office
801 West Michigan Street, BS 3024
Indianapolis, Indiana 46202-5151
For more information about the M.S.T. program visit kelley.iupui.edu/mst.

Master of Business Administration

The Indiana University M.B.A. Program is recognized as one of the top graduate business programs in the country. It offers three programs that lead to the Master of Business Administration degree.

Admission to any of the programs is selective and is based on the evaluation of several factors, including results from the Graduate Management Admissions Test, undergraduate performance, essays, recommendations, work experience, leadership, and other indicators of potential for success in a rigorous program of study and in a business career.

Bound by a common body of knowledge and philosophy, each program is designed to meet the diverse needs of students at different levels of career development and responsibility. For further information on the curriculum, format, prerequisites, and admission requirements for each program, contact the specific program of interest.

Evening M.B.A. Program, Indianapolis Campus

Candidates for the Evening M.B.A. degree program in Indianapolis come from diverse academic backgrounds and represent many businesses and industries. The program incorporates a wide range of business issues and integrates business disciplines to provide a strong program experience. Study teams and networking play an integral part in the evening program. Skill building in the areas of leadership, collaborative decision-making, teamwork, and communications are integral aspects of the total program experience.

Modules of study generally span one semester with class meetings two nights per week. A streamlined 32-month, 51-credit-hour program allows for maximum planning and integration with career and personal commitments.

Qualified people from all academic backgrounds who represent any business or industry and who are motivated to study in a challenging graduate business program are encouraged to apply for admission to graduate programs in the Kelley School of Business at Indiana University in Indianapolis. Application materials are due in the M.B.A. office by April 15 for August entry and by November 1 for January entry. For information, contact:

The cohort structure: each entering group of newly admitted M.B.A.'s forms a student cohort that moves through the MBA core courses together. Within each cohort there are smaller study groups that may work together on projects and study teams. Cohorts elect representatives during the first semester who becomes their voice for the Evening M.B.A. Association (the student advisory board) and with the M.B.A. staff and faculty.

M.B.A. students may take a variety of the electives for the 19.5 hour requirement or focus 10.5 or more in one area for a major. Majors are:

- Accounting
- Finance
- General administration
- Marketing
- Entrepreneurship
- Supply Chain Management

International opportunities: from the small business to the international corporation, every business interaction, product, and service has the potential to have a global impact. From our internationally experienced faculty to our course offerings, we will prepare you to thrive in that environment. One example is the China in Transition summer course, which provides M.B.A. students a hands on opportunity to gain international and consulting experience.

Students do background preparation in the first part of the semester and then travel to mainland China. There, they partner with students from City University of Hong Kong in a weeklong consulting assignment that culminates in a presentation to the Chinese host company.

Business enterprises: enriching education with practical experience often means extending learning beyond the classroom. The evening M.B.A. enterprise program engages Kelley M.B.A. students in strategic assignments with Central Indiana companies, offering a unique opportunity for all involved to benefit. Through a competitive selection process, the enterprise program is open to second- and third-year Kelley M.B.A. students. Three enterprises are currently available:

- Discovery, Innovation and Ventures Enterprise (DIVE)
- Finance Development Enterprise (FIND)
- Global Supply Chain Innovation Enterprise (gSCIE)

Benefits: membership in an enterprise benefits a student in the following ways:

- Enterprise projects enable you to experiment with a new career identity with little risk but potentially great reward. As a first-year M.B.A. student you will attend a series of lectures by local business leaders from a variety of fields, designed to give you a look inside new career options and networking opportunities. At the same time, you will complete a series of career self assessment tools and attend seminars on professional development culminating in the creation of a career strategy memo. Project completion will provide a useful focus for job interview discussions, especially if you are interested in changing a career track. During your second year of M.B.A. study, you will have the opportunity to apply for a more intensive real world experience.
- The breadth of a student's professional opportunity is only as big as your network of professional contacts. Enterprise directors will purposefully generate opportunities for you to talk with individuals in the Central Indiana business community who can offer targeted professional guidance. The relationship with an enterprise director enables you to receive

customized coaching that is available nowhere else in the M.B.A. curriculum.
- Each enterprise is a community of M.B.A. students with similar interests. This enhances the process of peer or learning within the program. Enterprise directors will offer opportunities for social engagement that strengthen personal ties between enterprise members.

M.B.A. Program, Bloomington Campus

Bloomington's program is a full-time, two-year residential program taught during the day for students who plan to take a leave from their careers while they pursue graduate education. For information, contact:

Director of Admissions and Financial Aid, Graduate Programs

Kelley School of Business

Indiana University

1309 E. Tenth Street

Bloomington, IN 47405-1701
Phone: (812) 855-8006

Kelley Direct Online M.B.A. Program

The Kelley Direct Online M.B.A. Program is designed for professionals who wish to continue their employment while earning their M.B.A. The Kelley Direct Program is the only such graduate management program offered by a top-20 business school that is almost exclusively delivered entirely over the Web.

Among the tools used are discussion and debate forums, online testing, audio streaming and video streaming, and simulations for case-based learning. Course materials, including audio and video presentations and virtual tours, may be accessed directly from the Web. The class interaction is asynchronous with some synchronous elements, allowing students the flexibility to balance family and career demands. For information, contact:

Doctoral Programs, Bloomington Campus

Indiana University offers two doctoral programs in business: the Doctor of Philosophy (Ph.D.) and the Doctor of Business Administration (D.B.A.). The Ph.D. is awarded through the University Graduate School, and the D.B.A. is awarded through the Kelley School of Business. The D.B.A. has been offered since February 1954; the Ph.D. in business since October 1, 1982.

The Office of Doctoral Programs in the Kelley School of Business administers both programs. Students may select either degree designation at the time of application. It is possible to switch from one degree program to the other, provided all the requirements of the new degree are met. While the objectives and requirements for both degrees are quite similar, there are some differences. Applicants should decide which degree best fits their career and intellectual objectives. For more information, contact:

Majors

In our part-time MBA program, students may complete a general administration degree or choose among five majors.

Accounting

1. MBA Core classes (30 hours)
2. Required Accounting courses (12 hours)
   - BUS-A510 Financial Accounting Theory & Practice I - 3 hrs.
   - BUS-A511 Financial Accounting Theory & Practice II - 3 hrs.
   - BUS-A514 Auditing Theory & Practice or A562 - 3hrs.
   - BUS-A515 Federal Income Taxes - 3hrs.
3. MBA electives (9 hours)

Students with undergraduate majors in Accouting or Finance should inquire with the Graduate Accounting Office regarding requirements for the Accounting Major.
Total: 51 hours

Entrepreneurship

1. MBA Core classes
2. Required Business Plan Foundations (3 hours)
   - BUS-W511 Venture Strategy - 3 hrs.
3. Required New Venture Business Functions (3 hours minimum) - choose from below:
   - BUS-M503 Applied Market Research - 3 hrs.
   - BUS-F517 Venture Capital - 1.5 hrs.
   - BUS-M506 Marketing Engineering - 1.5 hrs.
4. Field Experience (1.5 hours) - choose from below:

- BUS-X524 Enterprise Experience 2 - 1.5 hrs.*
- BUS-W525 Venture Club & Community - 1.5 hrs.
- BUS-D546 China in transition - 3 hrs.

5. If total credits in previous Entrepreneurship requirements are less than 10.5 hours, then choose from the following list so that total credit hours equal 10.5:
   - BUS-M511 Marketing Performance & Productivity Analysis
   - BUS-P552 Project Management - 1.5 hrs.
   - BUS-W520 Turnaround Management - 1.5 hrs.
   - **BUS-D594 International Competitive Strategies
   - **BUS-D 595 International Management
6. MBA electives (10.5 hours)

*BUS-X523 Enterprise Experience 1 may not be applied towards the major
**(Cannont count both D594 and D 595)

Total: 51 hours

Finance

1. MBA Core classes (30 hours)
2. Required Finance courses (3 hours)
   - BUS-F520 Asset Valuation & Strategy -1.5 hrs.
   - BUS-F540 The Firm in the Capital Market - 1.5 hrs.
3. Advanced Finance electives (7.5 hours) - choose from below:
   - BUS-F509 Advanced Capital Budgeting - 1.5 hrs.
   - BUS-F517 Venture Capital & Entrepreneurial Finance - 1.5 hrs.
   - BUS-F525 Corporate Financial Risk Management - 1.5 hrs.
   - BUS-F526 Derivative Securities - 1.5 hrs.
   - BUS-F528 Fixed Income Investments - 1.5 hrs.
   - BUS-F529 Equity Markets - 1.5 hrs.
   - BUS-F548 Corporate Governance & Restructuring - 1.5 hrs.
   - BUS-F570 International Financial Markets - 1.5 hrs.
   - BUS-F571 International Corporate Finance - 1.5 hrs.
4. MBA electives (10.5 hours)

Total: 51 hours

General Administration

1. MBA Core classes (30 hours)
2. MBA electives (21 hours)

Total: 51 hours

Marketing

1. MBA Core classes (30 hours)
2. Required Marketing courses beyond the Core (3 hours)
   - BUS-M503 Applied Marketing Research - 3hrs.
3. Choose 3 hours from below:
   - BUS-M506 Marketing Engineering - 1.5 hrs.
   - BUS-M595 Market Tests and Experiments - 1.5 hrs.
   - BUS-M513 Marketing Strategy Simulation - 1.5 hrs.
   - BUS-M511 Marketing Performance and Productivity Analysis - 1.5 hrs.
4. Choose additional 4.5 hoursof advance Marketing classes
5. MBA electives (10.5)

Total: 51 Hours

Supply Chain Management

1. MBA Core classes (30 hours)
2. Required Courses (6 hours)
   - *Supply Chain Foundations - 1.5 hours each*
     Bus-P561 Global Supply Chain Management - Fall
     Bus-P509 Supply Chain Operations – Fall
   - *Supply Chain Projects & Processes – 1.5 hours each*
     Bus-P552 Project Management – Fall
     Bus-P527 Ops Process I – Spring
3. Field Project (1.5 hours) - choose from below:
   - BUS-P528 Ops Process II – Spring, 1.5 hrs.
   - BUS-X524 Enterprise Project – Summer, 1.5 hrs.
   - BUS-P590 Independent Study in Operations (requires faculty approval)
4. Supply Chain Electives (3 hours) - choose from the following:
   - BUS-M550 Customer-Oriented Strategies - 1.5 hrs.
   - BUS-W519 Knowledge Management - 3 hrs.
   - BUS-F509 Financial Analysis for Corporate Decisions - 1.5 hrs.
   - BUS-K510 Advanced Decision Models - 1.5 hrs.
   - BUS-P590 Independent Study in Operations Management (requires faculty approval)
   - BUS-W550 Management Consulting and Strategy - 3hrs.
   - BUS-F571 International Corporate Finance - 1.5 hrs.
   - BUS-P510 Service Operations - 1.5 hrs.
   - BUS-M594 International Marketing - 1.5 hrs.
   - BUS-A511 Financial Accounting Theory and Practice II - 3 hrs.
   - BUS-K516 Quantitative Decision Models - 1.5 hrs.
   - BUS-M503 Applied Marketing Research - 3 hrs.
   - BUS-W516 Organizational Development and Change - 3 hrs.
   - BUS-A560 Auditing Information Technology - 3 hrs.
   - BUS-P527 Process Improvement I - 1.5 hrs.
   - BUS-P528 Process Improvement II - 1.5 hrs.
   - BUS-M595 Special Topics in Marketing - 1.5 hrs.
   - BUS-D546 China in Transition - 3 hrs.*

- **BUS-D594 International Competitive Strategies
- **BUS-D595 International Management

5. MBA electives (10.5 hours)

*There is a 1.5 hour section of this course that does not include the trip to China
**(Cannot count both D594 and D595)

Total: 51 hours

Degree Programs

The Kelley School of Business offers the following graduate degrees:

Master of Business Administration (M.B.A.)

- Accounting
- General Administration
- Entrepreneurship
- Finance
- Marketing
- Supply Chain Management

Master of Science in Accounting (M.S.A.)

Master of Science in Taxation (M.S.T.)

For more information regarding the IU Kelley School of Business graduate programs please vist our website (kelley.iupui.edu).

Master of Science in Accounting

The Master of Science in Accounting program (M.S.A.) is devoted to teaching the skills required of today's accountant. The plan of study ensures that students are not only well versed in the technical aspects of their chosen specialty but also the nontechnical skills that are required for them to become true leaders in industry and government.

M.S. in Accounting Program, Indianapolis Campus

Students may apply to the M.S. in Accounting program with or without academic background in business or accounting. Those students entering the program with a bachelor's degree in business normally must complete a minimum of 30 credit hours of course work. Those with backgrounds in other fields may be required to do additional work to develop expertise in the core areas of business.

Students may apply to the program after completing a bachelor's degree. Admission selection is based on the evaluation of several factors, including results from the Graduate Management Admissions Test (GMAT), undergraduate performance, recommendations, and work experience.

Prerequisites

1 BUS-F301 Financial Management
1 BUS-M301 Intro to Marketing Management
1 BUS-P301 Operations Management
1 ECON-E201 Intro to Microeconomics
1 ECON-E270 Statistics
1 BUS-L203 Commercial Law I
1 BUS-A201 Intro to Financial Accounting*
1 BUS-A311 Intermediate Accounting I
1 BUS-A325 Cost Accounting

*A201 is the only prerequisite course for MST students

M.S.A. Degree Requirements:

1. M.S.A. Core Classes (16.5 credit hours)

- BUPA-A 511 Financial Accounting Theory & Practice II 3 cr. hr.
- BUPA-A 515/A 328 Federal Income Taxes 3 cr. hr.
- BUPA-A 551 Tax Research (concurrent with A 515 1.5 cr. hr.
- BUPA-A 514/A424 Auditing Theory & Practice 3 cr. hr.
- BUPA-A 523 Business Information Systems 3 cr. hr.
- BUPA-L 503 Advanced Business Law 3 cr. hr.

2. Accounting Electives (6 credit hours)

- Choose from any BUPA-A XXX classes except for A 529 LIPE (counts as non-accounting elective)

3. Accounting/Non-Accounting/Business/Other Elective (7.5 credit hours)

Students who have had equivalent undergraduate courses may not retake, but must replace. A total of 15 credit hours of accounting course work must be completed toward the M.S. degree in Accounting.

Total: 30 hours

For further information on the curriculum format, prerequisites, and admission requirements, contact:

M.S.A. Program

Updated 1-26-12

Master of Science in Taxation

The Master of Science in Taxation (M.S.T.) is a 30.0 credit hour degree program designed to (1) to prepare graduates for entry level positions in public and private accounting in taxation and (2) provide graduate-level education for tax professionals who desire to enhance their specialized tax knowledge.

The M.S.T. is a specialized degree program aimed to equip students with the highly technical and demanding skills required to provide tax and business advice in the

private sector as well as administer the tax laws in the public sector of the economy.

Students may apply to the program after completing a bachelor's degree from an accredited college or university or during their senior year of college or have completed a law degree. An undergraduate major in accounting is not a requirement, however, applicants must have taken A201 Principles of Financial Accounting or the equivalent.

M.S.T. Degree Requirements:

1. M.S.T. Core Classes (18 credit hours)

- BUPA-A 515/A 328 Federal Income Taxes 3 cr. hrs.
- BUPA-A 551 Tax Research (concurrent with A 515) 1.5 cr. hrs.
- BUPA-A 539 Corporate Tax I 3 cr. hrs.
- BUPA-A 538 Corporate Tax II 3 cr. hrs.
- BUPA-A 556 Periods & Methods 3 cr. hrs.
- BUPA-A 522 Partnerships 3 cr. hrs.
- BUPA-A 555 S Corps 3 cr. hrs.

2. Electives (12 credit hours)

Students who have had equivalent undergraduate courses may not retake, bu must replace.

Total: 30 hours

For further information on the curriculum format, prerequisites, and admission requirements, contact:

Student Learning Outcomes

- Master of Business Administration-Evening
- Master of Science in Accounting
- Master of Science in Taxation

Evening - Master of Business Administration (M.B.A.)

Student who earn the M.B.A. will achieve the following program goals:

1. **Critical Analysis and Problem Solving**
   Students who earn the M.B.A. degree will be able to identify, integrate and apply the appropriate tools and techniques of business, drawing on knowledge of the major functions (accounting, economics, finance, quantitative methods, marketing, operations management, and strategy) to critically understand, analyze and solve complex business problems that may arise in both the domestic and the global arenas.

2 **An Integrative and Global Perspective**
Students who earn the M.B.A. degree will demonstrate a thorough understanding of how various external forces in the global economy (e.g., economic, political, regulatory, competitive, environmental and cultural) shape management alternatives, strategies and operational decisions and to foresee the potential business outcomes.

3 **Leadership and Effective Team Collaboration**
Students who earn the M.B.A. degree will demonstrate the leadership and teamwork skills necessary for productive and effective management and decision-making. Encouraging, examining, and comprehending the diverse views of others across different cultural, ethnic, and economic groups and stakeholders will be an important aspect of this learning goal.

4 **Ethical Decision-Making**
Students who earn the M.B.A. degree will demonstrate an ability to recognize ethical and related legal issues that arise in domestic and international environments and will be able to formulate, articulate and defend alternative solutions.

5 **Effective Communication**
Students who earn the M.B.A. degree will demonstrate an ability to effectively express ideas and facts in a variety of oral, written and visual communications.

6 **Professional Skills and Personal Development**
Students who earn the M.B.A. degree will develop an actionable plan for individual career and professional skills development that encompasses reflective self-assessment, the setting of personal and professional goals and the acknowledgement of tradeoffs which must be made to attain those goals, and the consideration of their future contributions to business and the community as alumni of the Kelley School of Business.

Master of Science in Accounting (M.S.A.)

Student who earn the M.S.A. will achieve the following program goals:

1. **Accounting Knowledge**
   The overriding goal of the M.S.A. Program is to ensure that its graduates will be well grounded in fundamental accounting principles relating to financial statement preparation and analysis, management decision making, internal controls and security, risk assessment, business processes, auditing and assurance and principles of federal income taxation. All M.S.A. graduates will have sufficient awareness of the concepts of accounting and tax to recognize problems and concerns that may require further research.

2 **Accounting Research**
Graduates will be competent in researching the accounting, tax, and business related research sources as well as other financial literature

independently to solve problems that are beyond the scope of fundamental accounting and tax knowledge. They will have access to major accounting and tax data services and training in their use. Graduates will develop the research skills that will enable them to be successful in their professional career as well as become lifetime learners.

3 **Critical Thinking**
Graduates will have the ability to analyze, integrate and communicate complex accounting, tax and financial information to arrive at reasoned conclusions and make informed decisions. They will be able to solve challenging problems by evaluating the logic, validity, and relevance of data. They will be able to recognize issues and raise concerns regarding potential problem situations. Graduates will achieve disciplinary competence in specialized areas.

4 **Communication Skills**
Graduates will be able to communicate in a clear, concise and effective manner in both written and oral form.

5 **Professional Responsibilities**
Graduates will be aware of their professional responsibilities concerning ethical choices they will encounter in the accounting, tax and financial reporting regulatory environments. They will understand the roles of accountants in society in providing and ensuring the integrity of financial and other information.

6 **Professional Development**
Graduates will appreciate the need to set career goals. They will understand the importance of networking, developing professional relationships and becoming involved in professional organizations. They will understand the nature of leadership and the importance of volunteering. They will not only be able to work independently but also will have a better understanding of how to work with others and function in a team setting.

Master of Science in Taxation (M.S.T.)

Student who earn the M.S.T. will achieve the following program goals:

1. **Taxation Knowledge and Skills**
Graduates should possess advanced knowledge of the tax laws as they affect individuals, business entities and nonprofit organizations (e.g., corporations, partnerships, trusts, estates, and tax-exempt organizations). Their knowledge should include exposure to not only federal tax concerns but also those relating to state, local and international taxation. Graduates should understand the practical tax implications surrounding common situations and be capable of effectively analyzing tax issues and formulating solutions.

2 **Tax Research**
Graduates should be capable of formulating defensibly correct solutions to tax problems based on analysis of the relevant tax authority, including the law and administrative and judicial interpretation of the law.

3 **Written and Oral Communication Skills**
Students should be able to communicate effectively verbally and should be able to effectively communicate tax research findings and advocate positions in writing.

4 **Taxation in a Global Context**
Students should understand the role of taxation as it relates to accounting, finance, business, economics, government and politics.

5 **Critical Thinking**
Graduates will have the ability to analyze, integrate and communicate complex, tax and financial information to arrive at reasoned conclusions and make informed decisions. They will be able to solve challenging problems by evaluating the logic, validity, and relevance of data. They will be able to recognize issues and raise concerns regarding potential problem situations.

6 **Social and Interpersonal Interaction Skills**
Students should be able to work effectively and efficiently within a team.

Graduate Programs

The Kelley School of Business offers the following graduate degrees:

Master of Business Administration (M.B.A.)

- Accounting
- General Administration
- Entrepreneurship
- Finance
- Marketing
- Supply Chain Management

Master of Science in Accounting (M.S.A.)

Master of Science in Taxation (M.S.T.)

For more information regarding the IU Kelley School of Business graduate programs please vist our website (kelley.iupui.edu).

Departments & Majors

In addition to the general-education and general business curricula discussed previously, students pursuing a B. S. in Business degree must select a major within the business program. The major, along with the curriculum for working toward that major, are presented by department in this section and are summarized below.

- Department of Accounting and Information Systems
- Department of Business Law
- Department of Finance
- Department of Management
- Department of Marketing

- Department of Operations

Major requirements are subject to change during the two years covered by this bulletin. Students are expected to stay informed of major changes by seeing a business academic advisor on a regular basis.

Department of Accounting and Information Systems

Accounting Major

The accounting curriculum prepares students for careers in auditing, corporate accounting and management consulting, governmental and nonprofit organizations, and taxation. In addition, it equips the prospective business executive with tools for intelligent analysis, planning, control, and decision making. The accounting curriculum also provides excellent background for the student who wants to pursue graduate work in business, public administration, or law.

Beginning in the fall of 2006, the general-education requirement for accounting majors was reduced to 47 credit hours. This limit applies only to accounting majors. Nine additional credit hours are required for the nonaccounting concentration. Accounting graduates who meet the requirements of the State Board of Public Accountancy of Indiana are eligible to sit for the Uniform C.P.A. Examination in Indiana. Most accounting graduates will need to engage in further study to be eligible to sit for the exam.

Those who wish to engage in public accounting practice in Indiana as certified public accountants should familiarize themselves with the rules and regulations issued by the Indiana State Board of Accountancy, Indiana Professional Licensing Agency, 302 W. Washington Street, Rm. E034, Indianapolis, IN 46204-2724; phone (317) 232-2980. Students planning practice outside Indiana should consult the C.P.A. board in their state of residence. Call 1-800-CPA-EXAM for additional information.

Internships in business or government are available on a selective basis during the fall, spring, or summer. Fall is the ideal time to apply for an accounting internship, as the majority of public accounting internships are spring-semester positions. For further information about internships, contact the Kelley Career Placement Office, Business/SPEA Building 4090; phone (317) 278-7842.

Major Requirements

Junior and Senior Years:

- BUS-A 311, BUS-A 312, BUS-A 325, BUS-A 328, BUS-A 337, BUS-A 424, and BUS-A302
- Two accounting electives from the following: BUS-A 375, BUS-A 335, BUS-A 339, BUS-A 380, BUS-A 422, BUS-A 439, BUS-A 460, BUS-A 490, or another approved accounting or systems course.

Nonaccounting concentration (9 cr.): Students must use these hours to build a three-course sequence that comprises a concentration. The concentration creates an expertise that is typically in a nonaccounting business area (e.g., international business or finance). However, a concentration that includes non-business courses (e.g., courses in criminal justice or computer technology) may be acceptable.

This concentration might be obtained in a number of ways. For example, students might construct a three-course sequence in a particular area such as finance, computer information systems, or something similar. Information about preapproved concentrations may be obtained from the Kelley School of Business advisors. Students may construct their own concentration, but all proposed concentrations must have approval from an accounting or systems faculty member. Students also are encouraged to use this flexibility to double major in a business area or to earn an outside minor.

One minor that students can pursue that is for Accounting students only is the Criminal Justice Accounting Minor. This is offered through the School of Public and Environmental Affairs. Three courses from the minor can be used as the non-accounting concentration and then two more courses are needed for the minor. There is also a PDF check sheet that lists the classes for the Criminal Justice Accounting Minor.

CPA Exam Preparation

Two accounting electives are required for the accounting degree. However, the accounting faculty strongly recommends that students who are interested in professional accounting careers and becoming a Certified Public Accountant (CPA) should take the following three elective courses:

- BUS-A 422 (Advanced Financial Accounting)
- BUS-A 339 (Advanced Income Tax)
- BUS-A 335 (Fund Accounting)

Additionally, the following course would be helpful in preparing for the CPA Exam.

- BUS-A 439 (Advanced Auditing)
- BUS-A 460 (Information Systems Security Assurance)

Internal Auditing Focus

Students who do not choose to pursue a career as a CPA but who want to pursue a career in internal auditing, should select the following two electives.

- BUS-A 344 (Internal Auditing, Entrprise Risk Management and Assurance)
- BUS-A 469 (Information Systems Security Assurance)

Note: Most states (including Indiana) require accounting professionals who wish to be licensed as certified public accountants to complete 150 credit hours of education with an accounting major. Students must choose among three alternatives. Students who plan to forego C.P.A. licensure may begin their careers after four years with a bachelor's degree. Students interested in licensure may either apply to the Master of Professional Accountancy program and continue for a fifth year to earn a master's degree (fulfilling the 150-hour requirement) or enter the workforce after four years (with the bachelor's degree) and continue to work toward the master's as part-time or returning students.

The Department of Accounting has created a Master of Professional Accountancy Program for students wishing to pursue licensure.

Updated 1-30-12

Department of Business Law

The business law department's course offerings acquaint students with a critical external factor affecting business operations: the law. The courses provide students with an understanding of the nature, functions, and practical operations of the legal system.

They also provide considerable information about the most important legal rules restricting—and facilitating—business operations. Finally, they help develop both critical-reasoning skills and an appreciation of the social, ethical, and economic forces that help make the law what it is.

Although a major in business law is not currently available on the Indianapolis campus, courses in this department may be elected to enhance most other business majors.

Department of Finance

The finance undergraduate curriculum provides a high degree of flexibility while offering the basic preparation needed to deal with the complexities of the modern financial environment.

All students in the major must take a common core of three courses: BUS-A 310, BUS-F 303, and BUS-F 305. These three courses provide a basic grounding in financial accounting systems, the capital and money markets, and corporate financial decision making. An understanding of these areas is necessary for someone who is planning a career in finance.

Finance Major

The undergraduate curriculum in this major is designed to provide familiarity with the instruments and institutions of finance and with a financial approach for structuring and analyzing management decisions. Course offerings are designed to integrate various aspects of the environment—such as the state of the economy, taxes, and legal considerations—into the decision-making process.

Study in finance, along with appropriate electives, provides academic preparation for careers in corporate financial management; commercial banking, savings and credit institutions; investment analysis; and the selling of financial instruments and services.

Candidates are encouraged to select electives in accordance with career objectives.

Major Requirements

Junior and Senior Years:

Finance core requirements:

- BUS-A 310
- BUS-F 303
- BUS-F 305

Students select two of the following:

- BUS-F 402
- BUS-F 420
- BUS-F 446
- BUS-F 494

Students select three of the following:

- BUS-A 312
- BUS-A 325
- BUS-A 328
- BUS-R 305
- BUS-R 440
- BUS-R 443
- ECON-E 305
- ECON-E 470
    - May choose from the following. Courses chosen for section above may not be counted here
- BUS-F 402
- BUS-F 420
- BUS-F 446
- BUS-F 494

Note: Double majors in finance and accounting may take any accounting course other than BUS-A 100, BUS-A 201, and BUS-A 202 as a Section C elective. In addition, double majors must take BUS-A 311 in lieu of BUS-A 310.

Updated 1-17-12

Department of Management

The Department of Management encompasses the areas of management, human resource management, organizational behavior, business policy, and international business. The curriculum is designed to offer students either a broad-based background preparing them for entrance into managerial positions or specialized training in an area of concentration.

At the undergraduate level, the department offers a major in management or human resource management, as well as the option to pursue a second major in international studies.

Management Major

Society recognizes the importance of understanding both management itself and the complex nature of the organizations—in business, government, hospitals, and universities—in which managers operate. The faculty is devoted to improving this understanding through the study of individual and group behavior, organizational theory, and human resource development.

The undergraduate courses offered in this major focus not only on the broad aspects of management and organization, but also on developing skills for dealing with problems of motivation, organization design, and the increasingly complex problems of human resource allocations in our interdependent society.

This major provides the flexibility to accommodate students whose interests include preparation for corporate management training positions, application of behavioral science to management, personnel function in both line and staff capacities, and managing the small business.

Major Requirements

Junior and Senior Years:

- BUS-W 430 and BUS-Z 340
- Four of the following (a minimum of two must be business courses):
    - BUS-D 301, BUS-D 302, BUS-J 404, BUS-W 406, BUS-W 311, BUS-Z 494, BUS-Z 404, and BUS-Z 441

- ECON-E 304
- OLS 378
- PSY-B 370 and PSY-B 424
- SOC-R 317 and SOC-R 478
- Any 400-level Kelley School of Business course approved by a business advisor
    - Internships do not count toward the management elective

Human Resource Management Major

This program is designed for students whose career objectives lie in the field of personnel management. From its early beginnings as a staff function involving the maintenance of records and the administration of benefit programs, personnel administration has grown to encompass the total development and deployment of human resources in organizations.
While company titles may vary from vice president of industrial relations to vice president for organization planning and development, few firms of any size or consequence today do not have a human resource management specialist reporting directly to the company's highest level. This practice reflects the awareness that the people who work in an organization are its greatest asset.

For this reason, the curriculum in human resource management is designed to acquaint the student with modern personnel management in its broadest sense. Included are both the traditional areas of personnel administration and labor relations (such as employment, management development, wage and salary administration, organizational planning, and contract negotiation) and developments in the behavioral sciences that have implications for a complete human resource management program.

The objectives at the undergraduate level are to provide students with the broad spectrum of knowledge they need for a career in organizational leadership, to prepare them for a career in human resource management, and to encourage and develop interest in further study and research in this area.

Major Requirements

Junior and Senior Years:

- BUS-Z 340, BUS-Z 441, BUS-Z 443, and BUS-Z 445
- Two of the following:
    - BUS-W 430, BUS-Z 404, and BUS-X 480
    - OLS 331

International Studies Major

In response to new and dynamic patterns of international business, U.S. business firms have progressed far beyond the comparatively simple stage of import-export operations. Many companies are becoming multinational, with production units in numerous foreign countries. Private enterprise in the United States has become more intimately concerned with the economic, political, and social trends of foreign nations. The Kelley School of Business has recognized these developments in its global business programs. All students may elect two courses dealing with the general problems involved in international business: BUS-D 301 and BUS-D 302. They also may participate in overseas programs, which offer an opportunity to see firsthand the problems treated in the course of study, as well as the opportunity to enhance their language facility. Students who wish to continue studies in the international area may choose, as a second major, the international studies major. The international studies major is a second major only. It cannot be listed as a first major. The international studies major consists of 9 credit hours of course work taken in addition to the international dimension requirement. These 9 credit hours can be selected from the four options used for the international dimension requirement. (See the "General-Education Requirements" section of this bulletin.) See a business advisor to discuss the possible combinations for fulfilling this major's requirements.

Updated 3-30-12

Department of Marketing

Marketing Major

The study of marketing concerns all activities related to the marketing and distribution of goods and services from producers to consumers. Areas of study include customer behavior, the development of product offerings to meet consumer needs, pricing policies, institutions and channels of distribution (including retailers and wholesalers), advertising, selling, sales promotion, research, and the management of marketing to provide for profitable and expanding businesses.

The marketing curriculum endeavors to provide the business community with broadly trained graduates who can approach problems with a clear understanding both of marketing and of the interrelationships between marketing and other functions of the firm.

Students planning careers in marketing management, advertising, sales, sales management, retailing, wholesaling, marketing research, or distribution normally major in marketing and then may pursue within the curriculum a modest degree of specialization in the area of their vocational interest.

Major Requirements

Junior Year

- BUS-M 303

Junior and Senior Years

Select four courses from the list below:

- BUS-M 401
- BUS-M 402
- BUS-M 405
- BUS-M 407
- BUS-M 412
- BUS-M 415
- BUS-M 419
- BUS-M 426
- BUS-P 320

Senior Year

- BUS-M 450

NOTE: If a student chooses to take BUS-P 320 and BUS-M 412 along with BUS-P 421, BUS-P 429 and two of the following: BUS-M 401, BUS-M 402, BUS-M 407, BUS-M 419, the student completes requirements for the Marketing major as well as the Supply Chain Management major. This qualifies the student for certification from the American Society for Training and Logistics (AST&L). For information go to http://www.astl.org/i4a/pages/index.cfm?pageid-3313.

Updated 1-26-12

Department of Operations

The Operations Department is responsible for the Supply Chain Management major. Over the years, the Operations Department has maintained a tradition of excellence that continues to evolve as the dynamic field of operations management continues to advance.

Supply Chain Management

Many of today's most admired businesses—companies like FEDEX, Toyota, and Wal-Mart—dominate the competition using supply chains as competitive weapons. Supply chain management includes all the activities involved in planning, sourcing, making, and delivering goods and services between suppliers, manufacturers, intermediaries, and customers.

Its major areas of study revolve around products, information, and cash flows between supply chain partners as well as balancing supply and demand, managing supplier and customer relations, improving processes, fulfilling orders, developing logistics and transportation networks, and controlling returns.

Our curriculum not only provides students with the knowledge and skills to successfully launch a career in supply chain management, but also prepares graduates for advancement in terms of promotion and responsibilities. While some students concentrate on supply chain management, many others combine it with their interests in finance, marketing, information technologies, entrepreneurship, accounting, and international business as part of a double major. In most of today's fast-paced, complex, and increasingly global businesses, a fundamental understanding of supply chain management is often crucial to success.

Major Requirements

Junior and Senior Years

- BUS-M 412, BUS-P 320, BUS-P 421, and BUS-P 429
- Three of the following:
  - BUS-M 303
  - BUS-M 401
  - BUS-M 402
  - BUS-M 407
  - BUS-M 419
  - BUS-W 406
  - BUS-W 311
  - BUS-Z 404
  - BUS-D 301
  - BUS-A 325
  - BUS-A 337
  - BUS-A 310 or BUS-A 460
  - BUS-F 305
  - BUS-F 494

Updated 1-26-12

Policies and Procedures

Undergraduate Policies

Academic Regulations and Scholastic Standards

Under the General Scholarship Rule, any student who does not possess the necessary preliminary training or who lacks other qualifications may be required by the Committee on Admissions and Probation to enroll in courses as the committee may designate or to take other corrective action as is necessary or desirable. The committee may review a student's record at any time and may take whatever action seems necessary for the student's best interest or for the best interest of the school.

Upon the recommendation of the appropriate school committee and with the approval of the dean of the Kelley School of Business, any student whose work is unsatisfactory or whose conduct is unethical may be dismissed from the Kelley School of Business.

Academic Misconduct Indiana University and the Kelley School of Business expect that students will follow the fundamental principles of academic integrity in the pursuit of learning. Academic integrity requires that students take credit only for their own work and ideas. Violation of these principles is considered an act of academic misconduct.

The Kelley School of Business strictly follows the guidelines listed in the *Code of Student Rights, Responsibilities, and Conduct* and the Kelley School of Business Honor Code. In addition, the school's policy regarding the appropriate penalty for any degree of academic misconduct permits the removal of the student from the course involved, with a grade of F.

Academic Standing Those students who consistently maintain a minimum grade point average of 2.0 (C) or higher in their cumulative records are considered to be in good standing.

Auditing Courses Students are not permitted to audit undergraduate business courses or M.B.A. courses. See the Master of Professional Accountancy program chair for the current policy regarding audit of M.P.A. classes.

Columbus Students Transferring to IUPUI Students who matriculate to Indiana University-Purdue University Columbus (IUPUC) and who wish to earn a Kelley School of Business Bachelor of Science in Business degree must meet senior residency requirements and complete the last 30 credit hours and half of the major courses on the IUPUI campus. Students cannot take any of the final course work in Columbus to receive the Kelley School of Business degree. The eight-year statute of limitations (see "Graduation Requirements") mandates that students complete their degree requirements within eight years in order to earn a Kelley degree. IUPUC students who wish to earn a Kelley degree must apply for admission to the Kelley School of Business in Indianapolis by the stated deadlines and meet all Indianapolis program requirements. Students must also apply to graduate from the Kelley School of Business in Indianapolis.

Integrative Core Prerequisites The prerequisites for the Integrative Core are strictly enforced: a total of 56 credit hours or more of college-level work; overall cumulative GPA of 2.0 or higher; the following courses with a grade of C or higher:

- BUS-K 201
  - K201 or any equivalent course is only good for five years before a student is admitted to Kelley
- BUS-X 100
- BUS-X 103 or BUS-X 203
- BUS-X 204
- COMM-R 110 and
- ENG-W 131

and the following courses successfully completed with a passing grade and a grade point average of 2.0 or higher:

- BUS-A 100
- BUS-A 201
- BUS-A 202
- BUS-L 203
- ECON-E 201
- ECON-E 202
- ECON-E 270
- MATH-M 118 and
- MATH-M 119

Option 1 admission to the Kelley School of Business in Indianapolis does not guarantee admission into the Integrative Core.

Maximum Semester Credit-Hour Load A typical academic load for full-time students is 12 to 15 credit hours. A student expecting to carry more than 18 credit hours during a regular semester or 7 credit hours in a summer session should have a minimum cumulative grade point average of 3.0 (B) or have earned a 3.0 (B) grade point average in the previous full semester. Note: Summer is not considered for this purpose.

Military-Related Credit Both Army and Air Force ROTC programs are available at Indianapolis. Completion of either program leads to a commission as a second lieutenant. Programs are available to both men and women. Courses are pursued in conjunction with an academic curriculum and receive academic credit as electives.

Placement credit is available to veterans and students with high school ROTC backgrounds. Veterans of military service are also eligible for academic credit as a result of their military training and experience. The Kelley School of Business follows the provisions of the "Guide to the Evaluation of Education Experiences in the Armed Services" issued by the American Council on Education (ACE) in granting credit. Credit in business subjects is evaluated as "undistributed" and is subject to oral or written examination for specific equivalency. Credit hours may be limited by university policy.

Physical Education Courses Students may elect a maximum of 4 credits of elective physical education courses (HPER-E courses). Physical education courses carry regular credit, count toward minimum degree requirements, and are included in the cumulative grade point average.

Probation, Dismissal, and Readmission Students are sent a warning following any regular semester or summer session in which they fail to attain a semester grade point average of 2.0 (C). They are placed on critical probation whenever their cumulative grade point average is below a 2.0 (C). At the discretion of the Committee on Admissions and Probation, a student whose cumulative grade point average falls significantly below a 2.0 (C) or whose grade point average continues to decline may be dismissed from the school.

The Committee on Admissions and Probation considers readmission petitions from students who have been dismissed if the appropriate waiting-out period has been observed. In such cases, petitions must be submitted at least 30 days prior to the semester or summer session in which the student wishes to be readmitted. Students who are readmitted to the Kelley School of Business must follow the current academic policies, curriculum requirements, and graduation requirements in effect at the time they are readmitted.

Upper-Level Business Courses Kelley School of Business students must have senior standing and have completed the Integrative Core to enroll in 400-level business courses. Enrollment in business courses numbered 301-499 is limited to the following:
1. Kelley School of Business students.
2. Non-business students who are registered for the minor in business.
3. Non-business students who are registered for degree programs requiring specific business courses. Such programs include engineering, health administration, journalism, and telecommunications. (Enrollment will be permitted only in the required business courses using this priority category.)
4. Other students with specific permission of the department offering the course. Departments may choose to declare certain courses "open enrollment" courses.
5. Graduate continuing nondegree students may take upper-level business courses with permission.

Unless students are registered in an official program, as identified in items (2) and (3) above, a maximum of 12 credit hours of upper-level business courses may be taken. In addition, for students enrolled in these specific programs, upper-level business courses may comprise no more than 25 percent of their programs.

To enroll in an upper-level business course (301 or higher), a non-business student must meet course prerequisites and have a minimum cumulative grade point average of 2.5 (on a 4.0 scale).

Credit Earned Externally or Transferred to IU

CLEP and DANTES Credit The Kelley School of Business does not accept CLEP or DANTES credit for business courses; however, the school will accept CLEP or DANTES credit awarded by other IUPUI academic units for non-business courses.

Credit for Independent Study by Correspondence The Kelley School of Business accepts a maximum of two courses (6 credit hours) taken by corresponce to satisfy degree requirements. However, because of their basic

importance in the degree program, the following courses or their equivalents may not be taken by correspondence to satisfy admission or degree requirements:

- Business or economics courses;
- Prerequisites (for both business and non-business courses);
- Courses required for a major (for both business and non-business courses).

Any exceptions to the above policy must have the written approval of the executive director of academic programs, Indianapolis. Note: Correspondence courses cannot be taken during the last 30 credit hours of study without petitioning for waiver of senior residency.

Credit for Self-Acquired Competency The Kelley School of Business does not award credit on the basis of self-acquired competency (for example, work experience). However, the school will give waiver examinations for specific courses when the chair of the department offering the course feels a student's experience gives that student a reasonable chance of passing the examination. To be eligible to take a waiver examination, the student must be regularly registered at IUPUI.

The school will not accept the transfer of credit from other institutions for business courses if the credit was awarded on the basis of self-acquired competency.

For non-business courses, the school will accept course-specific credit awarded on the basis of self-acquired competency by other baccalaureate-granting divisions/ schools of Indiana University and by other institutions accredited by the North Central Association of Colleges or comparable regional associations.

The school will not accept general (non-course-specific) self-acquired competency credit awarded by other divisions or schools of Indiana University or by other institutions.

Transfer of Credit

1. Transfer of Credit from Other Colleges and Universities

Acceptance of credit from other institutions, including Purdue University, will be determined by the IUPUI Office of Admissions. The applicability of credit toward degree requirements in the Kelley School of Business will be determined by the school. Credits in business courses at the lower-division level (100- and 200-level courses) that are accepted for transfer are usually accepted for specific course equivalency.

Courses in upper-division business subjects (300- and 400-level courses) may be accepted for specific equivalency if the course work is taken in the junior or senior year at a four-year institution that is accredited by the Association to Advance Collegiate Schools of Business (AACSB). If the institution is not so accredited, credit in upper-division courses accepted for transfer will be accepted as "undistributed" credit subject to oral or written examination for equivalency.

Upper-division business courses taken in the freshman or sophomore year at four-year institutions may be accepted as "undistributed" credit subject to oral or written examinations for specific equivalency.

Upper-division business courses taken at two-year institutions may be accepted as "undistributed" credit that will count only as business electives. No more than 94 credit hours may be accepted for transfer from a four-year institution. Course grades from other institutions are not transferred; only credit hours earned in a course are recorded. Evaluation of credit is completed after a student is admitted to the university.

2. Transfer of Credit from Junior and Community Colleges

No more than 64 credit hours earned at junior or community colleges may be applied to an Indiana University Kelley School of Business degree.

3. Transfer of Credit from Other Indiana University Campuses

Four-year degree programs in certain major areas may be completed at Indiana University East, Indiana University-Purdue University Fort Wayne, Indiana University Kokomo, Indiana University Northwest, Indiana University South Bend, Indiana University Southeast, and Indiana University-Purdue University Columbus, as well as at the Bloomington and Indianapolis campuses. Admission and degree requirements will vary among campuses.

Students wishing to transfer to the Kelley School of Business in Indianapolis are required to meet the same admission requirements to the school as do all other students, both internal and external, at the Indianapolis campus. Students who expect to graduate from the IU Kelley School of Business in Indianapolis must complete the last 30 credit hours of the degree program and one-half of their major requirements at the Indianapolis campus and complete an application to the school.

Ordinarily, such students must complete the Integrative Core (BUS-F 301, BUS-M 301, and BUS-P 301) on the Bloomington or Indianapolis campus. Transfer students who have completed all three courses of the Integrative Core before starting classes on the Indianapolis campus are required to enroll in BUS-X 390 The Integrative Experience (1 cr.) during their first semester of admission to the Kelley School of Business. A minimum grade of C- is required in the course. This course requirement applies to all students transferring credit for BUS-F 301, BUS-M 301, and BUS-P 301 from other institutions or another Indiana University campus. Students who are unclear about this requirement should see an academic advisor in the Kelley School of Business.

Grading System

Incomplete Courses A temporary grade of Incomplete (I) on the transcript indicates that the work completed is satisfactory but that the entire course has not been completed. A grade of I may be assigned only if the student is not in attendance during the last 25 percent of a semester or summer session and the instructor has reason to believe that the absence was beyond the student's control. Otherwise, the instructor shall assign a grade of F.

It is the instructor's responsibility to specify the work to be done to remove the Incomplete as well as the period of time allowed for completion. However, it is the student's responsibility to contact the instructor to verify that all requirements have been completed. If the Incomplete is not removed within one calendar year of

the date of the recording of the Incomplete grade, the registrar will automatically change the I to an F grade. The instructor may, however, require the Incomplete to be removed after a period that is less than one year. Upon satisfactory completion of the work within the time allowed, the Incomplete will be removed and the earned grade recorded. In special circumstances, the dean may authorize that a grade of I be changed to a grade of W (Withdraw).

Students do not reenroll in a course in which they have a grade of I.

Pass/Fail Option Business students may elect to take 3 credit hours each semester with a grade of P (Pass) or F (Fail), with a maximum of 6 credit hours each school year, including summer sessions. The election of this option must be exercised by the student within the first three weeks of the semester or equivalent time period in a summer session. Limitations on use of the Pass/Fail option are as follows: Kelley School of Business students may not take any business course Pass/Fail; and the Pass/Fail option cannot be used for courses that satisfy the general-education requirement or any course that would fulfill a major requirement. In short, the option can be used only for courses that are pure electives taken outside the Kelley School of Business. A grade of P is not counted in the cumulative grade point average, but a grade of F is included. A grade of P cannot be changed subsequently to a grade of A, B, C, or D.

Withdrawals A grade of W (Withdraw) is given automatically on the date of withdrawal to a student who withdraws during the first seven weeks of a regular semester or during the first three weeks of a summer session.

After the automatic withdrawal deadline, instructors have the option of assigning a grade of W (if the student is passing on the date of withdrawal) or F (if the student is failing on the date of withdrawal).

Any student wishing to withdraw from a business course in the final quarter of the semester (after the final drop date published in the *Schedule of Classes*) will be required to submit a petition describing the reason for the request. If the instructor of the course supports the student's request, the instructor must sign the petition and a drop/add slip. The Appeals Committee will review these petitions. Approval for a student to withdraw with a grade of W will be granted only in cases of illness or emergency.

Graduation Requirements

Though the school makes every attempt to provide students with ample advising and counseling help, *students in the Kelley School of Business are responsible for planning their own programs and for meeting degree requirements*. It is the student's responsibility to understand fully and comply with all the provisions of this bulletin. Requests for deviation from department, program, or school requirements may be petitioned in writing through the Program Office in BS3024. Such petitions will be reviewed by the Petitions Committee and granted only in consultation with the respective chair, director, or dean, or their respective administrative representatives.

Credit Deadline All course work except work from the current semester must be completed and recorded on the degree candidate's Indiana University transcript at least one month prior to the date of graduation.

Credit Hours and GPA Requirements A minimum of 124 credit hours of college-level work must be successfully completed in courses meeting the various requirements stated in this bulletin to earn the Bachelor of Science in Business degree. Of this number, at least 48 credit hours must be in business and economics courses and at least 56 credit hours must be in courses other than business and economics. For special rules concerning the accounting major, see "Departments and Majors" in this bulletin. A minimum cumulative GPA of 2.0 (C) is required for graduation. In addition, for students admitted or readmitted in the fall of 2002 or later, students must achieve a minimum GPA of 2.0 (C) in business and economics courses not counted toward general education, and a minimum GPA of 2.0 (C) in their major requirements to graduate from the Kelley School of Business. Students with outstanding cumulative GPAs may graduate with honors. (See "Academic Distinction" in the "Special Opportunities" section.)

Senior Residence Requirement Students who expect to receive the B.S. in Business degree from the Indiana University Kelley School of Business Indianapolis must complete the last 30 credit hours of work toward the degree program and one-half of their major requirements on the Indianapolis campus.

Permission to take up to 6 credit hours of the last 30 credit hours at another institution or by correspondence may be requested by petitioning the executive director of academic programs, Business/SPEA 3024, 801 W. Michigan Street, Indianapolis, IN 46202-5151; phone (317) 274-2147.

Degree Applications Candidates for the B.S. in Business degree must file an Intent to Graduate form with the Recorder's Office, Kelley School of Business, Business/SPEA Building 3024. Application deadlines are April 1 for December graduation, November 1 for May graduation, and January 15 for August graduation. Kelley School of Business transcripts may reflect from one to three majors and zero to two minors. Majors and minors do not show on the diploma.

Statute of Limitations Candidates for the B.S. in Business degree have the right to complete the degree requirements specified by the bulletin in effect at the time they were admitted or readmitted to Indiana University, as long as the required courses are available and no more than eight calendar years have elapsed since the date of admission or readmission and providing the student has not had an interruption in enrollment of two years or more. In the event that the required courses are not available or more than eight years have elapsed, students are required to meet the degree requirements currently in effect. Students who are unclear about this requirement should see a Kelley School of Business advisor.

Updated 1-26-12

Graduate and Professional Policies

For complete information regarding Graduate Policies for the IU Kelley School of Business, please refer the M.B.A. Handbook on the IUPUI Kelley website.

Student Organizations & Services

The faculty of the Kelley School of Business recognizes that student organizations contribute greatly to the programs of the school. Some of these are honorary organizations facilitating recognition of outstanding performance. Others enable students to develop their interests in various fields through extracurricular programs. More information about the organizations and names of individuals to contact is available in the Program Office, Business/SPEA Building 3024; phone (317) 274-2147.

Accounting Association The Accounting Club maintains a close relationship with IUPUI accounting students, alumni, accounting faculty, and practicing accountants. Members provide numerous services to the community and university, including free help with income tax issues, tutoring in accounting subjects, auditing of student organizations, and the arrangement of scholarships for accounting students. Members meet for discussions and panel presentations and to hear speakers from prominent businesses and accounting firms. Membership is open to all students.

Capital Investment Club The Capital Investment Club is a professional organization and the premier club of the IU Kelley School of Business. Founded in 2011, CIC provides unique learning, networking, and experiential opportunities to its members in Indianapolis, IN

Delta Sigma Pi This national professional fraternity for students enrolled in schools of business fosters the study of business in universities, encourages scholarship, promotes closer affiliation between the business world and business students, and furthers the development of high standards of business ethics. Public outreach via guest speakers, corporate tours, and volunteer community service is an important part of Delta Sigma Pi's activities.

Entrepreneurship Club The Entrepreneurship Club is an organization through the Kelley School of Business, Indianapolis. Although affiliated with the Kelley School, the club is open to all majors and disciplines on the IUPUI campus. On the whole, the EC promotes entrepreneurship through the use of guest speakers, networking events, and simulations. Each event is intended to teach, but also attempts to illustrate the fun and excitement that entrepreneurship can generate.

IUI Finance Association

International Business Club Open to all students, the IBC is designed to address the international aspects of business enterprise. The IBC sponsors company visits, serves as a liaison with other international groups, and distributes information on international opportunities. Representatives from multinational firms are frequent guests.

Kelley Indianapolis Cares (KIC) Kelley Indianapolis Cares (KIC) is here to bring you service learning opportunities and help you develop both strong social responsibility awareness and practices for any level of atmosphere you may encounter - whether personal or work.

Marketing Club All students concentrating in the field of marketing are eligible to join this organization, which is affiliated with the American Marketing Association. Its objectives are to further the individual welfare of its members; acquaint its members with practical situations in the marketing field; foster marketing research in the fields of advertising, retailing, and sales; and promote fellowship among marketing students and faculty. Outside speakers frequently address the club.

Society for Human Resource Management - Our mission is to provide students with the opportunity to gain knowledge and insight into the effective management of personnel in the field of Human Resource Management through affiliation with the IndySHRM and National SHRM organizations.

Kelley School of Business Indianapolis Student Government Kelley School of Business Indianapolis Student Government (KSBISG) is the governing body over Kelley Clubs and Organizations. KSBISG is also a liaison to University Student Government to allow Kelley students' voices be heard regarding campus decisions and issues.
Mission Statement:
Enhancing, guiding, and promoting student organizations for further academic and professional development of students at the Indiana Universit of Kelley School of Business Indianapolis (KSBISG). The purposes of KSBISG are:

1. To represent and act in the best interest of the KSBISG student body.
2. To communicate concerns of the students to the KSBISG administration as well as the Undergraduate Student Government.
3. To promote student involvement in organizations.
4. To coordinate activities among organizations within the School.
5. To encourage the establishment of student organizations related to the fields of business.
6. To allocate the activity fee among organizations in the KSBISG as described in the IUPUI Student Activity Fee Guidelines.

Club Advisor: Angie Meyer, angjmeye@iupui.edu and Carly Grennes, crstamey@iupui.edu
Website: www.ksbisg.org

Operations & Supply Chain Management Club (OSCM)
As a positive influence, representing the Kelley School of Business Indianapolis, the Operations and Supply Chain Management Student Organization (OSCM) will strive to offer opportunities for both members and businesses through service learning as well as educate its members on the varying disciplines within the supply chain management field.

Women in Business (WIB) Women in Business (WIB) is an undergraduate student organization dedicated to advancing the success of women within the Kelley School of Business Indianapolis. Women in Business is intended to help guide women attending the Kelley School of Business Indianapolis in a better direction. The main objective is to inform members of the different career opportunities, current trends, and attitutdes that women may experience in the business world. We do this by

providing experiences through which members can mature and evolve as professional women.

Faculty

Kelley School of Business Administrators and Faculty, Bloomington and Indianapolis

The faculty of the Indiana University Kelley School of Business at Bloomington and Indianapolis are identified below. In addition to these full-time faculty, a dedicated group of individuals who work elsewhere full-time also teach classes for the school. Although some of these people are new each semester, many have made long-term commitments to the Kelley School of Business. We gratefully acknowledge their contributions to the strength of the faculty and the school.

Administrative Officers

- Daniel C. Smith, Ph.D., *Dean*
- Idalene Kesner, Ph.D., *Associate Dean of Faculty and Research*
- M.A. Venkataramanan, Ph.D., *Associate Dean of Academic Programs*
- Ash Soni, Ph.D., *Associate Dean - Information Technology*

- Smith, Robert E., Ph.D. *(University of Wisconsin, 1977), Professor of Marketing*
- Smith-Daniels, Vicki, Ph.D. *(Ohio State, 1983), Professor Operations & Supply Chain*
- Solomon, June, M.A. *(Delhi University, 1971), Senior Lecturer in Communications, Professional, and Computer Skills*
- Soni, Ashok K., D.B.A. *(Indiana University, 1981), Associate Dean of Information Technology, Professor of Operations and Decision Technologies, and Arcelor Mittal USA MBA Faculty Fellow*
- Souza, Gilvan C., Ph.D. *(University of North Carolina at Chapel Hill, 2000), Associate Professor of Operations and Decision Technologies*
- Spiro, Rosann L., Ph.D. *(University of Georgia, 1976), Professor of Marketing and Executive Director of the Center for Global Sales Leadership*
- Sprinkle, Geoffrey B., Ph.D. *(University of Iowa, 1996), Professor of Accounting, and Whirlpool Faculty Fellow*
- Stefanescu, Catalin, M.S. *(University of North Carolina at Chapel Hill, 2007) Lecturer in Business Economics and Public Policy*
- Stefanescu, Irina, Ph.D. *(University of North Carolina at Chapel Hill, 2006), Assistant Professor of Finance*
- Steiner-Williams, Judy F., M.S. *(Indiana University, 1976), Senior Lecturer in Communication, Professional, and Computer Skills*
- Stern, Jerrold J., Ph.D. *(Texas A&M University, 1979), Professor of Accounting*
- Stoffman, Noah, Ph.D. *(University of Michigan, 1979), Assistant Professor of Finance*
- Stone, Cynthia, M.S. *(Indiana University, 1980), Lecturer in Communication, Professional, and Computer Skills*
- Storey, James B., M.F.A. *(University of Kansas, 2008), Lecturer in Communication, Professional, and Computer Skills*
- Sturek, Diane, *(University of Missouri, 1996), Visiting Lecturer of Accounting*
- Talbott, John, M.B.A. *(University of Tennessee, 1987) Lecturer in Marketing and Associate Director of the Center for Education and Research in Retailing*
- Tatikonda, Mohan, Ph.D. *(Boston University, 1995) Professor of Operations Management and Waters Faculty Fellow*
- Taylor, Nolan J., M.B.A. *(California State University, 1995), Clinical Assistant Professor of Information Systems*
- Telthorst, George, M.B.A. *(University of Chicago, 1984), Lecturer in Communication, Professional, and Computer Skills and Director of the Center for the Business of Live Sciences*
- Terjesen, Siri, Ph.D. *(Cranfield University, 2006), Assistant Professor of Management and Entrepreneurship*
- Threlkeld, J. Shannon, M.S. *(Indiana University, 2000), Lecturer in Marketing*
- Tian, Xuan, Ph.D. *(Boston College, 2008), Assistant Professor of Finance*
- Tiller, Mikel G., D.B.A. *(Indiana University, 1980), Associate Professor of Accounting and Chairperson of the Graduate Accounting Program*
- Tiller, Susan Keenan, B.A. *(Dartmouth College, 1982), Senior Lecturer in Accounting*
- Trzcinka, Charles, Ph.D. *(Purdue University, 1980), Professor of Finance and James W. and Virginia E. Cozad Chair in Finance*

- Udell, Gregory F., Ph.D. *(Indiana University, 1983), Chase Chair of Banking and Finance and Professor of Finance*
- Vargo, Sue, Ph.D. *(Indiana University, 1994), Co-Director and Senior Lecturer of Communication, Professional, and Computer Skills*
- Venkataramanan, Munirpallam A., Ph.D. *(Texas A&M University, 1987), Associate Dean of Academic Programs, Jack R. Wentworth Professor, and Professor of Operations and Decision Technologies*
- Venkataraman, Ramesh, Ph.D. *(University of Arizona, 1995), Associate Professor of Operations and Decision Technologies, Director of Information Systems Graduate Program and Whirlpool Faculty Fellow*
- Wahlen, James M., Ph.D. *(University of Michigan, 1991), Professor of Accounting and James R. Hodge Chair of Excellence*
- Walters, Rockney G., Ph.D. *(Purdue University, 1984), Professor of Marketing*
- Wendeln, Ken, M.P.A. *(Indiana University, 2001), Clinical Associate Professor in Management*
- Wesley, Curtis, Ph.D. *(Texas A&M University, 2010), Assistant Professor*
- Wheeler, Bradley C., Ph.D. *(Indiana University, 1993), Professor of Operations and Decision Technologies (Kelley School of Business) and Vice President for Information Technology and Chief Information Officer (Indiana University)*
- Whiting, Steven W., Ph.D. *(Indiana University, 2006), Assistant Professor of Management and Entrepreneurship*
- Wiethoff, Carolyn, M.A. *(Indiana University, 1998), Clinical Associate Professor of Management and Entrepreneurship*
- Wildenbeest, Matthijs, Ph.D. *(Erasmus University, 2007), Assistant Professor of Business Economics and Public Policy*
- Williams, Theresa D., Ph.D. *(University of Tennessee, 1994), Clinical Assistant Professor of Marketing and Director of the Center of Education and Research in Retailing*
- Wimbush, James C., Ph.D. *(Virginia Polytechnic Institute and State University, 1991), Professor of Management and Entrepreneurship (Kelley School of Business) and Dean of the University Graduate School (Indiana University)*
- Winston, Vivian, M.B.A. *(Indiana University, 1990), Lecturer in Accounting*
- Winston, Wayne L., Ph.D. *(Yale University, 1975), Professor of Operations and Decision Technologies and John and Esther Rees Professor*
- Wisneski, John, M.B.A. *(University of Notre Dame, 2003), Lecturer in Management and Entrepreneurship*
- Woodhouse, Douglas, M.B.A. *(London Business School, 1995) Lecturer in Operation and Decision Technologies*
- *Wright, Judith K., J.D. (Indiana University, 1984), Lecturer in Business Law and Coordinator of Business Foundations Certificate and Business Minor*
- *Yang, Jun, Ph.D. (Washington University, 2004), Assistant Professor of Finance and 3M Junior Faculty Fellow*
- *Yohn, Teri, Ph.D. (Indiana University, 1991), Associate Professor of Accounting and Price WaterhouseCoopers Faculty Fellow*
- *Yonker, Scott, Ph.D. (The Ohio State University, 2010), Assistant Professor of Finance*
- *Yu, Xiaoyun, Ph.D. (University of Minnesota, 2001) Associate Professor of Finance and Weimer Faculty Fellow*

Faculty Emeriti

- *Albright, S. Christian, Ph.D. (Stanford University, 1972), Professor of Operations and Decision Technologies*
- *Belth, Joseph M., Ph.D. (University of Pennsylvania, 1961), C.L.U., C.P.C.U., Professor Emeritus of Insurance*
- *Biagioni, Louis F., Ph.D. (University of Missouri, 1964), Professor Emeritus of Accounting and Information Systems*
- *Bonser, Charles F., D.B.A. (Indiana University, 1965), Professor Emeritus of Public and Environmental Affairs (School of Public and Environmental Affairs), Dean Emeritus of Public and Environmental Affairs, and Professor Emeritus of Business Administration (Kelley School of Business)*
- *Boquist, John A., Ph.D. (Purdue University, 1973), Edward E. Edwards Professor of Finance*
- *Bunke, Harvey C., Ph.D. (University of Illinois, 1951), Professor Emeritus of Business Administration and Professor Emeritus of Business Economics and Public Policy*
- *Childers, Victor E., D.B.A. (Indiana University, 1967), Associate Professor Emeritus of International Business*
- *Dalrymple, Douglas J., D.B.A. (Michigan State University, 1964), Professor Emeritus of Marketing*
- *Dalton, Dan R., Ph.D. (University of California, Irvine, 1979), Harold A. Poling Chair of Strategic Management and Professor of Management*
- *Davidson, Lawrence S., Ph.D. (University of North Carolina, 1976), Professor of Business Economics and Public Policy and Life Sciences Liaison*
- *DeHayes, Daniel W., Jr., Ph.D. (Ohio State University, 1968), Professor of Business Administration*
- *Donnell, John D., D.B.A. (Harvard University, 1966), Professor Emeritus of Business Administration*
- *Dreher, George F., Ph.D. (University of Houston, 1977), Professor of Business Administration*
- *Dvorak, Earl A., Ed.D. (Indiana University, 1951), Associate Professor Emeritus of Business Education (Kelley School of Business) and Associate Professor Emeritus of Education (School of Education)*
- *Dworkin, Terry M., J.D. (Indiana University, 1974), Professor Emeritus of Business Law*
- *Fisher, Jeffrey D., Ph.D. (Ohio State University, 1980), Director of the Center for Real Estate Studies, Charles H. and Barbara F. Dunn Professor of Real Estate, and Professor of Finance and Real Estate*

- *Fratianni, Michele, Ph.D. (Ohio State University, 1971), Professor Emeritus of Business Economics and Public Policy*
- *Frisbie, Gil, M.B.A. (Indiana University, 1969), Clinical Associate Professor of Marketing*
- *Frumer, Samuel, D.B.A. (Indiana University, 1960), C.P.A., Professor Emeritus of Accounting*
- *Ginger, Laura A., J.D. (University of Chicago, 1979), Associate Professor of Business Law*
- *Gordon, Paul J., Ph.D. (Syracuse University, 1958), Professor Emeritus of Management*
- *Granbois, Donald H., D.B.A. (Indiana University, 1963), Professor Emeritus of Marketing*
- *Green, R. Jeffery, Ph.D. (University of Illinois, 1967), Professor Emeritus of Business Economics and Public Policy*
- *Greenleaf, Robert W., D.B.A. (Indiana University, 1961), Professor Emeritus of Finance*
- *Groomer, S. Michael, Ph.D. (University of Missouri, 1975), C.P.A., Professor of Accounting*
- *Grossack, Irvin M., Ph.D. (Columbia University, 1962), Professor Emeritus of Business Economics and Public Policy*
- *Haeberle, William L., D.B.A. (Indiana University, 1952), Professor Emeritus of Management*
- *Hall, Robert W., D.B.A. (Indiana University, 1972), Professor Emeritus of Operations Management*
- *Harnett, Donald L., Ph.D. (Cornell University, 1964), Professor Emeritus of Operations and Decision Technologies*
- *Hartley, Joseph R., D.B.A. (Indiana University, 1957), Professor Emeritus of Business Administration*
- *Hegarty, W. Harvey, Ph.D. (University of North Carolina, 1972), Professor Emeritus of Business Administration*
- *Helmkamp, John G., D.B.A. (Indiana University, 1968), Professor Emeritus of Accounting*
- *Heslin, Thomas E., B.A. (New York University, 1961), Clinical Professor of Business Administration*
- *Hettenhouse, George W., Ph.D. (Purdue University, 1970), Professor Emeritus of Finance*
- *Heitger, Lester E., Ph.D. (Michigan State University, 1971), C.P.A., Professor of Accounting*
- *Hill, John W., Ph.D. (University of Iowa, 1986), Professor of Accounting and Arthur M. Weimer Chair of Business Administration*
- *Hustad, Thomas P., Ph.D. (Purdue University, 1973), Professor of Marketing*
- *Jaffee, Bruce L., Ph.D. (Johns Hopkins University, 1971), Professor of Business Economics and Public Policy*
- *Klemkosky, Robert C., Ph.D. (Michigan State University, 1971), Professor Emeritus of Finance*
- *Leibman, Jordan H., J.D. (Indiana University, 1979), Professor Emeritus of Business Law*
- *Long, John D., D.B.A. (Indiana University, 1954), C.L.U., C.P.C.U., Arthur M. Weimer Professor Emeritus of Business Administration*
- *Marer, Paul, Ph.D. (University of Pennsylvania, 1968), Professor Emeritus of International Business (Kelley School of Business) and Professor of Central Eurasian Studies (College of Arts and Sciences)*
- *Martin, E. Wainright., Jr., Ph.D. (Ohio State University, 1952), Professor Emeritus of Business Administration*
- *Mabert, Vincent A., Ph.D. (Ohio State University, 1973), Professor of Operations and Decision Technologies and John and Esther Reese Professor*
- *MacKay, David B., Ph.D. (Northwestern University, 1971), Professor of Marketing (Kelley School of Business) and Adjunct Professor of Geography (College of Arts and Sciences)*
- *McKowen, Diana S., M.S. (Indiana University, 1981), Lecturer in Communication, Professional and Computer Skills*
- *Metzger, Michael B., J.D. (Indiana University, 1969), Professor of Business Law and Ethics and Foster Chair in Business Ethics*
- *Miller, Joseph C., Ph.D. (University of Wisconsin, 1971), J.D. (University of Chicago, 1963), Professor Emeritus of Marketing*
- *Moore, Joseph C., M.S. (University of Dayton, 1975), Senior Lecturer in Operations and Decision Technologies*
- *Muth, John F., Ph.D. (Carnegie Mellon University, 1962), Professor Emeritus of Operations Management*
- *Novit, Mitchell S., Ph.D. (University of Michigan, 1966), Associate Professor Emeritus of Personnel and Organizational Behavior*
- *Ogan, Pekin, Ph.D. (University of North Carolina, 1974), Professor Emeritus of Accounting and Information Systems*
- *Olshavsky, Richard W., Ph.D. (Carnegie Mellon University, 1967), Professor Emeritus of Marketing*
- *Organ, Dennis W., Ph.D. (University of North Carolina, 1970), Professor of Personnel and Organizational Behavior*
- *Patterson, James H., D.B.A. (Indiana University, 1970), Professor of Operations and Decision Technologies*
- *Patterson, James M., Ph.D. (Cornell University, 1961), Professor Emeritus of Marketing*
- *Perkins, William C., D.B.A. (Indiana University, 1966), Professor Emeritus of Information Systems*
- *Pfister, Richard L., Ph.D. (Massachusetts Institute of Technology, 1959), Professor Emeritus of Business Economics and Public Policy*
- *Phillips, Michael J., S.J.D. (George Washington University, 1981), Professor Emeritus of Business Law*
- *Powell, C. Randall, Ph.D. (Ohio State University, 1973), Clinical Professor Emeritus of Business Administration*
- *Powell, Frona M., J.D. (Indiana University, 1976), Associate Professor of Business Law and Ethics*
- *Proebsting, Annette, M.L.S. (Indiana University, 2001), Lecturer in Accounting*
- *Raber, Nevin W., M.A.L.S. (Indiana University, 1952), Assistant Professor Emeritus of Business Administration*
- *Rogers, Richard L., Ph.D. (Pennsylvania State University, 1981), Associate Professor Emeritus of Accounting*

- *Ryan, William G., M.B.A. (Harvard University, 1956), Assistant Professor Emeritus of Business Administration*
- *Salamon, Gerald L., Ph.D. (Ohio State University, 1971), Professor Emeritus of Accounting*
- *Schmenner, Roger W., Ph.D. (Yale University, 1973), Professor Emeritus of Operations Management*
- *Scott, William E., Jr., Ph.D. (Purdue University, 1963), Professor Emeritus of Personnel and Organizational Behavior*
- *Seawell, Lloyd Vann, D.B.A. (Indiana University, 1958), C.P.A., Professor Emeritus of Accounting*
- *Shaffer, Robert H., LL.D. (Indiana University, 1985), Professor Emeritus of Business Administration (Kelley School of Business) and Professor Emeritus of Education (School of Education)*
- *Simkowitz, Michael A., Ph.D. (New York University, 1970), Professor Emeritus of Finance*
- *Smerk, George M., Jr., D.B.A. (Indiana University, 1963), Professor Emeritus of Transportation*
- *Smith, Robert E., Ph.D. (University of Wisconsin, 1977), Professor of Marketing*
- *Stephenson, P. Ronald, Ph.D. (Ohio State University, 1966), Professor Emeritus of Marketing*
- *Stockton, R. Stansbury, Ph.D. (Ohio State University, 1956), Professor Emeritus of Business Administration*
- *Suelflow, James E., Ph.D. (University of Wisconsin, 1965), Professor Emeritus of Business Economics and Public Policy*
- *Summers, John O., Ph.D. (Purdue University, 1968), Professor Emeritus of Marketing*
- *Thorelli, Hans B., Ph.D. (University of Stockholm, Sweden, 1954), E. W. Kelley Professor Emeritus of Business Administration*
- *Waldman, Joseph M., D.B.A. (Indiana University, 1966), Professor Emeritus of Business Administration*
- *Waters, L. Leslie, Ph.D. (Indiana University, 1987), University Professor Emeritus of Transportation and Business History*
- *Wentworth, Jack R., D.B.A. (Indiana University, 1959), Arthur M. Weimer Professor Emeritus of Business Administration*
- *Williams, Edgar G., D.B.A. (Indiana University, 1952), Vice President Emeritus of Indiana University and Professor Emeritus of Business Administration*

Updated 2-2-2012

Courses

In addition to the general-education and general business curricula discussed previously, students pursuing the B.S. in Business degree must select a major within the business program. The major, along with the curriculum for working toward that major, are presented by department in this section and are summarized below.

- Accounting
- Computer Information Systems
- Finance
- Human Resource Management
- International Studies(May be selected as a second major only)
- Management
- Marketing
- Supply Chain Management

Major requirements are subject to change during the two years covered by this bulletin. Students are expected to stay informed of major changes by seeing a business academic advisor on a regular basis.

The courses listed in this bulletin represent the complete undergraduate offerings of departments and programs of the Kelley School of Business on the Indianapolis campus.

The number of credit hours given to a course is indicated in parentheses following the course title.

The abbreviation "P" refers to course prerequisites; the abbreviation "C" refers to course co-requisites.

Accounting and Information Systems

Graduate

BUPA-A 508 Accounting for Non-Profit Organizations (3 cr.) Accounting concepts and methods peculiar to governmental units, universities, hospitals, and other nonprofit organizations.

BUS-A 510 Financial Accounting Theory and Practice I (3 cr.) An intermediate financial accounting course emphasizing financial statement preparation and analysis. Includes intermediate theory and problems, asset valuation, and income measurement, preparation and analysis of financial statements. This course does not count toward the MSA degree as it is the graduate version of A311 Intermediate Accounting.

BUPA-A 511 Financial Accounting Theory and Practice II (3 cr.) P: A510 or equivalent. Application of intermediate accounting theory to problems involving long-term liabilities, corporations, earnings per share, tax allocation, pensions, leases, and cash flows.

BUPA-A 512 Financial Accounting Theory and Practice (1-4 cr.) Accelerated coverage of Financial Accounting Theory and Practice I and II. Examines a broad range of intermediate accounting topics, including issues related to income measurement and revenue recognition, accounting for current and non-current assets, liabilities, leases, pensions, income taxes, stockholders' equity, accounting changes, earnings per share and cash flows.

BUPA-A 514 Auditing Theory and Practice (3 cr.) P: A511 and A523. This course addresses the concepts and procedures related to the implementation of the external and internal audits for business organizations. Coverage includes issuance of the audit report, reviews of internal control, statistical sampling, EDP systems and the company's business cycles. Additional topics include forensic accounting, auditing for fraud and other assurance services. Many topics covered are included on the uniform CPA examination given twice yearly by the AICPA.

BUPA-A 515 Federal Income Taxes (3 cr.) C: A551 Tax Research: Introduction to federal income taxation. Focus is on the income taxation of individuals and tax planning for individuals. The goal of this course is to introduce students to the federal income tax law of the U.S. The

course provides an overview of the following elements of the tax computation: gross income, deductions, credits, property transactions, alternative minimum tax, employment taxes, and an overview of the estate and gift tax. While the course primarily focuses on the income taxation of individuals, the basic treatment of other entities is considered, including the taxation of corporations, partnerships, limited liability companies, trusts and estates. Moreover, it should be emphasized that many of the basic tax rules examined apply to all entities. In addition, a portion of the course is devoted to tax research, enabling students to appreciate the sources of tax law such as the Internal Revenue Code, Regulations, administrative pronouncements and case law.

BUPA-A 516 Federal Estate and Gift Taxation (3 cr.) P: A515 or equivalent. Tax treatment of wealth transfers at death (the estate tax) and during lifetime (the gift tax), with emphasis on estate planning. Also includes an examination of the income taxation of estates and trusts.

BUPA-A 517 Financial Statement Analysis (3 cr.) P: A510 or equivalent. Financial statement analysis is a problem solving, case course designed to teach and understand the techniques used to evaluate the financial dynamics of businesses. Topics covered are directly related to the accounting financial statements, including strategic analysis, ratio analysis, asset and liability analysis, and revenue and expense analysis. Also covered will be forecasting, financial distress models, asset valuation modeling, discount models and abnormal return models. Students will use the Compustat database to generate company and industry data to perform longitudinal studies and publicly traded securities.

BUPA-A 520 Corporate Financial Reporting (3 cr.) P: A511 and A514. C: A562 recommended. This course will cover the theory and practice of corporate financial reporting. You will be responsible for conducting applied accounting research on a variety of corporate reporting issues that are designed not only to expand your knowledge of Generally Accepted Accounting Principles covered in undergraduate accounting courses but also to improve your analytical abilities and reasoning process. The research will involve cases based on actual financial statements and events involving real companies. Corporate financial reporting issues will also be covered through financial statement analysis as well as an introduction to special reporting issues. Another critical part of the course will be evaluating current developments in financial reporting, e.g., FASB's proposals and exposure drafts.

BUPA-A 522 Federal Taxation of Partnerships and LCC (3 cr.) P: A515 or equivalent. Tax aspects of the definition, formation, operation, liquidation, and termination of partnerships and limited liability companies.

BUPA-A 523 Business Information Systems (3 cr.) An overview of accounting systems and their existence within businesses. The course includes discussions of system controls, transaction processing, business cycles and issues related to development and installation of automated accounting systems.

BUS-A 524 Managing Accounting Information for Decision Making (3 cr.) P: BUS-A 201 Provides a user-oriented understanding of how accounting information should be managed to ensure its availability on a timely and relevant basis for decision making. Focus is on cost-benefit analysis for evaluating potential value-added results from planning, organizing, and controlling a firm=s accounting information. Group participation and computer support is used extensively. For MBA students enrolled in Module II.

BUPA-A 528 State and Local Taxation (3 cr.) P: A515 or equivalent. Examines the basic principles of state and local taxation. Taxes studied are income taxes, sales taxes, use taxes, inheritance taxes, estate taxes, personal property taxes, real property taxes, and excise taxes.

BUPA-A 529 Internship in Accounting (3 cr.) Learning in a professional environment. Internship with intensive seminars relating to business (e.g., leadership, team building, supervisory skills, time-management, oral communications, negotiating).

BUPA-A 538 Corporate Taxation II (1.5 cr.) This course develops in-depth corporate tax knowledge and gives studies experience preparing assignments similar to those prepared by tax practitioners. Topics include corporate liquidations, penalty taxes, corporate reorganizations, and consolidated tax returns.

BUPA-A 539 Advanced Taxation I: Entity Issues (3 cr.) P: A515 or equivalent. Introduction to the taxation of regular corporations, partnerships, limited liability companies, and S corporations.

BUPA-A 544 Federal Taxation of Corporations Filing Consolidated Returns (1.5-3 cr.) P: A515 or equivalent. The principal focus of this course is on the consolidation return regulations, including concepts and history; eligibility to file; computation of consolidated and separate taxable income; intercompany transactions; SRLY rules; consolidated basis adjustments, loss disallowance rules and procedures. Other tax issues raised by affiliated corporations include the multiple corporation limitations of Section 1561.

BUPA-A 551 Tax Research (1.5 cr.) P: A515 or concurrent. Covers how to access the primary and secondary sources of tax law, including the Internal Revenue Code, regulations and other administrative pronouncements and judicial decisions. Explains the research process and the use of research tools to locate sources of tax law. Utilizes both paper products and electronic (internet) resources. Emphasizes how to read and interpret source materials. Tax research assignments stress writing skills and the need for effective communication of research findings.

BUPA-A 552 Federal Taxation of Corporations and Stockholders (3 cr.) P: A515 or equivalent. Federal tax aspects of various corporate transactions including corporate formations, operations, distributions, redemptions, liquidations, mergers, acquisitions and divisions and the impact of these transactions on corporate shareholders.

BUPA-A 554 Income Taxation of Trusts and Estates (1.5 cr.) P: A515 or equivalent. Analyzes the income taxation of trusts and estates and their creators, beneficiaries and fiduciaries, including computation of fiduciary accounting income, distributable net income and taxable income, taxation of simple and complex trusts, computation of income in respect of a decedent,

preparation of the decedent's final income tax return and the returns of trusts and estates from inception through termination.

BUPA-A 555 Taxation of S Corporations (3 cr.) P: A515 or equivalent. Examines tax treatment, tax problems and tax planning techniques involving S corporations; eligibility rules; election, revocation, termination; treatment of income, deductions and credits; determining the shareholder's taxable income; pass-through of corporate net operating loss; distributions of previously taxed income; special taxes applicable to S corporations.

BUPA-A 556 Timing Issues in Taxation: Accounting Periods and Methods (1.5-3 cr.) P: A515 or equivalent. Examines timing issues related to the Federal income tax including adoption of and changes in accounting periods, cash and accrual methods of accounting, tax consequences of changing from one method of accounting to another, installment methods of accounting; time value of money issues (original issue discount); inventory accounting (LIFO), the Uniform Capitalization Rules, and accounting for long-term contracts.

BUPA-A 557 International Taxation (1.5-3 cr.) P: A515 or equivalent. Examines federal tax issues related to foreign transactions, including issues affecting U.S. citizens and residents working, investing in or doing business overseas, and foreigners working, investing in or doing business in the U.S.

BUPA-A 558 Taxation of Tax Exempt Organizations (1.5 cr.) P: A515 or equivalent. Examines the tax treatment of public and private charities exempt under I.R.C. Sec. 501(c)(3), as well as business leagues, social clubs, and other types of tax-exempt organizations Includes discussion of the requirements for exemption from federal income tax and the tax treatment of the unrelated business income tax and private foundation status and its repercussions.

BUPA-A 559 Federal Taxation of Current and Deferred Compensation (1.5-3 cr.) P: A515 or equivalent. Introduces the taxation of current and deferred compensation. Current compensation coverage includes receipt of property, stock options, golden parachutes, etc. Deferred compensation topics addressed are qualified and nonqualified retirement plans including pension and profit-sharing plans, stock bonus plans, self-employed retirement plans and individual retirement; examines basic concepts of plans and trust, participation and vesting requirements, hours of service and break-in service rules, discrimination in benefits or contributions, deduction for employer contributions, limitations on benefits and contributions, taxability of distributions, fiduciary responsibility and reporting and disclosure requirements.

BUPA-A 560 Information Technology Auditing (3 cr.) This course examines the security and control of information systems (IS) from the perspective of management, including the IS assurance process. The emphasis is on technical, professional, and regulatory best practices in information systems security and assurance. The course is designed to meet the IS security information needs of both managers and IS security assurance professionals. As such, the course is structured to cover most topics in the common body of knowledge (CBK) for professional examinations with an information security component, including the CPA, CISA (Certified Information Systems Auditor) and CIA (Certified Internal Auditor) exams.

BUPA-A 562 Advanced Financial Accounting (3 cr.) P: A511 or equivalent. Consideration of advanced financial accounting problems, including those related to consolidated financial statements, business combinations (mergers and acquisitions), branches, foreign operations and nonprofit organizations.

BUPA-A 566 Advanced Auditing (3 cr.) P: A514 or equivalent. Examines advance issues in auditing including in depth review of the following: forensic accounting and fraud examination; litigation support and expert witness services; the use of statistical sampling in auditing; internal auditing; assurance services and extending the attestation function. The course makes use of cases, articles and current pronouncements in the field.

BUPA-A 575 Auditing and Corporate Governance (3 cr.) This course introduces basic concepts of internal auditing, emphasizing business process controls as well as entity-level controls. The course is taught from a corporate governance perspective, which stresses the role played by internal audit in assisting management and the board in evaluating and improving the effectiveness of risk management, internal controls, and the governance process. The course also includes an introduction to audit software.

BUPA-A 590 Independent Study in Accounting (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUS-A 590 Independent Study in Accounting (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

BUPA-D 590 Independent Study in International Business (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUPA-F 560 Current Topics in Finance (1.5 cr.)

BUPA-F 590 Independent Study in Finance (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUPA-G 590 Independent Study in Business Economics and Public Policy (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUPA-L 503 Advanced Business Law (3 cr.) P: L203 or equivalent. Examines concepts of law as applied to the accounting profession, including contracts, agency, forms of organization, property, wills and trusts, securities regulation, consumer protection, and antitrust, secured transactions, negotiable instruments, commercial paper, payment systems, bankruptcy, and related subject areas.

BUPA-M 590 Independent Study in Marketing (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUPA-P 590 Independent Study in Operations Management (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUPA-S 590 Independent Study in Management Information Systems (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUS-S 590 Independent Study in Management Information Systems (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

BUPA-W 590 Independent Study in Management and Administration (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

BUPA-Z 590 Independent Study in Personnel and Organizational Behavior (Arr. cr.) For advanced MBA or MSA students engaged in special study projects. Course admission and project supervision is arranged through the MBA/MSA office and the faculty's advisor.

Undergraduate

BUS-A 100 Basic Accounting Skills (1 cr.) This course covers the process of recording economic events that underlie financial statements. The basics of generally accepted accounting principles are introduced as they affect financial statements. The fundamental aspects of managerial accounting are related to planning, controlling, and decision making in business organizations. Different cost definitions are developed and cost-volume-profit analysis is introduced as an important financial planning and control skill.

BUS-A 186 Accounting and the Business Environment (3 cr.) non-majors This course is designed from the user's perspective to help students understand the basics of financial and managerial accounting and how accounting is useful to external and internal decision makers.

BUS-A 200 Foundations of Accounting (Nonmajors) (3 cr.) P: Sophomore standing. The course addresses the role of accounting in society and business, with a special emphasis on fundamental concepts and the basic design of accounting systems. This course is intended for non-business majors who are interested in learning about how accounting affects their lives and businesses. Credit not given for both A200 and either A201 or A202.

BUS-A 201 Introduction to Financial Accounting (3 cr.) P: A100; sophomore standing. Provides balanced coverage of the mechanics, measurement theory, and economic context of financial accounting. Strikes a balance between a preparer's and a user's orientation, emphasizing that students must understand both how transactions lead to financial statements (preparer's orientation) as well as how one can infer transactions given a set of financial statements (user's orientation). Relies on current real-world examples taken from the popular business press. The first part of the course introduces students to the financial accounting environment, financial statements, the accounting cycle, and the theoretical framework of accounting measurement. The second part of the course covers the elements of financial statements, emphasizing mechanics, measurement theory, and the economic environment. Students cannot receive credit for both A201 and A200.

BUS-A 202 Introduction to Managerial Accounting (3 cr.) P: A100; sophomore standing. The course covers the concepts and issues associated with the accounting and the management of business. Particular emphasis is given to understanding the role of accounting in product costing, costing for quality, cost-justifying investment decisions, and performance evaluation and control of human behavior. Credit not given for both A202 and A200.

BUS-A 204 Introduction to Financial Accounting: Honors (3 cr.) P: A100; sophomore standing. The course covers the concepts and issues associated with corporate financial reporting. Particular emphasis is placed on understanding the role of financial accounting in the economy and how different accounting methods affect the financial statement.

BUS-A 302 Accounting Research (1 cr.) P: Kelley admit. C: A328. Emphasizes development of communication skills through writing exercises related to tax research. In addition, covers how to access the primary and secondary sources of tax law, including the Internal Revenue Code, regulations and other administrative pronouncements, and judicial decisions. Explains the research process and the use of research tools to locate sources of tax law. Utilizes both paper products and electronic (Internet) resources. Emphasizes how to read and interpret source materials. Tax research assignments stress writing skills and the need for effective communication of research findings.

BUS-A 310 Management Decisions and Financial Reporting (3 cr.) P: A201 and A202. Junior or senior standing. A310 is a one-semester course intended primarily for finance majors that covers all the traditional intermediate accounting topics. The course provides students with a thorough understanding of the theoretical foundations underlying financial reporting, the rules used by accountants to measure the effects of business decisions and to report the effects to external parties, the use of judgment in financial reporting, and the transformation of cash-flow decisions into accrual-based and cash-based financial statements. Students are expected to develop technical, analytical, and interpretive skills related to economic transactions and accrual-based financial statements. Accounting students should take A311 and A312 to satisfy accounting major requirements. Credit not given for both A310 and A311 or A312.

BUS-A 311 Intermediate Accounting I (3 cr.) P: A201 and A202. Junior or senior standing. Provides students with a thorough understanding of the theoretical foundations underlying financial reporting, revenue recognition, and the matching of expenses; financial statement presentation; and accounting for assets. The course's primary objective is to give students the tools necessary to understand and execute appropriate

accounting procedures. Another goal is to help students understand the process through which accounting standards are determined and to evaluate the outcomes of that process from the perspectives of managers, shareholders, auditors, and others. Students will learn to assess competing accounting theories and methods from multiple perspectives.

BUS-A 312 Intermediate Accounting II (3 cr.) P: A311. Kelley admit of junior or senior standing. Provides students with a thorough understanding of accounting for long-term liabilities and debt investment, stockholders' equity, and preparation of cash-flow statements. The course's first objective is to give students the tools necessary to understand and execute appropriate accounting procedures. The course's second objective is to help students understand the process through which accounting standards are determined and to evaluate the outcomes of that process from the perspectives of managers, shareholders, auditors, and others. Students will learn to assess competing accounting theories and methods from multiple perspectives.

BUS-A 325 Cost Accounting (3 cr.) P: A201 and A202. Junior or senior standing. Conceptual and procedural aspects of management and cost accounting. Product costing, cost control over projects and products, decision making, profit planning, quantitative modeling, activity-based management, and computer applications.

BUS-A 328 Introduction to Taxation (3 cr.) P: A201 and A202. C: A302. Kelley admit of junior or senior standing. This course examines the fundamentals of federal income taxation. Primary emphasis is on a basic understanding and awareness of the tax law as it applies to individuals. Includes an overview of the taxation of corporations, partnerships, and estates and trusts. The course introduces students to tax research and the various sources of tax law, including the Internal Revenue Code, regulations, administrative pronouncements, and case law.

BUS-A 335 Fund Accounting (3 cr.) P: A201 and A202. Kelley admit of junior or senior standing. Financial management and accounting for nonprofit-seeking entities such as municipal and federal governments, schools, and hospitals.

BUS-A 337 Computer-Based Accounting Systems (3 cr.) P: A201, A202, and K201. Kelley admit of junior or senior standing. Impact of modern computer systems on analysis and design of accounting information systems. Discussion of tools of systems analysis, computer-based systems, and internal controls and applications. Focus on microcomputer use.

BUS-A 339 Advanced Income Tax (3 cr.) P: A328. Kelley admit of junior or senior standing. Advanced aspects of the income taxation of corporations, partnerships, and S-corporations.

BUS-A 375 Internal Auditing Process Controls (3 cr.) P: BUS K201, BUS A201, and BUS A202 R: Kelley admit of junior or senior standing. This course introduces basic concepts of internal auditing, emphasizes business process controls, covers basic internal controls and how they relate to common business processes, covers how information technology relates to audit procedures and reports, covers the internal auditor's role in monitoring corporate controls, and involves hands-on experience with audit software.

BUS-A 380 Professional Practice in Accounting (1-3 cr.) P: F301, M301, and P301. Kelley admit of junior or senior standing in major area and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Students receive work experience in cooperating firms or agencies. Comprehensive written report required.

BUS-A 422 Advanced Financial Accounting (3 cr.) P: A312; I-Core. Kelley admit of senior standing. Generally accepted accounting principles as applied to partnerships, business combinations, branches, foreign operations, and nonprofits. Particular emphasis on consolidated financial statements.

BUS-A 424 Auditing (3 cr.) P: A337, A312, and I-Core. Kelley admit of senior standing. This course provides students with an understanding of (1) the auditing environment and professional ethics, (2) audit reports and the conditions under which alternatives are used, (3) basic auditing concepts, (4) audit evidence and documentation, (5) analytical reviews, (6) the audit risk model, (7) review and documentation of internal controls, (8) audits of cycles, (9) statistical sampling, and (10) audit objectives and audit procedures for mechanized systems. Emphasis is on the conceptual development of the subject matter, the nature of professional practice, and the technology of auditing.

BUS-A 437 Advanced Managerial Accounting (3 cr.) P: A325; I-Core. Kelley admit of senior standing and consent of instructor. Objective of course is to provide students with advanced managerial accounting knowledge and skills. Emphasis is on strategic decision making and management control systems. Students will provide case analyses and presentations.

BUS-A 439 Advanced Auditing (3 cr.) P: A424; I-Core. Kelley admit of senior standing. Coverage of ethics for the accounting profession. Issues of legal liability. Audit program planning. Statistical sampling applications. Use of Electronic Data Processing (EDP) auditing.

BUS-A 460 Information Systems Security Assurance (3 cr.) P: I-Core. Kelley admit of senior standing. This course covers the management and control security of an entity's information technology infrastructure and processes. Specific topics include information security risk identification and management; telecommunications; applications; operational security, physical security, and business continuity; and disaster recovery planning.

BUS-A 490 Independent Study in Accounting (1-3 cr.) P: ICORE, consent of undergraduate program chairperson and instructor. Kelley admit of junior or senior standing. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Business Law

Graduate

BUS-L 512 Law and Ethics in Business (3 cr.) The objective is to provide the student of management with that knowledge of the American legal system--

its processes and the substantive law itself--which is necessary to the making of informed and effective business decisions. Because the law develops and evolves in response to changing social, economic, political, and technological forces, and because business decisions often carry long-lasting as well as delayed effects, this course will emphasize the study of legal change. It is hoped that consideration of past legal developments will give prospective managers sufficient insight into the dynamics of this process to enable them to predict as soundly as possible the future legal environment in which their present decisions will bear fruit. For MBA students enrolled in Summer Module IS.

BUS-L 590 Independent Study in Business Law (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

Undergraduate

BUS-L 100 Personal Law (3 cr.) Effects of law on everyday lives. May include such topics as family law, criminal offenses and traffic violations, personal injury and property damage claims, employee rights, landlord-tenant law, consumer rights, debt collection, selected real and personal property issues, wills and estates, selected contract law issues, and forms of business organization (partnership, proprietorship, and corporation).

BUS-L 201 Legal Environment of Business (3 cr.) P: Sophomore standing. Emphasis on understanding the nature of law through examining a few areas of general interest, such as the duty to avoid harming others (torts), the duty to keep promises (contracts), and government regulation of business. Credit not given for both L201 and L203. Not offered on Indianapolis campus.

BUS-L 203 Commercial Law I (3 cr.) P: Sophomore standing. The purpose of this course is to examine the legal framework for business activity and to explore how to manage that framework in a rapidly changing legal environment. The areas of the law studied include contracts, torts, employment law, intellectual property, forms of business enterprises, and the legal regulation of business competition. Credit is not given for both L201 and L203.

BUS-L 204 Commercial Law I: Honors (3 cr.) P: Sophomore standing. Includes the nature of law, torts, contracts, the sale of goods, and the legal regulations of business competition. Credit not given for both L 203 (or L201) and L204.

BUS-L 303 Commercial Law II (3 cr.) P: L201 or L203 or L204. Kelley Admit of Junior or Senior standing. Focuses on the law of ownership, forms of business organization, commercial paper, and secured transactions. For accounting majors and others desiring a broad yet detailed knowledge of commercial law.

BUS-L 490 Independent Study in Business Law (1-3 cr.) P: Consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Computer Information Systems

BUS-S 302 Management Information Systems (3 cr.) P: K201. Junior or senior standing. Overview of management information systems (MIS) within a business context, with emphasis on end-user computing. Covers MIS theory and practice as they relate to management and organization theories; current trends in MIS; managerial usage of information systems; computer hardware, software, and telecommunications; information systems for marketing, finance, accounting, and other business areas; systems development process; and the role of microcomputers. Provides experiential learning by exposure to various decision-support tools for microcomputers.

BUS-S 305 Business Telecommunications (3 cr.) P: S302. Kelley admit of junior or senior standing. Introduces students to a wide range of telecommunications technologies, including local area networks, wide area networks, and the Internet, as well as uses of these technologies in the organization.

BUS-S 307 Data Management (3 cr.) P: K201. Kelley admit of junior or senior standing. Improves students' understanding of, and develops their skills in, the design and implementation of business databases using modern database management systems. Covers data structures and the conceptual, logical, and physical design of databases, as well as database implementation and general issues in business data management.

BUS-S 310 Systems Analysis and Design (3 cr.) P: ICORE. Kelley admit. C: or P: S307. Analysis of an organization and the subsequent design of computer systems to meet business requirements are at the heart of the computer information systems (CIS) field. This is the first in a two-course sequence (with S410) that addresses the multiphased process for developing information systems. Courses follow the system's development life cycle, although alternative methodologies are also covered. This first course covers the phases from information systems planning through the specification of structured system requirements in functional form (i.e., logical system design) and concentrates on methods, techniques, and tools used to determine information requirements and to document these requirements in a thorough and unambiguous form. Also introduces computer-aided software engineering (CASE) technology. Students learn the discipline of systems analysis and logical design through a hypothetical case situation.

BUS-S 410 Systems Implementation (3 cr.) P: S310. Kelley admit. Effective development of an information system depends on proper utilization of a broad range of information technology, including database management systems, operating systems, computer systems, and telecommunications networks. The second course in a two-course sequence (with S310) that addresses the multiphased process for developing information systems, this course covers the phases from physical system design through the installation of working information systems. Concentrates on using the results of systems analysis and design, typically documented in CASE technology, and either building or generating systems to meet these specifications. A semester-long field project and various hands-on exercises provide practical experience in building, testing, and installing a system.

BUS-S 430 Electronic Commerce Strategic Analysis (3 cr.) P: ICORE. Kelley admit of senior standing. This course will investigate how a variety of organizations (private, public, and nonprofit) use electronic commerce applications to reach their organizational goals. These applications will illustrate consumer-to-business, business-to-business, and intraorganizational electronic commerce in physical as well as digital products and services. The course will highlight the different business models underlying these electronic commerce applications and will discuss them from both an operational and strategic perspective.

BUS-S 435 Advanced Topics in Computer Information Systems (3 cr.) P: BUS-S 302, I-Core, and permission of undergraduate chairperson. Kelley admit of senior standing. Variable topics course; topics offered will depend on student interest and faculty interest and expertise. Possible topics include telecommunications and networking, advanced systems development methods, data administration, and management of the information systems function.

BUS-S 480 Professional Practice in Computer Information Systems (3-6 cr.) P: I-Core and permission of undergraduate chairperson. Kelley admit of senior standing. Work experience in cooperating firm or agencies. Comprehensive written report required. Grade of S or F assigned by faculty.

BUS-S 490 Independent Study in Computer Information Systems (1-3 cr.) P: S305, S307, and S310; consent of department chairperson and instructor. Kelley admit. Supervised individual study and research in student's special field of interest. Student will propose the investigation to be completed. Comprehensive written report required.

Economics

BUS-G 511 Microeconomics for Managers (1.5 cr.) P: G502 Managerial Economics. This course develops basic skills in analysis of industry and market structure, employment of game theory in the construction of competitive strategy, and determination of optimal prices for the sale of goods and services. Specific topics include oligopoly, antitrust regulation, price discrimination, product bundling, and predatory pricing. Students will gain advanced knowledge of how to use prices and market position to maintain an advantage over competitors that maximizes profits.

BUS-G 512 Macroeconomics for Managers (1.5 cr.) An integrated curriculum that teaches students how to take inventory of the nation's economic position, understand the impact of government actors, and forecast political and economic variables important to the firm. Specific topics covered include national income accounting, determination of GDP and inflation, measurement of unemployment, impacts of fiscal and monetary policies, movement and term structure of interest rates, consequences of government debt, and exchange rates and their linkage to the balance of payments. Students leave the course with a fundamental understanding of the national assets that expand production capacity and national liabilities that stunt opportunity for economic growth.

BUS-G 590 Independent Study in Business Economics and Public Policy (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

Finance

Graduate

BUS-F 509 Financial Analysis for Corporate Decisions (1.5 cr.) P: F523 Financial Management. This course develops a working knowledge of capital budgeting. The beginning of the course focuses on the application of traditional capital budgeting criteria, the determination of cash flows for capital budgeting purposes, and the determination of the appropriate cost of capital. Next, alternative methodologies/concepts such as Adjusted Present Value (APV), Economic Value Added (EVA), and valuing investment opportunities as Real Options are examined. Case studies are utilized to emphasize how these techniques can be applied to improve the capital allocation process.

BUS-F 517 Venture Capital and Entrepreneurial Finance (1.5 cr.) P: F523 Financial Management. This course will examine venture capital in financing entrepreneurial growth companies, how venture capital is raised, invested, and then harvested for reinvestment; how professional venture capitalists analyze and structure potential investments; how and when portfolio companies should execute an exit.

BUS-F 520 Asset Valuation and Strategy (1.5 cr.) P: F523 Financial Management. The course begins with an introduction to the primary and secondary markets with an emphasis on the equity markets. Basic theories for valuing equity and derivative securities are presented. Covered in the equity arena are the Capital Asset Pricing Model, Arbitrage Pricing Theory, and empirical tests of these models. Basic options, forwards, and futures are applied as risk management techniques in the equity and currency markets. Required course for finance majors.

BUS-F 523 Financial Management (3 cr.) Provides a working knowledge of the tools and analytical conventions used in the practice of corporate finance; establishes an understanding of the basic elements of financial theory to be used in application of analytical reasoning to business problems; and explores the interrelationship among corporate policies and decisions. Course work will include problem sets, study group preparation of executive summary memos and critiques, and use of PC spreadsheets to develop a planning model for a case focusing on funds requirement. For MBA students enrolled in Module 1B.

BUS-F 525 Corporate Financial Risk Management (1.5 cr.) P: F520 or concurrent, F526 recommended This course provides an introduction to risk management strategies. We will focus on two key questions: First, why is risk management important? Second, how can risk management strategies be implemented? The course will make extensive use of derivatives as risk management tools, but no technical knowledge of derivatives is required. Students will be introduced to commercial software such as JP Morgan's Riskmetrics and Creditmetrics. Bus F 526 is recommended, but not required.

BUS-F 526 Derivative Securities (1.5 cr.) P: F520 or concurrent This course provides an introduction to derivative securities. We will focus on understanding the basic types of derivatives such as futures contracts, swaps, and options. We will make extensive use of the Binomial and Black-Scholes models for pricing options. No prior knowledge of derivatives is required and we will keep the mathematics to the essentials.

BUS-F 528 Fixed Income Investments (1.5 cr.) P: F520 Explores the broad class of fixed income securities, the determinants of risk and pricing, theories of the term structure, and the management of portfolios of fixed income securities. Theoretical material is developed in the context of the market for treasury securities. The later part of the course is on institutional foundations of corporate bond, municipal bond, and mortgage-backed securities markets, as well as how the concepts are adapted to the valuation and management of these more complex securities.

BUS-F 529 Equity Markets (1.5 cr.) P: F520 The conceptual and analytical framework for investing in equity securities are presented in this course. Coverage includes an overview of the security markets, equity valuation, investment strategies, and portfolio management for individuals and institutions. International equity investing is discussed in global portfolio context. Numerous examples are used to illustrate the practical application of valuation models and strategies.

BUS-F 540 The Firm in the Capital Market (1.5 cr.) P: F523 Financial Management. An introduction to the fixed income markets and the derivative securities used to hedge interest rate risk is presented. The price/yield relationship, term structure of interest rates, and interest rate risk measurement are emphasized. Forwards, futures, options and swaps are presented as risk management tools. Required course for finance majors.

BUS-F 548 Corporate Governance and Restructuring (1.5 cr.) P: F523 Financial Management. This course is designed to promote greater understanding of mergers and acquisitions, restructurings, and corporate governance activities. This includes exploring the theory and evidence regarding the motives for M&A/ restructuring transactions, the sources of value-added, and managerial incentives to engage in or resist these activities. Participants will learn how to apply discounted cash flow techniques for valuation purposes. Case studies are utilized to incorporate financial theory and valuation techniques in real-world situations.

BUS-F 570 International Financial Markets (1.5 cr.) P: F523 Financial Management. This course examines the international financial markets in which firms and investors operate and discusses how to assess the opportunities and risks of those markets. Topics to be discussed include balance of payments, international arbitrage relationships, exchange rate determination, currency crises, and international asset diversification.

BUS-F 571 International Corporate Finance (1.5 cr.) P: F523, F570 This course examines how firms and investors manage their operations or investments in an international environment. Topics to be discussed include foreign exchange risk management, financing the global firm, foreign investment decisions, and multinational capital budgeting.

BUS-F 590 Independent Study in Finance (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

Undergraduate

BUS-F 200 Foundations of Financial Management (Non-majors) (3 cr.) P: sophomore standing. This course is designed to introduce the student to the basic decision models of financial management and to prepare the student to take an active role in financial decision making in the workplace.

BUS-F 260 Personal Finance (3 cr.) P: Sophomore standing. Financial problems encountered in managing individual affairs, family budgeting, installment buying, insurance, home ownership, and investing in securities. No credit for Kelley School of Business students when taken concurrently with or after the Integrative Core.

BUS-F 300 Introduction to Financial Management (3 cr.) P: BUS A200, MATH 110 or higher-level math course. Junior or senior standing. Offered to students for a minor in business. An extensive course dealing with a wide range of topics: the determinants of interest rates and the time value of money; the sources and uses of financial information; the structure, role, and regulation of the financial markets; monetary policy; the pricing of risk in the financial markets; the goals of investors; and how firms manage their financial affairs, including planning, budgeting, and decision making. The treatment of these topics will be both descriptive and analytical; there is a large vocabulary to be learned and a number of concepts and problems to be mastered. In addition, we will put this body of knowledge in the context of the current business and financial environment, both domestic and international.

BUS-F 301 Financial Management (3 cr.) Kelley admit of junior or senior standing. Students must meet the Option II admission criteria to take the Integrative Core courses including course, GPA, and grade requirements. Part of the Integrative Core, along with M301 and P301. Broad survey of finance for all business students. Provides a conceptual framework of a firm’s investment, financing, and dividend decisions; includes working capital management, capital budgeting, and capital structure strategies. Requires authorization.

BUS-F 303 Intermediate Investments (3 cr.) P: ICORE. C: or P: F305 and A310. Kelley admit of junior or senior standing. Students majoring in Accounting and Finance should take A311 instead of A310. Part of the finance core. Provides a rigorous treatment of the core concepts of investments for finance majors. Covers equity securities, fixed income securities, derivative securities, and international investments. Makes extensive use of spreadsheet modeling to implement financial models. Serves as a foundation for all 400-level finance electives.

BUS-F 304 Honors Financial Management (3 cr.) P: Students must meet the Option II admission criteria to take the Integrative Core courses, including course, GPA, and grade requirements. Kelley admit of junior or senior standing. Section authorization is required. The course

provides a conceptual framework of a firm's investment, financing, and dividend decisions; includes working capital management, capital budgeting, and capital structure strategies.

BUS-F 305 Intermediate Corporate Finance (3 cr.) P: F301. Kelley admit of junior or senior standing. Provides a rigorous treatment of the fundamental concepts of corporate finance for finance majors. Covers capital budgeting, the valuation of firms, and capital structure and payout policies. Serves as a foundation for all 400-level finance electives.

BUS-F 365 Personal Financial Planning (3 cr.) P: F301. R: Kelley admit of junior or senior standing. General course oriented toward theory and application of personal financial planning topics, with focus on the process of accumulating and protecting wealth, with the goal of obtaining financial independence. Time value of money exercises and money management tools are utilized. Other topics examined include personal insurance issues, investments in private and public securities, retirement planning, and estate planning.

BUS-F 402 Corporate Financial Strategy and Governance (3 cr.) P: A310 (or A311) and F305; I-Core. Kelley admit of senior standing. Advanced treatment of corporate financial management. Covers all major areas of corporate financial decisions: capital budgeting, dividends, capital structure, cash-flow projections, mergers, and acquisitions. Makes extensive use of spreadsheet modeling.

BUS-F 420 Equity and Fixed Income Investments (3 cr.) P: A310, F305, F303; I-Core. Kelley admit of senior standing. A detailed examination of the management of equity and fixed income investments. The analysis of individual securities, the formation of these securities into portfolios, and the use of derivative securities to modify the return/risk profiles of more traditional stock and bond portfolios will be discussed.

BUS-F 446 Bank and Financial Intermediation (3 cr.) P: F305 and A310; I-Core. Kelley admit of senior standing. The main topics are: (1) the economic role of financial intermediaries, with an emphasis on commercial banks; (2) the evolution of markets in which banks and other financial intermediaries operate; and (3) the regulation of commercial banks and other financial institutions.

BUS-F 490 Independent Study in Finance (1-3 cr.) P: I-CORE and consent of undergraduate program chairperson and instructor. Kelley admit. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

BUS-F 494 International Finance (3 cr.) P: I-CORE. Kelley admit of senior standing. A study of the international financial markets in which firms operate and of financial management in an international environment. Topics include exchange rates, international arbitrage, exchange rate risk management, international financing and diversification, and multinational capital budgeting.

General and Honors Courses

Note: Senior standing and the Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

Graduate

BUS-X 511 Weekend Seminar in Management Issues (1.5 cr.) The MBA Weekend Experience has students serve as the top management of a MNC. The experience helps them to focus on strategic processes such as how strategic decisions get made, how issues get raised, and where strategy meets human behavior. The experience also highlights the importance of leadership, vision, communication, and listening skills. It serves as an opportunity for the students to assess how effective they are in these skills areas. Required for students in MBA Module 1A.

BUS-X 518 Business of Life Sciences I (1.5 cr.) This course introduces students to all the parts of the industry including the players and their challenges in basic science, medical devices, pharmaceuticals, generics, biotech, distributors, health care providers, insurers, venture capitalists, etc. The business of life sciences is made more successful when those involved in the industry recognize and understand value added at each stage. The value chain beings with the sciences and ends with a health solution for a patient. In between are many stages involving several business sectors engaged in manufacturing and services. A Kelley student interested in a life science career will benefit from a deeper understanding of how the whole value chain works. Includes guest speakers who are specialists in various aspects of this diverse set of industry sectors, who know from experience he relationships and challenges. While this course looks at the big picture, a course project will give each student a chance to focus on at least one part of the value chain. The course grade will be based on attendance, class participation, and a business project.

BUS-X 519 Business of Life Sciences II (1.5 cr.) This course introduces students to all the parts of the industry including the players and their challenges in basic science, medical devices, pharmaceuticals, generics, biotech, distributors, health care providers, insurers, venture capitalists, etc. The business of life sciences is made more successful when those involved in the industry recognize and understand value added at each stage. The value chain begins with the sciences and ends with a health solution for a patient. In between are many stages involving several business sectors engaged in manufacturing and services. A Kelley student interested in a life science career will benefit from a deeper understanding of how the whole value chain works. Includes guest speakers who are specialists in various aspects of this diverse set of industry sectors, who know from experience the relationships and challenges. While this course looks at the big picture, a course project will give each student a chance to focus on at least one part of the value chain. The course grade will be based on attendance, class participation, and a business project.

BUS-X 522 Enterprise Lecture Series (1.5 cr.) Required lecture series and case competition for Evening MBA students to support Enterprise Experience. For MBA students enrolled in Module 1B or 2A.

BUS-X 523 Enterprise Experience I (1.5 cr.) First of a two–part series for Evening MBA students involving a consulting project with a local company or business. Students will work in groups of 3 or 4 under close supervision on enterprise director. For MBA students enrolled in Module 2A or 2B.

BUS-X 524 Enterprise Experience II (1.5 cr.) Second of a two–part series of Evening MBA students involving a consulting project with a local company or business. Students will work in small groups under close supervision of Enterprise Director.

BUS-X 551 Career Management (1.5 cr.) This course is designed to provide MBAs with the skills necessary to successfully manage internal and external career transitions. Students improve their ability to package their know–how and work experience by developing a professional portfolio of resume formats, professional summaries, references and multiple work samples. Presentation skills are enhanced through behavioral interview skill practices and mock interviews. Additional topics covered include: career & job search strategy, networking, negotiations, internal development, on/off campus interviewing and market updates. Typically offered during the Summer semester only. This course is required for students to participate in GCS services in Bloomington.

BUS-X 572 Entrepreneurship and Management Topics in Healthcare (1.5 cr.) P: F523, G512 Healthcare spending represents a staggering 17% of the US GDP, and is expected to continue growing. It also represents a complex industry, driven by innovation and entrepreneurship. This course addresses some of those complexities, with a focus on pharmaceuticals, biotechnology and medical devices.

Undergraduate

BUS-X 100 Business Administration: Introduction (3 cr.) Business administration from the standpoint of the manager of a business firm operating in the contemporary economic, political, and social environment. No credit for Kelley School of Business students when taken concurrently with or after the Integrative Core.

BUS-X 103 Business Learning Community (1 cr.) Authorization required. This course is designed to assist students to be successful at the university and to develop skills and competencies that will enable them to perform well in courses offered by the Kelley School of Business. Each learning community has an instructional team that is led by a faculty member and includes a student mentor, an academic advisor, and a librarian. The instructional team structures the learning environment to provide participants with as much academic support as possible.

BUS-X 105 Business Administration Introduction: Honors (3 cr.) Business administration from the standpoint of the manager of a business firm operating in the contemporary economic, political, and social environment. No credit for Kelley School of Business students when taken concurrently with or after the Integrative Core.

BUS-X 203 Independent Study in Community Service Learning (1-3 cr.) P: Sophomore standing. Authorization required. Independent study course for students intending to apply to the Kelley School of Business and who have 26 or more credit hours. Students will participate in an online library research program, survey and analyze written works on business ethics and societal responsibility, and participate in a group social learning project that involves multiple visits to elementary schools. Credit not given for both X103 and X203.

BUS-X 204 Business Communications (3 cr.) P: ENG W131 or equivalent with grade of C or higher. Theory and practice of written communication in business; use of correct, forceful English in the preparation of letters, memoranda, and reports.

BUS-X 220 Career Perspectives (2 cr.) P: Sophomore standing. Assists students in constructing their academic programs and postcollege plans. Students are involved in group interaction with managers, senior executives, faculty, junior or senior student mentors, alumni, and community leaders. Students use data from tests and exercises to consider career options as they relate to such topics as globalization, total quality management, workforce diversity, leadership theory, and volunteerism. Not offered in Indianapolis.

BUS-X 293 Honors Seminar in Business (1-3 cr.) For students in Business Honors Program.

BUS-X 300 Career Planing for Non-Business Majors (2 cr.) This course will provide non-business majors (preferably juniors and seniors) with the strategies and tools necessary to explore careers, prepare for the job or internship search, and/or to identify graduate school options. Topics include, but will not be limited to resume and job search document preparation, job search strategies, and assistance identifying career options.

BUS X302 Communication Core II (1 cr.) C: A328. Emphasizes development of communication skills through writing exercises related to tax research. In addition, covers how to access the primary and secondary sources of tax law, including the Internal Revenue Code, regulations and other administrative pronouncements, and judicial decisions. Explains the research process and the use of research tools to locate sources of tax law. Utilizes both paper products and electronic (Internet) resources. Emphasizes how to read and interpret source materials. Tax research assignments stress writing skills and the need for effective communication of research findings.

BUS-X 320 Business Career Planning and Placement (2 cr.) P: Kelley admit of junior standing. Assists students in obtaining positions consistent with career goals. Covers career planning, self-assessment, career options, organized employment campaigns, interviewing techniques, employment communications, alternate job search strategies, and career management. Involves in-depth work with resume software, electronic mail, and other communication tools. Session with corporate managers describing work issues and training programs. Also open to seniors in schools outside Kelley.

BUS-X 380 Professional Practice (1-3 cr.) P: I-CORE. Kelley admit of junior or senior standing and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Students receive work experience in cooperating firms or agencies. Comprehensive written report required.

BUS-X 390 Integrative Experience (1 cr.) P: All option two admission requirements. Kelley admit. Integrative case exercise involving the finance, marketing, and operations functions; required of students who did not complete the Integrative Core course work (F301, M301, and P301) on the Bloomington or Indianapolis campuses.

BUS-X 393 Honors Writing Experience (1-3 cr.) For students in the Business Honors Program.

BUS-X 400 Integration of International Business Study (1 cr.) P: Admission to a Kelley School of Business overseas study program. Seminar integrates curriculum in business overseas study program with domestic business practice and philosophy and the Kelley School of Business curriculum.

BUS-X 401 Community Service Learning: Focus on Children (1 cr.) P: Authorization. Provides training, orientation, and reflection for student volunteers who are assigned to elementary school children during the enrolled semester. The course will briefly cover child development and issues related to at-risk children and the agencies that serve them. A minimum of two hours per week of community service through a Kelley School of Business-approved program is required. The course is graded S/F.

BUS-X 405 Topical Explorations in Business (1-3 cr.) Specific topic to be announced as the course is offered.

BUS-X 480 Professional Practice (1-3 cr.) P: I-CORE. Junior or senior standing in major area; and consent of undergraduate program chairperson. Application filed through the coordinator of internships. Students receive work experience in cooperating firms or agencies. Comprehensive written report required.

BUS-X 485 Overseas Study I (3 cr.) P: Enrollment in a Kelley School of Business overseas study program. Lectures and discussion on aspects of the current international business environment.

BUS-X 486 Overseas Study II (3 cr.) P: Enrollment in a Kelley School of Business overseas study program. Lectures and discussion on aspects of the current international business environment.

BUS-X 487 Seminar in Business Administration (1-3 cr.) Instruction of an interdisciplinary nature for student groups involved in university-related nonprofit ventures. Interested groups must be sponsored by a Kelley School of Business faculty member and must obtain approval for the seminar from the Undergraduate Policy Committee. May be repeated up to a maximum of 6 credits.

BUS-X 488 Current International Topics (1-6 cr.) P: Enrollment in a Kelley School of Business overseas study program. Lectures and discussion on aspects of the current international business environment, as well as the cultural aspects of the area in which an overseas study program is located.

BUS-X 490 Independent Study in Business (3 cr.) P: Permission of chairperson for undergraduate program

BUS-X 493 Honors Seminar in Business (1-3 cr.)

BUS-X 496 Supervised Independent Honors Research in Business (1-5 cr.) P: Senior standing. For students in Kelley School of Business Honors Program.

International Business

Graduate

BUS-D 590 Independent Study in International Business (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

Undergraduate

BUS-D 301 The International Business Environment (3 cr.) P: ECON E201 and E202 Junior standing Economic environment for overseas operations. Governmental policies and programs that affect international business. Economic and political philosophies around the world; patterns of government-business relationships. Economic development and business activities in differing political and cultural environments.

BUS-D 302 International Business: Operation of International Enterprises (3 cr.) P: BUS D301 and Kelley admit. Junior standing International dimensions of marketing, finance, accounting, taxation, and personnel, with an emphasis on management decisions and implementation. Analytical framework for decision making in a multinational context.

BUS-D 490 Independent Study in International Business (1-3 cr.) P: I-CORE. Consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

BUS-D 496 Foreign Study in Business (2-6 cr.) P: Senior standing and consent of instructor. Work in, or visits to, business firms; discussions with business executives and government officials. Prior background reading, orientation work, and approval of project required. For every three weeks of foreign residence, students earn 2 credit hours.

Kelley Direct

BUS-I 510 Strategic Management and Business Planning (3 cr.) This course introduces students to strategic management and planning. In the course, you are asked to develop and execute a business strategy in a business simulation. In the Kelley Direct Online MBA Program, you are asked to develop a wide variety of skills and competencies in management. Developing and executing a business plan is only one of these skills. In addition, many of the skills and competencies addressed in this course will receive progressively greater refining in subsequent courses. As a result, this course should be viewed as in introduction to many issues that you will address again from different perspectives throughout the remainder of the MBA program. For Kelley Direct C560.

BUS-I 511 Law and Ethics in Business (3 cr.) The objective is to provide the student of management with a basic knowledge of the American legal system, the legal process and relevant substantive law which is necessary to making informed and effective business decisions. The law develops and evolves in response to changing

social, economic, political, and technological forces, and business decisions often carry long-lasting as well as delayed effects. This course emphasizes the study of the law of torts, contracts, and product liability. It is hoped that consideration of a study of these legal principles will give prospective managers insight into the dynamics of the legal process to enable them to predict as soundly as possible the future legal environment in which their present decisions will bear fruit. For Kelley Direct C550.

BUS-I 523 Supply Chain Management - Sourcing (3 cr.) This course concentrates on the important functions of working and managing the vendor base that supports the supply base. Students will learn about the design of cooperative arrangements between trading partners, as well as the new technologies like internet reverse auctions and e-hubs that are being employed for e-procurement. For Kelley Direct E731.

BUS-I 526 Asset Pricing and Security Valuation (3 cr.) A key focus of managers in public corporations is the creation of enterprise value and the way that value is shared between various suppliers of capital. This course provides an understanding of how financial markets function and how investors value financial securities. This knowledge will assist the manager to understand how various decisions may impact firm and shareholder value. Topics covered include the demand for and pricing of debt and equity securities, portfolio theory, and the pricing and expanding role of derivative securities. For Kelley Direct F741.

BUS-I 527 International Financial Management (3 cr.) This course provides an extension of the major finance topics a manger faces into a global setting. Investing across national boundaries presents unique opportunities and unique risks, thus domestic financial theory must be extended to incorporate these additional factors. Topics include measurement and management of exchange rate, international parity relationships, translation and transaction exposure, international investment diversification, international capital budgeting and multinational cash management. For Kelley Direct F742.

BUS-I 535 Strategic Management and Leadership (3 cr.) The primary focus of this course is the top-level executives who provide strategic leadership to business organizations. Students will learn about the roles, functions, and responsibilities of leadership, in order to learn the administrative requirements of leadership. In addition, students will be introduced to the analytical skills and social and personal characteristics of highly effective leaders. Case studies, videotapes and other media will be used to explore these and related issues. For Kelley Direct U710.

BUS-I 541 Financial Management (3 cr.) Provides a working knowledge of the tools and analytical conventions used in the practice of corporate finance; establishes an understanding of the basic elements of financial theory to be used in application of analytical reasoning to business problems; and explores the interrelationship among corporate policies and decisions. Course work will include problem sets, study group preparation of executive summary memos and critiques, and use of PC spreadsheets to develop a planning model for a case focusing on funds requirement. For Kelley Direct C540.

BUS-I 545 Economics for Managers (3 cr.) Economic decision making in the business firm, the strategic interaction of business firms in industries, the purchasing and behavior of individual consumers and consumers as a group, and the influence of public policy on market outcomes. Development of a fluency with the language of economics and a strong 'economic intuition,' understanding of selected economics-based decision-making tools and the impact and interaction of the structure of an industry on competition, analysis of intra-industry rivalry, and improved understanding of public policy issues. Emphasis on the logical foundations of economic analysis and managerial decision making. Will promote understanding and application of various quantitative measures. For Kelley Direct C530.

BUS-I 547 Strategic Marketing Management (3 cr.) An introduction to the process of creating a market-driven organization. Specific topics include marketing strategy, market research and analysis, and the development of products and services, pricing, distribution and promotion. The course employs lecture, classroom discussion through threaded discussion forums, case analysis and field research projects. For Kelley Direct C570.

BUS-I 548 Operations Management (3 cr.) Surveys the management of operations in manufacturing and service firms. Diverse activities, such as determining the size and type of production process, purchasing the appropriate raw materials, planning and scheduling the flow of materials and the nature and content of inventories, assuring product quality, and deciding on the production hardware and how it gets used, comprise this function of the company. Managing operations well requires both strategic and tactical skills. The topics considered include process analysis, workforce issues, materials management, quality and productivity, technology, and strategic planning, together with relevant analytical techniques. The course makes considerable use of business cases. Most classes will be spent discussing the cases assigned. For each case, students will be asked to review actual company situations and apply technical and managerial skills to recommending courses of action. Most cases will be taken from manufacturing, but some will be service-oriented. Several of the cases will focus on international companies or issues. For Kelley Direct C580.

BUS-I 550 Organization Designs for Strategic Advantage (3 cr.) The purpose of this course is twofold. Initially, students will be introduced to the basic elements of organizational design, including but not limited to organization structure, administrative processes and systems, size, and product-market complexity. Then they will learn how these other elements can be configured into a range of designs alternative suited for the demand of different strategic, environmental and technological conditions. These two areas of learning will prepare students for designing organizations that can adapt to the shifting competitive forces of virtually any organizational context. For Kelley Direct U702.

BUS-I 551 Global Enterprise Risk Management (3 cr.) The purpose of this course is to prepare the student to understand enterprise risk management in a globalized world. From the perspective of a multinational enterprise we focus on foreign Investment Risk, Country Risk, Foreign Exchange Rate Risk and global Non-Market Risk. We will study different monetary arrangement in the

past and present, analyze the very nature of the foreign exchange market, and try to understand the causes and consequences of international currency crises. We will analyze and measure different forms of foreign exchange related risk, and we will study strategies and instruments to manage these risks. We also study the emerging field of non-market risk management. As social and environmental concerns rise, and global communication costs shrink, businesses will increasingly find all their operations coming under increasing scrutiny, raising regulatory and social risk. We will examine the non-market business environment, defining the major players and the social and economic institutions in which they operate. We then explore the successful development of non-market risk reduction strategies. For Kelley Direct X520.

BUS-I 563 Integrative Team Oriented Project (3 cr.) Students will work in project teams to compete in a business computer simulation that is designed to integrate the knowledge, skills, and abilities learned in the program. Readings and other course materials will be assigned by the faculty instructor.

BUS-I 564 Employment Law for HR Practices (1.5 cr.) This course is designed to introduce and analyze human resources management utilizing am employment life cycle approach. Particular emphasis is placed on the legal environment inextricably intertwined with human resources management and the effect this relationship has on human resource practice. Human resources strategy and the function of human resources within the organization is also explored, focusing on employment law as a component in business strategy that should be utilized to solve issues both creatively and effectively.

Management

Graduate

BUS-J 501 Developing Strategic Capabilities (1.5 cr.) This course offers an introduction to tools for strategic management. Because it comes at the beginning of the MBA Program, it provides an introductory view of the complexities involved in determining long-term strategies. Rather than assessing the firm's environment in terms of broadly defined opportunities and threats, we will examine the dynamics of the competitive environment, how both the pace and the direction of industry change are influenced by the resources, capabilities, and competitive interactions of rival firms. For MBA students enrolled in Module 1A.

BUS-J 506 Leadership and Ethics in the Business Environment (3 cr.) P: J501. Modern businesses operate in an increasingly interdependent and dynamic environment. The modern, large firm is the major institution in most contemporary industrialized societies. Many actions of firms have major impacts on society as a whole, as well as on specific stakeholders. Corporate actions are increasingly subject to media, public and government scrutiny. The nature of the constantly changing relationship between business and its major constituencies is the focus of the course. The ethical, political, economic, social, and technological considerations of various managerial decisions are investigated. The role of ethical leadership and how it relates to corporate purpose and responsibility will be a major theme of this course. For MBA students enrolled in Module 2B.

BUS-J 522 Strategic Management of Technology and Innovation (3 cr.) P: J506. Once upon a time, technology management was left to engineers and innovation was something that came out of the R&D labs. Today new technologies redefine industries and business practices daily, and nurturing innovation is the responsibility of all managers. Technology, innovation, and strategy have become intertwined as firms realize that distinctive organizational capabilities are the basis of competitive advantage. The importance of developing capabilities has, in turn, increased interest in a broader interpretation of innovation: organizational learning. This course examines the interrelationship of these concepts and explores how managers may use the development of technology to improve their firm's strategic position.

BUS-W 511 Venture Strategy (3 cr.) P: J501. This course is designed for those individuals interested in creating a new business venture, acquiring an existing business, working in industries that serve the entrepreneur, or students wishing to familiarize themselves with concepts, issues, and techniques of new venture creation and entrepreneurship. There is also a strong focus on intrapreneurship, or innovation within a corporate environment. Because the sources of entrepreneurial and intrapreneurial motivation are often quite diverse, the learning goals and objectives of the students in this course are often similarly diverse. Therefore, the course is designed to offer a broad range of educational experiences, including case analyses, presenting and negotiating a financial deal, and creating a business plan or corporate change initiative.

BUS-W 519 Knowledge Management (3 cr.) It is now widely accepted that a firm's knowledge and its capability to learn and to share knowledge are critical competitive advantages. This course will begin by defining organizational learning and then move toward helping the business professional to do a knowledge audit. Organizations expand their knowledge through their networks and external contacts and through alternate modes of disseminating their knowledge. So it is important for firms to assess their learning intent and goals for learning externally as well as sharing and using knowledge internally. Many organizations are looking at themselves as learning organizations and think of their capacity to learn as an important capability. Taught as a web-based course through Oncourse.

BUS-W 520 Turnaround Management (1.5 cr.) This course is designed to provide the student with a process that has been shown to be effective in turning around a seriously under-performing business. The viewpoint of the leader of the business is taken throughout the course. The course is divided into three segments: (1) demonstrating that it is typical for a business to deteriorate in performance over time and the overall process for correcting performance; (2) examining each step in the turnaround process, including early stage diagnosis, recovery actions, and wind-up activities; and (3) suggestions for the leader to avoid entering into a turnaround again. Cases, guest speakers (e.g., workout specialists from banks, turnaround consultants, and company leaders who have experienced turnarounds), and lectures on each step in the process are used in the course.

BUS-W 525 New Ventures and the Venture Community of Indianapolis (1.5 cr.) P: J501. This course is designed to support and encourage student participation in the Venture Club monthly lunch meetings. The Venture Club is a group of venture capitalists, entrepreneurs, bankers, consultants, and service providers (accountants, lawyers, etc.) who meet on a monthly basis in downtown Indianapolis. Meetings typically consist of a brief networking session, followed by two or three presentations by entrepreneurs seeking funding for business concepts, and a guest speaker. Sessions last a total of two hours, and have approximately 200 attendees. Following a brief meeting at the beginning of the semester, students would attend the monthly meetings of the Venture Club (September through April for 8 meetings, 16 hours) and participate in online chat sessions following the meeting. Each meeting would have an associated reading from Harvard Business Review, or a similar journal related to new venture development and financing. Note: this course is generally offered in an ADC or online format.

BUS-W 550 Management Consulting and Strategy (3 cr.) P: J501. This course focuses on what is required to become a successful management consultant with emphasis on corporate strategy. Students will have the opportunity to assume the role of a management consultant and to prepare and present a current corporate strategy product. Key activities will include proposal preparation, fact gathering, interviewing progress review, and final report preparation and presentation. Prospective students should have a solid understanding of the fundamentals of corporate strategy.

BUS-W 590 Independent Study in Management and Administration (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

BUS-Z 590 Independent Study in Personnel and Organizational Behavior (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

Undergraduate

BUS-J 401 Administrative Policy (3 cr.) P: I-CORE, Z302, X320 (or concurrent), 6 hours of major (or concurrent). Kelley admit of senior standing. Administration of business organizations: policy formulation, organization, methods, and executive control.

BUS-J 402 Administrative Policy: Honors (3 cr.) P: I-CORE, Z304, X320 (or concurrent), 6 hours of major (or concurrent). Kelley and honors program admit or senior standing. Administration of business organizations: policy formulation, organizations, methods, and executive control.

BUS-J 404 Business and Society (3 cr.) P: I-CORE, senior standing. Examines major ethical theories as a basis for analyzing ethical behavior in the business environment. Investigates such issues as economic competition, discriminatory practices, manipulation of power, environmental conservation, and organizational cultures.

BUS-J 411 Analysis of Business Decisions (3 cr.) P: J401, Z311, Z312, X320, 6 hours of major. Kelley admit of senior standing. Strategy is about determining and implementing a course of action to accomplish objectives to effectively compete and create sustainable competitive advantages for the organization in the marketplace. In this course, students will make business decisions over multiple time periods and examine their impact on the organization's qualitative and quantitative performance. The course is composed of two essential elements: "knowing" and "doing." The "knowing" involves the strategic concepts, techniques, and models applicable to strategic and functional management to help students make intelligent choices among the options available to the organization and its competitors. The student will learn these through assigned readings and discussions. The "doing" involves active participation in a total enterprise strategic management simulation. A team will determine the organization's objectives and goals, evaluate business situations, make decisions for the various functional areas, and examine the outcomes from these decisions as the team competes with other firms in the industry.

BUS-J 490 Independent Study in Personnel Management and Organizational Behavior (1-3 cr.) P: I-CORE and consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special fields of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

BUS-W 200 Introduction to Business Management (3 cr.) P: Sophomore standing. Business administration and management from the standpoint of a business firm operating in the contemporary economic, political, and social environment. This course will not be counted toward a business degree or minor.

BUS-W 212 Exploring Entrepreneurship (3 cr.) This course provides a survey of the basic concepts of starting a business. The course covers the personal origins for motivation for entrepreneurship and the skills, knowledge, and abilities of the entrepreneur. The course includes guests who have successfully started their own businesses and who speak with students about their experiences. The course concludes with students assessing their own potential and developing an idea for a new business.

BUS-W 311 New Venture Creation (3 cr.) P: I-CORE. Kelley admit of junior or senior standing. Primarily for those interested in creating a new business venture or acquiring an existing business. Covers such areas as choice of a legal form, problems of the closely held firm, sources of funds, preparation of a business plan, and negotiating.

BUS-W 430 Organizations and Organizational Change (3 cr.) P: Z302, I-CORE. Kelley admit of senior standing. Analysis and development of organizational theories, with emphasis on environmental dependencies, sociotechnical systems, structural design, and control of the performance of complex systems. Issues in organizational change, such as appropriateness of intervention strategies and techniques, barriers to change, organizational analysis, and evaluation of formal change programs.

BUS-W 490 Independent Study in Business Administration (1-3 cr.) P: I-CORE and consent of undergraduate program chairperson and instructor.

Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

BUS-Z 200 Introduction to Human Resource Practices (Non-majors) (3 cr.) P: Sophomore standing. This course is designed to provide a basic overview of human resources practices and principles that all managers need to be aware of in today's business environment. Specifically, we will focus on employment laws and trends that affect firms of all sizes, as well as managerial practices that can positively impact an organization.

BUS-Z 302 Managing and Behavior in Organizations (3 cr.) P: Junior standing. Integration of behavior and organizational theories. Application of concepts and theories toward improving individual, group, and organizational performance. Builds from a behavioral foundation toward an understanding of managerial processes.

BUS-Z 304 Managing and Behavior in Organizations: Honors (3 cr.) P: Junior standing. Integration of behavior and organizational theories. Application of concepts and theories toward improving individual, group, and organizational performance. Builds from a behavioral foundation toward an understanding of managerial processes.

BUS-Z 311 Leadership and Ethics in the Business Environment (1.5 cr.) P: Junior standing. This course will explore the interrelated areas of business leadership and business ethics. We will examine examples of leadership and ethical crises, and investigate the ethical, political, economic, and social considerations of various leadership decisions.

BUS-Z 312 Human Resources and Negotiations (1.5 cr.) P: Junior standing. This course is designed to provide students with critical managerial tools, including general principles of human resources management and negotiation skills, which will improve their interpersonal skills and their knowledge of the current legal environment in which they must effectively operate.

BUS-Z 340 Introduction to Human Resrouces (3 cr.) P: Z312, Kelley admit, junior standing. Introductory overview of human resources management. Special emphasis will be given to legal issues, diversity in the work force, and contemporary practices.

BUS-Z 404 Effective Negotiations (3 cr.) P: Z312, I-CORE. Kelley admit of senior standing. Exposure to the concepts of negotiations in both the national and international environments, including negotiation strategies and tactics, influence, third-party intervention, audience effects, nonverbal communication, and ethical and cultural aspects. Case studies, simulations, and guest speakers will be used throughout the course.

BUS-Z 441 Wage and Salary Administration (3 cr.) P: Z302, Z340, I-CORE. Kelley admit of senior standing. Survey of problems faced by modern managers of compensation systems. In-depth look at the role of the company, government, union, and employee in the design and administration of total compensation systems. Describes current wage and salary systems and their advantages and disadvantages. Integrates theory and practice through case analysis.

BUS-Z 443 Developing Employee Skills (3 cr.) P: Z302, I-CORE. Kelley admit of senior standing. Focuses on skills that relate to the acquisition and/or identification of knowledge, skills, and abilities among job applicants or current employees. Students will learn how to identify individuals who currently possess the knowledge, skills, and abilities (KSA) required to be effective members of contemporary organizations and how to identify specific training needs and formulate and implement programs designed to address observed KSA deficiencies.

BUS-Z 445 Human Resources Selection (3 cr.) P: Z302, Z340, I-CORE. Kelley admit of senior standing. The ability to evaluate applicants and predict their future performance is a critical function in any organization that wishes to have a competitive edge over other firms. This course will provide students with an understanding of the technical components of selection, including how to determine which applicant characteristics should be examined, what procedures should be used to gather information, and how that information should be combined to identify qualified job applicants.

BUS-Z 490 Independent Study in Personnel Management and Organizational Behavior (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special fields of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

BUS-W 494 Herman B Wells Seminar in Leadership (3 cr.) P: I-Core. Kelley admit of senior standing. Required for students in Kelley Honors Program. Open to Kelley School of Business seniors and selected seniors from other schools with high scholastic ability and promise of developing leadership qualities exemplified by Herman B Wells.

Marketing

Note: Senior standing and the Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

Graduate

BUS-M 501 Strategic Marketing Management (3 cr.) An introduction to the process of creating a market-driven organization. Specific topics include marketing strategy, market research and analysis, and the development of products and services, pricing, distribution and promotion. The course employs lecture, classroom discussion, case analyses, and field research projects. For MBA students enrolling in Module 2A.

BUS-M 503 Applied Marketing Research (3 cr.) P: M501. The basic objective of this course is to develop the student's understanding of marketing research as it applies to marketing decision making. The course covers principles of qualitative, experimental and survey research designs, secondary and syndicated data sources, and questionnaire design. The major focus will be on the tools used to properly collect market research information. This course is usually taught Online (ADC course).

BUS-M 506 Marketing Engineering (1.5 cr.) P: M501. This course deals with the concepts, methods, and applications for decision modeling to address marketing issues such as segmentation, positioning, forecasting, new product design and development, advertising, sales force and promotion planning, and pricing. This course will provide skills to translate conceptual understanding into specific operational plans.

BUS-M 511 Marketing Performance and Productivity Analysis (1.5 cr.) P: M501. The focus of this course is on developing a comprehensive evaluation of the situation facing a product or product line. Emphasis is placed on assessing recent financial performance, identifying customer-based explanations for changes in performance, assessing the effects of marketing investments, and evaluating emerging customer needs and competitive threats.

BUS-M 513 Marketing Strategy Simulation (1.5 cr.) P: M501. A simulation course that creates an evolving market, where future decisions must be made in the context of earlier ones. Results depend on competitors' actions as well as your own decisions. The simulation provides an opportunity to increase skills in matching products and market segments, driving productivity and striving for optimum investment of marketing funds.

BUS-M 550 Marketing of Medical Products (1.5 cr.) P: M501. Companies increasingly recognize the importance of being customer driven and the role that customer satisfaction plays in maintaining competitive advantage in the marketplace. This course provides students with a rich understanding of how this understanding can help managers make better business decisions. The course covers business-to-business, as well as individual consumer behavior.

BUS-M 590 Independent Study in Marketing (Arr. cr.) For advanced MBA students engaged in special study projects. Course admission and project supervision is arranged through the MBA Office and the student's faculty advisor.

BUS-M 594 Global Marketing Management (3 cr.) Emphasizes principles and practices of marketing in the contemporary global environment. The material covers both U.S. and foreign company doing business in various countries around the world. Specifically, the objectives of the course are to provide students with some understanding of similarities and differences in the external marketing environment, different types of risks and challenges in doing business internationally and the implications of all these factors for developing marketing strategies.

Undergraduate

BUS-M 200 Marketing and Society: A Look at Roles and Responsibilities (3 cr.) P: Sophomore standing. This course is offered for students pursuing a Business Foundations Certificate. The course will acquaint the student with basic marketing concepts, terminology, and applications. The use of marketing in a variety of industries will be explored. The course will also aid the student in becoming a more aware and intelligent consumer. Assignments and assessment will occur primarily through Oncourse, a Web-based educational support system. Lectures may be delivered via classroom, television, or the Web. This course will not count toward a business degree or minor.

BUS-M 226 Personal Selling Techniques (3 cr.) P: Sophomore standing. This web-based course is designed in response to the developing need to have a sales related course designed for non-business majors. It is recognized that people in every profession have to communicate ideas, plans, proposals, etc. in a persuasive manner. Five basic areas will be covered in the course: (1) The selling process, (2) The investigative stage, (3) the demonstration of capability stage, (4) The commitment stage, and (5) The designing of sales models to improve performance results. Not intended for business majors.

BUS-M 300 Introduction to Marketing (3 cr.) P: A200, K201. Junior standing. Offered to students for a minor in business. Examination of the market economy and marketing institutions in the United States. Decision making and planning from the manager’s point of view; impact of marketing actions from the consumer’s point of view. No credit toward a degree in business.

BUS-M 301 Introduction to Marketing Management (3 cr.) P: Students must meet the Option II admission criteria to take the Integrative Core courses including course, GPA, and grade requirements. Kelley admit of junior or senior standing. Part of the Integrative Core, along with F301 and P301. Marketing planning and decision making examined from firm's and consumer's points of view; marketing concept and its company-wide implications and integration of marketing with other functions. Market structure and behavior and their relationship to marketing strategy and implementation.

BUS-M 303 Marketing Research (3 cr.) P: M301. Kelley admit of junior standing. Focuses on the role of research in marketing decision making. Defining research objectives, syndicated and secondary data sources of marketing information, exploratory research methods, survey research design, experimental design, and data analysis.

BUS-M 304 Honors Marketing Management (3 cr.) P: Students must meet the Option II admission criteria to take the Integrative Core courses, including course, GPA, and grade requirements. Kelley Admit of Junior standing Section authorization required. Marketing planning and decision making examined from the firm’s and the consumer’s points of view; marketing concept and its company-wide implications; integration of marketing with other functions. Market structure and behavior and their relationship to marketing strategy and implementation.

BUS-M 401 International Marketing (3 cr.) P: I-CORE. Kelley admit of senior standing. Covers world markets, their respective consumers, and their political/economic marketing environments. Examines the marketing issues required to meet the product, promotion, price, and distribution demands of a world market. Although the course has a global orientation, issues specific to exporting are discussed.

BUS-M 402 Marketing Channels (3 cr.) P: I-CORE. Kelley admit of senior standing. Marketing channels analyzed as organized behavior systems. Focuses on the institutional structure, relationships, and functions of

channels of distribution. Franchising, vertical integration, and vertical channel agreements also are emphasized.

BUS-M 405 Buyer Behavior (3 cr.) P: I-CORE. Kelley admit of senior standing. Description and explanation of consumer behavior. Demographic, socioeconomic, psychographic, attitudinal, and group influences on consumer decision-making. Applications to promotion, product design, distribution, pricing, and segmentation strategies.

BUS-M 407 Business-to-Business Marketing (3 cr.) P: I-CORE. Kelley admit of senior standing. Problems, activities, and decision methods involved in the marketing of goods and services by business to business. Demand estimation, pricing, promotion distribution systems, and role of non-consumer buyers.

BUS-M 412 Physical Distribution Management (3 cr.) P: I-CORE. Kelley admit of senior standing. Management of product distribution systems within an organization. Traffic, inventory control, warehousing, and other activity centers are analyzed for improvement and related to overall systems performance. Order entry and the customer service variables of order-cycle time and reliability are examined in relation to the sales function. Includes analysis of the impact of physical distribution decisions on other functional areas.

BUS-M 415 Advertising and Promotion Management (3 cr.) P: I-CORE. Kelley admit of senior standing. Basic advertising and sales-promotion concepts. The design, management, and integration of a firm's promotional strategy. Public policy aspects and the role of advertising in marketing communications in different cultures.

BUS-M 419 Retail Management (3 cr.) P: I-CORE. Kelley admit of senior standing. Major management problems in retail institutions. Treatment of retail/marketing strategy design and problems related to financial requirements, buying, inventory, pricing, promotion, merchandising, physical facilities, location, and personnel.

BUS-M 426 Sales Management (3 cr.) P: I-CORE. Kelley admit of senior standing. Emphasizes the activities and problems of field sales management. Includes organizing the sales force, recruiting, training, compensation, motivation, sales techniques, forecasting, territory design, evaluation, and control. Lectures and case studies.

BUS-M 430 Professional Selling (3 cr.) P: I-CORE. Kelley admit of senior standing. Focuses on the tactical and strategic aspects of the professional selling process, with particular emphasis on managing the large, complex sale. Topics include account entry strategies, effective investigative techniques, objection prevention, the client decision process, negotiation skills, and account development strategies. Participant interaction, role plays, work groups, and case studies will be used as learning tools.

BUS-M 450 Marketing Strategy (3 cr.) P: I-CORE, M303, one 400-level marketing course. Kelley admit of senior standing. Ideally taken in the student's last semester. Capstone course for marketing majors. Draws on and integrates courses previously taken. Focuses on decision problems in marketing strategy and policy design, as well as and application of analytical tools for marketing and decision making. Restricted to students in the marketing concentration.

BUS-M 490 Independent Study in Marketing (1-3 cr.) P: I-CORE and consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Operations and Decision Technologies

Note: Senior standing and the Integrative Core are prerequisites for all 400-level Kelley School of Business courses.

Graduate

BUS-K 503 Statistical Analysis (1.5 cr.) This course aims to cover the fundamental quantitative skills that managers need to effectively manage data and make decisions. The course will focus on a number of topic areas, including the analysis and management of business data, using linear regression analysis to understand relationships among variables and for use in forecasting, and probability analysis and decisions trees. The goal is to establish a theoretical understanding of statistical decision making, as well as to develop practical skills in analyzing data using Microsoft Excel. Statistical Analysis emphasizes the application of quantitative methods through lecture, homework assignments, cases, and computer exercises.

BUS-K 510 Advanced Decision Models (1.5 cr.) P: MBA Module 1A This course is concerned with optimization modeling. Topics covered are optimal product mix, project scheduling, aggregate planning, financial models, capital budgeting, optimal portfolio mix and multiple objectives optimization. This is an ADC course administered entirely through Oncourse, but it is not self-paced.

BUS-K 516 Quantitative Decision Models (1.5 cr.) P: MBA Module 1A This course is concerned with probability and statistical modeling. Topics covered are the application of regression-based forecasting models, simulation models and probabilistic causal models. This is an ADC course administered entirely through Oncourse, but it is not self-paced.

BUS-P 501 Operations Management (3 cr.) Surveys the management of operations in manufacturing and service firms. Diverse activities, such as determining the size and type of production process, purchasing the appropriate raw materials, planning and scheduling the flow of materials and the nature and content of inventories, assuring product quality, and deciding on the production hardware and how it gets used, comprise this function of the company. Managing operations well requires both strategic and tactical skills. The topics considered include process analysis, workforce issues, materials management, quality and productivity, technology, and strategic planning, together with relevant analytical techniques. The course makes considerable use of business cases. Most classes will be spent discussing the cases assigned. For each case, students will be asked to review actual company situations and apply technical and managerial skills to recommending courses of action. Most cases will be taken from manufacturing, but some will be service-oriented. Several of the cases will focus

on international companies or issues. For MBA students enrolled in Module 2A.

BUS-P 509 Supply Chain Operations (1.5 cr.) P: P501 This course is divided into two main parts. Three-quarters of this class is designed to help students begin to understand how to develop and manage efficient and effective physical distribution and logistics system. Students taking this course will learn the fundamentals of successfully exploiting supply chains by carefully coordinating distribution tasks, controlling resources (especially inventory), and leveraging technology (principally information systems). The overall goal of this part of the course is to introduce and familiarize you with the basic concepts and skills necessary for supply chain management as a manager, analyst, or consultant. The remaining quarter of this course focuses on Sourcing (also called purchasing) and how to conduct successful negotiations. Instructional tools include lectures, readings, and a group negotiation project. The course content covers both quantitative and qualitative materials. During the term we will also consider physical distribution and sourcing issues in parts of the world with underdeveloped infrastructure.

BUS-P 510 Service Operations (1.5 cr.) P: P501 In contrast to most aspects of the other operations management courses, this one is devoted to the particular problems of designing and delivering services, as opposed to manufactured goods. Although some ideas from the management of manufacturing enterprise will spill over readily into this course, other aspects of service operations management will have no natural counterpart. The course will lean heavily on cases and most class sessions will be devoted to discussions of cases assigned for each week. These cases will be the rallying point for our learning in the course; they are drawn from many different service environments and touch on numerous operations problems.

BUS-P 527 Process Improvement I (1.5 cr.) P: P501 Process Improvement I covers a variety of tools and organizational procedures for understanding, analyzing and improving work processes and environments. many of these tools and procedures have been popularized lately as "six sigma" quality management techniques, and apply readily to quite diverse business and organizational settings.

BUS-P 528 Process Improvement II (1.5 cr.) P: P501 Involves a real-world project selected and carried through by the student. This allows application of the tools and procedures learned earlier. Students who successfully complete both Process Improvement courses receive formal six sigma "Green Belt" certification. Courses open to all graduate students.

BUS-P 552 Project Management (1.5 cr.) P: P501 This course begins with an introduction to project management and some of the skills and concepts surrounding good practice. Project management tools such as the critical path and Gantt charts will be reviewed as well as methods for controlling the four most important elements of any project: scope, time, cost, and resources. Various approaches to organizing projects will be introduced. The course will then move to an examination of new product development in a series of industries.

BUS-P 561 Supply Chain Management Technologies (1.5 cr.) P: P501, P590 is recommended. The overall goal of this course is to introduce and familiarize you with the concepts and skills necessary for supply chain management as a consultant, analyst, or manager. In this course, we will identify the major issues in supply chain management to better understand their performance. We will study the basic tools for supply chain management in production planning and inventory control, order fulfillment, and multi-stage/multi-location coordination. We will also consider the growing role of information systems in supply chains and devising supply chain strategy. During the course we will also consider issues related to the implementation of supply chain improvements. We will use a variety of instructional tools including lectures and case discussions. The course content covers both quantitative and qualitative materials. The cases will feature a range of companies and leading edge as well as traditional distribution and logistics issues.

BUS-P 579 Strategic Management of the Healthcare Supply Chain (1.5 cr.) Health care supplies are the second largest expenditure accounting for 25 to 40% of the total cost of patient care. This course explores the strategic management of the health care supply chain with a focus on collaboration opportunities between multiple organizations. The health care supply chain is studied from an end-to-end perspective including acute care providers, outpatient facilities, distributors, group purchasing organizations, pharmaceutical companies, medical device manufacturers, information technology services, and other supply organizations. Over the past several years, several health care organizations have invested in strategic positioning of their supply chains through new organizational designs, new supply chain capabilities, and new collaborative business models. This course examines these new innovations and provides the tools and concepts to apply this new knowledge to the health care industry.

BUS-P 590 Independent Study in Operations Management (Arr. cr.) For advanced M.B.A. students engaged in special study projects. Course admission and project supervision is arranged through the M.B.A. Office and the student's faculty advisor.

Undergraduate

BUS-K 201 The Computer in Business (3 cr.) Introduction to the role of computers and other information technologies in business (with emphasis on microcomputer applications). Provides instruction in both functional and conceptual computer literacy. Experimental exercises include learning about Windows-based spreadsheets (Excel), relational databases (Access), electronic mail, and Internet navigation tools. These hands-on labs emphasize application of these learned skills to solve a variety of business problems. The lectures focus on the use and application of technology (hardware, software, storage/multimedia, Internet history, Internet in business, database management systems, and security/privacy of data in this information age).

BUS-K 204 The Computer in Business: Honors (3 cr.) Introduction to the role of computers in business, with emphasis on microcomputer applications. Experimental exercises include learning about Windows-based spreadsheets, database applications, electronic mail, and Internet navigation tools. The lectures focus on the

use and application of technology (hardware, software, networks, databases) and integrates current management topics (business applications, systems development, data management, computer ethics).

BUS-K 490 Independent Study in Decision Sciences (1-3 cr.) P: I-CORE and consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

BUS-P 200 Foundations of Operations and Supply Chain Management (Non-majors) (3 cr.) P: Sophomore standing. This course is designed to introduce the student to the basic ideas and concepts that make up the field of operations and supply chain management and to prepare the student to take an active role in operations decision making in the workplace. The course will acquaint the student with basic operations management concepts and terminology.

BUS-P 300 Introduction to Operations Management (3 cr.) P: BUS A200 and MATH 110 or higher. Junior standing. Offered to students for a minor in business. The operations function is concerned with the activity associated with the production of goods and services. Provides an overview of operating decisions and practices in both manufacturing- and service-oriented firms. While no attempt is made to cover any particular area in depth, standard terms and concepts required to communicate effectively with operating personnel are introduced. No credit toward a degree in business.

BUS-P 301 Operations Management (3 cr.) P: Students must meet the Option II admission criteria to take the Integrative core courses including course, GPA, and grade requirements. Kelley admit of junior standing. A survey course concerned with the production and distribution of goods and services. Part of the Integrative Core, along with F301 and M301. Examines how a firm produces and delivers its goods and services, with consistent and acceptable levels of quality, in a cost-effective manner. The discussion covers a wide range of interrelated issues including quality and process improvement, forecasting, planning, resource management, customer service, scheduling, and layout and process design. A semester-long team project is the primary activity used to integrate the three core courses.

BUS-P 304 Honors Operations Management (3 cr.) P: Students must meet the Option II admission criteria to take the Integrative Core courses, including course, GPA, and grade requirements. R: Kelley admit of junior or senior standing. Section authorization required. A survey course concerned with the production and distribution of goods and services. Part of the Integrative Core, along with F304 and M304. Examines how a firm produces and delivers its goods and services, with consistent and acceptable levels of quality, in a cost-effective manner. The discussion covers a wide range of interrelated issues including quality and process improvement, forecasting, planning, resource management, customer service, scheduling, and layout and process design. A semester-long, team project is the primary activity used to integrate the three core courses.

BUS-P 320 Supply Chain Management: Sourcing (3 cr.) P: I-CORE. Kelley admit of junior standing. Sourcing/purchasing has become a major source of economic benefit to most firms. This course provides a comprehensive look at this important area of supply chain management. The course examines the purchasing function in industrial firms. Topics include sourcing (domestic and international), specifications, standards; contract and pricing practices; negotiation; quality assurance and reliability; inventory management; value analysis; capital equipment buying; make-or-buy decisions; evaluation of purchasing performance; and ethics.

BUS-P 421 Supply Chain Management (3 cr.) P: I-CORE. Kelley admit of senior standing. Focuses on the material planning and execution systems used to manage the flow of material in the distribution and manufacturing stages of the supply chain. Topics include computer/software systems for demand management and forecasting techniques; inventory control systems for distribution channels; materials and capacity requirements; planning systems in manufacturing; and scheduling and order dispatching systems.

BUS-P 429 Supply Chain Management (3 cr.) P: I-CORE. Kelley admit of senior standing. Focuses on the study of the processes by which products are created and delivered to customers. The course emphasizes the process flow method using three measures of process achievement: throughput (the rate of product delivery), flowtime (the time it takes to deliver that product), and inventory. Topics include Little's Law, the uses of inventory, the importance of time-based competition, process analysis, and bottleneck analysis. Computational analysis using simulation is emphasized.

BUS-P 490 Independent Study in Operations Management (1-3 cr.) P: consent of undergraduate program chairperson and instructor. Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Written report required.

Real Estate

BUS-R 305 Introduction to Real Estate Analysis (3 cr.) P: F301, Kelley admit, junior standing. For students who may take additional real estate courses. Topics include real estate law, brokerage, property management, appraising, mortgage finance, and investment analysis. Emphasis on the analytical techniques applicable to real estate.

BUS-R 440 Real Estate Appraisals (3 cr.) P: F305, I-Core. Kelley admit of senior standing. Methods of appraising real property, with emphasis on income property; covers relevant concepts and analytical techniques. Course content is similar to that which a professional appraiser must learn.

BUS-R 443 Real Estate Finance and Investment Analysis (3 cr.) P: F305, I-Core. Kelley admit of senior standing. Application of financial concepts and techniques to the analysis of real estate financing and investment alternatives. Computer analysis and case studies are used.

BUS-R 490 Independent Study in Real Estate and Land Economics (1-3 cr.) P: I-CORE and consent of undergraduate program chairperson and instructor.

Supervised individual study and research in student's special field of interest. The student will propose the investigation desired and, in conjunction with the instructor, develop the scope of work to be completed. Comprehensive written report required.

IU School of Continuing Studies

Welcome to the School of Continuing Studies!

A Statement from the IUPUI Director Renee Betts

The School of Continuing Studies is dedicated to providing quality educational opportunities for adult learners in central Indiana. The program brings the resources of Indiana University and the innovative spirit of IUPUI to people who cannot get their educational and professional needs met by a traditional degree program. Whether on campus, off campus, or at a distance, the IUPUI Continuing Studies staff is dedicated to providing excellent student services with an emphasis on the needs of busy adult learners.

We look forward to helping you build a vision for your future.

Overview

Mission

The school plans and provides both credit and noncredit programs/courses that are offered in various learning formats at convenient times and locations. These programs/courses include:

- Bachelor of General Studies
- Master of Science in Adult Education
- Noncredit certificate programs
- Credit and noncredit programs
- Courses for professional development and personal growth
- Conferences, workshops, and seminars on a wide range of subjects
- Evening and outreach programs
- Weekend courses
- Web courses
- Workforce development and training

The School of Continuing Studies also provides specialized courses for on-site delivery at businesses, industries, and other off-campus locations via telecommunication and other electronic technologies.

General Studies Degree Program

The School of Continuing Studies administers the General Studies Degree Program, which extends to students the opportunity to pursue a college education regardless of work schedules, domestic responsibilities, or location. Students may fulfill degree requirements by taking on-campus courses, web, or a combination of both.

The core of each general studies degree is a broadly based education encompassing the arts and humanities; the social and behavioral sciences; and mathematics and natural sciences. The curriculum expands students body of knowledge and awareness of major areas of human experience. A general studies education is not limited in scope; it establishes the foundation for a lifetime of learning and serves as the framework for a productive professional and personal life.

The B.G.S. provides basic preparation for many careers and graduate programs. B.G.S. graduates are employed in various professional fields, including education, law, government and social service, real estate, and private industry. Many B.G.S. recipients have gone on to graduate programs in fields such as anthropology, business, divinity studies, education, fine arts, international affairs, law, library science, management, medicine, nursing, public health, and social work. B.G.S. graduates have earned masters degrees and doctorates at Indiana University and other universities.

In addition to enrolling in regular session courses at any Indiana University campus, students may fulfill general studies degree requirements in various ways, including credit by examination, credit for educational programs in noncollegiate organizations, military service credit, and credit for courses completed at other regionally accredited institutions.

History

Created in 1975, the School of Continuing Studies reflects the commitment of Indiana University and the state government to meeting the educational needs of adult citizens. The school consists of the following units:

- Academic Programs
- Financial Administration
- Marketing and Communication
- Learner Services
- Campus Divisions

Application Procedures

Students interested in pursuing a general studies degree should apply for admission to the School of Continuing Studies as follows:

- All applicants must submit an application.
- Citizens of other countries, including those in the United States on immigrant visas, must submit TOEFL scores and a 300- to 500-word handwritten essay. The essay is to be written on a topic of the students choice and may include autobiographical information. Students who intend to pursue a general studies degree at IUPUI must submit the international application for admission.
- Applicants who have not previously attended a college/university as a degree student must submit official copies of their high school transcripts or evidence of having earned a GED high school equivalency diploma.
- Applicants who have previously attended a college/ university must request that the college(s) or university(ies) attended forward official transcripts to IUPUI General Studies Degree Program Office, 518 Indiana Ave, Indianapolis IN, 46202.
- Applicants who are veterans should submit a copy of the DD214 form.
- Applicants presently on active duty should request an official copy of their AARTS, SMARTS, or

Community College of the Air Force transcripts from their education officer.
- Applicants who have completed educational programs/courses in noncollegiate organizations must request that official records of program/course completion be sent directly from the awarding organization.
- Applicants who have taken the College-Level Examination Program (CLEP), the Defense Activity for Non-Traditional Support (DANTES) exams, or the ACT-PEP Regents (Excelsior) College exams should request that official transcripts of their exam scores be sent directly from the testing agency.
- Applicants who have been placed on academic probation, dismissed, or denied readmission to a previously attended school must provide a letter explaining the circumstances and the reasons they believe they will now be successful.
- Applicants should submit application materials to: General Studies Degree Program Office, 518 Indiana Ave,Indianapolis, IN 46202.
- For questions, please call (317)278-7600.

Admission Deadlines

- New Student -- has never attended Indiana University, any campus: Fall - July 1st; Spring- November 15th; Summer - March 30th
- Returning Student -- has not been enrolled for more than two years and has a minimum 2.0 cumulative grade point average at Indiana University: Fall **-** August 1st; Spring - December 15th; Summer - April 30th
- Current Student: -- is currently enrolled and has a minimum 2.0 cumulative grade point average: Fall**-** September 5th; Spring - January 25th; Summer - May 20th

The official date of a students admission is the date the student is accepted into the General Studies Degree Program. This date does not necessarily coincide with the date the application was processed by the Office of Admissions. Current course work of students whose admission has been approved on or before the campus pass/fail deadline will be considered course work taken after admission to the General Studies Degree Program.

Application Fees

Applicants who have not previously attended Indiana University must pay a nonrefundable application fee at the time they submit their application. As of January 2012, the application fee is $50.00. Application fees are subject to change without notice.

Transfer Students

Transfers from and within Indiana University Campuses

Students with previously earned credit from any academic program on any Indiana University campus may apply to pursue a general studies degree. Credits are evaluated on a course-by-course basis. (To find out how to apply previously earned Indiana University credit to a general studies degree, see Credits from Indiana University.)

Students with academic deficiencies (cumulative GPA below 2.0) may be admitted on probation. Students who have been dismissed from another academic unit of Indiana University and whose cumulative GPA is below 2.0 will not be considered for admission for at least one academic year from the date of dismissal.

Transfers from Other Colleges/Universities

The School of Continuing Studies welcomes students who want to transfer from other regionally accredited colleges/universities. Applications for transfer admission are evaluated on the basis of applicants cumulative GPA and the number of credits earned in all subjects. Transfer credit is awarded only for courses in which students earn a minimum grade of C in curricula similar to those offered by Indiana University.

Acceptance of credit from other institutions is determined by the Indiana University Office of Admissions, and the applicability of credit toward degree requirements is determined by the School of Continuing Studies. Only credits earned at Indiana University are calculated in a students cumulative GPA.

Students who have been dismissed from other postsecondary institutions will not be considered for admission to the General Studies Degree Program for one academic year from the date of dismissal (students are not reinstated for summer sessions).

Recognition of Previously Earned Credit

Many students have previously earned academic credit from Indiana University or other institutions. These students may be eligible for credit by examination. Previously earned credits are applied to the requirements of the B.G.S. according to the following guidelines:

Credits from Indiana University

A maximum of 100 credit hours previously earned at Indiana University may be applied to the B.G.S. Courses in which grades of D+, D, or D were earned may be used as elective credit only; they will not be used to satisfy course distribution requirements.

Credits from Other Institutions

A maximum of 90 hours of transfer credit from other regionally accredited colleges/universities may be applied to the B.G.S. NOTE: A maximum of 64 transfer credits from two-year, community colleges may be applied to the B.G.S.

Credit by Examination from Other Institutions

Students wanting to transfer credit by examination earned from other institutions must have satisfactorily completed sequential courses in that subject area before transferring.

Undergraduate Program

Academic Guidance

A counselor provides guidance for each General Studies Degree Program candidate. Note: Although students are encouraged to seek the advice of a General Studies Degree Program counselor, students are responsible for planning their own programs and meeting the degree requirements for graduation.

General Requirements for the Bachelor of General Studies (B.G.S.)

(Students must check with their home campus regarding how courses apply to their degree.)

- Students must successfully complete a minimum of 120 credit hours to graduate.
- Students must successfully complete at least 69 of the 120 required credit hours in the arts and sciences. No more than 21 of these 69 credit hours—may be taken in a single arts and sciences department or subject area. In addition, no more than 30 of the 51 credit hours allowed outside the arts and sciences may be taken in any one professional school or technical program.
- Students must successfully complete at least 30 of the 120 required credit hours at Indiana University. Earning credit through an academic department examination at Indiana University is equivalent to having completed that course at Indiana University. Credits earned by Defense Activity for Non-Traditional Education Support (DANTES), and College-Level Examination Programs (CLEP) may not be applied to this 30 credit hour requirement.
- Students must complete at least 20 credit hours after admission to the General Studies Degree Program. This should be Indiana University course work. Credits earned by self-acquired competency, Defense Activity for Non-Traditional Education Support (DANTES), and College-Level Examination Programs (CLEP) may not be applied to this 20 credit hour requirement.
- Students must successfully complete at least 30 of the 120 required credit hours at the 300 and 400 upper-division level.
- Students must earn a minimum cumulative GPA of 2.0 on all courses considered for the B.G.S. and on all courses completed after admission to the School of Continuing Studies. C is the minimum grade accepted for any course completed to satisfy course distribution requirements.
- Students must also fulfill the fundamental skills and course distribution requirements (see Fundamental Skills Competency Requirements below and Course Distribution Requirements).

Fundamental Skills Competency Requirements

For the B.G.S., students must satisfy fundamental skills competency requirements that demonstrate college-level competency in six areas: written communication, intermediate writing course, oral communication, quantitative reasoning, computer literacy, and diversity.

Students may demonstrate competency by completing an appropriate college-level non-remedial course or its transfer equivalent in English composition/writing, speech/communication, quantitative reasoning, computer science, and diversity; by earning a grade of C or higher in a 3 credit hour course.

A course that fulfills one of the six competency requirements at any Indiana University campus fulfills that requirement for the IUPUI General Studies Degree Program. Acceptable grades for courses meeting competency requirements must be consistent with the campuses requirements.

Awards & Scholarships

The School of Continuing Studies offers several scholarships for general studies degree students. Available to both full and part-time students, the scholarships are based on financial need and academic merit, and usually range from $500 to $750 per academic year.

The scholarships may also be eligible for the matching program at the Office of Student Financial Assistance (OSFA), doubling their actual value. Scholarship applications may be obtained from any general studies office until March 15, the application deadline. Check our website for additional information.

Degree Programs

Course Distribution Requirements for the Bachelors of General Studies (B.G.S.)

Twelve (12) credit hours are required in each of three learning areas: arts and humanities, science and mathematics, and social and behavioral sciences. Students must also complete an 18 credit hour concentration in one of these three learning areas. The 12 credit hours required in each learning area, as well as the 18 credit hour concentration, must include courses from at least two academic departments.

An additional 66 hours of elective credit including a minimum of 15 additional credit hours in the arts and sciences and no more than 30 credit hours in any one professional school or technical program must also be completed to fulfill B.G.S. requirements.

Arts and Humanities	12 credit hours
Science and Mathematics	12 credit hours
Social and Behavioral Sciences	12 credit hours
Concentration	18 credit hours
Arts and Sciences Electives	15 credit hours
General Electives	51 credit hours
Total Credit Hours Required for the B.G.S.	120 credit hours

Completing Course Distribution Requirements

Each general studies degree requires completion of course work in three learning areas: arts and humanities, science and mathematics, and social and behavioral sciences. These requirements provide students with a broad exposure to the humanities and sciences. To fulfill the requirements, students may choose from a wide variety of subject fields within each learning area. These subject fields are described below. Note: The subject fields grouped under the three learning areas may vary among Indiana University campuses. Students should

consult their General Studies Degree Program counselors for their campuses specific requirements.

Arts and Humanities

The distribution courses in this learning area provide knowledge and interpretive frameworks through which students may reflect on the complexity of human history, assess the difficulties of determining moral values, appreciate the range and value of human emotion and thought, and be sensitive to the varieties of aesthetic expression. The following departments offer courses that fulfill the arts and humanities distribution requirement:

- Afro-American Studies
- American Studies
- Classical Studies
- Comparative Literature
- English
- Fine Arts
- Folklore
- Foreign Language Courses
- History
- History and Philosophy of Science
- Musicology and Music History
- Philosophy
- Religious Studies
- Speech
- Theatre and Drama

Science and Mathematics

The distribution courses in this learning area provide an appreciation of the physical and biological environment, introduce students to the discipline of systematic inquiry, provide insight into experimental methods and results, and illustrate the role and methods of the mathematical sciences. The following departments offer courses that fulfill the science and mathematics distribution requirement:

- Anatomy and Physiology
- Astronomy
- Biology
- Chemistry
- Computer Science
- Geology
- Mathematics
- Microbiology
- Physics
- Plant Sciences
- Zoology

Social and Behavioral Sciences

The distribution courses in this learning area provide students with the means to analyze and understand the social institutions in which they live, as well as the behavior of individuals in relation to one another and the world. The following departments offer courses that fulfill the social and behavioral science distribution requirement:

- Anthropology
- Economics
- Geography
- Linguistics
- Political Science
- Psychology
- Sociology

Completing B.G.S. Concentration Requirements

B.G.S. students must complete a concentration area by adhering to the following guidelines:

-
- Students must complete an additional 18 credit hours in one of three learning areas: arts and humanities, science and mathematics, or social and behavioral sciences.
- Students must complete courses from at least two departments in the learning area they select for their concentration area.
- Students must earn a minimum grade of C in courses used to fulfill the concentration requirement. Passing grades below C may be used only as elective credit.

Completing Elective Requirements

B.G.S. students may select any of the nonremedial, nondevelopmental courses offered by Indiana University to fulfill elective requirements. These electives enable students to explore diverse academic areas of interest and to tailor their general studies degree to their individual needs. Students are encouraged to consult with their General Studies Degree Program counselors and to choose courses in subjects related to their academic, professional, and personal interests.

Minors and Certificates

Completing Optional Minors

Student completing their degree on an IU campus may earn a minor in conjunction with the Bachelor of General Studies (B.G.S.). Students must discuss this possibility and obtain written approval from the school or department awarding the minor. Students pursuing their degree via distance education do not have the option of earning a minor in conjunction with the B.G.S.

Completing Optional Certificates

While meeting degree requirements, general studies students may simultaneously fulfill requirements for certain certificates. For example, the certificate in hospital accounting may be completed by at-a-distance (non-campus-based) General Studies Degree Program candidates, as well as by students enrolled on any Indiana University campus.

Most Indiana University campuses offer additional certificate programs that may be completed by local on-campus students. For more information on earning certificates, students should consult their General Studies Degree Program counselors.

Student Learning Outcomes

Bachelor of General Studies (B.G.S.)

Students who complete the general studies undergraduate program will achieve the following objectives:

General Studies Core Competencies

1. **Communication/Written/Oral:** Students effectively communicate in written or spoken language to diverse audiences. Students comprehend, evaluate and respectfully respond to the ideas of others.
2. **Diversity:** Students appreciate local and global diversity and are respectful and empathetic during personal interactions. Students effectively collaborate and resolve conflicts.
3. **Mathematical/ Quantitative Reasoning:** Students demonstrate the ability to use symbolic, graphical, numerical, and written representations of mathematical ideas. Students compute, organize data and effectively problem-solve using quantitative tools.
4. **Computer:** Students locate, critically evaluate, synthesize, and communicate information in various traditional and new media formats. Students understand the social, legal, and ethical issues related to information and its use.

General Studies Degree Requirements

1. **Arts and Humanities:** Students interpret and critique the historical, cultural and literary dimensions of human experience. Students develop an appreciation of the aesthetic value of these subjects.
2. **Science and Math:** Students investigate, evaluate and develop skills to comprehend and apply basic principles of scientific methodology and differentiate among facts and theories.
3. **Social and Behavioral:** Students compare, contrast and construct an understanding of the role social, economic, cultural and political institutions play in shaping human thought and behavior. Students are able to function as engaged members of society, who are willing and able to assume leadership roles.

General Studies Academic and Career Development

1. **Academic Planning:** Students assess their own knowledge, skills and abilities and develop plans of study for degree completion.
2. **Career Planning:** Students identify classes, minors and/or certificates that will enable them to achieve career goals upon graduation.
3. **Distance Education:** Students develop computing and communication technology skills in the growing open and distance learning environment.

Academic Policies & Procedures

Graduate Credit Hours

Graduate-level courses are often completed for personal enrichment; the credits are generally not applied to the undergraduate degree program. However, with prior approval, a maximum of 6 graduate credit hours may be applied to the B.G.S. The application of more than 6 graduate credit hours must have the director's approval.

Remedial Course Work

Remedial courses are not college-level courses and therefore do not count toward the B.G.S.

Minors and Certificates

Completing Minors Students completing their degree on an IU campus may earn a minor in conjunction with the B.G.S. Students must discuss this possibility and obtain written approval from the school or department awarding the minor.

Completing Certificates While meeting degree requirements, general studies students may simultaneously fulfill requirements for certain certificates. For more information on earning certificates, students should consult a General Studies academic advisor.

Program Planning and Counseling Guidelines

The experience of faculty, academic advisors, and successful students suggests the following guidelines for effective planning of undergraduate programs.

Requirements Students should be thoroughly familiar with the school's general requirements, competency and course requirements, and academic policies.

Counseling Students consult with a General Studies Degree Program academic advisor r as an integral aspect of the School of Continuing Studies enrollment process. The academic advisor assists students in formulating a plan of study, which includes the required and elective courses that students must take to earn their degree.

Students should discuss with their academic advisor the appropriate method to establish fundamental skills competency requirements: specific courses, College-Level Examination Programs (CLEP), Defense Activity for Non-Traditional Education Support (DANTES) examination, departmental examination, or departmental exemption.

Pass/Fail Option

B.G.S. students in good academic standing may enroll in a maximum of eight elective courses taken with a grade of P or F.

Courses taken pass/fail must be electives. They may not be used to satisfy any of the course distribution requirements nor counted as part of a students concentration area. The courses may be used to meet the B.G.S.s 300- to 400-level course requirement and fundamental skills competency requirements.

Withdrawal from Courses

Students must view the IUPUI Schedule of Classes found on the Registrar's website to verify deadlines and procedures for a current term.

Academic Standing of Students

Candidates for Degrees in Good Standing

Students are considered to be candidates in good standing for a general studies degree when they have:

1. been officially admitted to degree status.
2. earned a minimum academic GPA of 2.0 for the last semester's work.
3. earned a minimum school GPA of 2.0
4. earned a minimum cumulative GPA of 2.0

Graduation Certification

Candidates for graduation initiate the certification process by filing out the Graduation Application. Students should consult with their General Studies academic advisor at the time they enroll for their final semester/course.

Degrees Awarded with Distinction

The School of Continuing Studies recognizes outstanding performance in course work by awarding degrees with three levels of distinction: distinction, high distinction, and highest distinction. The level of distinction is determined by the overall GPA of each graduating class.

In order to graduate with distinction, students must have successfully completed 60 graded Indiana University credit hours for the B.G.S. Remedial courses and courses taken on a pass/fail basis are not counted.

Dean's List

General studies students are placed on the School of Continuing Studies Deans List when they have:

- Completed after admission to the School of Continuing Studies at least 12 credit hours of graded course work. (Grades of FX, I, P, R, S, and SAC are not counted in the 12 credit hours.) The course work must have been completed during the previous academic year (from August 1 to July 31). Note: Independent study courses must be completed by August 31 for Deans List consideration.
- Earned a minimum GPA of 3.5 for applicable credit hours. For part-time students, all course work completed during the previous academic year (from September 1 to August 31) is included in calculating the GPA. For full-time students, one semester (or both summer sessions) in which a minimum of 12 credit hours is completed may be considered in calculating the GPA.

Students placed on the Dean's List receive a letter and certificate signed by the dean.

Academic Probation

Students are automatically placed on academic probation whenever their GPA for a full-time semester or a 12 credit hour unit of work is below 2.0. Students academic performance and the academic performance of students who have been admitted on probation will be evaluated upon completion of an additional 12 credit hours at Indiana University.

Students will be removed from probationary status if their GPA for these 12 credits is at least 2.0 and if their cumulative GPA is at least 2.0. If a probationary student's GPA for the additional 12 credits is 2.0 but the cumulative GPA remains below 2.0, probationary status will be continued for another 12 credit hour unit of work; the cumulative GPA must be raised to at least 2.0 during this time, or probationary students will be dismissed (see below).

Dismissal

Students are subject to academic dismissal when they fail to make satisfactory progress toward their degree. Students will be dismissed whenever their GPA for a full-time semester or a 12 credit hour unit of work is below 1.0 and their cumulative GPA is below 2.0.

Probationary students will be dismissed if their GPA for the additional 12 credit hour unit of work is below 2.0. Students whose probationary status has been continued for a second 12 credit hour unit and who fail to achieve a cumulative GPA of 2.0 will also be dismissed.

Readmission to the School of Continuing Studies

The director of general studies may consider petitions for readmission from students who have been dismissed. The director may recommend reentrance without delay if warranted by exceptional circumstances and if the director believes the student will make satisfactory progress toward the degree. Students dismissed a second time may not be admitted for the next regular semester, but they are eligible to submit a petition for readmission after at least one regular semester has elapsed.

Academic Forgiveness

Upon successful completion (minimum GPA of 2.0) of 12 credit hours in the General Studies Degree Program, the following policies take effect:

- At a student's option, grades of D or F earned at Indiana University five years or more before admission to the School of Continuing Studies may be deleted from the internal School of Continuing Studies record. The cumulative GPA on the Indiana University transcript will not change.
- Students may request forgiveness of an unsatisfactory semester or 12 credit hours of part-time work at Indiana University if the semester/12 credit hours is/are within a five-year period before admission to the School of Continuing Studies. Although all Indiana University courses remain on a students permanent record, the school can exclude all credits attempted and grade points earned during this unsatisfactory semester/12 credit hours when computing a students School of Continuing Studies GPA.
  NOTE: If students exercise this option, none of the grades and credits earned during the unsatisfactory semester/12 credit hours may be applied to a general studies degree. Therefore, students are advised to consult with their General Studies Degree Program counselor about this policy's advisability.

NOTE: Although the options above allow unsatisfactory grades to be removed from the School of Continuing Studies internal record, the grades remain on the official record maintained by the Indiana University Office of the Registrar.

Special Opportunities

Credit by Examination at Indiana University

Students who want to pursue credit by examination at Indiana University should consult with their General Studies academic advisor counselor.

Credit Awarded through Nondepartmental Examinations

Indiana University awards credit for Advanced Placement (AP) Examinations, College-Level Examination Programs

(CLEP), Defense Activity for Non-Traditional Education Support (DANTES) examinations, and ACT-PEP Regents (Excelsior) College examinations on the basis of policy established by IUPUI faculty for awarding degrees. Students should consult with their General Studies academic advisor as to the options available through nondepartmental examinations.

Students will not receive credit by taking DANTES, CLEP, or ACT-PEP Regents (Excelsior) College examinations for courses for which they have already received credit. Credits awarded on the basis of CLEP and DANTES scores will not be considered as after-admission or Indiana University credit hours.

Students should request that official transcripts of their AP, CLEP, DANTES, and ACT-PEP Regents (Excelsior) College examination scores be sent directly to the IUPUI General Studies office.

Credit Awarded for Educational Programs in Noncollegiate Organizations

The School of Continuing Studies will consider the evaluation and credit recommendations of the following two publications when awarding credit to students who have successfully completed noncollegiate or in-company sponsored programs/courses:

- American Council on Education, The National Guide to Educational Credit for Training Programs
- The University of the State of New York, A Guide to Educational Programs in Noncollegiate Organizations

Students must request that official records of program/course completion be sent directly from the awarding organization. Students must also submit a complete description of the program/course, preferably a copy of program/course literature or an explanatory letter on the organizations letterhead stationery. For assistance with requests for transcripts or program/course descriptions, students may contact their General Studies academic advisor.

Military Service Credit

Indiana University adheres to the American Council on Educations Guide to Evaluation of Educational Experiences in the Armed Services in granting students credit on the basis of education gained through military service, schools, and experience. To receive credit for their military service background, students must submit copies of their official discharge (DD214), AARTS, SMARTS, Community College of the Air Force, or Defense Language Institute transcripts.

Faculty

Administrative Officers

- Daniel J. Callison, Ed.D., Dean and Professor
- Bruce Colston, Ed.D., Assistant Dean and Director of IU High School
- Eileen Balliet, J.D., Research Associate
- John P. Beeson, M.A., Executive Director, Office of External Affairs
- Lisa Denlinger, B.A., Executive Director, Office of Marketing and Communication
- J. Susan Straub, Executive Director, Office of Financial Administration

General Studies Degree Program-Campus Directors

- Saundra Brown-Gordon, M.S., Manager, Credit Programs, Indiana University Southeast (New Albany)
- Fred Hakes, M.S., Director, Indiana University Kokomo
- Renee Betts, M.S.W., Director, Indiana University-Purdue University Indianapolis
- Julie Hook, Ed.D., Indiana University-Purdue University Fort Wayne
- Paul Joray, Ph.D., Director, Indiana University South Bend
- Bob Lang, M.S., Academic Advisor, Indiana University East (Richmond)
- Attila Tuncay, Ph.D., Chairperson, Indiana University Northwest (Gary)
- Vickie Welsh-Huston, Director, Indiana University-Purdue University Columbus
- Ron White, Ed.D., Director, Indiana University Bloomington

Department of Adult Education

- Frank Disilvestro, Ed.D., Associate Professor and Chair
- Daniel Callison, Ed.D., Professor and Dean
- Henry S. Merill, Ed.D., Associate Professor
- Jeani Young, M.S.Ed., M.S., Ph.D Candidate, Lecturer and Program Coordinator

Courses

SCS-G 399 Special Topics: General Studies Internship (3-6 cr.)

SCS-I 499 Independent Study Enrollment (1-3 cr.)

School of Dentistry

Welcome to the IU School of Dentistry!

Mission

IUSD is a member of the American Dental Education Association and is fully accredited by the Commission on Dental Accreditation of the American Dental Association.

Its mission is to promote optimal oral and general health of Indiana citizens and others through educational, research, and service programs. The school is committed to recruiting quality students and preparing them to become highly competent, ethical, and socially responsible practitioners of dentistry.

The school also sees as part of its responsibilities the creation of opportunities for career-long learning for its graduates and other dental professionals through continuing education programs.

The school strives to maintain its role as a vital and productive member of Indiana University's scholarly community. It is dedicated to increasing the knowledge base in all areas related to oral health through an extensive research program that includes the participation of both faculty and students.

The school provides a broad spectrum of patient services as a principal means of furnishing clinical educational opportunities for students. Nearly 90,000 dental appointments are scheduled annually for a population of about 22,000 dental patients. Treatment is provided in the school's clinics as well as at patient care facilities at IU's Riley Hospital Outpatient Center, University and Wishard Memorial hospitals, and two community health centers.

The dental school continually emphasizes to its students the importance of community service. Through collaborative partnerships with schools, health care centers, and other facilities in central Indiana, the school seeks to expose students to a variety of service-learning experiences, particularly those involving special population groups.

Students also are taught that part of their ongoing responsibilities as health care providers in the community will be to increase public awareness of the critical role oral health plays in one's overall well-being.

Overview

History

Indiana University School of Dentistry (IUSD) is one of the oldest dental schools in the nation. It was established as the Indiana Dental College in 1879 and became part of Indiana University in 1925. In 1933, IU built a facility to house the school at its current site on what is now known as the Indiana University-Purdue University Indianapolis campus. It is the only dental school in the Hoosier state.

The school's reputation for excellence took firm root in the 1940s, when several key teachers and researchers began long and prolific careers as members of the dental faculty. It was during this era, for example, that three IU scientists, including dental professor Joseph Muhler, created the first stannous fluoride formula that became the active decay-preventing agent in Crest toothpaste.

Dr. Muhler and other pioneering teachers at the dental school contributed a body of groundbreaking work that drew worldwide attention to Indiana University, and each left a legacy of knowledge that helped build the foundation for contemporary dental science.

Currently, more than 350 faculty members contribute to the dental school's teaching and research programs, including 115 in full-time positions. About 40,000 square feet of space divided into more than a dozen facilities is now devoted to dental research opportunities at IU, including the Oral Health Research Institute, whose researchers have gained prominence for their studies of such subjects as fluoride and dental caries prevention.

More than 12,000 alumni of the school pursue a variety of careers in private practice, education, research, and public health throughout the United States and in more than 30 other countries.

Last updated: November 2011.

Accreditation & Licenses

The Indiana University School of Dentistry (IUSD) is a member of the American Dental Education Association and is fully accredited by the Commission on Dental Accreditation of the American Dental Association.

Contact Information

Indiana University School of Dentistry
Dental School (DS)
1121 W. Michigan Street
Indianapolis, IN 46202

Admissions

Dental Assisting and Dental Hygiene Admissions Requirements

The Indianapolis campus offers programs in dental assisting and dental hygiene; both are housed in the school's Department of Periodontics and Allied Dental Programs.

DDS Admissions Requirements

Detailed DDS admissions requirements are available on the IUSD Website: http://www.iusd.iupui.edu/prospective-students/admissions/

Graduate Admissions Requirements

Detailed MSD and PhD Admissions Requirements are available on the IUSD Website: http://www.iusd.iupui.edu/departments/education/graduate-education/graduate-programs/

Dental Hygiene Programs Requirements

Associate of Science (A.S.) Admission Requirements

Required prerequisite courses may be taken at any accredited college or university if they are listed as approved courses by the Student Records and Admissions Office at the Indiana University School of Dentistry (see the section of this Web site entitled For Further Information for the address).

A listing of currently approved courses can also be accessed on the School of Dentistry website under Prerequisites for Pre-Dental and Pre-Hygiene Students. They include one semester each of English composition, chemistry with laboratory, human anatomy, human physiology, microbiology with laboratory, psychology, sociology, and public speaking, and two semester courses in arts and humanities.

Remedial courses may not be used to fulfill this requirement. All applicants must maintain a minimum cumulative college grade point average of 2.0 (on a 4.0 scale) and achieve a minimum course grade of 2.0 (on a 4.0 scale) in all prerequisite courses to be considered for admission to the program. In addition, applicants must earn a 2.7 grade point average in the combined prerequisite science courses (inorganic chemistry, microbiology, human anatomy, and human physiology).

Please note that if prerequisite courses are retaken for an improved grade, all course grades will be included in the computed grade point averages. Courses taken at institutions other than Indiana University must show a grade of C or above to be accepted as transfer credit by Indiana University. All prerequisite courses listed above must be completed by the end of the spring semester of the year in which students wish to enter the program.

Required science courses must have been completed within the past seven years. Questions about course work that does not meet these time limits should be directed to the Student Records and Admissions Office at IUSD.

All candidates applying for admission must provide documentation that they have recently completed the prescribed number of hours of observation of a practicing dental hygienist in at least two different practice settings. They must also submit a personal statement. Specific instructions for documenting observations and the personal statement are available at the School of Dentistry website under Dental Hygiene Admission Criteria or from the Student Records and Admissions Office.

Each eligible candidate is required to either attend the In-house Dental Hygiene Candidates' Orientation or complete the online orientation. Registration forms indicating orientation preference must be received by the Student Records and Admissions Office.

All applications and supporting materials are to be submitted by February 1. Applicants who have previously applied must submit a new application when reapplying. Applications to the IUSD dental hygiene program may be obtained by contacting the dental school's Student Records and Admissions Office or from the Web site. Requirements and forms for admission to the IUSD dental hygiene program are specific to this program only and are not acceptable for admission to other dental hygiene programs in the state.

Applications for admission to any other Indiana dental hygiene program must be directed to those programs and follow their prescribed procedures. (See the section of this Web site entitled For Further Information for a list of dental hygiene programs offered on other campuses.) All potential applicants are advised to consult the School of Dentistry's Student Records and Admissions Office or Web site for updates or changes in dental hygiene admissions policies that may occur after publication of this document.

Class size is limited, and there are more qualified applicants than can be accepted each year. Applicants are encouraged to consult with the Student Records and

Admissions Office or the program director for pre-dental hygiene counseling. Selections are made on an individual basis, upon appraisal of the applicant's established record and potential for development.

Potential applicants are advised to review the list of minimum skill standards for admission and retention in the dental hygiene profession. This document is provided on the Web site and from the school's Student Records and Admissions Office. In addition to these standards, it is necessary that students enrolled in the dental hygiene program enter with basic computer literacy sufficient to allow them to participate in instruction involving computer-based course work, Internet searching, basic word processing, and e-mail applications.

Bachelor of Science (B.S.) Admission Requirements

Prerequisites to the public health dental hygiene program include completion of 90 undergraduate semester hours, graduation from an accredited dental hygiene program, satisfactory completion of the National Board Dental Hygiene Examination, and current licensure as a dental hygienist.

Accepted students are expected to have basic computer literacy sufficient to participate in Web-based instruction, computer word processing, and e-mail communication. An application to the program may be obtained by addressing communications to Director, Dental Hygiene Program, Indiana University School of Dentistry, 1121 West Michigan Street, Indianapolis, IN 46202-5186.

Applications may be received at any time during the academic year, but the completed application must be submitted to the program director at least 60 days prior to the first semester in which the applicant wishes to enroll. Completion of all application requirements and an interview with the program director or admissions committee is required before acceptance into the program can be considered. Upon acceptance, each student must complete a curriculum plan to be approved by the program director before enrollment in required courses.

Students in the public health dental hygiene program must complete a total of 32 semester hours of course work, including the following courses that comprise the required core curriculum. In addition to the core courses, students must complete approved elective courses in a selected focus area (e.g., behavioral sciences, education, or basic sciences) to fulfill the 32 semester hour completion requirement of the bachelor's degree.

Dental Assisting Requirements

Admission Requirements (Campus Program)

1. Applying to the dental assisting program on the Indianapolis campus is a two-step process involving both the IUPUI Office of Admissions and the IU School of Dentistry Division of Dental Assisting. Applicants must first file an admission application with the IUPUI Office of Admissions and be admitted to the university as an undergraduate student. Qualified applicants will be notified of their university admittance by IUPUI. The IUPUI Office of Admissions' application packet will also contain an application for admission to the dental school's dental assisting program. Applicants will submit this application to the Division of Dental Assisting. All IUPUI application materials are available through the IUPUI Enrollment Center (www.enroll.iupui.edu; 317-274-4591).
2. Applications must include official transcripts from all high school and all post-secondary schools attended, including colleges, universities, and vocational institutions. The transcripts of applicants who are currently enrolled in their senior year of high school should include grades from fall semester. Graduates of GED programs must submit a copy of their GED certificate and scores. Official transcripts showing all academic work completed must be submitted before final acceptance to the dental assisting program.
3. Applicants must have an overall minimum cumulative grade point average of 2.0 (on a 4.0 scale) as well as a minimum of 2.0 in science and English courses taken in high school and college.
4. Applicants must observe a chairside dental assistant in a dental office for a minimum of eight hours. The IUSD Dental Assisting Verification of Dental Office Observation Form is to be signed by the dentist and submitted to the Dental Assisting Program by the application deadline.
5. Individuals for whom English is a secondary language must demonstrate proficiency in English before being admitted to IUPUI. Several testing options are available. For more information, see the Undergraduate English Language Requirements on the IUPUI Office of International Affairs Web site (http://iapply.iupui.edu/undergraduate/#english). Tests results will be used as part of the dental assisting admissions review, and the dental assisting admissions committee may also require an interview or writing exercise to determine the applicant's English skills.

The application deadline for the campus program is 5 p.m. on June 1 prior to the fall semester the applicant wishes to enter the program. Applicants should send the completed application (photo optional), observation form, and all official transcripts to the Dental Assisting Program, Indiana University School of Dentistry, 1121 West Michigan Street, DS 430, Indianapolis, IN 46202-5186. Incomplete applications will not be considered.

All potential applicants are advised to consult the School of Dentistry's Dental Assisting Program Web site for updates or changes in dental assisting admissions policies that may occur after publication of this document.

Admission Requirements (Distance-Learning Program)

Applicants should follow admission requirements 1 through 5 for the campus program as well as requirements 6 through 8 listed below:

6 Applicants must identify a sponsoring general practice dentist holding an active Indiana dental license who can provide clinical training in the field of general dentistry.

6 Applicants must meet the university's technology requirements:

- Office XP Software

- Internet access at Explorer IE6 or Higher DSL or cable modem access is required)

6 Applicants must be able to travel to the Indiana University School of Dentistry when necessary (typically, one Saturday a month throughout the school year).

The application deadline for the distance-learning program is 5 p.m. on June 1 prior to the fall semester the applicant wishes to enter the program. Applicants should send the completed application (photo optional), observation form, and all official transcripts to the Dental Assisting Program, Indiana University School of Dentistry, 1121 W. Michigan Street, DS 430, Indianapolis, IN 46202-5186. Incomplete applications will not be considered.

All potential applicants are advised to consult the School of Dentistry's Dental Assisting Program Web site for updates or changes in dental assisting admissions policies that may occur after publication of this document.

Courses

The following is a listing of all of the courses offered for the School of Dentistry's undergraduate degree and certificate programs.

Associate of Science Degree

DHYG-E 351 Advanced Dental Materials for Dental Auxiliaries (2 cr.) Lecture and laboratory course designed to teach additional concepts of dental materials and their use in intraoral techniques. Included is instruction in dental auxiliary utilization principles and the manipulation of dental materials used in delegated intraoral functions.

DHYG-H 101 Dental Hygiene Freshman Experience (1 cr.)

DHYG-H 204 Periodontics (1 cr.) Study of the normal periodontium at the clinical, histologic, and biochemical levels; procedures involved in carrying out a comprehensive periodontal examination and performing a periodontal prophylaxis.

DHYG-H 205 Medical and Dental Emergencies (1 cr.) A study in emergency situations in the dental office, including predisposing factors and drugs, and treatment to include the support of the cardiopulmonary system.

DHYG-H 206 General Pathology I (1 cr.) H206 General Pathology I (1 cr.) Mechanisms of disease at the cellular, organ, and systemic levels with special references to specific disease processes; includes general concepts, terminology, and pathology of organ systems.

DHYG-H 207 General Pathology II (1 cr.) Mechanisms of disease at the cellular, organ, and systemic levels with special references to specific disease processes; includes general concepts, terminology, and pathology of organ systems.

DHYG-H 211 Head & Neck Anatomy (2 cr.) Head & Neck Anatomy

DHYG-H 214 Oral Anatomy (3 cr.) A study of the morphology, structure, and function of deciduous and permanent teeth and surrounding tissues, also including osteology of the maxilla and mandible, nerve and vascular supply of teeth, and muscles of mastication, with reinforcing laboratory procedures and clinical application.

DHYG-H 215 Pharmacology and Therapeutics: First Year (2 cr.) Actions and uses of drugs and theory of anesthetics; emphasis on drugs used in dentistry.

DHYG-H 216 Chemistry and Nutrition: First Year (3 cr.) Specific ideas in chemistry are correlated with working principles in dentistry. Previous knowledge of chemistry assumed.

DHYG-H 217 Preventive Dentistry: Second Year (1 cr.) Detection and prevention of dental disease; included is a study of dental surveys, dental indices, and fluoride therapy.

DHYG-H 218 Fundamentals of Dental Hygiene: First Year (4 cr.) An introduction to the dental and dental hygiene profession, including the basic didactic and laboratory/clinic practice for the performance of dental hygiene services.

DHYG-H 219 Clinical Practice I (4 cr.) Performance of dental hygiene services in various clinical settings. Included is didactic instruction and application of dental hygiene procedures for providing patient care and an introduction to oral diagnosis.

DHYG-H 221 Clinical Dental Hygiene Procedures (1-3 cr.) Clinical assignment for instruction and experience in performing dental hygiene services.

DHYG-H 250 LOCAL ANESTHESIA AND PAIN CONTROL (1 cr.) Local Anesthesia and Pain Control

DHYG-H 252 Introduction to Evidence-Based Dental Hygiene Care (1 cr.) Foundational knowledge to implement evidence-based decision-making strategies in the provision of patient/client care. It includes basic knowledge and skills related to research terminology, library and computer-based information retrieval systems, approaches to reviewing and evaluating scientific literature, and dental indices used in the description of oral health and disease.

DHYG-H 301 Clinical Practice II (5 cr.) Continued performance of dental hygiene services in various clinical settings. Included are didactic instruction and clinical application of dental hygiene services for providing patient care.

DHYG-H 302 Clinical Practice III (5 cr.) Continued performance of dental hygiene services in various clinical settings. Included are didactic instruction and clinical application of dental hygiene services for providing patient care.

DHYG-H 303 Radiology (1 cr.) Principles of radiation production, placement of intraoral film, proper exposure and processing of film, radiation safety, and interpretation of radiographs.

DHYG-H 304 Oral Pathology: Second Year (2 cr.) Developmental abnormalities and acquired disorders of teeth and surrounding structure.

DHYG-H 305 Radiology Clinic I (1 cr.) Clinical application of intraoral and extraoral radiographs.

DHYG-H 306 Radiology Clinic II (1 cr.) Clinical application of intraoral and extraoral radiographs.

DHYG-H 307 Radiology Clinic III (1 cr.) Clinical application of intraoral and extraoral radiographs.

DHYG-H 308 Dental Materials: First Year (2 cr.) Composition and physical and chemical properties of materials used in dentistry.

DHYG-H 311 Dental Health Education (3 cr.) An introduction to basic communication and motivation skills, instructional objectives, learning theory, evaluation of educational materials, and special needs patients.

DHYG-H 321 Periodontics (1-2 cr.) A study of periodontal disease, including the anatomy, classification, etiology, treatment, and relationship to systemic conditions.

DHYG-H 344 Senior Hygiene Seminar (2 cr.) Ethics, jurisprudence, and practice management concepts, including a study of state practice acts, dental hygiene employment opportunities, recall systems, and current trends in the dental hygiene profession.

DHYG-H 347 Community Dental Health (4 cr.) Principles and practice of program planning, implementation, and evaluation for community and school dental health programs.

Bachelor of Science Degree

Statistics: Recommended courses include STAT 301 Elementary Statistical Methods (3 cr.) or PSY B305 Statistics (3 cr.)

STAT 301 Elementary Statistical Methods (3 cr.) P: Must enroll in lab. A basic introductory statistics course with applications shown to various fields and emphasis placed on assumptions, applicability, and interpretations of various statistical techniques. Subject matter includes frequency distribution, descriptive statistics, elementary probability, normal distribution, applications, sampling distribution, estimation, hypothesis testing, and linear regression.

PSY-B 305 Statistics (3 cr.) P: PSY B104 Psychology as a Social Science or PSY B105 Psychology as a Biological Science and 3 credits of math that carry School of Science credit. Introduction to basic statistical concepts; descriptive statistics and inferential statistics.

DHYG-H 402 Practicum in Dental Hygiene Education (4 cr.) P: H403, Z477. Structured practical experience in planning, supervising, coordinating, and evaluating instruction in an educational setting. Emphasis on faculty roles and responsibilities.

DHYG-H 403 Advanced Community Dental Hygiene (4 cr.) Public health principles including a study of the health care delivery system and preventive public health care at the community level.

DHYG-H 405 Advanced Dental Science (3 cr.) Review of current literature related to periodontics, oral pathology, preventive dentistry, and the current practices of dental hygiene.

DHYG-H 406 Educational Methodology in Health Sciences (1-3 cr.) The purpose of this course is to assist potential educators in the health sciences to understand current theories, concepts, and methodologies in professional health science education. Students will learn to apply effective educational strategies to match learners' needs in didactic, laboratory, and clinical settings. This course will use a variety of delivery systems, including an on-line component.

DHYG-H 407 Instructional Media and Technology in Health Science Education (1-3 cr.) The purpose of this course is to examine the utilization of a variety of instructional technologies that can be used in educational settings for patients, students, and practitioners. Various technologies will be analyzed for appropriateness of use, strengths, and weaknesses. A variety of delivery mechanisms will be used, including an on-line component.

Dental Assisting Certificate

DAST-A 110 Oral Histology and Embryology (1 cr.) Development, structure, and function of cells and tissues of the teeth and periodontium; embryologic development of the face, palate, and teeth.

DAST-A 111 Oral Pathology, Physiology, Anatomy I (2 cr.) A111 is an overview of the structures, functions, and selected diseases of the human body, including basic cells, tissues, organs, and organ systems. A113 is an introduction to diseases of the oral cavity and its related structures.

DAST-A 112 Dental Therapeutics and Medical Emergencies (2 cr.) This course will present the pharmacology of medications that are commonly used by the physician and dentist and the diseases and indications for which these drugs are prescribed. Also, the class will review the systemic diseases and adverse reactions to dental treatment that can result in a medical emergency in the dental office and the armamentarium, medications, and procedures for treating these emergencies.

DAST-A 113 Oral Pathology, Physiology, Anatomy II (1 cr.) This course is an introduction to diseases of the oral cavity and its related structures.

DAST-A 114 Oral Anatomy (3 cr.) A study of the morphology, structure, and function of deciduous and permanent teeth and surrounding tissues, also including osteology of the maxilla and mandible, nerve and vascular supply of teeth, and muscles of mastication, with reinforcing laboratory procedures and clinical application.

DAST-A 121 Microbiology and Asepsis Technique (1 cr.) A study of microbial types, oral microbiology, bloodborne diseases, and infection control including procedures of instrument cleaning and sterilization, surface disinfection, use of protective barriers, waste management, and hazardous materials management.

DAST-A 131 Dental Materials I (2 cr.) Lecture and laboratory courses designed to familiarize the student with the basic mechanical, physical, and chemical properties of dental materials. The role of the assistant in selection, manipulation, and biological considerations of dental materials is stressed.

DAST-A 132 Dental Materials II (2 cr.) Lecture and laboratory courses designed to familiarize the student with the basic mechanical, physical, and chemical properties of dental materials. The role of the assistant in selection,

manipulation, and biological considerations of dental materials is stressed.

DAST-A 141 Preventive Dentistry and Nutrition (2 cr.) Etiology of prevalent oral diseases and their preventions with particular emphasis on plaque, plaque control, and fluorides. The effects of major nutrients on the physiologic body processes; applied nutrition in dental caries and periodontal disease. Clinical and laboratory experiences.

DAST-A 151 Radiology Clinic I (2 cr.) The principles of radiation production, theories and techniques of radiographic imaging, film processing and mounting, radiation safety, and radiographic interpretation are studied in this didactic and preclinical course.

DAST-A 152 Radiology Clinic II (1 cr.) Clinical experience in the placing, exposing, processing, evaluating, and mounting of intraoral and extroral dental radiographs. Practical application of radiation safety measures is required in the clinical setting.

DAST-A 162 Written and Oral Communication (2 cr.) Instruction and practice in gathering and organizing material for written and oral presentation. Individual and group projects in communication, including table clinics, posters, professional articles for publication, telephone techniques, and resumes.

DAST-A 171 Clinical Science I (4 cr.) A core course in dental nomenclature; the role of the assistant as a member of dental health team in general dentistry and dental specialties to include charting the mouth, identification and utilization of instruments and equipment, principles of dental procedures, instrument transfer, isolation techniques, and asepsis procedures.

DAST-A 172 Clinical Science II (4 cr.) Clinical chairside experience, including an extramural assignment; allows for refining of student skills. A seminar provides students opportunities to share experiences.

DAST-A 182 Practice Management, Ethics, and Jurisprudence (2 cr.) A course designed to emphasize the role of the dental assistant in the management of a dental office through reception procedures, appointment control, record keeping, purchasing, third-party reimbursement, financial systems, and inventory control. Also, the legal and ethical aspects of dentistry are discussed.

DAST-A 190 Expanded Restorative Dentistry (3 cr.) Lecture, laboratory, and clinical course designed to teach more extensively certain concepts of dental materials and their use in intraoral techniques. The principles of dental auxiliary utilization and the manipulation and placement of dental materials used in delegated intraoral functions are taught.

DAST-A 300 Special Topics in Dental Education (1 cr.) P: Chairperson's permission and admission to dental assisting, dental hygiene, or dental laboratory technology program. An advanced course for dental education majors. Supervised reading or projects on approved topics in dentistry. Hours, subject matter, and evaluation to be determined by faculty.

Dental Auxiliary Education

DAE-E 351 Advanced Dental Materials Technology for Auxiliary (2 cr.)

Graduate Courses

DENT-G 901 Advanced Research (Arr. cr.)

DENT-R 965 Advanced Clinical Prosthodontics (0.5-6 cr.)

Dental Hygiene Core Curriculum

PREDENTAL HYGIENE

(exact course sequencing may vary depending on course schedules and individual pace of enrollment)

- English Composition
- Sociology
- Arts and Humanities
- Chemistry with Laboratory
- Human Anatomy
- Arts and Humanities
- Public Speaking
- Psychology
- Human Physiology
- Microbiology with Laboratory

DENTAL HYGIENE (FIRST YEAR)

First Semester

- DHYG-H 204 Periodontics
- DHYG-H 206 General Pathology I
- DHGY-H 211 Head and Neck Anatomy
- DHYG-H 214 Oral Anatomy
- DHYG-H 216 Chemistry and Nutrition
- DHYG-H 218 Fundamentals of Dental Hygiene
- DHYG-H 303 Radiology

Second Semester

- DHYG-H 205 Medical and Dental Emergencies
- DHYG-H 207 General Pathology II
- DHYG-H 215 Pharmacology and Therapeutics
- DHGY-H 217 Preventive Dentistry
- DHYG-H 219 Clinical Practice I
- DHYG-H 308 Dental Materials
- DHYG-H 321 Periodontics

DENTAL HYGIENE (SUMMER SESSION)

- DHYG-H 221 Clinical Dental Hygiene Procedures
- DHYG-H 250 Local Anesthesia and Pain Control
- DHYG-H 252 Introduction to Evidence-Based Dental Hygiene Care
- DHYG-H 305 Radiology Clinic I

DENTAL HYGIENE (SECOND YEAR)

First Semester

- DHYG-H 301 Clinical Practice II
- DHYG-H 304 Oral Pathology
- DHYG-H 306 Radiology Clinic II
- DHYG-H 311 Dental Health Education
- DHYG-H 347 Community Dental Health (introduction)
- DHYG-E 351 Advanced Dental Materials for Dental Auxiliaries

Second Semester

- DHYG-H 302 Clinical Practice III
- DHYG-H 307 Radiology Clinic III

- DHYG-H 344 Senior Hygiene Seminar
- DHYG-H 347 Community Dental Health (practicum)

Undergraduate Programs

Undergraduate programs offered at Indiana University School of Dentistry in Indianapolis*

Certificate in Dental Assisting
Associate of Science in Dental Hygiene (A.S.D.H.)
Bachelor of Science in Public Health Dental Hygiene (B.S.)

Information about dental hygiene and dental assisting presented in this bulletin pertains only to programs on the Indianapolis campus.

*Undergraduate programs are also offered at several other IU campuses: the dental assisting certificate and dental hygiene associate's degree programs are available at the Fort Wayne, Gary, and South Bend campuses; the bachelor's degree program for dental hygienists is offered at Fort Wayne; and an associate degree program in dental laboratory technology is offered only at Fort Wayne.

Students interested in programs at Fort Wayne, Gary, and South Bend should check with counselors on those campuses for specific requirements, which may vary from those at Indianapolis.

Dental Assisting Core Curriculum

- DAST-A 110 Oral Histology and Embryology
- DAST-A 111 Oral Pathology, Physiology, and Anatomy I
- DAST-A 112 Dental Therapeutics and Medical Emergencies
- DAST-A 113 Oral Pathology, Physiology, and Anatomy II
- DAST-A 114 Oral Anatomy
- DAST-A 121 Microbiology and Asepsis Technique
- DAST-A 131 Dental Materials I
- DAST-A 132 Dental Materials II
- DAST-A 141 Preventive Dentistry and Nutrition
- DAST-A 151 Radiology Clinic I
- DAST-A 152 Radiology Clinic II
- DAST-A 162 Written and Oral Communication
- DAST-A 171 Clinical Science I
- DAST-A 172 Clinical Science II
- DAST-A 182 Practice Management, Ethics, and Jurisprudence

Electives

- DAST-A 190 Expanded Restorative Dentistry
- DAST-A 300 Special Topics in Dental Education

Student Learning Outcomes

- Bachelor of Science in Public Health Dental Hygiene
- Associate of Science in Dental Hygiene
- Certificate in Dental Assisting

Bachelor of Science in Public Health Dental Hygiene (B.S.)

The program's objectives are designed to provide students with the education and skills to:

1. perform dental hygiene services in a variety of settings (e.g., private dental practice, public health clinics, school systems, institutions, and hospitals);
2. design, implement, and evaluate effective preventive dental health programs for individuals and for groups in such settings as schools, hospitals, institutions, and community programs;
3. serve as a resource person and work in cooperation with other health personnel in assessing health care needs and providing health care services to the public;
4. plan, implement, and evaluate effective teaching methodologies in an educational setting;
5. supervise the teaching of dental hygiene services in a clinical/public health setting;
6. prepare for admission to graduate programs; and
7. continue their professional education and personal growth.

Associate of Science in Dental Hygiene (A.S.D.H.)

The curriculum supports attainment of the following list of competencies expected of a dental hygienist entering the profession. The graduate will be prepared to:

1. apply a professional code of ethics in all endeavors;
2. adhere to state and federal laws, recommendations, regulations, and safety practices in the provision of dental hygiene care;
3. provide dental hygiene care to promote patient/client health and wellness using critical thinking and problem solving in the provision of evidence-based practice;
4. assume responsibility for dental hygiene actions and care based on accepted scientific theories and research as well as the accepted standard of care;
5. continuously perform self-assessment for lifelong learning and professional growth;
6. advance the profession through service activities and affiliations with professional organizations;
7. provide quality assurance mechanisms for health services;
8. communicate effectively with individuals and groups from diverse populations both orally and in writing;
9. provide accurate, consistent, and complete documentation for assessment, diagnosis, planning, implementation, and evaluation of dental hygiene services;
10. provide care to all clients using an individualized approach that is humane, empathetic, and caring;
11. provide planned educational services using appropriate interpersonal communication skills and educational strategies to promote optimal oral health;
12. initiate and assume responsibility for health promotion, health education, and disease prevention activities for diverse populations;
13. systematically collect, analyze, and record data on the general, oral, and psychosocial health status of a variety of patients/clients using methods consistent with medico-legal principles;
14. use critical decision-making skills to reach conclusions about the patients'/clients' dental

hygiene needs based on all available assessment data;
15. collaborate with the patient/client and/or other health professionals to formulate a comprehensive dental hygiene care plan that is patient/client-centered and based on current scientific evidence;
16. provide specialized treatment that includes preventive and therapeutic services designed to achieve and maintain oral health; and
17. evaluate the effectiveness of the implemented clinical, preventive, and educational services and modify as needed.

Dental Assisting Certifcate Program

The certificate program in dental assisting will provide a quality education to prepare the student to:

1. be proficient in applying knowledge of the basic behavioral and dental sciences to clinical practice in assessing and performing dental assisting procedures;
2. communicate effectively with other health care professionals in coordinating and providing patient care including the use of technology and practice management techniques;
3. apply problem-solving and decision-making skills when assisting with dental health services under the direction and supervision of the dentist;
4. conduct one's self with the highest levels of professionalism, ethics, and personal integrity in the practice of compassionate, patient-centered dentistry;
5. internalize the importance of life-long learning and understand the importance of remaining current in knowledge of dentistry as the dental health care delivery system changes;
6. acquire knowledge and skills to promote and participate in preventive dental care and support oral health through promotion of total health;
7. be knowledgeable of and comply with state and federal laws governing the practice of dentistry and dental assisting;
8. achieve success on all national examinations, certifications, and licensures; and
9. participate in leadership opportunities, professional organizations, and service to the community.

Dental Assisting Certifcate Program

Vanchit John
Interim Chairperson
Associate Professor, Periodontics and Allied Dental Programs

Pamela T. Ford
Director of Campus Program and Clinical Assistant Professor

Patricia A. Capps
Director of Distance-Learning Program and Clinical Associate Professor

Indiana University's Indianapolis-based dental assisting program is one year in length (two semesters) and is composed of 15 mandatory courses encompassing approximately 1,000 hours of lecture, laboratory, and clinical instruction. Students who successfully complete the program receive a certificate and are eligible to take the Dental Assisting National Board Examination.

Applicants may now choose between two types of programs to earn a certificate in dental assisting: a traditional full-time on-campus program in which students receive all of their training at the School of Dentistry, or a full-time distance-learning program in which students complete most of their nonclinical courses online while receiving clinical experience in community dental offices.

Distance Learning Program

The IU School of Dentistry distance-learning dental assisting program was established in 2007 as an alternative to the campus program to help make a dental assisting education more accessible to candidates who are not conveniently located near campus or who are trying to obtain a college education while managing full-time work and/or family responsibilities.

This program is the first to be offered in Indiana and one of only a very few in the United States. Like all of the School of Dentistry's other programs, it is fully accredited by the American Dental Association Commission on Dental Accreditation. Enrollment is currently limited to 12 students per year.

The program uses Indiana University's online course management system to teach nonclinical subjects, and students may access the courses at a time that is convenient to them. Students should anticipate devoting about two hours a day to their online studies, which will include reading, writing, and video assignments.

Students must also spend one Saturday a month throughout the school year on site at the dental school to complete laboratory assignments and take examinations.

Clinical training is provided primarily in the second semester by a sponsoring general dentist of the student's choice. Students will receive a minimum of 300 clock hours of clinical practice.

Degree Programs

- Dental Assisting Certificate Program
- Dental Hygiene Degree Programs

Dental Hygiene Programs

Vanchit John
Interim Chairperson
Associate Professor, Periodontics and Allied Dental Programs

Nancy A. Young
Director and Associate Professor

The dental hygienist is a member of the dental health team providing educational, preventive, and therapeutic oral health services. Employment opportunities may be available in private dental practice, hospitals, public health, educational institutions, and research. Indiana University offers a program leading to an Associate of Science degree in dental hygiene and a program leading to a Bachelor of Science degree in public health dental hygiene.

Associate of Science Degree

The Indianapolis-based Associate of Science degree program in dental hygiene is two academic years in length

and is composed of a core curriculum of 27 courses presented over four semesters and one summer session. All courses are mandatory.

Bachelor of Science Degree

The Bachelor of Science degree-completion program in public health dental hygiene provides an opportunity for graduate dental hygienists to develop further expertise in public health methods or dental hygiene education and includes application of practical experience.

It is designed to meet the needs of part-time students who wish to work while completing their bachelor's degree. It prepares hygienists for leadership roles in education, public health, commercial ventures, professional associations, and/or health advocacy.

It can enhance career opportunities available to dental hygienists in a variety of areas, including but not limited to state and county health departments, academia, sales and marketing, educational software development, pharmaceuticals, dental education consulting, dental insurance companies, research, and clinical dental hygiene. Program activities promote development of professional leadership skills and prepare hygienists for entry into graduate programs.

Dental Assisting Core Curriculum

- DAST-A 110 Oral Histology and Embryology
- DAST-A 111 Oral Pathology, Physiology, and Anatomy I
- DAST-A 112 Dental Therapeutics and Medical Emergencies
- DAST-A 113 Oral Pathology, Physiology, and Anatomy II

- DAST-A 300 Special Topics in Dental Education

Graduate Admissions

- Doctor of Dental Surgery (D.D.S.)
- Master of Science (M.S.) Majors
- Doctor of Philosophy in Dental Science (Ph.D.)

Doctor of Dental Surgery (D.D.S.)

Predental Requirements

Most students accepted by IUSD attain a bachelor's degree prior to enrollment. The predental collegiate training may be taken at any accredited college or university in the United States. Required courses cannot be taken on a Pass/Fail basis. Special credit for required courses may be accepted if all portions of the course work (i.e., lecture, laboratory) have been properly evaluated and appear on official transcripts. Because details of courses offered in the various accredited colleges may vary, courses must be carefully considered when a program is planned, particularly in the fields of science. All prerequisite science courses, except biochemistry and physiology, require laboratories. Extra work in the areas of biology and chemistry is strongly encouraged.

Prior to matriculation at IUSD, applicants must complete a minimum of 90 semester (or 135 quarter) hours of which no more than 60 hours may be completed at the junior college level. The following predental requirements must be met in order to qualify for admission:

Two semesters or three quarters (minimum of 8 semester hours/12 quarter hours) of each of the following:

- Biology or zoology, with laboratory
- Inorganic chemistry, with laboratory
- General physics, with laboratory

One semester or two quarters (minimum of 4 semester hours/6 quarter hours) of each of the following:

- Organic chemistry, with laboratory
- Anatomy, with laboratory

Three semester hours or 4.5 quarter hours of biochemistry and physiology lecture

One semester or one quarter (minimum of two semester hours/three quarter hours) of each of the following:

- Introductory psychology
- English composition

Courses in cell biology, molecular biology, genetics, solid art, business administration or personal finance, histology, and medical terminology are strongly recommended but not required. Likewise, a minor in anthropology, psychology, sociology, or Spanish is strongly encouraged. All incoming dental students must be familiar with computer usage.

Application Procedure

Although the current application deadline is December 1, the selection process begins in November, which therefore gives early applicants a decided advantage. Electronic applications to dental school are available through the American Dental Education Association Web site, www.adea.org.

Applicants must also take the Dental Admission Test (DAT), which they may do before submitting the Associated American Dental Schools Application Service (AADSAS) application to IUSD, but IUSD will not grant an invitation for an interview until the school receives an applicant's DAT scores. The DAT can be taken nearly any day of the year at Prometric Candidate Contact Centers throughout the country. Students should take this test only after completing the required chemistry and biology courses. Applicants may request an interpretation of test results from the IUSD Student Records and Admissions Office. Details concerning the DAT may be obtained by writing the American Dental Association, 211 E. Chicago Avenue, Chicago, IL 60611; or by visiting www.ada.org.

Applicants will be invited to the school for a personal interview based upon the status of their application and their academic achievement. Criteria for admission include, but are not limited to, overall grade point average, science grade point average, DAT scores, interviews, recommendations, hours of college credit, degrees received, motivation, exploration of dentistry, manual and artistic skills, character, personality, ethics, and health. Applications from all underrepresented groups are encouraged. Selections are made on an individual basis upon appraisal of the applicant's established record and potential for development.

Advanced Standing Program Requirements

IUSD offers the Advanced Standing Program (ASP) for selected individuals who have received their dental degree from an institution outside the United States or Canada. Upon successful completion of the ASP, the candidate will receive the D.D.S. degree from IUSD. The individualized program ranges in length from one to three years.

Because admission to the ASP is limited by the dental school's available space and resources, IUSD is able to admit no more than five candidates to the ASP each year, and commonly admits only one candidate per year. Applications are accepted only between June 1 and January 1, unless the candidate is a current IUSD faculty member.

When considering candidates for the ASP, the Admissions Committee interviews and gives preference to the following:

- Current IU School of Dentistry faculty
- Current students in or recent graduates from IU School of Dentistry's advanced education programs
- Faculty from other institutions who express interest in faculty openings at IU School of Dentistry
- Other residents of the State of Indiana

Because of the limited nature of this program, nonresidents of the State of Indiana who do not fall into one of the above categories are not eligible for admission.

The following criteria are used in the selection process, and the Admissions Committee will consider only those candidates for whom all the information is available:

- Successful completion of National Board Dental Examination Parts 1 and 2
- Results from an interview with Admissions Committee members
- Evaluation of dental school transcripts
- Two letters of recommendation (one personal and one professional)
- TOEFL test of English language proficiency as required by Indiana University for applicants whose first language is not English

An individualized curriculum is designed for each candidate who is admitted to the ASP, based upon an assessment of the candidate's previous education, training, experience, and demonstrated competencies. This assessment may include the following:

- Written and practical examinations
- Examples of technique work
- Other information considered by the faculty to be useful in its deliberation

Master's Degrees

Only students who have a minimum cumulative grade point average of 3.0 (on a scale of 4.0) will be considered for admission, unless, under exceptional circumstances, the prospective student can provide evidence that he or she is capable of successfully completing the graduate dental program.

Application forms must be accompanied by transcripts of undergraduate and professional school work together with such additional materials as may serve to determine eligibility and ability to satisfactorily pursue an advanced course of study.

Letters of support attesting to the candidate's academic background, professional experience, and character should be requested from at least two individuals who have direct knowledge of the candidate's potential to do graduate-level work. To request application information for one of the M.S. or M.S.D. programs, contact the School of Dentistry's Office of Graduate Education (see Contact Information).

Deadline dates for completed applications vary among the individual graduate programs. In addition, several of the individual graduate programs participate in the Postdoctoral Application Support Service (PASS[1]) and the Postdoctoral Dental Matching Program (Match[2]), two national services designed to help applicants obtain positions in first-year postdoctoral programs of their choice, as well as to help the programs obtain applicants of their choice.

Candidates must register in these services if the program is a participant. For applications for the 2010-2011 academic year, three IU graduate programs are participating in both PASS and Match: orthodontics, pediatric dentistry, and oral and maxillofacial surgery.

The endodontics and prosthodontics graduate programs are participating in PASS. Candidates should contact the dental school's Office of Graduate Education or the appropriate program director to obtain more information about application deadlines, national application services, and other details related to the application process.

1. Postdoctoral Application Support Service (PASS), offered by the American Dental Education Association: http://www.adea.org/DENTAL_EDUCATION_PATHWAYS/PASS/Pages/default.aspx

2. Postdoctoral Dental Matching Program (Match), administered by National Matching Services, Inc.: www.natmatch.com/dentres

PhD in Dental Science

The program is open to persons who have earned the Doctor of Dental Surgery degree or its equivalent as well as graduates of bachelor of science degree programs. Applicants must have a minimum grade point average of 3.0 or higher on a 4.0 scale (grade point averages from the dental degree in the case of dental school graduates).

Candidates for the Ph.D. degree program must have a minimum percentile score on the Graduate Record

Examination (GRE) of 55 percent in the verbal, quantitative, or analytical section. In addition, an acceptable TOEFL score must be obtained by applicants from non–English-speaking countries, as follows: a score of 550 or higher on the paper-based test, 213 or higher on the computer-based test, or 79 or higher on the Internet-based test.

Doctor of Dental Surgery (D.D.S.)

The Doctor of Dental Surgery degree program is four academic years in length. The curriculum includes 106 core courses and modules that are presented over eight semesters and three summer sessions.

All of the courses/modules are mandatory for awarding of the degree. The curriculum supports the attainment of the following list of competencies expected of a general dentist entering the profession. The Doctor of Dental Surgery graduate will be prepared to:

1. assess and diagnose the child, adolescent, adult, geriatric, and special needs patient;
2. perform treatment planning and case presentations for the child, adolescent, adult, and geriatric patient;
3. communicate and collaborate with groups and individuals to promote oral and general health including strategies, resources, and interventions as appropriate for the prevention of oral disease in the community;
4. control pain and anxiety through clinical pharmacology and management of related problems;
5. prevent and manage dental and medical emergencies;
6. restore defective and/or missing teeth to appropriate form, function, and esthetics in the child patient;
7. diagnose and restore defective teeth to form, function, and esthetics in the adolescent, adult, and geriatric patient;
8. provide fixed replacement of missing teeth to restore appropriate form, function, and esthetics in the uncomplicated adolescent, adult, and geriatric patient;
9. provide restoration of uncomplicated partially edentulous patients with removable partial dentures to maintain oral function, health, comfort, and appearance;
10. provide restoration of uncomplicated edentulous patients with complete dentures to maintain oral function, health, comfort, and appearance;
11. diagnose and manage periodontal disorders;
12. prevent, diagnose, and manage pulpal and periradicular diseases;
13. diagnose and manage oral mucosal disorders;
14. collect and assess diagnostic information to plan for and perform uncomplicated oral surgical procedures;
15. recognize malocclusion in the primary, mixed, and permanent dentition and to identify from an acceptable problem list an uncomplicated case with limited developmental/acquired abnormality;
16. describe the indications, contraindications, advantages, and disadvantages of space maintainers and demonstrate the basic skills necessary in making simple orthodontics appliances and space maintainers;
17. discern and manage ethical issues and problems in dental practice;
18. understand and apply the appropriate codes, rules, laws, and regulations that govern dental practice;
19. demonstrate behavioral patient management and interpersonal skills;
20. understand the fundamental elements of managing a dental practice;
21. perform and supervise infection control procedures to prevent transmission of infectious diseases to patients, the dentist, the staff, and dental laboratory technicians;
22. critically evaluate and incorporate new dental procedures/therapies into their practices when proven scientifically efficacious;
23. recognize the role of lifelong learning and self-assessment in maintaining competency;
24. use information technology resources; and
25. detect, diagnose, assess the risk for, prevent, and manage dental caries.

Doctor of Philosophy in Dental Science (Ph.D.)

The graduate of the Ph.D. program will be prepared to:

1. demonstrate an in-depth understanding of the biology of the oral cavity;
2. demonstrate the principles/mechanisms pertinent to human physiology and disease;
3. demonstrate competency in performing complex scientific literature searches;
4. write a detailed grant proposal;
5. express scientific material, including original research data, in both oral and written form;
6. demonstrate skills in critical thinking; and
7. plan and undertake independent research.

Master of Science in Dentistry in Operative Dentistry (M.S.D.)

The graduates of the two-year postdoctoral program in Operative Dentistry will be prepared to:

1. manage caries risk patients based on Caries Management by Risk Assessment (CAMBRA);
2. discuss current direct and indirect dental restorative materials (gold, dental amalgam, ceramics, glass ionomer cement, and resin-matrix composite) including associated setting reactions, physical properties, and indications and contraindications for their clinical use;
3. demonstrate clinical proficiency when performing routine and advanced restorative procedures;
4. demonstrate a broad knowledge base of dental restorative materials and procedures;
5. demonstrate knowledge of current restorative dentistry scientific literature;
6. develop and present evidence-based restorative dentistry lectures; and
7. develop a research protocol and perform controlled dental research.

Master of Science in Dentistry in Preventive Dentistry (M.S.D.)

The graduates of the Preventive Dentistry program will be able to define terms and explain basic principles, concepts, and theories related to Cariology. They will be prepared to:

1. describe the dental caries process in detail;
2. describe and contrast the interaction of the etiological factors associated with dental caries;
3. distinguish and assess the different presentations of dental caries;
4. recognize the epidemiology of dental caries;
5. discriminate populations at high risk for dental caries;
6. analyze the external and internal risk determinants of dental caries;
7. compare and contrast the different methodologies utilized for caries detection;
8. demonstrate diagnosis of dental caries;
9. assess caries risk status;
10. assess salivary flow measurements, buffering capacity, and management approaches for patients with low salivary flow;
11. compare and contrast some of the different strategies utilized for caries management;
12. discriminate the therapeutics used in caries management;
13. compare and contrast the use of sealants based on risk assessment, for individuals and populations;
14. support the values of prevention, evaluation, and reevaluation;
15. develop an Oral Health Plan to be incorporated by a health professional team;
16. develop a community health plan;
17. summarize the basic principles on developing patient education plans;
18. critically review scientific methodology; and
19. recognize the different methodologies and techniques related to caries research.

Master of Science in Dentistry in Dental Materials (M.S.D.)

Graduates of the two-year postdoctoral program in Dental Materials will achieve core comptencies in Materials Knowledge, Critical Thinking, and Effective Communication.

Materials Knowledge
The graduate will be prepared to:

1. describe major classes of dental biomaterials used in clinical dentistry;
2. explain the differences in the chemical nature of the major classes of materials;
3. recognize the effects of chemical nature on the mechanical behavior of materials; and
4. describe the relationship between material characteristics and clinical performance of dental biomaterials.

Critical Thinking
The graduate will be prepared to:

1. identify the physical and chemical principles of major material testing methods;
2. select and justify appropriate testing methods for major classes of dental biomaterials; and
3. formulate hypotheses and design the necessary experiments for a given material evaluation scenario.

Effective Communication
The graduate will be prepared to:

1. present research methods and results correctly in oral and written reports;
2. provide evidence-based arguments on research findings in oral and written reports; and
3. provide suggestions on dental biomaterial selection based on current dental literature.

General Practice Residency Program

The graduate of the General Practice Residency program will be prepared to:

1. function as a patient's primary care provider, treating or managing all aspects of oral health care using advanced dental treatment modalities as well as understanding the oral health needs of the community by engaging in community service and directing health promotion and disease prevention activities;
2. enhance and expand knowledge and skills in multidisciplinary comprehensive and emergency dental care, therefore providing a greater confidence in all phases of professional life;
3. plan and provide multidisciplinary oral health care for a wide variety of patients including patients with special needs and while utilizing the values of professional ethics, lifelong learning, patient-centered care, adaptability, and acceptance of cultural diversity in professional practice.
4. interact with other health care professionals in the hospitals, outpatient clinics, community health center environments, and within interdisciplinary health care teams, in order to facilitate the patients' total health care; and
5. participate in critical-thinking analysis, evidenced-based care, and technology-based information retrieval systems and apply this knowledge in treatment decisions and continuous quality improvement.

Master of Science in Dentistry in Endodontics (M.S.D.)

The advanced specialty education program in Endodontics is accredited by the American Dental Association (ADA) Commission on Dental Accreditation. Indiana University School of Dentistry's learning outcomes for the master's degree in endodontics are fully supportive of the outcomes required by the ADA.

IU's program follows academic and clinical standards determined by the commission to ensure the quality and continuous improvement of dental and dentally related education, and to reflect the evolving practice of dentistry. Full details are published in the ADA's Standards for Dental Education Programs under Advanced Specialty Education Programs, Endodontics

Standard 4: Curriculum and Program Duration (http://www.ada.org/115.aspx#general).

Master of Science in Dentistry in Orthodontics (M.S.D.)

The advanced specialty education program in Orthodontics is accredited by the American Dental Association (ADA) Commission on Dental Accreditation. Indiana University School of Dentistry's learning outcomes for the master's degree in orthodontics are fully supportive of the outcomes required by the ADA.

IU's program follows academic and clinical standards determined by the commission to ensure the quality and continuous improvement of dental and dentally related education, and to reflect the evolving practice of dentistry. Full details are published in the ADA's Standards for Dental Education Programs under Advanced Specialty Education Programs, Orthodontics and Dental Facial Orthopedics Standard 4: Curriculum and Program Duration (http://www.ada.org/115.aspx#general).

Master of Science in Dentistry in Periodontics (M.S.D.)

The advanced specialty education program in Periodontics is accredited by the American Dental Association (ADA) Commission on Dental Accreditation. Indiana University School of Dentistry's learning outcomes for the master's degree in periodontics are fully supportive of the outcomes required by the ADA.

IU's program follows academic and clinical standards determined by the commission to ensure the quality and continuous improvement of dental and dentally related education, and to reflect the evolving practice of dentistry. Full details are published in the ADA's Standards for Dental Education Programs under Advanced Specialty Education Programs, Periodontics Standard 4: Curriculum and Program Duration (http://www.ada.org/115.aspx#general).

Master of Science in Dentistry in Prosthodontics (M.S.D.)

The advanced specialty education program in Prosthodontics is accredited by the American Dental Association (ADA) Commission on Dental Accreditation. Indiana University School of Dentistry's learning outcomes for the master's degree in prosthodontics are fully supportive of the outcomes required by the ADA.

IU's program follows academic and clinical standards determined by the commission to ensure the quality and continuous improvement of dental and dentally related education, and to reflect the evolving practice of dentistry. Full details are published in the ADA's Standards for Dental Education Programs under Advanced Specialty Education Programs, Prosthodontics Standard 4: Curriculum and Program Duration (http://www.ada.org/115.aspx#general).

Master of Science in Dentistry in Oral and Maxillofacial Surgery (M.S.D.)

The advanced specialty education program in Oral and Maxillofacial Surgery is accredited by the American Dental Association (ADA) Commission on Dental Accreditation. Indiana University School of Dentistry's learning outcomes for the specialty certificate in oral and maxillofacial surgery are fully supportive of the outcomes required by the ADA.

IU's program follows academic and clinical standards determined by the commission to ensure the quality and continuous improvement of dental and dentally related education, and to reflect the evolving practice of dentistry. Full details are published in the ADA's Standards for Dental Education Programs under Advanced Specialty Education Programs, Oral and Maxillofacial Surgery Standard 4: Curriculum and Program Duration (http://www.ada.org/115.aspx#general).

Master of Science in Dentistry in Pediatric Dentistry (M.S.D.)

The advanced specialty education program in Pediatric Dentistry is accredited by the American Dental Association (ADA) Commission on Dental Accreditation. Indiana University School of Dentistry's learning outcomes for the master's degree in pediatric dentistry's are fully supportive of the outcomes required by the ADA.

IU's program follows academic and clinical standards determined by the commission to ensure the quality and continuous improvement of dental and dentally related education, and to reflect the evolving practice of dentistry. Full details are published in the ADA's Standards for Dental Education Programs under Advanced Specialty Education Programs, Pediatric Dentistry Standard 4: Curriculum and Program Duration (http://www.ada.org/115.aspx#general).

Graduate Programs

The Indiana University School of Dentistry offers many graduate programs.

Dental Science Ph.D.

Dentistry D.D.S.

Master of Science in Dentistry

- Dental Materials
- Endodontics
- Operative Dentistry
- Orthodontics
- Pediatric Dentistry
- Periodontics
- Preventive Dentistry
- Prosthodontics

Certificate Residency Programs

- General Practice
- Oral and Maxillofacial Surgery

For more information on IUSD graduate programs visit us at http://www.iusd.iupui.edu/departments/education/graduate-education/graduate-programs/.

Student Organizations & Services

The School of Dentistry website has a complete list of school organizations and associations.

Academic Policies & Procedures

Please refer to http://www.indiana.edu/~bulletin/iu.dentistry/2009-20011/policies/index.shtml for the School of Dentistry Policies and Procedures.

Faculty

Administrative Officers

- Dean Lawrence I. Goldblatt
- Executive Associate Dean Jeffrey A. Dean

Associate Deans

- Jeffrey A. Dean, Academic Affairs
- Lawrence P. Garetto, Dental Education
- Michael J. Kowolik, Graduate Education
- Pamella P. Shaw, Diversity, Equity, and Inclusion
- George P. Willis, Clinical Affairs
- Domenick T. Zero, Research

Assistant Dean

- Robert H. Kasberg, Student Affairs

Departmental Chairpersons

- William J. Babler, Department of Oral Biology (Interim)
- Jeffrey D. Bennett, Department of Oral Surgery and Hospital Dentistry
- David T. Brown, Department of Restorative Dentistry
- Katherine S. Kula, Department of Orthodontics and Oral Facial Genetics
- Vanchit John, Department of Periodontics and Allied Dental Programs (Interim)
- James E. Jones, Department of Pediatric Dentistry
- Kenneth J. Spolnik, Department of Endodontics
- Domenick T. Zero, Department of Preventive and Community Dentistry
- Susan L. Zunt, Department of Oral Pathology, Medicine, and Radiology

See the School of Dentistry website for a complete list of the School of Dentistry faculty.

IU School of Education

Welcome to the IU School of Education!

Mission

The mission of the Indiana University School of Education at IUPUI is to improve teaching, learning, and human development in a diverse, rapidly changing, and increasingly technological society. We prepare reflective, caring, and highly skilled educational practitioners and scholars who lead in their chosen professions; inform educational theory and practice through research; and work in partnership with a range of constituents to effect change from the local to national levels and throughout the world.

The mission of the School of Education at IUPUI is defined by its location in the largest population center in Indiana. Our urban location provides both the opportunity and the resources to focus teaching, research, and service on the constellation of issues related to urban education in America.

Overview

History

Indiana University has been preparing teachers since 1851. The first "Department of Pedagogy" was part of what is now the College of Arts and Sciences in Bloomington. In 1908 a formal School of Education was established, and in 1923 the school became autonomous from the College of Arts and Sciences. The first B.S. in education was awarded in 1925.

Education classes have been offered in Indianapolis since 1914, when the Extension Division of Indiana University was founded. Enrollments and course offerings in Indianapolis grew steadily and by 1969 it was possible to earn a bachelor's degree in education at Indianapolis. In 1969, regional campuses of Indiana University and Purdue University merged to form IUPUI.

In 1972, the IUPUI Division of Education was formally established with offices in the Marrott Building on North Meridian Street. In 1975 the School of Education in Bloomington and the Division of Education in Indianapolis merged to become a single School of Education with two campuses, and the School of Education at IUPUI moved into a new Education/Social Work Building located at 902 West New York Street.

Today, Indiana University's School of Education is one of America's most respected educational institutions for the preparation of teachers, administrators, and specialists in all areas of education. The School of Education has full equality with the other professional schools of the university and grants the degrees of Bachelor of Science in Early Childhood Education, Bachelor of Science in Education, Master of Science in Education, Specialist in Education, and Doctor of Education.

Students may earn the B.S. degree in education entirely at IUPUI. IUPUI offers select graduate programs in education and enrolls a growing number of doctoral students. The Indiana University School of Education at IUPUI awards nearly 300 degrees annually, and boasts well over 13,000 alumni.

Mission

The mission of the Indiana University School of Education at IUPUI is to improve teaching, learning, and human development in a diverse, rapidly changing, and increasingly technological society. We prepare reflective, caring, and highly skilled educational practitioners and scholars who lead in their chosen professions; inform educational theory and practice through research; and work in partnership with a range of constituents to effect change from the local to national levels and throughout the world.

The mission of the School of Education at IUPUI is defined by its location in the largest population center in Indiana. Our urban location provides both the opportunity and the resources to focus teaching, research, and service on the constellation of issues related to urban education in America.

Accreditation & Licenses

The School of Education is accredited by the National Council for Accreditation of Teacher Education (NCATE) and by the Higher Learning Commission of North Central Association of Colleges and Secondary Schools. Teacher education programs offered through the School of Education at IUPUI have either been nationally approved by their Specialized Professional Associations (SPA), or approved by the Indiana Department of Education.

Programs nationally recognized:

- Elementary Education (ACEI)
- English Education (NCTE)
- Mathematics Education (NCTM)
- Social Studies Education (NCSS)
- Visual Arts Education (NASAD)

General Education

General education refers to courses and other experiences that lay the foundation for IUPUI students to evidence progress toward the IUPUI “Principles of Undergraduate Learning.” There is a focus on building skills in written and oral communication, information technology, inquiry, science, literature, quantitative reasoning, and both global and democratic perspectives.

Courses that build the general education foundation for elementary education majors are listed below; they are organized by the Principles of Undergraduate Learning to which they are most directly related. Students are encouraged to follow this template as well as meet with an advisor in the School of Education as soon as possible. Both the particular sequence and the course clusters or learning communities designated for Education majors

have been planned to provide the strongest foundation and to build the most powerful connections between the content of the individual courses.

Professional Education

The professional education component is a carefully articulated program of study where courses are taken in blocks and in a prescribed order. The professional education courses that are part of Learning to Teach/ Teaching to Learn (LT/TL) are tied closely to specific professional development school (PDS) sites in Marion County. These are schools that have entered into a special partnership with the School of Education. Some of the formal course work as well as all of the field experiences that accompany this course work are conducted at the PDS sites. Students also have the option to student teach at these PDS sites.

Because LT/TL is a field-based program in which formal class sessions are integrated with field experiences, most professional education courses are offered at a time when teacher education candidates are able to work with students in P-12 classrooms. Most professional education courses are scheduled during the day, and students will need to make arrangements to devote one day (part-time enrollment) or two days (full-time enrollment) each week to complete the class and early field experience work.

Student Teaching

All interns complete student teaching assignments in two school settings. For elementary education majors, student teaching will comprise two eight-week placements, the first in Block IIIB and the second in Block IVB. Elementary majors will complete one primary placement and another intermediate placement.

In the secondary programs, the student teaching requirement will be met by consecutive eight-week placements in a middle school and high school setting during Block IV. Students completing a program leading to an all-grades license should consult with their major advisor about the logistics of the student teaching placements.

Eligibility Requirements for Student Teaching

To be eligible for student teaching, a student must have

1. Been admitted to the Teacher Education Program and be in good standing.
2. Submitted an application for Student Teaching with the Teacher Education Program application (secondary-all-grade majors only).
3. Passing scores on the Block I Rubric and Block II performance task and no issues outstanding.
4. Senior or graduate standing in the university or be within two semesters and one summer session of graduation. (In no case should a student have competed fewer than 84 credit hours prior to the semester in which the student teaching and/or practicum is to be done.)
5. Completed at least three-fourths of the credit hours required for licensing in the teaching area(s).
6. Completed all professional education and education technology courses within 10 years and attained a minimum grade point average (GPA) of 2.50 in all professional education courses with a minimum grade of C in each professional education course.
7. Earned a minimum overall GPA of 2.50 at Indiana University.
8. Passed the appropriate PRAXIS II test prior to starting student teaching (secondary and all-grade programs)

Application for Student Teaching

All students must complete an application for Student Teaching. All students apply for student teaching when they apply to the Teacher Education Program.

Career Services

The IUPUI School of Education offers career planning assistance to its students and alumni. A website has been established to help students search for posted jobs and internships. Students may post their profile for prospective employers and search for posted positions at https://www.myinterfase.com/iupui-se/student/. Employers are welcome to register to post job and internship opportunities. Career planning resources and information on how to search IUPUI's JagJobs database, as well as how to schedule an appointment with a Career Consultant, can be found on the website of the Office of Academic and Career Development at http://www.uc.iupui.edu/students/career/.

The school offers meetings addressing graduation requirments, licensing procedures, and career information in both the fall and spring for current student teachers.

Admission

Requirements

Entering students with strong academic credentials who indicate education as their choice among academic programs may be dually admitted to University College and the School of Education. Students admitted to University College who subsequently make a decision to pursue an education degree or complete a program leading to an initial teaching license may transfer to the School of Education when they attain a minimum 2.50 overall grade point average (GPA) with at least 12 hours of coursework.

Education majors transferring to IUPUI from other colleges and universities may be dually admitted to the University College and the School of Education if their GPA is 2.50 or better, or admitted to University College if they have not yet achieved a 2.50 overall GPA. Students must attain a 2.50 overall GPA to transfer to the School of Education.

It is important to note that admission to the school does not guarantee admission to the Teacher Education Program. Application to teacher education is a separate process that typically occurs during the second semester of the sophomore year (or during the semester prior to beginning the professional education component of the licensure program).

Transfer Students

Transfer Credit Policy

Acceptance of credit from other institutions will be determined by IUPUI Enrollment Services. After transfer courses have been credited through IUPUI Enrollment Services, the student should meet with a School of Education academic advisor to determine which transfer

courses will fulfill degree requirements for programs in education.

Students in elementary or secondary programs must have a minimum grade point average (GPA) of 2.00 in the transfer courses that would apply toward their degree. No courses with grades below a C will be accepted. Degree Progress GPAs and GPAs from transfer courses are combined to determine overall and major GPAs for admission and graduation purposes when a student transfers in more than 27 credit hours.

IUPUI's Teacher Education Program Learning to Teach/ Teaching to Learn is built on a coherent sequence of professional education courses and field experiences. To support program integrity and continuity, students interested in completing a program leading to initial licensure through the School of Education are encouraged to complete the entire professional education component at the IUPUI campus. Requests for transfer credits for professional education courses will be reviewed on an individual basis in consultation with program faculty; feedback will be provided in a timely fashion. No more than 15 credits of professional education courses from an accrediated program can be transfered to the program. Only education courses with grades of B- (2.70) or higher willl be considered.

Admission to the LT/TL Teacher Education Program

Admission to the Teacher Education Program is separate from admission to the School of Education.

Students wishing to earn a license to teach at any developmental level (elementary, middle, or high school) must apply to the Teacher Education Program and be formally admitted before being authorized to enroll in any professional education courses. Since space is limited and admission is competitive, students interested in Teacher Education are urged to meet application deadlines (February 7 for fall admission and September 7 for spring admission). Please note that due to the competitive nature of admission to the programs not all students meeting minimum requirements may be admitted. The application and supporting information are available from the School of Education home page on the Web at education.iupui.edu.

Note: Admission to the Teacher Education program does not guarantee licensure by the state of Indiana.

The standards for admission to the Teacher Education Program apply both to education majors and to majors in other schools who are seeking an initial teaching license. A student must:

1. Maintain a minimum overall grade point average (GPA) of 2.50. (This minimum GPA is subject to change)
2. Complete required courses.
    1. *Elementary Majors*
        - Achieve a grade of C or higher in all courses.
        - Complete all prerequisite coursework prior to beginning the Teacher Education Program. (Refer to the General Education section of this bulletin for a list of required prerequisite courses.) Prerequisite courses can be in progress at the time of application submission; however, they must be completed satisfactorily prior to beginning Block I.
    2. *Secondary Majors*
        - Complete ENG W131 as well as a second writing course, COMM R110, or COMM C180, EDUC H341, and EDUC W200, with a C or higher before entering the program.
        - Achieve a grade of C or higher in all general education and major courses.
        - Achieve a 2.50 GPA in general education. (Subject to change)
        - Achieve a 2.50 GPA in major. (Subject to change)
        - Complete half of the major courses plus enough of the general education courses to equal no less than 60 credit hours. (See checksheets for specific numbers of hours for each program) Fulfilling this requirement will leave no more than 6-9 clases outside of the blocks left to take. Prerequisite courses can be in progress at the time of application submission; however, they must be completed satisfactorily prior to beginning Block I.
    3. *Secondary/All-grade Majors*
        - Achieve a 2.50 GPA in major. (Subject to change)
        - Achieve a 2.50 overall GPA (Subject to change)
        - Consult an advisor in the students designated school for additional admission requirements.
3. Demonstrate basic skills with **one of the following**: (After January 1, 2013, a new basic skills tests will replace the PRAXIS I)
    - ACT with a score of at least 24 based on math, reading, grammar, and science.
    - SAT with a score of at least 1100 based on critical reading and math.
    - GRE with a score of at least 1100 based on verbal and quantitative.
    - Praxis I composite score of 527 based on reading, writing, and math **OR**
      Pass all three sections of Praxis I: reading, math and writing.
    - Anyone with a Master's Degree from a regionally accredited institution is exempt.
4. Complete a formal application. Applications for admission to the Teacher Education Program are due by February 7 for the following fall semester, and by September 7 for the spring semester.

Undergraduate Programs

Degree Programs

- Bachelor of Science in Education—Elementary Education
- Bachelor of Science in Education with Middle School/High School Teaching License

Licensure, Certification, and Program Information

- All Grade Licensure Programs
- Certification Programs
- Junior High/Middle School Extended Coverage Programs for the Elementary License
- Specific Degree Requirements

Bachelor of Science in Education-Elementary Education

The elementary education program prepares graduates to meet standards for teaching in K-6 settings. This program is nationally recognized by the Association for Childhood Education International (ACEI).

PREREQUISITE COURSES (70 credits)

Students in the elementary education program complete the general education requirements outlined below. Students are encouraged to enroll in course clusters or learning communities designated for education majors whenever they are available.

Students are encouraged to see an education advisor for course lists for the concentration and to begin planning early to meet that requirement.

PROFESSIONAL EDUCATION (58 credits)

Admission to the Learning to Teach/Teaching to Learn program is competitive, and applications are due February 7 for fall admission and September 7 for spring. The application can be found at education.iupui.edu.

The professional education component is a carefully articulated program of study where courses are taken in blocks and in a prescribed order (presented below). The professional education portion of the program is designed to be a four-semester sequence with courses that are taught on site at professional development schools (PDS) in Marion County. These schools have entered into a special partnership with the School of Education. Students also student teach at these PDS sites. Student teaching requires five full days a week.

Students pursuing an initial license to teach in grades K-6 are authorized for professional education courses only after admission to Teacher Education. Because LT/TL is a field-based program in which formal class sessions are integrated with field experiences, most professional education courses are offered at a time when teacher education candidates are able to work with students in K-12 classrooms. Most professional education courses are scheduled during the day, and students will need to make arrangements to devote one (part-time enrollment) or two days (full time enrollment) each week to complete the class and field experience work.

The School of Education uses performance-based assessments to evaluate students readiness for an Initial Professional Educator License. In addition to their course assignments, students are expected to pass three benchmark assessments during the LT/TL program. Benchmark I is a rubric that evaluates the students basic competencies and dispositions; Benchmark II is a performance task that involves interviewing individual learners; and Benchmark IV is a demonstration of the students abilities to have an impact on childrens learning. These measures and others, including content area PRAXIS tests and student teaching evaluations, are used to determine whether a student will be recommended for licensure upon completion of the program.

The student must receive a C or better in all courses.

Pre-Professional Courses (17 credits)

- EDUC F110 Windows on Education (2 cr.)
- EDUC F200 Examining Self as Teacher (3 cr.)
- EDUC N102 Teaching and Learning Elementary School Math 1 (3 cr.)
- EDUC P251 Eeducational Psychology (3 cr.)
- EDUC Q200 Scientific Inquiry (3 cr.)
- EDUC W200 Using Compuers in Education (3 cr.)

Language Arts (12 credits)

- ENG W131 Elementary Composition I (3 cr.)
- ENG W132 Elementary Composition II (3 cr.) **OR**
- EDUC E201 Multiculural Education and Global Awareness(3 cr.)
- COMM R110 Fundamentals of Speech Communication (3 cr.) OR
- COMM C180 Introduction to Interpersonal Communication (3 cr.)

American/World Literature Elective (3 credits)

Select **one** of the following:

- EDUC E449 Trade Books in the Clasroom (3 crs.)
- ENG L204 Introduction to Fiction (3 crs.)
- ENG L207 Women and Literature (3 crs.)
- ENG L213 Literary Masterpieces I (3 crs.)
- ENG L214 Literary Masterpieces II (3 crs.)

Science (9 credits)

- BIOL N100 Contemporary Biology (3 cr.)
- GEOL G110 Physical Geology (3 cr.) **OR**
- GEOG G107 Pysical System of Environment (3 cr.)
- AST A100 The Solar System (3 cr.) **OR**
- PHYS 20000 Physcial Environment (3 cr.)

Fine Arts (6 credits)

- MUS E241 Music Fundamentals(3 cr.) **OR**
- MUS M174 Music for the Listener (3 cr.)
- HER H100 Art Appreciation (3 cr.) **OR**
- HER E214 Visual Learning **OR**
- HER Z200 Art Making for Teachers

Physical Education (3 credits)

- HPER P290 Movement Exp. for Children (3 cr.)

Prerequisites as determined by the math placement test are in addition to the 9 required credits (MATH 00100 and MATH 11000 or MATH 11100).

Math for Elementary Teachers (9 crs.)

- MATH 13000 Math for Elementary Teachers I (3 cr.) **AND**
- MATH 13200 Math for Elementary Teachers II (3 cr.) **OR**
- MATH 13600 Math for Elementary Teachers (6 cr.)
- MATH 13100 Math for Elementary Teachers III (3 cr.) **OR**
- MATH M118 Finite Mathematics (3 cr.) **OR**
- STAT 30100 Elmentary Statistical Methods I(3 cr.)

Social Science (9 cedits)

- HIST H105 American History I (3 cr.) **OR**
- HIST H106 American History II (3 cr.)
- GEOG G110 Intro to Human Geography (3 cr.)

Social Science Electives (3 credits)

Select **one** of the following:

- AFRO A150 Intro to African-American Studies (3 cr.)/li>
- ANTH A104 Culture and Society (3 cr.)
- ECON E201 Introduction to Microeconomics (3 cr.)
- ECON E202 Introduction to Macroeconomics (3 cr.)
- GEOG G130 World Geography (3 cr.)
- HIST H108 Perspectives on the World to 1800 (3 cr.)
- HIST H109 Perspectives on the World Sinc 1800 (3 cr.)
- HIST H113 History of Western Civilizations I (3 cr.)
- HIST H114 History of Western Civilizations II (3 cr.)
- PSY B104 Psychology as a Social Science (3 cr.)
- PSY B105 Psychology as a Biological Science (3 cr.)
- SOC R100 Introduction to Sociology (3 cr.)
- SOC R121 Social Problems (3 cr.)
- WOST W105 Introduction to Women's Studies (3 cr.)

Students must be formally admitted to the teacher education program prior to taking Block classes.

Block I

A: Diversity and Learning (7 credits)

- EDUC M320 Diversity and Learning (6 cr.)
- EDUC M303 Field Experience (1 cr.)

B: Literacy and Numeracy in Early Childhood (6 credits)

- EDUC E345 Language Arts and Mathematics for Young Children (6 cr.)
- EDUC M304 Field Experience (1 cr.)

*Benchmark I performance assessment at the end of Block I

Block II

A: Middle Childhood A (6 credits)

- EDUC E340 Reading Methods I (3 cr.)
- EDUC E324 Teaching About the Arts (music)(1.5 cr.)
- EDUC E324 Teaching About the Arts (visual arts) (1.5 cr.)
- EDUC M305 Field Experience (1 cr.)

B: Middle Childhood B (7 credits)

- EDUC E343 Mathematics in the Elementary Schools (3 cr.)
- EDUC E328 Science Methods (3 cr.)
- EDUC M306 Field Experience (1 cr.)

*Benchmark I performance assessment at the end of Block II
*Benchmark II performance assessment at the end of Block II

Block III

A: Individualizing Instruction (7 credits)

- EDUC K307 Methods of Teaching Students with Special Needs (3 cr.)
- EDUC E341 Methods of Teaching Reading II (3 cr.)
- EDUC M307 Field Experience (0 cr.)

B: Reflective Practitioner (8 credits)

- EDUC M425 Elementary Student Teaching (8 cr.)

Block IV

A: Curriculum in a Democracy (7 credits)

- EDUC E325 Social Studies in the Elementary Schools (3 cr.)
- EDUC H440 Education and American Culture (3 cr.)
- EDUC M400 Field Experience (0 cr.)

B: Reflective Practitioner (8 credits)

- EDUC M425 Elementary Student Teaching (8 cr.)

Benchmark IV performance assessment at the end of Block IV

Students doing a dual licensure program will register for an 8 credit hour practicum for the dual program in place of their Block IV student teaching.

STUDENT TEACHING (16 cr. hours)

All interns complete student teaching assignments in two school settings. For elementary education majors, student teaching will comprise two eight-week placements, the first in Block IIIB and the second in Block IVB. Elementary majors will complete one primary placement and one intermediate placement. If a student doing an overseas teaching experience, the first experience will be 10-weeks and must be completed in the Indianapolis area.

The new Indiana licensing regulations require that all elementary majors have a concentration, an institutional minor, or a dual license. The options are listed below.

Concentration areas:

Students electing to do a concentration area take 12 credit hours in a subject area in which they would like to develop additional expertise. Completion of the concentration area will not extend or add an area to the students teaching license. Although concentration areas will not be identified on students transcripts, students will be issued a certificate of completion for the concentration to share with future employers.

Note: classes in the concentration area can also be used to meet prerequisite requirements when indicated. Students must have a total of 128 credit hours to graduate.
Concentrations are available in the following areas:

Language Arts Concentration (12 credits)

Choose **one** course from the following: (3 credits)

- ENG W206 Intro to Creative Writing
- ENG W207 Intro to Fiction Writing
- ENG W208 Intro to Poetry Writing

Choose **one** course from the following: (3 credits)

- ENG L372 Contemporary American Fiction
- ENG L379 Ethnic Minority Literature of the United States

: Choose **one** course from the following:(3 credits)

- ENG Z204 Rhetorical Issues in Grammar
- ENG Z205 Intro to the English Language

: (3 credits)

- EDUC X470 Socio-psycholinguistics of Reading

Social Studies Concentration (12 credits)

: Choose **one** course from the following: (3 credits)

- POLS Y308 Urban Politics
- POLS Y324 Women and Politics
- POLS Y325 African American Politics
- POLS Y200 Contemporary Political Issues
- POLS Y377 Globalization

: Choose **one** course from the following: (3 credits)

- SOC R314 Families and Societies
- SOC R321 Women and Health
- SOC R328 Urban Sociology
- SOC R463 Inequality and Society

: Choose **one** course from the following: (3 credits)

- AMST A304 Transformation of America 1960-1980
- AMST A364 History of Black America

: (3 credits)

- GEOG G110 Introduction to Human Geography

: (3 credits)

- ECON E101 Current Economic Issues and Problems

Note: The American Studies course will serve as the American History requirement and one of the other courses in this concentration will serve as the social studies elective in the prerequisite requirements.

DUAL LICENSE AREAS

Students electing to do a dual license area take 15 to 18 credits in an area that will give them additional expertise and will add an additional teaching area to their K-6 license. Dual license areas are not identified on students transcripts. Please note: classes in the dual license area can also be used to meet prerequisite requirements when indicated. Students must have a total of 128 credit hours to graduate. Dual licenses are available in the following areas:

Students apply to a dual program when completing the application to Teacher Education. However, some of the course work for certain programs may be completed prior to entering the teacher education program. See an advisor in the School of Education for details. A minimum GPA of 3.00 is required for each dual licensure area.

Students will student teach in their dual licensure area during the second student teaching experience. They will register for the appropriate 8 credit-hour practicum in place of one of the traditional student teaching experience for their initial program. See an advisor in the School of Education for information.

ENGLISH AS A SECOND (NEW) LANGUAGE Dual Program (15 additional credits outside the teacher education program)

The ESL dual program prepares a teacher to meet the needs of students who are learning to speak English in the school classroom or pull-out programs. Students must select ENL as the area of dual licensure when applying for admission to the Teacher Education Program (LTTL) and must maintain an overall GPA of 3.00 or higher in this dual program. Student must take and pass the state licensure test for ENL. The license will be issued at the developmental levels of the students initial teaching license.

Prerequisites: Two semesters of high school or one semester of university-level foreign language study or experience required.

Part A: ENL Course Requirements must be taken in the following sequence:

- EDUC L441 Bilingual Education (summer/fall/spring) (3 cr.)
- ENG Z432 Second Language Acquisition (fall)(3 cr.) **OR** ENG Z205 Introduction to English Grammar (3 cr.)
- EDUC L403 Assessment Literacy for Cultural and Linguistic Diversity (spring) (3 cr.)
- EDUC X470 Psycholinguistics for Teachers of Reading (elementary major only) (fall/summer I) (3 cr.) **OR** EDUC X401 Critical Reading in the Content Areas (secondary majors only) (summer II) (3 cr.)
- L436 Methods and Material for ESL (summer II) (3 cr.)

Part B: Learning to Teach/Teaching to Learn Course Requirements

- EDUC E341/M307 Methods of Teaching Reading II (elementary only)(3 cr.) **OR** EDUC M469/M303 Content Area Literacy (secondary only) (3 cr.)
- EDUC M470 Student Teaching 8 weeks (8 cr.) (done only after all ESL courses have been completed - will replace the second student teaching experience in the teacher education program)

READING Dual Program (15 additional credits outside the teacher education program)

The holder of the reading minor is eligible to be a reading teacher at the level of the certification to which it is attached. Students must select reading as the area of dual licensure when applying for admission to the Teacher Education Program (LTTL) and must maintain an overall GPA of 3.00 or higher in this dual program. Students must pass all reading content tests required by the state for licensure.

Required courses: Elementary Majors

Part A: Advanced Literacy Course Requirements should be taken in the following sequence if possible:

- EDUC E449 Tradebooks in the Classroom (could be counted as literature elective for LTTL) (3 cr.)
- EDUC L400 Instructional Issues in Language Education (prerequisite E449) (fall/spring)(3 cr.)
- EDUC L441 Bilingual Education: Introduction (fall/spring) (3 cr.)
- EDUC X470 Socio-psycholinguistics of Reading (fall/summer I) (3 cr.)
- Reading Elective (select one of the courses below) (3 cr.)
- EDUC F401 Integrating the Arts and Literacy (summer I) (3 cr.)
- EDUC F401 Variable Title Summer in the City Workshop (requires approval of literacy faculty member or advisor) (summer I or II) (3 cr.)
- EDUC L436 Methods and Materials for Teaching ESL (prerequisite L441) (spring) (3 cr.)
- EDUC X400 - Diagnostic Teaching of Reading in Classroom (summer I) (3 cr.)
- EDUC X401 - Critical Reading in Content Areas (summer II) (3 cr.)

Part B: Learning to Teach/Teaching to Learn Course Requirements

- EDUC E340 Methods of Teaching Reading I (Block II)(3 cr.)
- EDU M305 Field Experience (Block II) (1 cr.)
- EDUC E341 Methods of Teaching Reading II (Block III) (3 cr.)
- EDUC M307 Field Experience (Block III) (1 cr.)
- EDUC X425 Student Teaching in Reading (Block IV) (8 cr.)

Special Education Dual Program (Mild Intervention) - (18 additional credits outside the teacher education program)

Students will be licensed in developmental areas based on their initial program. Students must enroll in either the full-time or part-time Learning to Teach/Teaching to Learn program. The program is designed to enable students to complete field experiences as part of their elementary or secondary education program. Special education seminars are offered one evening each week and twice a week in the summer so they do not conflict with the block courses. Students are required to take one of the following 3 credit seminars each semester while completing this program:

This undergraduate program offers licensure in both general education (elementary or secondary) and special education certification in Mild Intervention. Mild Intervention certification replaces licensure in the areas of learning disabilities, mild cognitive disabilities, and emotional disabilities in the state of Indiana. This program is not available for all-grade majors. Students must select special education as the area of dual licensure when applying for admission to the Teacher Education Program (LTTL) and must maintain an overall GPA of 3.00 or higher in this dual program. Students must pass all state required licensure tests for special education to obtain a special education license.

Required:

- Seminar 1: EDUC K448 Families School and Society (3 cr.)
- Seminar 2: EDUC K453 Classroom Management and Behavior Support (3 cr.)
- Seminar 3: EDUC K465 Collaboration and Consultation (3 cr.)
- Seminar 4: EDUC K420 Assistive Technology (3 cr.)
- Seminar 5: EDUC K426 Assessment and Instruction I (3 cr.)
- Seminar 6: EDUC K441Transition Across the Lifespan (3 cr.)
- Practicum: EDUC M470 Student Teaching for Special Education (8 cr.) (Taken during student teaching semester in place of the second experience)

Institutional Minors

Institutional minors are issued by the IUPUI school which offers the minor. They range in length from 15 to 21 credits. Completion of the institutional minor will give students additional expertise in the chosen subject area, but will NOT extend or add an areas to the student's teaching license. Institutional minors will be shown on the student's transcript if they arrange to have that done through the school or depratment offering the minor.

Art Minor - Herron School of Art (15 credits)

Chemistry Minor - School of Science (20 credits)

French Minor - School of Liberal Arts (14 credits)

Geology Minor - School of Science (18 credits)

Biology Minor - School of Science (19 credits)

Economics Minor - School of Liberal Arts (15 credits)

Geography Minor - School of Liberal Arts (15 credits)

German Minor - School of Liberal Arts (14 credits)

History Minor - School of Liberal Arts (15 credits)

Mathematics Minor - School of Science (21 credits)

Music Minor - School of Music (20 credits)

Physics Minor - School of Science (18 credits)

Political Science Minor - School of Liberal Arts (15 credits)

Psychology Minor - School of Science (15 credits)

Sociology Minor - School of Liberal Arts (15 credits)

Spanish Minor - School of Liberal Arts (15 credits)

Bachelor of Science in Education with Middle School/High School Teaching License

Each discipline in the secondary program (English, World Languages, Mathematics, and Social Studies) requires a unique and highly prescribed program of studies. Courses in these programs of study fall into three categories: the common core curriculum, the licensure concentration program, and the teacher education program. In all areas of these programs, the courses are carefully selected to prepare students to meet the rigorous content and

teaching standards required for a middle school and high school teaching license in the discipline.

Note the following symbols next to the course title:

+ This course must be completed with a C or better before beginning the Teacher Education Program

Strongly recommended due to current Academic Standards for secondary students.

*****Requires a prerequisite course.

Higher-level courses may be substituted with permission of an advisor in any general education area.

Note: EDUC F110 Windows on Education is designed for beginning freshman, students entering IUPUI or changing majors after their freshman year may substitute an elective.

General Education courses cannot be counted more than once. Example: Anthropology A104 can be counted toward Social Sciences credit requirements **OR** Comparative World Cultures, but not for both.

English Education (124 credits)

Nationally Recognized by the National Council for Teachers of English (NCTE)

General Education (38 credits)

Must complete 33 of these credits before beginning Teacher Education Program

- ENG W131 Elementary Composition 1 (or W140) + (3 cr.)
- ENG W132 Elementary Composition 2 (or W150) + **OR**
- EDUC E201 Multicultural Education/Global Awareness (3 cr.)

- EDUC F110 Windows on Education (see note above)(2 cr.)
- EDUC W200 Using Computers in Education + (3 cr.)
- EDUC H341 American Culture & Education +(3 cr.)
- EDUC F200 Examining Self as Teacher + (3 cr.)

*Select **one** course from the following list:*

- CSCI N207 Data Analysis Using Spreadsheets (3 cr.)
- ECON E270 Stats in Business/Economics* (3 cr.)
- GEOG G488 Applied Spatial Statistics (3 cr.)
- MATH M118 Finite Mathematics* (3 cr.)
- MATH 15300 Algebra and Trigonometry (3 cr.)
- PHIL P162 Logic (3 cr.)
- POLS Y205 Elements of Political Analysis (3 cr.)
- PSY B305 Statistics* (3 cr.)
- SOC R251 Methods of Social Research* (3 cr.)
- STAT 11300 Statistics and Society (3 cr.)

*Select **one** course from the following list:*

- AFRO A150 Afro-American Studies (3 cr.)
- AMST A103 Topics in American Studies (3 cr.)
- CLAS C205 Classical Mythology # (3 cr.)
- COMM T130 Intro to Theatre (3 cr.)

- ENG W412 Technology and Literacy (3 cr.)

**Prepares students to tutor at the Writing Center

- COMM R110 Speech Communication (3 cr.)

*Select **one** course from the following list:*

- COMM C228 Group Discussion Techniques (3 cr.)
- COMM R227 Argumentation & Debate (3 cr.)
- COMM T133 Introduction to Acting (3 cr.)
- COMM R309 Great Speakers (3 cr.)
- COMM R321 Persuasion (3 cr.)

Secondary Teacher Education Program (38 credits)

Students must apply for and be admitted to the Teacher Education Program prior to taking Block courses.

- EDUC M322 Diversity and Learning (6 cr.)
- EDUC M469 Content Area Literacy (3 cr.)
- EDUC M403 Field Experience (1 cr.)

Benchmark I Assessment

- EDUC S420 Teaching/Learning in Middle School (3 cr.)
- EDUC K306 Teaching Students with Special Needs in Sec. Classrooms (3 cr.)
- EDUC M404 Field Experience (0 cr.)

Benchmark II Assessment

Offered spring only. May be taken concurrently with Middle School or High School Block.

- EDUC M452 Methods of Teaching English (3 cr.)

- EDUC S430 Teaching/Learning in High School (3 cr.)
- EDUC M405 Field Experience (0 cr.)

Benchmark III Assessment

PRAXIS II must be passed prior to student teaching

Students must demonstrate content area skills by achieving passing scores on the PRAXIS II test in the

content area(s) of licensure prior to student teaching in Block IV.

- EDUC M451 Middle Schools-8 weeks (8 cr.)
- EDUC M480 High School-8 weeks (8 cr.)

Benchmark IV

For students pursuing a license to teach at the secondary level, student teaching comprises the final semester. Back-to-back placements in a middle school and high school setting are arranged through the School of Education. Either developmental level may be scheduled first; order will depend on student preference and availability of mentor teachers. Students doing an overseas experience must complete 10-weeks in the Indianapolis areas prior to the 8-week overseas experience.

World Languages (SPANISH EDUCATION - 123 credits)

General Education (44 credits)

Must complete 36 of these credits before beginning Teaching Education Program

- ENG W131 Elementary Composition 1(or W140) + (3cr.)
- ENG W132 Elementary Composition 2(or W150) + **OR**
- EDUC E201 Multicultural Educ/Global Awareness + (3cr.)

- SPAN S461 Contemporary Spanish Literature I (3 cr.)
- SPAN S470 Women and Hispanic Literature (3 cr.)
- SPAN S471 or S472 Spanish-American Lit I or II (3 cr.)
- SPAN S477 20th Century Spanish-American Fiction (3 cr.)

*Select **one** from the following list:*

- SPAN S411 Spanish Culture and Civilization (3 cr.)
- SPAN S412 Latin American Culture and Civilization (3 cr.)

*Select **one** from the following list:*

- SPAN S440 Hispanic Sociolinguistics (3 cr.)
- SPAN S441 The Acquisition of Spanish (3 cr.)
- SPAN S425 Spanish Phonetics (3 cr.)
- SPAN S427 The Structure of Spanish (3 cr.)
- SPAN S428 Applied Spanish Linguistics (3 cr.)

*Select **two** courses at the 400 level from among the courses listed above or the ones listed below:*

- SPAN S487 Capstone Internship in Spanish (3 cr.)
- SPAN S498 Capstone Seminar in Spanish (3 cr.)

Secondary Teacher Education Program (38 credits)
Students must apply for and be admitted to the Teach Education Program prior to taking Block Courses.

- EDUC M322 Diversity and Learning (6 cr.)
- EDUC M469 Content Area Literacy (3 cr.)
- EDUC M403 Field Experience (1 cr.)

Benchmark I Assessment

- EDUC S420 Teaching/Learning in Middle School (3 cr.)
- EDUC K306 Teaching Students with Special Needs in Secondary Classrooms (3 cr.)
- EDUC M404 Field Experience (0 cr.)

Benchmark II Assessment

Offered in Spring only. May be taken concurrently with Middle School or High School Blocks.

- EDUC M445 Methods of Teaching Foreign Language (3 cr.)

- EDUC S430 Teaching/Learning in High School (3 crs.)
- EDUC M405 Field Experience (0 crs.)

Benchmark III Assessment

Praxis II - Must be passed prior to student teaching

Students must demonstrate content area skills by achieving passing scores on the PRAXIS II test in the content area(s) of licensure prior to student teaching in Block IV.

- EDUC M451 Middle School - 8 weeks (8 cr.)
- EDUC M480 High School - 8 weeks (8 crs)

Benchmark IV

For students pursuing a license to teach at the secondary level, student teaching comprises the final semester. Back-to-back placements in a middle school and high school setting are arranged through the School of Education.

Either developmental level may be scheduled first; order will depend on student preference and availability of mentor teachers. Students doing an overseas experience must complete 10 weeks in the Indianapolis areas prior to the 8 week overseas experience.

Social Studies Education (124 credits)

Nationally Recognized by the National Council for the Social Studies (NCSS)

General Education (38 credits)
Students must complete 33 of the General Education credits before beginning the Teacher Education Program

- EDUC F100 Windows on Education (see note above) (2 cr.)
- EDUC F200 Examining Self as Teacher + (3 cr.)
- EDUC W200 Using Computers in Education + (3 cr.)
- EDUC H341 American Culture & Education + (3 cr.)

- ENG W131 Elementary Composition I + (3 cr.)
- EDUC E201 Multicultural Education & Cultural Awareness + (3 cr.) **OR**
- ENG W132 Elementary Composition II +(3 cr.)
- COMM R110 Speech Communications + (3 cr.) **OR**
- COMM C180 Interpersonal Communications + (3 cr.)

- ANTH A103 Anthropology (3 cr.) AND

*Select **one** course from the following list:*

- Astronomy A100, A105 (3 cr.)
- Biology K101, K103, N100, N107, N200, N212 (3 cr.)
- Chemistry C100, C101, C102, C105, C106 (3 cr.)
- GEOL G110 #(3 cr.)
- Geology G107, G109, G115, G132, G180 (3 cr.)
- Physics 10000, 15200, 20000, 21800, 21900, 25100 (3 cr.)
- Psychology B105 (3 cr.)

*Select **one** course from the following list:*

- REL R212 Comparative Religions (3 cr.)
- REL R303 Religions in the Making (3 cr.)
- PHIL P 323 Society and State in the Modern World (3 cr.)

*Select **three** courses that are not in one of your teaching areas from the following list:*

- AFRO A150 Afro-American Studies (3 cr.)
- ANTH A104 Culture and Society (3 crs)
- ECON E101 Survey of Current Econ. Issues (3 cr.)
- GEOG G110 Intor to Human Geograhp (3 cr.)
- POLS Y103 Intro to American Policitcs (3 cr.)
- PSY B104 Psychology as a Social Science (3 cr.)
- SOC R100 Intro to Sociology (3 cr.)
- SOC R121 Social Problems (3 cr.)

Social Studies Major (48 credits)

Survey of American History (6 credits)

- HIST H105 American History I (3 cr.)
- HIST H106 American History II (3 cr.)

Advanced Early American History Through 1876 (3 credits)

*Choose **one** of the following:*

- HIST A 301-A302 Colonial and Revolutionary America I & II (3 cr.)
- HIST A 337-338 American Frontier I & II (3 cr.)
- HIST A 345-346 American Diplomatic Hist. I & II (3 cr.)

Advanced American History 1877 - present (3 credits)

*Choose **one** of the following:*

- HIST A 315 US History Since WWII (3 cr.)
- HIST A 313 Origins of Modern America (3 cr.)
- HIST A 322 History of American Thought II (3 cr.)

Survey of World History (6 credits)

- HIST H113 Western Civilization I (3 cr.) **AND**
- HIST H109 Perspectives: World 1800 to Present (3 cr.) **OR**
- HIST H108 Perspectives: World 1800 to Present (3 cr.) **AND**
- HIST H114 Western Civilization II (3 cr.)

Advanced World History (6 credits)

- 200-400 African or Asian History (3 cr.)
- Latin American History (3 cr.)

CHOOSE AT LEAST **ONE** OF THE FOLLOWING ADDITIONAL LICENSURE (TEACHING) AREAS:

Economics (24 credits)

- Econ E 201 Intro to Microeconomics (3 cr.)
- Econ E 202 Intro to Macroeconomics (3 cr.)
- Econ E 321 Inter. to Microeconomic Theory (3 cr.)
- Econ E 322 Inter. to Macroeconomics Theory (3 cr.)

*Choose **four** of the following Economics electives (12 credits):*

- Econ E 270 Statistical Theory in Business and Econ (3 cr.)
- Econ E 303 International Economics (3 cr.)
- Econ E 304 Labor Economics (3 cr.)
- Econ E 305 Money and Banking (3 cr.)
- Econ E 308 Public Finance (3 cr.)
- Econ E 325 Comparative Economics (3 cr.)
- Econ E 337 Economic Development (3 cr.)
- Econ E 385 Economics of Industry (3 cr.)

Geography (24 credits)

- GEOG G107 Physical Systems of the Environment (3 cr.)
- GEOG G110 Introduction to Human Geography (3 cr.)
- GEOG G130 World Geography (3 cr.)
- GEOG G337 Computer Cart. and Graphics (3 cr.)
- GEOG G303 Weather and Climate (3 cr.)

*Choose **two** of the following regional geography courses:*

- GEOG G326 Geography of North America (3 cr.)
- GEOG G321 Geography of Europe (3 cr.)
- GEOG G323 Geography of Latin America (3 cr.)
- GEOG G324 Geography of the Caribbean (3 cr.)

Government/Political Science (24 credits)

- POLS Y103 American Politics (3 cr.)
- POLS Y215 Intro to Political Theory (3 cr.)
- POLS Y217 Comparative Politics (3 cr.)
- POLS Y304 American Constitutional Law I (3 cr.) **OR**
- POLS Y305 American Constitutional Law II (3 cr.)

*Select **four** courses from the following list (12 credits):*

- POLS Y213 Introduction to Public Policy (3 cr.)

- POLS Y301 Political Parties & Interest Groups (3 cr.)
- POLS Y303 Policy Making in the U.S. (3 cr.)
- POLS Y306 State Politics in the US (3 cr.)
- POLS Y307 Indiana State Government & Politics (3 cr.)
- POLS Y317 Voting, Election & Public Opinion (3 cr.)
- POLS Y318 American Presidency (3 cr.)
- POLS Y319 The United States Congress (3 cr.)
- POLS Y324 Women and Politics (3 cr.)
- POLS Y360 United States Foreign Policy (3 cr.)
- POLS Y382 Modern Political Thought (3 cr.)
- POLS Y383 American Political Ideals I (3 cr.)
- POLS Y384 American Political Ideals II (3 cr.)

Secondary Teacher Education Program (38 credits)

Students must apply for and be admitted to the Teacher Education Program prior to taking Block courses.

- EDUC M322 Diversity and Learning (6 cr.)
- EDUC M469 Content Area Literacy (3 cr.)
- EDUC M403 Field Experience (1 cr.)

Benchmark I Assessment

- EDUC S420 Teaching/Learning in Middle School (3 cr.)
- EDUC K306 Teaching Students with Special Needs in Secondary Classrooms (3 cr.)
- EDUC M404 Field Experience (0 cr.)

Benchmark II Assessment

Offered in Spring only. May be taken concurrently with Middle School or High School Block.

- EDUC M442 Teaching Secondary Social Studies (3 cr.)

Benchmark III Assessment

Praxis II - Must be passed prior to student teaching

Students must demonstrate content area skills by achieving passing scores on the PRAXIS II test in the content area(s) of licensure prior to student teaching in Block IV.

- EDUC M451 Middle Schools-8 weeks (8 cr.)
- EDUC M480 High School-8 weeks (8 cr.)

Benchmark IV

For students pursuing a license to teach at the secondary level, student teaching comprises the final semester. Back-to-back placements in a middle school and high school setting are arranged through the School of Education. Either developmental level may be scheduled first; order will depend on student preference and availability of mentor teachers. Students doing an overseas experience must complete 10 weeks in the Indianapolis areas prior to the 8-week overseas experience.

All-Grade Licensure Programs and Dual Programs

Students pursuing an all-grades license must be students in good standing in either HPER or Herron, and must meet both the degree requirements of the relevant school and the School of Education requirements for licensure.

General Education

Students must complete the program of General Education outlined by the relevant school (HPER or Herron).

Teaching Areas

Physical Education

Physical Education students pursuing a teaching license are encouraged to contact the School of Physical Education Tourism Management for a current list of requirements in the teaching area.

Visual Arts

Students wishing to become certified to teach in public schools may pursue either a Bachelor of Art Education or certification within the Master of Art Education at Herron. The Art Education Program of the Herron School of Art is offered in conjunction with the School of Education.

Students are encouraged to consult the Herron School of Art for more information.

Dual Licensure Programs

Students who wish to be licensed in an additional area can take designated course work to earn a dual license. These dual licensure programs are only available to students obtaining their initial teaching license or who currently hold a valid teaching license. The additional content area will be applicable to the developmental levels of the initial license. Programs are available at the graduate level for licensed teachers who seek to add other certification areas to their licenses.

Students apply to a dual program when completing the application to Teacher Education. However, some of the course work for certain programs may be completed prior to entering the Teacher Education program. See an advisor in the School of Education for details. A minimum GPA of 3.00 is required for each dual licensure area.

Students will student teach in their dual licensure area during the second student teaching experience. They will register for the appropriate 8 credit-hour practicum in place of one of the traditional student teaching experiences for their initial program. See an advisor in the School of Education for information.

ENGLISH AS A SECOND (NEW) LANGUAGE Dual Program (15 additional credits outside the teacher education program)

The ESL dual program prepares a teacher to meet the needs of students who are learning to speak English in the school classroom or pull-out programs. Students must select ENL as the area of dual licensure when applying for admission to the Teacher Education Program (LT/TL) and must maintain an overall GPA of 3.00 or higher in this dual program. Students must take and pass the state licensure test for ENL. The license will be issued at

the developmental levels of the students initial teaching license.

Prerequisites: Two semesters of high school or one semester of university-level foreign language study or experience required.

Part A: ENL Course Requirements must be taken in the following sequence:

- EDUC L441 Bilingual Education (summer/fall/spring) (3 cr.)
- ENG Z432 Second Language Acquisition (fall)(3 cr.) **OR** ENG Z205 Introducation to English Grammar (3 cr.)
- EDUC L403 Assessment Literacy for Cultural and Linguistic Diversity (spring) (3 cr.)
- EDUC X470 Psycholinguistics for Teachers of Reading (elementary major only) (fall/summer I) (3 cr.) **OR** EDUC X401 Critical Reading in the Content Areas (secondary majors only) (summer II) (3 cr.)
- L436 Methods and Material for ESL (summer II) (3 cr.)

Part B: Learning to Teach/Teaching to Learn Course Requirements

- EDUC E341/M307 Methods of Teaching Reading II (elementary only)(3 cr.) **OR** EDUC M469/M303 Content Area Literacy (secondary only) (3 cr.)
- EDUC M470 Student Teaching 8 weeks (8 cr.) (done only after all ESL courses have been completed - will replace the second student teaching expereince in the teacher education program)

READING Dual Program (15 additional credits outside the teacher education program)

The holder of the reading minor is eligible to be a reading teacher at the level of the certification to which it is attached. Students must select reading as the area of dual licensure when applying for admission to the Teacher Education Program (LT/TL) and must mainatin an overall GPA of 3.00 or higher in this dual program. Students must pass all reading content tests required by the state for licensure.

Required courses-Elementary Majors

Part A: Advanced Literacy Course Requirements should be taken in the following sequence if possible:

- EDUC E449 Tradebooks in the Classroom (could be counted as literature elective for LT/TL) (3 cr.)
- EDUC L400 Instructional Issues in Language Education (prerequisite E449) (fall/spring)(3 cr.)
- EDUC L441 Bilingual Education: Introduction (fall/spring) (3 cr.)
- EDUC X470 Socio-psycholinguistics of Reading (fall/summer I) (3 cr.)
- Reading Elective (select one of the following courses) (3 cr.)
- EDUC F401 Integrating the Arts and Literacy (summer I) (3 cr.)
- EDUC F401 Variable Title Summer in the City Workshop (requires approval of literacy faculty member or advisor) (summer I or II) (3 cr.)
- EDUC L436 Methods and Materials for Teaching ESL (prerequisite L441) (spring) (3 cr.)
- EDUC X400 - Diagnostic Teaching of Reading in Classroom (summer I) (3 cr.)
- EDUC X401 - Critical Reading in Content Areas (summer II) (3 cr.)

Part B: Learning to Teach/Teaching to Learn Course Requirements

- EDUC E340 Methods of Teaching Reading I (Block II)(3 cr.)
- EDU M305 Field Experience (Block II) (1 cr.)
- EDUC E341 Methods of Teaching Reading II (Block III) (3 cr.)
- EDUC M307 Field Experience (BLock III) (1 cr.)
- EDUC X425 Student Teaching in Reading (Block IV) (8 cr.)

Required courses-Secondary Majors

Part A: Advanced Literacy Course Requirments should be taken in the following sequence if possible:

- EDUC L400 Instructional Issues in Language Education (spring) (3 cr.)
- EDUC X401 Critical Reading in the Content Area (summer II) (3 cr.)
- EDUC X470 Socio-psycholinguistics of Reading (fall/summer I) (3 cr.)
- EDUC X400 Working with Learner Literacy Difficulties (summer I)(3 cr.)
- EDUC X460 Adolescent/Young Adult Literature (fall/spring/summer)(3 cr.)

Part B: Learning to Teach/Teaching to Learn Course Requirments

- EDUC M469 - Content Area Literacy (Block I) (3 cr.)
- EDUC X425 - Student Teaching in Reading (Block IV) (8 cr.)

Special Education Dual Program (Mild Intervention) - (18 additional credits outside the teacher education program)

Students will be licensed in developmental areas based on their initial program. Students must enroll in either the full-time or part-time Learning to Teach/Teaching to Learn program. The program is designed to enable students to complete field experiences as part of their elementary or secondary education program. Special education seminars are offered one evening each week and twice a week in the summer so they do not conflict with the block courses. Students are required to take one of the following 3 credit seminars each semester while completing this program:

This undergraduate program offers licensure in both general education (elementary or secondary) and special education certification in Mild Intervention. Mild Intervention certification replaces licensure in the areas of learning disabilities, mild cognitive disabilities, and emotional disabilities in the state of Indiana. This program is not available for all-grade majors. Students must select special education as the area of dual licensure when applying for admission to the Teacher Education Program (LT/TL) and must maintain an overall GPA of 3.00 or higher in this dual program. Students must pass all state required licensure tests for special education to obtain a special education license.

Required courses:

- Seminar 1: EDUC K448 Families School and Society (3 cr.)
- Seminar 2: EDUC K453 Classroom Management and Behavior Support (3 cr.)
- Seminar 3: EDUC K465 Collaboration and Consultation (3 cr.)
- Seminar 4: EDUC K420 Assistive Technology (3 cr.)
- Seminar 5: EDUC K426 Assessment and Instruction I (3 cr.)
- Seminar 6: EDUC K441Transition Across the Lifespan (3 cr.)
- Practicum: EDUC M470 Student Teaching for Special Education (8 cr.) (Taken during student teaching semester in place of the second experience)

Junior High/Middle School Extended Coverage Programs for the Elementary License

These programs allow students completing an elementary program or currently holding an elementary license to extend their teaching certification into the middle school grades in one or more subject areas. Subject areas are mathematics, science, language arts, and social studies.

All students must take the following education courses and then select one or more of the content areas.

Education Courses (14 credits)

- EDUC P475 Adolescent Psychology (3 cr) *
- EDUC S405 Teaching & Learning in the Middle School (3 cr) (Web based)*
- EDUC M470 Practicum (8 cr) **

* Students must be admitted to the Teacher Education program before taking these courses.
** This may be completed as the second student teaching experience for students currently in the elementary program.

Select one or more content areas:

Mathematics (20-22 credits)

- MATH M118 Finite Mathematics*(3 cr.)(prerequisite for MATH 154)
- MATH 154 Algebra and Trigonometry II (3-5 cr.)* or
- MATH 159 Pre-calculus* (prerequisite to MATH 163)
- MATH 163 Integrated Calculus and Analytic Geometry I (5 cr.)
- MATH 300 Logic and Foundations (3 cr.) (prerequisite to MATH 463)
- MATH 463 Intermediate Euclidean Geometry ** (3 cr.)
- CSCI N207 Data Analysis with Spreadsheets* (3 cr.)

Science (19-20 credits)

Students must choose one or more content areas:

Earth Space Science (19 credits)

- GEOL G110 Physical Geology (3 cr.)
- GEOL G120 Physical Geology Lab (1 cr.)
- GEOL G132 Environmental Problems(3 cr.)
- GEOL G209 History of the Earth (3 cr.)
- GEOL G300 Environmental and Urban Geology (3 cr.)
- GEOG G303 Geologic Mapping/Field (3 cr.)
- AST A100 The Solar System (3 cr.) or
- AST A105 Stellar Astronomy

Life Science With Biology Focus (18 credits)

- BIOL K101 Concepts of Biology I (5 cr.)
- BIOL K103 Concepts of Biology II (5 cr.)
- BIOL K341 Principles of Ecology (3 cr.)
- CHEM C105 Principles of Chemistry I (3 cr.)
- CHEM C125 Principles of Chemistry Lab I (2 cr.)

Biological Science (20 credits)

- CHEM C105 Principles of Chemistry I (3 cr.)
- CHEM C125 Principles of Chemistry Lab I (2 cr.)
- CHEM C106 Principles of Chemistry II (3 cr.)
- CHEM C126 Principles of Chemistry Lab II (2 cr.)
- PHYS P201 General Physics I (5 cr.)
- PHYS P202 General Physics II (5 cr.)

Social Studies (21 credits)

Students must choose one content area:

Historical Perspectives (21 credits)

- HIST H105 American History I (3 cr)
- HIST H106 American History II (3 cr.)
- HIST H113 Western Civilization I (3 cr.) or
- HIST H108 Perspectives on the World to 1800 (3 cr.)
- HIST H114 Western Civilization II (3 cr.) or
- HIST H109 Perspectives on the World 1800 to Present (3 cr.)
- HIST elective 300 level or higher (3 cr.)
- HIST elective 300 level or higher (3 cr.)
- HIST elective 300 level or higher (3 cr.)

Geographical Perspectives (21 credits)

- GEOG G107 Physical Geography (3 cr.)
- GEOG G110 Human Geography (3 cr.)
- GEOG G130 World Geography (3 cr.)
- GEOG G300 The World of Maps (3 cr.)
- GEOG elective 300 level or higher (3 cr.)
- GEOG elective 300 level or higher (3 cr.)
- GEOG elective 300 level or higher (3 cr.)

Language Arts (21 credits)

- ENG L202 Literary Interpretation (3 cr.
- ENG L213 Literary Masterpieces (3 cr.)
- ENG W206 Creative Writing (3 cr.)
- ENG W313 Art of Fact: Writing Nonfiction Prose(3 cr.)
- ENG W400 Issues in Teaching Writing (3 cr.)
- ENG G204 Rhetorical Issues: Grammar and Usage (3 cr.)
- EDUC X460 Books for Reading Instruction (3 cr.)

Certification Programs

A minimum GPA of 2.50 is required for each program.

Coaching (18 cr.)

- HPER P280 Principles and Care of Athletic Injuries (1 cr.)
- HPER P397 Kinesiology (3 cr.)
- HPER P450 Principles and Psychology of Coaching (3 cr.)

- HPER Theory and Techniques of Coaching: 6 credits from the following: A361, A362, A363, A364, A365, A366, A367, A368, A369, A370, A371, or A372.
- BIOL N217 Human Physiology (5 cr.)

Driver and Traffic Safety

- HPER S350 Content and Materials in Safety Education (2 cr.)
- HPER S456 Traffic Safety Education for Teachers (4 cr.)
- HPER S458 Driver Education Multiple Instruction Techniques (3 cr.)
- HPER S360 Highway Safety Administration (3 cr.)

Program Framework

The School of Education has integrated the campus "Principles of Undergraduate Learning" and the various state and national frameworks for beginning teachers into the IUPUI Principles of Teacher Education. These principles provide the conceptual framework for all undergraduate degree and licensure programs.

Principles of Teacher Education

Principle 1: Conceptual Understanding of Core Knowledge

Definition: The ability of teachers to communicate and solve problems while working with the central concepts, tools of inquiry, and structures of different disciplines. For prospective secondary teachers this means developing rich expertise within their chosen discipline.

This principle is demonstrated by the ability to:

- Set learning goals that reflect command of the subject matter.
- Design and implement instruction that develops students conceptual understanding of core knowledge.
- Interact with learners, providing meaningful and strategic information.
- Improve learners communication and quantitative skills through meaningful learning engagements.
- Model effective communication and problem solving.
- Use a variety of media and technology.
- Distinguish high quality educational materials.
- Write and speak with clarity.

Principle 2: Reflective Practice

Definition: The ability of teachers to step outside of the experiences that make up teaching and to analyze and critique from multiple perspectives the impact of these experiences and contexts.

This principle is demonstrated by the ability to:

- Explain the principles that guide teaching.
- Demonstrate teaching as an inquiry process, collecting and analyzing data about students learning and generating plans designed to support student understanding.
- Entertain multiple perspectives.
- Self-assess from multiple perspectives.
- Collect information through observation of classroom interaction.
- Assess learners development and knowledge.
- Use assessment processes appropriate to learning outcomes.
- Invite learners to employ multiple approaches, solutions, and diverse pathways to learning.

Principle 3: Teaching for Understanding

Definition: The ability of teachers to draw on their conceptual understanding to plan, implement, and assess effective learning experiences and to develop supportive social and physical contexts for learning.

This principle is demonstrated by the ability to:

- Set clear and developmentally appropriate goals for learning experiences.
- Establish suitable classroom routines.
- Provide learners with meaningful choices.
- Create a collaborative, supportive social environment.
- Engage learners in generating knowledge and testing hypotheses.
- Help learners articulate their ideas and thinking processes.
- Use multiple strategies that engage students in active meaningful learning.
- Encourage learners to see, question, and interpret ideas from diverse perspectives.
- Support learners in assuming responsibility for themselves and for their own learning.
- Motivate all children to learn.
- Create an inviting, interactive learning environment.
- Ask questions that promote learning.
- Build on childrens prior knowledge.

Principle 4: Passion for Learning

Definition: The ability of teachers to continually develop their own complex content and pedagogical knowledge and to support the development of students habits of continual, purposeful learning.

This principle is demonstrated by the ability to:

- Synthesize and teach complex concepts and networks of knowledge.
- Learn about learners and teaching through reflective practice.
- Recognize and support learners intellectual, social, and personal growth.
- Support all learners with special needs including learners new to English.
- Engage learners in multiple ways of knowing.
- Convey reasonable, but high and positive expectations for learner achievement.
- Integrate the disciplines to create meaningful curriculum.
- Give learners opportunities to solve community problems and to make authentic and meaningful choices.
- Provide all learners with equitable access to meaningful learning opportunities.
- Seek help from other professionals when needed.
- Engage in personal inquiry to construct content and pedagogical knowledge and skills.

Principle 5: Understanding School in the Context of Society and Culture

Definition: The ability of teachers to value and to teach about diversity, inclusivity, and equity; to recognize the impact of social, cultural, economic, linguistic, geographic, and political systems on daily school life; and to capitalize on the potential of school to minimize inequities.

This principle is demonstrated by the ability to:

- Act as a change agent.
- Demonstrate willingness and growth toward multicultural competence and culturally responsive teching.
- Recognize cultural differences and strive to address the discontinuities that can become obstacles to equitable teaching and learning.
- Mediate when learners need help to resolve problems or change attitudes.
- Initiate and engage in partnerships with families, teachers, administrators, and other community members involved in the lives of students and respect families as partners in teaching and learning.
- Embed knowledge of home, school, and community into teaching.
- Recognize and challenge deficit perspectives and utilize strength-based approaches to engage wtih students, families, and communities.

Principle 6: Professionalism

Definition: The ability of teachers to be active contributors to professional communities that collaborate to improve teaching and student achievement by developing shared ethics, standards, and research-based practices.

This principle is demonstrated by the ability to:

- Demonstrate the ethical principles guiding professional conduct.
- Demonstrate and document standards-based practice that aligns with state, national, and professional standards.
- Stay current in terms of research on pedagogy, content, and assessment.
- Participate in professional organizations and resource networks beyond the school.
- Collaborate with colleagues about issues that are complex and difficult.
- Give presentations for other professionals.
- Initiate activities such as teacher research, study groups, and coaching to improve the teaching and learning of a school community.
- Promote positive attitudes.
- Facilitate decision making.
- Operate on democratic principles.

Program Format

IUPUI is recognized as a leader in urban education. Students are prepared according to the standards established by the Indiana Professional Standards Board and earn Rules 2002 Indiana Teaching Licenses. In addition, students are immersed in programs of study that challenge them intellectually with new models of instruction and explorations of diversity.

All students in the Learning to Teach/Teaching to Learn program spend significant time in community schools, where they learn the importance of social justice and democratic practices. They learn to tap the wealth of assets in Indianapolis as they hone their expertise as discipline-based teachers and passionate professionals. The School of Education is committed to preparing teachers who want to make a difference and have the knowledge and skills to do so.

The undergraduate teacher education program is called Learning to Teach/Teaching to Learn. Upon succssful completion, this program leads to a Bachelor of Science in Education and a license to teach in Indiana.

The program consists of three parts:

1. Prerequisite Courses
2. Teacher Education Courses
3. Student Teaching

Prerequisite Courses

Teachers are first and foremost required to be knowledgeable about the subjects they teach. Specific prerequisite courses are required for every different teaching license available through Indiana University School of Education at IUPUI. School of Education advisors and the School of Education Web site provide advising sheets that list the specific courses required to prepare for admittance into each teaching license program.

Elementary education majors complete a program of prerequisite courses that prepares them to be strong generalists. They typically take all their prerequisite courses as freshmen and sophomores, building their skills in written and oral communication, information technology, science, language arts, mathematics, social sciences, and fine arts.

Secondary and all-grade education majors prepare more specifically for teaching in a discipline area like English, social studies, science, mathematics, world languages, visual art, or physical education. Their prerequisite courses focus on the development of core knowledge. These courses help students develop their abilities to think critically and communicate, and prepare them to meet the rigorous content and teaching standards required for middle school, high school, or all-grade teaching.

Teacher Education Courses

The Learning to Teach/Teaching to Learn program is a gateway into the profession of teaching. The courses in the program are carefully aligned with standards and integrate field experiences so students develop the knowledge, skills, and dispositions they need to be professional educators. Elementary majors enter the program as juniors and spend four full semesters in the teacher education blocks. They learn about the developmental needs of children, the complexities of schools and social systems, and research-based methods of teaching.

Secondary and all-grade students also take teacher education courses in sequenced blocks, but their preparation is a combination of continued learning in their discipline and gaining the knowledge, skills, and dispositions required for teaching adolescents and young adults or all levels of students. All new teachers must meet

professional standards and pass professional tests before they can be licensed, so all of the teacher education courses teach toward these measures of preparedness.

Student Teaching

Student teaching represents the culminating experience in the Learning to Teach/Teaching to Learn program. By assuming full responsibility for a class of students, candidates demonstrate their achievement of standards, and reflect both on student learning and on their own effectiveness as teachers. At IUPUI, all students are prepared to teach at two developmental levels and can expect to complete two separate student teaching assignments.

Indiana Teaching Licenses

Every Indiana Teaching License requires preparation to meet multiple categories of professional standards. Teachers must be prepared to teach both content and children, so each license program is aligned to content standards and developmental standards. In addition to doing well in teacher education courses, benchmark assessments, and student teaching, prospective teachers must also pass PRAXIS I and PRAXIS II tests.

IUPUI offers the following license programs:

- Primary/Intermediate Elementary
- Middle School/High School Content Area
- All-Grade Content Area

Indiana License Types and Coverage

IUPUI's educator preparation programs at both the graduate and undergraduate levels were developed to meet the 2002 Licensure Framework adopted by the Division of Standards of the Indiana Department of Education. This framework establishes requirements not in terms of courses to be taken, but rather in terms of the standards that program graduates are expected to meet. The license framework addresses the principles set forth by the Interstate New Teacher Assessment and Support Consortium (INTASC) and includes both content standards for different subjects and teaching areas, and developmental standards associated with particular educational settings (early childhood, elementary, middle school, high school).

Elementary License

- Preparation to teach kindergarten through sixth grades
- School Settings: Elementary; Primary and Elementary; Intermediate
- Content Standards: Elementary; Primary Generalist and Elementary; Intermediate Generalist

Middle School/High School Content Area License

- Preparation to teach sixth through twelfth grades in a particular content area
- School Setting: Middle School/Junior High School and High School
- Content Standards: Language Arts, Social Studies, Science, Mathematics, or Foreign Languages

All-Grades License

- Preparation to teach kindergarten through twelfth grades
- School Settings:Elementary; Primary, Elementary; Intermediate, Middle School/ Junior High School; High School
- Content Standards: Fine Arts, Health and/or Physical Education

Education Degrees

Students in the Learning to Teach/Teaching to Learn program may be working toward a specific teaching license or both a license and a Bachelor of Science degree.

Degrees are offered in the following areas:

- Elementary Education
- Secondary Education in
  - English
  - Foreign Language: Spanish
  - Mathematics
  - Science
  - Social Studies

- All-Grade Education in
  - Visual Arts
  - Physical Education

Dual Licensure Programs

Students may complete any of the following dual programs in conjunction with one of the licensure programs listed above. The developmental standards and school setting of the license will be the same as the partner license except for all-grade programs where the dual license will be for middle school and high school only.

English as a Second Language (ESL) Dual License

- Preparation to teach children whose first language is not English
- Content Standard: English as a Second Language

Special Education Dual License

- Preparation to teach children with special needs
- Content Standard: Exceptional Needs

Reading Dual License

- Provides extra expertise in the teaching of reading
- Content Standard: Reading

The School of Education at IUPUI also offers programs at the graduate level that lead to the following licenses:

- School Services (Counselor)
- Building-Level Administrator

Specific Degree Requirements

Students must enroll in a program at the School of Education at IUPUI and meet all of the requirements for that program.

Students pursuing an early childhood, elementary, or elementary/middle school license must

1. Meet the regular matriculation requirements of the university;
2. Be admitted to the LT/TL Teacher Education Program;
3. Complete at least 30 of the last 60 credit hours required for a specific degree program at IUPUI. These 30 credit hours must include student teaching

as well as methods courses in the major teaching area. No more than 15 hours of teacher education coursework can be transferred from another institution;
4. Complete the professional education courses as stipulated in the specific program, and all of the general education and subject-matter courses required for recommendation by Indiana University for an initial teaching license;
5. Complete a minimum of 123 credit hours of academic credit (see specific program requirements). Some programs require additional hours for graduation;
6. Maintain a minimum cumulative grade point average (GPA) of 2.50 in all courses taken for the degree;
7. Achieve a minimum grade of C in each professional education class and a passing grade for all student teaching while maintaining a cumulative GPA of 2.50 in professional education courses;
8. Earn a C or better in all courses

Students pursuing a middle/high school or all-grades license must
1. Meet conditions 1 through 7 above;
2. Achieve a minimum GPA of 2.50 in the teaching area(s);
3. Take no more than 15 credit hours of professional teacher education courses at other institutions.

Assessment in the Teacher Education Program

Students recommended for a teaching license by IUPUI will be expected to demonstrate the knowledge, disposition, and skills expected of beginning teachers. It is IUPUI's responsibility to ensure that students recommended for an initial license have met all relevant standards set by the Division of Professional Standards and the national professional organizations.

Students will be required to complete Benchmark assessments as they move through the program. Failure to complete a Benchmark will result in removal from the program. Students whose Benchmarks are evaluated as not supporting that the student has adequate skills, knowledge and/or dispositions may be required to do a follow-up to the benchmarks. Benchmark evaluations will also be considered when determining if students will be readmitted to the program.

Student Learning Outcomes

The following Student Learning Outcomes apply to all undergraduate degree and certification programs offered by the School of Education. Elementary Education, Secondary Education and Transition to Teaching Programs.

Principle #1: Conceptual Understanding of Core Knowledge

Definition: The ability of teachers to communicate and solve problems while working with the central concepts, tools of inquiry, and structures of different disciplines. For prospective secondary teachers this means developing rich expertise within their chosen discipline. This principle is demonstrated by the ability to:

- Set learning goals that reflect command of the subject matter.
- Design and implement instruction that develops students conceptual understanding of core knowledge
- Interact with learners, providing meaningful and strategic information.
- Improve learners communication and quantitative skills through meaningful learning engagements.
- Model effective communication and problem solving.
- Use a variety of media and technology.
- Distinguish high quality educational materials.
- Write and speak with clarity.

Principle #2: Reflective Practice

Definition: The ability of teachers to step outside of the experiences that make up teaching and to analyze and critique from multiple perspectives the impact of these experiences and contexts. This principle is demonstrated by the ability to:

- Explain the principles that guide teaching.
- Demonstrate teaching as an inquiry process, collecting and analyzing data about students learning and generating plans designed to support student understanding.
- Entertain multiple perspectives.
- Self-assess from multiple perspectives.
- Collect information through observation of classroom interaction.
- Assess learners development and knowledge.
- Use assessment processes appropriate to learning outcomes.
- Invite learners to employ multiple approaches, solutions, and diverse pathways to learning.

Principle #3: Teaching for Understanding

Definition: The ability of teachers to draw on their conceptual understanding to plan, implement, and assess effective learning experiences and to develop supportive social and physical contexts for learning. This principle is demonstrated by the ability to:

- Set clear and developmentally appropriate goals for learning experiences.
- Establish suitable classroom routines.
- Provide learners with meaningful choices.
- Create a collaborative, supportive social environment.
- Engage learners in generating knowledge and testing hypotheses.
- Help learners articulate their ideas and thinking processes.
- Use multiple strategies that engage students in active, meaningful learning.
- Encourage learners to see, question, and interpret ideas from diverse perspectives.
- Support learners in assuming responsibility for themselves and for their own learning.
- Motivate all children to learn.
- Create an inviting, interactive learning environment.
- Ask questions that promote meaningful learning.
- Build on childrens prior knowledge.

Principle #4: Passion for Learning

Definition: The ability of teachers to continually develop their own complex content and pedagogical knowledge and to support the development of students habits of continual, purposeful learning. This principle is demonstrated by the ability to:

- Synthesize and teach complex concepts and networks of knowledge.
- Learn about learners and teaching through reflective practice.
- Recognize and support learners intellectual, social, and personal growth.
- Support all learners with special needs including learners new to English.
- Engage learners in multiple ways of knowing.
- Convey reasonable, but high and positive expectations for learner achievement.
- Integrate the disciplines to create meaningful curriculum.
- Give learners opportunities to solve community problems and to make authentic and meaningful choices.
- Provide all learners with equitable access to meaningful learning opportunities.
- Seek help from other professionals when needed.
- Engage in personal inquiry to construct content and pedagogical knowledge and skills.

Principle #5: Understanding School in the Context of Society and Culture

Definition: The ability of teachers to value and to teach about diversity, inclusivity, and equity; to recognize the impact of social, cultural, economic, linguistic, geographic, and political systems on daily school life; and to capitalize on the potential of school to minimize inequities. This principle is demonstrated by the ability to:

- Act as a change agent.
- Demonstrate willingness and growth toward multicultural competence and culturally responsive teaching.
- Recognize cultural differences and strive to address the discontinuities that can become obstacles to equitable teaching and learning.
- Mediate when learners need help to resolve problems or change attitudes.
- Initiate and engage in partnerships with families, teachers, administrators, and other community members involved in the lives of students and respect families as partners in teaching and learning.
- Embed knowledge of home, school, and community into teaching.
- Recognize and challenge deficit perspectives about and utilize strength-based approaches to engage with students, families, and communities.

Principle #6: Professionalism

Definition: The ability of teachers to be active contributors to professional communities that collaborate to improve teaching and student achievement by developing shared ethics, standards, and research-based practices. This principle is demonstrated by the ability to:

- Demonstrate the ethical principles guiding professional conduct.
- Demonstrate and document standards-based practice that aligns with Common Core, Indiana and professional standards.
- Stay current in terms of research on pedagogy, content, and assessment.
- Participate in professional organizations and resource networks beyond the school.
- Collaborate with colleagues about issues that are complex and difficult.
- Give presentations for other professionals.
- Initiate activities such as teacher research, study groups, and coaching to improve the teaching and learning of a school community.
- Promote positive attitudes.
- Facilitate decision making.
- Operate on democratic principles.

Degree Programs

Bachelor of Science in Education (B.S.Ed.)

- Elementary Education
- English Secondary School Teaching
- Social Studies Secondary School Teaching
- Spanish Secondary School Teaching

Student Responsibilities

The School of Education has established academic requirements concerning admission, course of study, majors and minors, and campus residence, all of which must be met before a degree is granted. Students are held responsible for understanding the requirements and for meeting the conditions prior to graduation.

A student pursuing a secondary (middle school/high school) or all-grades license while enrolled in a degree-granting program in another school must satisfy requirements of the degree-granting school as well as School of Education requirements for licensure.

Students are encouraged to:

1. Develop a strong foundation for meeting the campus principles of undergraduate learning by following the course sequence presented in this bulletin and by enrolling in course blocks or learning communities designated for education majors whenever they are available.
2. Plan a program with an academic advisor in the School of Education and meet with that advisor at least once each semester.
3. Check the advising report at least once each semester (onestart.iu.edu). For questions about accessing OneStart, please see an advisor or visit Education Student Services.
4. Apply for admission to the LT/TL Teacher Education Program during the semester (Fall/Spring) prior to when you intend to begin the program.

Graduate Programs

A full range of graduate opportunities is available through the School of Education at IUPUI. Students can earn the Master of Science in Elementary Education, Secondary Education, Early Childhood Education, Language Education, Special Education, and complete requirements for the Master's in Higher Education/Student Affairs. The

program in Counseling and Counselor Education leads to a master's degree and a license in school counseling. The school also offers a masters degree with a special focus on technology integration on-site in several area school systems.

IUPUI provides unique opportunities for collaborative studies (for example, Education and Museum Studies) or interprofessional work (for example, courses that enroll students from Education, Nursing, and Social Work to emphasize service integration at the school site).

Through its "Summer in the City" program, the school offers a range of graduate workshops each summer on contemporary topics of interest to teachers and administrators. A growing number of courses for license renewal or continuing professional development is available online or through interactive video technology.

Post-Baccalaureate Licensure Programs

Students who already hold a baccalaureate degree may apply to the School of Education to complete just the courses need to obtain a teaching license provided their undergraduate GPA is 2.50 or higher. A formal transcript evaluation and an orientation session are required before enrollment. There is a fee for the transcript evaluation. Information and the transcript evaluation request form are available on the School of Education Web site (education.iupui.edu) or by calling Education Student Services at (317) 274-6801.

Urban Doctorate Program

Starting in Fall 2012, the IU School of Education at IUPUI will offer the first doctorate degree in education to be offered entirely on the IUPUI campus. The degree will be one of just a handful of urban education doctorates in the country, focused on preparing researchers to study schools in complex urban environments. Faculty and students in the program will conduct community-based research designed in partnership with P-12 schools and community organizations. It will be the only urban education doctoral program in the state of Indiana. The program is a distinctive, research-oriented degree program, and the first of its kind in Indiana. The interdisciplinary focus will prepare scholars who are capable of making significant contributions to improve urban education. The focus will be on research addressing the needs of high risk students and other factors that impact student learning. The community-based, collaborative model will place researchers in the social context of urban education issues.

Student Learning Outcomes

The advanced professional programs in the School of Education are committed to improving schooling by enhancing academic, social, and emotional learning, with the ultimate goal of improving social justice for all. The four beliefs that guide this work are as follows and apply to all of our advanced professional programs.

Core Belief #1: Comprehensive Knowledge Base

- Professional educators must have a comprehensive knowledge base that includes content and pedagogical and practical forms of knowledge.

Core Belief #2: Intellectual Skills and Abilities

- Professional educators must possess discipline-specific skills that allow them to plan, implement, inquire about, and assess practices related to their field of concentration.

Core Belief #3: Focus on Diversity, Culture, Community, and Context

- Professional educators must focus on the community context in which education takes place (from school community to our global society), understanding the role of family, culture, and community and their impact on the learner.

Core Belief #4: Commitment to Personal and Professional Growth

- Professional educators must make a commitment to education, to their particular discipline, and to all learners.

Degree Programs

Master of Science in Education (M.S.Ed.)

- Counseling and Counselor Education
- Curriculum and Instruction with a Focus on Technology
- Educational Leadership
- Elementary Education
- English as a New Language
- Higher Education and Student Affairs
- Language Education
- Secondary Education
- Special Education

Admissions

Fall Semester deadline: **May 1**
Spring Semester deadline: **November 1**
Summer Session deadline: **March 1**
All students applying for a Master's degree in education must apply to the School of Education.

NOTE: The Graduate Non-Degree policy states that students may take no more than 9-12 graduate credit hours in an academic discipline under the graduate non-degree status.

You should address these questions in your personal goals statement:

1. Are you a licensed teacher in Indiana?
2. What are your personal, academic, and career goals?
3. How will this program help you meet your academic and career goals?
4. What experiences have prepared you for this program?

License Renewal/Education graduate non-degree

Complete ONLY these areas in the application:

- Personal Information
- Educational Objective (*Academic Program*: Education Graduate Non-Degree, *Major*: License Renewal, and select the semester you plan to enroll)
- Educational History
- Work Experience

Graduate Certification Applicants

In addition to the online application with the personal goals statement, you must also submit:

1. Two (2) letters of recommendation on official letterhead with signatures*
2. Official transcripts (with the exception of IU schools)
3. Submit letters and transcripts directly to:

   School of Education, Graduate Admissions

   902 W. New York Street
   Indianapolis, IN 46202-5155

*__NOTE:__We do NOT accept recommendation letters via the online application system. They must be mailed to the School of Education at the address listed above.

You will need to choose the last option "To complete continuing education courses for licensing purposes" when you begin the application. In the application you should choose "*Academic Program"*: Education Graduate Non-Degree, "*Major"*: Teacher Certfication.

Master's Degree Applicants

In addition to the online application with the personal goals statement, you must also submit:

1. Official GRE scores
2. Two (2) letters of recommendation on official letterhead with signatures*
3. Official transcripts (with the exception of IU Schools)
4. Submit letters and transcripts directly to:

   School of Education, Graduate Admissions

   902 W. New York Street
   Indianapolis, IN 46202-5155

*__NOTE:__We do NOT accept recommendation letters via the online application system. They must be mailed to the School of Education at the address listed above.

In the "*Educational Objectives"* section of the application choose "*Type of Admission"*: Master's, "*Academic Program"*: Education, "*Major"*: choose master's program to which you are applying.

Academic Policies & Procedures

- Appeals
- Grading Policy
- Probation, Dismissal, and Reinstatment
- Nondiscrimination Policy
- Other Special School or Program Requirements, Including Graduation Policies

Grading Policy

Below is the undergraduate grading policy of the School of Education as approved by the faculty.

A	Extraordinary high achievement; shows unusually complete command of the subject matter; represents an exceptionally high degree of originality and creativity.**
A-	Exceptionally thorough knowledge of the subject matter; outstanding performance, showing strong analytical abilities.
B+	Significantly above average understanding of material and quality of work.
B	Very good, solid, above average under-standing of material and quality of work.
C+	Good, acceptable performance.
C	Satisfactory quality of work.
C- to D	Unacceptable work. Not meeting requirements for certification in the School of Education.
F	Completely unacceptable work.

Most students should expect grades ranging between C + and B. Students should recognize that effort alone does not necessarily guarantee above average grades, since grades are assigned on the basis of the overall quality of a students work.
** The School of Education does not recognize a grade of A+.

Pass/Fail Option

Within certain restrictions, students in good standing may choose to take some elective courses or general education courses on a Pass/Fail basis. Instructor approval is not needed for the student to take a course Pass/Fail.

There are two restrictions to the Pass/Fail option:

1. The Pass/Fail option may not be used for any course in a subject in which the student wishes to be certified to teach. That is, all courses in the teaching area (or supporting areas) and all professional education courses must be taken for a letter grade. No courses identified to meet unit expectations for communication and quantitative reasoning may be Pass/Fail. Elementary education majors may use the Pass/Fail option only for credit hours over and above the minimum hours required in literature, fine arts, science, or social studies. Secondary and all-grade license candidates may use the Pass/Fail option only for elective credit hours, or for courses that satisfy the general education requirements.
2. A maximum of two courses per academic year may be taken on a Pass/Fail basis. The academic year

begins in the fall and includes the following year's summer sessions.

The grade of Pass (P) is assigned no grade points and is not considered in computing the grade point average. A grade of P may not subsequently be changed to a letter grade. A grade of Fail (F) received in a course taken with the Pass/Fail option is entered on the transcript, treated as a regular letter grade, and used in computing the grade point average.

The decision to take a class Pass/Fail must be made on or before the end of the first three weeks of class during the regular semester, and on or before the end of the first two weeks in a summer session. Check the Schedule of Classes for the exact dates. Appropriate forms are available at Education Student Services, ES 3131, and must be signed by the Assistant Dean for Student Services.

Incomplete (I) Grades

If a student is not in attendance during the last several weeks of a semester, the instructor may report a grade of Incomplete (I) (indicating that the work submitted is satisfactory but that the entire course has not been completed) if the instructor has reason to believe that the absence was beyond the students control. If this is not a valid assumption, the instructor shall record a grade based on the work submitted to date.

The student must have completed 75 percent of the course requirements and must have an I grade contract completed and on file. The time allowed for the removal of an I grade is one calendar year from the date of its initial recording, unless, in exceptional circumstances, the School of Education authorizes adjustment of this period. By assigning a grade of I, an instructor implicitly authorizes and requires that the registrar automatically change an I to an F at the end of the appropriate time period if the student fails to complete the course work to the instructors satisfaction. Both the student and the instructor in whose course the student received the Incomplete will be notified of this change of grade. Students receiving an incomplete in block courses cannot move forward in the program until all work is completed and the incomplete has been changed to a grade of "C" or higher.

Withdrawal (W) from Courses

Withdrawal is not a grade and does not figure in hours of credit or grade point average (GPA) calculations. However, students should be aware that a pattern of repeated withdrawals may affect admission to Teacher Education, student teaching placement, financial aid, and/or eventual employment.

A student must refer to the Schedule of Classes to determine the last date for an automatic W from a class for each semester or summer session. The Schedule is available online at registrar.iupui.edu. After the automatic withdrawal date has passed, the instructor and the Assistant Dean of Student Services make a determination whether to assign a W or an F.

Ordinarily the only acceptable reason for withdrawal is illness or obligation of employment. Students withdrawing from a class during the second half of a regular semester or summer session may be assigned a W only for compelling nonacademic reasons, and only if the students work up to that point is passing. Otherwise, the instructor may elect to assign a grade of "F."

Any student withdrawing from a block course after the beginning of the fourth week of classes or dropping block courses during two or more semesters must appeal to the School of Education Appeals Committee to re-enter the program. Readmission is not automatic.

It is the students responsibility to start the withdrawal procedure by getting the form from Education Student Services and securing the appropriate signatures. The application for withdrawal must be processed within 10 days of its receipt.

Important: Students withdrawing from a course to which a Laboratory/Field Experience is linked must withdraw from the Field Experience as well as from the course itself; such withdrawal is not automatic. Failure to withdraw from both sections may result in a grade of F in the Laboratory/Field Experience. Students are cautioned that withdrawing from courses my jeopardize their financial aid.

Appeals

School of Education Appeals Committee

Students who wish to appeal decisions concerning admission to teacher education or retention in teacher education, or who seek a waiver for a requirement in a specific program, must follow this appeals process:

1. Submit all appeals to the School of Education Appeals Committee by letter or email to the Assistant Dean for Program Assessment in the School of Education.
2. If a student has a concern about the quality of teaching or grade in a course in which he or she is enrolled in the School of Education, the student should follow this process:
    - Discuss those concerns with the instructor. If that discussion does not resolve the students concerns, the student should:
    - Schedule a meeting with the appropriate department chair.
    - If deemed necessary, submit an appeal to the School of Education Appeals Committee.

Students should contact the Assistant Dean for Assessment in the School of Education for information about filing an appeal.

Grievance Hearing Committee The purpose of the School of Education's Grievance Hearing Committee is to provide a five-member hearing board for any student who believes that his/her rights, as defined in Part I of Indiana University's *Code of Student Rights, Responsibilities, and Conduct*, have been violated by a member of the faculty or administration. After considering the appeal during a formal hearing, the hearing board votes in private and forwards its recommendation for action to the dean of the School of Education, who makes final disposition of the appeal in the School of Education. Should the student wish to appeal further, the *Code of Student Rights, Responsibilities, and Conduct* provides an avenue through the Dean of Students (see below for details).

Grievance Jurisdiction The Grievance Hearing Committee hears appeals in the following categories:

- Violations of Individual Rights and Academic Affairs, as defined in Parts I. A and B of the *Code of Student Rights, Responsibilities, and Conduct*. These include:
  - Individual Rights (I. A.1-5)
  - Citizenship Rights
  - Discrimination
  - Sexual Harassment
  - Harassment Based on Sexual Orientation
  - Racial Harassment
- Academic Affairs (I.B.1-5)
- Provision of advising for academic planning
- Classes conducted in accordance with the Indiana University Code of Academic Ethics
- Freedom to raise issues and express ideas or opinions relevant to classroom work
- Sensitivity by faculty to student personal or political beliefs, and protection of privacy of student information
- Ethical behavior of faculty in relationships with students
- Academic misconduct, as defined in the *Code of Student Rights, Responsibilities, and Conduct* (Part III.A.). This includes:
  - cheating
  - fabrication
  - plagiarism
  - interference
  - violation of course rules
  - facilitating academic dishonesty
- Grades in a course - if the student feels the grade is a result of bias or discrimination
- Terms and conditions of associate instructor and graduate assistant appointments

The *Code of Student Rights, Responsibilities, and Conduct* distinguishes between personal misconduct and academic misconduct. Appeals regarding personal misconduct are not within the jurisdiction of the IUPUI Grievance Hearing Committee and are handled by the Dean of Students according to the Code (VI.D).

Grade Replacement Policy: Policy and Procedure on Course Reenrollment and Recalculation of Student Grade Point Average

The University Faculty Council has stated that any undergraduate who has retaken a course previously failed shall have only the second grade in that course counted in the determination of the overall grade point average by the Office of Records and Admissions. The student's transcript shall record both grades. Any grade point average calculated in accord with this policy shall be marked replaced denoting that a grade has been replaced by the grade in the course when taken subsequently.

The policy can take effect only if the course was taken at IUPUI and repeated after the beginning of the academic year 1976-77. The IUPUI School of Education grade replacement policy has been revised, effective fall 1996. The new policy allows approved undergraduate students seeking their first degree to repeat a maximum of 15 credit hours subject to school/division approval. Students may not replace any EDUC course. Students in education must submit a grade replacement form before the policy can take effect. These forms are available from the Office of Student Support and Diversity located in room 3131 in the Education/Social Work Building.

Determination of GPA

The School of Education uses the grade point average (GPA) indicated on the advising system for all audits, including those for admission to the Teacher Education program, probation and dismissal, and graduation.

Note: Only credit hours are transferred to Indiana University from schools outside of the IU system. Grades made in courses taken at other universities will be used to compute GPAs for purposes of admission to the teacher education programs when students are transferring in more than 27 credit hours.

Grade Change Appeal

Students wishing to appeal a grade in any course offered by the School of Education should follow the appeals policy within one semester of receiving the grade.

Students wishing to have a grade changed to a "W" after a semester has passed should follow the IUPUI grade appeal procedure as outlined in this bulletin. Grade appeal forms are available online from registrar.iupui.edu. These grade petitions in undergraduate courses will not be considered for concluded courses older than 5 years. Exceptions will only be considered if an extremely serious and documented circumstance (e.g., coma, unmanageable schizophrenia, etc.) literally prevented the student from filing the petition within the 5-year period.

A students request to have a grade in a course offered by the School of Education changed from a grade of F to Withdrawn (W) will be granted only if one or more of the following conditions exists:

1. The student has provided official documentation of a medical emergency that prevented the student from attending and officially withdrawing from the course.
2. The student was a first-semester freshman and never attended the class.

If a student feels there were other extenuating circumstances that prevented him or her from attending and/or officially withdrawing from the course, he or she may write a letter of appeal to the School of Education Appeals Committee. Any available official documentation pertaining to the extenuating circumstances should be included with the letter of appeal.

Good Standing

A student is determined to be in good standing in the School of Education when the undergraduate grade point average (GPA) meets or surpasses the minimum 2.50 standard, has grades of C or higher in all professional (block) education courses, and when the student has no pending issues with the Office of Program Evaluation and Assessment.

Bulletin Designation

Students must meet requirements for graduation as stated by the school in the IUPUI Campus Bulletin at the time of initial enrollment, or as set forth in any subsequent bulletin. Students are expected to meet requirements of a single bulletin for graduation but must meet the state licensure requirements in place at the time of completion of the program.

Probation, Dismissal, and Reinstatement

Failure to meet the minimum standards results in academic probation or in dismissal. A cumulative minimum grade point average (GPA) of 2.50 and minimum grades of or in all professional education courses and related field experiences are required to remain in good standing.

Probation

The academic progress of students in the School of Education working toward admission into a School of Education program is reviewed at the close of each fall and spring semester; students will receive formal, written notice if they have been placed on probation and are, or may be, subject to dismissal. Students on academic probation have two semesters to meet the minimum academic standards before they are dismissed from the school and possibly the university.

Dismissal and Reinstatement from the LT/TL Teacher Education Program

Students receiving grades below a "C" or "S" in any teacher education (block) courses or whose overall GPA or GPA in the block courses falls below 2.50 will be automatically dismissed from the teacher education program. Students may appeal to reenter the program within one semester of dismissal. Students should contact the Assistant Dean for Program Assessment in the School of Education. Students dismissed from the teacher education program but who still meet the minimum IUPUI requirements to remain at the university must move their files to another school within one semester of dismissal from the program.

Dismissal from the University

Once dismissed from the School of Education for academic reasons, students are placed on the all-university checklist, which means that they may not enroll in courses on any Indiana University campus.

Reinstatement in the University

Once dismissed for academic reasons, the student must wait for at least one semester (not including summer sessions) before applying for readmission. If the student is readmitted, the course load may be restricted or adjusted in the students best interest. The student should send a letter and completed form petitioning for readmission to:

Assistant Dean for Program Assessment School of Education 902 W. New York Street IUPUI Indianapolis, IN 46202-5155

Voluntary Withdrawal While on Probation

If a student voluntarily withdraws from the School of Education while on probation, that student may enter another school at the university if the students grade point average is acceptable to that school. Some schools require an application process. The student may reenter the School of Education in good standing if, by taking academic course work in other divisions or schools of the university, grades have been earned that raise the cumulative grade point average to a minimum of 2.50, and the student has made progress toward fulfilling program requirements.

Stopping Out

Once admitted to the Teacher Education Program, a student in good standing who intends to stop out of the professional education courses for one or more semesters must notify Education Student Services in writing in order to be guaranteed readmission to the program. The student must petition for readmission within two years of stopping out. Upon reentering the program, the student must meet any new program requirements. Student who do not return within two years of stopping out must reapply for admission to the Teacher Education Program.

Other special school or program requirements, including graduation policies

Currency of Professional Education Courses

Professional education courses must be current in order to be acceptable in undergraduate certification programs. No professional education or technology courses can be more than 10 years old at the time of student teaching. Course work that is older, whether taken at IUPUI or another university, will need to be retaken. The student should consult with a School of Education academic advisor.

Graduates should apply for their teaching license upon completion of their program. Delays in applying for initial licensure may result in graduates needing to retake portions of the program as the state requirments for licensure constantly change.

Campus Residency Requirement

A student must complete at least 30 of the last 60 credit hours required for a specific degree program while in residence at IUPUI. These 30 credit hours will include methods courses in the major as well as student teaching. For students who are completing a first undergraduate degree, some work in the major must also be completed at IUPUI, unless the student has transferred from an IU campus offering a degree in that major.

Correspondence Courses

Students in education degree or license programs are not encouraged to take correspondence courses. Neither professional education courses nor courses meeting unit expectations for communication and quantitative reasoning may be taken by correspondence.

Temporary and Permanent Intercampus Transfers

To register for a single semester or for the summer session(s) at another campus of Indiana University, or to transfer on a permanent basis, a student must complete

the appropriate intercampus transfer form found on the Web by visiting www.iupui.edu/moveiu.

Honors Program

The School of Education Honors Program is part of the university-wide Honors Program at IUPUI, and is available to students who are interested in strengthening and/or enriching their academic experiences. This program is built on the IUPUI Principles of Undergraduate Learning and the Interstate New Teacher Assessment and Support Consortium (INTASC) standards for teacher education. Honors students are eligible for financial stipends and have opportunities to work closely with faculty. Students must complete an application for admission to the Honors Program through the university.

Undergraduate Students in Graduate Courses

Undergraduate students may not enroll in graduate courses.

Graduation

The School of Education requires a minimum of 124 credit hours to qualify for graduation, determined by specific degree requirements. Some programs require additional hours for graduation. Consult a School of Education academic advisor for specific requirements.

Students should file an application for a Bachelor of Science degree in the School of Education at the beginning of their final year of classes or at the beginning of their senior year. The application for graduation is available on the Web at education.iupui. edu/forms/home.htm, or from Education Student Services (ES 3131). Application for a degree is a student responsibility, and the School of Education will not be responsible for the graduation of students who fail to file an application.

Degree with Honors

The School of Education recognizes high cumulative grade point averages with the designations Distinction,High Distinction, and Highest Distinction. To earn a degree with honors, students must earn a minimum grade point average of 3.6 in all course work taken toward the B.S. in Education degree, must be in the top 10 percent of the class, and must complete at least four full semesters in residence at Indiana University campuses. Since only the top 10 percent of students from the School of Education may receive honors, students with a GPA above 3.60 are not guaranteed this designation.

Application for Licensure

Students should file an Indiana State Application for a Teaching License once the degree is posted to the transcript, or all grades are posted for certification-only programs. The application requires evidence of passing scores for all state licensure exams as well as proof of successfully completing training for CPR-Heimlich Maneuver-AED certification.

Information about exams can be obtained at Education Student Services or through the Indiana Department of Education website (www.state.in.us/psb). Students taking state licensure tests after September 1, 2013, must take new content tests offered by Pearson. Those students having already taken the ETS PRAXIS II series tests before September 1, 2013 may use them for licensure, but PRAXIS II tests taken after September 1, 2013 will not be accepted by the state.

Nondiscrimation Policy

The School of Education has a standard policy that affects student teaching and educational placement. It states:

Discrimination refers to the exclusion of a teacher or a prospective teacher from any position, assignment, or learning opportunity on the basis of any of the following criteria: race, color, minor variations in accent or dialect, religion, sex, national or social origin, economic condition of birth, age, handicap, or any other criterion not directly related to ability as a teacher.

The central characteristic of discrimination rests in its denial of an objective judgment of individual worth by assigning, deliberately or unintentionally, a stereotyped status to an individual. It thus introduces criteria that are not relevant to confirmable professional judgment of the quality of an individuals performance.

Any complaint related to this policy should be called to the attention of the Assistant Dean for Student Services.

Student Organizations & Services

Education Students Advisory Council (ESAC)

ESAC serves as the representative body for students enrolled in the School of Education. It promotes programs that enhance student life, foster a sense of identity among students, and increase the School of Educations visibility in the university community while providing opportunities for involvement with alumni and opportunities to develop student leadership. It contributes to the professional development of students, honors students, and faculty whose efforts have distinguished them and the School of Education. Membership is elected from students admitted to the teacher education program.

Kappa Delta Pi

Kappa Delta Pi (Pi Omicron Chapter) is an international honorary organization founded to recognize excellence in education. Students who are invited for membership exhibit the ideals of scholarship, high personal standards, and outstanding achievement in professional education courses. The IUPUI chapter of Kappa Delta Pi sponsors a wide variety of programs for its members and the School of Education.

School of Education Alumni Association

The School of Education Alumni Association was founded in 1951 to further the educational, professional, and social interests of the School of Education and the alumni. The association provides an ongoing link between the graduate and the university. The Education Alumni Association sponsors education-related events throughout the state, and publishes Chalkboard, a semi-annual magazine for all graduates of the Indiana University School of Education.

National Science Teachers Association Student Chapter

This organization promotes the mission of the National Science Teachers Association by providing pre-service teachers with support resources and professional development in science education.

Elementary and Secondary Urban Educators Organizations

These organizations serve as official assemblies within the School of Education for all students on the IUPUI campus enrolled in the elementary or secondary education program. These memberships are dedicated to issues relating to urban education in Indianapolis, developing connections within urban schools, and helping urban schools with projects.

Faculty

- Banta, Trudy W., Ed.D. (University of Tennessee, 1967), Professor (Graduate School)
- Berghoff, Beth, Ph.D. (Indiana University, 1995), Associate Professor (Graduate School-Associate)
- Blackwell, Jacqueline, Ph.D. (University of Maryland, 1977), Associate Professor (Graduate School-Associate)
- Borgmann, Cindy, Ph.D. (Indiana University, 1981), Associate Professor
- Chism, Nancy Van Note, Ph.D. (Ohio State University, 1984), Professor (Graduate School)
- Dare, Mary Jo, Ed.D. (Indiana University, 1993), Clinical Associate Professor
- Flowers, Natasha, Ph.D (Indiana State University, 2007) Clinical Assistant Professor
- Gill, Lonnie, Ph.D. (Indiana University, 2005), Clinical Assistant Professor
- Helfenbein, Robert, Ph.D. (University of North Carolina-Chapel Hill, 2004), Associate Professor (Graduate School-Associate)
- Hill, Crystal, Ph.D. (University of North Carolina-Chapel Hill, 2008), Assistant Professor (Graduate School-Associate)
- Houser, Linda, Ph.D. (Indiana State University, 1992), Assistant Dean for Program Evaluation and Assessment
- Hughes, Robin, Ph.D (Texas A & M University, 2001), Associate Professor (Graduate School-Associate)
- Jamison, Sharon, M.S.L.I.S. (University of Illinois, 1989), Clinical Lecturer
- Keller, Deborah, Ph.D. (Purdue University, 2004), Lecturer
- King, Kathleen Thorius Ph.D. (Arizona State, 2009), Assistant Professor
- Leland, Christine H., Ed.D. (Boston University, 1986), Professor (Graduate School)
- Levy, Ofer, Ph.D. (Indiana University, 2009), Clinical Lecturer
- Little, Charles, Ed.D. (Indiana University, 1978), Clinical Associate Professor
- Magee, Paula, Ph.D. (City University of New York, 1992), Clinical Associate Professor
- Maxcy, Brendan, Ph.D. (University of Texas at Austin, 2004), Associate Professor
- Matern, Carol, M.S. (Butler University, 2002), Lecturer
- Medina, Monica, M.S. (Indiana University, 1979), Clinical Lecturer
- Morran, Keith, Ph.D. (Indiana University, 1980), Professor (Graduate School)
- Morrone, Anastasia, Ph.D. (University of Texas at Austin, 1992), Associate Professor (Graduate School -Associate)
- Murtadha, Khaula, Ph.D. (Miami University, 1994), Associate Professor (Graduate School-Associate)
- Mutegi, Jomo, Ph.D. (Florida State University, 1997), Associate Professor (Graduate School-Associate)
- Nguyen, Thu Suong, Ph.D. (University of Texas at Austin, 2006), Assistant Professor
- Ociepka, Anne, Ph.D. (Indiana University, 2003), Clinical Assistant Professor
- Pike, Gary, Ph.D. (Ohio State University, 1985), Associate Professor
- Plankis, Brian, Ph.D. (University of Houston, 2009), Assistant Professor
- Robison, Floyd F., Ph.D. (Indiana University, 1982), Associate Professor (Graduate School)
- Rogan, Patricia M., Ph.D. (University of Wisconsin-Madison, 1987), Professor (Graduate School)
- Rosario, Jose, Ph.D. (University of Wisconsin-Madison, 1976), Professor (Graduate School)
- Scribner, Samantha, Ph.D. (University of California-Riverside, 2006) Assistant Professor (Graduate School-Associate)
- Schuster, Dwight, Ph.D. (Penn State University, 2005), Assistant Professor (Graduate School-Associate)
- Seybold, Joy, Ph.D. (Purdue University, 2004), Clinical Assistant Professor
- Smith, Joshua, Ph.D. (University at Albany, 2002), Associate Professor (Graduate School-Associate)
- Stephenson, Jane, Ph.D. (George Washington University, 2008), Assistant Professor (Graduate School-Associate)
- Teemant, Annela, Ph.D (The Ohio State University, 1997), Associate Professor (Graduate School-Associate)
- Tillema, Erik, Ph.D (University of Georgia, 2007), Assistant Professor (Graduate School-Associate)
- Thompson, Chalmer, Ph.D. (University of Maryland, College Park, 1988), Associate Professor
- Weis, Patricia, M.S. (Indiana University, 1987), Clinical Lecturer
- Willey, Craig, Ph.D. (University of Illinois at Chicago, 2010), Assistant Professor
- Wood, Elizabeth, Ph.D. (University of Minnesota, 2005), Associate Professor, Public Scholar of Museums, Families, and Learning (Graduate School-Associate)
- Yoder, Gina, Ph.D. (Indiana University, 2002), Clinical Assistant Professor

Courses

Computer Education

EDUC-W 200 Using Computers in Education (1-3 cr.) Develops proficiency in computer applications and classroom software; teaches principles and specific ideas for appropriate, responsible, and ethical computer use to make teaching and learning more effective; promotes critical abilities, skills, and self-confidence for on-going professional development. (Required of all students pursuing teacher education.)

EDUC-W 201 Beginning Technology Skills (1 cr.) Develops proficiency in computer applications and classroom software; teaches principles and specific ideas for appropriate, responsible, and ethical computer use to make teaching and learning more effective; promotes critical abilities, skills, and self-confidence for on-going professional development.

EDUC-W 301 Integrating Technology into Teaching Part I (1 cr.) P: EDUC W201. This course is designed to provide the student with skills and experiences that will allow for effective and appropriate integration of technology into teaching and learning activities. In this course, the focus will be on reviewing current models of effective technology integration, surveying available technology in schools, and developing classroom lessons and activities.

EDUC-W 401 Integrating Technology into Teaching Part II (1 cr.) P: EDUC W201 and W301. This course is designed to provide the student with skills and experiences that will allow for effective and appropriate integration of technology into teaching and learning activities. Students will have the opportunity to implement and evaluate a technology-integrated classroom activity in an advanced field experience.

EDUC-W 450 Internship in Instructional Computing (1-6 cr.) Prerequisite EDUC W210 or permission of instructor. Complete semester long internship experience with a classroom teacher or other individual or group in an appropriate setting. Exchange regular reflections with the practicum supervisor. A corequisite for Computer Endorsement Cohort. (Enrollment in this course should be for one credit each semester for up to 6 credits for the Cohort.)

Education Psychology

EDUC-P 251 Educational Psychology for Elementary Teachers (1-4 cr.) The application of psychological concepts to school learning and teaching using the perspective of development from childhood through preadolescence. Special attention is devoted to the needs of the handicapped.

EDUC-P 490 Research in Educational Psychology (1-3 cr.)

Elementary Education

EDUC-E 201 Multicultural Education and Global Awareness (3 cr.) This course examines educator's and student's responsibility (ies) in a complex and interdependent world. Students will be guided to develop the skills, knowledge, and attitudes needed to live effectively in a world of limited resources, ethnic diversity, and cultural pluralism. Taught as a writing intensive course at IUPUI.

EDUC-E 325 Social Studies in the Elementary Schools (3 cr.) Emphasizes the development of objectives, teaching strategies, and evaluation procedures that facilitate the social learning of young children. Special attention given to concept learning, inquiry, decision making, and value analysis.

EDUC-E 328 Science in the Elementary Schools (3 cr.) The focus of this course will be on developing teacher competencies in writing performance objectives, question-asking, evaluating, and sequencing. These competencies will reveal themselves in the preparation and development of science activities and the teaching strategies involved in presenting those activities to elementary school children.

EDUC-E 340 Methods of Teaching Reading I (2-3 cr.) Describes the methods, materials, and techniques employed in elementary school developmental reading programs.

EDUC-E 341 Methods of Teaching Reading II (2-3 cr.) P: E339 and E340. Describes the methods, materials, and techniques employed in diagnosis and corrective instruction in elementary school reading programs.

EDUC-E 343 Math in the Elementary Schools (3 cr.) B-I Emphasizes the developmental nature of the

arithmetic process and its place as an effective tool in the experiences of the elementary school child.

EDUC-E 345 Language Arts and Mathematics for Young Children (6 cr.) Methods of developing language, cognition, reading and mathematical readiness; mathematical thinking through play, the arts, and directed experiences; design of curriculum and appropriate teaching strategies for young children.

EDUC-E 449 Trade Books and the Classroom Teacher (3 cr.) Emphasizes the use of trade books in language and reading in elementary classrooms.

EDUC-E 490 Research in Elementary Education (1-3 cr.) B-I Individual research.

EDUC-E 495 Workshop in Elementary Education (arr. cr.) For elementary school teachers. Gives 1 credit hour for each week of full-time work.

Foundations of Education

EDUC-F 110 Windows on Education (2-3 cr.) First year seminar to support incoming freshmen interested in teaching as a career. The course will facilitate students' efforts to navigate university life while making an informed decision regarding career choices. The F110 will serve as the First Year Seminar that may be linked to EDUC F200: Examining Self as a Teacher.

EDUC-F 200 Examining Self as a Teacher (3 cr.) Designed to help a student make a career decision, better conceptualize the kind of teacher the student wishes to become, and reconcile any preliminary concerns that may be hampering a personal examination of self as teacher. Students will design a major portion of their work.

EDUC-F 401 Topical Exploration in Education (0-3 cr.) Explores various topics of relevance to education, both in the United States and abroad.

EDUC-H 340 Education and American Culture (3 cr.) The present educational system: its social impact and future implications viewed in historical, philosophical, and sociological perspective.

EDUC-H 341 American Culture and Education (3 cr.) An opportunity to participate in a cooperative learning venture, as students investigate the sociological, psychological, historical, and philosophical foundations of American education, relating findings, observations, and experiences at professional development school sites with current practices and the future of education.

EDUC-H 440 Capstone Seminar in American Elementary Education (3 cr.) This course serves as a capstone seminar in foundations for senior elementary education students. It covers essential content knowledge, theory and themes in educational history, sociology, and philosophy. It also addresses key issues for understanding the professional world of teachers. It is linked to extensive field experience including student teaching.

Graduate Courses

EDUC-A 500 Introduction to Educational Leadership (3 cr.) This course entails an introduction to the history, philosophy, and social aspects of educational leadership. It reviews relevant theories of administration; the historical role of administration in schools; and the political, social, economic, and philosophical frameworks that have informed administrations.

EDUC-A 560 Political Perspectives of Education (3 cr.) This course focuses on theoretical and conceptual approaches useful in describing, explaining, and predicting political behavior related to schools. Forces for continuity and change at local, state, and federal levels are explored.

EDUC-A 590 Independent Study in Educational Leadership (1-3 cr.) Individual research or study with an educational leadership faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, A590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-A 608 Legal Perspectives on Education (3 cr.) This course entails an overview of the legal framework affecting the organization and administration of public schools, including church-state issues, pupil rights, staff-student relationships, conditions of employment, teacher organizations, tort liability, school finance, and desegregation.

EDUC-A 635 Public School Budgeting and Accounting (3 cr.) This course explores the normative and positive aspects of financing K-12 public education. After a rigorous introduction to the foundation of school finance theory, the course will investigate the concepts and practices of effective budget management.

EDUC-A 640 Planning Educational Facilities (3 cr.) This course focuses on the basic concepts in planning educational facilities as they relate to educational needs. It covers educational specifications for learning environments, and renovation and modernization of school buildings.

EDUC-A 695 Practicum in Educational Leadership (3 cr.) P: Consent of instructor. This course provides for closely supervised field experience in various areas of educational leadership.

EDUC-A 799 Doctoral Thesis in Educational Leadership (1-15 cr.) Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area. S/F grading.

EDUC-C 565 Introduction to College and University Administration (3 cr.) Types of institutions and their organization and roles on the nationwide scene; their principle administrative functions, including faculty personnel, business management, public relations; relationship of student personnel to other administrative positions.

EDUC-C 620 Pro Seminar in Higher Education (3 cr.) This course id designed to introduce you to and provide you with the opportunity to reflect upon higher education as: the location of your educational experiences; the environment in which you participate in professional practice; an organizational entity; the subject of scholarly research; and an economic, social, cultural, and political institution within American society.

EDUC-C 675 Supervised College Teaching (3 cr.) P: Master's degree. Opportunities for advanced graduate students to teach college classes under close supervision and to participate in a seminar on college teaching.

EDUC-C 690 Independent Study in Higher Education (1-3 cr.) P: Individual research or study with a higher education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term, specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, C690 should not be used for the study of material taught in a regularly scheduled course.

EDUC-C 750 Topical Seminar (1-6 cr.) P: Master's degree and consent of instructor. Current issues, developments, and concerns bearing on higher education. Specific topics vary each semester.

EDUC-C 788 Seminar in Research in Higher Education (3 cr.) Study of research design, techniques, and procedures applicable to research problems in administration.

EDUC-C 790 Research in Higher Education (1-12 cr.)

EDUC-C 799 Doctoral Thesis in Higher Education (1-15 cr.) Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area.

EDUC-E 506 Curriculum in Early Childhood Education (3 cr.) Planning the curriculum and selecting and evaluating learning experiences for children ages three through eight years with reference to relevant research. Organizing the classroom to provide maximum integration among experiences in different academic areas. A one-semester course; should be followed by E525 in the same year.

EDUC-E 555 Human Diversity in Education (3 cr.) Explores issues related to teaching in a complex and diverse culture. Through this class students will become familiar with a range of diversity issues that teachers confront in our society, including cognitive abilities, learning styles, and cultural, racial, and economic backgrounds of children.

EDUC-E 590 Independent Study or Research in Elementary Education (1-3 cr.)

EDUC-E 599 Master's Thesis in Elementary Education (3 cr.)

EDUC-G 502 Professional Orientation and Ethics (3 cr.) The psychological and educational foundations for counseling and guidance. Overview of counseling theories, practices, and organization.

EDUC-G 522 Counseling Techniques (3 cr.) P: G502 or equivalent. C: G523. Introduction to counseling theories and psychological processes involved in individual counseling.

EDUC-G 523 Laboratory in Counseling and Guidance (3 cr.) C: G522. Laboratory experiences in counseling, analysis of counseling interviews, role playing, and closely supervised counseling in the laboratory setting.

EDUC-G 524 Practicum in Counseling (1-3 cr.) P: G502, G522 and G523. Closely supervised counseling practice with clients in the department's counseling laboratories or in approved field sites in schools or agencies. Intensive supervision. Special application required.

EDUC-G 532 Introduction to Group Counseling (3 cr.) P: G502 (for M.S. students). Psychological and theoretical foundations of group counseling. Analysis of the dynamics of groups.

EDUC-G 550 Internship in Counseling (1-6 cr.) Counseling experience in actual school or agency situations. Under direction and supervision of the counselor/supervisor, students get practice in counseling, interviewing, in-service training, orientation procedures, and data collection.

EDUC-G 552 Career Counseling - Theory and Practice (3 cr.) An introduction to career development theory, psychological assessment for career planning, and sources and uses of career information in counseling.

EDUC-G 562 School Counseling (3 cr.) Foundations and contextual dimensions of school counseling. Knowledge and skills for the practice of school counseling, developmental counseling. Program development, implementation, and evaluation. Consultation, principles, practices, and applications of needs assessment. Provides an overall understanding of the organization of schools and the function of the counselor and counseling program.

EDUC-G 580 Topical Seminar in Counseling and Guidance (1-3 cr.) An intensive study of theory and research of selected topics in counseling.

EDUC-G 590 Research in Counseling and Guidance (1-3 cr.) P: Consent of instructor. Individual study or research with a counseling faculty member.

EDUC-G 598 Seminar on Professional Issues (3 cr.) An examination of professional issues and trends in the field of counseling and their implications for practice.

EDUC-G 799 Doctoral Thesis in Counseling Pscyhology (1-15 cr.) Credit may be earned over a period of several semesters. The thesis is to be an organized scientific contribution to the field of counseling psychology.

EDUC-G 901 Advanced Research (3 cr.) Open only to doctoral candidates who have been admitted to candidacy, i.e., have passed qualifying examinations and completed all program course work except the dissertation. Enrollment is restricted to six semesters. This course is not offered in summer sessions.

EDUC-H 590 Independent Study or Research in History, Philosophy and Comparative Education (1-3 cr.) P: Individual research or study with a History, Philosophy, and Comparative Education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, H590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-H 637 Topical Seminar (3 cr.) P: Consent of instructor. Critical examination of a problem area in history of education or comparative education that has been extensively studied by the instructor.

EDUC-H 799 Doctoral Thesis in the History or Philosophy of Education (1-15 cr.) Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area.

EDUC-J 500 Instruction in the Context of Curriculum (3 cr.) First course for the master's degree in curriculum and instruction. Extends concepts introduced in undergraduate teacher preparation. Topics include conceptions and definitions of curriculum and instruction and their impact on social contexts, learning theories, and schooling practices. Elementary and secondary contexts are studied.

EDUC-J 538 M.S. Practicum/Internship (1-6 cr.) Supervised practice in a school or other approved agency. Includes performance in such roles as curriculum development, program evaluation, action research, staff training and development, consultation, or program development. A comprehensive report involving a systematic analysis of the practicum activity must be completed.

EDUC-J 799 Doctoral Thesis in Curriculum and Instruction (1-12 cr.) Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area.

EDUC-K 505 Introduction to Special Education for Graduate Students (3 cr.) P: Graduate standing or consent of instructor. Basic special education principles for graduate students with no previous course work in special education. Students cannot receive credit for both K205 and K505.

EDUC-K 525 Survey of Mild Handicaps (3 cr.) An advanced survey of the literature relating to mild handicaps, including historical foundations, definitions, and current issues facing workers in the field.

EDUC-K 541 Transition Across the Life Span (3 cr.) In this course, issues and strategies related to the array of transitions students with disabilities need to make as they progress from pre-school to public school and on to adult life are discussed. The course covers laws, policies and guidelines governing service provision across age groups and levels of instruction, and it addresses strategies for program planning, interagency cooperation and collaboration, and resource utilization.

EDUC-K 548 Families, School and Society (3 cr.) The course focuses on the family as a system and discusses the impact of disabilities on the daily lives of family members. Historical, legal and ethical perspectives on family involvement and empowerment are explored. Approaches for providing services to families with members who are developmentally disabled, chronically ill, at risk or who have other types of impairments also are presented.

EDUC-K 553 Classroom Management and Behavior Support (3 cr.) The course provides basic knowledge and skills for (1) developing and maintaining a productive and proactive classroom environment, (2) teaching students discipline, self-control, conflict resolution and other self-management skills, (3) managing and preventing crisis behavior, and (4) developing and implementing behavior intervention and management plans in classroom programs and in cooperation with parents, teachers, and other personnel.

EDUC-K 590 Independent Study or Research in Special Education (1-3 cr.) P: Individual research or study with a Special Education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, K590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-K 595 Practicum in Special Education (1-6 cr.) P: Consent of instructor. Provides for closely supervised field experience in various areas of special education.

EDUC-K 599 Master's Thesis in Special Education (3 cr.)

EDUC-K 799 Doctoral Thesis in Special Education (1-15 cr.) Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area.

EDUC-L 500 Instructional Issues in Language Learning (3 cr.) This course reviews the principles and the current instructional issues related to learning a first or a second language. Besides the general issues of effects of the environment, developmental stages, and basic instructional methodologies, relationships among reading education, English education, and second language education will be explored.

EDUC-L 502 Socio-Psycholinguistic Applications to Reading Instruction (3 cr.) Explores the linguistic and cognitive dimensions of language as they relate to the teaching of reading. Discusses relationships among the systems of language and among the various expressions of language. Always includes topics on pragmatics, semantics, grammar, and dialect.

EDUC-L 505 Secondary Language Literacy Instruction (3 cr.)

EDUC-L 524 Language Issues in Bilingual and Multicultural Education (3 cr.) A survey of language education issues related to the linguistic abilities and educational needs of students requiring bilingual or bidialectal instruction. Topics discussed include language acquisition, language pedagogy, program models, cultural influences, teacher training, and research directions.

EDUC-L 525 Practicum in Literature, Culture and Language Education (1-4 cr.) Supervised application of language and literacy teaching methods. Special emphasis on setting up effective learning environments, selecting materials, designing instruction, monitoring student growth, adjusting instruction based upon student performance, and communicating with other professionals.

EDUC-L 559 Trade Books in Elementary Classrooms (3 cr.) Emphasizes the use of trade books in language and reading in elementary classrooms.

EDUC-L 590 Independent Study or Research in Literature, Culture and Language Education (1-3 cr.) P: Individual research or study with a Language Education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, L590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-L 599 Master's Thesis in Literature, Culture and Language Education (3 cr.) To be used as the master's thesis in language education or the early inquiry experience as part of the doctoral program. The thesis or inquiry experience may be an organized study or a systematic and comprehensive analysis of theory and practice in a specific area.

EDUC-L 650 Internship in Literature, Culture and Language Education (1-3 cr.) Provides directed and supervised experience for advanced graduate students in the field of language education.

EDUC-L 795 Dissertation Proposal Preparation (1-3 cr.) P: Authorization required. This course is for the development of a dissertation proposal in language education. Students must have the consent of a dissertation director or prospective director to enroll. Students should be finished or nearly finished with program course work.

EDUC-L 799 Doctoral Thesis in Literature, Culture and Language Education (1-15 cr.) P: Authorization required. Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area.

EDUC-M 500 Integrated Professional Seminar (0-6 cr.) This seminar is linked to courses and field experiences included in the Transition to Teaching (T2T) program. It will allow for collaboration among school-based mentors, university-based instructors, and T2T candidates in offering academic content appropriate to the program. The seminar will provide a technology-rich and performance-based professional experience. This course has a fee attached.

EDUC-M 525 Practicum in Junior High School and Middle School Education (1-6 cr.)

EDUC-M 550 Practicum (1-16 cr.) Teaching or experience in an accredited school, normally in Indiana. Credit will be commensurate with time spent in the instructional setting. S/F grading.

EDUC-N 590 Independent Study or Research in Mathematics Education (1-3 cr.) Individual research or study with a Mathematics Education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, N590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-P 507 Assessment in Schools (3 cr.) Introductory assessment course for teachers and school administrators. Topics include principles of assessment, formal and informal classroom assessment instruments and methods, formative and summative assessment, interpretation and use of standardized test results, social and political issues in assessment, use of student data bases in schools.

EDUC-P 510 Psychology in Teaching (2-3 cr.) Basic study of psychological concepts and phenomena in teaching. An analysis of representative problems and of the teacher's assumptions about human behavior and its development. Intended for current and prospective classroom teachers who are working toward a master's degree.

EDUC-P 514 Life Span Development: Birth to Death (3 cr.) A survey course of human development from infancy through old age, emphasizing the life span perspective of development. Classical stage theorists, current popular conceptions, major research findings, and educational implications for all life stages from birth to death.

EDUC-P 516 Adolescent Development (3 cr.) Individual research or study with an Educational Psychology faculty member, arranged in advance of Factors of growth and development in adolescents, including physical, psychological, social, cognitive, and emotional, with particular reference to relevance for the practitioner and potential for future research. Examines contemporary issues, such as drug and alcohol abuse, sexuality, vandalism, ethnic and cultural issues, and problems of handicapped youths.

EDUC-P 590 Independent Study or Research in Educational Pscyhology (1-3 cr.) Individual research or study with an Educational Psychology faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, P590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-P 799 Doctoral Thesis in Educational Psychology (1-12 cr.) Credit may be earned over a period of several semesters. The thesis may be an organized scientific contribution or a comprehensive analysis of theory and practice in a specific area.

EDUC-Q 590 Independent Study or Research in Science Education (1-3 cr.) P: Individual research or study with a Science Education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, Q590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-Q 690 Advanced Research in Science Education (1-6 cr.) Individual research participation in an

attempt to determine what science process and content can be learned by whom and how science learning can be facilitated through teacher training or improved instructional design. Open only to advanced graduate students. Credit may be extended over several semesters.

EDUC-S 505 The Junior High and Middle School (3 cr.) Role of the junior high school and middle school in American education. Total program: philosophy, functions, curriculum, guidance, activities, personnel, and administration.

EDUC-S 509 Middle School STEM Methods (3 cr.)

EDUC-S 555 Diversity and the Communities of All Learners (1-3 cr.) This class explores issues related to teaching all learners in increasingly complex secondary schools. It draws on anthropology to understand diversity across culture, sociology to examine the social complexities of pluralistic societies, special education to address the individualize student needs. The course emphasizes educational practice and communities of learners. (Offered on both Bloomington and Indianapolis campuses.)

EDUC-S 590 Independent Study or Research in Secondary Education (1-3 cr.) P: ndividual research or study with a secondary education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, S590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-S 599 Master's Thesis in Secondary Education (3 cr.)

EDUC-T 531 Organizational Change in Culturally and Linguistically Diverse Schools (3 cr.) Organizational development in linguistically and culturally diverse school sites: legal basis; administrative strategies; staff development models; use of community resources; and formative evaluation techniques for organizational development in school contexts.

EDUC-T 550 Cultural/Community Forces and the Schools (3 cr.) Promotes modification of instructional strategies within diverse educational settings by providing opportunities to analyze community forces and cultures through cultural orientation workshops and seminars, culturally focused readings, direct residential participation in community-related activities, and site-based culture/ strategies reports.

EDUC-T 590 Independent Study or Research in Urban Multicultural Education (1-3 cr.) Individual research or study with an Urban Multicultural Education faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student product(s). Ordinarily, T590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-U 548 Student Development Theory and Research (3 cr.) Overview of the social, psychological, and student affairs literature related to college student development. Relationships between student characteristics and college outcomes. Applications of psychosocial, cognitive developmental, and person-environment interaction theories to student affairs work are considered in depth.

EDUC-U 549 Environmental Theory and Assessment in Higher Education (3 cr.) Selected environmental theories are examined (e.g., human aggregate, physical/ architectural, campus ecology, cultural, perceptual). Various environmental assessment approaches for use in postsecondary settings are reviewed. Strategies for humanizing campus environments are examined, with a particular emphasis on members of historically underrepresented groups.

EDUC-U 550 Topical Seminar in College Personnel (1-3 cr.) P: Appointment to off-campus internship. An investigation of issues, functions, and concerns that relate to higher education and student affairs administration, current issues in college personnel, and international student concerns.

EDUC-U 590 Internship in Student Personnel (1-4 cr.) P: Appointment to off-campus internship. Relates theory to practice through supervised experience in student personnel.

EDUC-U 590 Independent Study or Research in College Student Personnel Adminstration (1-3 cr.)

EDUC-U 599 MA Thesis in College Student Personnel Administration (3 cr.)

EDUC-W 505 Professional Development Workshop (1-3 cr.)

EDUC-W 520 Instructional Technology (3 cr.) An exploration of computer-related technology, computer peripherals, and their applications across the curriculum. Technical issues and applications will be studied through research and projects using a variety of software and hardware.

EDUC-W 531 Computers in Education (3 cr.) A survey of computer technology as applied to instructional processes. Students will be introduced to a variety of computer systems and to the ways computers are used in instruction and classroom management.

EDUC-W 540 Computers in the Curriculum (3 cr.) Focuses on developing instructional techniques. Students will address instructional design issues, instructional strategies, and planning techniques. Also, students will explore modern trends in using educational technology and will examine issues of integrating computer technology into the classroom.

EDUC-W 566 Internship in Integration in Educational Computing (6 cr.)

EDUC-W 590 Individual Research in Computer Education (1-6 cr.) Individual study or research for students exploring issues in educational technology. To be arranged with a technology faculty member in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student product(s). Ordinarily W590 will not be used for the study of material

taught in a regularly scheduled course. (This course is offered within IU system)

EDUC-Y 520 Strategies for Educational Inquiry (3 cr.) Introductory course intended to orient beginning graduate students to the conduct of social science inquiry in general and educational inquiry in particular and to acquaint them with key terms and generally accepted procedures in qualitative and quantitative inquiry.

EDUC-Y 535 Evaluation Models and Techniques (3 cr.) P: Y520 or equivalent. An overview of evaluation as an inquiry process, including a discussion of the history of evaluation and the state of the art. Frameworks and models for planning evaluation studies are discussed and applications are demonstrated. Criteria for evaluating studies, steps for writing evaluation proposals and reports, and techniques for the collection of information are discussed. This course is similar to J660. Credit may not be earned in both courses.

EDUC-Y 590 Independent Study or Research in Inquiry Methodology (1-3 cr.) Individual research or study with an Inquiry faculty member, arranged in advance of registration. A one- or two-page written proposal should be submitted to the instructor during the first week of the term specifying the scope of the project, project activities, meeting times, completion date, and student products. Ordinarily, Y590 should not be used for the study of material taught in a regularly scheduled course.

EDUC-Y 611 Qualitative Inquiry in Education (3 cr.) P: Y520, H510 or consent of instructor. Examination of qualitative approaches to educational inquiry e.g., case study, naturalistic inquiry, educational anthropology, educational connoisseurship, and criticism. Exploration of methods for collecting and analyzing qualitative data, criteria for field studies, and approaches to writing up field studies.

Language Education

EDUC-L 400 Instructional Issues in Language Education (3 cr.) Reviews the principles and current instructional issues related to learning a first or a second language. Besides the general issues of effects of the environment, developmental stages, and basic instructional methodologies, relationships among reading education, English education, and second language education will be explored.

EDUC-L 436 Methods and Materials for Teaching ESL (3 cr.)

EDUC-L 441 Bilingual Education: Introduction (3 cr.) Introduction to the development of bilingual/ bicultural education in the United States and its antecedents, rationale, and theories. Comparison of existing bilingual/ bicultural programs.

EDUC-L 442 Methods for Bilingual Teaching (3 cr.) P: L441. Methods of teaching the content areas in a bilingual setting, including techniques of linguistic analysis.

EDUC-L 490 Research in Language Education (1-3 cr.) Individual research and study in language education.

Mathematics Education

EDUC-N 102 Teaching and Learning Elementary School Mathematics I (3 cr.) Helps preservice teachers develop an understanding of the mathematics content and pedagogy relevant for a successful elementary school teacher. Focus is on content and methods that are consistent with recent recommendations about mathematics learning and teaching, and the state of Indiana academic standards. Pedagogical methods address number theory, data and chance, and algebraic thinking.

EDUC-N 103 Teaching and Learning Elementary School Mathematics II (3 cr.) To develop an understanding of mathematics content and pedagogy relevant to be a successful elementary school teacher. Focus is on content and methods that are consistent with recent recommendations about mathematics learning and teaching and the Indiana Academic Standards. Pedagogical methods address geometry, measurement and algebra.

EDUC-N 343 Math in the Elementary School (1-6 cr.) Emphasizes the developmental nature of mathematical ideas and processes and the role of mathematics in the elementary school curriculum. Public School participation required.

Methods

EDUC-M 101 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 201 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience for sophomores. Grade: S or F.

EDUC-M 301 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience for juniors. Grade: S or F.

EDUC-M 303 Laboratory/Field Experiences: Junior High/Middle School (0-3 cr.) B-I Laboratory or field experiences at the junior high or middle school level. (May be repeated.) Corequisite with M314, M330, or M336. Grade: S or F.

EDUC-M 304 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 305 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 306 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 307 Laboratory/Field Experience (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 317 Student Commonality and Diversity (1-3 cr.) Examines the implications of diversity and the value of cultural sensitivity in education. Students will become familiar with differences in learning and communication styles on the basis of race, gender, ethnicity, religion, socio-economic class, and language; and become familiar with multicultural education in practice and its effects on the curriculum, classroom, and school structure.

EDUC-M 320 Diversity and Learning: Teaching Every Child (6 cr.) This course integrates information from educational psychology and multicultural and special education to prepare students to teach children in their early childhood and middle childhood years. The content includes childhood development, learning theory, motivation, and assessment. Students reflect critically on

personal assumptions and develop attitudes and beliefs supportive of multicultural education and inclusion.

EDUC-M 322 Diversity and Learning: Reaching Every Adolescent (6 cr.) This course integrates information from educational psychology and multicultural and special education to prepare students to teach adolescents and young adults. The content includes adolescent development, learning theory, motivation, and assessment. Students reflect critically on personal assumptions and develop attitudes and beliefs supportive of multicultural education and inclusion.

EDUC-M 324 Teaching About the Arts (1-3 cr.) Introduction to the importance of the arts in elementary school curriculum. Students are given a foundation of methods and materials in art and music that will enable them to integrate the arts into the general curriculum, supplement art lessons given by school art specialists, and encourage student discussion and understanding of art and music in the world today.

EDUC-M 330 Foundations of Art Education and Methods I (3 cr.) P: H340, P254, M300 and 15 credit hours of studio art courses. An introduction to art education theory and related social issues. Supervised art teaching in elementary schools is an important part of this course.

EDUC-M 371 Foundations of Art Education (4 cr.) Historical, sociological, and philosophical foundations of art education; curriculum development; individualized and interdisciplinary learning; instructing K-12 audiences; K-12 school organization; and general processes and practices of teaching art, including the creative problem-solving process, along with interpreting, understanding, and judging art. School and museum field experiences included.

EDUC-M 400 Laboratory/ Field Experience (0-3 cr.) Laboratory or field Experience.

EDUC-M 401 Laboratory/Field Experience for Seniors (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 402 Laboratory/Field Experience for Seniors (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 403 Laboratory/Field Experience (0-3 cr.) Laboratory or field experiences at the high school level. (May be repeated.) Corequisite with the required special methods course. Grade: S or F.

EDUC-M 404 Laboratory/Field Experience for Seniors (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 405 Laboratory/Field Experience for Seniors (0-3 cr.) Laboratory or field experience. Grade: S or F.

EDUC-M 408 Laboratory/ Field Experience (0-3 cr.) Laboratory or field Experience.

EDUC-M 425 Student Teaching: Elementary (1-16 cr.) Full-time supervised student teaching in grades 1-6 for a minimum of 10 weeks in an elementary school accredited by the state of Indiana, or in an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

EDUC-M 442 Teaching Secondary School Social Studies (4 cr.) Develops concepts and theories from social science, humanities, and education into practices of successful social studies instruction. Integrates social issues and reflective thinking skills into the social studies curriculum. Emphasis on curriculum development skills and on building a repertoire of teaching strategies appropriate for middle/secondary school learners. Includes micro-teaching laboratory.

EDUC-M 445 Methods of Teaching Foreign Languages (1-4 cr.) Development and practice of skills and techniques for teaching foreign languages, selecting content and materials, and evaluating student and teacher performance. Micro-teaching laboratory included. This course should be taken during the semester immediately preceding student teaching. (Sem. I only)

EDUC-M 446 Methods of Teaching Senior High/Junior High/Middle School Science (1-5 cr.) P: 35 credit hours of science. Designed for students who plan to teach biology, chemistry, earth science, general science, or physics in the junior high/middle school or secondary school. Assignments and credit will be differentiated for graduate students.

EDUC-M 451 Student Teaching: Junior High/Middle School (1-16 cr.) Full-time supervised student teaching for a minimum of 10 weeks in a junior high or middle school accredited by the state of Indiana, or in an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

EDUC-M 452 Methods of Teaching English in the Senior High/Junior High/Middle School (1-5 cr.) Methods, techniques, content, and materials applicable to the teaching of English in secondary schools, junior high schools, and middle schools. Experiences provided to assess ongoing programs in public schools and to study materials appropriate for these programs.

EDUC-M 456 Methods of Teaching Physical Education (3 cr.) P: M314 General Methods. Development and organization of teaching materials for various teaching styles found in the elementary and secondary public schools. Includes class management concepts and demonstration of teaching skills in laboratory sessions.

EDUC-M 457 Methods of Teaching Senior High/Junior High/Middle School Mathematics (2-4 cr.) P: 30 credit hours of mathematics. Study of methodology, heuristics of problem solving, curriculum design, instructional computing, professional affiliations, and teaching of daily lessons in the domain of secondary and/or junior high/ middle school mathematics. (Sem. I only)

EDUC-M 469 Content Area Literacy (1-3 cr.) Focuses on middle, junior, and senior high school. Curriculum, methods, and materials for teaching students to read and learn more effectively in all content areas.

EDUC-M 470 Practicum (3-8 cr.) Instructional experience under the direction of an identified supervising teacher, with university-provided supervision in the endorsement or minor area, and at the level appropriate to the area. Placement will be in an accredited school within the state of Indiana unless the integral program includes experience in an approved and accredited out-of-state site. The

practicum may be full- or part-time, but in every instance the amount of credit granted will be commensurate with the amount of time spent in the instructional setting. Grade: S or F.

EDUC-M 472 Teaching Art in the Elementary School (3 cr.) P: M371, HER C311. Develops understanding and appreciation of teaching, with emphasis on teaching in the elementary schools. Includes curriculum and lesson planning, organization of materials and ideas, and techniques of classroom management. To be taken concurrently with M301, which encompasses off-campus experiences in the elementary schools.

EDUC-M 473 Teaching Art in the Secondary Schools (3 cr.) P: M371, HER C311. Develops understanding and appreciation of teaching, with emphasis on teaching art in the secondary schools. Includes advanced studies of curriculum and lesson planning, classroom organization, and management techniques. Must be taken concurrently with M401, which encompasses Herron Saturday School experience.

EDUC-M 480 Student Teaching in the Secondary School (1-16 cr.) Full-time supervised student teaching for a minimum of 10 weeks in a junior high/middle school or senior high school accredited by the state of Indiana, or in an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-approved supervision. Grade: S or F.

EDUC-M 482 Student Teaching: All Grades (1-16 cr.) Full-time supervised student teaching in the areas of visual arts, music, physical education, special education, or school library/media services for a minimum of 10 weeks at an elementary school, junior high/middle school, and/or senior high school accredited by the state of Indiana, or at an equivalent approved school out of state. The experience is directed by a qualified supervising teacher and has university-provided supervision. Grade: S or F.

Reading Education

EDUC-X 400 Diagnostic Teaching of Reading in the Classroom (3 cr.) Diagnosis of reading difficulties and solution to problems through research, conference, and practice in the use of materials and equipment.

EDUC-X 401 Critical Reading in the Content Area (1-3 cr.) Aids elementary and secondary teachers in the development of instructional strategies that assist students in the comprehension, critical analysis, and integration of ideas presented in print material of various subject matter areas.

EDUC-X 425 Practicum in Reading (1-6 cr.) Students will work in selected elementary and secondary classrooms diagnosing and developing reading competence. Prerequisites: X400 or E339-41 or E331-32; or consent of instructor.

EDUC-X 460 Books for Reading Instruction (3 cr.) Examines use of trade books and non-text materials for teaching language arts and reading K-8. Special sections may focus on specific student populations. Section emphasis announced each semester.

EDUC-X 470 Psycholinguistics for Teachers of Reading (1-3 cr.) Explores the linguistic and cognitive dimensions of language. Discusses relationships among the systems of language and among the various expressions of language. Always includes topics on semantics, grammar, and dialect.

EDUC-X 490 Research in Language Education (1-6 cr.) Individual Research.

Science Education

EDUC-Q 200 Introduction to Scientific Inquiry (1-3 cr.) Provides the elementary education major with background in the science process skills needed to complete required science courses.

EDUC-Q 490 Research in Science Education (1-6 cr.) Individual research and study in science education.

Secondary Education

EDUC-P 475 Adolescent Development and Classroom Management (3 cr.) Focuses on discipline approaches appropriate for middle and high school through an understanding of adolescents. Analysis of cognitive and moral development, puberty, environmental and cultural issues, family and peer relationships, identity formation, and social and personal problems. Provides tools to diagnose students' behaviors and to establish learning climate.

EDUC-S 405 The Middle and Junior High School (3 cr.) The course provides future middle and junior high teachers with an understanding of how early adolescent students and school structures impact curriculum, instruction and classroom management decisions. The course meets the middle/junior high school endorsement requirement for elementary school majors.

EDUC-S 420 Teaching and Learning in the Middle School (3 cr.) Middle schools operate on unique philosophical and organizational foundations. This course will explore the design of middle schools and the ways teachers work to meet the needs of a diverse range of learners including those with specific needs. Preservice teachers will develop the skills needed to provide challenging learning opportunities to young adolescent learners.

EDUC-S 430 Teaching and Learning in the High School (3 cr.) This course for secondary teachers explores curriculum planning for conceptual learning that is developmentally appropriate for adolescents and young adults. It includes the topics of high school organization and reform, assessment, critical thinking, urban school settings, risk behaviors, identity development, and importance of the larger community context.

EDUC-S 490 Research in Secondary Education (1-3 cr.) Individual research.

Special Education

EDUC-K 201 Schools, Society, and Exceptionality (1-3 cr.) B-I This course is designed to provide an overview of the many complex issues related to special education policy and practice in the United States. Content will include an introduction to the definitions and characteristics of various exceptionalities; an exploration of the options available for instructing exceptional children in public school settings; and discussion of the many important topics and issues related to planning and implementing special education in American public schools.

EDUC-K 306 Teaching Students with Special Needs in Secondary Classrooms (3 cr.) This course includes an overview of the skills and knowledge necessary for effective instruction of students with disabilities in inclusive secondary programs.

EDUC-K 307 Methods for Teaching Students with Special Needs (3 cr.) This course prepares future teachers to work with students with diverse abilities in inclusive settings. Participants learn to use learning modalities, varied rates and complexity of instruction, and making use of individual interests and preferences. Additionally, differentiating and/or individualizing instruction for all learners and developing classroom management skills are emphasized.

EDUC-K 410 Seminar 4: Assistive Technology in Education (3 cr.) This seminar assists students in developing an understanding of assistive technology and its role in assisting individuals with disabilities in all areas of life, including education, employment, housing, recreation, and transportation.

EDUC-K 420 Assistive Technology in Special Education (3 cr.) Develops a basic understanding of Assistive Technology and its potential impact on the daily lives of individuals with disabilities. Explores the options available for children and youth as well as the legislation that regulates its use.

EDUC-K 426 Seminar 4: Assessment and Instruction (3 cr.) This seminar teaches students how to gain knowledge of formal and informal assessment techniques, how to link assessment to curriculum and instruction, and how to effectively choose, construct, deliver, and evaluate curriculum and instruction to students with diverse learning needs.

EDUC-K 441 Seminar 6: Transition Across the Lifespan (3 cr.) This course provides an in-depth discussion of issues and strategies related to transitions from pre-school through elementary, middle, and high school, and into adulthood. Relevant laws, planning, processes, strategies for interagency collaboration, and resources will be highlighted.

EDUC-K 448 Seminar 1: Individuals and Families in School and Society (3 cr.) The purpose of this seminar is to learn the perspectives of individuals with disabilities and their families regarding the impact of disabilities in their daily lives. A life-span approach will be used to discuss issues related to birth and early childhood, school-age years, and adulthood. Additional topics include labeling, legal issues, person-centered planning, and academic, social/emotional, behavioral, and environmental issues.

EDUC-K 453 Seminar 2: Classroom Management and Behavior Support (3 cr.) The purpose of this course is to provide students with basic knowledge and skills for (1) developing and maintaining proactive classroom environments; (2) teaching children social problem-solving and self-control skills; (3) managing and preventing school-based crisis behaviors; and (4) working with parents and other professionals.

EDUC-K 465 Seminar 3: Collaboration and Service Delivery (3 cr.) The purposes of this seminar are to explore service delivery options currently available in special education and to assist students in building their collaborative skills, including effective communication and consultation skills.

EDUC-K 490 Research in Special Education (1-3 cr.) B-I Individual research and study in special education.

EDUC-K 495 Laboratory/Field Experiences in Special Education (arr.: max. 9 cr.) P: Consent of instructor. This course provides the student a field-based, supervised experience with individuals with severe handicaps. It allows the opportunity to interact within school/work/community settings on a daily basis (three hours a day, five days a week). Specific assignments, which are mutually agreed upon among student, cooperating teacher, and practicum supervisor, are also required.

Purdue School of Engineering and Technology

Welcome to the Purdue School of Engineering and Technology!

The Purdue School of Engineering and Technology offers undergraduate and graduate programs that prepare students for careers in industry. The school is one of the largest degree-granting schools at IUPUI, with an enrollment of approximately 2,500 students. All degrees are awarded by Purdue University, with the exception of those awarded through the Department of Music & Arts Technology.

History

The School of Engineering and Technology was formed in 1972 and is the successor to Purdue University programs that began in Indianapolis in 1940. The first Purdue University courses in the city were defense training courses sponsored by the U.S. Office of Education. After World War II, the curriculum was changed from a certificate to a diploma program. Three technical-institute programs were established: drafting and mechanical technology, electrical technology, and supervision and production technology. Ten students graduated at the first commencement in 1947. Freshman engineering courses were added in 1948; the Bachelor of Science in Engineering degree was first offered in 1969.

Today the school offers undergraduate and graduate programs leading to Purdue University degrees. Several of the programs have transfer and articulation agreements with a few Indiana colleges and universities as well as with international institutions abroad.

Overview

Vision and Mission of the School

The vision of the Purdue School of Engineering and Technology at IUPUI is to be one of the best urban university leaders in the disciplines of engineering and technology.

The mission of the Purdue School of Engineering and Technology at IUPUI is to provide for our constituents:
• high quality, well-rounded, and relevant educational experiences in an urban environment;
• opportunities to develop technical proficiency, leadership, and lifelong learning skills;
• outreach and accessibility to the broader community through civic engagement;
• excellence in the pursuit of basic and applied research, scholarship, and creative activity; and
• activities that support the intellectual and economic development of business, industry, government, and community stakeholders.

The current strategic plan for the School of Engineering and Technology is located on its Web site: www.engr.iupui.edu/.

Update on 11/17/2011

Accreditation & Licenses

- Computer Engineering Technology
- Construction Engineering Management Technology
- Electrical Engineering Technology
- Mechanical Engineering Technology
- Computer & Information Technology
- Computer Graphics Technology
- Mechanical Engineering
- Electrical Engineering
- Computer Engineering
- Biomedical Engineering

Requirements

Graduate Admission Requirements

Students who hold a baccalaureate degree from an accredited institution with a grade point average (GPA) of 3.00 on a 4.00-point scale, or with an overall “B” grade equivalent may be considered for admission to graduate degree programs in the School of Engineering and Technology. International applicants must submit official test score reports from the Educational Testing Service (ETS) for the Test of English as a Foreign Language (TOEFL) and the Graduate Record Exam (GRE) to be considered for admission.

Undergraduate Admissions

Admission is based on evidence presented by individual applicants to show that they are capable of profiting from and contributing to one of the academic programs of the school. Inquiries about admission to engineering and technology programs, as well as requests for admission applications, should be addressed to the IUPUI Office of Admissions, 420 University Boulevard, Campus Center 255, Indianapolis, IN 46202-5140.

Undergraduate Engineering Admission Requirements

In determining the qualifications of an applicant to undergraduate engineering programs, the Office of Admissions uses the following criteria:

- Graduation from a high school accredited by a state Department of Public Instruction.
- The extent to which the student meets or exceeds the following minimum requirements:
- High School GPA of 3.0.

- Completion of Core 40 including chemistry and 4 years of math including trigonometry or pre-calculus.
- Minimum SAT scores of 550 math and 480 critical reading or ACT scores of 24 math and 20 verbal.

- All applicants who have not completed a full year of college work are required to take the College Entrance Examination Board (CECEB), Scholastic Assessment Test (SAT), or American College Test (ACT). For admission to the engineering programs, minimum SAT scores of 480 verbal (critical reading) and 550 mathematics or minimum ACT scores of 20 English and 23 mathematics are required.
- Because of a limitation on the total number of applicants that may be accepted as first-year students, out-of-state admissions may close at any time. When it becomes necessary to limit the number of Indiana residents accepted for a specific program, students will be offered admission to an alternate program or admission to the desired program for a subsequent semester.

Undergraduate Technology Admission Requirements

In determining the qualifications of an applicant to undergraduate technology programs, the Office of Admissions uses the following criteria:

- Graduation from a high school accredited by a state Department of Public Instruction.
- The extent to which the student meets or exceeds the following minimum requirements:
- Complete Academic Honors Diploma, Core 40, or equivalent, with
- High School GPA of 3.0 or higher, OR
- Minimum SAT scores of 500 math and 450 verbal/critical reading, or equivalent ACT scores of 21 math and 19 verbal.

- All applicants who have not completed a full year of college work are required to take the College Entrance Examination Board (CECEB), Scholastic Assessment Test (SAT), or American College Test (ACT).
- Because of a limitation on the total number of applicants that may be accepted as first-year students, out-of-state admissions may close at any time. When it becomes necessary to limit the number of Indiana residents accepted for a specific program, students will be offered admission to an alternate program or admission to the desired program for a subsequent semester.

Transfer Students

Transfers

From IUPUI Schools, Indiana University Campuses, or Purdue University Campuses

Students wishing to transfer from these schools must have a minimum cumulative grade point average of 2.0 on a 4.0 scale and be in good academic and disciplinary standing. The required minimum cumulative grade point average may be higher in some programs. Students must follow the procedures listed below. After reviewing the transfer request and supporting materials, the school will inform students in writing of the acceptance or rejection of the application.

- IUPUI students or students in the IU system wishing to transfer into the School of Engineering and Technology must apply directly to their intended department. Transfers from the School of Engineering and Technology to another IUPUI school must be processed by the transfer school's recorder.
- A Purdue University student from another campus must complete an official undergraduate application through the IUPUI Office of Admissions.
- If a student seeking admission to the School of Engineering and Technology previously has been dismissed for academic reasons, he or she must file a petition for readmission that will be reviewed by the Committee on Readmissions. The petition may be obtained from the New Student Academic Advisint Center, School of Engineering and Technology, 723 W. Michigan Street, Room 174, Indianapolis, IN 46202.

From Other Colleges and Universities

Applicants transferring from colleges and universities other than Indiana University or Purdue University must fulfill the following requirements:

- An IUPUI application for undergraduate admission and a copy of high school records must be submitted to the Office of Admissions.
- An official transcript of all course work done, from all institutions previously attended, also must be forwarded to the Office of Admissions.
- For admission to an engineering or technology program, residents of Indiana must have a cumulative grade point average of at least 2.0 on a 4.0 scale, and out-of-state applicants must have an average of at least 2.5, for all courses previously taken at a recognized college or university. Transfer credits are evaluated by the Office of Admissions and distributed by the Office for Academic Programs in coordination with the department in which the student enrolls.
- There is a residency requirement to receive a degree: transfer students must complete a program of study that includes at least 32 credit hours for a bachelor's degree and at least 15 credit hours for an associate degree in the School of Engineering and Technology. For the associate degree, at least 6 out of the 15 credits are expected to be in the major. For the bachelor's degree, at least 12 out of the 32 credits are expected to be in the major at the junior level or higher.
- Individual academic programs may require that transfer students complete specific courses prior to admission with advanced standing.
- Transfer students must be in good academic and disciplinary standing at the college(s) previously attended. Students who have been dismissed for academic reasons by another college or university, or who have less than a 2.0 grade point average, must file a petition for readmission that will be reviewed by the committee on readmissions. The petition form may be obtained from the New Student Academic Advising Center, 723 W. Michigan Street, Room 174, Indianapolis, IN 46202.

Transfer students may receive credit in the School of Engineering and Technology for successfully completed course work of equivalent amount and character from another accredited college. However, if a student changes to a

different course of study in the process of transferring from another college or university, credits for certain courses may not be applicable toward requirements in the new curriculum.

Transfer credit is not granted for work done at institutions that are not fully approved by a regional accrediting association of secondary schools and colleges. In addition to regional association approval, certain programs may require accreditation by professional organizations and/or societies before credit will be considered for transfer. Credit will not be transferred from any institution whose regional accreditation designation is A/V (Associate/Vocational-Technical).

The only exception is when agreements exist that specify courses or blocks of credit that will transfer into specific Purdue University degree programs.
Graduates of unaccredited institutions, proprietary institutions, or institutions accredited only as occupational training institutions are encouraged to review their academic plans carefully before seeking advanced credit. All prospective transfer students are encouraged to write or visit the school for further information about their opportunities.

To Other Indiana University Campuses

Indiana University credits transferred from one campus of Indiana University to another will be evaluated and accepted in terms at least as favorable as credits transferred from other accredited institutions in the United States. No review of the credits will be undertaken except on good-faith terms, using the same criteria as those used in evaluating external credits.

Special Expenses

Fees and Payment Procedures

University Fees

All fees are due and payable by the due date on the student's schedule confirmation and are subject to change without notice by action of the Trustees of Indiana University. A complete listing of all fees is published for each term in the class schedule. Extra laboratory fees may be charged when appropriate and when laboratory instruction is required.

Residency Status

The criteria for establishing in-state residency and thus qualifying for in-state fee rates are very strict. Inquiry about establishing resident status for fee purposes should be made to the registrar, who is the proper source of this information. Contact the Office of the Registrar, Campus Center, Room 250, 420 N. University Boulevard, IUPUI, Indianapolis, IN 46202; phone (317) 274-1519 or visit http://registrar.iupui.edu/resident.html

General Fees

In order to support programs, services, and facilities that benefit all students at IUPUI each semester students are charged a fee. All students include every person enrolled in a credit bearing course - and may be graduate, undergraduate, full and/or part time.

Often these fees are mistaken for certain optional fees for which students may or may not choose. This fee is not optional and must be paid by all students.

More information is available at http://www.iupui.edu/~fees/

Late Enrollment and Late Program Change Fees

All classes are considered closed following final registration for a specific term. Schedule changes after that date are considered a special privilege and require special authorization and an additional fee. The student should refer to the appropriate class schedule for a listing of these fees.

The School of Engineering and Technology does not normally allow any student to register after expiration of the 100 percent refund period. (See "Refunds" in this section of the bulletin.)

Special Credit Fees

The Trustees of Indiana University have approved the following fee structure for special credit:

1. If the credit is awarded as a result of an examination within the first three semesters following matriculation, there is no charge.
2. If the credit is awarded as a result of an examination and the student is a first-semester transfer student, there is a nominal fee per credit hour.
3. If the credit is awarded as a result of an examination and the student does not meet either of the above conditions, the charge per credit hour is at the regular resident or nonresident rate.
4. If the credit is awarded as a result of experience or credentials, the student will be charged a nominal fee per credit hour.

Auditing Fees

An audit form must be presented to the Office of the Registrar from a student's school or division to audit a course for record. No grades or credits are received for audits. If a course is changed from credit to audit after the first week of classes, a late program change fee will be assessed.

Students who desire an official record of auditing a particular course will be charged full tuition. Written permission from the instructor must be obtained before a student may register to audit. Courses with a laboratory component may not be audited.

Other Fees

Students may also be required to pay special fees for the following services: housing, locker rental, parking, recreation, student identification card (depending on enrollment status and anticipated use), and transcript request. A complete listing of special fees is provided each term in the IUPUI *Schedule of Classes and IUPUI* Web site.

Payment Procedures

Payments must be made in cash or by bank draft, express order, postal money order, traveler's check, personal check, MasterCard, Visa, or Discover for the exact amount of fees due at the time of registration. For information about this fee payment, refer to the IUPUI *Schedule of Classes or IUPUI* Web site www.iupui.edu.

Refunds

Refund credits are determined by the date the drop activity is processed by the IUPUI Office of the Registrar. For information about refunds, refer to http://bursar.iupui.edu/Help/default.htm.

To be eligible for a refund, the student must officially notify the Office of the Registrar at the time of withdrawal. Refund information for summer sessions and courses scheduled

from 1 to 8 weeks in length is published in the *IUPUI Schedule of Classes*.

Financial Aid
It is the goal of IUPUI to encourage students in their educational endeavors and to reduce financial barriers. IUPUI recognizes that many students and their parents cannot afford to finance a college education entirely from their own income and assets. For this reason, a program of financial assistance is available to admitted and enrolled students who have a demonstrated financial need. Aid is available in the form of scholarships, grants, and loans.

Students desiring further information about any of the following financial aid programs should write to:

Office of Student Fianacial Services Campus Center 250 420 N. University Boulevard IUPUI Indianapolis, IN 46202-5147 phone: (317) 274-4162 Web: http://www.iupui.edu/%7efinaid/

Application Procedures
Potential financial aid recipients must complete the Free Application for Federal Student Aid (FAFSA), which is available from high schools, on the Web, or at the Office of Student Financial Services. The priority application deadline for any summer session and/or the following academic year is March 1, although applications will be processed as long as funds are available. Students who apply late should plan on finding other funds to pay for tuition and books until their financial aid applications are processed.

Eligibility
Financial aid awards are given on the basis of need as determined by the information supplied on the FAFSA. IUPUI students enrolled for 6 or more credit hours are eligible if need is demonstrated. The amount of the award will be less for part-time students than for full-time students; full-time student status is considered to be 12 or more credit hours. Only regularly admitted students and transient students from Purdue University are eligible.

Types of Aid
Financial aid is generally offered as a package consisting of a combination of scholarships, grants, loans, and/or work-study awards, although awards may vary with individual students. All awards are subject to the availability of funds.

Scholarships
Scholarships are awarded on the basis of academic achievement. Sources of scholarships may be both inside and outside IUPUI. Scholarship awards are often not based on need, and the student does not pay back the award later. An applicant will be contacted by IUPUI if you are eligible to apply for scholarships; if an application is required, it will be sent automatically.

Grants
Grants are awarded on the basis of need only and do not have to be repaid by the student.

Student Loans
Unlike scholarships and grants, loans must be repaid. Several different student loan programs are available at IUPUI. Some are based on financial need; some are not. Interest rates and maximum awards vary by program. Contact the Office of Student Financial Services for details.

Part-Time and Summer Employment
Many students who attend IUPUI are able to earn part of their expenses through part-time and summer employment. The IUPUI Office of Student Employment, 815 W. Michigan Street, Taylor Hall Third Floor (317) 274-4856, offers help in finding part-time jobs and maintains current information about part-time job opportunities. Students should contact this office for further information on employment assistance.

Work-Study Program
The Federal College Work-Study Program available at IUPUI was established by the Higher Education Act of 1965. The main purpose of the program is to give eligible students the chance to do paid work that will complement their academic programs and career aspirations. Students who have been admitted to IUPUI may apply through the Office of Student Financial Services.

Veterans Benefits
Information on benefits, including Veterans Administration paid tutorial assistance and work-study opportunities, is available from the veterans affairs representative at the Campus Center, Theater Level (lower Level), 420 University Blvd., IUPUI, Indianapolis, IN 46202; (317) 278-9163, or visit http://veterans.iupui.edu/.

General Requirements
Undergraduate Engineering Requirements

To earn a Bachelor of Science in Engineering (B.S.E.), Bachelor of Science in Biomedical Engineering (B.S.B.M.E.), Bachelor of Science in Computer Engineering (B.S.Cmp.E.), Bachelor of Science in Electrical Engineering (B.S.E.E.), or Bachelor of Science in Mechanical Engineering (B.S.M.E.), students must satisfy the following requirements. Requirements for graduation include receiving credit in all required courses: at least 130 credit hours in the biomedical engineering program, 129 credit hours in the computer engineering program, 129 credit hours in the electrical engineering program, 131 credit hours in the engineering management program, 130 credit hours in the interdisciplinary engineering program, or 130 credit hours in the mechanical engineering program.

Each student must have an approved plan of study that lists all courses for the specific degree program. Students should prepare their plans of study for approval during the junior year. If a student wants to deviate from the published curricula, written permission of the administrator of the program is required.

Additional requirements include the following:

1. Students must complete the program of study for the degree by resident course work, by examination, or by credit accepted from another institution. The dean may refuse to accept as credit toward graduation any course that was completed 10 or more years previously, and former students will be notified of all such decisions upon reentering. Substitution of courses required for graduation may be made by the dean of the school.
2. Students must complete at least two semesters of resident study at IUPUI, and they must complete at least 32 credit hours of appropriate course work, of which 12 credit hours must be completed in the major at the junior level or higher. Students are also expected to complete the senior year in residence: however, with the approval of the dean,

students who have had at least four semesters of resident study may complete a maximum of 20 credit hours of the senior year in another approved college or university. For the purpose of this rule, two summer sessions are considered equivalent to one semester.
3. Students must be registered in the School of Engineering and Technology, either in residence or in absentia, during the semester or summer session immediately preceding the awarding of the degree.
4. Students must have an index of 2.0 in required engineering courses in addition to an overall graduation index of 2.0 for all courses on the approved plan of study. Students who have completed all other requirements for a bachelor's degree but have failed to meet the minimum graduation index may register for additional courses, with the approval of an authorized representative of the dean, after a review of their record. The additional courses may not exceed 20 credit hours. Students may take a maximum of 9 of the 20 credit hours in another approved college or university, provided the courses are approved in advance and in writing by an authorized representative of the dean of the School of Engineering and Technology. A copy of the approval must be filed in the office of the engineering and technology recorder. Credit in these additional courses must be established within five years of the date on which all other degree requirements were met. Students will have fulfilled the requirements for graduation if graduation indexes, including extra courses, equal or exceed the minimum specified at the time when all other graduation requirements were satisfied.
5. Applicants for a second bachelor's degree, after they are admitted to the second bachelor's degree program, must complete at least 32 credit hours of appropriate course work, of which 12 credit hours must be completed in the major at the junior level or higher.
6. Courses taken under the Pass/Fail option and courses taken by correspondence may not be used to fulfill graduation requirements for engineering students.

Undergraduate Technology Requirements

Associate Degree

To earn an Associate of Science (A.S.) degree, students must satisfy the following requirements:
1. Students must complete the plan of study for the degree by resident course work, by examination, or by credit accepted from another institution. The dean of the school may refuse to accept as credit toward graduation any course that was completed 10 or more years previously, and former students will be notified of all such decisions upon reentering. Substitutions of courses required for graduation may be made by the dean of the School of Engineering and Technology.
2. Students must complete at least two semesters of resident study at IUPUI, and they must complete at least 15 credit hours of appropriate course work, of which 6 credit hours must be in the major. Students are generally expected to complete the entire second year in residence; however, with the approval of the dean of the school, students who have at least three semesters of resident study may complete a maximum of 16 credit hours of the second year in another approved college or university. For the purpose of this rule, two summer sessions are considered equivalent to one semester.
3. Students must be registered in the School of Engineering and Technology, either in residence or in absentia, during the semester or summer session immediately preceding the award of the degree.
4. Students must have a minimum graduation index of 2.0. Students who have completed all other requirements for an A.S. degree but have failed to meet the minimum graduation index (the average of grades earned in courses required for a degree) may register for additional courses, with the approval of an authorized representative of the dean of the school, after a review of their record. These additional courses may not exceed 10 credit hours, and credit in these courses must be established within three years of the date on which all other degree requirements were met. Students will have fulfilled the requirements for graduation if their graduation indexes, including the extra courses, equal or exceed the minimum specified at the time when all other graduation requirements were satisfied.
5. Applicants for a second A.S. degree must complete at least 15 credit hours at IUPUI of appropriate course work after admission to the second associate degree program. At least 6 of the 15 credit hours must be completed in the major. A second associate degree may not be earned in the same program.

Bachelor's Degree

To earn a Bachelor of Science (B.S.) degree, students must satisfy the following requirements.
1. Students must complete the program of study for the degree by resident course work, by examination, or by credit accepted from another institution. The dean may refuse to accept as credit toward graduation any course that was completed 10 or more years previously, and former students will be notified of all such decisions upon reentering. Substitution of courses required for graduation may be made by the dean of the school.
2. Students must complete at least two semesters of resident study at IUPUI, and they must complete at least 32 credit hours of appropriate course work, of which 12 credit hours are required to be in the major at the junior level or higher. Students are generally expected to complete the senior year in residence; however, with the approval of the dean, students who have had at least four semesters of resident study may complete a maximum of 20 credit hours of the senior year in another approved college or university. For the purpose of this rule, two summer sessions are considered equivalent to one semester.
3. Students must be registered in the School of Engineering and Technology, either in residence or in absentia, during the semester or summer session immediately preceding the awarding of the degree.
4. Students must have a minimum graduation index of 2.0. Students who have completed all other requirements for a bachelor's degree but have failed to meet the minimum graduation index may register for additional courses, with the approval of an authorized representative of the dean, after a review of their record. The additional courses may not exceed 20 credit hours. Students may take a maximum of 9 of the 20 credit hours in another approved college or university, provided the courses are approved in advance and in writing by an authorized representative of the dean of the School of Engineering and Technology. A copy of the approval must be filed in the Office of the Recorder. Credit in these additional courses must be established within five years of the date on which all other degree requirements

were met. Students will have fulfilled the requirements for graduation if graduation indexes, including extra courses, equal or exceed the minimum specified at the time when all other graduation requirements were satisfied.
5. Applicants for a second bachelor's degree must complete at IUPUI at least 32 credit hours of appropriate course work after they are admitted to the second bachelor's degree program. At least 12 of the 32 credit hours must be completed in the major at the junior level or higher.

Second Bachelor's Degrees

Applicants for a second bachelor's degree, whose first degree was from an institution other than IUPUI, IU or Purdue, must complete at IUPUI at least 32 credit hours of appropriate course work after they are admitted to the second bachelor's degree program. At least 12 of the 32 credit hours must be completed in the major at the junior level or higher.

Engineering and Technology Minors

Minimum criteria for academic minors offered within the School of Engineering and Technology will include an overall 2.0 GPA; a grade of C– or above for each course required for the minor; and at least one-half of the required courses for the minor must have been completed in residency at IUPUI. Any courses (e.g., Web-based courses or courses via the Internet) delivered by an IUPUI school are considered to be residence courses for this purpose. The academic requirements for each minor offered by the school will consist of at least 21 semester hours.

Certificate Programs

Students who are seeking one of the certificate programs offered by the School of Engineering and Technology must qualify for admission under the published criteria of the academic unit at IUPUI and must complete at least one-half of the required courses at IUPUI. Any courses (e.g., Web-based courses or courses via the Internet) delivered by an IUPUI school are considered to be residence courses for this purpose.

Internship and Cooperative Education Programs

Good career opportunities almost always require previous work experience. While earning a degree at the Purdue School of Engineering and Technology, Internship and Cooperative Education Programs provide essential opportunities to launch a career.

The lessons that students learn in classes and laboratories receive their ultimate test through the school's cooperative education, internship, professional work experience, and international student exchange programs. The school interacts with a broad variety of area companies to provide the technical experience required to succeed in today's globally competitive economic markets.

The Cooperative Education Program (Co-op) is a five-year professional development experience, designed to combine practical on-the-job experiences with the classroom training of a four-year college curriculum; the Internship Program allows students to work full time or part time for an employing organization while simultaneously taking courses during one semester. This internship program allows flexibility for students who wish to obtain work experience, but are not able to take a semester away from school as is required in the co-op program.

The greater metropolitan Indianapolis community offers a number of employment enrichment opportunities through extensive professional, governmental, and manufacturing resources. Our community resources provide rich, practical, well-paid professional opportunities generally unavailable at residential campuses.

After students have satisfactorily completed the first year of the academic program, they have a choice of employment programs to meet their needs.

Eligibility

To be eligible for one of the Internship/Cooperative Education Programs, a student must:
1. be admitted to the Purdue School of Engineering and Technology, IUPUI;
2. be enrolled in one of the academic programs offered by the school;
3. continue in one of the school's Bachelor of Science degree programs;
4. have satisfactorily completed the first year of an academic program;
5. meet and maintain minimum GPA requirements;
6. register for the appropriate Employment Enrich-ment Programs course before each work period;
7. satisfactorily complete the work period requirements;
8. attend a co-op/internship orientation session.

During periods of professional employment, students will earn a competitive salary and might also earn academic credit toward the bachelor's degree. The amount and distribution of credit is determined by the student's academic department. For further information, contact the Office of Student Placement Services, Engineering and Technology Building (ET) 141, 799 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5160; (317) 274-0805.

Undergraduate

The School of Engineering and Technology is unique in offering programs in both engineering and engineering technology. What is the difference between the two areas? Engineering students learn the principles and theories needed to plan, design, and create new products and are more likely to use broad analytical skills in achieving engineering solutions. Technology students learn technical methods and practices to become experts who apply technology to solve industrial problems.

Undergraduate Engineering Degree Programs

Programs for full-time students pursuing bachelor's degrees in engineering are presented in this section. The admission requirements, curricula, graduation requirements, and course descriptions of each program listed are those that were in effect at the time of printing and may subsequently change. Students are encouraged to obtain the latest course and curriculum information from their academic advisors.

The following undergraduate engineering degree programs are available in the School of Engineering and Technology:

- Bachelor of Science in Biomedical Engineering (BSBME)

- Bachelor of Science in Computer Engineering (BSCmpE)
- Bachelor of Science in Electrical Engineering (BSEE)
- Bachelor of Science in Energy Engineering (BSEEN)
- Bachelor of Science in Engineering (BSE)
- Bachelor of Science in Mechanical Engineering (BSME)
- Bachelor of Science in Motorsports Engineering (BSMSTE)

Undergraduate Engineering Curriculum

All undergraduate engineering curricula in this bulletin are presented as four-year programs. Well-qualified students with excellent high school preparation should be able to complete all requirements in four years or less. Students with gaps in their high school preparation or those who participate in the Cooperative Education Program may require more time to complete their degrees. Other students may adjust their semester credit loads to maintain employment or for other reasons. Programs can be tailored for part-time and evening students, as classes are scheduled for both day and evening. Part-time and evening students are urged to consult their advisors to avoid future scheduling problems.

It is important for students to recognize that some flexibility is provided in each of the curricula to allow for individual differences in backgrounds and academic goals. It is students' responsibility to consult with an academic advisor to design a program to fit personal needs.

Creative accomplishment in an engineer's career often derives from an education that stresses major ideas and fundamental concepts of engineering rather than specific technologies. Engineering curricula provide wide experience in mathematical, physical, and engineering sciences as well as in social sciences and the humanities. In this way a student obtains both thorough training in engineering and a well-rounded education. Such an approach provides the best preparation for an engineer who must envision and develop the technologies of the future and deal with scientific advances.

Engineers are responsible for translating the ever-expanding reservoir of scientific knowledge into systems, devices, and products and for further expanding knowledge. To meet these responsibilities, those who are learning to be engineers must not only master the ideas of others but must also originate new ideas. Moreover, although engineers deal extensively with facts and scientific fundamentals as a matter of course, they cannot rely on these alone. Engineers inevitably face decisions that cannot be made only on the basis of technical skills, but that require a broad understanding of human values and behavior as developed by studies in the social sciences and humanities. They must also be able to accommodate situations where judgment and wisdom, combined with scientific knowledge or technical skills, can provide a solution.

Minor in Business for Engineering Students

Indiana University Kelley School of Business and the School of Engineering and Technology have established a minor in business for engineering students. To qualify for the minor, students must meet course prerequisites and entrance requirements. In certain cases, substitutions are permitted for some requirements. Please consult with a Kelley School of Business academic advisor for more information: (317) 274-2147. Application deadlines are March 1 for the summer and fall semesters, and October 1 for the spring semester. Applications are available in the undergraduate office, Indiana University Kelley School of Business, Business/SPEA Building 3024.

Freshman Engineering Program

Interim Director of Freshman Engineering: D. King
Senior Lecturer: P. Orono
Lecturer: P. Gee
Assistant Professor Part-Time: N. Lamm

All qualified students interested in pursuing an engineering degree at IUPUI are admitted to the Freshman Engineering Program. This includes second-degree and transfer students as well as beginning students.

While in this program, beginning students complete the basic sequence of courses common to all engineering majors. These courses include calculus I and II, chemistry and physics for science and engineering majors, English composition, and public speaking. Freshman engineering courses taken by all students include: ENGR 19500 Introduction to the Engineering Profession, ENGR 19600 Introduction to Engineering, and ENGR 19700 Introduction to Programming Concepts. The Freshman Engineering Program provides students with an opportunity to explore the various engineering disciplines before making a commitment to a specific curriculum.

Transfer and second-degree students remain in Freshman Engineering until the evaluation of their transfer credits is completed.

The New Student Academic Advising Center (NSAAC) has a full-time staff available year round. Prospective students and their families are invited to contact the NSAAC regarding any questions they may have concerning engineering and the engineering degree programs offered at IUPUI. The advisors in the NSAAC provide academic counseling and advising to prospective and continuing students. New students in engineering receive individualized attention while completing the basic core of freshman engineering courses. Transfer and second-degree students likewise work closely with freshman engineering advisors until all transfer credit issues are resolved. The office has an open-door policy, and students are encouraged to consult with advisors about any issues that might affect their academic progress.

Technology Degree Programs

The School of Engineering and Technology offers a variety of technology programs at the associate and bachelor's degree levels. Programs for full-time students pursuing these technology departments are presented in this section. Although the school sets the normal length of time needed to complete each degree program, the required time may vary for individual students. For example, well-qualified students with excellent high school preparation may complete a program in less than the length of time indicated. Other students who decide to combine cooperative (co-op) education or internships with their course work may take more time to complete all degree requirements. Students may adjust their course loads for job or personal reasons, and plans of study can be tailored to meet the needs of part-time and evening students. Needing to study over a

longer time should be no obstacle to completing the program successfully.

Associate of Science

Science and technology activities range from the applied and practical to the highly theoretical and abstract. At one extreme are the theoretical scientists; at the other are the mechanics, draftspersons, and service personnel. Within this spectrum, educational backgrounds include doctoral degrees, master's degrees, bachelor's degrees, and associate degrees at the university level, as well as certificates and diplomas from other postsecondary educational and training institutions.

The Associate of Science degree offered in the School of Engineering and Technology at IUPUI is awarded upon successful completion of two years of university-level study in applied science. Graduates of these programs are called technicians.
Technicians' jobs require applying technical knowledge and skills and, normally, the manipulative skills necessary to perform technical tasks.

Technicians have considerable knowledge of the materials and processes involved and are equipped with the ability to apply the principles of physical and biological sciences, generally using instruments rather than tools. Their job contribution is mainly through mental activity, combined with applied skills. In many organizations the technician can move up in the organization to higher levels of responsibility, if he or she is capable and is willing to pursue further education.

The following associate degree programs are offered by the School of Engineering and Technology at IUPUI:

Architectural Technology: Department of Design & Communication Technology
Biomedical Engineering Technology: Department of Engineering Technology
Interior Design: Department of Design & Communication Technology

Bachelor of Science

The Bachelor of Science degree is awarded under the "two-plus-two" education plan. A student following this plan first earns an associate degree in two years and then may complete a bachelor's degree after two more years. Transfer students must meet all departmental requirements.

A student is awarded an Associate of Science degree upon successful completion of the two-year program. This degree indicates that the person who receives it is educated at the technician level. These individuals may go directly into the work force, or they may decide to continue their studies. Students who want to continue may be admitted for an additional two years of bachelor's-level study in the various technology programs. Students who successfully complete such a program are awarded a Bachelor of Science degree, which provides the basis for increased job responsibility.

The following technology bachelor's degree programs are available to qualified students:

- Biomedical Engineering Technology
- Computer Engineering Technology
- Computer Graphics Technology
- Computer & Information Technology
- Construction Engineering Management Technology
- Electrical Engineering Technology
- Interior Design Technology
- Mechanical Engineering Technology
- Music Technology
- Organizational Leadership and Supervision

For more specific information, see the advisors in the respective departments.

* Jointly offered with Purdue University, West Lafayette.
** See Department of Music & Arts Technology section of this bulletin.

Awards & Scholarships

The Purdue School of Engineering and Technology offers scholarships through IUPUI's Office of Student Scholarships. Early admission to IUPUI is the best way to be assured of scholarship opportunities. The Purdue School of Engineering and Technology offers scholarships to incoming freshmen and continuing students. Most scholarships are merit-based awards offered at the departmental level, but some are designated specifically for new students, or for minority, women, and other students from underrepresented populations.

Information on all scholarships can be found at http://www.iupui.edu/~scentral/

Scholastic Recognition

Dean's List

All undergraduate students in the School of Engineering and Technology who complete at least 6 credit hours during a semester, who have a semester grade point average of 3.8 or higher, a cumulative GPA of 2.5 or higher, and who are approved by the program faculty are placed on the Dean's List. These honor students receive certificates from the Dean recognizing their meritorious efforts. ***Approved by Faculty Senate on May 12, 2009 with policy effective fall 2009.***

Graduation with Distinction

By awarding degrees "With Distinction" or "With Highest Distinction" the School of Engineering and Technology recognizes the outstanding scholastic achievement of selected associate and bachelor's degree candidates.

Distinction at graduation is awarded on the basis of all course work taken for letter grades. Individuals must complete all the requirements for their field of study and meet the following conditions:

- A candidate for the bachelor's degree with distinction must have earned at least 65 hours of credit in the Purdue University or Indiana University system. A candidate for an associate degree with distinction must have earned at least 35 hours of credit in the Purdue University or Indiana University system.
- Honors are awarded according to the following cumulative semester grade point averages:
- Top 10 percent—With Distinction
- Top 30 percent of the top 10 percent—With Highest Distinction

Note: For the purpose of determining graduation honors, the calculated cumulative semester grade point average includes all courses taken for a grade in either the Purdue or the

Indiana University system, regardless of when the courses were taken.

Students who are awarded their degrees with distinction receive corresponding diplomas and are given special recognition during the annual Commencement exercise.

Degree Programs

Engineering Degree Programs

- Bachelor of Science in Biomedical Engineering (BSBME)
- Bachelor of Science in Computer Engineering (BSCmpE)
- Bachelor of Science in Electrical Engineering (BSEE)
- Bachelor of Science in Energy Engineering (BSENE)
- Bachelor of Science in Engineering (BSE)
- Bachelor of Science in Mechanical Engineering (BSME)
- Bachelor of Science in Motorsports Engineering (BSMSTE)

Technology Degree Programs

Associate of Science (A.S.) degrees with a major field of study in one of the following:

- Architectural Technology
- Biomedical Engineering Technology
- Interior Design Technology

Bachelor of Science (B.S.) degrees with a major field of study in one of the following:

- Biomedical Engineering Technology
- Computer Engineering Technology
- Computer Graphics Technology
- Computer & Information Technology
- Construction Engineering Management Technology
- Electrical Engineering Technology
- Interior Design Technology
- Mechanical Engineering Technology
- Music Technology
- Organizational Leadership and Supervision

Design & Communication Technology

Architectural Technology, A.S.

Upon completion of this program, students will be able to:

1. Demonstrate knowledge, techniques (including the use of modern tools), and skills in the use of components, programs and systems encountered in the degree program's courses.
2. Use current knowledge of mathematics, science and emerging technology tools of their discipline to solve problems and demonstrate solutions.
3. Identify, analyze and solve technical problems as required in the degree program's courses.
4. Apply and/or design components, systems and software programs in their specialty area.
5. Conduct, analyze and interpret experiments, and assess results.
6. Function as a member of a 2-4 person team to complete a task in a timely manner.
7. Demonstrate ability to organize work done by team members.
8. Write technical reports; present data and results coherently in oral and graphic formats.
9. Demonstrate skills for life-long learning by locating, evaluating and applying relevant information using external resources such as the Internet, data books, trade publications and library resources and participating in industry conferences, trade organizations/societies and continuing educational opportunities.
10. Demonstrate ethical conduct as described in the university student code of conduct.
11. Demonstrate knowledge of professional code of ethics.
12. Demonstrate a respect for diversity as described in the university civility statement.
13. Recognize contemporary professional, societal and global issues in case studies and course projects.
14. Demonstrate quality, timeliness and ability to complete increasingly complex homework and projects throughout the degree experience.

Computer Graphics Technology, B.S.

Upon completion of this program, students will be able to:

1. Demonstrate an ability to correctly demonstrate and implement computer literacy practices.
2. Demonstrate an ability to effectively apply algebra and trigonometry principles appropriate to visual communication projects and applications.
3. Demonstrate an ability to analyze a specific problem, by identifying and defining the component parts of the problem, properly documenting the principles requirements of the solution(s), and effectively documenting and reporting the associated requirements appropriate to its solution(s).
4. Demonstrate an ability to design, implement and evaluate a computer-based system, process, component, or programs to meet desired visual communication needs.
5. Demonstrate an ability to function effectively on teams and in a collaborative setting to accomplish a common goal.
6. Demonstrate an understanding of professional, ethical, legal (including copyright), security, and social issues and responsibilities.
7. Demonstrate an ability to communicate effectively with a wide range of audiences, and diverse populations in both domestic and international settings.
8. Demonstrate an ability to analyze the local and global impact of computer generated images and applications on individuals, organizations, and society.
9. Demonstrate an ability to demonstrate how to identify professional development needs, and implement a plan to ensure continuing professional development.
10. Demonstrate an ability to demonstrate how to identify and use current techniques, skills, and tools necessary for computing practice related to visual communication problems.

Interior Design Technology, A.S. and B.S.

Upon completion of this program, students will be able to:

1. Demonstrate technical knowledge and application of the design process.

2. Solve problems that are quantitative in nature.
3. Analyze complex issues and apply sound design methodology in multidisciplinary fields of interior design technology.
4. Practice effective communication skills in, oral, written and visual presentations.
5. Increase knowledge and demonstrate solutions sensitive to health, safety and welfare of the public.
6. Work collaboratively and effectively in technology and design related industries.
7. Continue Professional advancement through life-long learning.
8. Understand the environmental, ethical, diversity, cultural and contemporary aspects of their work.
9. Be responsible citizens.

Technical Communication Certificate
Upon completion of this program, students will be able to:

1. Demonstrate that they have the core knowledge, skills, and professional practices necessary for entry-level technical communicators.
2. Demonstrate their ability to gather and transform technical knowledge for a variety of audiences.
3. Design, develop, and edit effective, usable publications using rhetorical principles and current technology.

Student Learning Outcomes

The School of Engineering & Technology has organized its Student Learning Outcomes (SLOs) by department. Please choose the appropriate department in the links below, or the left-hand navigation, and then find the program you are looking for. You can also click the link for the program below and it will take you directly to that program's SLOs. Students in all programs will graduate with a Bachelor of Science degree unless otherwise noted.

Please note that certificate program learning outcomes can be found under the appropriate department below the degree program learning outcomes. Any questions or concerns about the Student Learning Outcomes should be directed to the department of the program in question, or the Office of Academic Programs in ET 215.

- Music Technology

*Music & Arts Technology students are awarded Indiana University degrees.

Biomedical Engineering, B.S.B.M.E.

Upon completing the undergraduate B.M.E. degree, our students will possess:

1. An ability to apply knowledge of mathematics, science, and engineering.
2. An ability to design and conduct experiments, as well as to analyze and interpret data.
3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. An ability to function on multi-disciplinary teams.
5. An ability to identify, formulate, and solve engineering problems.
6. An understanding of professional and ethical responsibility.
7. An ability to communicate effectively
8. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. A recognition of the need for, and an ability to engage in lifelong learning.
10. A knowledge of contemporary issues.
11. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
12. An understanding of biology and physiology.

13. The capacity to apply advanced mathematics (including differential equations and statistics), science and engineering to solve problems at the interface of engineering and biology.
14. The ability to make measurements on and interpret data from living systems, addressing the problems associated with the interaction between living and non-living materials and systems.

Music & Arts Technology

Music Technology, B.S.

Upon completion of this program, students will be able to:

1. Think, speak, and write clearly and effectively.
2. Demonstrate acquaintance with mathematical and experimental methods of the physical and biological sciences; including analysis and historical and quantitative techniques
3. Address culture and history from a variety of perspectives.
4. Understand and experience thinking about moral and ethical problems.
5. Respect, understand, and evaluate work in a variety of disciplines.
6. Explain and defend one's views effectively and rationally.
7. Understand and have experience with art forms other than music.
8. Hear, identify, and work conceptually with the elements of music-rhythm, melody, harmony, and structure.
9. Understand compositional process, aesthetic properties of style, and the ways these shape and are shaped by artistic and cultural forces.
10. Demonstrate acquaintance with a wide selection of musical literature - the principal eras, genres, and cultural sources.
11. Develop and defend musical judgments.
12. Perform in areas appropriate to the student's needs and interests.
13. Sight read.
14. Understand procedures for realizing a variety of musical styles.
15. Demonstrate capacity to create derivative or original music both extemporaneously and in written form.
16. Compose and improvise at a basic level in one or more musical languages
17. Understand how technology serves the field of music as a whole.
18. Demonstrate a working knowledge of the technological developments applicable to their area of specialization.
19. Work independently on a variety of musical problems by combining their capabilities in performance; aural, verbal and visual analysis; composition and improvisation; and history and repertory.
20. Form and defend judgments about music.
21. Acquire the tools of work with a comprehensive repertory, including music from various cultures of the world and music of their own time.
22. Understand basic interrelationships and interdependencies among the various professions and activities that constitute the musical enterprise.
23. Acquire the skills necessary to assist in the development and advancement of their careers.
24. Develop teaching skills, particularly as related to their major area of study.
25. Develop improvisational skills in all areas of musicianship
26. Experience a broad range of repertory through attendance at events such as recitals, concerts, opera and music theatre productions, and other types of performances.
27. Explore areas of individual interest related to music in general or to the major.
28. Explore multidisciplinary issues that include music.
29. Practice synthesis of a broad range of musical knowledge and skills, particularly through independent study that involves a minimum of faculty guidance, where the emphasis is on evaluation at completion.

Computer, Information & Leadership Technology

Computer & Information Technology, B.S.

Upon completion of this program, students will be able to:

1. Demonstrate mastery of core computing and mathematical concepts.
2. Analyze user needs and identify the computing requirements appropriate to an IT solution.
3. Plan, design, implement, and evaluate IT-based systems to meet desired needs.
4. Function effectively on teams to accomplish a common goal.
5. Acknowledge diverse opinions in regards to professional, ethical, legal, and social issues in a global perspective.
6. Communicate effectively with a wide range of audiences.
7. Analyze and explain the impact of IT on individuals, organizations and societies.
8. Explain the need to engage in continuing professional development.
9. Use current technical concepts, techniques and practices in the information technologies within the student's area of expertise.
10. Apply the best practices and standards within the student's area of expertise.

Organizational Leadership Supervision, B.S.

Upon completion of this program, students will be able to:

1. Demonstrate and apply knowledge of:
1. the process and roles of leadership.
2. leadership traits.
3. leadership behavior concepts.
4. situational approaches to leadership.
5. power and influence.
6. leading during times of uncertainty, turbulence, and change.

2. Design and conduct research, as well as analyze and interpret data in order to:
1. evaluate their personal leadership effectiveness.

2. evaluate their organization's effectiveness and sustainability.
3. evaluate their organization's social and environmental impact.

3. Lead an organization, or processes and functions within it that meet or exceeds desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, and sustainability.
4. Function on multi-disciplinary teams.
5. Identify, formulate, and solve organizational problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively verbally and nonverbally to all size audiences.
8. Understand the impact of leadership and supervision in a global, economic, environmental and societal context.
9. Demonstrate knowledge of contemporary organizational issues.
10. Use the techniques, skills, tools and concepts necessary for effective strategic and tactical planning.

Certificates

Computer Technology Applications Certificate
Upon completion of this program, students will be able to:

1. Use traditional application software at the highest level.
2. Customize and modify application software for end users.
3. Train end users of application software in best practices.
4. Research, learn, and apply new software techniques.
5. Create sophisticated and interactive Web interfaces using application software.
6. Use Web 2.0 tools to further their career.

E-Commerce Certificate
Upon completion of this program, students will be able to:

1. Apply tools and techniques for effective Web site planning and analysis.
2. Allow individuals to develop dynamic web applications in a variety of programming languages.
3. Explore sophisticated data management and information exchange as it applies to interactive and e-commerce applications.
4. Apply optimal Web design strategies to deploy usable Web applications for a global audience.
5. Utilize current web development standards appropriately.

Information Technology Certificate
Upon completion of this program, students will be able to:

1. Apply tools and techniques for effective Web site planning and analysis.
2. Introduce fundamental client and server side languages for developing dynamic websites.
3. Explore database development and technologies used to build database-driven web applications.
4. Apply optimal Web design strategies to deploy usable Web applications for a global audience.
5. Research, learn and apply new web technologies.

Network Security Certificate
Upon completion of this program, students will be able to:

1. Apply information assurance and security principles to secure systems and networks.
2. Conduct accurate and comprehensive digital forensics investigations and apply appropriate rules of evidence.
3. Use an appropriate analytic framework to assess risk and recommend strategies for mitigation.
4. Analyze and produce comprehensive security policies, standards, and procedures.
5. Analyze and create comprehensive business continuity plan to include incident response, disaster recovery, and continuous operations.

Human Resource Management Certificate
Upon completion of this program, students should be able to:

1. Describe, use, and evaluate tactical and strategic Human resource management principles.
2. Develop, implement and provide a safe and effective work environment.
3. Comply with local, state, and federal employment law and related public policies.
4. Promote training and development of individuals, work teams, and organizations.
5. Assess, design, develop, implement, and evaluate learning solutions in various organizational contexts.
6. Promote positive, productive employer-employee relationships.
7. Create, negotiate, and manage regulations concerning collective bargaining, grievance, and arbitration procedures.
8. Leverage compensation, benefits, rewards, and recognition to attract, motivate, and retain talent.
9. Develop policy, practice, and procedure to select talent aligned with the strategic direction of the organization.

International Leadership Certificate
Upon completion of this program, students will be able to:

1. Demonstrate techniques to analyze and solve intercultural problems that typically occur within diverse organizations.
2. Apply knowledge and techniques to devise strategies for successfully leading a diverse workforce within an international organization.
3. Use knowledge and techniques to devise strategies for successfully managing diversity within an international organization.
4. Demonstrate substantial knowledge of at least one foreign country, or region, (or distinct subculture within the USA), including demographic profile, economic status, political climate, commerce, history, language, and cultural norms as a result of intensive experience and/or study.

Leadership Studies Certificate
Upon completion of this program, students will be able to:

1. Define and defend their personal philosophy of leadership and ethical behavior.
2. Describe behavior in organizational settings at the individual, team/group, and macro-organization levels.

3. Identify the stages of team development that occurs within organizations.
4. Make leadership-oriented decisions that are ethically, legally, morally, and strategically sound.
5. Apply concepts of supervisory management, team building, personnel selection and development, decision-making, resource allocation, conflict resolution, and strategic planning to the solving of individual, team/group, and organizational problems.
6. Explain the importance of attracting, managing, and motivating a globally-diverse workforce.
7. Improve individual and organizational performance by applying the appropriate leadership theories and processes in practice.
8. Evaluate the appropriateness of leadership behaviors in given situations, and make suggestions for improving those behaviors.

Mechanical Engineering

Mechanical Engineering, B.S.

Upon completion of this program, students will be able to:

1. Demonstrate and apply knowledge of mathematics, science, and engineering with:
1. Chemistry and calculus-based physics in depth.
2. Mathematics through multivariate calculus, differential equations, and linear algebra.
3. Probability and statistics.
4. Mechanical engineering sciences: solid mechanics, fluid-thermal sciences, materials science, systems dynamics.

2. Conduct experiments methodically, analyze data, and interpret results.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability, with applications to:
1. Mechanical systems.
2. Thermal systems.

4. Function in teams to carry out multidisciplinary projects.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibilities.
7. Communicate effectively in writing and orally.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context through broad education
9. Recognize the need to engage in lifelong learning.
10. Demonstrate knowledge of contemporary issues.
11. Use the techniques, skills, and modern tools of engineering effectively and correctly in engineering practice with:
1. Mechanical engineering analysis tools. (e.g., ProMechanica)
2. Engineering design and manufacturing tools. (e.g., ProEngineer)
3. Internet and library information resources.
4. Mathematical computing and analysis tools. (e.g., Matlab, Excel, LabView, and C)

Energy Engineering, B.S.

Upon completion of this program, students will be able to:

1. Demonstrate and apply knowledge of mathematics, science, and engineering with:
1. Knowledge in chemistry and calculus-based physics in depth.
2. Mathematics through multivariate calculus, differential equations, and linear algebra.
3. Probability and statistics a4. Energy engineering sciences: solid mechanics, fluid-thermal science, energy conversion, supply, and storage.

2. Design and conduct experiments methodically, analyze data, and interpret results.
3. Design a system, component, or process to meet desired needs with applications to energy systems.
4. Function in teams to carry out multidisciplinary projects.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibilities.
7. Communicate effectively, in writing and orally.
8. Understand the impact of engineering solutions in a global and societal context through broad education.
9. Recognize the need to engage in lifelong learning.
10. Demonstrate knowledge of contemporary issues.
11. Use the techniques, skills, and modern tools of engineering effectively and correctly in engineering practice with:
12. Engineering analysis tools.
1. Engineering design and manufacturing tools. (e.g., ProEngineer)
2. Internet and library resources.
3. Mathematical computing and analysis tools. (e.g., Matlab,C, Excel, LabView)

Electrical & Computer Engineering

Computer Engineering, B.S.C.E.

Upon completion of this program, students will be able to demonstrate:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. a recognition of the need for, and an ability to engage in lifelong learning.
10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Electrical Engineering, B.S.
Upon completion of this program, students will be able to demonstrate:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. a recognition of the need for, and an ability to engage in lifelong learning.
10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Engineering Technology

Biomedical Engineering Technology, A.S. and B.S.
Upon completion of tthis program, students will be able to:

1. Demonstrate knowledge and skills in the use of the electrical and/or computer components of medical equipment systems as encountered in the degree program's courses. Demonstrate a working medical vocabulary and knowledge of clinical safety requirements and regulations as encountered in the degree program's classes.
2. Use current knowledge of mathematics, science and emerging technology tools to solve problems and demonstrate solutions.
3. Identify, analyze and integrate the technical equipment requirements with the needs of medical staff and patients as required in the degree program's courses.
4. Apply and design solutions for issues identified in heallth care technology as demonstrated in a senior project.
5. Conduct, analyze and interpret experiments, and access results.
6. Function as a member of a 2-4 person team to complete a task in a timely manner. Demonstrate ability to organize work done by team members.
7. Write technical reports; present data and results coherently in oral and graphic formats.
8. Demonstrate skills for lifelong learning by locating, evaluating and applying relevant information using external resources such as the Internet, data books, trade publications and library resources.
9. Demonstrate ethical conduct as described in the university student code of conduct. Demonstrate knowledge of professional code of ethics.
10. Demonstrate a respect for diversity as described in the university civility statement. Recognize contemporary professionals, societal and global issues in case studies and course projects.
11. Demonstrate quality, timeliness and ability to complete increasingly complex homework and projects throughout the degree experience.

Computer Engineering Technology, B.S.
Upon completion of this program, students will be able to:

1. Demonstrate knowledge, techniques (including the use of modern tools), and skills in the use of microprocessors, programs, networks and systems encountered in the degree program's cources.
2. Use current knowledge of mathematics, science and emerging technology tools of their discipline to solve problems and demonstrate solutions.
3. Identify, analyze, and solve technical problems as required in the degree program's courses.
4. Apply and design hardware, systems, and software programs in their specialty area demonstrated in a senior project.
5. Conduct, analyze and interpret experiments, and assess results.
6. Function asa member of a 2-4 person team to complete a task in a timely manner. Demonstrate ability to organize work done by team members.
7. Write technical reports; present data and results coherently in oral and graphic formats.
8. Demonstrate skills for lifelong learning by locating, evaluating and applying relevant information using external resources such as the Internet, data books, trade publications and library resources.
9. Demonstrate ethical conduct as described in the university student code of conduct. Demonstrate knowledge of the professional code of ethics.
10. Demonstrate respect for diversity as described in the university civility statement. Recognize contemporary professional, societal and global issues in case studies and course projects.
11. Demonstrate quality, timeliness and ability to complete increasingly complex homework and projects throughout the degree experience.

Construction Engineering Management Technology, B.S.
Upon completion of this program, students will be able to demonstrate:

1. An appropriate mastery of the knowledge, techniques, skills and modern tools of their disciplines.
2. An ability to apply current knowledge and adapt to emerging applications of mathematics, science, engineering and technology.
3. An ability to conduct, analyze and interpret experiments and apply experimental results to improve processes.
4. An ability to apply creativity in the design of systems, components or processes appropriate to program objectives.
5. An ability to function effectively in teams.
6. An ability to identify, analyze and solve technical problems.
7. An ability to communicate orally.
8. An ability to communicate writen and visual.

9. Recognition of the need for, and ability to engage in lifelong learning.
10. An ability to understand professional, ethical and social responsibilities.
11. A respect for diversity and knowledge of contemporary professional, societal and global issues.
12. A committment to quality, timeliness, and continuous improvement.

Electrical Engineering Technology, B.S.
Upon completion of this program, students will be able to:

1. Demonstrate knowledge, techniques (including the use of modern tools), and skills in the use of components, circuits, programs and systems encountered in the degree program's courses.
2. Use current knowledge of mathematics, science and emerging technology tools of their discipline to solve problems and demonstrate solutions.
3. Identify, analyze and solve technical problems as requires in the degree program's courses.
4. Apply and design components, circuits, systems and software programs in their specialty area as demonstrated in a senior project.
5. Conduct, analyze and interpret experiments and assess results.
6. Function as a member of a 2-4 person team to complete a task in a timely manner. Demonstrate ability to organize work done by team members.
7. Write technical reports; present data and results coherently in oral and graphic formats.
8. Demonstrate skills for lifelong learning by locating, evaluating and applying relevant information using external resources such as the Internet, data books, trade publications and library resources.
9. Demonstrate ethical conduct as described in the university student code of conduct. Demonstrate knowledge of professional code of ethics.
10. Demonstrate a respect for diversity as described in the university civility statement. Recognize contemporary professional, societal and global issues in case studies and course projects.
11. Demonstrate quality, timeliness and ability to complete increasingly complex homework and projects throughout the degree experience.

Mechanical Engineering Technology, B.S.
Upon completion of this program, students will be able to:

1. Demonstrate an appropriate mastery of the knowledge, techniques, skills, and modern tools of their discipline within designated courses which provide laboratory components.
2. Apply current knowledge in mathematics, science, engineering and technology, and recognize emerging applications in these areas.
3. Conduct experiments, analyze and interpret experimental data, and apply experimental parameters in order to improve and/or modify processes.
4. Apply creativity in the design of systems, components, or processes within Mechanical Engineering Technology projects.
5. Function effectively as a member of a project team, or with group projects.
6. Identify, analyze , and solve technical problems.
7. Communicate effectively in written, oral and graphical modes.
8. Recognize the need for lifelong learning, and participate in educational and professional opportunities to expand your knowledge base.
9. Understand and communicate professional, ethical, and social responsibilities as a practitioner of MET.
10. Demonstrate a respect for diversity and a knowledge of contemporary professional, societal, and global issues.
11. Demonstrate via actions a commitment to quality, timeliness, and continuous improvement.

Certificates

Construction Management Certificate
Upon completion of this program, students will be able to demonstrate:

1. An appropriate mastery of the knowledge, techniques, skills and modern tools of their disciplines.
2. An ability to apply current knowledge and adapt to emerging applications of mathematics, science, engineering and technology.
3. An ability to conduct, analyze and interpret experiments and apply experimental results to improve processes.
4. An ability to apply creativity in the design of systems, components or processes appropriate to program objectives.
5. An ability to function effectively in teams.
6. An ability to identify, analyze and solve technical problems.
7. An ability to communicate orally.
8. An ability to communicate writen and visual.
9. Recognition of the need for, and ability to engage in lifelong learning.
10. An ability to understand professional, ethical and social responsibilities.
11. A respect for diversity and knowledge of contemporary professional, societal and global issues.
12. A committment to quality, timeliness, and continuous improvement.

Motorsports Engineering Technology Certificate
Upon completion of this program, students will be able to:

1. Demonstrate an appropriate mastery of the knowledge, techniques, skills, and modern tools of the following disciplines within designated courses which provide laboratory components:
1. Thermodynamics/Engine Design
2. Dynamics/Vehicle Dynamics/Aerodynamics
3. Static & Dynamic Loading/Modeling and Analysis of Loaded Structures
4. Electronics/Instrumentation/Data Acquisition
5. System Analysis & Design

2. Apply current knowledge in mathematics, science, engineering and technology, and recognize emerging applications in these areas.
3. Conduct experiments, analyze and interpret experimental data, and apply experimental parameters in order to improve and/or modify processes.

4. Apply creativity in the design of systems, components, or processes as displayed in motorsports related projects.
5. Function effectively as a member of a project teams, or with project groups.
6. Identify, analyze, and solve technical problems.
7. Communicate effectively in written, oral, and graphical modes.
8. Recognize the need for lifelong learning, and participate in educational and professional opportunities to expand your knowledge base.
9. Understand and communicate professional, ethical, and social responsibilities as a practitioner of engineering
10. Demonstrate a respect for diversity and a knowledge of contemporary professional, societal, and global issues.
11. Demonstrate via actions a commitment to quality, timeliness, and continuous improvement.

Quality Assurance Certificate
Upon completion of this program, students will be able to:

1. Demonstrate a basic understanding of statistics as applied to engineering
2. Demonstrate a thorough understanding of quality assurance principles and procedures.
3. Demonstrate a working knowledge of data measurement and assessment as pertains to quality.
4. Demonstrate a working knowledge of implementing quality management in organizations.
5. Demonstrate a working knowledge of 6-Sigma concepts and implementation.

Motorsports Engineering, B.S.

Upon completion of this program, students will be able to:

1. Demonstrate an appropriate mastery of the knowledge, techniques, skills, and modern tools of the following disciplines within designated courses which provide laboratory components:
- Thermodynamics/Engine Design
- Dynamics/Vehicle Dynamics/Aerodynamics
- Static & Dynamic Loading/Modeling and Analysis of Loaded Structures
- Electronics/Instrumentation/Data Acquisition
- System Analysis & Design

2. Apply current knowledge in mathematics, science, engineering and technology, and recognize emerging applications in these areas.
3. Conduct experiments, analyze and interpret experimental data, and apply experimental parameters in order to improve and/or modify processes.
4. Apply creativity in the design of systems, components, or processes as displayed in motorsports related projects.
5. Function effectively as a member of a project teams, or with project groups.
6. Identify, analyze, and solve technical problems.
7. Communicate effectively in written, oral, and graphical modes.
8. Recognize the need for lifelong learning, and participate in educational and professional opportunities to expand your knowledge base.
9. Understand and communicate professional, ethical, and social responsibilities as a practitioner of engineering
10. Demonstrate a respect for diversity and a knowledge of contemporary professional, societal, and global issues.
11. Demonstrate via actions a commitment to quality, timeliness, and continuous improvement.

Graduate Programs

M. Razi Nalim, Associate Dean for Research and Graduate Programs

The School of Engineering and Technology offers five graduate degrees at the M.S. level: Master of Science in Biomedical Engineering (M.S.Bm.E.), Master of Science in Electrical and Computer Engineering (M.S.E.C.E.), Master of Science in Mechanical Engineering (M.S.M.E.), Master of Science in Engineering (M.S.E.), and Master of Science (M.S.).

Qualified students may pursue Ph.D. degrees in biomedical engineering, electrical and computer engineering, or mechanical engineering at IUPUI through programs jointly administered with the respective schools at Purdue University, West Lafayette. Students are usually expected to complete the M.S.E.C.E. or M.S.M.E. before pursuing the Ph.D. degree.

Students completing a master's or doctoral degree in engineering will be prepared to enter the work force at a high level of responsibility and expertise. Knowledge of the dynamics of expanding new technologies and the strategic importance of high productivity prepares master's degree graduates to advance rapidly in today's business and industries.

Graduate courses are usually offered on the IUPUI evening schedule. The programs are designed to meet the needs of part-time students employed in the Indianapolis area, as well as traditional students who are preparing for careers in research.

For more information, call (317) 278-4960, send e-mail to et_grad@iupui.edu, or see the Web site: www.engr.iupui.edu.

General Requirements

Degree Programs

Contact: Valerie Lim Diemer, Graduate Programs Coordinator

- Master of Science in Biomedical Engineering (M.S.Bm.E.)
- Master of Science in Engineering (M.S.E.)
- Master of Science in Electrical and Computer Engineering (M.S.E.C.E.)
- Master of Science in Mechanical Engineering (M.S.M.E.)
- Master of Science in Technology (M.S.Tech)
- Master of Science in Music Techology (M.S.)

- Master of Science in Music Therapy (M.S.)
- Doctor of Philosophy in Biomedical Engineering (Ph.D.)
- Doctor of Philosophy in Electrical and Computer Engineering (Ph.D.)
- Doctor of Philosophy in Mechanical Engineering (Ph.D.)

*Jointly offered with Purdue University, West Lafayette.

Master of Science in Technology

The School of Engineering and Technology offers graduate education in technology with the primary goal of developing advanced levels of practitioners in industry. The Master of Science in Technology degree program is designed so that graduates holding a B.S. degree in a technology discipline or a related area can complete their degrees as a full-time student or while working full-time. The graduate degree program offers concentration or area of specialization in Applied Information Technology, Construction Engineering Management Technology, Facilities Mangaement (an online program), and Organizational Leadership and Supervision in addition to more interdisciplinary plans of study that draw courses from the various technology programs in the School. The curriculum consists of a total of 33 credit hours, including a directed project, and can be completed in four semesters (two academic years) and must be completed within five years.

For more information, send e-mail to gradengr@iupui.edu or gradtech@iupui.edu. To view the program requirements visit http://engr.iupui.edu/gradprogs/progreq.shtml?menu=req.

Graduate Programs in Biomedical Engineering

Biomedical engineering is an interdisciplinary program and a joint effort of the Purdue School of Engineering and Technology, the Purdue School of Science, and the Indiana University Schools of Medicine and Dentistry at Indiana University–Purdue University at Indianapolis (IUPUI). In addition to these participating academic units, the program operates in close collaboration with several centers and facilities on campus, and with the Department of Biomedical Engineering at Purdue University, West Lafayette.

Students interested in the M.S.Bm.E. degree should apply directly to the Graduate Programs Office of the Purdue School of Engineering and Technology in Indianapolis. Students with a master's degree, or who are solely interested in the Ph.D. degree, should apply to the Department of Biomedical Engineering at West Lafayette, even though they may be resident and study on the Indianapolis campus.

For more information about the M.S.B.m.E visit http://engr.iupui.edu/bme/ms_bme_pos.shtml?menu=ms.

For more information about the PhD program visit https://engineering.purdue.edu/BME/Academics/BMEGraduateProgram/Admissions/.

Graduate Programs in Electrical and Computer Engineering

Students can earn the Master of Science in Electrical and Computer Engineering (M.S.E.C.E.), and the Master of Science in Engineering (M.S.E.), through the Department of Electrical and Computer Engineering at the Purdue School of Engineering and Technology at IUPUI. The M.S.E.C.E. degree is organized into several areas of study, including computer engineering, controls and automation, communication and signal processing, and VLSI and circuit design. The M.S.E. degree is interdisciplinary in nature and is primarily for Bachelor's degree holders in fields other than electrical or computer engineering. Students holding a bachelor's degrees in fields other than electrical or computer engineering may pursue the M.S.E.C.E. if they complete a prescribed list of prrerequisite courses.

Qualified students may be authorized to pursue the Ph.D. degree in electrical and computer engineering at IUPUI. Programs leading to the Ph.D. in electrical and computer engineering are jointly administered with the School of Electrical and Computer Engineering at Purdue University, West Lafayette.

For more information about electrical and computer engineering graduate programs visit http://engr.iupui.edu/ece/graduate.shtml?menu=grad.

Graduate Programs in Mechanical Engineering

The Department of Mechanical Engineering has an outstanding and up-to-date engineering faculty with expertise and research interests in the areas of advanced manufacturing, advanced materials, biomechanics, composites, computational fluid dynamics, computer-aided design, computer-aided manufacturing, combustion, controls, fluid mechanics, finite element analysis, fracture, heat transfer, propulsion robotics, solid and structural mechanics, stress analysis, and turbomachinery. The department offers graduate programs of study that lead to the degrees of Master Science (M.S.), Master of Science in Engineering (M.S.E.), Master of Science in Mechanical Engineering (M.S.M.E.), and Ph.D. The program leading to the Ph.D. in mechanical engineering is jointly administered with the School of Mechanical Engineering at Purdue University, West Lafayette.

The department also offers combined bachelor's and master's degree programs, in which students may receive both B.S. and M.S. degrees in five years at IUPUI. These degree programs are open to qualified undergraduates at IUPUI, leading to either: 1) B.S. and M.S.M.E. degrees (B.S./M.S.M.E.) for mechanical engineering undergraduates, or 2) a B.S. degree in physics and an M.S. degree in mechanical engineering (B.P.M.M.E.) for physics undergraduates. The combined degrees prepare students for advanced engineering careers with two degrees (bachelor's and master's) in as little as five years.

For more information about http://engr.iupui.edu/me/bulletin/GraduatePrograms.shtml?menu=academics.

Student Learning Outcomes

The School of Engineering & Technology has organized its Graduate Student Learning Outcomes by program. Please choose the appropriate program in the links below, or the left-hand navigation.

Any questions or concerns about the Student Learning Outcomes should be directed to the Office of Academic Programs in ET 215.

Engineering

- Master of Science in Biomedical Engineering
- Master of Science in Electrical & Computer Engineering
- Master of Science in Mechanical Engineering

Technology

- Master of Science in Technology
- Master of Science in Music Technology*
- Master of Science in Music Therapy*

*Music & Arts Technology students are awarded Indiana University degrees.

Biomedical Engineering

Upon completion of the Master's degree (**with thesis**) in Biomedical Engineering at IUPUI, students will be able to:

1. Assess the quality and relevance of published results from the literature.
2. Apply appropriate laboratory, computational, and analysis techniques in the service of answering a research question or contributing to product development relevant to biomedical engineering.
3. Communicate (in speech, writing, and appropriate supporting visuals) the results and implications of biomedical research.

Upon completion of the Master's degree (**non-thesis**) in Biomedical Engineering at IUPUI, students will be able to:

1. Apply the tools of mathematics, science, and engineering to solve problems at the interface of engineering and biology.
2. Demonstrate knowledge of biological and physiological principles that advance the broad spectrum of life science application areas that is biomedical engineering.
3. Communicate (in speech, writing, and appropriate supporting visuals) information related to the theory and practice of biomedical engineering in research, clinical or industrial settings.

Technology

Upon program completion, students will be able to:

1. Identify, explain, and compare the major quantitative and qualitative approaches in measurement and evaluation within industrial, technological, educational and/or organizational contexts.
2. Use appropriate quantitative and qualitative approaches to measure and evaluate a variety of phenomena in industrial, technological, educational, and organizational settings.
3. Explain, identify, apply and utilize quantitative and qualitative processes to develop and sustain organizational cultures that emphasize quality, productivity, and continuous improvement.
4. Recognize the importance of evidence-based decision-making in industrial, technological, educational, and organizational contexts.
5. Locate and evaluate the credibility and appropriateness of research and applied studies for use in problem-solving in industrial, technological, educational, and organizational contexts.
6. Select and plan an in-depth area of study in industry, technology, education, and/or organizational leadership related to the one's personal, academic, and/or professional objectives.
7. Identify, explain, and apply major theories, concepts, models, and approaches from an in-depth discipline within industry, technology, educational, and/or organizational leadership.
8. Design and implement an appropriate project related to a specifically-identified research or applied problem in an industrial, technological, educational, or organizational context.
9. Conduct a literature review or benchmarking analysis, gather and analyze relevant data, develop sound conclusions and recommendations, and present findings in professionally-presented oral and written reports.

Electrical & Computer Engineering

Graduates of the Masters program in ECE will have the ability to:

1. Apply their knowledge and skills to solve advanced Electrical and Computer Engineering problems.
2. Conduct research in topics within the electrical and computer engineering area.
3. Communicate effectively.

Mechanical Engineering

Upon completion of the Master’s degree (**with thesis**) in Mechanical Engineering at IUPUI, students will be able to:

1. Assess the quality and relevance of published results from the literature.
2. Apply appropriate laboratory, computational, and analysis techniques in the service of answering a research question or contributing to product development relevant to mechanical engineering.
3. Communicate (in speech, writing, and appropriate supporting visuals) the results and implications of mechanical engineering research.

Upon completion of the Master’s degree (**non-thesis**) in Mechanical Engineering at IUPUI, students will be able to:

1. Apply the tools of mathematics, science, and engineering to solve problems in the broad area of mechanical engineering.
2. Demonstrate knowledge of mechanical engineering principles that advance the broad spectrum of application areas that is mechanical engineering.
3. Communicate (in speech, writing, and appropriate supporting visuals) information related to the theory and practice of mechanical engineering in research or industrial settings.

Music Technology

Upon completion of the program, students will be able to:

GENERAL

1. Investigate the components of music technology.
2. Assess commonly used music software and hardware.

3. Determine best-fit music production models for creative operations.
4. Assess personal skills and knowledge of music production field.
5. Investigate the components of music technology.
6. Explain the basic computing concepts of music sequencing and notation, including the digital electronic process with some analysis of microchips and microprocessors.
7. Describe the function and operational technique of hardware components used in a typical computer music system.
8. Explain the basic computing concepts of music sequencing and notation, including the digital electronic process with some analysis of microchips and microprocessors.
9. Determine project cost analysis for human resources and materials.
10. Develop a theoretical position on ethical use of technology.
11. Discuss the ethical considerations and legal implications of using software.
12. Final Project Example: Develop a new tool, resource, application, artistic production, literary work, or another form of informed expression that utilizes new technologies. Take the project through planning, production and completion stages, and writing pre and post assessments.
13. Identify and evaluate innovative entities in a specific area of music technology.
14. Develop a music program design utilizing storyboard and flowchart modeling.
15. Apply software to create music notation, sound samples, and music graphics.
16. Develop a music program design utilizing storyboard and flowchart modeling.
17. Define Musical Instrument Digital Interface (MIDI) and outline its development.
18. Review major software applications related to music sequencing, timing codes, editing, notation, multimedia, and computer-assisted instruction.
19. Demonstrate conceptual understanding of the multimedia project design process.
20. Demonstrate understanding of psychological concepts that affect multimedia project design.
21. Learn about standard media formats that are used to create media products.
22. Create a CD that employs sound, text, video and or animation.
23. Submit a revised proposal draft for the final project or internship.
24. Develop a multimedia project through the final project proposal. These include determining project parameters, using flowcharts to display project organization, generating subject content, scripting, storyboarding, testing a beta version of the project, and submitting a full proposal.
25. Engage in ownership and responsibility for his or her culminating set of personal, academic, and professional experiences related to the internship.
26. Apply APA style guidelines in citations and written reviews.
27. Complete a report of the final project in APA style.
28. Describe the nature, purposes, and types of research in technology-based arts.
29. Access and use databases, journals, and other sources of research reports and summaries, including library-based medias and online resources.
30. Recognize and interpret the basic language and vocabulary of statistics used in selected research reports.
31. Describe the structure of selected research.
32. Evaluate research in a systematic manner; analyze and review research.
33. Retrieve, critique, and summarize research independently.
34. Develop and review a researchable question in a written proposal.

PERFORMANCE/COMPOSITION/OTHER CREATIVE ACTIVITIES

1. Collaborate in a music production as a team member to produce a music recital.
2. Describe the function and operational technique of hardware components used in a typical computer music system.
3. Enter simple to complex music into a computer utilizing a QWERTY and synthesizer keyboard and a mouse with correct notational aesthetics.
4. Demonstrate, in a musical composition, the use of the synthesizer keyboard programming techniques and controller features (multitimbral channels, sound envelope manipulation, wheel, pedal, and sliders).
5. Use a software application to capture, edit, organize and perform with or otherwise use digital sounds.
6. Delineate the elements of MIDI messages in relation to musical performance or composition (e.g. bits, commands, status and data bytes to pitch, amplitude, velocity; and channel numbers to multitimbral composition).
7. Discuss and give examples of serial and parallel transmission including function of the MIDI connector for MIDI, out and thru.
8. Demonstrate the use of MIDI control surfaces.

PROGRAMMING

1. Program a computer, using MIDI, to orchestrate and playback notated music on a synthesizer.
2. Explain the MIDI specs relating to transmission and reception of messages, and explain the Central Processing Unit.
3. Discuss and give examples of serial and parallel transmission including function of the MIDI connector for MIDI, out and thru.
4. Explain the relationship between various MIDI numbering systems (decimal, binary, octal, and hexadecimal) and some elements of musical expression (pitch, velocity).
5. Recognize and analyze channel voice and mode messages, system commas, real time, and exclusive messages.
6. Review major software applications related to music sequencing, timing codes, editing, notation, multimedia, and computer-assisted instruction.

SCHOLARSHIP

1. Develop a theoretical position on ethical use of technology.
2. Develop a music program design utilizing storyboard and flowchart modeling.
3. Describe the function and operational technique of hardware components used in a typical computer music system.
4. Define Musical Instrument Digital Interface (MIDI) and outline its development.

MUSIC EDUCATION, SCIENCE, THERAPY/, AND HEALTH RELATED STUDIES

1. Identify and evaluate cognitive theories that apply to computer-based training.
2. Test feedback models and human interface designs.
3. Determine project cost analysis for human resources and materials.
4. Describe the function and operational technique of hardware components used in a typical computer music system.
5. Final Project Example: Develop research projects utilizing new technologies for music classroom environments, and prepared final software project model as an educational proposal presentation for a school governing board.
6. Describe the function and operational technique of hardware components used in a typical computer music system.
7. Explain the basic computing concepts of music sequencing and notation, including the digital electronic process with some analysis of microchips and microprocessors.
8. Describe the role of technology as it relates to communication, information competency, creativity, and music education.

BUSINESSS AND MUSIC INDUSTRY

1. Collaborate in a music production as a team member to produce a music recital.
2. Identify and evaluate companies involved in music technology production.
3. Develop a music program design utilizing storyboard and flowchart modeling.
4. Apply software to create music notation, sound samples, and music graphics.
5. Develop a music program design utilizing storyboard and flowchart modeling.
6. Select and apply software tools to project management and timeline projections.
7. Determine project cost analysis for human resources and materials.
8. Present final software project model as a proposal presentation for a client.
9. Describe the function and operational technique of hardware components used in a typical computer music system.
10. Explain the basic computing concepts of music sequencing and notation, including the digital electronic process with some analysis of microchips and microprocessors.
11. Broaden experience and realistic understanding of applied arts technology within a selected industry (or, industries).
12. Synthesize, integrate, and extend their development of applied arts technology skills in the context ofcorporate environments and IT needs.
13. Construct, implement, and evaluate units of work based on appropriate learning experiences which address assigned project outcomes and capstone requirements.
14. Extend their appreciation of the role of music and arts technology within the chosen industry through discussion, reflection and/or demonstration of work projects.
15. Broaden their understanding of the role of project design, evaluation, and reporting in the implementation of arts technology within a given industry through facilitated, mentored, guided, and independent learning experiences.
16. Describe the components of self-marketing and entrepreneurship.
17. Review jobs in the music industry: managers, lawyers, producers, agents, manufacturers, sales, promoters, media and technical.

Music Therapy

Upon program completion, students will be able to:

1. Apply knowledge from music therapy, music medicine, music technology, biological and behavioral sciences to investigate health phenomena.

- Understand history of music therapy research.
- Use criteria to evaluate theories related to individual's focus area.
- Synthesize knowledge from psychometric theories and research as it relates to reliability and validity of measurement instruments.
- Synthesize empirical literature (integrative review) in focus domain such that development of proposal of research builds on background knowledge.
- Define health/or health-related concept as the phenomena of concern for research focus.
- Explain types of knowledge and methods for knowledge generation and philosophy of science underpinnings.
- Synthesize knowledge from minor to apply to focus domain. 1.8 Demonstrate skill in critiquing proposals.
- Describe the nature, purposes, and types of research in technology-based arts.
- Investigate the components of music technology.
- Describe the role of technology as it relates to communication, information competency, creativity, and music education/therapy.
- Identify and evaluate companies involved in music technology production.
- Assess commonly used music software and hardware.
- Identify and evaluate cognitive theories that apply to computer-based training.
- Identify problem in practice that require application of research findings.
- Access and use databases, journals, and other sources of research reports and summaries, including library-based medias and online resources.

- Apply software to create music notation, sound samples, and music graphics.
- Develop a music program design utilizing storyboard and flowchart modeling.
- Ability to synthesize research literature and identify gaps in knowledge.
- Submit an integrative review article in research focus area.
- Demonstrate skills in scientific writing.

2. Utilize analytical and empirical methods to extend music therapy knowledge and scholarship.
- Know research vocabulary.
- Know how to do a literature search.
- Describes research designs and methods for application to research questions.
- Recognize and interpret the basic language and vocabulary of statistics used in selected research reports.
- Understand the process of design and implementation of a research project.
- Review, summarize and critiques journal articles.
- Critically analyzes various forms of analytical and empirical methods to generate knowledge and scholarship in music therapy. Domain: Integration and Application of Knowledge.
- Explore potential application of knowledge utilization in clinical practice.
- Interpret research findings appropriately for application to practice.
- Apply knowledge of descriptive and interferential analytical methods to answer research questions.
- Explore potential application of knowledge utilization in clinical practice.
- Apply skill in quantitative research methodology.
- Apply knowledge of qualitative design and analytical methods.
- Apply knowledge of analytical methods to experimental design.
- Formulate research questions or hypotheses.
- Demonstrate ability to logically link problem identification to research hypothesis and application to practice.
- Demonstrate data management skills.
- Choose data collection methods or instruments consistent with theory and research question.
- Determine best-fit music production models for creative operations.
- Apply APA style guidelines in citations and written reviews.
- Develop and present a convincing written argument that supports the significance of a specified problem.
- Develop and present a convincing written and oral argument that supports the method of choice for thesis.
- Prepare a research proposal that builds on current research and theory.
- Complete a report of the final project in APA style.
- Conduct and communicate research that advances the body of scientific knowledge.
- Prepare a data-based manuscript based on research experiences.

3. Conduct and communicate research that advances the body of scientific knowledge.
- Identify and describe major and changing forces in healthcare and the music therapy profession.
- Broaden their understanding of the role of project design, evaluation, and reporting in the implementation of arts technology within a given industry through facilitated, mentored, guided, and independent learning experiences.
- Conduct and communicates research that advances the body of scientific knowledge.
- Select and apply software tools to project management and timeline projections.
- Test feedback models and human interface designs.
- Determine project cost analysis for human resources and materials.
- Demonstrate oral presentation skills.
- Demonstrate poster presentation skills.
- Develop and present a convincing written argument that supports the significance of a specified problem.
- Prepare a thesis proposal that builds on current research and theory.
- Present final software project model as a proposal presentation for a client.

4. Discuss the ethical considerations and legal implications of using software.
5. Develop a theoretical position on ethical use of technology.
6. Discuss ethical considerations when utilizing human subjects in research.
7. Be aware of support resources available consistent with level of competency expected.
8. Engage in ownership and responsibility for his or her culminating set of personal, academic, and professional experiences.
9. Work effectively as a working member of a research team.

Master's Programs

Application Deadlines

Applicants Applying From Within the USA

Fall (August) Admission:

- **January 2** (priority considerations for University Fellowships and assistantships or financial aid)
- **June 1** (final deadline for applications and all supporting documentations)

Spring (January) Admission:

- **November 1** (University Fellowships are not available for admission in this session)

International Applicants Applying From Overseas

Fall (August) Admission:

- **January 2** (priority considerations for University Fellowships and assistantships or financial aid)
- **May 1** (final deadline for applications and all supporting documentations)

Spring (January) Admission:

- **August 31** (University Fellowships are not available for admission in this session)

Domestic Applicants (U.S. citizens or U.S. permanent residents)

The following is a list of items required for your application. Use this checklist to help you in gathering all the necessary documents.

1. Complete the online graduate application and submit a $60 non-refundable application fee (pay online with a valid credit card).
2. A Statement of Purpose located in the online application. Compose a 400-500 word essay detailing your specific area/s of focus in graduate study and summarizing your academic goals and career objectives in relation to your educational background and professional experience, if relevant.
3. Two (2) official sets of final academic transcripts (not photocopied) are required from **all** colleges/universities attended. You may print the Purdue University Graduate School Request for Official Transcript form for use to order your transcripts. Use one form for each institution that you are requesting official transcripts from. Transcripts must be sent directly to our office from the academic institution(s).
4. A certified copy of Bachelor's Degree (diploma) awarded, if degree conferred is not posted on final transcript.
5. Three (3) recommendations for graduate admission are required.*
6. The GRE General Test is required if you are applying for admission to an engineering program (Biomedical Engineering, Electrical and Computer Engineering, or Mechanical Engineering). Official GRE score report from ETS must be sent directly to IUPUI. (Institution code: 1325.) If you are applying for admission to the Technology graduate program, *either* the GRE General Test, the**GMAT**, *or* the **MAT** test is required. Either one of the three tests is acceptable for Technology graduate applicants.

*Persons writing your recommendations should be your present or former professors/instructors and academic advisors, or project leaders, managers/supervisors you report to professionally, and are expected to comment on your academic performance, intellectual abilities, scholastic aptitudes, work ethics. Recommendations from friends, acquaintances, peers, or family members/relatives are **not acceptable.**

Recommenders may complete and submit web-based recommendations within your online application. Instructions are available in the online application on how a recommender may complete and submit an online recommendation; however, if a recommender prefers to complete a paper recommendation form, print the following Purdue University Graduate School recommendation form in pdf format for use: Recommendation for Admission to Graduate School.

Foreign-born Naturalized U.S. Citizens and U.S. Permanent Residents: If you are either a foreign-born naturalzed U.S. citizen or a U.S. permanent resident and have completed your Bachelor's (undergraduate) degree or Master's (graduate) degree from a university or college outside the United States of America, official TOEFL test score report from ETS is required for your application. In addition, include with your application two (2) photocopies of your U.S. permanent resident card ("green card") or your U.S. Passport for verification.

Mail all application materials to the following:

Graduate Programs Office

IUPUI - Purdue School of Engineering & Technology

799 West Michigan Street, ET 215
Indianapolis, IN 46202-5160

International Applicants

The following is a list of items required for your application. Use this checklist to help you in gathering all the necessary documents.

1. Complete the online graduate application and submit a $60 non-refundable application fee (pay online with a valid credit card).
2. A Statement of Purpose located in the online application. Compose a 400-500 word essay detailing your specific area/s of focus in graduate study and summarizing your academic goals and career objectives in relation to your educational background and professional experience, if relevant.
3. Two (2) official sets of final academic transcripts (not photocopied) are required from **all** colleges/universities attended. You may print the Purdue University Graduate School Request for Official Transcript form

for use to order your transcripts. Use one form for each institution that you are requesting official transcripts from.

4. Two (2) official sets of English translations of final academic transcripts, if official language of home country is not English.
5. Two (2) official copies of undergraduate (Bachelor's) degree diploma received in official language of home country.
6. Two (2) official English translations of undergraduate (Bachelor's) degree diploma received, if official language of home country is not English.
7. Three (3) recommendations for graduate admission are required.*
8. The GRE General Test is required if you are applying for admission to an engineering program. Official GRE score report from ETS must be sent directly to IUPUI. (Institution code: 1325.)
9. Official TOEFL score report to be sent from testing agency (ETS) directly to IUPUI. Institution code: 1325
10. Form " Financial Information for International Students " to be completed by you and your sponsor.
11. Official letter or statement from a bank verifying that your sponsor has required funds to pay total expenses/cost for at least two years. Submit a recent, original bank letter or bank statement. Original only. Photocopies or fax copies are not acceptable.
12. If you have a government or institutional scholarship: Provide an official letter from the sponsoring agency that specifies the amount of the award or scholarship.
13. A photocopy of your current visa and/or I-20 documents, if you are already in the U.S.A.

*Persons writing your recommendations should be your present or former professors/instructors and academic advisors, or project leaders, managers/supervisors you report to professionally, and are expected to comment on your academic performance, intellectual abilities, scholastic aptitudes, work ethics. Recommendations from friends, acquaintances, peers, or family members/relatives are **not acceptable.**

Recommenders may complete and submit web-based recommendations within your online application. Graduate Programs Office

IUPUI - Purdue School of Engineering & Technology

799 West Michigan Street, ET 215
Indianapolis, IN 46202-5160

MS in Music Technology

The Master of Science in Music Technology (MSMT) curriculum provides post-baccalaureate education in areas of computer-based music technology, multimedia and interactive design and multimedia production techniques.

The primary objective of the program is to bring new and emerging digital arts technologies to students as they relate to a new discipline defined as music technology. The curriculum establishes the creative application of multimedia technology to video, audio and graphic production of arts and educational materials. Included in this field are foundations, methods and theoretical courses which underpin the development of production skills required in using technology in a creative environment.

Application Requirements

- Submission of the online application to the University
- Submission of the Department of Music and Arts Technology application
- Bachelor's degree and evidence of substantial music instruction, performance and literacy
- All official transcripts of undergraduate and graduate study
- Minimum Grade Point Average of 3.0 (on a 4.0 scale) for the undergraduate degree
- Performance videotape, audio cassette, CD, DVD or on-campus audition on a musical instrument or conducting of a music ensemble
- Three letters of recommendation in support of the application (they may be on business letterhead, submitted through the online application link, or from the recommendation forms included in the Department of Music and Arts Technology application packet)
- Any additional information that demonstrates personal experience in music technology and musicianship (e.g., authored CDs or websites, original compositions)
- In-person or telephone interview with the Head of Graduate Studies
- $50 application fee ($60 for an International applicant), payable through the online application.

Please note: The GRE is NOT required for application to the MSMT program.
International applicants from other than English speaking countries must take the TOEFL.

Degree Requirements

30 credit hours* for degree, including:

- 18 credit hours in Core courses (at the 500 level or above);
- 6 credit hours in Cognate courses (at the 400 level) to be selected from Music, Business, Education, Communications, Computer Science, Fine Arts or Law;
- 6 hours of approved electives (at the 400 level or above) from the cognate field or other fields with approval of the head of the graduate studies.

Minimum grade point average:

- 3.0 average to continue;
- No grades lower than "B" in core courses and cognate fields will be counted toward the degree
- No grades lower than "C" will be counted toward the degree;
- Residency requirement (on-campus student only), 3 consecutive summers or 1 summer and a contiguous academic term.

Current Tuition Rates (Fall 2010 - Summer 2011)

Indiana Resident: $283.20 per credit hour

Non-Resident (out-of-state, international) $852.40 per credit hour.

Apply Now

You need to complete **both** the Department Application and the University online application.

MS in Music Therapy

The Master of Science in Music Therapy program is designed to provide professional board-certified music therapists (http://www.cbmt.org) with advanced research skills and clinical practice in music therapy, and to teach music therapists how to utilize the array of tools available in music technology for such purposes. Within music therapy clinical practice and research, music technology will: 1) facilitate the collection and analysis of data generated during clinical sessions; 2) apply compositional and improvisational techniques with patients, and; 3) exploit the multi-mediated environment of the MIDI workstation where visual, auditory, and tactile senses can work interchangeably to support therapeutic strategies.

Application Requirements

- Submission of the online application to the University
- Submission of the Department of Music and Arts Technology application
- Bachelor's degree and evidence of substantial music instruction, performance and literacy
- All official transcripts of undergraduate and graduate study
- Minimum Grade Point Average of 3.0 (on a 4.0 scale) for the undergraduate degree
- Performance videotape, audio cassette, CD, DVD or on-campus audition on a musical instrument or conducting of a music ensemble
- Three letters of recommendation in support of the application (they may be on business letterhead, submitted through the online application link, or from the recommendation forms included in the Department of Music and Arts Technology application packet)
- Any additional information that demonstrates personal experience in music technology and musicianship (e.g., authored CDs or websites, original compositions)
- In-person or telephone interview with the Head of Graduate Studies
- $50 application fee ($60 for an International applicant), payable through the online application.

Degree Requirements

30 credit hours* for degree, including:

- 18 credit hours in Core courses (at the 500 level or above);
- 6 credit hours in Cognate courses (at the 400 level) to be selected from Music, Business, Education, Communications, Computer Science, Fine Arts or Law;
- 6 hours of approved electives (at the 400 level or above) from the cognate field or other fields with approval of the head of the graduate studies.

Minimum grade point average:

- 3.0 average to continue;
- No grades lower than "B" in core courses and cognate fields will be counted toward the degree
- No grades lower than "C" will be counted toward the degree;
- Residency requirement (on-campus student only), 3 consecutive summers or 1 summer and a contiguous academic term.

Current Tuition Rates (Fall 2010 - Summer 2011)

Indiana Resident: $283.20 per credit hour
Non-Resident (out-of-state, international) $852.40 per credit hour.

Apply Now

You need to complete **both** the Department application and the University online application.

MS in Technology (Facilities Management)

If you are currently working in the field of facility management (or have an interest in this career field) as a planner, property manager, plant manager, facility manager, plant engineer or other related areas you can enhance job opportunities while earning a formal credential sitting at your computer. This online program is designed for working professionals and can be completed in ONLY 2 years. You will share a virtual classroom with facility management professionals from around the world while earning a Purdue University degree. This is a unique program that will increase your knowledge and professionalism and therefore, your value as a facilities manager.

Description: The M.S. Degree in Technology, Facilities Management Emphasis is an on-line graduate program designed for the working student. The program provides an integrated experience in facilities management with emphasis on project and contract management, engineering systems management and energy management. The program also requires an independent direct project in the area of facilities management.

You may apply for admission to the program, if you:

- Have completed or will be completing a bachelor's degree from an accredited university.
- Coursework or knowledge of trigonometry and statistics.
- Obtained an undergraduate cumulative GPA of 3.0 or higher on a 4.0 scale.
- Have taken the GRE (Graduate Record Examination). General test and obtained scores above the 50th percentile for unconditional admission, or obtained scores above the 30th percentile for conditional admission.

Information about admissions and the GRE can be obtained from:
Office of Graduate Programs
Purdue School of Engineering and Technology

723 West Michigan Street, SL 164
Indianapolis, IN 46202
Telephone: 317/278-4960
Email: gradtech@iupui.edu
International students who are graduates of non-US institutions and whose first language is not English are required to take the Test of English as a Foreign Language (TOEFL). A minimum score of 550 on the paper version or 213 on the computer version is required.

Apply Now

Visit http://www.engr.iupui.edu/gradprogs/application.shtml to apply for admisssion to the **Masters in Technology** degree program. If you are a US Citizen, please select the domestic student application form. International students should download the Instruction sheet for application and review the required checklist.

MS in Technology

You are eligible to apply for admission to the program, if you:

- Have completed or will be completing a bachelor's degree from an accredited technology, engineering, or a related discipline.
- Obtained an undergraduate GPA (grade point average) of 3.0 or higher on a 4.0 scale, or overall "B" average equivalent.
- Have taken either GMAT, GRE, or MAT (Miller's Analogies Test) test.
- And for international applicant: Have taken the TOEFL test and met the minimum scores requirement.

PhD in Biomedical Engineering

While no single factor or score can characterize an applicant's probability for success, the following benchmarks may prove helpful.

Successful U.S. applicants typically have average undergraduate GPAs of approximately 3.60 (Prior graduate school GPAs, if applicable, are higher).

In the case of international students, successful applicants are typically in the top 5% of their graduating class, or higher, depending on the prior institution. Target GRE scores are 550 and higher for verbal and 750 and higher for quantitative.

Application Requirements

In order to be considered for admission to the Biomedical Engineering Graduate Program, the following forms are required to be completed by all applicants:

1. Complete the electronic application (Paper applications have been phased out).
2. Submit an non-refundable application ($60 for us citizens and permanent residents and $75 for international applicants).
3. Submit an online statement of approximately 300-500 words concerning your purpose for undertaking or continuing graduate study, your reasons for wanting to study at Purdue, and your professional plans, career goals, and research interests. You also may explain any irregularities or special circumstances applicable to your background and elaborate on your special abilities, awards, achievements, scholarly publications, and/or professional history.
4. Three (3) letters of recommendation are required for degree seeking applicants. The people submitting recommendation letters on your behalf may send their recommendations to Purdue University through the online recommendation system (preferred) or via paper. For recommenders wishing to complete a paper recommendation, please send the Graduate School recommendation form (PDF and Word).
5. Two official transcripts from each college or university you have attended must be submitted.*
6. Official TOEFL Score reported electronically by ETS, or Official IELTS Score reported to the Purdue University Graduate School. International degree-seeking applicants whose native language is not English are required to submit the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) scores for Purdue University Graduate School admission. Your application is not complete until your TOEFL scores are received directly from ETS or your IELTS Scores are received from the Purdue University Graduate School. **

*NOTE: If colleges or universities attended do not provide transcripts in English, then official, original (native) language transcripts must be accompanied by certified English translations. An official transcript bears the original signature of the registrar and/or the original seal of the issuing institution. For completed degrees, if your transcript does not clearly indicate the date and from where the degree was obtained, you must also include a *copy* of the original degree certificate. This most often pertains to transcripts sent from universities in China and India, where degree certification is usually not indicated on the transcript. As with transcripts, if foreign institutions do not provide the degree certificate in English, then a copy of the original (native) language degree certificate must be accompanied by a copy of certified English translation. Transcripts cannot be returned. Transcripts should be mailed directly to the Weldon School.

**NOTE: Official TOEFL Score reported electronically by ETS to the Purdue University Graduate School. International non-native speakers of English must achieve a TOEFL score of 550 or higher on the paper-based examination or 213 or higher on the computer-based examination to be considered for admission to a degree program. These scores will only be accepted for up to two years after the date they were taken. For the new Internet-based Test of English as a Foreign Language (TOEFL iBT), non-English speaking applicants are required to have a minimum score in each of the four test areas as follows: Writing 18, Speaking 18, Listening 14, and Reading 19. An overall minimum score of 77 will be required. Purdue University's code for the TOEFL is 1631.

Official IELTS Score reported by IELTS International to the Purdue University Graduate School. International applicants must achieve a minimum score of 6.5 or higher to be considered for admission into the Weldon School of Biomedical Engineering. Have scores sent to the Graduate School at Purdue University.

You can check the status of your application online at the Graduate School Application website or inquiries can be sent to WeldonBMEGrad@purdue.edu. All records submitted

by and on behalf of an applicant become the property of Purdue University and cannot be returned.

Application Deadlines

The deadline for receipt of a completed application (online application submitted, fee paid, and all required official documents received in the Weldon School) for priority consideration of admission and financial support is **December 15**.

Please note that **our program has NO spring or summer admissions**.

Our Graduate office will answer any questions that you may have. Please contact us at:

Biomedical Engineering Graduate Office
Purdue University
206 S. Martin Jischke Drive
West Lafayette, IN 47907-2032
Phone: 765-494-2982
Fax: 765-494-1193
Email: WeldonBMEGrad@purdue.edu

PhD in Electrical & Computer Engineering

To apply for admission to the Ph.D. program in Electrical and Computer Engineering, you must follow these specific steps and instructions to apply:

1. Complete the Purdue University online application and select *West Lafayette campus*.
2. Submit a Statement of Purpose (300-500 words) and Resume. Send hardcopies if you are unable to submit the your application.*
3. Send two (2) copies of official transcripts from the Registrar in a sealed envelope. Transcript/Class Rank Form
4. Send official GRE Test scores for ETS only (no photocopies).
5. For degree-seeking whose native language is not English, submit official TOEFL scores from ETS only, no photocopies. We also accept IELTS scores in place of TOEFL – please send the official score sheet.
6. Submit three (3) letters of recommendation.
7. In the supplemental ***ECE Web Application*** form where it asks for "Campus Preference", state as your campus preference.
8. Notify the Coordinator of Graduate Engineering and Technology Programs at IUPUI by email wvlim@iupui.edu after you have submitted the Purdue Univerity application and have sent all application materials to the ECE Graduate Office at Purdue University.

*In your **Statement of Purpose** you must state clearly that you wish to be admitted to the Ph.D. program to study at the_. You should also specify in the Statement the research area/s you are interested in and the you wish to study with.

Go to the Purdue University ECE website to begin the application process.

NOTE: To inquire about your application status send email directly to the Admissions Representative in the ECE Graduate Office at Purdue University, West Lafayette: ecegrad@purdue.edu.

Bachelor's level students are normally considered for admission into the Master's program; however, bachelor's level students with exceptionally strong undergraduate records may apply for and be considered for direct admission into the Ph.D. degree program.

Doctoral Program Basic Requirements

- *Undergraduate Cumulative Grade Point Average:* 3.25 or equivalent required
- *Master's Degree Completion:* Required, with a grade point average of 3.3 or equivalent, or superior performance in a bachelor's program
- *Graduate Record Examination (GRE):* Required -- no minimum score set

International Applicant Requirements

- *TOEFL for Non-Native English Speakers:* Minimum Paper-Based Test (PBT) Score Required: 550
  Minimum Internet-Based Test (IBT) Overall Score Required: 77
  With the following minimum section requirements:
  Reading: 19
  Listening: 14
  Speaking: 18
  Writing: 18
- *IELTS (Academic Module):*
  An alternative to the TOEFL, scores of 6.5 or higher will be accepted
- *Pearson Test of English (PTE) (Academic Module):*
  An alternative to the TOEFL, scores of 58 or higher will be accepted
- *TWE for Non-Native English Speakers*
  Not required, but recommended
- *Or New IELTS*

Application Deadlines

Fall Admission:

- **January 5** (for completed applications for priority consideration for financial support)
- **May 1** (final deadline)

Spring Admission:

- **September 15** (for completed applications)

Summer Admission:

- Summer session is only available to applicants admitted for fall who wish to start research early through an agreement with their professor.

Contact Information

Name: Karen Jurss
Admissions Representative
Phone: (765) 494-3392
E-mail: ecegrad@ecn.purdue.edu

In order to expedite the processing of your application, we ask that you submit all supporting documents in ***one large envelope***.

Mail all required application materials directly to:

Graduate Office

School of Electrical and Computer Engineering
Purdue University
465 Northwestern Avenue
West Lafayette, IN 47907-2035
USA

PhD in Mechanical Engineering

Application Deadlines

Domestic Applicants (U.S. citizens and U.S. permanent residents)

The following is a list of items required for your application. Use this checklist to help you in gathering all the necessary documents.

1. Complete the online graduate application and submit a $50 application fee (pay online with a valid credit card).
2. A Statement of Purpose located in the online application. A 400-500 word essay detailing your specific area/s of focus in graduate study and summarzing your academic goals and career objectives in relation to your educational background and professional experience, if relevant.
3. Two (2) official sets of final academic transcripts (not photocopied) are required from **all** colleges/universities attended. You may print the Purdue University Graduate School Request for Official Transcript form for use to order your transcripts. Use one form for each institution that you are requesting official trasncripts from. Transcripts must be sent directly to our office from the academic institution/s.
4. Certified copy of Bachelor's Degree (diploma) awarded, if degree conferred is not posted on final transcript.
5. Certified copy of Master's Degree (diploma) awarded, if degree conferred is not posted on final transcript.
6. Three (3) recommendations for graduate admission are required.*
7. Complete the program department application (for Mechnical Engineering only).
8. The GRE General Test is required if you are applying for admission to an engineering program. Official GRE score report from ETS needs to be sent directly to IUPUI. Institution code: 1325.

Foreign-born Naturalized U.S. Citizens and U.S. Permanent Residents: If you are either a foreign-born naturalzed U.S. citizen or a U.S. permanent resident and have completed your Bachelor's (undergraduate) degree or Master's (graduate) degree from a university or college outside the United States of America, the official TOEFL test score report from ETS is required for your application. In addition, include with your application two (2) photocopies of your U.S. permanent resident card ("green card") or your U.S. Passport for verification.

*Persons writing your recommendations should be your present or former professors/instructors, advisors, project leaders, or managers/supervisors who you report to professionally, and are expected to comment on your academic performance, intellectual abilities, and scholastic aptitudes. Recommendations from friends, acquaintances, peers, or family members/relatives are **not acceptable**.

Recommenders may complete and submit web-based recommendations within your online application. Instructions are available in the online application on how a recommender may complete and submit an online recommendation; however, if a recommender prefers to complete a paper recommendation form, print the following Purdue University Graduate School recommendation form in pdf format for use: Recommendation for Admission to Graduate School.

Mail all application materials to the following:

Graduate Programs Office

IUPUI - Purdue School of Engineering & Technology

799 West Michigan Street, ET 215
Indianapolis, IN 46202-5160

International Applicants

The following is a list of items required for your application. Use this checklist to help you in gathering all the necessary documents.

1. Complete the online graduate application and submit a $60 application fee (pay online with a valid credit card).
2. A Statement of Purpose located in the online application. A 400-500 word essay detailing your specific area/s of focus in graduate study and summarzing your academic goals and career objectives in relation to your educational background and professional experience, if relevant.
3. Two (2) official sets of final academic transcripts (not photocopied) are required from **all** colleges/universities attended (Do not include secondary or high school transcripts). You may print the Purdue University Graduate School Request for Official Transcript form for use to order your transcripts. Use one form for each institution that you are requesting official trasncripts from. Transcripts must be sent directly to our office from the academic institution/s.
4. Two (2) official sets of English translations of final academic transcripts, if official language of home country is not English.
5. Two (2) official copies of undergraduate (Bachelor's) and graduate (Master's) degree diplomas received in official language of home country.
6. Two (2) official English translations of undergraduate (Bachelor's) and graduate (Master's) degree diplomas received, if official language of home country is not English.
7. Three (3) recommendations for graduate admission are required.*
8. Complete the program department application (for Mechnical Engineering only).
9. The GRE General Test is required if you are applying for admission to an engineering program. Official GRE score report from ETS needs to be sent directly to IUPUI. Institution code: 1325.
10. Official TOEFL score report to be sent from testing agency (ETS) directly to IUPUI. Institution code: 1325
11. Form " Financial Information for International Students " to be completed by you and your sponsor.
12. Official letter or statement from a bank verifying that your sponsor has required funds to pay total expenses/cost for at least two years. Submit a recent,

original bank letter or bank statement. Original only. Photocopies or fax copies are not acceptable.

13. If you have a government or institutional scholarship: Provide an official letter from the sponsoring agency that specifies the amount of the award or scholarship.
14. A photocopy of your current visa and/or I-20 documents, if you are already in the U.S.A.
15. Letter of financial support from your research advisor or major professor. Note: This letter of support will only be prepared and provided AFTER your application has been reviewed for admission AND a professor has indicated his/her interest in providing full financial support for your Ph.D. education.

*Persons writing your recommendations should be your present or former professors/instructors, advisors, project leaders, or managers/supervisors who you report to professionally, and are expected to comment on your academic performance, intellectual abilities, and scholastic aptitudes. Recommendations from friends, acquaintances, peers, or family members/relatives are **not acceptable**.

Recommenders may complete and submit web-based recommendations within your online application. Instructions are available in the online application on how a recommender may complete and submit an online recommendation; however, if a recommender prefers to complete a paper recommendation form, print the following Purdue University Graduate School recommendation form in pdf format for use: Recommendation for Admission to Graduate School.

Mail all application materials to the following:

Centers

New Student Academic Advising Center (NSAAC)

New Student Academic Advising Center (NSAAC)

Interim Director: D. King
Assistant Professor of Engineering, Part-time and Academic Advisor: N. Lamm Senior Lecturer of Freshman Engineering: P. Orono Lecturerof Freshman Engineering: P. Gee

The New Student Academic Advising Center for the School of Engineering and Technology was formed in 2007. The center is the advising unit for all students new to the School of Engineering and Technology, including beginners, transfers, second degree, and returning students. The center provides services that include orientation programs, transfer credit analysis, and academic advising through the first year of student's enrollment. In addition to providing academic advising, the center coordinates the curriculum and teaching for the freshman engineering courses as well as the learning community courses required for all beginning students.

All qualified students interested in pursuing an engineering degree at IUPUI are admitted to the Freshman Engineering Program. This includes second-degree and transfer students as well as beginning students. While in this program,

beginning students complete the basic sequence of courses common to all engineering majors. These courses include calculus I and II, chemistry and physics for science and engineering majors, English composition, and public speaking. Freshman engineering courses include: ENGR 19500 Introduction to the Engineering Profession, ENGR 19600 Introduction to Engineering, ENGR 19700 Introduction to Programming Concepts, and ENGR 29700 Computer Tools for Engineering. The Freshman Engineering Program provides students with an opportunity to explore the various engineering disciplines before making a commitment to a specific curriculum.

Biomedical Engineering (BME)

Chancellor's Professor: E. Berbari *(Chair)* **Professors:** G. Kassab, H. Yokota
Associate Professors: J. Schild, D. Xie, K. Yoshida
Assistant Professors: J. Ji, S. Na, C.C. Lin, J. Wallace
Clinical Associate Professor: W. Combs
Lecturer: K. Alfrey *(Director of the Undergraduate Program)*

Biomedical engineering is a discipline that advances knowledge in engineering, biology, and medicine to improve human health through cross-disciplinary activities that integrate the engineering sciences with the biomedical sciences and clinical practice. Students work in the development of new divices, algorithms, processes, and systems that advance biology and medicine and improve medical practice and health care delivery. Many students choose BME because it is people-oriented.

The mission of the Biomedical Engineering Department is to strive to attain world-class research and to provide the highest quality educational experience for our students. We expect and value excellence in conducting research, and training students to participate in research activities and professional practice. We accomplish our Mission as follows:

- **By exploiting the most modern and innovative approaches, we are leaders in interdisciplinary biomedical engineering research and discovery.**
- **By providing students with an education in engineering principles, design, and modern biomedical science, we develop in them the knowledge and skills for productive careers in biomedical engineering.**
- **By committing to service to advance biomedical engineering, we contribute to the field.**

Bachelor of Science in Biomedical Engineering

The bachelor's degree in Biomedical Engineering (B.S.B.M.E.) integrates the engineering analysis and design skills of the Purdue School of Engineering and Technology with the life sciences offered through the Purdue School of Science and with significant medical/clinical elements available through collaboration with the Indiana University School of Medicine.

The B.S.B.M.E. degree program combines a strong set of mathematics, science, and biomedical engineering courses into a demanding and rewarding four-year degree program aimed at solving contemporary problems in the life and health sciences. Outstanding features include instructional objectives that integrate the study of the fundamental principles of life and health sciences with rigorous engineering disciplines through a core of interdisciplinary courses that include biomechanics, biomeasurements, biomaterials, computational biology, and biosignals and systems analysis, among others. Many of the courses involve laboratory and problem solving recitation sections that lead the student through a practical encounter with methods of engineering analysis aimed at understanding and solving problems related to human health care and delivery. The Senior Design Experience is a two-semester sequence where a team approach is used to solve problems originating from the laboratories of faculty across the Schools of Engineering, Science, Dentistry, and Medicine, as well as from clinical and industrial partners. This approach will develop strong team-working skills among the students and enhance their communication skills with professionals outside of their discipline.

The senior year electives enable the student to pursue course content that develops a depth of understanding in a number of biomedical engineering expertise areas such as tissue engineering, biomolecular engineering, imaging, bioelectric phenomena, biomechanics, and regenerative biology. Students interested in pursuing careers in medicine or dentistry may also use their electives to fulfill these respective preprofessional requirements. Highly motivated students with strong academic credentials will find biomedical engineering an excellent premedical or predental degree program.

This exciting and innovative curriculum forms the basis of our program vision, whereby our students will be well educated in modern biomedical engineering, and with this knowledge they will be prepared to develop new devices, technologies, and methodologies that lead to significant improvements in human health care and delivery. The Biomedical Engineering Web site (www.engr.iupui.edu/bme/) has the most up-to-date information concerning the plan of study for the B.S.B.M.E. degree program.

Biomedical Engineering Program Objectives

The program educational objectives of our biomedical engineering undergraduate program are to integrate engineering and life science principles into a comprehensive curriculum that produces graduates who can achieve the following career and professional accomplishments, if desired:

- **Meet employer expectations in medical device companies or other health or life science related industries.**
- **Pursue and complete advanced graduate degrees in biomedical engineering, or related engineering or life science areas.**
- **Pursue and complete advanced professional degree programs in medicine, law, business, or other professional areas.**

The above program objectives are based on achieving a set of assesssable program outcomes at the time the students have completed the undergraduate curriculum and are outlined below:

Program Outcomes

Upon completing the undergraduate BME degree, our students will possess:

a. an ability to apply knowledge of mathematics, science, and engineering

b. an ability to design and conduct experiments, as well as to analyze and interpret data

c. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainablity

d. an ability to function on multi-disciplinary teams

e. an ability to identify, formulate, and solve engineering problems.

f. an understanding of professional and ethical responsibility

g. an ability to communicate effectively

h. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context

i. a recognition of the need for, and an ability to engage in life-long learning

j. a knowledge of contemporary issues

k. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

l. an understanding of biology and physiology

m. the capacity to apply advanced mathematics (including differential equations and statistics), science and engineering to solve problems at the interface of engineering and biology

n. the ability to make measurements on and interpret data from living systems, addressing the problems associated with the interaction between living and non-living materials and systems

Transfer Students

Transfer students are initially admitted to the Freshman Engineering Program. Subsequent transfer into the Department of Biomedical Engineering is permitted only after consultation with a Biomedical Engineering Advisor to ensure course equivalencies and to evaluate the student's overall academic achievement. Students requesting transfer into Biomedical Engineering must submit a brief application.

Admission into Biomedical Engineering

Freshman engineering students who declare a biomedical engineering major must apply to the Department of Biomedical Engineering for formal admission by April 1 of their first year. Acceptance into the department is competitive and is based on academic qualifications, advisor's recommendation, and available space.

Graduate Programs in Biomedical Engineering

Biomedical engineering is an interdisciplinary program and a joint effort of the Purdue School of Engineering and Technology, the Purdue School of Science, and the Indiana University Schools of Medicine and Dentistry at Indiana University-Purdue University Indianapolis (IUPUI). In addition to these participating academic units, the program operates in close collaboration with several centers and facilities on campus, and with the Department of Biomedical Engineering at Purdue University, West Lafayette.

Students interested in the M.S.B.M.E. degree should apply directly to the Graduate Programs Office of the Purdue School of Engineering and Technology in Indianapolis. Students with a master's degree, or who are solely interested in the Ph.D. degree, should apply to the Department of Biomedical Engineering at West Lafayette, even though they may be resident and study on the Indianapolis campus.

For more information about the M.S.B.M.E. visit http://engr.iupui.edu/bme/ms_bme_pos.shtml?menu=ms.

For more information about the the P.hD. program visit https://engineering.purdue.edu/BME/Academics/BMEGraduateProgram/Admissions/.

Plan of Study

Bachelor of Science Plan of Study

Guidelines for selecting General Education Electives, as well as a list of approved courses, can be found on the BME website (http://www.engr.iupui.edu/bme/). BME, science, and technical electives must be selected in consultation with an academic advisor. These courses may include upper-level science, BME, or other engineering courses not already included on the BME plan of study. The goal of these electives is to provide depth of education in a specific sub-discipline of Biomedical Engineering.

Freshman Year	**Credit Hours**
First Semester	
BIOL-K 101 Concepts of Biology I	5
ENGR 19500 Engineering Seminar	1
ENGR 19600 Engineering Problem Solving	3
MATH 16500 Integrated Calculus and Analytic Geometry	4
ENG W 131 Elementary Composition I	3
ENGR 19700 Intro to Computing (C Programming)	2
TOTAL	18
Second Semester	
CHEM-C 10500 Primciples of Chemistry I	3
CHEM 12500 Experimental Chemistry I	2

PHYS 15200 Mechanics	4
MATH 16600 Integrated Calculus and Analytic Geometry II	4
MATH 17100 Multidimensional Mathematics	3

TOTAL	16

Senior Year

First Semester

BME 49100 Biomedical Engineering Design I	3
BME 41100 Quantitative Physiology	3
BME 44200 Biofluid and Biosolid Mechanics	3
BME/SCI/TECH Elective*	3
BME/Sci/Tech Elective	3
TOTAL	15

Second Semester

BME 49200 Biomedical Engineering Design II	3
BME 46100 Transport Processes in BME	3
BME/Tech Elective	3
BME 40400 Ethics for Biomedical Engineers	1
General Education Elective	3
TOTAL	13

*The four BME/Sci/Tech electives must be selected in consultation with an advisor to form an appropriatae Depth Area.

Computer, Information, & Leadership Technology (CILT)

Chair: Eugenia Fernandez, Associate Professor of Computer & Information Technology
Associate Chair: Patricia Fox, Clinical Assistant, Professor of Organizational Leadership & Supervision

The Department of Computer, Information, and Leadership Technology houses degree and certificate programs in Computer and Information Technology (CIT), Organizational Leadership and Supervision (OLS), and three graduate tracks offered through the School of Engineering and Technology's Master of Science in Technology degree.

Our department partners two dynamic programs, bringing together talented faculty and staff who continue to develop innovative and creative opportunities for teaching and learning both on and off campus. CIT's Living Lab, STEM Mentors, and the Go Green programs all serve as powerful tools for experiential learning for our students, and are exemplars of IUPUI's RISE to the Challenge Initiative RISE to the Challenge Initiative.

CIT's degree program is accredited by ABET (Accreditation Board for Engineering and Technology), a process involving voluntary review to ensure the CIT program meets established quality standards. By participating in ABET accreditation, we focus on continuous quality improvement, a hallmark of all successful organizations.

As a CILT student, graduate, or industrial partner, you are an integral part of tomorrow's computer information technology industry or leadership community. Technical skills and professional leadership competencies continue to make our graduates distinctive, unique, and highly marketable in meeting the needs of employers today. All industries seek strong, effective, and mature leaders with the technological knowledge to compete in a global workforce. CILT programs will be the resource of choice to meet that need and each of you will benefit from the synergy created in our department.

Computer & Information Technology

Professors: A. Jafari **Associate Professors:** E. Fernandez (*Chair*), J. Starks, H. Wu
Assistant Professor: F. Li
Clinical Assistant Professor: C. Justice **Lecturers:** S. Catlin, J. Clark, R. Elliott, N. Evans, C. Minns

The Computer and Information Technology (CIT) program offers a Purdue Bachelor of Science Degree. This degree is available with four concentrations: Web Development, Data Management, Networking Systems, and Information Security These concentrations are designed to provide an applications-oriented, practical education that prepares students for careers as application developers (people who design, write, install and maintain a variety of IT systems, with an emphasis on Web applications); data managers (people who, design, implement, program and maintain databases); network systems specialists (people who to design, configure, secure and maintain IT networks); and information security specialists (people who protect information assets of an organization).

Students who must interrupt their course of study for two calendar years or more will be required to meet all requirements for the program as it stands at the time of their return. Computer and Information Technology (CIT) courses over 10 years old may have to be repeated. Students should check with a CIT advisor.

CIT has been a leader in offering degree courses that can be completed via distance education. Selected courses may be taken either partially or completely via the Web.

CIT offers a minor in computer technology to students majoring in other areas of study at IUPUI. The computer information technology minor provides a basic set of computer concepts and programming courses along with a sequence of computing specialty courses.

CIT also offers Web-based certificate programs, which can be completed via distance education. The IT Certificate for Web Development focuses on the principles and techniques used to develop Web-based business applications. The six courses that comprise the program cover the application development process including analysis, design, Web programming, database integration and implementation.

The E-Commerce Development Certificate focuses on Web-based application development. Interested students should have at least two to three years of application development experience or have completed the IT Certificate for Web Development. Students in the E-Commerce Development certificate can choose to develop their programming skills using either ASP, NET or Java. Upon completion of the E-Commerce Development Certificate, students will have the skills and knowledge to build and maintain data driven e-commerce sites.

CIT offers a Network Security Certificate (NSC) program accredited by The Committee on National Security Systems (CNSS) that addresses the ever-growing need in security. The NSC provides information assurance and security education and training to students and professionals. This program is hands-on and requires students to have some networking and systems experience. Completion of the NSC provides students with a solid foundation in security techniques and prepares participants to work in information assurance and network security. The certificate consists of six courses and is designed so that it can be completed within three semesters.

CIT offers a Computer Technology Applications Certificate (CTAC). CTAC is a six-course, 18-credit-hour sequence of classes designed to give you a strong background in computer applications. It will equip you with technology expertise to support your professional academic endeavors and help you transition to the technology of the future. In the required courses, you will use software applications rather than programming to build web sites, develop software training modules, create other interactive IT products, and complete a service learning project. Electives allow you to explore personal-use topics such as IT for the consumer, home networking, and protecting yourself in cyberspace or professional topics such as ethics, IT fundamentals, HTML, and desktop publishing.

Courses in any of the certificate programs may be applied directly to the Bachelor's degree in Computer and Information Technology.

For more information, visit our Web site at cit.iupui.edu or contact Computer and Information Technology at (317) 274-9705 or via email: cit@iupui.edu.

Bachelor of Science in Computer & Information Technology

This program is accredited by the Computing Accreditation Commission, ABET, Inc., 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The Program Objectives for the B.S. in Computer and Information Technology are:

1. Apply appropriate information technologies and methodologies to enable an organization to meet its goals.
2. Create, maintain and secure the information technology infrastructure of an organization.
3. Communicate effectively in oral, written, and visual modes in interpersonal and group environments.
4. Act professionally and ethically both as individuals and as members of diverse workplace teams.
5. Engage in ongoing professional development and learning activities.

General Requirements

Completion of the CITBS requirements of a selected concentration and a minimum of 121 credit hours.

1. A minimum of 39 credit hours must be earned in courses at the 300 level or higher. Students must verify upper-level credit with a CIT advisor.
2. Students are required to complete at least two of the four RISE experiences - research, international, service learning, and experiential learning. See an advisor for details.

Requirements for Bachelor of Science in Computer and Information Technology (CITBS)

The bachelor's degree requirements are fulfilled by meeting all of the requirements of a selected concentration. Four concentrations are available for a student to select: Data Management, Information Security, Networking Systems, and Web Development.

Overall - completion of 121 credit hours, meeting the following minimums:

- 39 credit hours in upper level courses
- 32 credit hours in residency in the School of Engineering & Technology
- 12 credit hours in upper level CIT courses
- 2.0 GPA

Core Requirements - 63 credit hours

- CIT Core - 36 credit hours
- CIT Concentration - 21 credit hours
- CIT Selectives - 6 credit hours

Leadership Core - 10 credit hours

- Human Behavior (3 credit hours)
- Ethics (3 credit hours)
- Project Management (3 credit hours)
- Career Planning (1 credit hour)

General Education - 30 credit hours

- Communications (composition, speech, and report writing) - 12 credit hours
- Mathematics/Science - 18 credit hours
- Science electives may come from chemistry, geology, physics, and life sciences; however, a laboratory must be associated with the course.

Free Electives - 18 credit hours

- Electives must include 9 units in the same (non-CIT) subject area with at least 3 units at the 300/400 level, but not ECON-E270, PSY-B 30500 or SOC-R 359.
- Minor or Certificates are recommended. See advisor for details.

Specific Concentration Areas

Data Management - Concentration Requirements (21 credits)

- **30000-level Programming** - 3 credit hours
- **CIT 49900** Database Programming - 3 credit hours
- **CIT 49900** Database Security - 3 credit hours
- **CIT 49900** Advanced Database Design - 3 credit hours
- **CIT 41200** XML-Based Web Applications - 3 credit hours
- **CIT 47900** Database Administration - 3 credit hours
- **CIT 49900** Data Warehouse and Mining - 3 credit hours

Information Security - Concentration Requirements (21 Credits)

- **CIT 35600** Network O/S Administration - 3 credit hours
- **CIT 40600** Advanced Network Security - 3 credit hours
- **CIT 41500** Advanced Network Administration - 3 credit hours
- **CIT 42000** Digital Forensics - 3 credit hours
- **CIT 43100** Applied Security Protocols - 3 credit hours
- **CIT 45100** IT Risk Assessment - 3 credit hours
- **CIT 46000** Wireless Security - 3 credit hours

Networking Systems - Concentration Requirements (21 Credits)

- **CIT 32700** Wireless Networking - 3 credit hours
- **CIT 40200** Design & Implementation of LANs - 3 credit hours
- **CIT 35600** Network O/S Administration - 3 credit hours
- **CIT 44000** Communications Network Design - 3 credit hours
- **CIT 41500** Advanced Network Administration - 3 credit hours
- **CIT 40600** Advanced Network Security - 3 credit hours
- **CIT 38100** Unix Programming & Admin - 3 credit hours

Web Development - Concentration Requirements (21 Credits)

- **CIT 27000 or CIT 21500 or CIT 24200** Programming - 3 credit hours

- **CIT 31200** Advanced Web Site Design - 3 credit hours
- **CIT 30000 Level Programming** - 3 credit hours
- **CGT Selective** - 3 credit hours
- **CIT 37400** Systems and Database Analysis - 3 credit hours
- **CIT 41200** XML-Based Web Applications - 3 credit hours
- **CIT 43600** Advanced E-Commerce or **CIT 34400** Database Programming - 3 credit hours

Minor in Computer Technology

A minor in computer technology requires the completion of either 18 or 19 credit hours of computer technology courses, plus prerequisite requirements in mathematics, and computer applications. Required courses in computer technology are provided in two groupings: (a) core requirements, and (b) a specialty sequence. At least 12 credit hours of the minor must be taken at IUPUI.

Students who wish to complete a minor in computer technology must already be accepted as a major by some other department on the IUPUI campus. Students should ask their department's academic advisor whether a minor in computer technology is acceptable with their major field.

A student who applies for a computer technology minor must have completed a mathematics competency as evidenced by completing MATH-M 118 and M 119 or MATH 15300 and 15400, or MATH 15900, and a college-level computer literacy course (equivalent to CIT 10600).

The computer technology minor's core requirements (12 credit hours):

- **CIT 11200** Information Technology Fundamentals **or BUS S302** Management Information Systems - 3 credit hours
- **CIT 21200** Web site Design - 3 credit hours
- **CIT 14000** Programming Constructs Laboratory - 3 credit hours
- **CIT 21500** Web Programming **or CIT 27000** Java Programming I **or CIT 24200** Intro to ASP.Net Programming - 3 credit hours

Prior to continuing into the specialty sequences, a student must have:

1. attained the mathematics and computer literacy ability evidenced by college-level courses,
2. completed the above computer technology minor's core requirements,
3. completed 30 credit hours toward his or her major,
4. earned a cumulative grade point average (GPA) of 2.0 or higher.

The student who has met these conditions then selects one of the specialty sequences below and proceeds to complete the three courses of that selected specialty.

The computer technology specialty sequences are:

Applications Development (9 cr.)

- **CIT 21400** Intro to Data Management (3 cr.)
- **CIT 21300** Systems Analysis and Design **or BUS A337** Computer Based Accounting Systems Analysis (3 cr.)
- **INFO-I 300** Human-Computer Interaction **or CIT 29900** Interface Design (3 cr.)

Network Systems (9 cr.)

- **CIT 29900** Data Communications (3 cr.)
- **CIT 29900** Network Fundamentals (3 cr.)
- **CIT 35600** Network O/S Administration or CIT 40200 Design and Implementation of LANs (3cr.)

Web Technologies (9 cr.)

- **CIT 21400** Intro to Data Management (3 cr.)
- **CIT 30300** Commercial Web Site Development or CIT 34700 Advanced ASP. Net Programming or CIT 32900 Java Server Pages (3 cr.)
- **CIT 31200** Advanced Web Site Design **or CIT 41200** XML-Based Web Applications (3 cr.)

Database Systems (9 cr.)

- **CIT 21400** Intro to Data management (3 cr.)
- **CIT 49900** Database Programming (3 cr.)
- **CIT 49900** Advanced Database Design (3 cr.)

Information Security (9 cr.)

- CIT 29900 Data Communications (3 cr.)
- CIT 30300 Communications Security and Network Controls (3 cr.)
- CIT 40600 Advanced Network Security (3 cr.)

IT Certificate for Web Development

The IT Certificate for Web Development program requires the completion of **18 credit hours**, all delivered over the Web. The courses cover the principles and techniques of the application development process as they apply to a Web environment.

Students who complete the Information Technology Certificate will be able to:

- Apply the tools and techniques for effective Web site planning and analysis
- Create dynamic data driven web sites
- Utilize both client and server side languages in developing e-commerce sites.
- Apply optimal Web design strategies to deploy e-commerce Web applications for a global audience
- Research, learn and apply new web technologies
-

The Information Technology Certificate requirements are:

- **CIT 21200** Web Site Design - (3 cr.)
- **CIT 21300** Systems Analysis and Design - (3 cr.)
- **CIT 21400** Intro to Data Management - (3 cr.)
- **CIT 21500** Web Programming - (3 cr.)
- **CIT 31200** Advanced Web Site Design - (3 cr.)
- **CIT 31300** Commercial Web site Development - (3 cr.)

For more information: IT Certificate for Web Development Web Page

Computer Technology Applications Certificate

The Computer Technology Applications Certificate (CTAC) requires the completion of **18 credit hours.** The courses cover intro and advanced use of computer applications.

Students who complete the Computer Technology Applications Certificate will be able to:

- Use traditional office application software at the highest level
- Customize and modify application software for end users
- Train end users of application software in best practices
- Research, learn, and apply new software techniques
- Create sophisticated and interactive Web interfaces using application software
- Use Web 2.0 tools to further their career

The Computer Technology Applications Certificate requirements are:

- **CIT 10600** Using a Personal Computer - (3 cr.)
- **CIT 20600** Advanced Applications and Desktop Publishing - (3 cr.)
- **CIT 30600** Computer Technology Applications Capstone - (3 cr.)

Electives (Choose 3):

- **CIT 11200** Information Technology Fundamentals - (3 cr.)
- **CIT 21200** Web Site Design - (3 cr.)
- **CIT 30100** Digital Technologies for the Consumer - (3 cr.)
- **CIT 34600** Desktop Publishing Applications - (3 cr.)
- **OLS 26300** Ethical Decisions in Leadership - (3 cr.)

For more information: Computer Technology Applications Certificate Web Page

E-Commerce Development Certificate

The E-Commerce Development Certificate requires the completion of 18 credit hours. The program covers the skills and knowledge to build and maintain data driven e-commerce sites.

Students who complete the E-Commerce Development Certificate will be able to:

- Apply the fundamental concepts of object-oriented programming
- Develop database-driven web applications for multiple browsers and platforms
- Design, describe, and develop a complex web-based software product

The E-Commerce Development Certificate requirements are:

- **CIT 21300** Web-Based Analysis & Design - (3 cr.)
- **CIT 31299** Advanced Web Site Design - (3 cr.)
- **CIT 41200** XML-Based Web Applications - (3 cr.)
- **CIT 43600** Adv. E-Commerce Development - (3 cr.)

ASP.Net Programming Track

- **CIT 24200** Introduction to ASP.Net Programming - (3 cr.)
- **CIT 34700** Advanced ASP.Net Programming - (3 cr.)

Java Programming Track

- **CIT 27000** Introduction to Java - (3 cr.)
- **CIT 32900** Java Server Programming - (3 cr.)

For more information: E-Commerce Development Certificate Web Page

Network Security Certificate

The Network Security Certificate requires the completion of 18 credit hours. The program covers information assurance and security. It requires students to have some networking and systems experience.

Students who complete the Network Security Certificate (NSC) will be able to:

- Apply information assurance and security principles to secure systems and networks
- Conduct accurate and comprehensive digital forensics investigations and apply appropriate rules of evidence
- Use an appropriate analytic framework to assess risk and recommend strategies for mitigation.

The Networ Security Certificate requirements are:

- CIT 30300 Communication Security and Network Controls - (3 cr.)
- CIT 40600 Advanced network Security - (3 cr.)
- CIT 42000 Digital Forensics - (3 cr.)
- CIT 43100 Applied Secure Protocols - (3 cr.)
- CIT 45100 IT Risk Assessment - (3 cr.)
- CIT 46000 Wireless Security - (3 cr.)

For more information: Network Security Certificate Web Page

Organizational Leadership and Supervision

Associate Professors C. Goodwin, S. Hundley, C. Feldhaus
Clinical Professors P. Fox (*Associate Chair*), T. Diemer
Senior Lecturer R. Wolter
Visiting Lecturer H. Meisenhelder, R Markoff

This program offers a broad based education for those students who desire leadership roles in business, government, technology and industry. A guiding vision of the department is to close the gap between theory and practice. In addition to a Bachelor of Science (B.S.) degree, OLS offers a Certificate in Human Resource Management, International Leadership, and Leadership Studies. The Certificate in Leadership Studies is only available to non-majors.

The degree programs are flexible to meet the needs of both traditional and nontraditional students. As part of a relevant and practical discipline, our programs integrate a series of core courses with a choice of concentration tracks. The core courses offer a strong foundation in leadership, communication and general education, mathematics, and science. Concentration tracks allow students to develop their

interests and talents within a particular technical or related field. Students will select courses from the following related areas of study:

- Architectural Technology (ART)
- Computer & Information Technology (CIT)
- Construction Engineering Management Technology (CEMT)
- Electrical and Computer Engineering Technology (ECET)
- Interior Design (INTR)
- Mechanical Engineering Technology (MET)
- Music Technology (MUS)
- Allied Health
- Biology
- Business
- Chemistry
- Engineering
- Informatics
- Interdisciplinary
- Nursing, Dental hygiene
- School of Public and Environmental Affairs (SPEA)
- Tourism, Convention, & Events Management (TCEM)
- World Languages (WLAC)
- Ivy Tech & Vincennes University Associates Degrees (except General Studies)
- Ivy Tech & Vincennes University AAS Degrees

Students are encouraged to complete a minor, certificate, or dual baccalaureate degree through the completion of their related area of study.

The B.S. degree increases the range and depth of the student's education in technical and leadership areas. Graduates are prepared to assume leadership positions in a variety of organizational functions as well as to pursue graduate degrees. The degree requirements are arranged in three areas of study: leadership and supervision, math/science/technology (or related area of study), and general education requirements (communication, behavioral/social science, humanities, and electives.

Students working toward their B.S. degrees may earn two or more certificates in specialty areas in technology and in OLS. For example, by taking a combination of specific OLS course electives, students may earn a certificate in Human Resource Management without taking courses beyond the 122 credit hours required for the B.S. degree. Academic advisors will assist the student in selecting courses needed to meet the requirements in the concentration area.

The program learning outcomes for the B.S. in Organizational Leadership and Supervision are:

1. Demonstrate and apply knowledge of:
1. the process and roles of leadership.
2. leadership traits.
3. leadership behavior concepts.
4. situational approaches to leadership.
5. power and influence.
6. leading during times of uncertainty, turbulence, and change.

2. Design and conduct research, as well as analyze and interpret data in order to:
1. evaluate their personal leadership effectiveness.
2. evaluate their organization's effectiveness and sustainability.
3. evaluate their organization's social and environmental impact.

3. Lead an organization, or processes and functions within it that meet or exceeds desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, and sustainability.
4. Function on multi-disciplinary teams.
5. Identify, formulate, and solve organizational problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively verbally and nonverbally to all size audiences.
8. Understand the impact of leadership and supervision in a global, economic, environmental and societal context.
9. Demonstrate knowledge of contemporary organizational issues.
10. Use the techniques, skills, tools and concepts necessary for effective strategic and tactical planning.

Transfer Students

Where applicable, the OLS Department agrees to accept credit hours earned at Ivy Tech, Vincennes University or other similarly accredited colleges and universities to satisfy the 64.0 credit hours of general education, elective, and related concentration requirements for the Bachelor of Science degree in OLS. Students who have successfully completed an AS or AAS degree prior to their application to IUPUI with a GPA of 2.7 or higher and all math, science, and communication requirements complete may enroll in an accelerated leadership curriculum. Adult Programs in Leadership for Undergraduate Studies (A+PLUS) accepts 25 students each fall and spring. To be eligible for A+PLUS, students must complete the AS or AAS degree from a regionally accredited 2-year or 4-year college or university after 1991 and meet all other IUPUI and OLS admission requirements. For more information, call (317) 278-0277 or e-mail et_ols@iupui.edu.

Bachelor of Science in Organizational Leadership & Supervision

The B.S. degree in Organizational Leadership and Supervision requires a total of 122 credit hours. Of the 46 credit hours required in OLS, 25 must result from taking OLS 10000, 25200, 26300, 27400, 32700, 37100, 39000, 41000, and 49000. The balance of the requirements for graduation are as follows:

1. 21 additional credit hours of OLS elective course work beyond the required courses above, for a total of 46 credit hours of OLS (one OLS elective must fulfill the IUPUI RISE requirement for learning drawn from research, international experience, service, or experiential learning such as internships or coops) completes the OLS Core.
2. 24 credit hours in an applied technology or related competency that complements OLS and directly relates to specific career interests such as CEMT, CIT, ECET, MET, business, nursing, allied health, SPEA,

informatics, etc. These courses must be related to a second degree, a minor, a certificate, or reflect some logical combination of courses. Students will be directed to the appropriate advisor for a certificate, or minor; and the faculty in that department will counsel the student for those required courses. Note: Students must have the set of courses they plan to apply to the related technology area preapproved by an OLS academic advisor.

3. CIT 10600 or similar computer applications coursework, TECH 10200 or TCM 25000, 3 credit hours of any physical science, IET 35000, 3 credit of statistics, and 6 credit hours in mathematical skills (above Math 11100) must be completed by all students to round out the mathematics, science, and Technology Core.
4. 3 credit hours in behavioral or social sciences, selected from courses in anthropology, psychology, sociology, economics and/or geography; 3 credit hours in humanities, selected from courses in art, history, literature, music, religion, and/or theater; 15 credit hours in communication, including COMM R110, ENG W131, TCM 22000, and TCM 32000*, and 3 credits of communication elective (foreign language, ENG-W, -G, COMM-R, -C, linguistics, or TCM). Students should take TCM 32000 with OLS 41000 (both are prerequisites for OLS 49000 Senior Research Project.
5. 12 credit hours of electives from any department. Students should choose courses that "round out" their degree and expose them to different disciplines and ways of thinking or to improve their marketability in the workplace by fulfilling requirements for certificates/minors or master's degree prerequisites. Prior approval by an OLS advisor is strongly recommended.

Certificate Programs

To enroll in certificate programs, students must be formally admitted by the Office of Admissions on the IUPUI campus. Students must notify the department of intent to pursue each certificate or minor and sign paperwork for program admission and graduation. Credit may be given for applicable courses taken at other colleges or universities. Students may apply these courses toward degree programs in the Organizational Leadership and Supervision Program. To fulfill residency requirements, students must complete a minimum of 50% of coursework in OLS at IUPUI.

Human Resource Management Certificate Program

Although all resources are essential for success, people are an organization's principal resource. How skillfully an organization develops, allocates, and supervises its human resource governs its success or failure. This certificate provides a thorough explanation of the human resource manager's role in helping individuals, work groups, and organizations succeed. The focus of the courses is practical, and each course emphasizes the application of vital concepts so that students will acquire a comprehensive understanding of the subject matter. This Certificate is useful to students who seek careers in human resource management or in other disciplines.

Upon completion of the certificate in Human Resource Management, students should be able to:

- Describe, use, and evaluate tactical and strategic Human resource management principles.
- Develop, implement and provide a safe and effective work environment.
- Comply with local, state, and federal employment law and related public policies.
- Promote training and development of individuals, work teams, and organizations.
- Assess, design, develop, implement, and evaluate learning solutions in various organizational contexts.
- Promote positive, productive employer-employee relationships.
- Create, negotiate, and manage regulations concerning collective bargaining, grievance, and arbitration procedures.
- Leverage compensation, benefits, rewards, and recognition to attract, motivate, and retain talent.
- Develop policy, practice, and procedure to select talent aligned with the strategic direction of the organization.

A certificate will be presented to those who complete graduation paperwork and successfully complete all requirements.

Admission

Candidates for this certificate are required to be formally admitted by the IUPUI Office of Admissions, but are not required to be students in the Purdue School of Engineering and Technology. Each student must meet with an OLS Advisor to declare their intent to pursue the certificate and complete the necessary forms.

Curriculum

Students are required to successfully complete a total of seven courses (21 credit hours) to earn the certificate. Each course must be completed with a grade of C or higher.

Required Core Courses - Total Hours: 21

All students must successfully complete all of the following courses:

- **OLS 38300** Human Resources Management[1] - 3 credit hours
- **OLS 33100** Occupational Safety and Health - 3 credit hours
- **OLS 36800** Personnel Law - 3 credit hours
- **OLS 37500** Training Methods - 3 credit hours
- **OLS 37800** Labor Relations - 3 credit hours
- **OLS 47600** Compensation Planning and Management - 3 credit hours
- **OLS 47900** Staffing Organizations - 3 credit hours

Leadership Studies Certificate Program

The Certificate in Leadership Studies equips students with the knowledge, skills, experiences, attitudes, perspectives, and tools necessary to understand the broad-based concepts associated with leadership in a variety of individual, organizational, and community settings in an ever changing, pluralistic, global society. A unique feature of this certificate is its ability to attract a diverse group of students from across the myriad of disciplines taught at IUPUI. Such a strong

mixture of interdisciplinary perspectives augments the richness of learning that occurs in certificate courses.

Students who complete the certificate in Leadership Studies will be able to:

- Define and defend their personal philosophy of leadership and ethical behavior.
- Describe behavior in organizational settings at the individual, team/group, and macro-organization levels.
- Identify the stages of team development that occurs within organizations.
- Make leadership-oriented decisions that are ethically, legally, morally, and strategically sound.
- Apply concepts of supervisory management, team building, personnel selection and development, decision-making, resource allocation, conflict resolution, and strategic planning to the solving of individual, team/group, and organizational problems.
- Explain the importance of attracting, managing, and motivating a globally-diverse workforce.
- Improve individual and organizational performance by applying the appropriate leadership theories and processes in practice.
- Evaluate the appropriateness of leadership behaviors in given situations, and make suggestions for improving those behaviors.

Admission

Candidates for this certificate are required to be formally admitted by the IUPUI Office of Admissions, but are not required to be students in the Purdue School of Engineering and Technology. Credit will be given for applicable courses taken at other colleges and universities. Credits earned while completing this certificate may be subsequently applied toward the B.S. degree in Organizational Leadership and Supervision (OLS). Each student must meet with an OLS Advisor to declare their intent to pursue the certificate and complete the necessary forms; however, **students with a declared major in OLS are not eligible to earn the leadership studies certificate, due to curricular redundancy.**

Prerequisites

English W131 and Communication R110 are *encouraged prerequisites* for enrollment in OLS 252, 263, and 274, and are *required prerequisites* for enrolling in any 300- or 400-level OLS course.

Curriculum

Students are required to successfully complete a total of six courses (18 credit hours) to earn the certificate. Each course must be completed with a grade of C or higher.

- **OLS 25200** Human Behavior in Organizations[1] - 3 credit hour
- **OLS 26300** Ethical Decisions in Leadership[1] - 3 credit hours
- **OLS 27400** Applied Leadership[1] - 3 credit hours
- **OLS 32700** Leadership for a Global Workforce - 3 credit hours
- **OLS 39000** Leadership Theories and Processes - 3 credit hours
- **OLS 3xx** Any OLS 30000- or 40000-level Selective Course - 3 credit hours

Students must complete 200-level courses prior to enrolling in OLS 32700 and OLS 39000 and meet with an OLS Advisor to complete paperwork and an application for graduation prior to enrolling in OLS 39000.

International Leadership Certificate

The interdisciplinary International Leadership Certificate is designed to provide the knowledge, skills, abilities, perceptions, and experiential learning opportunities appropriate for any student interested in supervising or leading individuals from different countries or preparing for international work assignments. Students who complete the International Leadership Certificate will develop the tools necessary to understand the broad-based concepts associated with leadership in a variety of individual, organizational, and community settings in an ever changing, pluralistic, global society.

Students who complete the Certificate in International Leadership will be able to:

- Demonstrate techniques to analyze and solve intercultural problems that typically occur within diverse organizations.
- Use knowledge and techniques to devise strategies for successfully managing diversity within an international organization.
- Apply knowledge and techniques to devise strategies for successfully leading a diverse workforce within an international organization.
- Demonstrate substantial knowledge of at least one foreign country, or region, (or distinct subculture within the USA), including demographic profile, economic status, political climate, commerce, history, language, and cultural norms as a result of intensive experience and/or study.

Admission

Candidates for this certificate are required to be formally admitted by the IUPUI Office of Admissions, but are not required to be students in the Purdue School of Engineering and Technology. Credit will be given for applicable courses taken at other colleges and universities. Credits earned while completing this certificate may be subsequently applied toward the B.S. degree in Organizational Leadership and Supervision. (OLS). Each student must meet with an OLS Advisor to declare their intent to pursue the certificate and complete the necessary forms.

Prerequisites

English W131 and Communication R110 are *encouraged prerequisites* for enrollment in any OLS 200-400 level courses.

Curriculum

Students are required to successfully complete a total of seven courses (21 credit hours) to earn the certificate. Each course must be completed with a grade of C or higher.

- **OLS 25200** Human Behavior in Organizations[1] - 3 credit hours

- **OLS 32700** Leadership for a Global Workforce - 3 credit hours
- **OLS 32800** Principles of International Business - 3 credit hours
- **OLS 45400** Gender and Diversity in Management - 3 credit hours

9 credit hours of International Experience/Foreign Language to be fulfilled by taking a combination of course work in the following
areas:.....

3 - 6 credit hours of a single foreign language.....
3 - 6 credit hours of approved international experience* (OLS 42300, Mexico Immersion, or OVST).....

**International Experience includes all IU/IUPUI Study Abroad, Service Learning work in a bi-lingual setting, or other approved international experience.*

Honors Minor in Leadership

The Honors Minor in Leadership consists of five Honors courses (15 credit hours), providing high-potential IUPUI undergraduates admitted to the new IUPUI Honors College or other degree programs exposure to current theory and practice designed to prepare students for future leadership roles and/or advanced degrees. Each of the Interdisciplinary Leadership Principles in the Honors Minor in Leadership directly relates to the IUPUI Principles of Undergraduate Learning. Students admitted to the Honors Minor in Leadership must take a sequence of five courses exploring topics covering a wide range of leadership principles including:

1. Foundations of Leadership (3 credit hours of **honors OLS 25200**, BUS-Z 304, or SPEA-V 366)

2. Ethical, Social, and Political Components to Leadership (3 credit hours of **honors OLS 26300**, BUS-W 494, SPEA-V 412, SPEA-V 473, or other approved courses)

3. Diversity, Global, and Community Leadership (3 credit hours of **honors OLS 32700**, SPEA-V 382, POLS-Y 219, or ANTH-A 361)

4. Theoretical and Practical Aspects of Leadership (3 credit hours of **honors OLS 39000**, BUS-J 402, or SPEA-V 362)

5. Honors RISE Experience in Leadership (3 credit hours of approved honors Research, International, Service, or Experiential Learning coursework)

At least two Honors courses (6.0 credit hours) must be taken outside of the student's primary discipline (*recommended) and students must complete paperwork to declare their intent to pursue the minor and complete a formal Application for Graduation (ET 309: Organizational Leadership and Supervision) to ensure this credential is properly recorded on their official transcripts. Students not enrolling in a designated Honors section must complete the Honors Contract to ensure credit is properly denoted on transcript.

For more information, contact OLS at 317-278-0286 or the IUPUI Honors College at 317-274-7193.

Design & Communication Technology (DCT)

Chair: M. Bannatyne
Associate Chair: W. Worley, Associate Professor of Technical Communication

It would be an understatement to say that the world about us is changing at a pace unprecedented in any other era of history. If I were to try and identify the most significant influence that has pushed these changes along, I would have to name the computer.

The amazing changes in our world have not resulted simply due to the invention of the computer itself, but rather from the multitude of applications that computer has opened up to us for our own use and pleasure. Once only viewed as a means to calculate answers to complex equations, we now look in awe at the way visual information on a computer screen is hurdled across the arch of heaven from one nation to another in an endless stream of digital bits and bytes. Indeed, the computer and its associated networks have made information available to us in such quantities that a hundred lifetimes would never be long enough to capture even the smallest fraction of it all. At times, I am sure that many of us may feel this flood of information may seem more of "a solution in search of a problem" rather than the means of bringing any inquiry to a successful conclusion.

"What are we to do with this plethora of data and images?" The answer is simple, "Use what we need, and pass the rest along to other areas of discovery and learning!" With the vast wealth of visual information available to us via the computer, we can now reach out to colleagues and students in ways that were only a mere generation ago still a dream of things yet in the distant future. While an argument might certainly be made that the computer's greatest value is shown through the visual graphics it can provide to support education, we must be careful that we do not attribute to the computer any prowess that does not exist.

Perhaps the most significant change the computer has made in our lives is the way we think about it. Where once we were told, "The computer cannot make a mistake", we now view the computer as a valuable resource that assists us to get a job done in a manner that suits our needs. We now accept the technological change that the computer caused, not so much as a miracle that is only understood by a few, but as a tool that has become a part of our natural domain...a tool that is expected to solve many of our problems. In the final analysis, perhaps ultimately this change in our perception will be seen as the greatest change of all in our world.

We live in a remarkable technological age, but stay tuned for the best is yet to come. Join us in DCT where we will help prepare you to meet the design and communication challenges of living in the future with confidence.

Architechtural Technology

Associate Professor and Director: J. Cowan
Assistant Professor: B. Kelceoglu
Assistant Clinical Professor: D. Nickolson

The Architectural Technology (ART) curriculum offers a two-year associate degree program designed to provide students with the skills to work in the areas of architectural

visualization, detailing, building information modeling (BIM), fundamental structural design, space planning, materials testing, inspection, and sales. The curriculum is not intended to prepare students for registration as professional architects.

Emphasis is on building science and technical design, residential and commercial construction drawings, mechanical and electrical systems in buildings, and the graphic depiction of these systems using building information modeling software. Also included are courses in mathematics, physical sciences, social sciences, communications, interior design, and the humanities.

Graduates typically find employment with architectural firms, design agencies, construction firms, building material suppliers, and various governmental agencies. Graduates are also eligible to pursue a Bachelor's degree in Computer Graphics Technology with an emphasis on Architectural Visualization. This combination of courses and skills also prepares students to apply for graduate programs in the design field (e.g., architecture, computer graphics).

The career educational objectives for Architectural Technology are:

- Demonstrate excellent technical capabilities in architectural technology and related fields.
- Be responsible citizens.
- Continue professional advancement through life-long learning
- Apply sound design methodology in multidisciplinary fields of architectural technology that is sensitive to the health, safety and welfare of the public.
- Competently use mathematical, measurement, instrumentation, and testing techniques.
- Practice effective oral, written and visual communication skills.
- Understand the environmental, ethical, diversity, cultural and contemporary aspects of their work.
- Work effectively and collaboratively in architectural, engineering and construction industries.

Associate of Science in Architecture Technology

Freshman Year

First Semester (17 credit hours)

- ART 16500 Building Systems and Materials, 3 credits
- ART 10500 Intro to Design Technology, 3 credits*
- MATH 15900 Pre-Calculus, 5 credits**
- ENG-W131 Elementary Composition I, 3 credits
- COMM-R 110 Fundamentals of Speech Communication, 3 credits

Second Semester (18 credit hours)

- ART 11700 Intro to Construction Graphics with CAD, 3 credits
- ART 12000 Architectural Presentation, 3 credits
- INTR 20200 INTR Materials & Applications, 3 credits
- INTR 12500 Color and Lighting of Interiors, 3 credits
- CEMT 10400 Fundamentals of Surveying, 3 credits
- Humanities/Social Science Elective, 3 credits

Sophomore Year

Third Semester (17 credit hours)

- ART 15500 Residential Construction, 3 credits
- CEMT 16000 Statics, 3 credits
- CEMT 21500 Mechanical & Electrical Systems, 4 credits
- Lab Science Selective, 4 credits
- INTR 12400 Space Plan for Interiors, 3 credits

Fourth Semester (17 Credits)

- ART 21000 History of Architecture, 3 credits
- ART 22000 Commercial Construction, 3 credits
- CGT 21100 Raster Imaging for Computer Graphics, 3 credits
- TCM 22000 Technical Report Writing, 3 credits
- CEMT 26000 Strength of Materials, 3 credits
- CEMT 26700 Materials Testing, 2 credits

**Co-Listed with INTR 10300*

***MATH 15300 and 15400 are can be substituted for MATH 15900*

Computer Graphics Technology

Associate Professor: M. Bannatyne
Assistant Professor: D. Baldwin
Visiting Lecturer: P. Fiala, B. Hansen

Computer Graphics Technology (CGT) prepares visually oriented students to succeed in a wide range of industries, spanning careers in animation and film to multimedia and design. CGT students are visual problem solvers who develop the technological and aesthetic skills a booming industry demands in this exciting and rewarding field of study. Students can choose to study animation or multimedia from outstanding teaching faculty, rich with industry experience.

Consistent with the criteria set by the Accreditation Board for Engineering and Technology (ABET), the Program Educational Objectives of the CGT program within the Department of Design and Communication Technology (DCT) are "*To produce graduates who, during the first few years of professional practice, will...*":

- Show their ability to solve problems related to the workplace through their application of excellent technical capabilities in visual communication, computer systems, and related supporting field
- Be responsible citizens in the workplace through their demonstrated ethical and professional conduct and appreciation for diversity in its various forms
- Continue their professional advancement through life-long learning opportunities, in-service training, and engagement with professional organizations
- Practice effective oral and written communication skills
- Show their ability to address diverse environmental, ethical, legal, cultural diversity, and contemporary social aspects of their work
- Work collaboratively and effectively in diverse enterprises where they may be asked to act as a liaison between their company and the client

- Have the ability to function both as an individual, and within the dynamics of a group environment, in the workplace

Bachelor of Science in Computer Graphics Technology

Interactive Multimedia Developer Track

Freshman Year

1st Semester (16 hours required)

Course	*Hrs*
*CGT 10100 - Introduction to CGT	3
*CGT 11100 - Design for Visualization & Comm.	3
*CGT 11200 - Sketching for Visualization & Comm.	3
ENG-W 131 - Elementary Composition I	3
TECH 10200 - Discovering Technology	1
MATH-M 11800 - finite Mathematics	3

2nd Semester (15 hours required)

Course	*Hrs*
*CGT 11600 - Geometric Mod. for Visual. & Comm.	3
*CGT 11700 - Illustrating for Visual. & Comm.	3
COMM-R 110 - Fund. of Speech Communication	3
Human./Social Science Elective	3
**MATH-M 11900 - A Brief Survey of Calculus I	3

1st Semester (15 hours required)

Course	*Hrs*
*CGT/CIT 14100*** - Internet Fund. Develop. & Techn.	3
*CGT 21100 - Raster imaging for Computer Graphics	3
*CGT 21600 - Vector Imaging for Computer Graphics	3
Science Elective	3
TCM 34000 - Correspondence in Business & Industry	3

2nd Semester (15 hours required)

Course	*Hr*
*CGT 24100 - Introduction to Animation	3
*CGT 25100 - Principles of Creative Design	3
*CGT 29900 - Seminar: Portfolio Review	3
Free Elective	3
PSY-B 104 - Psychology as a Social Science	3

Junior Year

1st Semester (15 hours required)

Course	*Hr*
*CGT 35100 - Multimedia Authoring I (or CGT 353)	3
*CGT 35600 - Dynamic Content Development I	3
CIT 21400 - Using a Database Management System	3
Human./Social Science or Liberal Arts Elective	3
TCM 37000 - Oral Practicum for Technical Managers	3

2nd Semester (15 hours required)

Course	*Hr*
*CGT 34600 - Digital Video & Audio	3
*TECH 20010 - Career Enrichment Internship I	3

* CGT 45100 - Multimedia Application Development	3
* CGT 45600 - Dynamic Content Development II	3
CIT 21500 - WEB Programming	3

Senior Year

1st Semester (16 hours required)

Course	*Hr*
Business/Economics/Marketing Selective	3
*CGT 41100 - Contemporary Problems in A.C.G.	3
*TECH 30010 - Career Enrichment Internship III	3
*CGT 49900 - Senior Seminar	1
Technical Elective	3
Technical Elective	3

2nd Semester (16 hours required)

Course	*Hr*
*CGT 41500 - Seminar for Senior Design Project	1
*CGT 41600 - Senior Design Project	3
Free Elective	3
Human./Social Science or Liberal Arts Elective	3
OLS 27400 - Applied Leadership	3
Technical Elective	3
Total Hours for Baccalaureate Degree	123

Technical Animation and Spatial Graphics Track

Freshman Year

1st Semester (16 hours required)

Course	*Hrs*
*CGT 10100 - Introduction to CGT	3
*CGT 11100 - Design for Visualization & Comm.	3
*CGT 11200 - Sketching for Visualization & Comm.	3
ENG-W 131 - Elementary Composition I	3
TECH 10200 - Discovering Technology	1
MATH-M 11800 - Finite Mathematics	3

2nd Semester (15 hours required)

Course	*Hrs*
*CGT 11600 - Geometric Mod. for Visual. & Comm.	3
*CGT 11700 - Illustrating for Visual. & Comm.	3
COMM-R 110 - Fund. of Speech Communication	3
Human./Social Science Elective	3
**MATH-M 11900 - Brief Survey of Calculus I	3

Sophomore Year

1st Semester (15 hours required)

Course	*Hrs*
*CGT/CIT 14100*** - Internet Fund. Develop. & Techn.	3
*CGT 21100 - Raster imaging for Computer Graphics	3
*CGT 21600 - Vector Imaging for Computer Graphics	3
Science Elective	3
TCM 34000 - Correspondence in Business & Industry	3

2nd Semester (15 hours required)

Course	*Hrs*

*CGT 24100 - Introduction to Animation	3
*CGT 25100 - Principles of Creative Design	3
*CGT 29900 - Seminar: Portfolio Review	3
Free Elective	3
PSY-B 10400 - Psychology as a Social Science	3

Junior Year

1st Semester (15 hours required)

Course	*Hr*
*CGT 34100 - Motion for Computer Animation	3
*CGT 35100 (MM Auth. I) or CGT 356 (Hyper. Auth. I)	3
*CGT 39000 - Seminar: Storyboarding & Preproduction	3
Human./Social Science Elective	3
TCM 37000 - Oral Practicum for Technical Managers	3

2nd Semester (15 hours required)

Course	*Hr*
*CGT 34000 - Digital Light. & Render. For Com. Anim.	3
*CGT 34400 - Visual Effects in Film and Animation	3
*TECH 20010 - Career Enrichment Internship I	3
*CGT 44200 - Production for Computer Animation	3
Free Elective	3

1st Semester (16 hours required)

Course	*Hr*
Business/Economics/Marketing Selective	3
*CGT 41100 - Contemporary Problems in A.C.G.	3
*TECH 30010 - Career Enrichment Internship III	3
*CGT 49900 - Senior Seminar	1
Technical Elective	3
CGT 34600 - Digital Video & Audio (VideoI)	3

2nd Semester (16 hours required)

Course	*Hr*
*CGT 41500 - Seminar for Senior Design Project	1
*CGT 41600 - Senior Design Project	3
*CGT 44600 - Digital Postproduction (Video II)	3
Human./Social Science or Liberal Arts Elective	3
OLS 27400 - Applied Leadership	3
Technical Elective	3
Total Hours for Baccalaureate Degree	123

**CGT CORE courses require a grade of C- or higher to pass*

***Math 118 & 119 or Math 153 & 154 may be used in place of Math 159*

****CIT 212 or CSCI-N 241 may be substituted for this course*

Architectural Technology Visualization (Animation)

Freshman Year

1st Semester (17 hours required)

Course	*Hrs*
ART 105 - Introduction to Design Technology	3
ART 16500 - Building Systems and Materials	3
COMM-R 110 - Fundamentals of Speech Communication	3
ENG-W 131 - Elementary Composition I	3
*Math 15900 - Pre-Calculus	5

2nd Semester (18 hours required)

Course	*Hrs*

Interior Design Technology

Assistant Clinical Professor: E. McLaughlin (Program Director)
Assistant Clinical Professor: D. Nickolson
Assistant Professor: B. Kelceoglu
Lecturer: M.A. Frank

Associate of Science in Interior Design Technology

The Interior Design curriculum is a two year Associate of Science (A.S.) degree program that uses the latest technology while employing faculty from the areas of interior design, architecture, fine arts, and computer graphics to provide students with the skills necessary to work as interior design assistants and be able to sit for the National Council for Interior Design Qualification (NCIDQ) exam after approximately four years of work experience.

The emphasis is on technical knowledge, methodology, and aesthetic appreciation of interior design for the health, safety, and welfare of the public; equipping students with visual presentation and communication skills; imparting awareness for environmental, business, ethical, and other contemporary issues; and linking classroom knowledge to applications in the field. These graduates can address complex design problems and manage projects.The educational objective for the A.S. Interior Design are:

1. Demonstrate technical knowledge and application of the design process.
2. Solve problems that are quantitative in nature.
3. Analyze complex issues and apply sound design methodology in multidisciplinary fields of interior design technology.
4. Practice effective communication skills in, oral, written and visual presentations.
5. Increase knowledge and demonstrate solutions sensitive to health, safety and welfare of the public.
6. Work collaboratively and effectively in technology and design related industries.
7. Continue professional advancement through life-long learning.
8. Understand the environmental, ethical, diversity, cultural and contemporary aspects of their work.
9. Be responsible citizens.

Graduates typically find employment in residential design fields in retail settings as sales associates or as manufactur's reps for products, in the kitchen and bath industry, as CAD technicians for the interior design or architecture fileds, or as self-employed designers.

Freshman Year

First Semester (18 credits)

- COMM-R 110 Fundamentals of Speech Communication, 3 credits.
- ENG-W 131 Elementary Composition I, 3 credits.
- MATH 15300 Algebra & Trig I, 3 credits.
- HER E109 Color and Design, 3 credits.
- INTR 10300 Introduction to Interior Design, 3 credits.
- ART 16500 Building Systems and Materials, 3 credits.

Second Semester (16 credits)

- ART 11700 Introduction to Construction Drafting with CAD, 3 credits.
- ART 12000 Architectural Presentation, 3 credits.
- INTR 15100 Textiles for Interiors, 3 credits.
- CGT 21100 Raster Imaging for Computer Graphics, 3 credits.
- HER-E 209 Drawing for Interior Design, 3 credits.
- TCM 25000 Career and Internship Planning, 3 credits.

Sophomore Year

Third Semester (18 credits)

- ART 15500 Residential Construction, 3 credits.
- CGT 22100 Graphical Representation in Architectural Documents, 3 credits.
- INTR 12400 Space Planning for Interiors, 3 credits.
- INTR 12500 Color and Lighting, 3 credits.
- INTR 20200 Interior Materials and Applications, 3 credits.
- INTR 20400 History of Interiors and Furniture, 3 credits.

Fourth Semester (15 credits)

- ART 21000 History of Architecture, 3 credits.
- ART 22200 Commercial Construction, 3 credits.
- INTR 22400 Residential I, Kitchen and Bath, 3 credits.
- INTR 22500 3D Interior Design Studio, 3 credits.
- INTR 22600 Commercial Systems I, 3 credits.

Bachelor of Science in Interior Design Technology

This program is accredited by the Council of Interior Design Accreditation (CIDA) as well as the National Association of Schools of Art and Design (NASAD).

The Interior Design curriculum is a four-year Bachelor of Science (B.S.) degree program that employs faculty from the areas of interior design, architecture, fine arts, computer graphics, construction and organizational leadership to provide students with the skills necessary to work as professional interior designers and be able to sit for the National Council for Interior Design Qualification (NCIDQ) exam after approximately two years of work experience.

The emphasis is on technical knowledge, methodology, and aesthetic appreciation of interior design for the health, safety, and welfare of the public; equipping students with visual presentation and communication skills; imparting an awareness for environmental, business, ethical, and other contemporary issues; and linking classroom knowledge to application in the field. These graduates can address complex design problems and manage projects.

The educational objectives for the B.S. Interior Design are:

1. Demonstrate technical knowledge and application of the design process.
2. Solve problems that are quantitative in nature.
3. Analyze complex issues and apply sound design methodology in multidisciplinary fields of interior design technology.
4. Practice effective communication skills in, oral, written and visual presentations.

5. Increase knowledge and demonstrate solutions sensitive to health, safety and welfare of the public.
6. Work collaboratively and effectively in technology and design related industries.
7. Continue professional advancement through life-long learning.
8. Understand the environmental, ethical, diversity, cultural and contemporary aspects of their work.
9. Be responsible citizens.

Graduates typically find employment in residential or commercial design fields as designers, in retail or manufacturing settings as sales associates, in design and construction industries as manufacturer's reps for products, as CAD technicians for the interior design or architecture fields, or as self-employed designers.

Freshman Year
First Semester (18 credits)
- COMM-R 110 Fundamentals of Speech Communication, 3 credits.
- ENG-W 131 Elementary Composition I, 3 credits.
- MATH 15300 Algebra & Trig I, 3 credits.
- HER E109 Color and Design, 3 credits.
- INTR 10300 Introduction to Interior Design, 3 credits.
- ART 16500 Building systems and Materials, 3 credits.

Second Semester (16 credits)
- ART 11700 Introduction to Construction Drafting with CAD, 3 credits.
- ART 12000 Architectural Presentation, 3 credits.
- INTR 15100 Textiles for Interiors, 3 credits.
- CGT 21100 Raster Imaging for Computer Graphics, 3 credits.
- HER-E 209 Drawing for Interior Design, 3 credits.
- TCM 25000 Career and Internship Planning, 3 credits.

Sophomore Year
Third Semester (18 credits)
- ART 15500 Residential Construction, 3 credits.
- CGT 22100 Graphical Representation in Architectural Documents, 3 credits.
- INTR 12400 Space Planning for Interiors, 3 credits.
- INTR 12500 Color and Lighting, 3 credits.
- INTR 20200 Interior Materials and Applications, 3 credits.
- INTR 20400 History of Interiors and Furniture, 3 credits.

Fourth Semester (15 credits)
- ART 21000 History of Architecture, 3 credits.
- ART 22200 Commercial Construction, 3 credits.
- INTR 22400 Residential I, Kitchen and Bath, 3 credits.
- INTR 22500 3D Interior Design Studio, 3 credits.
- INTR 22600 Commercial Systems I, 3 credits.

Junior Year
Fifth Semester (18 credits)
- Art History Selective, 3 credits.
- Humanities or Social Science Elective, 3 credits.
- INTR 30400 History of American Interiors and Furniture, 3 credits.
- INTR 32400 Residential Interior Design Studio II, 3 credits.
- INTR 32500 Environmental Lighting Design, 3 credits.
- OLS 25200 Human Behavior in Organizations, 3 credits.

Sixth Semester (15 credits)
- CEMT 28000 Quantity Survey, 3 credits.
- CGT 32100 Advanced Digital Pictorial Illustration, 3 credits.
- INTR 32600 Commercial Interior Design Studio II, 3 credits.
- INTR 39000 Internship, 3 credits.
- TECH Selective, 3 credits.

Senior Year
Seventh Semester (15 credits)
- CEMT 34700 Construction Contract Admin. and Specifications, 3 credits.
- Humanities or Social Science Elective, 3 credits.
- INTR 42600 Healthcare Design Studio, 3 credits.
- INTR 45200 Building Systems, 3 credits.
- INTR 45300 Business Practices, 3 credits.

Eighth Semester (12 credits)
- INTR 42800 Capstone, 3 credits.
- INTR 48000 Senior Thesis, 3 credits.
- INTR 49500 Sustainable Design, 3 credits.
- OLS 37100 Project Management, 3 credits.

Technical Communication
Associate Professor: W. Worley (Director)
Associate Professor: M. Hovde
Visiting Assistant Professor: C. Renguette

The Technical Communication Program offers specialized courses for students in engineering and technology programs that help them prepare for the writing and speaking tasks they will perform as part of their professional work. These courses build on students' previous experiences in written and oral communication and help them learn to present technical information effectively to audiences in organizational settings. In addition, the program works with other schools and local industry to prepare students for careers as technical communicators.

Certificate in Technical Communication

The undergraduate Technical Communication Certificate is offered by the Purdue School of Engineering and Technology. Any student formally admitted to the university may be a candidate for the certificate.

Students who earn the certificate will have demonstrated they have the core competencies necessary for entry-level positions as technical communicators: the ability to gather and transform technical information for a variety of audiences and the ability to design, develop, and edit effective documents using rhetorical principles and current technology.

Technical or Scientific Specialty
A technical or scientific major or minor or technical interest demonstrated by 6 credit hours of courses, including CIT 10600 or 11200 or an equivalent introductory computer course.

Required Courses: 13 credits

One course selected from each of these five areas:

1. Introduction to Technical Communication (choose one) - 3 credits
- TCM 22000 Technical Report Writing (online sections available)
- TCM 23000 Principles and Practices of Technical Communication (under development)
- TCM 32000 Written Communication in Science and Industry (online sections available)
- TCM 38000 Technical Communication in the Healthcare Professions (online only)

2. Visual Technical Communication - 3 credits
- TCM 35000 Visual Elements of Technical Documents

3. Editing - 3 credits
- ENG-W 365 Theories and Practices of Editing

4. Advanced Applications of Technical Communication (choose one) - 3 credits
- TCM 39500 Independent Study
- TCM 42000 Field Experience
- TCM 42500 Managing Document Quality (offered fall semester)
- TCM 45000 Research Approaches for Technical & Professional Communication (offered spring semester)
- ENG-W 315 Writing for the Web (online only)

5. Career Development (choose one) - 1 credit
- TCM 25000 Internship and Career Planning
- TCM 43500 Portfolio Preparation

Professional Preperation

Near the end of their coursework, students may complete a professional portfolio, suitable for job hunting, which includes three to five deliverables that demonstrate a range of skills and competencies. Practicing technical communicators will review the portfolio and provide responses. As an alternative, students may take TCM 25000 Career Planning in Engineering and Technology, a course that prepares them for professional employment.

Supplemental Course

- ENG-W 412 Technology and Literacy
- IET 36400 Total Quality Control
- INFO-I 270 Introduction to Human-Computer Interaction Principles and Practices
- INFO-I 275 Introduction to Human-Computer Interaction Theory
- INFO-I 300 Human-Computer Interaction
- JOUR-J 390 Corporate Publications
- JOUR-J 463/563 Desktop Publishing
- OLS 27400 Supervisory Management
- OLS 37500 Training Methods
- OLS 38500 Leadership for Quality & Productivity
- TCM 37000 Oral Practicum for Technical Managers
- TCM 49900 Selected Topics in TCM

Electrical and Computer Engineering (ECE)

Professors Y. Chen (*Chair*), S. Chien, M. El-Sharkawy, M. Rizkalla, D. Russomanno, P. Schubert, K. Varahramyan
Associate Professors E. Du, D. Kim, B. King, S. Koskie, J. Lee, S. Rovnyak, P. Salama
Assistant Professors L. Christophor, L. Li
Research Professors M. Agarwal, R. Lind, J. Saleem, S. Shrestha

The Department of Electrical and Computer Engineering offers programs at the bachelor's, master's, and doctoral levels. At the bachelor's degree level, the department offers programs leading to the Bachelor of Science in Engineering (B.S.E.), Bachelor of Science in Computer Engineering (B.S.Cmp.E.), and Bachelor of Science in Electrical Engineering (B.S.E.E.) degrees. The B.S.E. degree program is designed for students who desire broad flexibility and the opportunity for interdisciplinary study; it does not have a designated professional curriculum. Additional information about the B.S.E. program can be obtained from the faculty in the Department of Electrical and Computer Engineering. The programs leading to the B.S.E.E. and B.S.Cmp.E. are described in this section. Graduate programs in electrical and computer engineering are described in the section entitled "Graduate Engineering Programs" in this bulletin.

Electrical and computer engineering programs are designed to prepare students for careers in the commercial, government, and academic sectors, where electrical and computer engineering expertise is needed in hardware and software design, information processing, circuit and electronics, control and robotics, communications and signal processing, energy systems, and manufacturing. Programs in the department are enhanced by interaction with local industry. Students have direct and routine access to full-time faculty, which further strengthens and accelerates the learning process. These advantages and the metropolitan environment of the university lead to an application-oriented, practical education that prepares students for success.

The Department of Electrical and Computer Engineering regards research as an important catalyst for excellence in engineering education. Graduate research and undergraduate design projects in the areas of signal processing, communications, image processing, computational intelligence, networking, software engineering, embedded systems, high performance computing, control, robotics, manufacturing, biometrics, nanotechnology, and ASIC and FPGA based electronics offer opportunities for applying and deepening students' expertise.

An undergraduate education in electrical and computer engineering provides a strong foundation in the mathematical, physical, and engineering sciences. In acquiring this knowledge, students must also develop problem-solving skills. In addition, the general-education courses in the program provide communication skills and the appreciation of human and social issues necessary to translate engineering achievements into advances for society.

For more information, contact the Department of Electrical and Computer Engineering at (317) 274-9726.

B.S in Electrical Engineering

This program is accredited by the Engineering Accreditation Commission, ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The B.S.E.E. degree program prepares students for career opportunities in the hardware and software aspects of design, development, and operation of electronic systems and components, embedded systems, control and robotics, communications, digital signal processing, and energy systems. Challenging positions are available in the government, commercial, and education sectors, in the areas of electronics, communication systems, signal and information processing, power, automation, robotics and manufacturing, control, networking, information processing, and computing. Within these areas, career opportunities include design, development, research, manufacturing, marketing, operation, field testing, maintenance, and engineering management.

The Program Educational Objectives of the Electrical Engineering degree program are to prepare graduates who will be successful in their chosen career paths by:

1. becoming productive and valuable engineers in the private or public sector
2. pursuing and completing graduate studies, and/or
3. taking on leadership roles in their professions, as well as in their communities and the global society

The minimum number of credit hours for graduation is 126, distributed as follows for each discipline:

1. Mathematics and Physical Sciences
- Calculus: MATH -16500, 16600, 17100, 26100, 26600 - 18 credit hours
- Chemistry: CHEM C10500 - 3 credit hours
- Physics: PHYS 15200 and 25100 - 9 credit hours
- Math/Science elective - 3 credit hours

2. Communications and Ethics
- Speech: COMM R110 - 3 credit hours
- Writing: ENG W131 - 3 credit hours
- Communication in Engineering Practice: TCM 36000 - 2 credit hours
- Engineering Ethics and Professionalism: ECE 21000, ECE 40100 - 2 credit hours

3. General Education Electives
- ECON-E 201 or ECE 32700 - 3 credit hours
- Electives - 12 credit hours

4. Freshman Engineering Courses
- Introduction to the Engineering Profession: ENGR 19500 - 1 credit hour
- Introduction to Engineering: ENGR 19600 - 3 credit hours
- Comp Tools for Engr: ENGR 29700 - 1 credit hour

5. Engineering Science
- Circuits: ECE 20100, 20200, and 20700 - 7 credit hours
- Systems and Fields: ECE 30100, 30200, and 31100 - 9 credit hours
- C Programming: ECE 26100 and ECE 26300 - 4 credit hours
- ME 29500 - 3 credit hours

6. Engineering Design
- Electronics: ECE 20800 and 25500 - 4 credit hours
- Digital Systems: ECE 27000 and 36200 - 8 credit hours
- Communication Systems: ECE 44000 - 4 credit hours
- Control Systems: ECE 38200 - 3 credit hours
- Capstone Design: ECE 48700 and 48800 - 3 credit hours
- EE and Tech Electives - 15 credit hours

7. Restricted Electives - 3 credit hours

Semester by semester, the 126 total credit hours can be distributed as follows:

Freshman Year

First Semester (17 credit hours)

- ENGR 19500 Introduction to the Engineering Profession - 1 credit hour
- ENGR 19600 Introduction to Engineering - 3 credit hours
- CHEM C10500 Chemical Science I - 3 credit hours
- MATH 16500 Analyt. Geometry and Calc. I - 4 credit hours
- COMM R110 Fundamentals of Speech Communication - 3 credit hours
- General Education - 3 credit hours

Second Semester (17 credit hours)

- PHYS 15200 Mechanics - 4 credit hours
- MATH 16600 Analyt. Geometry and Calc. II - 4 credit hours
- Math 17100 Multidimentional Math - 3 credit hours
- ENG W131 Elementary Composition I - 3 credit hours
- General Education Elective[1] - 3 credit hours

Sophomore Year

Third Semester (17 credit hours)

- MATH 26100 Multivariate Calculus - 4 credit hours
- PHYS 25100 Electricity and Optics - 5 credit hours
- ECE 20100 Linear Circuit Analysis I - 3 credit hours
- ECE 20700 Electronic Measurement Techniques - 1 credit hour
- ECE 26300 C Programming - 3 credit hours
- ECE 26100 C Programming Lab - 1 credit hour

Fourth Semester (16 credit hours)

- MATH 26600 Ordinary Diff. Eqn - 3 credit hours
- ECE 20200 Circuit Analysis II - 3 credit hours
- ECE 25500 Introduction to Electronics Analysis and Design - 3 credit hours
- ECE 20800 Electronic Design and Devices Lab - 1 credit hour
- ECE 27000 Digital Logic Design and Lab - 4 credit hours

- ENGR 29700 Computer Tools for Engineers - 1 credit hour
- ECE 21000 Sophomore Seminar 1 - 3 credit hours

Junior Year

Fifth Semester (16 credit hours)

- ECE 30100 Signals and Systems - 3 credit hours
- ECE 31100 Electric and Magnetic Fields - 3 credit hours
- ECE 36200 Microprocessor Systems and Interfacing - 4 credit hours
- TCM 36000 Comm. In Engineering Practice - 3 credit hours
- Math/Science/Technical Elective[2]- 3 credit hours

Sixth Semester (15 credit hours)

- ECE 30200 Probabilistic Methods in Electrical Engineering - 3 credit hours
- ECE 38200 Feedback System Analysis - 3 credit hours
- ECE 32700 Engineering Economics - 3 credit hours
- ME 29500 Mechanicss and Heat - 3 credit hours
- EE Elective[4] - 3 credit hours

Senior Year

Seventh Semester (15 credit hours)

- ECE 44000 Introduction to Communication Systems Analysis - 4 credit hours
- ECE 48700 Senior Design I - 1 credit hour
- ECE 40100 Ethics - 1 credit hour
- EE Electives[4] - 6 credit hours
- Humanities or Social Science Elective[1] - 3 credit hours

Eighth Semester (14 credit hours)

- ECE 48800 Senior Design II - 2 credit hours
- EE Electives[4] - 6 credit hours
- Restricted Elective[5] - 3 credit hours
- General Education Elective[1] - 3 credit hours

After completing a rigorous, broad education in electrical and computer engineering during the first five semesters, juniors and seniors may select advanced electrical and computer engineering courses and technical elective courses from an approved list. Careful selection of these elective courses allows a student to concentrate in a specialized area of electrical engineering. A listing of acceptable electrical engineering and technical elective courses is given below. The actual course selection will depend on the schedule, as not every course is available every semester. Existing upper-level electrical engineering courses are offered in the areas of signal processing, imaging, robotics, control systems, VLSI, electronic circuits and manufacturing, nano technology, energy systems, network and data communication, software engineering, and embedded systems design. The Department of Electrical and Computer Engineering groups these and other allowable courses into several areas of tracks. An electrical and computer engineering student should file a plan of study with an academic advisor in the sophomore year to decide how to select these electives.

[1] From approved general education elective list.

[2] From approved math/science elective list.

[3] From approved technical elective list.

[4] From approved electrical engineering elective list.

[5] From lists 1-4.

EE Elective Courses choose 15 credit hours

Any non-required ECE 30000-level or above, except ECE 32600 or ECE 32700.

Students wishing to take a 50000-level course must meet with an academic advisor for permission to register for the course.

Math/Science/Technical Elective Courses: Choose 3 credit hours from the list of Math/Science Electives or the list of Technical Electives.

- MATH 33300: Chaotic Dynamical Systems
- MATH 35100: Elementary Linear Algebra
- MATH 51000: Vector Calculus
- MATH 52000: Boundary Value Prob. of Diff. Eqn.
- MATH 51100: Linear Algebra with Applications
- MATH 52300: Introduction to Partial Diff. Eqn.
- MATH 52500: Introduction to Complex Analysis
- MATH 52600: Principles of Math. Modeling
- MATH 52700: Advanced Math. Eng. & Physics I
- MATH 52800: Advanced Math. Eng. & Physics II
- MATH 53000: Functions of a Complex Variable I
- MATH 53100: Functions of a Complex Variable II
- MATH 54400: Real Analysis and Measure Theory
- BIOL K10100: Concepts of Biology I
- BIOL K10300: Concepts of Biology II
- BIOL K32400: Cell Biology
- CHEM C10600: Principles of Chemistry II
- CHEM C31000: Analytical Chemistry
- CHEM C34100: Organic Chemistry
- CHEM C36000: Elementary Physical Chemistry
- CHEM C36100: Phys. Chemistry of Bulk Matter
- CHEM C36200: Phys. Chemistry of Molecules
- PHYS 31000: Intermediate Mechanics
- PHYS 34200: Modern Physics
- PHYS 40000: Physical Optics
- PHYS 40000: Quantum Mechanics
- PHYS 52000: Mathematical Physics
- PHYS 53000: Electricity & Magnetism
- PHYS 54500: Solid State Physics
- PHYS 55000: Introduction to Quantum Mechanics

Any 30000-level or above math/science course with prior written approval of students' advisory committee

Technical Elective Courses

Any non-required course from lists of Electrical Engineering Elective or Computer Engineering Elective, or from the following courses.

- ECE 32600: Engineering Project Management
- CSCI 43700: Introduction to Computer Graphics
- ME 20000: Thermodynamics I
- ME 27000: Basic Mechanics I
- ME 27200: Mechanics of Materials
- ME 27400: Basic Mechanics II
- ME 30100: Thermodynamics II
- ME 34400: Introduction to Engineering Material, or
- Students complete three or more 1-credit sessions of either
- ENGR 20000, ENGR 25000, ENGR 30000, ENGR 35000, OR ENGR 40000
- ENGR 20010, ENGR 25010, OR ENGR 30010

*ECE 49500 Selected Topics in Electrical Engineering is generally used to offer new courses.

Restricted Elective: Choose 3 credit hours from any of the aforementioned elective lists.

B.S in Computer Engineering

This program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET), 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The Bachelor of Science in Computer Engineering (B.S.Cmp.E.) degree curriculum provides an in-depth education in the analytical skills, hardware, and software aspects of modern computer systems. The program builds on a strong foundation in engineering design, including traditional analog and digital circuit design. The three main areas of emphasis within the computer-engineering program are embedded systems, telecommunications and networking, and software engineering and distributed computing. Extensive laboratory experiences support the theoretical aspects of the course work. Students gain valuable digital hardware design and software design experiences throughout the curriculum. The junior and senior years strengthens the student's expertise with courses in data structures, embedded systems, computer architecture, parallel and high performance computing systems, advanced digital systems, and computer communications networks and network security.

The Program Educational Objectives fo the Computer Engineering degree program are to prepare graduates who will be successful in their chosen career paths by:

1. becoming productive and valuable engineers in the private or public sector
2. pursuing and completing graduate studies, and/or
3. taking on leadership roles in their professions, as well as in their communities and the global society.

The minimum number of credit hours for graduation is 126, distributed as follows for each discipline:

1. Mathematics and Physical Sciences
- MATH 16500, 16600, 17100, and 26100, 26600 - 18 credit hours
- Chemistry: CHEM C10500 - 3 credit hours
- Physics: PHYS 15200 and 25100 - 9 credit hours

2. Communications and Ethics
- Speech: COMM R110 - 3 credit hours
- Writing: ENG W131 - 3 credit hours
- Communication in Engineering Practice: TCM 36000 - 2 credit hours
- Engineering Ethics and Professionalism: ECE 21000 and 40100 - 2 credit hours

3. General Education Electives
- a. Electives - 15 credit hours

4. Freshman Engineering Courses
- Introduction to the Engineering Profession: ENGR 19500 - 1 credit hour
- Introduction to Engineering: ENGR 19600 - 3 credit hours
- Comp Tools for Engineers: ENGR 29700 - 1 credit hour

5. Engineering Science
- Circuits: ECE 20100, 20200, and 20700 - 7 credit hours
- Systems and Fields: ECE 30100, 30200 - 6 credit hours

6. Engineering Design
- Digital Systems: ECE27000, 36200, and 36500 - 11 credit hours
- Capstone Design: ECE48700, 48800 - 3 credit hours

7. Computer Science
- Computing II: ECE 26100, 26300, and CSCI 24000 - 8 credit hours
- UNIX Programming:ECE 28200 - 1 credit hour
- DiscreetMath: CSCI 34000 - 3 credit hours
- Data Structures: CSCI 36200 - 3 credit hours
- Operating Systems: ECE 40800 - 3 credit hours

8. CmpE Electives[4] - 9 credit hours
9. Advanced CmpE Electives[5] - 6 credit hours
10. Math/Science/Technical Electives[2or3] - 3 credit hours
11. Restricted Electives[6] - 3 credit hours

[1] From approved general education elective list.

[2] From approved math/science elective list.

[3] From approved technical elective list.

[4] From approved computer engineering elective list.

[5] From lists 1-4.

Semester by semester, the 126 total credit hours may be distributed as follows:

Freshman Year

First Semester (17 credit hours)

- ENGR 19500 Introduction to the Engineering Profession - 1 credit hour
- ENGR 196 Introduction to Engineering - 3 credit hours

- MATH 16500 Analytic Geometry and Integrated Calculus I - 4 credit hours
- CHEM C10500 Chemical Science I - 3 credit hours
- COMM R110 Fundamentals of SpeechCommunication - 3 credit hours
- General Elective - 3 credit hours

Second Semester (17 credit hours)

- PHYS 15200 Mechanics - 4 credit hours
- MATH 16600 Analytic Geometry and Integrated Calculus II - 4 credit hours
- MATH 17100 Multidimensional Math - 3 credit hours
- ENG W131 Elementary Composition I - 3 credit hours
- General Education Elective - 3 credit hours

Sophomore Year

Third Semester (17 credit hours)

- MATH 26100 Multivariate Calculus - 4 credit hours
- PHYS 25100 Electricity and Optics - 5 credit hours
- ECE 20100 Linear Circuit Analysis I - 3 credit hours
- ECE 20700 Electronic Measurement Techniques - 1 credit hour
- ECE 26100 C programming Lab - 1 credit hour
- ECE 26300 C Programming - 3 credit hours

Fourth Semester (16 credit hours)

- MATH 26600 Ordinary Differential Equations - 3 credit hours
- CSCI 24000 Advanced Programming - 4 credit hours
- ECE 20200 Circuit Analysis II - 3 credit hours
- ECE 27000 Digital Logic Design and Lab - 4 credit hours
- ENGR 29700 Computer Tools for Engineers - 1 credit hour
- ECE 21000 Sophomore Seminar - 1 credit hour

Junior Year

Fifth Semester (16 credit hours)

- ECE 30100 Signals and Systems - 3 credit hours
- ECE 36200 Microprocessor Systems and Interfacing - 4 credit hours
- CSCI 340 Discrete Math - 3 credit hours
- Math/Science/Tech Elective[2 or 3] - 3 credit hours
- General Education Elective[1] - 3 credit hours

Sixth Semester (15 credit hours)

- ECE 302 Probabilistic Methods in Electrical Engineering - 3 credit hours
- ECE 282 UNIX Programming for Engineers - 1 credit hour
- CSCI 362 Data Structures - 3 credit hours
- CmpE Elective[4] - 3 credit hours
- TCM 36000 Comm. In Engineering Practice - 2 credit hours
- ECE 32700 Engineering Economics - 3 credit hours

Senior Year

Seventh Semester (14 credit hours)

- ECE 365 Introduction to the Design of Digital Computers - 3 credit hours
- ECE 48700 Senior Design I - 1 credit hour
- ECE 40100 Engineering Ethics - 1 credit hour
- Advanced Computer Engineering Elect.[5] - 3 credit hours
- CmpE Elective[4] - 6 credit hours

Eighth Semester (14 credit hours)

- ECE 40800 Operating Systems - 3 credit hours
- ECE 48800 Senior Design - 2 credit hours
- Advanced CmpE Elective[4] - 3 credit hours
- CmpE Elective - 3 credit hours
- Restricted Elective[5] - 3 credit hours

[1] From approved general education elective list.

[2] From approved math/science elective list.

[3] From approved technical elective list.

[4] From approved computer engineering elective list.

[5]From approved advanced computer engineering elective list

[6] From lists 1-4.

Advanced Computer Engineering Elective Courses

- ECE 42100 Advanced Digital Systems Design
- ECE 46100 Software Engineering
- ECE 46300 Intro to Computer Communication Networks
- ECE 46800 Introduction to Compilers and Translation Engineering
- ECE 47100 Embedded Systems

Students may also use the 50000-level version of any of these classes

CmpE Elective Courses

Computer Engineering Elective: Choose 9 credit hours from the following list. At least 3 credit hours must be at or above 400-level.

Any ECE 30000 or above courses, except ECE 32600 or ECE 32700

- ECE 25500: Intro. to Electronic Analysis & Design
- CSCI 35500: Intro. to Programming Languages
- MATH 41400: Numerical Analysis
- CSCI 43700: Intro. to Computer Graphics
- CSCI 43500: Multimedia Information Systems
- CSCI 43800: Computer Graphics II
- CSCI 48100: Data mining
- CSCI 44300: Database Systems

* Course ECE 49500 Selected Topics in Electrical Engineering is generally used to offer new courses.

Math/Science/Technical Elective Courses

- MATH 33300: Chaotic Dynamical Systems
- MATH 35100: Elementary Linear Algebra
- MATH 51000: Vector Calculus
- MATH 52000: Boundary Value Prob. of Diff. Eqn.
- MATH 51100: Linear Algebra with Applications
- MATH 52300: Introduction to Partial Diff. Eqn.
- MATH 52500: Introduction to Complex Analysis
- MATH 52600: Principles of Math. Modeling
- MATH 52700: Advanced Math. Eng. & Physics I
- MATH 52800: Advanced Math. Eng. & Physics II
- MATH 53000: Functions of a Complex Variable I
- MATH 53100: Functions of a Complex Variable II
- MATH 54400: Real Analysis and Measure Theory
- BIOL K10100: Concepts of Biology I
- BIOL K10300: Concepts of Biology II
- BIOL K32400: Cell Biology
- CHEM C10600: Principles of Chemistry II
- CHEM C31000: Analytical Chemistry
- CHEM C34100: Organic Chemistry
- CHEM C36000: Elementary Physical Chemistry
- CHEM C36100: Phys. Chemistry of Bulk Matter
- CHEM C36200: Phys. Chemistry of Molecules
- PHYS 31000: Intermediate Mechanics
- PHYS 34200: Modern Physics
- PHYS 40000: Physical Optics
- PHYS 40000: Quantum Mechanics
- PHYS 52000: Mathematical Physics
- PHYS 53000: Electricity & Magnetism
- PHYS 54500: Solid State Physics
- PHYS 55000: Introduction to Quantum Mechanics

Any 300-level or above math/science course with prior written approval of student's advisory committee

: Any non-required course from lists of Electrical Engineering Elective or Computer Engineering Elective or Advanced Computer Engineering Elective, or following courses.

- ECE 32600: Engineering Project Management
- CSCI 30000: Systems Programming
- CSCI 44100: Client-Server Database Systems
- CSCI 48700: Artificial Intelligence
- ME 29500: Engineering Mechanics & Heat

or student can complete three or more 1-credit sessions of either

- a. ENGR 20000, ENGR 25000, ENGR 30000, ENGR 35000, ENGR 40000, or
- b. ENGR 20010, ENGR 25010, OR ENGR 30010,

Restricted elective course: any course in the list of Technical electives, math/science electives, or Humanities or Social Science electives

B.S in Engineering - Interdisciplinary Engineering

This program is not accredited by the Engineering Accreditation Commission of the ABET.

The Electrical and Computer Engineering Department offers a Bachelor of Science in Engineering (B.S.E.) degree program for students wishing to supplement a strong core curriculum in electrical and computer engineering science and design with courses from mathematics, science, business, biomedicine, or another engineering discipline. While not ABET-accredited, the B.S.E. degree program offers the student greater flexibility to create a plan of study to accommodate broad interdisciplinary interests and objectives. The plan coincides with the traditional B.S.E.E. curriculum through the sophomore year and then diverges to include ECE electives and courses from interdisciplinary areas in the remainder of the curriculum.

The minimum number of credit hours for graduation is 126, distributed as follows for each discipline:

1. Mathematics and Physical Sciences
- Calculus: MATH 16500, 16600, 26100, and 26600 - 18 credit hours
- Chemistry: CHEM C10500 - 3 credit hours
- Physics: PHYS 15200 and 25100 - 9 credit hours

2. Communications and Ethics
- Speech: COMM R110 - 3 credit hours
- Writing: ENG W131 - 3 credit hours
- Communication in Engineering Practice: TCM 36000 - 2 credit hours
- Engineering Ethics and Professionalism: ECE 21000 and 40100 - 2 credit hours

3. Humanities and Social Sciences
- Electives - 15 credit hours

4. Freshman Engineering Courses
- Introduction to the Engineering Profession: ENGR 19500 - 1 credit hour
- Introduction to Engineering: ENGR 19600 - 3 credit hours
- Programming Concepts: ENGR 19700 - 3 credit hours
- ENGR 29700 - 1 credit hour

5. Electrical Engineering Courses
- ECE Core: ECE 20100, 20200, 20700, 20800, 25500, 27000, 30100, and 36200 - 22 credit hours
- ECE Electives (any ECE 30000-, 40000-, or 50000-level course) - 9 credit hours

6. Technical Elective Course - 3 credit hours
7. Interdisciplinary Area
- Core Requirements - 12 credit hours
- Core Electives - 12 credit hours

Freshman Year

First Semester (15 credit hours)

- ENGR 19500 Introduction to the Engineering Profession - 1 credit hour
- ENGR 19600 Introduction to Engineering - 3 credit hours
- CHEM C10500 Principles of Chemistry I - 3 credit hours
- COMM R110 Fundamentals of Speech Communication - 3 credit hours
- MATH 16500 Analytic Geometry and Integrated Calculus I - 4 credit hours

Second Semester (18 credit hours)

- ENGR 19700 Programming Concepts - 3 credit hours
- CHEM C10600 Principles of Chemistry II - 3 credit hours
- ENG W13100 Elementary Composition I - 3 credit hours
- MATH 16400 Integrated Calculus and Analytic Geometry II - 5 credit hours
- PHYS 15200 Mechanics - 4 credit hours

The remainder of the interdisciplinary plan of study is individualized. Students should speak to their academic advisors regarding course selection.

Graduate Programs in ECE

Students can earn the Master of Science in Electrical and Computer Engineering (M.S.E.C.E.), and the Master of Science in Engineering (M.S.E.), through the Department of Electrical and Computer Engineering at the Purdue School of Engineering and Technology at IUPUI. The M.S.E.C.E. degree is organized into several areas of study, including computer engineering, controls and automation, communication, signal processing, VLSI/ASIC design, and power sytems, while the M.S.E. degree is interdisciplinary in nature and is primarily for non-electrical engineering undergraduates. Qualified students may be authorized to pursue the Ph.D. degree in electrical and computer engineering at IUPUI. Programs leading to the Ph.D. in electrical and computer engineering is jointly administered with the School of Electrical and Computer Engineering at Purdue University, West Lafayette. For more information about graduate electrical and computer engineering programs
visit http://engr.iupui.edu/ece/graduate.shtml?menu=grad.

Engineering Technology (ENT)

Chair: E. Cooney, Professor of Electrical and Computer Engineering Technology **Program Directors: BMET** - B. Christe
CEMT - T. Iseley
CpET - B. Lin
EET - E. Cooney
MET - J. Zecher
MSTE - P. Hylton

The Department of Engineering Technology offers one degree program at the associate level and six degree programs at the bachelor's level. ENT offers an Associate of Science degree with a major in Biomedical Electronics Technology (BMET). Graduates from the BMET associate degree program can continue their education for an additional two years and complete the course work leading to a Bachelor of Science degree. The department offers Bachelor of Science degrees in Biomedical Engineering Technology, Computer Engineering Technology, Construction Engineering Management Technology, Electrical Engineering Technology, Mechanical Engineering Technology, and Motorsports Engineering. The ENT programs are well-suited for individuals who are curious about how things work and want a practice-oriented education. The department faculty members all have practical engineering work experience in their fields of expertise and are able to offer an educational experience that provides graudates with the skills necessary to quickly become productive employees. The faculty is dedicated to teaching and is very focused on meeting the educational needs of students. Daytime, evening and selected web-based courses are offered.

For more information, contact the Department of Engineering Technology at (317) 274-2363, e-mail aland@iupui.edu, or visit our Web site at http://www.engr.iupui.edu/ent.

Biomedical Engineering Technology

Associate Professor B. Christe (*Program Director)*

Associate of Science in Biomedical Engineering Technology

This two-year program consists of a combination of courses in basic electrical circuits, analog and digital electronics, microprocessor fundamentals, mathematics, physics, medical instrumentation, human anatomy, and human physiology. The program is enhanced by the department's interaction with the Indiana University Hospital on the IUPUI campus and with other area hospitals.

The biomedical engineering technology (BMET) curriculum enables graduates to find employment as biomedical equipment technicians, medical equipment sales personnel, medical equipment servicing/maintenance technicians, and research technicians.

The curriculum satisfies the educational requirements of the Association for the Advancement of Medical Instrumentation (AAMI) and the Certified Biomedical Equipment Technician Examination. Courses are offered in the day, evening, and online. Not all courses are offered in all formats.

Graduates of this program may choose to work toward the Bachelor of Science degree program in biomedical engineering technology. Approximately two additional years of study are necessary to complete the requirements for the B.S. in Biomedical Engineering Technology.

Freshman Year

First Semester (14 credit hours)

- **BMET 10500** Introduction to Biomedical Electronics Technology: 1 credit
- **ECET 10900** Digital Fundamentals: 3 credits
- **MATH 15300** Algebra and Trigonometry I: 3 credits
- **ENG W131** Elementary Composition I: 3 credits
- **TECH 102** Discovering Technology: 1 credit
- **TECH 105** Introduction to Engineering Technology: 3 credits

Second Semester (16 credit hours)

- **ECET 10700** Introduction to Circuit Analysis: 4 credits
- **BMET 22000** Applied Human Biology: 3 credits
- **ECET 15500** Digital Fundamentals II: 3 credits
- **COMM R110** Fundamentals of Speech Communication: 3 credits
- **MATH 15400** Algebra and Trigonometry II: 3 credits

Sophomore Year

Third Semester (16 credit hours)

- **ECET 15700** Electronics and Circuit Analysis: 4 credits
- **BMET 20900** Introduction to Microcontrollers: 2 credits
- **BMET 24000** Introduction to Medical Electronics: 3 credits

- **MATH 22100** Calculus for Technology I: 3 credits
- **PHYS 21800** General Physics: 4 credits

Fourth Semester (18 credit hours)

- **ECET 20700** AC Electronics Circuit Analysis: 4 credits
- **BMET 32000** Biomedical Electronics Systems: 4 credits
- **BMET 29000** BMET Practicum: 4 credits
- **CIT 17600** Information Technology Architectures
- **PSY B104** Psychology as a Social Science: 3 credits

Bachelor of Science in Biomedical Engineering Technology

Building on the foundational coursework completed in the first two years of study in Biomedical Engineering Technology, students focus on developing skills to support technology used in patient care. Students integrate the technical/electrical/computer aspects of medical equipment with the needs of the medical staff and patients. Graduates will be integral members of the health care team, demonstrating excellent problem solving skills blended with an emphasis on customer service toward the medical staff to result in safe and effective patient care. Some graduates may elect to work directly for medical equipment manufacturers, investigating device design, integration, sales or support.

Junior Year

Fifth Semester (15 credit hours)

- **BMET 31000** Intro to Radiography Systems: 3 credits
- **MATH 22200** Calculus for Technology II: 3 credits
- **BUS A200** Foundations of Accounting: 3 credits
- **TCM 22000** Technical Report Writing: 3 credits
- **IET 15000** Quantitative Methods for Tech: 3 credits

Sixth Semester (16 credit hours)

- **CIT 20200** Network Fundamentals: 4 credits
- **BMET 42000** Techn & Patient Populations: 3 credits
- **TCM 32000** Written Comm for Sci & Industry: 3 credits
- **Communication, Humanities, and Social Science** Elective: 6 credits

Senior Year

Seventh Semester (17 credit hours)

- **CIT 40200** Design & Implem Local Area Network: 4 credits
- **BMET 44000** Codes Reg & Patient Safety: 3 credits
- **BMET 49000** Project Planning & Design: 1 credits
- **BMET 49300** Ethics and Professionalism for BMET: 1 credits
- **CHEM C110 and C115** The Chemistry of Life: 3 & 2 credits
- **Communication, Humanities, and Social Science** Elective: 3 credits
- **TCM 38000** Tech Comm in the Healthcare Prof: 3 credits

Eighth Semester (14 credit hours)

- **BMET 47000** Special Topics in BMET: 3 credits
- **BMET 49100** Techinical Project: 2 credits
- **OLS** Elective: 3 credits
- **OLS** Elective: 3 credits
- **Communication, Humanities, and Social Science** Elective: 3 credits

Computer Engineering Technology

Professors W. Conrad, E. Cooney *(Chair)*, R. Pfile
Associate Professors B. Christe, K. Rennels
Clinical Associate Professor W. Lin

Bachelor of Science in Computer Engineering Technology

Accredited by the Technology Accreditation Commission, ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The purpose of the Computer Engineering Technology Program is to train engineering technologists to design, develop, and implement computer-based applications. The CpET program is offered by a partnership between the Department of Engineering Technology and the Computer and Information Technology program. A major emphasis of the CpET program is practice-oriented, "hands-on" training in laboratories to provide students and graduates with a rich experience in computer applications.

B.S. degree graduates will be able to provide technical support for computer systems in advanced manufacturing systems, control systems, networks, telecommunication systems, embedded systems, product development, and instrumentation. Graduates of the B.S. CpET program will have titles such as software technologist, automation engineer, applications software engineer, systems analyst, telecommunications engineer, network administrator and system test engineer.

The educational objectives for the Computer Engineering Technology program are:

1. Demonstrate knowledge, techniques (including the use of modern tools), and skills in the use of microprocessors, programs, networks, and systems encountered in the degree program's courses
2. Use current knowledge of mathematics, science, and emerging technology tools of their discipline to solve problems and demonstrate solutions
3. Identify, analyze and solve technical problems as required in the degree program's courses
4. Apply and design hardware, systems, and software programs in their specialty area as demonstrated in a senior project.
5. Conduct, analyze and interpret experiments, and assess results
6. Function as a member of a 2-4 person team to complete a task in a timely manner. Demonstrate ability to organize work done by team members
7. Write technical reports, present data and results coherently in oral and graphic formats
8. Demonstrate skills for life-long learning by locating, evaluating, and applying relevant information using external resources such as the internet, data books, trade publications and library resources.
9. Demonstrate ethical conduct as described in the university student code of conduct. Demonstrate knowledge of professional code of ethics.

10. Demonstrate a respect for diversity as described in the university civility statement. Recognize contemporary professional, societal and global issues in case studies and course projects.
11. Demonstrate quality, timeliness, and ability to complete increasingly complex homework and projects throughout the degree experience.

The Bachelor of Science in Computer Engineering Technology study plan for the industrial computing option is as follows.

Freshman Year

First Semester (16 credit hours)

- **TECH 10200** Discovering Technology: 1 credits
- **TECH 10500** Introduction to Engineering Technology: 3 credits
- **TECH 10400** Tech Graphics Communciation: 3 credits
- **ECET 10900** Digital Fundamentals: 3 credits
- **MATH 15300** Algebra and Trigonometry I: 3 credits
- **ENG W131** Elementary Composition I: 3 credits

Second Semester (16 credit hours)

- **ECET 10700** Introduction to Circuit Analysis: 4 credits
- **CIT 14000** Programming Constructs Lab: 3 credits
- **MATH 15400** Algebra and Trigonometry II: 3 credits
- **TCM 22000** Technical Report Writing: 3 credits
- **ECET 15500** Digital Fundamentals II: 3 credits

Sophomore Year

Third Semester (17 credit hours)

- **ECET 20900** Intro to Microcontrollers: 4 credits
- **MATH 22100** Calculus for Tech I: 3 credits
- **ECET 15700** Electronics Circuit Analysis: 4credits
- **ECET 16400** Applied Object Oriented Programming: 3 credits
- **COMM-R 110** Fundamentals of Speech Communication: 3 credits

Fourth Semester (14 credit hours)

- **MATH 22200** Calculus for Tech II: 3 credits
- **ECET 28400** Computer Communications: 4 credits
- **CIT 28600** Operating Systems and Administration: 3 credits
- **PHYS 21800** General Physics I: 4 credits

Junior Year

Fifth Semester (15 credit hours)

- **ECET 35700** Real-Time Digital Signal Processing: 4 credits
- **Gen Ed Elective** See approved course list: 3 credits
- **ECET 23100** Electrical Power & Controls: 4 credits
- **ECET Elective**: 4 credits

Sixth Semester (17 credit hours)

- **ECET Elective**: 4 credits
- **ECET Elective**: 4 credits
- **CIT 27000** Java Programming: 3 credits
- **TCM 37000** Oral Practicum: 3 credits
- **OLS 26300** Ethical Decisions in Leadership: 3 credits

Senior Year

Seventh Semester (14 credit hours)

- **ECET Elective**: 4 credits
- **ECET 49000** Senior Design Project Phase I: 1 credit
- **CIT 21400**:Introduction to Data Management 3 credits
- **STAT Selective** See approved course list: 3 credits
- **Gen Ed** Elective: 3 credits

Eighth Semester (16 credit hours)

- **ECET 49100** Senior Design Project Phase II: 2 credits
- **ECET Elective**: 4 credits
- **CIT Selective***: 3 credits
- **ECET Elective**: 4 credits
- **Gen Ed Elective**: 3 credits

Construction Engineering Management Technology

Professor T. Iseley (Program Director), E. Sener
Assistant Professor B. Kinsey, D. Koo
Lecturer Bill White

The Construction Engineering Management Technology program offers students in the program a B.S. degree. Students may apply to enter the co-op or internship work programs following their freshman year.

For more information, contact the Department of Engineering Technology at (317) 274-2363 or email aland@iupui.edu. or visit our Web site at http://engr.iupui.edu/cemt/index.shtml?menu=home.

Bachelor of Science in Construction Engineering Management Technology

Accredited by the Technology Accreditation Commission, ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

The Construction Engineering Management Technology curriculum is intended to further students' knowledge in areas of construction contract administration, specification writing, construction field operations, construction scheduling/project control, construction costs and bidding, construction law and ethics, construction safety and inspection, construction project cost and project control, soils and foundations, construction economics, and construction management through further course work. Additional course work in microeconomics, mathematics, lab sciences, and training in written and oral communications is also included. Many students complete all or part of their course work on a part-time basis by taking a reduced course load during the semesters they are engaged in construction-related employment.

Graduates of the program are prepared for employment with contractors, building product companies, consulting engineering firms, construction material and equipment vendors, testing labs, utilities, and state and other government organizations. Occupations such as inspecting, estimating, project management, merchandising, supervising, and testing may also be filled by graduates of this program.

The career educational objectives for Construction Technology are:

1. Demonstrate an appropriate master of the knowledge, techniques, skills, and morern tools of their discipline.
2. Apply current knowledge and adapt to emerging applications in mathematics, science, engineering , and technology.
3. Conduct, analyze and interpret experiments and apply experimental results to improve processes.
4. Apply creativity in the design of system, components or processes appropriate to program objectives.
5. Function effectively on teams.
6. Identify, analyze, and solve technical problems.

Graduates typically find employment with engineering firms, construction firms, consulting companies, surveying companies, contractors and subcontractors, builders, construction materials testing companies, building products, materials and equipment suppliers, land developers, highway departments, utilities, and various state, city, and governmental agencies and work with titles such as project manager or project supervisor, contract administrator, specifications writer, safety supervisor, project estimator, project scheduler, contractor, sub-contractor, builder, surveyor, designer, remodeller, testing supervisor, merchandiser of construction materials and equipment.

The curriculum is not intended to prepare students for registration as professional engineers.

Freshman Year

First Semester (16 credit hours)

- **TECH 10200** Discovering Technology:1 credit hours
- **TECH 10400**: Technical Graphics Communication: 3 credit hours
- **TECH 10500**: Introduction to Engineering Technology: 3 credit hours
- **CEMT 12000**: Construction Materials and Methods: 3 credit hours
- **ENG W131** Elementary Composition I: 3 credit hours
- **MATH 15300** Algebra and Trigonometry I: 3 credit hours

Second Semester (15 credit hours)

- **OLS Selective:** OLS 25200 or OLS 27400: 3 credit hours
- **CEMT 27500** Civil Eng Drafting: 3 credit hours
- **COMM R110** Fundamentals of Speech Communication: 3 credit hours
- **MATH 15400** Algebra and Trigonometry II: 3 credit hours
- **TCM 22000** Technical Report Writing: 3 credit hours

Sophomore Year

Third Semester (17 credit hours)

- **CEMT 21500** Constr Mech & Elec: 4 credit hours
- **CEMT 11000** Construction Accounting: 3 credit hours
- **TCM 34000** Correspondence in Bus & Ind: 3 credit hours
- **ECON E201** Microeconomics: 3 credit hours
- **PHYS 218** General Physics I: 4 credit hours

Fourth Semester (15 credit hours)

- **Gen Ed Elective**: 3 credit hours
- **CEMT 28000** Quantity Survey: 3 credit hours
- **CEMT 10400** Surveying Fundamentals: 3 credit hours
- **CEMT 16000** Statics: 3 credit hours
- **MATH 22100** Calculus for Technology I: 3 credit hours

Junior Year

Fifth Semester (14 credit hours)

- **CEMT 30200** Construction Law & Ethics: 3 credit hours
- **CEMT 34200** Construction Cost & Bidding: 3 credit hours
- **CEMT 31200** Construction Surveying: 3 credit hours
- **CEMT 26000** Strength of Materials: 3 credit hours
- **CEMT 26700** Materials Testing: 2 credit hours

Sixth Semester (16 credit hours)

- **CEMT 34700** Constr. Contract Admin & Specs: 3 credit hours
- **CEMT 34100** Construction Scheduling: 3 credit hours
- **CEMT 48400** Wood, Timber and Formwork Design: 3 credit hours
- **Science Elective:** 4 credit hours
- **Math/Stat/Phys/.Elective:** 3 credit hours

Senior Year

Seventh Semester (16 credit hours)

- **CEMT 45200** Hydraulics and Drainage: 3 credit hours
- **CEMT 33000** Construction Field Operations: 3 credit hours
- **CEMT 45500** Constr. Safety & Inspection: 3 credit hours
- **CEMT 48600** Reinfor Concrete Des & Const: 3 credit hours
- **Gen Ed Elective**: See approved course list: 3 credit hours
- **CEMT 39000** Construction Experience: 1 credit hours

Eighth Semester (15 credit hours)

- **CEMT 43000** Soils and Foundations: 3 credit hours
- **CEMT 49400** Engineering Economics for Construction: 3 credit hours
- **CEMT 44700** Project Management: 3 credit hours
- **CEMT 35000** Constr. Proj. Cost & Proj. Cntrl: 3 credit hours
- **Construction Elective:** 3 credit hours

Construction Management Certificate

This certificate is designed to provide educational opportunities for those who need or desire to learn contemporary construction management techniques and skills and employ the latest technology in doing so. This program emphasizes developing the skills required by the construction industry and relies on the use of computers, whenever possible, to provide a contemporary education in the use of the latest technology in the management process. Those who earn the certificate will qualify for entry-level positions as superintendents, project managers, estimators, or schedulers for construction-related firms and will be competent in using the latest technology.

Good candidates for the program are people who wish to acquire additional marketable skills in construction management, who wish to upgrade existing construction management skills, or who wish to earn tangible verification of acquired skills and bodies of knowledge related to construction management.

Curriculum (27 credit hours)

- **CEMT 11000** Construction Accounting: 3 credit hours
- **CEMT 28000** Quantity Survey: 3 credit hours
- **CEMT 33000** Construction Field Operations: 3 credit hours
- **CEMT 34100** Construction Scheduling and Project Control: 3 credit hours
- **CEMT 34200** Construction Cost and Bidding: 3 credit hours
- **CEMT 34700** Construction Contract Administration and Specifications: 3 credit hours
- **CEMT 44700** Construction Project Management: 3 credit hours
- **CEMT 45500** Construction Safety and Inspection: 3 credit hours
- **CEMT 49400** Engr Economics for Construction: 3 credit hours

Any student who has 8 credit hours in college-level technical mathematics, including algebra, trigonometry, and calculus; proven computer competency; the ability to read and interpret construction documents; and is formally admitted to the university, may be a candidate for this certificate. Courses taken at other universities may be recognized as equivalent to selected required courses. Course credit may be given for appropriate job experience.

Courses taken at other universities may be recognized as equivalent to selected required courses, as corequisites, or as prerequisites, and course credit may be given for appropriate job experience. Please see the department chair before starting this certificate to obtain the full certificate requirements and the flowchart for the certificate program of study, there may be other course requirements that circumstances may necessitate. Students pursuing a degree cannot be awarded a certificate.

Electrical Engineering Technology

Professors W. Conrad, E. Cooney*(Chair)*, R. Pfile
Clinical Associate Professor W.Lin
Assistant Professors Afshin Izadian, David Goodman

Bachelor of Science in Electrical Engineering Technology

Accredited by the Technology Accreditation Commission, ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

Graduates of this program are qualified for high-level positions as technologists with job titles such as product engineer, process automation specialist, quality engineer, audio engineer, manufacturing system integration engineer, product engineer, field service engineer, substation engineer, controls engineer, calibration specialist, and sales engineer. The courses are offered both in the day and evening.

The educational objectives for the Electrical Engineering Technology program are:

1. Demonstrate knowledge, techniques (including the use of modern tools), and skills in the use of microprocessors, programs, networks, and systems encountered in the degree program's courses
2. Use current knowledge of mathematics, science, and emerging technology tools of their discipline to solve problems and demonstrate solutions
3. Identify, analyze and solve technical problems as required in the degree program's courses
4. Apply and design hardware, systems, and software programs in their specialty area as demonstrated in a senior project.
5. Conduct, analyze and interpret experiments, and assess results
6. Function as a member of a 2-4 person team to complete a task in a timely manner. Demonstrate ability to organize work done by team members
7. Write technical reports, present data and results coherently in oral and graphic formats
8. Demonstrate skills for life-long learning by locating, evaluating, and applying relevant information using external resources such as the internet, data books, trade publications and library resources.
9. Demonstrate ethical conduct as described in the university student code of conduct. Demonstrate knowledge of professional code of ethics.
10. Demonstrate a respect for diversity as described in the university civility statement. Recognize contemporary professional, societal and global issues in case studies and course projects.
11. Demonstrate quality, timeliness, and ability to complete increasingly complex homework and projects throughout the degree experience.

Freshman Year

First Semester (16 credit hours)

- **TECH 10200** Discovering Technology: 1 credit hour
- **TECH 10400** Technical Graphics Communication: 3 credit hours
- **TECH 10500** Introduction to Engineering Technology: 3 credit hours
- **ECET 10900** Digital Fundamentals: 3 credit hours
- **MATH 15300** Algebra and Trigonometry I: 3 credit hours
- **ENG W131** Elementary Composition I: 3 credit hours

Second Semester (16 credit hours)

- **ECET 10700** Introduction to Circuit Analysis: 4 credit hours
- **ECET 15500** Digital Fundamentals II: 3 credit hours
- **TCM 22000** Technical Report Writing: 3 credit hours
- **MATH 15400** Algebra and Trigonometry II: 3 credit hours
- **Gen Ed Elective** See approved course list: 3 credit hours

Sophomore Year

Third Semester (16 credit hours)

- **ECET 15700** Electronics Circuit Analysis: 4 credit hours
- **ECET 16400** Applied Object Oreinted Programming: 3 credit hours

- **STAT Selective** See approved course list: 3 credit hours
- **MATH 22100** Calculus for Tech I: 3 credit hours
- **COMM-R 110** Fundamentals of Speech Communication : 3 credit hours

Fourth Semester (17 credit hours)

- **ECET 20700** AC Electronics Circuit Analysis: 4 credit hours
- **ECET 28400** Computer Communications: 4 credit hours
- **MATH 22200** Calculus for Tech II: 3 credit hours
- **Gen Ed Elective** See approved course list: 3 credit hours
- **Tech Elective** See Approved course list: 3 credit hours

Junior Year

Fifth Semester (15 credit hours)

- **ECET 20900** Introduction to Microprocessors: 4 credit hours
- **ECET 23100** Electrical Power and Controls: 4 credit hours
- **PHYS 21800** General Physics: 4 credit hours
- **TCM 22000 Technical Report Writing: 3 credit hours**
- **ECET Elective: 4 credit hours**
- **ECET Elective: 4 credit hours**
- **ECET 30700 Analog Network Signal Processing: 4 credit hours**
- **TCM 37000 Oral Practicum for Technology: 3 credit hours**

Senior Year

- **ECET Elective: 4 credit hours**
- **ECET 49000 Senior Design Project Phase I: 1 credit hour**
- **TECH Elective See approved course list: 3 credit hours**
- **CHEM C101 Elementary Chemistry I LEC: 3 credit hours**
- **CHEM C121 Elementary Chemistry I LAB: 2 credit hours**
- **Gen Ed Elective See approved course list: 3 credit hours**
- **ECET Elective: 4 credit hours**
- **ECET Elective: 4 credit hours**
- **ECET 49100 Senior Design Project Phase II: 2 credit hours**
- **OLS 26300 Ethical Decisions in Leadership: 3 credit hours**
- **TECH Elective See approved course list: 3 credit hours**

Advanced Curriculum Program
Electrical engineering technology students interested in pursuing advanced degrees in science, engineering, or professional registration are encouraged to take the ECET department's Advanced Curriculum Program (ACP).1 This program maximizes a student's undergraduate preparation in the mathematics, science, and engineering science required for advanced studies within the framework of the B.S. degree program. The ACP requirements are listed below, with the four-year technology course substitution shown in parentheses.

Mathematics and Science

- **MATH 16300 Integrated Calculus and Analytic Geometry I (in place of MATH 22100)**
- **MATH 16400 Integrated Calculus and Analytic Geometry II (in place of MATH 22200)**
- **MATH 26100 and 26200**
- **STAT 511 Statistical Methods I (in place of STAT 30100)**
- **PHYS 15200 Mechanics (in place of PHYS 21800)**
- **PHYS 25100 Heat, Electricity, and Optics (PHYS 21900)**
- **CHEM C105 and CHEM C125 Principles of Chemistry I (in place of CHEM C101 and CHEM C121)**
- **Two engineering design courses**

Interdisciplinary Technical Electives

Minimum of 12 credit hours with approval of advisor.

Minor in Electrical Engineering Technology

The minor in electrical engineering technology (EET) requires completion of a minimum of 22 credit hours of ECET courses. Required courses are ECET 107, 109, 157, 155, and 207. In addition, one course from the following list must be completed: ECET 209, 231 or 284 . At least 12 credit hours of minor must be completed in residence at IUPUI. Students with credit for ECET 116 should consult the ECET department.

Students who wish to complete a minor in electrical engineering technology should consult a department advisor about prerequisite courses or credit for courses taken at other universities.

Mechanical Engineering Technology

Professors: J. Zecher *(Program Director)* **Associate Professors:** D. Acheson, K. Rennels, P. Hylton, R. Chen
Assistant Clinical professor: P Yearling
Lecturer: R. Durkin

The Department of Engineering Technology offers a Bachelor of Science degree in mechanical engineering technology. The short-duration certificate programs are offered in quality assurance and motorsports technology.

For more information, contact the Department of Engineering Technology at (317) 274-3428, or email aland@iupui.edu , or visit our Web site at: www.engr.iupui.edu/met.

Bachelor of Science in Mechanical Engineering Technology

Accredited by the Technology Accreditation Commission, ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

This program is designed to satisfy a specific need of industry. Building on the A.S. background, selected practical and applied courses give students additional communicative

and supervisory skills, interdisciplinary technical understanding, and greater expertise in their major area.

The program educational objectives for Mechanical Engineering Technology are:

1. Show their ability to solve problems related to the workplace through their application of excellent technical capabilities in mechanical engineering technology and related supporting fields.
2. Be responsible citizens in the workplace through their demonstrated ethical and professional conduct, and appreciation for diversity in its various forms.
3. Continue their professional advancement through life-long learning opportunities, in-service training, and engagement with professional organizations.
4. Practice effective oral and written communication skills.
5. Show their ability to address diverse environmental, ethical, diversity, cultural, and contemporary aspects of their work.
6. Work collaboratively and effectively in engineering and manufacturing industries as a liaison between professional engineers and manufacturing personnel.

Freshman Year

First Semester (16 credit hours)

- **TECH 10200** Technology Learning Community: 1 credit hour
- **TECH 10400** Technical Graphics Communication: 3 credit hours
- **TECH 10500** Introduction to Engineering Technology: 3 credit hours
- **IET 10400** Industrial Organization: 3 credit hours
- **MATH 15300** Algebra and Trigonometry I: 3 credit hours
- **ENG W131** Elementary Composition I: 3 credit hours

Second Semester (17 credit hours)

- **MET 11100** Applied Statics: 3 credit hours
- **MET 20400** Introduction to Design: 3 credit hours
- **CHEM C101** Elementary Chemistry I: 3 credit hours
- **CHEM C121** Elementary Chemistry Laboratory I: 2 credit hours
- **TCM 22000** Technical Report Writing: 3 credit hours
- **MATH 15400** Algebra and Trigonometry II: 3 credit hours

Sophomore Year

Third Semester (17 credit hours)

- **MET 21100** Applied Strength of Materials: 4 credit hours
- **MET 21300** Dynamics: 3 credit hours
- **COMM R110** Fundamentals of Speech Communication: 3 credit hours
- **PHYS 21800** General Physics I: 4 credit hours
- **MATH 22100** Calculus for Technology I: 3 credit hours

Fourth Semester (16 credit hours)

- MET 21400 Machine Elements: 3 credit hours
- MET 22000 Heat/Power: 3 credit hours
- MET 23000 Fluid Power: 3 credit hours
- PHYS 21900 General Physics II: 4 credit hours
- Technical Elective: 3 credit hours

Junior Year

Fifth Semester (17 credit hours)

- **ECET 16400** Object Oriented Programming: 3 credit hours
- **IET 15000** Quantitative Methods for Technology: 3 credit hours
- **MET 32800** CAD/CAM for Mechanical Design: 3 credit hours
- **MET 33800** Manufacturing Processes: 4 credit hours
- **MET 34800** Engineering Materials: 4 credit hours

Sixth Semester (17 credit hours)

- **MET 31000** Computer-Aided Machine Design: 3 credit hours
- **MET 35000** Applied Fluid Mechanics: 3 credit hours
- **MET 38800** Thermodynamics and Heat Power: 4 credit hours
- **IET 35000** Engineering Economics: 3 credit hours
- **ECET 11600** Electrical Circuits: 4 credit hours

Senior Year

Seventh Semester (16 credit hours)

- **ECET 35100** Instrumentation and Controls: 4 credit hours
- **Gen Ed Elective** See approved course list: 3 credit hours
- **Gen Ed Elective** See approved course list: 3 credit hours
- **Technical Elective** See approved course list: 3 credit hours
- **Technical Elective** See approved course list: 3 credit hours

Eighth Semester (12 credit hours)

- **MET 41400** Design of Mechanical Projects: 3 credit hours
- OLS 26300 Ethical Decisions in Leadership: 3 credit hours
- **Gen Ed Elective** See approved course list: 3 credit hours
- T**echnical Elective** See approved course list: 3 credit hours

Bachelor of Science in Mechanical Engineering Technology

Advanced Curriculum Track

The advanced-degree Mechanical Engineering Technology Program includes classes in advanced mathematics, and science.

Junior Year

Fifth Semester (16 credit hours)

- MET 21300 Dynamics: 3 credit hours
- MET 32000 Applied Thermodynamics: 3 credit hours

- TCM 34000 Correspondence in Business and Industry: 3 credit hours
- IET 15000 Quantitative Methods for Technology: 3 credit hours
- MATH 26100 Multivariate Calculus: 4 credit hours

Sixth Semester (16 credit hours)

- MET 31000 Computer-Aided Machine Design: 3 credit hours
- MET 34400 Materials II: 3 credit hours
- MET 35000 Applied Fluid Mechanics: 3 credit hours
- ECET 11600 Electrical Circuits: 4 credit hours
- CIT 14000 Programming Constructs Lab: 3 credit hours

Senior Year

Seventh Semester (15 credit hours)

- MET 32800 CAD/CAM for Mechanical Design: 3 credit hours
- MET 38400 Instrumentation: 3 credit hours
- IET 10400 Industrial Organization: 3 credit hours
- IET 35000 Engineering Economics: 3 credit hours
- TCM 37000 Oral Practicum for Technical Managers: 3 credit hours

Eighth Semester (17 credit hours)

- MET 41400 Design of Mechanical Projects: 3 credit hours
- CHEM C10100 and C12100 Elementary Chemistry I: 5 credit hours
- Technical Elective: 3 credit hours
- Social Science Electives: 6 credit hours

Quality Assurance Certificate Program

Developed in conjunction with the Northeast Indiana Section of the American Society for Quality Control, this certificate program provides training and instruction in the use of measuring instruments and techniques of statistical quality control. The course work provides a basis for putting these techniques to work in the quality control system of an industrial organization. The program includes an investigation of the concept of quality control and the impact of quality costs, determination of customer needs, and follow-up on field performance and feedback. A certificate will be presented to those who successfully complete all course work and the transcript noted.

A total of 20 credit hours and cumulative grade point average of 2.0 on a 4.0 scale is required to receive the certificate.

All students must complete the following courses:

The courses are listed in the order in which they should be taken.

Curriculum (23 credit hours)

- MATH 15100 or MATH 15300/15400 Algebra and Trigonometry: 5 credit hours
- MET 10500 Intro to Engineering Technology: 3 credit hours
- IET 30000 Metrology for Quality Assurance: 3 credit hours
- IET 15000 Quantitative Methods for Technology: 3 credit hours
- IET 36400 Total Quality Control: 3 credit hours
- IET 37400 Nondestructive Testing or
- IET 47400 Quality Improvement of Products and Processes: 3 credit hours
- IET 45400 Statistical Quality Control: 3 credit hours

Motorsports Engineering

Associate Professor P. Hylton *(Program Director)*
Lecturer A. Borme

IUPUI is the first University in the United States to offer a bachelor's degree in motorsports engineering

The motorsports industry is growing and expected to continue to grow at a rapid pace. By most accounts, Indiana, North Carolina, and England are recognized as the three leading local motorsports economies. Indianapolis, while generally known as the home of open-wheel racing has a broad appeal. It is also known for sprint cars, midgets, karting, NHRA, and many other forms of racing. It is estimated that there are over 400 motorsports-related firms in the Indianapolis region including companies that produce engines, brakes, shocks, springs, and other racing products.

Bachelor of Science in Motorsports Engineering

This 4-year Bachelor of Science of Degree in Motorsports Engineering degree program was just approved in May, 2008. This program, which aims to prepare graduates for careers in the motorsports industry, as well as automotive-related companies, will focus on teaching fundamentals of engineering and will include hands-on projects that involve designing, analyzing, and building of actual systems.

Freshman Year

First Semester (14 credit hours)

- ENG-W 131 Elementary Composition: 3 credit hours
- Math 16500 Calculus I: 4 credit hours
- ENGR 19500 Learning Community: 1 credit hour
- CHEM C 10500 Chemistry II: 3 credit hours
- MSTE 27200 Intro to Motorsports: 3 credit hours

Second Semester (16 credit hours)

- COMM_R110 Fund. Of Speech Comm: 3 credit hours
- MATH 16600 Calculus II: 4 credit hours
- PHYS 15200 General Physics I: 4 credit hours
- ENGR 19700 Intro to Programming Concep: 2 credit hours
- MATH 17100 Multidimensional Math: 3 credit hours

Sophomore Year

Third Semester (17 credit hours)

- MSTE 29700 Computer Modeling for Motorsports: 1 credit hour
- MATH 26100 Multivariate Calculus: 4 credit hours
- PHYS 25100 General Physics II: 5 credit hours
- ME 20000 Thermodynamics: 3 credit hours
- MSTE 21000 Statics and Dynamics: 4 credit hours

Fourth Semester (17 credit hours)

- MATH 26600 Ordinary Differential Equations: 4 credit hours
- ECE 20400 Electrical & Electronics Circuits: 4 credit hours
- ME 27200 Strength of Materials: 4 credit hours
- Technical Elective: 3 credit hours
- MSTE 35000 Computer Aided Design & Mfg: 3 credit hours

Junior Year

Fifth Semester (16 credit hours)

- MSTE 32000 Motorsports Design I: 3 credit hours
- MSTE 33000 Data Acquisition in Motorsports I: 3 credit hours
- MSTE 34000 Dynamic Systems & Signals: 3 credit hours
- MSTE 31000 Business of Motorsports I: 3 credit hours
- ME 31000 Fluid Mechanics: 4 credit hours

Sixth Semester (15 credit hours)

- MSTE I 4100 Internship: 1 credit hour
- MSTE 33100 Data acquisition in Motorsports II: 3 credit hours
- MSTE 31100 Business of Motorsports II: 3 credit hours
- STAT Elective: 3 credit hours
- ME 34400 Materials: 3 credit hours
- TCM 36000 Communications/Writing: 2 credit hours

Senior Year

Seventh Semester (16 credit hours)

- MSTE I 41000 Internship: 1 credit hour
- MSTE 47200 Vehicle Dynamics: 3 credit hours
- Gen Ed Elective: 3 credit hours
- Technical Selective: 3 credit hours
- MSTE 36000 Control Systems Analysis & Des: 3 credit hours
- ECON: 3 credit hours

Eighth Semester (17 credit hours)

- MSTE I 41000 Internship: 1 credit hour
- Ethics: 3 credit hours
- MSTE 42000 Automotive Control: 3 credit hours
- MSTE 41400 Motorsports Design II: 3 credit hours
- MSTE 42600 Internal Combustion Engines: 3 credit hours
- Tech Elective: 3 credit hours
- Gen Ed Elective: 3 credit hours

Motorsports Engineering Certificate

This certificate provides an educational opportunity in the basics of the motorsports industry. Motorsports is a rapidly expanding segment of the Indiana employment market. This certificate will assist in developing technical skills in this area. A certificate and transcript notation will be awarded upon completion of the course work.

A total of 26 credit hours and a cumulative grade point average of 2.0 on a 4.0 scale is required to receive the certificate

All students must complete the following courses or their equivalents:

- Math 15900 Algebra & Trigonometry or Math 153/154 Algebra & Trigonometry I&II: 5 credit hours
- MET 11100 Statics: 3 credit hours
- MET 21100 Strength of Materials or MET 213 Dynamics: 3 credit hours
- (must take one but both are recommended)

- MET 22000 Heat and Power: 3 credit hours
- MET 29900 Introduction to Motorsports: 3 credit hours
- MSTE 42600 IC Engines: 3 credit hours
- MET 49900 Vehicle Dynamics: 3 credit hours
- An MET Project Course with a Motorsports related project: 3 credit hours
- (may be MET 41400, MET 49700 or MET 29900 project course)

Sustainable Technologies Certificate

Purpose

In the United States, sustainability has gained importance in business, industry, government, government agencies, higher education, and in the general public's consciousness. The goal of meeting today's needs without harming future generations' ability to realize their potential is a hallmark of sustainable practices, and there is widespread interest from many disciplines and sectors in developing, enhancing, and integrating sustainability into aspects of products, services, and solutions. Thus, the need to equp students with the knowledge, skills, and perspectives to make contributions tosustainability initiatives has never been greater. Green jobs are rapidly being created as the economy begins enbracing sustainable, energy efficiency, and low-carbon practices. The driving forces behind the development of green jobs are businesses wishing to maintain cutting edge technology, become more energy efficient, while lowering their carbon foot print, or becoming entirely carbon neutral. The governments of the world, the U.S. being one of them, support these developments through initiatives including: federal funding, subsidies, tax reform, and carbon markets. This certificate is designed to address a growing need for professionals who can contribute to the green global workforce with knowledge in sustainable practices in current technologies. The Sustainable Technologies Certificate will be beneficial to students who want to acquire knowledge in areas of renewable energies, green building, and sustainable design, and who may want to pursue a career in a sustainable technology. All of the Sustainable Technologies Certificate courses will be offered online.

Admission

Candidates for this certificate are required to be formally admitted by the IUPUI Office of Admissions, but not required to be a student in the Purdue School of Engineering

Technology. To earn the Sustainable Technologies Certificate, or any other certificates, students must contact the department to complete paperwork to add the certificate to their program plan of study before they enroll in the last semester or sooner. Applications for graduation must be completed one semester prior to completion of the required curriculum.

Curriculum (18 credit hours)

Students are required to successfully complete a total of 6 courses (18 credit hours) to earn the certificate. No more than 6.0 units of transfer credit can be applied towards this certificate. All students must successfully complete all of the following required core courses:

- OLS 39900 (TECH 20100) Introduction to Sustainable Principles and Practices - 3 credit hours
- ECET 49900 (TECH 30100) Renewable Energy Technologies* - 3 credit hours
- ART 29900 (TECH 30200) Introduction to Green Building Technologies*[1] or
- ART 29900 (TECH 30400) Green Building: Information Modeling[1] - 3 credit hours
- ECET 49900 (TECH 30300) Energy Efficiency and Auditing - 3 credit hours
- ECET 49900 (TECH 40200)Emerging Green Technologies* - 3 credit hours

* SPEA Students will be taking these courses.

[1] For the certificate students choose just one of these courses.

Mechanical Engineering (ME)

Professors J. Chen *(Chair),* R. Nalim, N. Paydar
Associate Professors H. El-Mounayri, S. Anwar, T. Wasfy, T. Katona, A. Jones
Assistant Professors J. Xie, L. Zhu, Y. Kim, H. Yu, J. Zhang, A. Tovar
Lecturers A Razban

The Department of Mechanical Engineering offers programs at the bachelor's, master's, and doctoral levels. At the bachelor's level, programs described here lead to the Bachelor of Science in Mechanical Engineering (B.S.M.E.), the Bachelor of Science in Energy Engineering (B.S.E.E.N.), and the Bachelor of Science in Engineering (B.S.E.), an interdisciplinary degree. Students enrolled in the department study under faculty actively engaged in research in a variety of areas: advanced materials, biomechanics, combustion, composites, computational fluid dynamics, computer-aided design, control, experimental mechanics, fluid mechanics, finite element methods, fracture, heat transfer, manufacturing, renewable energy, battery technology, fuel cell technology, mechatronics, hybrid electric vehicles technology, robotics, solid and structural mechanics, turbomachinery, and vibration. For more information, contact the Department of Mechanical Engineering at (317) 274-9717 or visit the Department's website at **www.engr.iupui.edu/me.**

B.S. in Mechanical Engineering

The B.S.M.E. Program is accredited by the Engineering Accreditation Commission of ABET, Inc., 111 Market Place, Suite 1050, Baltimore, MD 21202, (410) 347-7700.

Mechanical engineering has its foundation in the basic sciences, including mathematics, physics, and chemistry, and requires an understanding of such areas as solid and fluid mechanics, materials, thermodynamics, heat and mass transfer, manufacturing processes, instrumentation, and control. Mechanical engineers are engaged in a variety of activities including design, manufacturing, research, development, testing, construction, operations, sales, management, consulting, and teaching.

The mechanical engineering curriculum provides a broad base on which to build an engineering career. Traditional subjects in mechanical engineering are complemented by extensive computer experience in such areas as computer-aided design and numerical problem solving. The program's flexibility allows students to specialize in their area of interest through choosing electives. Part-time employment is available to students in the research laboratories of the department. Such experience enhances course work and is particularly valuable to those who later undertake graduate study.

The Mechanical Engineering Program Educational Objectives are:

1. Serve as competent mechanical engineering professionals that meet or exceed the expectations of their employers.

2. Pursue advanced degrees in Mechanical or other related fields of engineering. Pursue other professional degrees, such as law or business.

3. Assume leadership roles in government and industry, as well as in their communities and the global society.

The number of credit hours required for graduation is 130, distributed as follows for each discipline:
1. Mathematics and Physical Sciences

- Calculus: **MATH 16500**, **16600**, **26100:** 12 credit hours
- Multidimensional Mathematics: **MATH 17100:** 3 credit hours
- Differential Equations: **MATH 26600:** 3 credit hours
- Chemistry: **CHEM-C 105:** 3 credit hours
- Physics: **PHYS 15200** and **25100:** 9 credit hours
- Science/TECH Elective (also listed under Technical Electives): 3 credit hours

2. Communications, Ethics and Contemporary Issues

- Speech: **COMM-R 110:** 3 credit hours
- Writing: **ENG-W 131:** 3 credit hours
- Communication in Engineering Practice: **TCM 36000:** 2 credit hours
- Engineering Ethics and Professionalism: **ME 40100:** 1 credit hour
- Seminar & Fundamentals of Engineering Review: **ME 40500:** 1 credit hour

3. General Education

- Engineering Economics: **ME 32700:** 3 credit hours

- Electives: 12 credit hours
- Free Elective 3 credit hours

4. Freshman Engineering Courses

- Introduction to the Engineering Profession: **ENGR 19500:** 1 credit hour
- Introduction to Engineering: **ENGR 19600: 3 credit hours**
- Introduction to Programming Concepts: **ENGR 19700: 2 credit hours**
- Computer Tools for Engineering: **ENGR 29700: 3 credit hours**

5. Mechanics and Materials

- Mechanics: **ME 27000** and **ME 27400: 6 credit hours**
- Materials: **ME 27200** and **ME 34400: 7 credit hours**

6. Design

- Mechanical Design: **ME 26200** and **37200: 7 credit hours**
- Capstone Design: **ME 46200: 3 credit hours**
- Thermal-Fluid Systems Design: **ME 41400: 3 credit hours**

7. Thermal-Fluid Sciences

- Thermodynamics: **ME 20000: 3 credit hours**
- Fluid Mechanics: **ME 31000: 4 credit hours**
- Heat and Mass Transfer: **ME 31400: 4 credit hours**

8. Electrical Engineering, Instrumentation and Control

- Electrical Engineering: **ECE 20400: 4 credit hours**
- Systems, Measurements and Controls: **ME 33000**, **34000**, and **48200: 9 credit hours**

9. Technical Electives

- TECH Electives: 9 credit hours
- Statistics Elective: 3 credit hours
- Science/TECH Elective (also listed under Mathematics and Physical Sciences): 3 credit hours

Semester by semester, the **130 total credit hours** are distributed as follows:

Freshman Year

First Semester (14 credit hours)

- **ENGR 19500** Introduction to the Engineering Profession: 1 credit hours
- **ENGR 19600** Introduction to Engineering: 3 credit hours
- **CHEM-C 10500** Chemical Science I: 3 credit hours
- **COMM-R 110** Fundamentals of Speech Communication: 3 credit hours
- **MATH 16500** Analytic Geometry and Calculus I: 4 credit hours

Second Semester (16 credit hours)

- **ENGR 19700** Introduction to Programming Concepts: 2 credit hours
- **ENG-W 131** Elementary Composition I: 3 credit hours
- **MATH 16600** Analytic Geometry and Calculus II: 4 credit hours
- **PHYS 15200** Mechanics: 4 credit hours
- **MATH 17100** Multidimensional Mathematics: 3 credit hours

Sophomore Year

Third Semester (16 credit hours)

- **ENGR 29700** Computer Tools for Engineering: 1 credit hours
- **ME 20000** Thermodynamics I: 3 credit hours
- **ME 27000** Basic Mechanics I: 3 credit hours
- **MATH 26100** Multivariate Calculus: 4 credit hours
- **PHYS 25100** Heat, Electricity, and Optics: 5 credit hours

Fourth Semester (16 credit hours)

- **ME 32700** Engineering Economics: 3 credit hours
- **ME 26200** Mechanical Design I: 3 credit hours
- **ME 27400** Basic Mechanics II: 3 credit hours
- **ECE 20400** Introduction to Electrical and Electronic Circuits: 4 credit hours
- **MATH 26600** Ordinary Differential Equations: 3 credit hours

Junior Year

Fifth Semester (17 credt hours)

- **ME 27200** Mechanics of Materials: 4 credit hours
- **ME 33000** Modeling and Analysis of Dynamic Systems: 3 credit hours
- **ME 31000** Fluid Mechanics: 4 credit hours
- Statistics Elective: 3 credit hours
- General Education Elective: 3 credit hours

Sixth Semester (17 credit hours)

- **ME 34400** Introduction to Engineering Materials: 3 credit hours
- **ME 31400** Heat and Mass Transfer: 4 credit hours
- **ME 37200** Mechanical Design II: 4 credit hours
- **ME 34000** Dynamic Systems and Measurements: 3 credit hours
- General Education Elective: 3 credit hours

Senior Year

Seventh Semester (17 credit hours)

- **ME 41400** Thermal-Fluid Systems Design: 3 credit hours
- **ME 48200** Control Systems Analysis and Design: 3 credit hours
- **TCM 36000** Communication in Engineering Practice: 2 credit hours
- TECH **Elective:** 3 credit hours
- **General Education Elective:** 3 credit hours
- **General Education Elective: :** 3 credit hours

Eighth Semester (17 credit hours)

- **ME 40100** Engineering Ethics and Professionalism: 1 credit hour

- **ME 40500** FE Exam Preparation and Seminar: 1 credit hour
- **ME 46200** Capstone Design: 3 credit hours
- TECH Elective: 3 credit hours
- TECH Elective: 3 credit hours
- Free Elective: 3 credit hours

The complete list of Approved Electives for the B.S.M.E. curriculum may be found by clicking here.

B.S. in Energy Engineering

Energy Engineering at IUPUI is an interdisciplinary engineering degree housed in the Mechanical Engineering Department. It is a four-year Purdue University Bachelor's degree that is only offered on the IUPUI campus in Indianapolis, IN. For more details, visit the Energy Engineering website: http://engr.iupui.edu/energy/index.shtml.

We combine courses from chemistry, mechanical engineering, physics and electrical engineering to create a strong knowledge base essential to success in this industry. Students also have the opportunity to take courses concentrating on critical energy issues such as green building, hybrid and electric transportation, fuel cells and bio fuels, and energy systems such as wind, solar and nuclear.

Whether entering the workforce directly or continuing on to further education, graduates of this program will leave equipped to tackle the exciting and meaningful challenges ahead on the energy horizon.

The Energy Engineering Program Educational Objectives are:

1. Serve as competent energy engineering professionals that meet or exceed the expectations of their employers.
2. Pursue advanced degrees in energy or other related fields of engineering. Pursue other professional degrees, such as law or business.
3. Assume leadership roles in government and industry, as well as in their communities and the global society.

Click here to view the Student Learning Outcomes for the B.S. in Energy Engineering.

Semester by semester, the **129 total credit hours** are distributed as follows:

Freshman Year

First Semester (17 credit hours)

- **ENGR 19500 -** Introduction to Engineering Profession (1 cr.)
- **ENGR 19600** - Introduction to Engineering (3 cr.)
- **MATH 16500** - Integrated Calculus and Analytic Geometry (4 cr.)
- **CHEM-C 105** - Chemical Science I (3 cr.)
- **COMM-R 110** - Fundamentals of Speech Communication (3 cr.)
- **ENG-W 131** - Elementary Composition I (3 cr.)

Second Semester (16 credit hours)

- **ENGR 19700** - Introduction to Programming Concepts (2 cr.)
- **MATH 17100** - Multidimensional Mathematics (3 cr.)
- **MATH 16600** - Integrated Calculus and Analytic Geometry II (4 cr.)
- **PHYS 15200** - Mechanics (4 cr.)
- **Gen Ed Elec** - General Education Elective (3 cr.)

Sophomore Year

Third Semester (17 credit hours)

- **ENGR 29700** - Computer Tools for Engineering (1 cr.)
- **MATH 26100** - Multivariate Calculus (4 cr.)
- **PHYS 25100** - Heat, Electricity, and Optics (5 cr.)
- **EEN 22000** - Fundamentals of Electrochemical Materials & Energy Engineering (4 cr.)
- **ME 20000** - Thermodynamics I (3 cr.)

Fourth Semester (17 credit hours)

- **ECE 20400** - Introduction to Electrical and Electronic Circuits (4 cr.)
- **MATH 26600** - Differential Equations (3 cr.)
- **EEN 24000** - Basic Mechanics (4 cr.)
- **EEN 26000** - Sustainable Energy (3 cr.)
- **ME 32700** - Engineering Economics (3 cr.)

Junior Year

Fifth Semester (16 credt hours)

- **ECE 49500** - Fundamentals of Electrical Energy Engineering (3 cr.)
- **EEN 33000** - Dynamic Systems Modeling and Measurements (4 cr.)
- **ME 27200** - Strength of Materials (4 cr.)
- **EEN 31000** - Fluid Mechanics and Heat Transfer (5 cr.)

Sixth Semester (15 credit hours)

- **ECE 32100** - Electromechanical Motion Devices (3 cr.)
- **EEN 33500** - Electric Power Networks and Interfaces (3 cr.)
- **EEN 34500** - Renewable Energy Systems and Design (3 cr.)
- **EEN ELEC** - Energy System Elective (3 cr.)
- **GEN ED ELEC** - General Education Elective (3 cr.)

Senior Year

Seventh Semester (17 credit hours)

- **EEN 41000** - Clean Power Generation (3 cr.)
- **ME 48200/ECE 38200** - Control Systems Analysis and Design (3 cr.)
- **EEN ELEC** - Energy Systems Elective (3 cr.)
- **EEN ELEC** - Energy Systems Elective (3 cr.)
- **TECH ELEC** - Technical Elective (3 cr.)
- **TCM 36000** - Communication in Engineering Practice (2 cr.)

Eighth Semester (14 credit hours)

- **ME 40500** - FE Preparation and Seminar (1 cr.)
- **ME 46200/EEN 46200** - Capstone Design (3 cr.)

- **ME 40100** - Engineering Ethics and Professionalism (1 cr.)
- **TECH ELEC** - Technical Elective (3 cr.)
- **EEN ELEC** - Energy Systems Elective (3 cr.)
- **GEN ED ELEC** - General Education Elective (3 cr.)

Electives

Energy Systems Electives
* 3 cr. Unless noted otherwise

ECE 49500 - Electronic Fundamentals of hybrid and Electric Vehicles
ECE 59500 - Modeling, Analysis and Control of Electric and Hybrid Vehicles
ECE 59500 - Energy Systems
ME 50400 - Automotive Control
ME 49700 - Powertrain Integration
ME 59700/EEN 4xx00 - Renewable Energy and Fuel Cells

EEN 3xx00 - Thermal and Hydro Generation (*Under Development*)
EEN 3xx00 - Wind and Solar Generation (*Under Development*)
EEN 3xx00 - Hybrid & Electric Transportation (*Under Development*)
EEN 3xx00 - Energy Storage Devices and Systems (*Under Development*)
EEN 3xx00 - Power Electronics (*Under Development*)

EEN 4xx00 - Fuel Cell & Battery Engineering (*Under Development*)
EEn 4xx00 - Nuclear Power Systems (*Under Development*)
EEN 4xx00 - Power train Modeling and Simulation (*Under Development*)

EEN xxx00 - Energy Systems Instrumentation (*Under Development*)
EEN xxx00 - Bio-fuels Extraction & Conversion (*Under Development*)
EEN xxx00 - Fuel Reforming & Reactor Design (*Under Development*)
EEN xxx00 - Materials for Energy Conversion (*Under Development*)
EEN xxx00 - Geothermal HVAC (*Under Development*)
EEN xxx00 - Zero and Lew-Energy Building Design (*Under Development*)

Technical Electives

**3 cr. unless noted otherwise*

ME 34400 - Introduction to Engineering Materials
ME 37200 - Mechanical Design II

ME 41800 - Heating and Air-Conditioning Analysis and Design
ME 43000 - Power Engineering
ECE 43200 - Power System I
ME 43300 - Principles of Turbomachinery
ME 44600 - CAD/CAM Theory and Applications
ME 45000 - Computer-Aided Engineering Analysis
ME 45100 - Computational Methods in Thermal Sciences
ME 45800 - Composite Materials
ME 47200 - Advanced Mechanics of Materials
ME 47400 - Vibration Analysis

ME 50500 - Intermediate Heat Transfer
ME 50900 - Intermediate Fluid Mechanics
ME 51000 - Gas Dynamics
ME 52500 - combustion
ME 55000 - Advanced Stress Analysis
ME 55100 - Finite Element Analysis
ME 55200 - Advanced Applications of Finite Element Methods
ME 56300 - Mechanical Vibrations
ME 56900 - Mechanical Behavior of Materials
ME 58100 - Numerical Methods in Mechanical Engineering
ME 59700 - Selected Topics in Mechanical Engineering

ENGR 20000, 25000, 30000, 35000, 40000 - Cooperative Education Practice I-V (1 cr each)
ENGR 20010, 25010, 30010, - Career Enrichment Internship I-III (1 cr each)
ECE - Power Electronics (*Under Development*)
ECET - Industrial Energy Systems Design (*Under Development*)

B.S. in Engineering - Interdisciplinary Engineering

Interdisciplinary engineering provides an opportunity for students whose interests and talents, while oriented toward engineering and science, do not coincide with the plan of study outlined for the B.S.M.E. student. Interdisciplinary engineering does not have a designated professional curriculum, but it is constituted to accommodate a degree objective with broad flexibility and opportunity for interdisciplinary studies.

Students cooperate with their faculty advisors to develop a personalized plan of study leading to the Bachelor of Science in Engineering (B.S.E.) degree with interdisciplinary engineering identified as the major field of study. The Department of Mechanical Engineering has prepared plans of study with such major program areas as Bioengineering, Structural Design, Construction Engineering Management and Engineering Management. The "Major Area" on a B.S.E. Plan of Study includes a minimum of 25 credit hours to complement at least 30 credit hours of Engineering Science/Design. At least 15 of the engineering credits must be at the 300 level or higher.

A description of the Engineering Management program follows as an example. For information about other available options, please consult faculty in the Department of Mechanical Engineering or visit the Department's Undergraduate Programs website.

B.S. in Engineering - Engineering Management

The School of Engineering and Technology and the Indiana University School of Business offer a joint program in engineering management. This program prepares students to begin careers that may lead to administrative or management positions in technological, engineering, or manufacturing operations. The program also prepares students for careers in large nontechnological organizations such as financial institutions, which may require skills generally associated with both engineering and business. The engineering management program provides a solid background in both engineering and management. To complete the graduation requirements, students take courses

in electrical, industrial, and mechanical engineering, as well as accounting, business law, economics, finance, marketing, and management.

Students who finish this four-year degree have several options for continuing their education. With approximately three additional semesters of study, they can also complete an undergraduate program in industrial, electrical, or mechanical engineering. With approximately six additional undergraduate courses they can enroll in a master's degree program in industrial, electrical, or mechanical engineering. They may also apply for direct admission to law school. Students interested in any of these options for continued education should consult their advisors when determining their plans of study.

The number of credit hours required for graduation is 127, distributed as follows for each discipline:

1. Mathematics and Physical Sciences

- Calculus: MATH 16500, 16600, 26100: 12 credit hours
- Multidimensional Mathematics: MATH 17100: 3 credit hours
- Differential Equations: MATH 26600: 3 credit hours
- Chemistry: CHEM-C 10500: 3 credit hours
- Physics: PHYS 15200 and 25100: 9 credit hours

2. Communications, Ethics and Contemporary

- Speech: COMM-R 110: 3 credit hours
- Writing: ENG-W 131: 3 credit hours
- Communication in Engineering Practice: TCM 36000: 2 credit hours
- Engineering Ethics and Professionalism: ME 40100: 1 credit hour
- Seminar & Fundamentals of Engineering Review: ME 40500: 1 credit hours

3. General Education

- Electives: 12 credit hours

4. Freshman Engineering Courses

- Introduction to the Engineering Profession: ENGR 19500: 1 credit hour
- Introduction to Engineering: ENGR 19600: 1 credit hour
- Introduction to Programming Concepts: ENGR 19700: 2 credit hours
- Computer Tools for Engineering: ENGR 29700: 1 credit hour

5. Engineering Courses

- Electrical Engineering: ECE 20400 and 26600: 2 credit hours
- General Engineering: 9 credit hours
- Mechanical Engineering: ME 20000, 27000, 27200, 27400, and 33000: 16 credit hours
- Materials: ME 34400: 3 credit hours
- Design: ME 46200: 3 credit hours

6. Economics: ECON E201, E202: 6 credit hours

7. Business

- Accounting: A200: 3 credit hours
- Business Law: BUS L203: 3 credit hours
- Finance: BUS F300: 3 credit hours
- Management: BUS Z302: 3 credit hours
- Marketing: BUS M300: 3 credit hours
- Operations and System Management: BUS P300: 3 credit hours
- Computer: BUS K201: 3 credit hours
- Statistics: STAT 35000: 3 credit hours

Semester by semester, the **127 total credit hours** are distributed the same as the B.S.M.E. curriculum during the first two semesters, as shown below, and the student works with his or her advisor to make an individualized plan of study for the remaining semesters.

Freshman Year

First Semester

- **ENGR 19500** Introduction to the Engineering Profession: 1 credit hours
- **ENGR 19600** Introduction to Engineering: 3 credit hours
- **CHEM-C 10500** Chemical Science I: 3 credit hours
- **COMM-R 110** Fundamentals of Speech Communication: 3 credit hours
- **MATH 16500** Analytic Geometry and Calculus I: 4 credit hours

Second Semester

- **ENGR 19700** Introduction to Programming Concepts: 2 credit hours
- **ENG-W 131** Elementary Composition I: 3 credit hours
- **MATH 16600** Analytic Geometry and Calculus II: 4 credit hours
- **PHYS 15200** Mechanics: 4 credit hours
- **MATH 17100** Multidimensional Mathematics: 3 credit hours

NOTE: The Third through Eighth semesters are scheduled on an individual basis.

Graduate Programs in Mechanical Engineering

The Department of Mechanical Engineering has an outstanding and up-to-date engineering faculty with expertise and research interests in the areas of advanced manufacturing, biomechanics, composites, computational fluid dynamics, computer-aided design, computer-aided manufacturing, combustion, controls, elasticity, fluid mechanics, finite element analysis, fracture, heat transfer, renewable energy, mechatronics, advanced vehicle tech., battery, fuel, cell, robotics, solid and structural mechanics, stress analysis, and turbomachinery.

The department offers graduate programs of study that lead to the degrees of Master Science (M.S.), Master of Science in Engineering (M.S.E.), Master of Science in Mechanical Engineering (M.S.M.E.), and Ph.D. The program leading to the Ph.D. in mechanical engineering is jointly administered with the School of Mechanical Engineering at Purdue University, West Lafayette.

The department also offers combined bachelor's and master's degree programs, in which students can receive

both B.S. and M.S. degrees in five years at IUPUI. These degree programs are open to qualified undergraduates at IUPUI, leading to either: 1) B.S. and M.S.M.E. degrees (B.S./M.S.M.E.) for mechanical engineering undergraduates, or 2) a B.S. degree in physics and an M.S. degree in mechanical engineering (B.P.M.M.E.) for physics undergraduates. The combined degrees prepare students for advanced engineering careers with two degrees (bachelor's and master's) in five years.

For more information about graduate programs visit http://engr.iupui.edu/me/bulletin/GraduatePrograms.shtml?menu=academics.

Music and Arts Technology (MAT)

Chair: Fred J. Rees, Professor of Music & Arts Technology

The Department of Music and Arts Technology reflects urban culture, contemporary and digital arts. Special courses on American popular music, contemporary music performance styles, music technology and music therapy are delivered by innovative instructional technology. The department's technology facilities have captured national attention.

The Department of Music and Arts Technology is committed to delivering quality music instruction to the undergraduate and graduate students at the nation's premiere urban institution. Most undergraduate courses carry no prerequisites and are open to all students. Performance ensembles are open to students, staff, faculty, and community members.

Ensemble groups include the IUPUI Jazz Ensemble, IUPUI Jazz Combos, Pep Band, University Choir, IUPUI Percussion Ensemble, Guitar Ensemble, Steel DrumEnsemble, Afro-Cuban Percussion Ensemble, Chamber Ensemble, Telematic Performing Ensemble, and Laptop Orchestra.

This department awards degrees from Indiana University.

For more information, call or write: Department of Music and Arts Technology, IUPUI, 535 W. Michigan Street, Indianapolis, IN 46202, (317) 274-4000.

Web: music.iupui.edu

Undergraduate Programs

Music Minor

The Department of Music and Arts Technology welcomes students whose majors are outside the department, but who wish to minor in music. There is no audition required to minor in music, but students must declare music as their minor at the appropriate time in their undergraduate studies.

Music minors should participate in music ensembles within the Department of Music and Arts Technology and should register (or audition when required) for these ensembles during undergraduate orientation or the first week of class. The IUPUI Flute Choir, Jazz Ensemble, Pep Band, University Choir, Guitar Ensemble, and Urban Drum Experience are open to all students.

Music Minor in Musical Theatre

The Music Minor in Musical Theatre program (M.M.M.T.) is designed for students seeking to immerse themselves in the art of musical theatre.

This program provides opportunity in the creative process as well as becoming more in tune with the human experience.

Emphasis will be placed on performance that includes singing, acting (character development) and staging.

This course of study includes an annual performance open to family and friends.

Bachelor of Science in Music Technology

The Bachelor of Science in Music Technology degree is designed to provide professional training for students seeking careers that employ music technology. The program builds skills and knowledge common to the music industry and professional fields. The program is broad in scope and enables students to function effectively in the changing, contemporary musical world. It fosters leadership skills in the areas of creativity, entrepreneurship, self-reliance, and resourcefulness. The BSMT graduate will be able to adapt knowledge gained from this program to related disciplines beyond traditional music specializations. It will serve as a platform for students seeking the IUPUI Master of Science in Music Technology degree and will prepare graduates for advanced musical and technical study.

Overview

One hundred and thirty (130) hours of course work are required for this IU Degree. Students are engaged in making music with technology, performing, composing and producing digital music formatted materials. Students study musicianship during the first two years of the degree program, which combines music theory, history, keyboard and aural training. They participate in music ensembles and applied music lessons each semester of this four-year course of study.

Students also develop an outside concentration related to the degree. Examples might be in Business, Computer Technology, Informatics, Communication Studies, Mathematics, or Languages.

Admission Requirements

- High School Diploma
- SAT Scores
- Admittance into IUPUI: Bachelor's degree admission requirements
- TOEFL: a provisional minimum of 61+ (internet-based version/iBT), 173+ (computer-based version/CBT), or 500+ (paper-based version/PBT) http://www.toefl.org. You must request that official score reports be sent to IUPUI. Use school code 1325.
- Completed BSMT Application send to Department of Music and Arts Technology
- Audition
- Interview
- Basic Musical Skills Test
- Additional information may be requested to document musical skills or experience with technology.

Music Therapy Equivalency Program

The music therapy equivalency program is designed to assist students who already have an undergraduate degree in music in obtaining the needed competencies to become board-certified music therapists.

Admission Requirements

- Bachelor's degree in music from NASM-approved school
- Minimum grade point average of 3.0 (4.0 scale)
- Submission of a university and a department application
- Official transcripts of all college course work
- Evidence of musicianship through performance videotape, audio cassette, CD/DVD, or live audition
- Three letters of recommendation required tosupport the admission application
- In-person or telephone admission interview withthe music therapy faculty
- Non-native speakers must demonstrate English language proficiency with a minimum TOEFL score of 600/97. International students will also need to meet the application requirements of the IUPUI Office of International Affairs.

Admission Categories

Upon receipt of the completed application, letters of recommendation, transcript, evidence of musicianship, and the interview, the Graduate Admissions Committee of the IU Department of Music and Arts Technology at IUPUI may grant regular admission, grant admission on probation, or reject the application.

Admission on Probation

Students who do not have an undergraduate average of 3.0 or higher may be admitted on probation in exceptional cases. The probationary status continues until 9 credit hours of course work have been successfully completed. Students who are admitted on probation and incur academic probation during their first semester of study are subject to dismissal.

Program Requirements

Program requirements vary depending on the student's background and educational needs. The American Music Therapy Association and the Certification Board for Music Therapists have identified minimum competencies needed to become board certified as a music therapist. The faculty and student will determine which competencies have not been addressed during previous course work, this needs and strength analysis will determine the courses needed to meet the standards.

Minimum Grade Point Average

- 3.0 average to continue
- No grades lower than C in music therapy core courses are counted toward equivalency

Music Therapy Equivalency Curriculum

There are 22 credit hours of music therapy core courses and 7 credit hours of practicum courses (including internship) required for the equivalency program. In addition, courses in clinical (psychology and anatomy) and musical foundations may be required, depending on the student's previous educational background.

M.S. in Music Technology

On-Campus Program

The Master of Science in Music Technology provides graduate students an academic background in digital music production, instructional design, and multimedia development. Current graduates of this master's program have found employment in a wide range of business and educational settings. Participants develop skills in designing software, using authoring tools and languages, applying multimedia concepts, and managing technology facilities and projects. This degree is offered as an on-campus or online program.

Admission Requirements

1. Bachelor's degree (with demonstrated musicalskills)
2. Minimum grade point average of 3.0 (4.0 scale)
3. Submission of a university and a department application
4. Official transcripts of all undergraduate and graduate study
5. Evidence of musicianship through performance videotape, audio cassette, CD/DVD, or live audition
6. Three letters of recommendation required tosupport the admission application
7. In-person or telephone admission interview withthe Head of Graduate Studies
8. Non-native speakers must demonstrate English language proficiency with a minimum TOEFL score of 550/79 International students will also need to meet the application requirements of theIUPUI Office of International Affairs

Admission Categories

Upon receipt of the completed application, letters of recommendation, transcript, evidence of musicianship, and the interview, the Graduate Admissions Committee of the IU Department of Music and Arts Technology at IUPUI may grant regular admission, grant admission on probation, or reject the application.

Admission on Probation

Students who do not have an undergraduate and graduate grade point average of 3.0 or higher may be admitted on probation in exceptional cases. The probationary status continues until 9 credit hours of course work have been successfully completed. At this time student admission requests are re-evaluated. Students who are admitted on probation and incur academic probation during their first semester of study are subject to dismissal.

Degree Requirements

- 30 credit hours (18 credit hours at the 500 level or above)
- 6 credit hours in cognate courses (at the 400 level or above) to be selected from music, business, communications, computer science, education, fine arts, or law
- 6 credit hours of approved courses (at the 400 level or above) from the cognate field or other fields with the approval of the Head of Graduate Studies

Minimum Grade Point Average

- 3.0 average to continue
- No grades lower than B in core courses arecounted toward the degree

- No grades lower than C are counted toward thedegree

Residency Requirements (for on-campus students only)

- Three consecutive summers, two contiguous academic terms

Core Courses

The following courses, totaling 18 credit hours, are required of all students enrolled in the Master of Science in Music Technology program:

Class/Credit Hours

- N512 Foundations of Music Production - 3 cr.
- N513 Principles of Multimedia Technology - 3 cr.
- N514 Music Technology Methods - 3 cr.
- N515 Multimedia Design Applications in the Arts - 3 cr.
- N516 Advanced Interactive Design Applications in the Arts - 3 cr.
- N517 Internship in Arts Technology or N518 Arts Technology Major Project - 3 cr.

Total Credit Hours - 18

Cognate Field Courses

Six (6) credit hours are required in an approved cognate field within or outside the Department of Music and Arts Technology. Students may choose to complete the remaining 6 credit hours with emphasis in one of the following areas: music, business, communications, computer science, education, fine arts, law, or others with the approval of the department. The cognate field may become a minor if at least 12 credit hours are taken in one field.

Internship or Technology Project

Students may elect to enroll in an internship (N517) or develop a multimedia project (N518) as the summative experience in the program. Either option is supervised by the student's academic advisor and requires a full report. (These courses are part of the core courses listed previously.) Students participating in the internship are placed in an academic technology setting or an industry setting for one semester of experience working with technology and multimedia experts. No thesis is required for the degree.

Online Program: Master of Science in Music Technology

The IUPUI Department of Music and Arts Technology offers the entire M.S.M.T. Program "live," using streaming video, videoconferencing and audio through the Internet. All course and degree requirements are the same as the on-campus program.

Admission Requirements

- Bachelor's degree (with demonstrated musical skills)
- Minimum grade point average of 3.0 (4.0 scale)
- Submission of a university and a department application
- Official transcripts of all undergraduate and graduate study
- Evidence of musicianship through performance videotape, audio cassette, or CD/DVD
- Three letters of recommendation are required tosupport the admission application
- In-person or telephone admission interview withthe Head of Graduate Studies
- Non-native speakers must demonstrate English language proficiency with a minimum TOEFL score of 550/79 International students will also need to meet the application requirements of theIUPUI Office of International Affairs

Admission Categories

Upon receipt of the completed application, letters of recommendation, transcript, evidence of musicianship, and the interview, the Graduate Admissions Committee of the IU Department of Music and Arts Technology at IUPUI may grant regular admission, grant admission on probation, or reject the application.

Admission on Probation

Students who do not have an undergraduate and graduate grade point average of 3.0 or higher may be admitted on probation in exceptional cases. The probationary status continues until 9 credit hours of course work have been successfully completed. At this time student admission requests are re-evaluated. Students who are admitted on probation and incur academic problems during their semesters of study are subject to dismissal.

Degree Requirements

- 30 credit hours (18 hours at the 500 level orabove)
- 6 credit hours in cognate courses (at the 400 level or above) to be selected from music, business, communications, computer science, education, fine arts, or law
- 6 credit hours of approved courses (at the 400 level or above) from the cognate field or other fields with the approval of the Head of Graduate Studies

Minimum Grade Point Average

- 3.0 average to continue
- No grades lower than B in core courses arecounted toward the degree
- No grades lower than C are counted toward thedegree

Virtual Residency Requirement

Course enrollment during three consecutive summers, or one summer and a contiguous academic term.

Core Courses

The following courses, 18 credit hours, are required of all students enrolled in the M.S.M.T. program:

Class/Credit Hours

- N512 Foundations of Music Production - 3 cr.
- N513 Principles of Multimedia Technology - 3 cr.
- N514 Music Technology Methods - 3 cr.
- N515 Multimedia Design Applications in the Arts - 3 cr.
- N516 Advanced Interactive Design Applications in the Arts - 3 cr.
- N518 Arts Technology Major Project - 3 cr.

Total Credit Hours - 18

Cognate Field Courses

Six (6) credit hours are required in an approved cognate field within or outside the Department of Music and Arts Technology. Students may choose to complete the remaining 6 credit hours with emphasis in one of the following areas: music, business, communications, computer science,

education, fine arts, law, or others with the approval of the department. The cognate field may become a minor if at least 12 credit hours are taken in one field.

Technology Project

Students develop a multimedia project (N518) as the summative experience in the program. This project is supervised by the student's academic advisor and requires a full report. (This course is part of the core courses listed previously.) No thesis is required for the degree.

M.S. in Music Therapy

The Master of Science in Music Therapy program is designed to provide professional music therapists with advanced research skills and clinical practice in music therapy, and to teach music therapists how to utilize the array of tools available in music technology for such purposes. This degree is offered on campus and online.

Admission Requirements

1. Bachelor's degree in music therapy or its equivalent
2. Board certified by the Certification Board for Music Therapists
3. Minimum grade point average of 3.0 (4.0 scale)
4. Submission of a university and adepartment application
5. Official transcripts of all undergraduate and graduate study
6. Three letters of recommendation
7. In-person or telephone admission interview withmusic therapy faculty
8. Videotaped music therapy session (with accompanying documentation, the function oftherecording is equivalent to a music audition;it will not be an actual session)
9. Non-native speakers must demonstrate English language proficiency with a minimum TOEFL score of 600/97. International students will also need to meet the application requirements of theIUPUI Office of International Affairs.

Admission Categories

Upon receipt of the completed application, letters of recommendation, transcript, evidence of musicianship, and the interview, the Graduate Admissions Committee of the IU Department of Music and Arts Technology at IUPUI may grant regular admission, grant admission on probation, or reject the application.

Admission on Probation

Students who do not have an undergraduate and graduate grade point average of 3.0 or higher may be admitted on probation in exceptional cases. The probationary status continues until 9 credit hours of course work have been successfully completed. At this time student admission requests are re-evaluated. Students who are admitted on probation and incur academic probation during their first semester of study are subject to dismissal.

Degree Requirements

- A total of thirty (30) credit hours are required for completion of the degree, including:
- 12 credit hours in music therapy (at the 500 level or above);
- 9 credit hours in core music technology courses (at the 500 level or above);
- 6 credit hours of cognates (at the 500 level or above);
- 3 credit hours of thesis

Minimum Grade Point Average

- Minimum 3.0 average to continue
- No grades lower than B in core courses arecounted toward the degree
- No grades lower than C are counted toward thedegree

Core Courses

The following courses are required of all students enrolled in the Master of Science in Music Therapy program:

Class/Credit Hours

- N512 Foundations of Music Production - 3 cr.
- N513 Principles of Multimedia Technology - 3 cr.
- N514 Music Technology Methods - 3 cr.
- N521 Research Methods in Arts and Music Technology - 3 cr.
- N530 Philosophy and Theory in Music Therapy - 3 cr.
- N531 Music Therapy Quantitative and Qualitative Research - 3 cr.
- N532 Music in Medicine - 3 cr.
- N533 Advanced Clinical Techniques in Music Therapy - 3 cr.
- N600 Music Therapy Thesis
-

Music Therapy Thesis

The thesis is the final academic requirement for the degree. The thesis proposal must be approved by a faculty committee before enrollment in the thesis will be permitted.

Other Information

IUPUI Music Academy

The IUPUI Music Academy is a non-profit community music school committed to providing high quality, professional music instruction to area residents of all ages and levels of ability. The academy serves over 500 people each year, ages 18 months through adulthood, by offering music classes for children and adults, ensembles, and private lessons. The academy is a member of the National Guild of Community Schools of the Arts.

Music at the Center for Young Children

Children attending the IUPUI Center for Young Children (CYC) can participate in preschool music classes during the weekday. Classes are held at the CYC after lunch, so students do not miss any instruction time from the CYC program.

For more information, contact:

E.J. Choe, Director
IUPUI Music Academy
535 W. Michigan Street, Room 378
Indianapolis, IN 46202

musacad@iupui.edu
Phone: (317) 278-4139
Fax: (317) 278-2590
Web: www.musicacademy.iupui.edu

International Music Technology Conference and Workshop

The Annual International Music Technology Conference and Workshop is hosted in Indianapolis during the latter part of June. Participants may register for graduate credit. During the International Computer Music Technology Conference, they will be able to see and experiment with the latest technology. There is a technology facility and three labs to which they may have access.

The IUPUI Computer Music Technology Facility includes two fully-networked computer music technology laboratories with video-streaming equipment for Internet-based participants. Eachworkstation is equipped with a multimedia computer and an Axiom 61keyboard. The Digital Keyboard Lab is equipped with 16Roland keyboards, a Roland controller audio system, Dell XPS-one computers, and a Teacher Station.

The Graduate Multimedia Lab has full production capabilities, including a digital flatbedscanner, video and photographic digital cameras, sound- and video-editing software, multimedia authoring tools and CD/DVD-ROM burner hardware and software. Both PC and Macintosh computers are available.

The Digital Sound Design Lab provides capabilities for all aspects of digital audio and MIDI-based production for sound tracks, multimedia design, sound sampling, sound design, and collaborative composition over the Internet.

Participants have the opportunity to work with both Macintosh and Windows applications. Topics include the following:

- Multimedia applications
- CD/DVD technology
- Music notation, sequencing and sampling
- Internet resources and Web design
- Computer-based music instruction
- Music workstation design and construction
- Grant writing and fundraising for technology support
- Computer-based music curriculum design
- Special topics (e.g., podcasting, wikis, distance learning, new music software products)

Policies & Procedures

Undergraduate Policies

Academic Warning

A student whose semester grade point average (GPA) falls below a 2.0, but whose cumulative GPA is a 2.0 or higher, will be placed on academic warning. Students on academic warning will be required to meet with their academic advisor before being able to register for classes. A student will be advised of academic warning status by the Office of the Associate Dean for Academic Affairs and Undergraduate Programs.

Academic Probation

A student whose cumulative grade point average (GPA) falls below a 2.0 will be placed on probation. Students on academic probation will be required to meet with their academic advisor before being able to register for classes. The student may continue studies provided the student achieves a semester GPA of at least 2.0 for each semester whil on probation. Once the cumulative GPA is at least 2.0, the student will be removed from probationary status. A student will be advised of probationary status and the possibility of dismissal by the Office of the Associate Dean for Academic Affairs and Undergraduate Programs.

Dismissal

A student on probation who has completed a minimum of 12 IUPUI grade point average (GPA) hours is subject to dismissal from the School if the student fails to attain a GPA of at least 2.0 in any two consecutive IUPUI semester (fall and spring), including the semester that the student was first placed on probation.

A student can also be dismissed from the School when, in the opinion of the Associate Dean for Academic Affairs and Undergraduate Programs in consultation with the student's major department, the student has ceased making progress in the degree program. Examples of lack of progress may include, but are not limited to, average GPA in courses in the major below 2.0, multiple semesters with semester GPA below 2.0, and repeated failures in core courses in the curriculum. Students in danger of dismissal due to failure to make academic progress will be required to meet with their academic advisor.

A student will be notified of dismissal by the Office of the Associate Dean for Academic Affairs and Undergraduate Programs.

Readmission

A student dismissed for the first time from the Purdue School of Engineering and Technology or another Purdue School must remain out of school at least one regular (fall or spring) semester. During the semester out of school, the student may petition the School of Engineering and Technology for readmission. A student dismissed for the second time must remain out of school at least two regular semesters (fall and spring), but may petition for readmission during the second semester out of school. Readmission after a second dismissal is extremely rare.

A student readmitted will be informed by the Office of the Associate Dean for Academic Affairs and Undergraduate Programs. The notification will specify any conditions and restrictions affecting readmission and continuance in the degree program. Readmitted students will be placed on probation. Readmitted students must earn a GPA of at least 2.0 each semester whil on probation or they will be dismissed again. Readmitted student will be removed from probation when their cumulative GPA is raised to 2.0. Students may contact Kelly Keelen at (317) 274-2761 or keelen@iupui.edu for a Petition for Readmission. Deadlines for submitting the petition is June 1 for fall and October 1 for spring.

Acceptance of Grade Replacement & Repeating Courses

Repeated Courses (Grade Replacement Policy)

Students enrolled in the School of Engineering and Technology are permitted to apply only the provisions of the IUPUI Grade Replacement Policy that pertain to repeating a course in order to achieve a higher grade. This replacement will affect a student’s academic record only at the Purdue School of Engineering and Technology at IUPUI. If the student subsequently transfers to another academic unit at IUPUI or another campus, different interpretations of the grade replacement policy may be in place.

An undergraduate student who retakes any course may elect to have only the final grade counted in computation of the cumulative semester index, in accordance with the limitations listed below. After retaking the course, the enrollment and original grade will be removed from calculations used to determine the student's cumulative GPA. The student's transcript, however, will continue to show the original enrollment in the course and all grades earned for each subsequent enrollment.

This policy is subject to the following limitations:

- Students may exercise the grade replacement option for no more than 15 credit hours, including any courses in which the former FX option was used for their 1st undergraduate degree.
- A grade may be replaced only by another grade for the same class.
- A student may exercise the Grade Replacement Policy a maximum of two times for a single course.
- The request to remove a grade from the cumulative GPA calculation by this method is irreversible.
- The second enrollment for any course covered by this policy must have occurred during fall semester 1996 or later.

Students who plan to use the grade replacement option must complete and submit the grade replacement form to the Recorder in the Office of Academic Programs for processing after retaking the course.

Academic Regulations

Grades and Grade Reports

Students are responsible for completing all required work in each of their courses by the last scheduled class meeting, unless course assignments have been properly cancelled. Students receive a grade in each course in which they are enrolled at the close of the session. Grades indicate what a student has achieved with respect to the objectives of the course, and instructors are required, by action of the Faculty Senate, to record the grade a student has earned in a course. Grades that have been officially recorded will be changed only in cases of instructor error or subsequent finding of student academic dishonesty.

Basis of Grades

The School of Engineering and Technology uses a grading system that may include plus and minus grades as well as straight letter grades for all undergraduate and graduate courses. These grades and their grade point values are indicated below.

For credit courses:

A or A+	4.0
A–	3.7
B+	3.3
B	3.0
B–	2.7
C+	2.3
C	2.0
C–	1.7
D+	1.3
D	1.0
D–	0.7
F	0.0 (no credit)

For credit courses taken under the Pass/Fail option:

P: Pass; equivalent to grade A through D– (no grade point value assigned).
F: Failure; failure to achieve minimal objectives of the course. The student must repeat the course satisfactorily in order to obtain credit for it. The F is factored into the student's grade point average.

For noncredit courses, including thesis research:

S: Satisfactory; meets course objectives (no grade point value assigned).
F: Unsatisfactory; does not meet course objectives (is factored into grade point average).
Note that no separate grades are given for course laboratory sections that have been given separate course designations for scheduling purposes.

Incomplete, Deferred, or Withdrawal grades for credit or noncredit courses (no grade point value assigned):

I: Incomplete, no grade; a temporary record indicating that the work is satisfactory as of the end of the semester but has not been completed. The grade of Incomplete may be assigned only when a student has successfully completed at least three-fourths of the work in a course and unusual circumstances prevent the student from completing the work within the time limits previously set. An instructor may require the student to secure the recommendation of the dean that the circumstances warrant a grade of Incomplete. When an Incomplete is given, the instructor will specify the academic work to be completed and may establish a deadline of up to one year. If the student has not completed the required work by the end of the following year, the registrar will automatically change the I to an F.
R: Deferred; a grade given for those courses that normally require more than one academic session to complete, such as project, thesis, and research courses. The grade indicates that work is in progress and that the final report has not been submitted for evaluation.
W: Withdrawal; a grade of W is recorded on the final grade report.

Withdrawing from Classes

During the first half of a semester or session, students may officially withdraw from classes without penalty if they obtain the approval of their advisor. During the third quarter of a semester or session, students may withdraw from classes if they obtain the approval of their advisor and the appropriate instructors; during the last quarter of the semester, students will be allowed to withdraw from classes only under extenuating circumstances. At that time they must obtain the approval of the appropriate instructors, their advisor, and the dean, and must also present a written justification from a doctor, member of the clergy, advisor, or similar person of authority. The fact that a student merely stops attending a class will not entitle the student to a grade of W.

Uses of the Pass/Fail Option

To provide students with the opportunity to broaden their education with less worry about the grades they may earn, an alternate grading system, the Pass/Fail option, is permitted for a limited portion of the required credit hours.

The following general rules are currently applicable; individual departments may impose further restrictions.

- Subject to the regulations of divisions or departments, students may choose this option in any course that does not already appear on their academic record and that they are otherwise eligible to take for credit with a letter grade. Students may use this option for not more than 20 percent of the total credit hours required for graduation.
- Students taking a course under this option have the same obligations as those taking the course for credit with a letter grade. When instructors report final grades in the course, any student who would have earned a grade of A through D– will receive a P, and any student who has not passed will receive an F. The registrar will note either result on the student's academic records, but will not use the course in computing the grade point average unless the student receives an F.
- This option is not available to students on probation.
- This option is available for a maximum of two courses in any one semester and one course during a summer session.
- Students receiving the grade of Pass in a course taken under the Pass/Fail option may not retake the same course for a letter grade.
- Courses taken under Pass/Fail option and courses taken by correspondence may not be used to fulfill graduation requirements for engineering students. Whether the courses are accepted for technology students is up to each major department.

These rules are general or minimum guidelines for those electing this option. There are certain specific limitations on registration for the Pass/Fail option. This option may be elected only during continuing student registration, late registration, and the drop/ add period at the beginning of a semester or session. Changes from letter grade to Pass/Fail and vice versa may not be made after the second week of classes during the regular semester or after the first week of classes during the summer sessions.

Absence from Campus

Students who interrupt their course of study for more than one calendar year may be required to meet all departmental curriculum requirements for the program offered at the time of their return.

Scholastic Indexes

The scholarship standing of all undergraduate degree regular students is determined by two scholastic indexes: the semester index and the graduation index.

Semester Index

The semester index (semester grade point average) is an average determined by weighting each grade received (4.0 for an A, 3.7 for an A–, etc.) during a given semester and multiplying it by the number of credit hours in the course, adding up all the figures, and then dividing the sum by the total number of course credit hours obtained during that semester. Grades of P and S are not included in the computation; grades of F are included. The cumulative semester index is the weighted average of all courses taken by a student, except those to which the FX policy is applied. See "Repeated Courses (FX Policy)" above in this section of the bulletin.

Graduation Index

The graduation index (degree grade point average) is the weighted average of grades in only those courses that are used to meet the graduation requirements for the program in which the student is enrolled. When a student retakes a course with the advisor's approval or later substitutes an equivalent course for one previously taken, only the most recent course grade is used by the school in calculating the graduation index. Since certain courses previously completed by the student may on occasion be omitted from a program of study, the graduation index and the cumulative semester index may differ.

Graduation Index Requirements

For all bachelor's degrees in the School of Engineering and Technology, a minimum graduation index of 2.0 is required for graduation. Candidates for graduation from engineering programs must also have an index of 2.0 for all required engineering courses.
For the Associate of Science degree, a minimum graduation index of 2.0 is required for graduation.

Good Standing

For purposes of reports and communications to other institutions and agencies and in the absence of any further qualification of the term, students are considered in good standing unless they have been dismissed, suspended, or dropped from the university and have not been readmitted.

Graduate and Professional Policies

Academic Probation and Academic Dismissal

Academic standards for probation (warning status) and dismissal are established by the faculty for each specific academic program. Therefore, a student is subject to the regulations applicable to all students enrolled in a particular program at the time of registration. If students are experiencing academic difficulty, they are urged to consult their academic advisor as soon as possible.

Students will be notified by IUPUI e-mail from the Office of the Associate Dean for Academic Programs, School of Engineering and Technology, when they are placed on academic probation. The e-mail will also inform the student of the conditions that must be met for removal from academic probation. Students who are dismissed for academic reasons will also be notified by letter from the Office of the Associate Dean for Academic Programs.

The following standards are currently applicable for students enrolled in the School of Engineering and Technology.

Academic Probation

Graduate degree-seeking students are placed on academic warning and probation when either the cumulative index or the semester index is below 3.00 (B). Graduate students must maintain a semester and cumulative grade point average of at least 3.00 each semester to be in good standing. Academic probation will be removed when students achieve a semester and cumulative grade point average of 3.00. The minimum grade acceptable for a graduate-level course is C (2.00).

Full-time undergraduate students are automatically on academic probation when either the cumulative semester

index or the semester index is below 2.0 (C). Part-time students are automatically on academic probation when either the cumulative semester index or the grade point average for the last 12 credit hours of consecutive enrollment is below 2.0 (C). All students on probation are automatically placed on academic checklist. Students on checklist must obtain the signature of a departmental advisor in order to register.
Students who, in subsequent enrollments, do not improve significantly may receive a letter stating that they will be subject to dismissal if an index of 2.0 (C) or higher is not earned in the current enrollment period. Such students may register only after their grades have been posted and their departmental checklist clearance form has been approved by the dean.

Removal from Probation

Students are removed from academic probation when they complete 12 credit hours of consecutive enrollment with a minimum grade point average of 2.0, provided their overall grade point average is also at or above 2.0.

Academic Dismissal

Full-time students may be dismissed when they fail to attain a 2.0 semester grade point average in any two consecutive semesters or when their cumulative semester index has remained below 2.0 (C) for any two consecutive semesters. Part-time students may be dismissed when their cumulative semester index or grade point average for the last 18 credit hours of consecutive enrollment is below 2.0 (C).

Readmission

A student who has been dropped due to scholastic deficiency may petition the Faculty Committee on Readmission for readmission. If readmitted, the student will be placed on probation. Students may contact the particular department for specific rules and regulations.

Acceptance of Grade Replacement & Repeating Courses

Students enrolled in the School of Engineering and Technology are permitted to apply only the provisions of the IUPUI Grade Replacement Policy that pertain to repeating a course in order to achieve a higher grade. This replacement will affect a student's academic record only at the Purdue School of Engineering and Technology at IUPUI. If the student subsequently transfers to another academic unit at IUPUI or another campus, different interpretations of the grade replacement policy may be in place.

An undergraduate student who retakes any course may elect to have only the final grade counted in computation of the cumulative semester index, in accordance with the limitations listed below. After retaking the course, the enrollment and original grade will be removed from calculations used to determine the student's cumulative GPA. The student's transcript, however, will continue to show the original enrollment in the course and all grades earned for each subsequent enrollment.

This policy is subject to the following limitations:

- Students may exercise the grade replacement option for no more than 15 credit hours, including any courses in which the former FX option was used.
- A grade may be replaced only by another grade for the same class.
- A student may exercise the Grade Replacement Policy a maximum of two times for a single course.
- The request to remove a grade from the cumulative GPA calculation by this method is irreversible.
- The second enrollment for any course covered by this policy must have occurred during fall semester 1996 or later.

Students who plan to use the grade replacement option must inform the engineering and technology recorder after they have retaken a course and wish to apply the policy.

Academic Regulations

Grades and Grade Reports

Students are responsible for completing all required work in each of their courses by the last scheduled class meeting, unless course assignments have been properly cancelled. Students receive a grade in each course in which they are enrolled at the close of the session. Grades indicate what a student has achieved with respect to the objectives of the course, and instructors are required, by action of the Faculty Senate, to record the grade a student has earned in a course. Grades that have been officially recorded will be changed only in cases of instructor error or subsequent finding of student academic dishonesty.

Basis of Grades

The School of Engineering and Technology uses a grading system that may include plus and minus grades as well as straight letter grades for all undergraduate and graduate courses. These grades and their grade point values are indicated below.

For credit courses:

A or A+	4.0
A–	3.7
B+	3.3
B	3.0
B–	2.7
C+	2.3
C	2.0
C–	1.7
D+	1.3
D	1.0
D–	0.7
F	0.0 (no credit)

For credit courses taken under the Pass/Fail option:

P: Pass; equivalent to grade A through D– (no grade point value assigned).F: Failure; failure to achieve minimal objectives of the course. The student must repeat the course satisfactorily in order to obtain credit for it. The F is factored into the student's grade point average.

For noncredit courses, including thesis research:

S: Satisfactory; meets course objectives (no grade point value assigned).

F: Unsatisfactory; does not meet course objectives (is factored into grade point average).
Note that no separate grades are given for course laboratory sections that have been given separate course designations for scheduling purposes.

Incomplete, Deferred, or Withdrawal grades for credit or noncredit courses (no grade point value assigned):

I: Incomplete, no grade; a temporary record indicating that the work is satisfactory as of the end of the semester but has not been completed. The grade of Incomplete may be assigned only when a student has successfully completed at least three-fourths of the work in a course and unusual circumstances prevent the student from completing the work within the time limits previously set. An instructor may require the student to secure the recommendation of the dean that the circumstances warrant a grade of Incomplete. When an Incomplete is given, the instructor will specify the academic work to be completed and may establish a deadline of up to one year. If the student has not completed the required work by the end of the following year, the registrar will automatically change the I to an F.
R: Deferred; a grade given for those courses that normally require more than one academic session to complete, such as project, thesis, and research courses. The grade indicates that work is in progress and that the final report has not been submitted for evaluation.
W: Withdrawal; a grade of W is recorded on the final grade report.

Withdrawing from Classes

During the first half of a semester or session, students may officially withdraw from classes without penalty if they obtain the approval of their advisor. During the third quarter of a semester or session, students may withdraw from classes if they obtain the approval of their advisor and the appropriate instructors; during the last quarter of the semester, students will be allowed to withdraw from classes only under extenuating circumstances. At that time they must obtain the approval of the appropriate instructors, their advisor, and the dean, and must also present a written justification from a doctor, member of the clergy, advisor, or similar person of authority. The fact that a student merely stops attending a class will not entitle the student to a grade of W.

Uses of the Pass/Fail Option

To provide students with the opportunity to broaden their education with less worry about the grades they may earn, an alternate grading system, the Pass/Fail option, is permitted for a limited portion of the required credit hours. The following general rules are currently applicable; individual departments may impose further restrictions.

- Subject to the regulations of divisions or departments, students may choose this option in any course that does not already appear on their academic record and that they are otherwise eligible to take for credit with a letter grade. Students may use this option for not more than 20 percent of the total credit hours required for graduation.
- Students taking a course under this option have the same obligations as those taking the course for credit with a letter grade. When instructors report final grades in the course, any student who would have earned a grade of A through D– will receive a P, and any student who has not passed will receive an F. The registrar will note either result on the student's academic records, but will not use the course in computing the grade point average unless the student receives an F.
- This option is not available to students on probation.
- This option is available for a maximum of two courses in any one semester and one course during a summer session.
- Students receiving the grade of Pass in a course taken under the Pass/Fail option may not retake the same course for a letter grade.
- Courses taken under Pass/Fail option and courses taken by correspondence may not be used to fulfill graduation requirements for engineering students. Whether the courses are accepted for technology students is up to each major department.

These rules are general or minimum guidelines for those electing this option. There are certain specific limitations on registration for the Pass/Fail option. This option may be elected only during continuing student registration, late registration, and the drop/ add period at the beginning of a semester or session. Changes from letter grade to Pass/Fail and vice versa may not be made after the second week of classes during the regular semester or after the first week of classes during the summer sessions.

Absence from Campus

Students who interrupt their course of study for more than one calendar year may be required to meet all departmental curriculum requirements for the program offered at the time of their return.

Scholastic Indexes

The scholarship standing of all undergraduate degree regular students is determined by two scholastic indexes: the semester index and the graduation index.

Semester Index

The semester index (semester grade point average) is an average determined by weighting each grade received (4.0 for an A, 3.7 for an A–, etc.) during a given semester and multiplying it by the number of credit hours in the course, adding up all the figures, and then dividing the sum by the total number of course credit hours obtained during that semester. Grades of P and S are not included in the computation; grades of F are included. The cumulative semester index is the weighted average of all courses taken by a student, except those to which the FX policy is applied. See "Repeated Courses (FX Policy)" above in this section of the bulletin.

Graduation Index

The graduation index (degree grade point average) is the weighted average of grades in only those courses that are used to meet the graduation requirements for the program in which the student is enrolled. When a student retakes a course with the advisor's approval or later substitutes an equivalent course for one previously taken, only the most recent course grade is used by the school in calculating the graduation index. Since certain courses previously completed by the student may on occasion be omitted from a program of study, the graduation index and the cumulative semester index may differ.

Graduation Index Requirements

For all bachelor's degrees in the School of Engineering and Technology, a minimum graduation index of 2.0 is required for graduation. Candidates for graduation from engineering programs must also have an index of 2.0 for all required engineering courses.
For the Associate of Science degree, a minimum graduation index of 2.0 is required for graduation.

Good Standing

For purposes of reports and communications to other institutions and agencies and in the absence of any further qualification of the term, students are considered in good standing unless they have been dismissed, suspended, or dropped from the university and have not been readmitted.

Student Organizations & Services

Engineering and technology students have the opportunity to participate in the activities of the following student societies or chapters:

- American Society of Engineering Education (ASEE)
- American Society of Mechanical Engineers (ASME)
- Associated General Contractors of America (AGC)
- Biomedical Engineering Society
- Engineering and Technology Student Council
- Engineers Without Borders
- Formula SAE
- Global Design Students
- Institute of Electrical and Electronics Engineers (IEEE)
- Motorsports Club
- National Society of Black Engineers (NSBE)
- NET
- Pi Tau Sigma Honor Society
- SIGGRAPH
- Society of Hispanic Professional Engineers
- Society of Human Resource Management (SHRM)
- Society of Student Constructors (SSC)
- Society of Women Engineers (SWE)
- Student Design Organization (SDO)
- Tau Alpha Pi Honor Society
- Tau Beta Zeta

Minority Engineering Advancement Program (MEAP)

The Minority Engineering Advancement Program (MEAP) was established in 1974 to encourage minority students to pursue studies in engineering and engineering technology. Through the annual MEAP summer workshops, the school identifies and recruits talented secondary school students and provides them with information about engineering careers and college requirements. Since 1976, approximately 100 students participate each summer in the program.

MEAP also provides support services to minority undergraduates enrolled in the School of Engineering and Technology. In addition, some scholarships are available to American Indian, African American, and Hispanic students, people from groups that have been historically underrepresented in engineering and technology. For more information, students should contact the Office for Academic Programs, School of Engineering and Technology, 799 W. Michigan Street, IUPUI, Indianapolis, IN 46202-5160; www.engr.iupui.edu/meap; phone (317) 274-2943.

Opportunities to Study Abroad

The School of Engineering and Technology International Engineering Program offers credit and noncredit internship opportunities abroad. Internships are full-time positions, and work assignments last from the middle of May until the middle of July. These internships allow students to gain technical experience in international companies, knowledge of a foreign culture, improved foreign language skills, and other benefits of an intercultural experience. Juniors or seniors with grade point averages of 3.0 or higher and specific language skills are eligible to apply. Participants receive a stipend to cover a major part of their expenses. Living accommodations are arranged, usually with a host family. Free time for travel, study, and recreation is available at the end of the program. For more information, contact the Office for Academic Programs, School of Engineering and Technology, 799 W. Michigan Street, Indianapolis, IN 46202-5160; phone (317) 274-2533.

Individual departments also offer short- and long-term study abroad opportunities. Check with the department you're interested in to learn more about its study abroad programs.

Faculty

Administrative Officers

- **David Russomanno**, Dean
- **Stephen Hundley**, Associate Dean for Academic Affairs and Undergraduate Programs
- **M. Razi Nalim**, Associate Dean for Graduate Programs and Research
- **John Mainella**, Assistant Dean for Development and External Relations
- **Sherri Alexander**, Assistant Dean for Finance and Administration
- **Terri Talbert-Hatch**, Assistant Dean for Student Services
- **Eugenia Fernandez**, Chair of the Department of Computer, Information and Leadership Technology
- **Yaobin Chen**, Chair of the Department of Electrical and Computer Engineering
- **Elaine Cooney**, Chair of the Department of Engineering Technology
- **Jie Chen**, Chair of the Department of Mechanical Engineering
- **Mark Bannatyne,** Chair of the Department of Design and Communication Technology
- **Edward Berbari**, Chair of the Department of Biomedical Engineering
- **Wanda L. Worley**, Director of Technical Communication
- **Tim Diemer**, Director of International Services
- **Joe Abella**, Director of Industry Relations
- **Danny King**, Interim Director of New Student Academic Advising Center

- **Marilyn Mangin**, Director of Student Recruitment
- **Jennifer Williams**, Director of Career Services and Professional Development

Yokomoto, Charles F., *Professor Emeritus in Electrical and Computer Engineering (1970); B.S. Electrical Engineering, 1964, M.S. Electrical Engineering, 1966, Ph.D. Electrical Engineering, 1970, Purdue University*

Yurtseven, H. Oner, *Dean Emeritus and Professor Emeritus of Electrical and Computer Engineering and Dean (1977); B.S. Electrical Engineering, 1967, Middle East Technical University, Turkey; Ph.D. Electrical Engineering, 1974, The Johns Hopkins University*

Resident Faculty

Acheson, Douglas, *Associate Professor of Computer Graphics Technology (1997); B.S. Technical Graphics, 1993, M.S. Educational Computing, 1995, Purdue University*

Albright, Bruce Randall, *Lecturer of Music; B.A., 1992, Indiana University Bloomington; M.S.M.T., 2002, Indiana University-Purdue University Indianapolis*

Alfrey, Karen, *Lecturer of Biomedical Engineering, Director of the Undergraduate Program in Biomedical Engineering, B.S.E.E. 1993 Cornell University; M.S. 1997 Rice University; Ph.D. 2000 Rice University*

Alvarado, John, *Lecturer of Music; B.M. in Classical Guitar Performance, 1998, DePaul University; M.M. in Performance, 2000, Arizona State University*

Anwar, Sohel, *Associate Professor of Mechanical Engineering (2004); B.S. in Mechanical Engineering, Bangladesh University of Engineering & Tech, 1986, M.Sc.Eng. in Mechanical Engineering, Bangladesh University of Engineering, 1988, M.S. in Mechanical Engineering, Florida State University, 1990, Ph.D. in Mechanical Engineering, The University of Arizona, 1995, Professional Engineer (P.E), Michigan, 2004*

Bailey, Darrell, *Professor of Music; B.M. in Organ Performance, 1974, B.A. in Music, 1975, M.M.T., 1976, Oberlin College; D.M.E. University of Illinois at Urbana-Champaign*

Baldwin, Daniel, *Clinical Assistant Professor of Computer Graphics Technology (2006), B.F.A, Painting, 1996, Indiana University; M.F.A, Illustration, 2000, Savannah College of Art and Design*

Berbari, Edward, *Chancellor's Professor of Biomedical Engineering, Chair of Department of Biomedical Engineering, and Professor of Medicine (1994); B.S.E.E. Electrical Engineering, 1971, Carnegie-Mellon University; M.S. Biomedical Engineering, 1973, University of Miami; Ph.D. Electrical Engineering, 1980, University of Iowa*

Borme, Andrew, *Lecturer of Motorsports Engineering, B.S. Mechanical Engineering, 1986, Rensselaer Polytechnic Institute, M.S. Mechanical Engineering, 1991, California State University*

Burns, Debra, *Associate Professor of Music; B.A. in Music Education, 1987, Glenville State College; M.M. in Music Therapy, Illinois State University; Ph.D. in Music Education and Music Therapy, 1999, University of Kansas*

Catlin, Sally, *Lecturer of Computer and Information Technology (2003); B.A. History, 1986, University of California; M.S. Education, 2003, Indiana University*

Chen, Jie, *Professor of Mechanical Engineering, Chair of the Department of Mechanical Engineering, Professor of Orthodontics, School of Dentistry (1990); B.S. Mechanical Engineering, 1982, Tianjin University, China; M.S. Biomedical Engineering, 1984, Shanghai Second Medical College, China; Ph.D. Mechanical Engineering, 1989, Drexel University*

Chen, Rongrong, *Associate Professor of Mechanical Engineering Technolog (2008), B.S. Physical Chemistry, 1983, Xiamen University, Ph.D. Electrochemistry, 1993, Case Western Reserve University*

Chen, Yaobin, *Professor of Electrical and Computer Engineering, Chair of the Department of Electrical and Computer Engineering (1990); B.S. Electrical Engineering, 1982, Nanjing Institute of Technology, China; M.S. Electrical*

Engineering, 1986, Ph.D. Electrical Engineering, 1988, Rensselaer Polytechnic Institute

Chien, Y. P. Stanley, *Professor of Electrical and Computer Engineering (1989); B.S. Electrical Engineering, 1984, University of Wisconsin; M.S. Electrical Engineering, 1985, Ph.D. Electrical and Computer Engineering, 1989, Purdue University*

Choe, E.J., *Assistant Professor of Music and Director, IUPUI Music Academy; B.M. in Piano Performance, 1987, M.A. in Piano Performance and Pedagogy, 1990, The University of Colorado at Boulder; D.M. in Piano Pedagogy and Literature, 2008, Indiana University Bloomington*

Christe, Barbara, *Program Director of Biomedical Engineering Technology Program (1998); B.S. Engineering, 1984, Marquette University; M.S. Clinical Engineering, 1986, Rensselaer at Hartford*

Christopher, Lauren, *Assistant Professor of Electrical and Computer Engineering (2008); B.S. Electrical Engineering, 1982, Massachusetts Institute of Technology; M.S. Electrical Engineering, 1982, Massachusetts Institute of Technology; Ph.D. Electrical Engineering 2003; Purdue University*

Chu, Tien-Min (Gabriel), *Assistant Professor of Biomedical Engineering (2003); D.D.S. Dental Surgery, 1989, Kaohsiung Medical College, Ph.D. Materials Science, 1999, University of Michigan*

Clark, Jerome A., *Lecturer of Computer and Information Technology (1999); B.S. Computer Technology, 1992, IUPUI; M.S. Management 1996, Indiana Wesleyan University*

Conrad, William, *Professor of Electrical and Computer Engineering Technology (1991); B.S.E.E., 1966, Purdue University; M.Eng., General Engineering, 1968, Pennsylvania State University; P.E., Indiana*

Cooney, Elaine, *Professor of Electrical and Computer Engineering Technology, Chair of Electrical and Computer Engineering Technology (2009); B.S.E. Electrical Engineering, 1984, General Motors Institute; M.S.E.E. 1986, Purdue University*

Cowan, David J., *Associate Professor of Architectural Technology (2009); B.A. Visual Arts, 1973, University of Saskatchewan, Canada; B.Ed. Secondary, 1976, University of Regina, Canada; M.E.Des(Arch.) Architecture, 1986, University of Calgary, Canada; Ph.D. Architecture 2006, University of Calgary, Canada*

Deal, W. Scott, *Professor of Music; B.A., 1980, Cameron University; M.M. in Percussion Performance, 1982, University of Cincinnati-College-Conservatory of Music; D.M.A., 1994, University of Miami*

Diemer, Timothy, *Assistant Professor of Organizational Leadership & Supervision; Director of International Services; Bachelor of Science (cum laude), 1973, The Ohio State University, College of Education; Master of International Administration, 1983, School for International Training, Brattleboro, Vermont*

Drews, Michael, *Assistant Professor of Music; B.A., 1994, Kent State University; M.A. in Composition, 1998, Cleveland State University; D.M.A., 2006, University of Illinois at Urbana-Champaign*

Du, Eliza, *Associate Professor of Electrical and Computer Engineering (2005); B.S. Electrical Engineering, 1996; M.S. Telecommunications, 1999, Beijing University of Posts and Telecom, China; Ph.D. Electrical Engineering, 2003, University of Maryland-Baltimore County*

Elliott, Robert, *Visiting Lecturer of Computer and Information Technology (2009); B.S. Computer and Information Technology, 2000, Purdue University, Indianapolis; M.S. Human Computer Interaction, 2009, Indiana University, Indianapolis*

El-Mounayri, Hazim, *Associate Professor of Mechanical Engineering (1997); B.S. Mechanical Engineering, 1989; M.Sc. Material Science, 1992, The American University in Cairo, Egypt; Ph.D. Mechanical Engineering, 1997, McMaster University, Canada*

El-Sharkawy, Mohamed, *Professor of Electrical and Computer Engineering (1992); B.S. Electrical Engineering, 1974, M.S. Electrical Engineering, 1979, Alexandria University, Egypt; Ph.D. Electrical Engineering, 1985, Southern Methodist University*

Evans, Nancy, *Lecturer of Computer and Information Technology (2009); B.S. Accounting, 1993, Butler University; M.S. Secondary Education, 2003, Ball State University*

Feldhaus, Charles, *Associate Professor of Organizational Leadership and Supervision and Chair of M.S. Technology (2001); B.A. Radio and Television, 1979, University of Southwestern Louisiana; M.S. Secondary Education, 1985, Indiana University; Ed.D. Educational Administration/Supervision, 1999, University of Louisville*

Fernandez, Eugenia, *Associate Professor of Computer and Information Technology (1996) and Chair of the Department of Computer, Information, and Leadership Technology (2009); B.S. Mechanical Engineering, 1979, Worcester Polytechnic Institute; M.S.E. Computer, Information,and Control Engineering, 1984, University of Michigan; Ph.D. Management Information Systems, 1988, Purdue University*

Fox, Patricia L., *Clinical Assistant Professor of Organizational Leadership and Supervision and Associate Chair of Computer, Information, and Leadership Technology, (1983); B.S. Accounting, Indiana University, 1980; M.B.A., 1985, Butler University*

Frank, Mary Ann, *Lecturer in Interior Design, B.S., Systems Science and Math, 1982, Washington University; M.S. , Adult Education, 2009, Indiana University*

Gee, Patrick, *Lecturer of Freshman Engineering (2000) ; B.S. Mechanical Engineering, 1992; M.S. Mechanical Engineering, 1998, Purdue University*

Goodman, David, *Assistant Professor of Electrical Engineering Technology (2009), B.S. Electrical Engineering, 1995, Purdue University, M.S. Mechanical Engineering Technology, 2005, Purdue University, Ph.D. Engineering Technology 2009, Purdue University*

Goodwin, Clifford, *Associate Professor of Organizational Leadership and Supervision (1979); A.A.S. Aviation Technology, 1969; B.S. Supervision, 1970, Purdue University; M.S. Education, 1980, Ball State University; Ed.D., 1997, Indiana University*

Hovde, Marjorie Rush, *Associate Professor of Technical Communication, Adjunct Associate Professor of English (1996); B.A. English Education, 1979, Eastern Mennonite College; M.A. English Expository Writing, 1984, University of Iowa; Ph.D. English Rhetoric and Composition 1994, Purdue University*

Hundley, Stephen P., *Associate Dean for Academic Affairs and Undergraduate Programs,Associate Professor of Organizational Leadership and Supervision (1997); B.S. Business Management, 1992, Virginia Commonwealth University; M.S. Human Resource Administration, 1994, Central Michigan University; M.Ed. Adult Education, 1995, Virginia Commonwealth University; Ph.D. Education/Organization Development, 1998, American University*

Hylton, Pete, *Associate Professor of Mechanical Engineering Technology,Adjunct Associate Professor of Motorsports Engineering (2004); B.S. Mechanical Engineering, 1979, Rose-Hulman Institute of Technology; M.S. Mechanical Engineering, 1983, Purdue University; M.S. Applied Mathematics, 2007, IUPUI*

Iseley, Tom, *Professor of Construction Technology; B.S.C.E. 1973, University of Alabama in Birmingham; M.B.A.,1976, University of Alabama in Birmingham, Ph.D. 1988, Purdue University*

Izadian, Afshin, *Assistant Professor Electrical Engineering Technology (2009); B.S. Electrical Engineering, 1998, South Tehran University; MSc in Electrical Engineering, 2001, Iran University of Science and Technology; Ph.D. Electrical Engineering, 2008, West Virginia University*

Jafari, Ali, *Professor of Computer and Information Technology (1995); B.S. Business Administration, 1978, University of Esfahan, Iran; M.S. Media Technology, 1981, University of Wisconsin-Stout; Ph.D. Telecommunication, 1988, Indiana University*

Ji, Julie, *Assistant Professor of Biomedical Engineering (2007); B.S. Chemical Engineering, 1999, Massachusetts Institute of Technology; Ph.D. Bioengineering, 2004, University of Pennsylvania*

Jones, Alan S., *Associate Professor of Mechanical Engineering (2007); B.S. in Mechanical Engineering, Bradley University, 1994, M.S. in Mechanical Engineering, The University of Michigan, 1995, Ph.D. in Mechanical Engineering, The University of Michigan, 2003*

Justice, Connie, *Clinical Assistant Professor of Computer and Information Technology (2000); B.S. Electrical Engineering, 1997, Purdue University, Indianapolis; M.S. Information Science, 2004, Indiana University*

Kassab, Ghassan S., *Professor of Biomedical Engineering; Professor of Surgery, Cellular and Integrative Physiology; Thomas J Linnemeier Guidant Chair, B.S. Chemical Engineering 1986 UCSD: M.S. Engineering Sciences 1987 UCSD; Ph.D. Bioengineering 1990 UCSD*

Katona, Thomas R., *Associate Professor of Mechanical Engineering, School of Engineering and Technology, Associate Professor of Orthodontics, School of Dentistry (1990); M.S. Mechanical Engineering, 1972, Ph.D. Mechanical Engineering, 1981, D.M.D. Dentistry, 1982, University of Pennsylvania*

Kelceoglu, Bekir, *Assistant Professor of Architectural Technology and Interior Design (2009); B.A. Interior Architecture, 2000, Anadolu University, Turkey; M.F.A, Design Development, 2006, The Ohio State University*

Kim, Dongsoo (Stephen), *Associate Professor of Electrical and Computer Engineering (2000); B.S. Metallurgical Engineering, 1987, Korea University; M.S. Computer Science, 1993, University of Texas, Dallas; Ph.D. 1998, Computer Science and Engineering, University of Minnesota*

Kim, Youngsik, *Assistant Professor of Mechanical Engineering (2010), B.Sc. Material Engineering, 2000, SungKyunKwan University, South Korea; M.Sc., Materials Science & Engineering, 2003, Ph.D., Materials Science & Engineering, 2006, Iowa State University, Iowa*

King, Brian, *Associate Professor of Electrical and Computer Engineering (2001); B.A. Mathematics, 1982, M.S. Mathematics, 1984, Ph.D. Mathematics, 1990, Ph.D. Computer Science, 2000, University of Wisconsin*

Kinsey, Brian D., *Assistant Professor of Construction Technology (1980); B.S. Engineering Sciences, 1972, M.S.E. Mechanical Engineering, 1975, Purdue University; Professional Engineer License., Indiana*

Koskie, Sarah, *Associate Professor of Electrical and Computer Engineering (2003); S.B. Mechanical Engineering, 1983, S.M. Mechanical Engineering, 1986, Massachusetts Institute of Technology,; M.S. Mathematics, Rutgers Univeristy, 1999; Ph.D., Control Theory, Rutgers University, 2003*

Lamm, Nancy, *Assistant Professor of Engineering, part-time, and Academic Advisor in the New Student Academic Advising Center (1987); A.B. Microbiology, 1969, Indiana University; B.S.E. Bioengineering, 1983, M.S.E. Interdisciplinary Engineering, 1989, Purdue University*

Laranja, Ricardo, *Lecturer in Music, B.M., 2000, Acquinas College; M.S. Media Arts and Science, 2003, IUPUI*

Lee, Jaehwan (John), *Associate Professor of Electrical and Computer Engineering (2005); B.S. Electrical Engineering, 1986, Kyungpook National University, South Korea; M.S. Electrical and Computer Engineering, 2003, Ph.D. Electrical and Computer Engineering, 2004, Georgia Institute of Technology*

Li, Feng, *Assistant Professor of Computer and Information Technology (2009); B.S. Mechanical Engineering, 2002, M.S. Computer Science, 2005, Southeast University, China; Ph.D. Computer Science, 2009, Florida Atlantic University*

Li, Lingxi, *Assistant Professor of Electrical and Computer Engineering (2008); B.E. Automation, 2000, Tsinghua University, China; M.S. Automation, 2003, Chinese Academy of Sciences, China; Ph.D. Electrical and Computer Engineering, 2008, University of Illinois, Urbana*

Lin, Chien-Chi, *Assistant Professor of Biomedical Engineering, B.S. 1996 National Tsing Hua University; M.S. 1998 National Taiwan University; Ph.D. 2007 Clemson University*

Lin, William, *Associate Professor of Electrical and Computer Engineering Technology (1999); B.Ed. Science Education (Physics), 1976, National College of Education Taiwan; M.S., Physics, 1981, University of Southern Mississippi; Ph.D.*

Electrical Engineering, 1987, The Pennsylvania State University

Lindsey, Roberta L., *Assistant Professor of Music; B.A. in Music Education, 1980, M.A. in Music History, 1987, Butler University; Ph.D., 1996, The Ohio State University*

Mannell, David, *Lecturer of Music, Director, IUPUI Choral Program; B.M.E. in Teaching Music, 1980, Emporia Kansas State Unviersity; M.S.M.T., 2002, Indiana University-Purdue University Indianapolis*

Markoff, Richard M (Rick), *Visiting Senior Advisor to the Chancellor and Visiting Lecturer, School of Engineering and Technology (2011); B.A., Communications, Western Michigan University (1968); M.Ed., Higher Education, University of Missouri (1970); Ph.D., Higher Education, The University of Toledo (1978)*

McLaughlin, Emily, *Interior Design Program Director and Clinical Assistant Professor, B.A., Interior Design, 1997; M.A. in Interior Design, 2003, Purdue University*

McRobbie, Michael A., *Professor of Computer and Information Technology and President of Indiana University 2007; B.A. 1975, University of Queensland, Australia; Ph.D. 1979, The Australian National University, Australia*

Meisenheler, Helen, *Visiting Lecturer of Organizational Leadership and Supervision (2010); B.S. Behavioral Science, (1990), United States Air Force Academy; M.S. Psychology, University of Oregon, (1997); Ph.D. Social Psychology, Loyola Univeristy - Chicago (2002)*

Meng, Chuiyuan, *Lecturer of Music; Bachelor of Literature in Musicology and Music Education, 2006, Capital Normal University, China; M.S.M.T., 2008, Indiana University-Purdue University Indianapolis*

Minns, Christie, *Visiting Lecturer of Computer and Information Technology (2008); B.S. Management Science, 1992, M.S. Information and Communication Science, 1995, Ball State University*

Munson, Jordan, *Lecturer of Music; B.M. in Music Performance, 2007, University of Kentucky; M.S.M.T., 2008, Indiana University-Purdue University Indianapolis*

Na, Sungsoo, *Assistant Professor of Biomedical Engineering (2009); B.S. Mechanical Engineering, 1993, Pukyong National University; M.S. Mechanical Engineering, 2000, Pusan National University, South Korea; Ph.D. Biomedical Engineering, 2006, Texas A&M University*

Nalim, M. Razi, *Associate Professor of Mechanical Engineering (1997), Associate Dean for Graduate Programs and Research (2011); B.Tech. Mechanical Engineering, 1983, Indian Institute of Technology, India; M.S. Mechanical Engineering, 1985, Ph.D. Aerospace Engineering, 1994, Cornell University*

Nickolich, David, *Clinical Assistant Professor of STEM Workforce Education, Department of Computer, Information and Leadership Technology (2011) and Director of STEM Initiatives, School of Engineering and Technology (2009); A.A.S. Computer Technology, (1975), Purdue University; B.S. Computer Technology, (1977), Purdue University; M.B.A. Business Administration, (1983), Kelley School of business, Indiana University; M.A. Adult and Community Education, (1992), Ball State University; M.A.E. Educational Administration and supervision, (1993), Ball State University; Ed.D. Adult, Higher, and Community Education, (2005), Ball State University*

Nickolson, Darrell, *Clinical Assistant Professor of Architectural Technology and Interior Design (2009); B.S. Interior Design, 1999; M.S., Gerontology, 2008, University of Indianapolis*

Orono, Peter, *Senior Lecturer of Freshman Engineering and Mechanical Engineering (2000); B.S. Mechanical Engineering, 1979, Makerere University, Kampala, Uganda; M.S. Mechanical Engineering, 1985, Texas Tech University; Ph.D. Mechanical Engineering, 1991, Wayne State University*

Peters, G. David, *Professor of Music, Director of Graduate Studies; B.M.E., 1964, University of Evansville; M.S. in Music Education, 1965, Ed.D. in Music Education, 1974, University of Illinois at Urbana-Champaign*

Pfile, Richard E., *Professor of Electrical and Computer Engineering Technology (1983); B.S. Chemistry, 1974, B.S. Electrical Engineering, 1976, University of Louisville; M.S.E. Computer, Information, and Control Engineering, 1980, University of Michigan*

Razban, Ali, *Senior Lecturer (2010); B.S., Mechanical Engineering, Purdue University; M.S.E., Mechanical Engineering and Applied Mechanics, University of Michigan; Ph.D., Mechanical Engineering, Imperial College London, UK; M.B.A. Purdue University*

Rees, Fred J., *Professor of Music and Chair, Department of Music and Arts Technology; B.M., Performer's Certificate in Double Bass, 1971, SUNY Potsdam; D.M.A. in Music Education, 1977, University of Southern California*

Renguette, Corinne, *Visiting Assistant Professor of Technical Communication (2011); B.A. English, Indiana University, 2002; M.A. English, Indiana University, 2004; Ph.D. Applied Linguistics, 2011, Ball State University*

Rennels, Kenneth E., *Associate Professor of Computer Integrated Manufacturing Technology, B.S. Industrial Engineering, 1975, Purdue University; M.S.B.A. Management and Administrative Studies, 1979, Indiana University; M.S. Industrial Engineering, 2000, Purdue University; Professional Engineer License., Indiana*

Rizkalla, Maher E., *Professor of Electrical and Computer Engineering (1986); B.S. Electrical Engineering, 1975, Assiut University, Egypt; M.S. Electrical Engineering, 1980, Cairo University, Egypt; Ph.D. Electrical Engineering, 1985, Case Western Reserve University*

Rovnyak, Steven, *Associate Professor of Electrical and Computer Engineering (2003); B.S. Electrical Engineering; A.B. Mathematics, 1988; M.S. Electrical Engineering, 1990, Ph.D. Electrical Engineering, 1994, Cornell University*

Russomanno, David J, *Professor of Electrical and Computer Engineering and Dean of Purdue School of Engineering and Technology (2010); B.E.E. in Electrical Engineering, 1986 Auburn University; M.E., 1989; Ph.D., University of South Carolina*

Salama, Paul, *Associate Professor of Electrical and Computer Engineering (1999); B.S. Electrical Engineering, 1991, University of Khartoum; M.S.Electrical Engineering, 1993, Ph.D. Electrical Engineering, 1999, Purdue University*

Schild, John H., *Associate Professor of Electrical and Computer Engineering and Biomedical Engineering (1997); B.S. Biomedical Engineering, 1983, M.S. Biomedical Engineering, 1988, Case Western Reserve University; Ph.D. Electrical and Computer Engineering, 1994, Rice University*

Sener, Erdogan, *Professor of Construction Technology (1987); B.S. Civil Engineering, 1968, Middle East Technical University, Turkey; M.S. Civil and Structural Engineering, 1969, Michigan State University; Professional Engineer License, Indiana*

Schubert, Peter J., *Professor of Electrical and Computer Engineering (2011), B.A., Physics, 1982, Washington Univeristy (St. Louis, MO); M.S. Electrical Engineering, 1984, University of Cincinnati; Ph.D., 1990, Electrical Engineering, Purdue University*

Starks, Joy, *Associate Professor of Computer and Informatoin Technology (1998); B.A. Theory and Composition, 1976, University of Missouri; B.S. Education, 1978, M.A. Education, 1981, Southern Illinois University*

Tovar, Andres, *Assistant Professor of Mechanical Engineering (2011); B.S., Mechanical Engineering, National University of Colombia (1995); M.S., Industrial Automation, National University of Colombia (2000), Mechanical Engineering, University of Notre Dame (2004); Ph.D., Aerospace and Mechanical Engineering, University of Notre Dame (2005)*

Vander Gheynst, John, *Assistant Professor of Music; B.M. in Music Education, 1995, The University of Georgia; M.M. in Trumpet Performance, 1997, University of Illinois at Urbana-Champaign; D.M.A. in Trumpet Performance, Jazz Emphasis, 2007, The University of Texas at Austin*

Varahramyan, Kody, *Professor of Electrical and Computer Engineering, Vice Chancellor for Research (2008); B.S. Electrical Engineering, 1977, University of Illinois, Urbana Champaign; M.S. Electrical Engineering, 1979, Ph.D. Electrical Engineering, 1983, Rensselaer Polytechnic Institute*

Walker, Richard, *Assistant Professor of Music; B.M. in Performance, 1990, Northern Kentucky University; M.M. in Performance, 1993, University of Illinois at Urbana-Champaign*

Wallacce, Joseph, *Assistant Professor of Biomedical Engineering, B.S.A.E. 2002 Georgia Institute of Technology; M.S.E. 2004 University of Michigan; Ph.D. 2007 University of Michigan*

Wasfy, Tamer, *Associate Professor of Mechanical Engineering (2009); B.S. in Mechanical Engineering, American University in Cairo, Egypt, 1989, M.S. in Mechanical/Materials Engineering, American University in Cairo, Egypt, 1990, M.Phil. in Mechanical Engineering, Columbia University, New York, NY 1993, Ph.D. in Mechanical Engineering, Columbia University, New York, NY 1994*

Wolter, Robert M., *Senior Lecturer of Organizational Leadership and Supervision (1999); A.A.S. Organizational Leadership and Supervision, 1995, B.S. Organizational Leadership and Supervision, 1997, Purdue University; M.S. Adult Education, 2002, Indiana University*

Worley, Wanda L., *Associate Professor of Technical Communication, Director of Technical Communication (2003); B.S. English, 1969, Indiana University; M.A.T. English, 1973, Indiana University; Ph.D. Adult Education, 1999, University of Wisconsin-Madison*

Wu, Huanmei, *Associate Professor of Computer and Information Technology (2005); B.S. Chemistry, 1996, Tsinghua University, Beijing, China; M.S. Computer and Information Science, 2003, Ph.D. Computer and Information Science, 2005, Northeastern University, Boston, MA*

Xie, Dong, *Associate Professor of Biomedical Engineering, Associate Professor, Department of Surgery, School of Medicine (2004); B.S. Biochemical Engineering, 1982, East China University of Science and Technology; M.S. Polymer Chemistry, 1987, Hubei Research Institute of Chemistry; M.S. Dental Materials, 1993, The Ohio State University; Ph.D. Polymeric Biomaterials/Oral Biology, 1998, The Ohio State University; Postdoctoral, Polymers in Biomedical Applications, 1999, University of Alabama at Birmingham*

Xie, Jian, *Assistant Professor of Mechanical Engineering (2007); B.S. in Chemical Engineering, Tianjin University, China, 1982, M.S. in Electrochemistry, University of South Dakota, Vermillion, South Dakota, 1996, Ph.D. in Electrochemistry, Miami University, Oxford, Ohio, 1999*

Yokota, Hiroki, *Professor of Biomedical Engineering and Anatomy-Cell Biology, Professor of Mechanical Engineering (1998); B.S. Aeronautics and Astronautics, 1978; M.S. Astronautics, 1980; Ph.D. Engineering, Astronautics, 1983, Tokyo University, Japan; Ph.D. Biology, 1993, Indiana University*

Yoshida, Ken, *Associate Professor of Biomedical Engineering (2006), Adjunct Associate Professor of Electrical and Computer Engineering (2008); B.S. Engineering - Biocybernetics (Biomedical Engineering), U.C.L.A., 1989; Ph.D. Bioengineering, 1994, University of Utah*

Yu, Huidan (Whitney), *Assistant Professor of Mechanical Engineering (2011); B.S., Physics, Zhejiang Normal University, China (1984); Ph.D., Physics, Peking University, China (2001), Aerospace Engineering, Texas A&M University (2004)*

Zecher, John E., *Professor of Mechanical Engineering Technology, Director of Mechanical Engineering Technology (1983); B.S. Industrial Technology, 1971, Miami University; M.S. Mechanical Engineering Technology, 1972, Western Michigan University; Professional Engineer License, Indiana*

Zhang, Jing, *Assistant Professor of Mechanical Engineering (2011); B.S., Metal Forming, University of Science and Technology, Beijing, China (1996); M.S., Manufacturing Engineering, Beijing University of Aeronautics and Astronautics (1999); Ph.D., Materials Science and Engineering, Drexel University (2004)*

Zhu, Likun, *Assistant Professor of Mechanical Engineering (2009); B.S. in Precision Instruments and Mechanology, Tsinghua University, Beijing, China, 1998, M.S. in Precision Instruments and Mechanics, Tsinghua University, Beijing, China, 2001, Ph.D. in Mechanical Engineering, University of Maryland, College Park, Maryland, 2006*

Graduate Programs

Welcome to the Graduate School!

Administration of Graduate Programs at IUPUI

Indiana University-Purdue University Indianapolis (IUPUI), a comprehensive campus made up of 19 Indiana University and Purdue University schools, is a dynamic place where new degree initiatives are fostered. Involvement with society at large, and the community in particular, is a hallmark of this campus, which changes the flavor of new degree programs.

Thus, students will find innovative programs in music technology, philanthropy, public history, and visual arts, as well as developing programs in informatics, visual communications, and music therapy. These new and developing programs enrich the solid foundation of traditional graduate programs available at IUPUI. Please see our Web site, http://www.iupui.edu/%7eiuihome/graddegrees.php, for a complete listing of the graduate degree programs at IUPUI.

There are three types of postbaccalaureate programs at IUPUI: (1) programs leading to graduate degrees and certificates, administered by Indiana University Graduate School; (2) programs leading to graduate degrees and certificates, administered by Purdue University Graduate School; and (3) other programs that are administered mainly by individual schools such as the Schools of Medicine, Dentistry, Law, Public and Environmental Affairs, Education, Library and Information Science, Health and Rehabilitation Sciences, Music, Nursing, Informatics; the Kelley School of Business; and the Herron School of Art and Design. For information about applying to one of the degree programs within these schools, please contact the school or department offering the degree.

IUPUI Graduate Office

The IUPUI Graduate Office is the administrative center for graduate and graduate/professional programs on the Indianapolis campus. Although no graduate degrees are granted by IUPUI itself, more than 8,000 students pursue one of the 165 graduate-level certificates and degrees offered on the IUPUI campus by the Indiana University Graduate School, the Purdue University Graduate School, and individual schools at IUPUI. The director of the graduate office serves as dean of students for all IUPUI postbaccalaureate students in collaboration with the IUPUI dean of students. In addition to the director, the Graduate Office has an assistant director, an assistant dean, a graduate non-degree coordinator, a curriculum coordinator, and other support staff.

CONTACT US

If you are seeking further assistance view our Contact Information.

As the locus of graduate administrative activity, the IUPUI Graduate Office processes applications and GRE scores for all graduate and professional programs and receives theses and dissertations for the graduate schools of both IU and PU. The office provides staff support for all graduate administrative committees, sponsors student organizations (e.g., the Graduate Student Organization), counsels post baccalaureate and prospective students, conducts workshops, and organizes Graduate School commencement activities. The IUPUI Graduate Office also connects IUPUI to a wider graduate community through organizations such as the Council of Graduate Schools (CGS), the Committee on Institutional Cooperation (CIC), and the Midwest Association of Graduate Schools (MAGS).

Perhaps most importantly, the IUPUI Graduate Office is the answer center for a wide range of questions pertaining to graduate study, graduate programs, and graduate student life. In addition, the IUPUI Graduate Office supports other offices, such as the Enrollment Center and the Community Learning Network, in providing information and documents for general inquiries. Staff of the IUPUI Graduate Office, under the primary direction of the assistant dean, also recruit for campus graduate programs.

IUPUI Graduate Affairs Committee

The Graduate Affairs Committee at IUPUI is charged with overseeing the development of new programs, quality control, recruitment, and other issues related to graduate education on the campus. Membership of this committee includes the graduate deans or their designees from both Indiana University and Purdue University as well as deans, associate deans, the president of the Graduate Student Organization, and faculty from all of the schools with postbaccalaureate programs on the IUPUI campus.

New initiatives and directions are discussed, and appropriate issues are shared with the respective schools for further development and comment. New program proposals are reviewed and approved by the Graduate Affairs Committee. The Curriculum Subcommittee, which is appointed by the Indiana University Graduate School associate dean, has the responsibility of reviewing all new course or course change requests before they are submitted for campus and university wide remonstrance, and for providing recommendations to the Graduate Affairs Committee.

Approved program proposals are referred to either the IU Academic Leadership Council or to the Purdue Graduate School for final action before going to the Indiana Commission for Higher Education, as necessary. The Fellowship Subcommittee reviews nominations and selects the recipients of graduate fellowships, as well as distributing merit-based block grants to the schools for the support of graduate education.

The following pages outline general regulations for graduate and professional programs on the IUPUI campus. For specific information about the admissions process, degree requirements, or prerequisites, please contact the school or department offering the degree.

Contact information for the IUPUI Graduate Office:
Union Building 207
620 Union Drive
Indianapolis, IN 46202

Admission

Purdue University Graduate School

Undergraduate Requirements

Correspondence about admission to the Graduate School should be addressed to the Graduate Studies Office of the department or program to which an applicant wishes to be admitted or to the Graduate School, Purdue University, West Lafayette, IN 47907. Applicants ordinarily will be expected to hold baccalaureate degrees from colleges or universities of recognized standing prior to registration as graduate students. Applicants for a master's or doctoral degree program should have achieved a 3.0 (out of 4.0) grade point average or higher for the baccalaureate degree or have other indicators of outstanding academic performance.

For additional information concerning requirements for admission, please consult the specific departments or programs at IUPUI to which you wish to apply. Some departments have requirements for admission that exceed the general Graduate School requirements.

Classification and Admission

Degree-seeking applicants are those who seek to study for a doctoral or master's degree.

Degree-seeking graduate students must show promise, as judged by academic performance and experience, of ability to perform advanced study and research and must have adequate preparation in their chosen fields of study. Applicants must submit an official transcript from each college or university attended. If these transcripts are not in English, the official original-language transcripts must be accompanied by certified English translations.

For unconditional admission to a degree program, a B or better average in prior study is required. Individual departments may set higher grade requirements and may require the submission of additional evidence of academic performance.

A minimal score of 550 (paper-based) or 213 (computer-based) on the Test of English as a Foreign Language (TOEFL) is required for admission to the Graduate School for all international applicants whose native language is not English. See "International Students" in the "General Regulations" section at the beginning of the "IUPUI Graduate Office" section for more information about TOEFL.

Non-degree-seeking applicants are those who wish to attend graduate school for professional and personal enrichment without seeking an additional degree. See the "Graduate Non-Degree" section for more information about non-degree-seeking applicants.

Financial Aid and Admissions

Students desiring financial aid who are interested in earning a Purdue degree while taking classes should contact IUPUI's financial aid office.

Any student who is not fully admitted to a program may enroll in classes as a graduate non-degree student (see "Graduate Non-Degree Program" below). Students who are not fully admitted to a program should contact their department to verify their admission status. In many cases, students who are graduate nondegree or special students do not qualify for financial aid.

Graduate Non-Degree Program (GND)

Application Information

To be eligible for the Graduate Non-Degree Program, students must have a bachelor's degree from an accredited institution and be a U.S. citizen or a student who does not need an I-20 or an IAP-66 for a student visa. Under most circumstances, Graduate Non-Degree is not an appropriate enrollment status for persons requiring a student visa to enter the country.

Students who are interested in taking courses as a Graduate Non-Degree student will need to apply to the Graduate Non-Degree Program and be admitted prior to being able to register for courses. The application process includes completing an application and paying an application fee. Please see the following URL for the online application and more information about the Graduate Non-Degree Program: www.iupui.edu/~gradoff//gnd/.

Students previously admitted to the Graduate Non-Degree Program may not need to complete another application. Please see the above URL for directions on how to register for courses if you were previously admitted to the Graduate Non-Degree Program.

Graduate Programs

Courses

Graduate courses are listed within the School offering a Graduate Program:

- Herron School of Art and Design
- Kelley School of Business
- IU School of Continuing Studies
- IU School of Dentistry
- IU School of Education
- IU School of Health and Rehabilitation Sciences
- IU School of Informatics
- IU School of Journalism
- IU School of Liberal Arts
- IU School o f Library and Information Sciences
- IU School of Medicine
- IU School of Nursing
- IU School of Physical Education and Tourism Management
- IU School of Social Work
- Purdue School of Engineering and Technology
- Purdue School of Science

Student Learning Outcomes

Graduate Programs

General Graduate Regulations and Information

English for Academic Purposes (EAP) Placement Test

The IUPUI EAP Program and the Office of International Affairs have joined together to administer the required English for Academic Purposes (EAP) Placement Test for students whose native language is not English. All international students must take this test before registering for classes, even if they have taken the TOEFL. Because this is a placement test used to accurately determine English language skill level, students do not need to prepare for it.

The scores are used to exempt or to assign students to the EAP classes that best meet their academic needs and that will provide the favorable English experiences necessary for a successful career at IUPUI. Students are required to begin the assigned EAP courses during their first or second semester on campus. The EAP Placement Test takes approximately three hours to complete and it tests the students' reading, listening, and writing skills. For more information, visit the EAP Program web site (http://eap.iupui.edu).

Students register in advance for the EAP placement test and pay a testing fee. Students must either be admitted to study at IUPUI or have filed an admission application in order to register for the test. For further EAP test registration and course and program information, contact the EAP Program at (317) 274-2188, Cavanaugh Hall 341, or write esl@iupui.edu.

English Proficiency

Applicants, except those whose native language is English, are expected to submit results of the Test of English as a Foreign Language (TOEFL). The TOEFL is given worldwide throughout the year. Information on testing dates, locations, and costs may be obtained by viewing at: http://www.ets.org/

IUPUI's school code number for the TOEFL application is 1325. All Purdue University and Indiana University Graduate School graduate teaching assistants/instructors whose native language is not English must demonstrate adequate oral English proficiency before being assigned duties involving direct instruction of students.

GRE (Graduate Record Examination)

Applicants may be required to take the Graduate Record Examination General Test, Subject Test, or both (see departmental requirements). Information concerning this exam may be obtained online at http://www.ets.org.
Students may also call a Sylvan Learning Center to schedule the GRE. It is particularly important that the GRE be taken if the applicant:

1. is seeking admission to a department that requests it (see individual departmental requirements);
2. wishes to be considered for a fellowship;
3. feels that the previous academic record does not adequately reflect the applicant's ability;
4. received the baccalaureate degree from an unaccredited institution.

International Students

There are special application procedures for those who are not citizens of the United States or who have had their previous schooling outside the United States. Such individuals should obtain the International Application packet from the Office of International Affairs (Education/Social Work, ES 2126). Information is also available online at http://www.iupui.edu/~oia//AD/admission_step1.html.

Once enrolled, international students who wish to change their program of study must first obtain the approval of the Office of International Affairs. When such approval is granted, application for formal change of status may then be made to the appropriate school according to the same procedures governing United States citizens.
International students must enroll in at least 8 credit hours each fall and spring semester in order to meet visa requirements. Any exceptions to this regulation must be approved in advance by the Office of International Affairs.

Enrollment/Registration

The courses in which a graduate student enrolls should reflect the nature and amount of the student's study and research activities as accurately as possible. Research includes literature reviews and thesis writing. A candidate for any advanced degree (excluding Indiana University Graduate School master's students) must be registered during the session in which he or she expects to receive the degree.

Proper registration is the responsibility of the student, the major professor, and the student's department. The IUPUI Graduate Office staff does not (except in unusual cases) counsel individual graduate students relative to their programs and progress. Necessary contacts should, in general, be made through the student's department.

Financial Aid

Graduate students interested in obtaining an Indiana University or Purdue University degree at the Indianapolis campus should contact IUPUI's financial aid office:

Office of Student Financial Aid Services
Campus Center 250
420 University Blvd.
Indianapolis, IN 46202
Phone: (317) 274-4162

Associate Instructorships, Graduate Assistantships, and Research Assistantships

Many associate instructorships, graduate assistantships, and research assistantships are available in departments and schools. Some of these positions are accompanied by fee scholarships, which defray the cost of tuition and most fees. Application for such positions should be made to the department or school in which the student wishes to work. Early application is advisable.

Fellowships

A number of fellowships are available to students enrolled full time; among them are university fellowships, fee scholarships, and various privately and federally funded awards. Students should indicate their interest in these fellowships directly to the major department. Information on, and preliminary applica-tion materials for, the National Science Foundation Graduate Fellowships may be obtained from:
Fellowship Office
National Research Council
2101 Constitution Avenue N W
Washington, DC 20418
In all cases, early application is advisable. It should be noted that all such award holders are required to devote full time to their studies.

Foreign Language Requirements

There is no general requirement of competency in any foreign language. Each department determines requirements, if any, and options for satisfying them are obtained from the department.

Grades

Grade points are assigned at IUPUI according to the following scale (in calculating grade point averages, any plus or minus accompanying a letter grade is taken into account):
A=4.0
A-=3.7
B+=3.3
B=3.0
B-=2.7
C+=2.3
C=2.0
C-=1.7
D+=1.3
D =1.0
D-=0.7
F=0

Courses completed with grades below C (2.0) are not counted toward graduate degree requirements, but such grades will be counted in calculating a student's grade point average. Some departments may require an average grade in graduate courses higher than B (3.0), while others may count no courses completed with grades below B (3.0) toward degree requirements. No work may be transferred from another institution unless the grade is a B (3.0) or higher.

The school dean may review a grade record at any time and may place a student on academic probation if the record justifies such action. When the grade point average of a student falls below 3.0, or the student is not making sufficient progress toward the degree, the dean will notify the student that he or she has been placed on probation. Unless the student brings this record up to a 3.0 grade point average, or begins making satisfactory progress in the next semester of enrollment, the student will not ordinarily be allowed to continue study at the university.

Standards of Work

Success in graduate study requires performance of a high quality. Pass/fail grades are unacceptable. A student's progress will be reviewed each semester by the department. Any

student who fails to perform on a level satisfactory to the advisory committee or the dean may be asked to discontinue graduate study. The same scholastic requirements in effect during the regular university year apply to graduate study during the summer sessions and to work taken at all Indiana University or Purdue University campuses. The same grade standards also apply to prerequisite courses.

Thesis

A master's or doctoral thesis is a document authored by a student that describes results of original research undertaken by that student and asserts a position that the student is willing to defend. This position should not be construed to prohibit joint or collaborative research endeavors. It is expected, however, that in such a situation, unique aspects of the broad problem will be explored by each individual and that the thesis written and presented to the final examining committee will be a personal document describing the student's creative effort and contribution. Students should speak with their advisor early in their graduate careers when considering a collaborative thesis project. Links to online versions of the Guide to Preparation of Theses and Dissertations for both IU and Purdue are available at http://www.iupui.edu/~gradoff//students/.

Visiting / Transient Students

Visiting students in good standing in any accredited graduate school who wish to enroll for one semester or summer session to take graduate-level courses and who plan to return thereafter to their former institution may be admitted as visiting/transient students if their enrollment can be accommodated. Visiting/transient students should register as Graduate Non-Degree Program students.

Information about the Graduate Non-Degree Program may be obtained from:

IUPUI Graduate Office
Union Building, Room 207
620 Union Drive
Indianapolis, IN 46202
phone: (317) 274-3459
fax : (317) 278-2380
http://www.iupui.edu/~gradoff//gnd/

IU Degree Programs

Non-Degree Programs

Purdue Degree Programs

Student Learning Outcomes

Graduate Programs

Non-Degree Programs

Students who have a bachelor's degree can enroll for credit in a wide variety of graduate and professional courses throughout the university as a GND student. Some courses students are interested in taking may require authorizations from the instructor or department prior to registration. GND students may not take any graduate-level courses in law, medicine, dentistry, nursing, social work, business, or public health.

This program is for the student who:

1. wants to supplement his/her academic background by taking graduate level courses;
2. wants to take graduate level courses for personal development;
3. is unsure about a graduate or professional program and would like to sample available programs;
4. is awaiting final approval of graduate admission and is taking courses with the guidance and approval of a degree program advisor;
5. wants to enhance skills utilized in a current career; or
6. wants to prepare for a change in careers.

Students who want to take course work for teacher's license renewal, endorsements, certification for Indiana Teacher's License, or master's program should contact the:
School of Education
ES 3131
902 W. New York Street
Indianapolis, IN 46202-5154
phone: (317) 274-6801
for direct admission to their program.

The address for the Graduate Non-Degree Program is:
Graduate Non-Degree Program
620 Union Drive, Room 207
Indianapolis, IN 46202
phone: (317) 274-1577
fax: (317) 278-2380

Students who have a bachelor's degree and want to take only undergraduate courses at IUPUI should complete the undergraduate admissions visiting student application http://enroll.iupui.edu/admissions/undergraduate/non-degree/.

Master's Degree Regulations

Advisory Committee

For each prospective candidate for the master's degree, an advisory committee shall be appointed, consisting of at least three members of the graduate faculty. The duties of this committee are to assist the student in the preparation of a plan of study and to advise him or her during the period of graduate work. In the case of the thesis option, the committee also advises the student regarding research and writing of the thesis.

The student, with the approval of the head of the graduate program, shall select a major professor. The major professor/student relationship must be a mutually acceptable one. When selected, the major professor will act as the chair of the student's advisory committee and be in charge of his or her research. The advisory committee as agreed upon by the major professor and the student, with the approval of the head of the graduate program, shall be presented to the dean of the Graduate School for approval and formal appointment.

Plan of Study

A tentative plan of study should be drawn up in advance of registration for the first semester of graduate work, and the formal plan of study must be submitted to the dean of the Graduate School before the final session, preferably during the first semester in residence.

The plan of study shall be appropriate to meet the needs of the student in his or her chosen field, as determined by the advisory committee and approved by the head of the graduate program, the school dean, and the Graduate School dean. It shall include the specific courses the student is expected to complete and all other requirements of the particular master's degree being sought. Neither 100- nor 200-level courses may appear on a plan of study. Otherwise, requirements for the numerical level (300 through 600) of courses are determined by each department or administrative unit subject to the restriction that not more than a total of six 300- or 400-level course credit hours may appear on a plan of study. Research credits are not to appear on the plan of study. The quantitative aspects of research registration are controlled by departmental requirements and/or by residence requirements, registration limits, and thesis requirements. Course credits earned by a student whose graduate study and/or professional activity has been inactive for five years or more cannot be used on a plan of study for an advanced degree. A plan of study approved before such a period of inactivity is invalid. Requirements for the specific number of credit hours will be determined by each department or administrative unit that supervises master's degree programs. For specific requirements, the student

should consult the introductory sections of the departmental course offerings under the general heading "Descriptions of Programs and Courses" in this bulletin and request information, from the department, about any additional requirements.

Non-Thesis Master's Degree

The Graduate School has no general requirement for oral and written examinations for the non-thesis master's degree. In any department, the final examination may be waived if the student meets the minimum requirements of the department. In some departments, a final examining committee is appointed for each candidate for the non-thesis master's degree and a final examination report is filed with the Graduate School before the end of the session in which the student is to receive a degree. The committee must certify to the Graduate School either that the student has passed the required examinations of the department or that the committee is satisfied with the accomplishment of the student as determined by a committee conference. In other departments, neither a final examining committee nor a final examination is required. In these departments, the student is certified for the degree by satisfying established graduation requirements of the department.

Thesis Master's Degree

Every candidate whose plan of study follows the thesis option must prepare an acceptable thesis in residence. Research in absentia is not allowed for the master's degree. In general, the thesis will be based on work done in connection with the primary area. The work will consist of assigned research, which shall be recorded with no grades given except Satisfactory and Unsatisfactory.

The general schedule for submitting the master's thesis is similar to the schedule cited on the following pages for the Ph.D., except that only three members of the graduate faculty are required for the final examining committee, and no microfilming fee is required.

After the research has been completed and the thesis written, the candidate shall be given a final examination in which he or she defends the thesis and demonstrates to the examining committee that he or she has all of the capabilities for which the master's degree is awarded. The dean of the Graduate School reserves the right to appoint additional committee members.

Multiple Master's Degrees

A student may earn two (2) Purdue master's degrees provided there is no overlap in the two plans of study. Where the requirements for two advanced degrees are of a nature requiring some overlap, instead of waiving the requirements for one of these degrees (i.e., by dual listing of courses on the plans of study), the departments concerned may involve the student in alternate educational activities. As an alternative to multiple master's degrees, departments may wish to offer advanced degrees involving joint areas of study.

A program of study involving the Ph.D. degree and two or more master's degrees may be approved, provided it meets all of the existing requirements and provided that any overlap between courses listed on the plan of study for the Ph.D. degree and those listed for the master's degrees involves only one of the master's plans of study.

Ph.D. Degree Regulations

The degree of Doctor of Philosophy is the highest earned degree conferred by Purdue University and is awarded only to those who have demonstrated superior ability in a recognized academic discipline. Each student's doctoral program must specify course work that is rationally related, should be highly research oriented, and should culminate in a

thesis of literary and scholarly merit that is indicative of the candidate's ability to conduct original research in a recognized field of specialization.

Doctoral programs are composed of formal courses, guided individual study in a chosen field or discipline, study in such cognate subjects as may be required by the candidate's advisory committee, and original research that serves as the basis of a scholarly thesis.

Before being admitted to candidacy for the Ph.D. degree, each student is required to pass a series of comprehensive examinations. Individual departments may require both qualifying and preliminary examinations and may require competence in one or more foreign languages.
A second Ph.D. degree program generally is not permitted at Purdue, but exceptional circumstances may be considered by the Graduate Council.

Advisory Committee

Each prospective candidate for the Ph.D. degree, with the approval of the head of his or her graduate program, shall select a major professor who will act as the chair of the advisory committee and who will direct the research. An advisory committee of not fewer than three members of the graduate faculty will then be appointed. The composition of this committee must be mutually acceptable to the student and the committee and should be representative of the general field of study in which the student expects to do work. The advisory committee as agreed upon by the major professor and the student, with the approval of the head of the graduate program, shall be presented to the dean of the Graduate School for approval and formal appointment. The dean may appoint additional members if it seems advisable.

Plan of Study

A plan of study should be prepared by the student and the advisory committee at the earliest practicable time. It is recommended that the plan of study be submitted before the end of the first semester following the acceptance of the student to work toward the Ph.D. degree, and all plans of study must be filed with the Graduate School before the preliminary examination is requested.

The plan of study shall specify the area or field of interest in which the student proposes to study and to conduct research. It shall meet the needs of the student as determined by the advisory committee by including the specific courses that the student is expected to complete and all specific course, seminar, language (if any), and research requirements of the department in which the student is a doctoral candidate, indicating the manner in which these requirements are to be met. Neither 100- nor 200-level courses may appear on a plan of study. Otherwise, requirements for the numerical level (300 through 600) of courses are determined by each department or administrative unit subject to the restriction that not more than a total of six 300- or 400-level course credit hours may appear on a plan of study. Research credits are not to appear on the plan of study. The quantitative aspects of research registration are controlled by departmental requirements and/or by residence requirements, registration limits, and thesis requirements. Course credits earned by a student whose graduate study and/or professional activity has been inactive for five years or more cannot be used on a plan of study for an advanced degree.

A plan of study approved before such a period of inactivity is invalid. A preliminary examination passed before such a period of inactivity is invalid. Requirements for the specific number of credit hours will be determined by each department or administrative unit that supervises doctoral programs.
The plan of study must be approved by the head of the graduate program, the school dean, and the Graduate School dean. The dean of the Graduate School reserves the right

to refer any or all plans of study to the Graduate Council for review and approval when deemed advisable. The Graduate Council has the final authority to supervise the quality of all graduate programs.

Qualifying Examinations

Qualifying examinations for the Ph.D. degree are required in some departments. These examinations are for the purpose of determining the student's qualifications to continue graduate study toward the Ph.D. degree.

Preliminary Examinations

After the student has completed most of the formal study to the satisfaction of the advisory committee and met the language requirement(s), if any, he or she becomes eligible to take the preliminary examinations. The results of these examinations, written and/or oral, will be reported to the Graduate School by the examining committee with an appropriate recommendation for the student's admission to candidacy, continued preparatory study, or discontinuation of study. The dean of the Graduate School reserves the right to appoint additional members to the preliminary examining committee. The dean must be informed of the date and place of the examination and the membership of the examining committee at least two weeks before the examination. No examining committee shall have fewer than three members of the graduate faculty.

The preliminary examination will be conducted by the examining committee. In some cases, parts of the examination may be delegated to certain other staff members, but the final responsibility for the examination rests with the student's examining committee.

Departments need not offer written preliminary examinations more than once a semester, and it will be the responsibility of the student to learn in advance when these examinations are to be given.

If the student does not pass the preliminary examinations, at least one semester must elapse before reexamination is permitted. Should the preliminary examinations be failed twice, the student may not be given a third examination, except upon the recommendation of the examining committee and with special approval of the Graduate Council.

After admission to candidacy, the candidate must devote at least two semesters to research before taking the final examination.

Thesis

The special research carried on as part of the doctoral work is expected to make a definite contribution to the candidate's chosen field of knowledge, a contribution of sufficient importance to merit publication. The candidate must, therefore, prepare a thesis showing the results of his or her research. Following is the schedule that should be adhered to with regard to the submission of the dissertation and final examination:

1. A first draft of the thesis should be in the hands of the major professor at least six weeks before the end of the session in which the degree is to be granted.
2. The thesis must be prepared according to departmental format requirements (available in departmental graduate studies offices)and university format requirements as described in the Manual for the Preparation of Graduate Theses, a copy of which may be obtained in departmental offices or online at http://www.gradschool.purdue.edu/downloads/thesis/graduate-thesis-manual.pdf.

   The thesis must bear the written approval of the professor who has directed the

research before it is submitted to the final examining committee.

3. The final examining committee for the doctoral candidate shall consist of a minimum of four members of the graduate faculty. The formal request for the appointment of the examining committee must be received in the Graduate School not later than two weeks preceding the final examination. This formal request must specify the time and place of the examination.
4. Generally, each member of the examining committee must receive a copy of the thesis at least two weeks before the date of the final oral examination.
5. Approval of departmental format requirements must be obtained before the thesis is delivered to the Library Thesis Deposit Office. University format requirements will be checked in the Library Thesis Deposit Office at the time the thesis is deposited.
6. The final examination must be taken and passed, and the report of the examination must be filed in the Graduate School before the last week of classes.
7. The completed and corrected deposit copy of the thesis, along with an extra copy of the title page and the abstract, must be deposited in the Library Thesis Deposit Office and a receipt thereof delivered to the Graduate School before the end of the first working day following the last day of classes of the session in which the degree is expected. Doctoral students must also submit one unbound copy of the thesis to the Library Thesis Deposit Office. The unbound copy will be sent to University Microfilms International for microfilming.
8. The sum of $65 must be paid to the Office of Student Account Services (http://www.osas.iupui.edu) before the end of the session to pay for the cost of microfilming.

Final Examination

After the research has been completed and the dissertation written, the candidate shall be given a final examination in which he or she defends the thesis and demonstrates to the examining committee that he or she has all of the capabilities for which the Doctor of Philosophy degree is awarded. The examining committee shall consist of no fewer than four members of the graduate faculty. The dean of the Graduate School reserves the right to appoint additional committee members.

Publication and Use of Thesis

The results obtained and the thesis prepared for an advanced degree are the property of the university. Except for the standard arrangement for the publication of Ph.D. theses on microfilm (see the following paragraph), no part of the thesis may be reproduced or published without the authorization of the president of the university or his designee. Unless otherwise named, the head of the department supervising the work shall act for the president. No part of the thesis may be used, directly or indirectly, in support of or in condemnation of any product or procedure referred to therein.
Purdue University has an agreement with University Microforms International, Ann Arbor, Michigan, for microfilming Ph.D. theses. The availability of the dissertation in film form will be announced by a listing of the title and a reproduction of the thesis abstract in Dissertation Abstracts International, a monthly journal distributed to leading libraries here and abroad. The thesis fee covers the cost of microfilming and the publication and distribution of the abstract. A film copy or paper enlargement of all or part of the thesis may be ordered by anyone from the publishers of Dissertation Abstracts International. The original thesis and one unbound microform copy will be deposited in the University Library. Publication by microfilm does not preclude the printing of a dissertation in whole or in part in a journal or monograph.

Student Learning Outcomes

Graduate Programs

Student Learning Outcomes

Schools and departments at IUPUI have developed student learning outcomes for their student learning experiences. Student learning outcomes are statements that specify what students will know, be able to do, or be able to demonstrate as a result of successful completion of the experience. Outcomes are usually expressed as knowledge, skills, attitudes or value. They are often used as foundations for student assessments.

Graduate and Professional Policies

Academic Policies & Procedures

Integrity in Graduate Education

Students are expected to adhere to the highest ethical standards in all their course work and research. Individuals violating that code of conduct are subject to disciplinary action; such breaches could lead to expulsion of the student from the university or to rescision of a degree already granted. Graduate students are subject to the provisions outlined in the Code of Student Rights, Responsibilities, and Conduct, which is available online (http://www.iupui.edu/code/).

Academic Policies & Procedures

Graduate and Professional Policies

Graduate Non-Degree Policies

CAMPUS POLICIES

View the IUPUI Campus Bulletin Policies & Procedures

1. Graduate non-degree students must maintain a minimum GPA of at least 2.5.
2. Graduate non-degree students may not take more than 18 credit hours in a single subject area without written permission from the department to the GND advisor.
3. Graduate non-degree students not having continous enrollment may need to submit an update form http://www.iupui.edu/~gradoff/docs/App_UpdateForm.pdf to the Graduate Office in order to register for classes.
4. Admission to the Graduate Non-Degree Program will not guarantee admission to a graduate degree program.
5. A maximum of 12 credits earned as a graduate non-degree student may be applied to a certificate, master's degree, or Ph.D. Some departments allow fewer than 12 credits or none.
6. Graduate non-degree students may not register for any medical research course.
7. If Graduate non-degree students need advice about specific course issues or authorizations for designated courses, they can be obtained through the department that offers the course.
8. Graduate non-degree students may not enroll in graduate course work in law, medicine, dentistry, nursing, social work, business, or public health.

English for Academic Purpose Proficiency Policy for Graduate Non-Degree Students Who Are Nonnative Speakers of English

Satisfactory English language skills are necessary for enrollment as a graduate non-degree student. Nonnative English speakers must take the IUPUI ESL Placement Test or the TOEFL unless they have received a U.S. bachelor's or higher degree. Individual schools and programs may have policies for documentation of English ability which are different from the GND policy. Students who anticipate pursuing a graduate degree on this campus are encouraged to take the ESL Placement Test even if they are not required to take it for GND admission, since their academic unit will require it before entry.

GND students who do not need an I-20 or IAP-66 are given a one-semester grace period in which to satisfy the testing requirement. If the student is subject to this policy, the student must take the ESL test before registration for a second semester will be permitted. To register for the test, call or visit the IUPUI Office of International Affairs (Education/Social Work, ES 2126, phone (317) 274-7000). There is a fee for this test.

To receive an exemption from the ESL test requirement under the terms of this policy, the student must submit an official transcript with the GND application. Students who do not

have official transcripts available upon application may submit them to the Office of International Affairs at a later date. Documents submitted to International Affairs after the GND application has been processed will be reviewed within two months of submission. Any applicant who wishes to enroll in ESL courses must take the ESL Placement Test before course registration.

Application to a Graduate or Professional Program

Graduate non-degree students who later decide to pursue a certificate, master's degree, or a Ph.D. must apply and be admitted by a degree-granting program in order to receive a degree. For information about applying to one of the degree programs at IUPUI, please contact the school or department offering the degree.

Financial Aid for Graduate Non-Degree Students

Graduate non-degree students may be eligible for financial aid if:

1. the courses are being taken because an IUPUI graduate or undergraduate department or school has required the courses as prerequisites for admission to a graduate or undergraduate program at IUPUI, or for Purdue veterinary, Purdue pharmacy, or IU optometry programs; and
2. those prerequisite courses being taken for any semester equal at least half-time enrollment (6 credit hours of undergraduate courses), all of which are prerequisites; and
3. they did not exceed their available aid at the undergraduate level.

Questions regarding this information should be directed to the graduate area of the Office of Student Financial Aid Services at (317) 278-4723.

IUPUI Employees and Their Spouses

If the student or the student's spouse is employed full time at IUPUI, the Fee Courtesy Request Form, available from the Office of Student Financial Aid Services, Cavanaugh Hall, or online at www.iupui.edu/finaid, must be completed. If the student has been classified as a nonresident of Indiana for tuition purposes, the student should note that tuition is assessed at the out-of-state rate. Completing this form enables the student to receive the fee and reductions available to full-time IUPUI employees and their dependents.

School of Health and Rehabilitation Sciences

Welcome to the School of Health and Rehabilitation Sciences!

Dean's Remarks

Thank you for your interest in the Indiana University School of Health and Rehabilitation Sciences (SHRS). The School of Health and Rehabilitation is located on the campus of Indiana University-Purdue University Indianapolis (IUPUI). The SHRS is one of the oldest allied health academic units of its type in the country and has provided leadership in health and rehabilitation sciences, as well as research and education, to the citizens of Indiana, the region, and the nation for more than 35 years.

In 1967, the school was one of 13 allied health units from across the country to participate in the planning and formation of the field's national professional society, the Association of Schools of Allied Health Programs. On this campus, the School of Health and Rehabilitation Sciences joins the Schools of Dentistry, Medicine, Nursing, Public Health, and Social Work to form the IUPUI Academic Health Center, one of the largest academic health centers in the country.

Perhaps our most cherished asset is the quality of our students. The school's graduate professional programs are among the most competitive for admission at Indiana University, and the grade point average of students selected for our professional programs routinely ranks among the highest on the university campus.

Our students' commitment to excellence is expressed in many ways; by individual and collaborative research initiatives, national awards, service to the community, presentations at regional and national conferences, and pass rates on certification/licensure exams that exceed national averages, to name only a few. Our students come to us from many backgrounds, and upon completion of their studies, they seek careers in a wide variety of settings to promote the health and well-being of residents of Indiana, the region, and the nation.

The school's faculty members are recognized nationally and internationally for their contributions. They serve on national licensure boards and are leaders of national professional societies, reviewers for federal granting agencies, and invited speakers. Their research findings are published in the best journals in their disciplines, and they routinely serve as consultants to community agencies, state and national health care facilities, and corporations. The principal goal of our school's faculty is to educate the next generation of practitioners and researchers.

The services offered by the school facilitate our student-centered approach to learning. Advising starts as soon as a student indicates a desire to study in one of our educational programs. Our Office of Academic and Student Affairs sponsors important student events in combination with its statewide advising network and is the entry point for learning more about health opportunities in undergraduate and graduate professional education.

To promote excellence in education, research, and service, the SHRS maintains strong relationships with a variety of critical constituent groups. Our alumni activities keep our graduates involved with charting the future of the school. We maintain up-to-date facilities and offer scholarships through generous donations from alumni and friends of the school.

The school's collaboration with other academic units promotes creative research and teaching opportunities, and our affiliation with over 500 health care facilities gives students unique educational experiences. Moreover, the involvement of associate faculty is essential to fully implement the school's curriculum. We are proud of these relationships and continue to seek other collaborative opportunities.

Health care delivery in this country is undergoing dramatic change, but it remains one of the most personally fulfilling professions, and we know that most of our students pursue it with a sense of mission. The School of Health and Rehabilitation Sciences strives to provide the most comprehensive educational experience that helps students realize their educational and career goals.

Dr. Augustine Agho, Dean

School of Health and Rehabilitation Sciences

November 18, 2011

Overview

Vision

The vision of the School of Health and Rehabilitation Sciences is to be recognized nationally and globally as a leader in graduate health sciences, and as a provider of excellent health care professionals for the state of Indiana and beyond.

Mission

In fulfilling its vision, the School of Health and Rehabilitation Sciences seeks to develop and maintain a scholarly and competent faculty who will provide excellence in:

- the teaching/learning process for programs in fields related to health professions
- the advancement of knowledge through research, scholarship, and creative activity
- the development of lifelong commitment to local, national, and global civic engagement with each of these core activities characterized by collaboration within and across disciplines, the university, and the community, as well as a commitment to diversity, and the pursuit of best practices.

Statement of Values

The School of Health and Rehabilitation Sciences (SHRS) of Indiana University is committed to excellence in the education of its students, who will have a concern for the people they serve.

We value the commitment of students to learning, of faculty to the highest standards of teaching, scholarship, and service, and of staff to the highest standards of service.

We recognize students as partners in the teaching/ learning process and provide them with opportunities to

develop expertise, scientific knowledge, and professional attitudes that enable them to contribute to the health of society.

We are committed to the maintenance of individual professional competence and lifelong learning; to the development of new knowledge through research, scholarship, and creative activity; and to the provision of service through civic engagement.

We value collegiality, cooperation, and creativity, as well as honesty, integrity, and support for open inquiry and dissemination of findings.

We value the personal and professional development of a diverse community of students, faculty, and staff, and we are committed to continuous improvement of all programs and services.

We are committed to training faculty and students involved in the community, to providing educational programs and working with a wide array of partners, to offering expert care and assistance to clients, to engaging in field research that serves Indianapolis, the state of Indiana, and beyond, and to building a strong, welcoming campus community for all.

History

The School of Health and Rehabilitation Sciences traces its origins to 1941, with the initial offering of allied health sciences degrees through the Indiana University School of Medicine. In 1958, by action of the Trustees of Indiana University, the Division of Allied Health Sciences was formed, and in 1960 the trustees conferred upon the faculty of the School of Medicine the responsibility and authority to grant the Bachelor of Science degree to those students who successfully completed the prescribed curriculum in four allied health programs.

Since that time, additional baccalaureate programs and new programs at the associate and graduate levels have been approved and initiated. In 1967, the Division of Allied Health Sciences was one of 13 similar units from across the country to participate in the planning and formation of the national professional society, the Association of Schools of Allied Health Sciences.

The Division of Allied Health Sciences was granted school status at the April 1991 meeting of the Trustees of Indiana University. The School of Allied Health Sciences encompassed allied health programming on five of the eight campuses of Indiana University and incorporated 21 distinct allied health academic degree programs.

In 2002, the School of Allied Health Sciences was restructured to better align campus resources in support of the allied health sciences degrees. The resulting school focused solely on delivering graduate degrees in selected health and rehabilitation science disciplines. The undergraduate allied health sciences degrees migrated to other academic units on the IUPUI campus.

To better reflect the more focused academic mission of the school, and based on faculty recommendation, in June 2003 the Trustees of Indiana University approved changing the name to School of Health and Rehabilitation Sciences. Four departments constitute the school; Health Sciences, Nutrition and Dietetics, Occupational Therapy, and Physical Therapy. In 2010, the school received approvals from the IU Board of Trustees and the Indiana Commission on Higher Education to offer a graduate degree in physician assistant studies. During its history of almost 50 years, the school has provided leadership in education, research, and civic engagement pertaining to health for the citizens of Indiana, the region, and the nation.

Accreditation

The School of Health and Rehabilitation Sciences shares with the other schools of the university the accreditation accorded Indiana University as a member of the North Central Association of Colleges and Schools.

In addition, the professional programs are individually accredited by appropriate governing agencies within the discipline. See program-specific sections.

Contact Information

Indiana University School of Health and Rehabilitation Sciences

Coleman Hall (CF) 120 1140 W. Michigan Street

kdearly@iupui.edu

Admission

Preadmission Status

Enrollment at Indiana University does not guarantee admission to the professional or graduate programs offered through the School of Health and Rehabilitation Sciences. To be eligible for admission to the programs offered by the school, students must adhere to the academic regulations of the academic unit in which they are enrolled and meet school and program admission requirements as stipulated in the program sections of this bulletin.

Admission to many programs is competitive, therefore, completion of the prerequisites does not guarantee admission to the program. On some campuses a student may be admitted as a preprofessional student in a health and rehabilitation sciences discipline; however, this status is for academic advising purposes only and in no way influences admittance into a professional program.

Occupational Therapy Program

Admission to the Master of Science in Occupational Therapy (M.S.O.T.) Program requires completion of a bachelors degree and stated prerequisite courses. The M.S.O.T. program does not have a preference regarding the major area of study for the bachelors degree as long as prerequisite courses are completed.

However, undergraduate students at IUPUI who are interested in the Master of Science in Occupational Therapy degree may want to consider obtaining the Bachelor of Science in Health Sciences degree offered by the School of Health and Rehabilitation Sciences, choosing the Preparation for Graduate Health Professions Program track within the degree. For the most current admissions requirements, please see:

http://shrs.iupui.edu/occupational_therapy/admissions.

Physical Therapy Program

Admission to the Doctor of Physical Therapy (D.P.T.) Program requires completion of a bachelors degree and

stated prerequisite courses. The D.P.T. program does not have a preference regarding the major area of study for the bachelors degree as long as prerequisite courses are completed. However, undergraduate students at IUPUI who are interested in the Doctor of Physical Therapy degree may want to consider obtaining the Bachelor of Science in Health Sciences degree offered by the School of Health and Rehabilitation Sciences, choosing the Preparation for Graduate Health Professions Program track within the degree. For the most current admissions requirements, please see:

http://shrs.iupui.edu/physical_therapy/admissions.

Physician Assistant Program

Admission to the Master of Physician Assistant Studies (M.P.A.S.) Program requires completion of a bachelor's degree and sated prerequisite courses. The M.P.A.S. program does not have a preference regarding the major area of study for the bachelor's degree as long as prerequisite courses are completed. However, undergraduate students at IUPUI who are interested in the Master of Physician Assistant degree may want to consider obtaining the Bachelor of Science in Health Sciences degree offered by the School of Health and Rehabilitation Sciences, choosing the Preparation for Graduate Health Professions Program track within the degree. For the most current admissions requirements, please see:

http://shrs.iupui.edu/health_sciences/degrees/physician_assistant.html.

Admission Policies for Graduate and Professional Programs

Prerequisite Course Work

Applicants must complete prerequisite courses at a regionally accredited college or university. Individual programs determine the specific courses and the minimum grade that must be achieved in any course (see specific program information); therefore, program-specific requirements may differ. The completion of a prerequisite course with a Pass/Fail grade must be approved by each program. Applicants should read the Admission Policies and Program Descriptions sections of this bulletin for specific entry-level requirements.

Interview

Applicants may be required to complete a personal interview. The interview may be a component of the admission decision.

Policy Changes

Policies concerning the minimum grade point average for admission consideration are subject to change. Changes for beginning first-year professional students become effective the semester following the announcement of the decision to the university counselors and other constituencies. Changes in prerequisite courses or the minimum grade required in a prerequisite course will be applied as follows for continuing students:

- Applicants who have taken the course before the change and who meet the old requirement will have satisfactorily completed the requirement.
- Applicants who have taken the course before the change and who do not meet the old requirement must complete the course under the new requirement.
- Applicants enrolled in the course at the time of the change will be permitted to meet the old requirement.
- Applicants who have not taken the course before the change will have to meet the new requirement.

Admission Procedures

1. In addition to the general admission requirements for Indiana University, the program-specific sections in this bulletin must be read for admission requirements and deadlines.
2. Individuals seeking admission to a professional program must submit a complete application before the programs application deadline. See the General Information section of this bulletin for names, addresses, and telephone numbers of persons to contact for applications. Admission to the professional program is competitive; application for admission to the school does not constitute automatic admission to a program.
3. All complete applications are considered by the programs admission committee. The selection of a class is based on program admission criteria. All applicants receive written notification of their admission status.
4. Applicants may appeal any admission decision except those relating to minimum grade point averages. Copies of the policies and procedures governing the appeals process are available on request from any of the schools administrative offices.
5. Individuals interested in being admitted to one of the schools programs should contact the program of interest annually for an update of admission criteria.
6. The program applications are revised each year. Applicants must obtain an application for the year in which they wish to apply.
7. Applicants should check the current program website for submission deadlines.
8. Students who have been convicted of a felony may be unable to obtain appropriate credentials to practice in some disciplines. Contact the program director for further information.
9. Individuals whose names appear on the Sex Offenders List will not be allowed to pursue admission to any program in the School of Health and Rehabilitation Sciences.

Withdrawal and Readmission

A student may be readmitted to the school after withdrawal as follows:

Temporary Withdrawal

Students in good standing who voluntarily and temporarily withdraw from a program assume temporary inactive status with the School of Health and Rehabilitation

Sciences. At the time of departure, it is the students responsibility to arrange, in writing, a continuation agreement with the individual program director. The student is allowed to reenroll as specified in the continuation agreement. The student must meet any specific academic/clinical requirements associated with reenrollment under the continuation agreement. Students failing to reenroll as specified in the continuation agreement are subject to dismissal from the School of Health and Rehabilitation Sciences.

Academic Advising

The School of Health and Rehabilitation Sciences undergraduate baccalaureate program has a dedicated student enrollment counselor who is available to assist undergraduate students interested in either the B.S. in H.S. degree or one of the School's undergraduate certificates. The School's student enrollment services coordinator is available to assist students who are working on the prerequisites for a professional program. Once admitted to a professional program, students are advised by faculty within the program. It is the students responsibility to seek counseling and guidance. The student is responsible for planning a program to meet degree requirements.

Appeals

The School of Health and Rehabilitation Sciences abides by the appeals procedures discussed in the Indiana University Code of Student Rights, Responsibilities, and Conduct. Students may obtain a copy of the schools Appeals Policy and Procedure from any of the schools administrative offices.

Attendance

Students are responsible for complying with all attendance requirements that may be established by the program faculty.

Clinical Affiliations

Clinical affiliations (fieldwork experiences) are required in most School of Health and Rehabilitation Sciences programs. The program faculty are responsible for the selection, approval, and assignment of clinical experiences. Although individual student needs and desires will be recognized, final placement decisions are made by the program faculty. Students are responsible for transportation, fees, and self-support, and for following the rules and regulations of the center(s) to which they are assigned. In addition, student conduct must be consistent with the standards of the university and the profession.

Degree Applications

Each fall, students preparing to graduate during the following calendar year must file an Intent to Graduate form in the office of the program in which they are enrolled. Program faculty then certify the student's satisfactory completion of degree requirements. If changes in the anticipated date of degree completion occur, students must consult their faculty advisor and file an updated Intent to Graduate form.

Financial Aid

A student may seek financial assistance through the IUPUI Financial Aid Office. In addition, assistance may be available through professional associations and other external groups and agencies.

Costs

Students are responsible for the following costs:

- *Fees and Tuition:* Fees and tuition are established annually by the Trustees of Indiana University.
- *Books and Supplies:* Books and supplies are determined by the program.
- *Uniforms:* During clinical/fieldwork experiences, students must adhere to the dress code requirements of the program and training site. Students are responsible for providing their own uniforms.
- *Transportation:* Students are responsible for travel and lodging costs associated with clinical/fieldwork experiences.

Contact the program of interest for a current cost sheet.

Liability Insurance

All students participating in required fieldwork experience are covered by the university's medical malpractice insurance. When requested, students may be required to purchase and show proof of general liability insurance before being certified to begin the clinical experience.

Health

Before the beginning of the professional program, students are required to demonstrate proof of immunization for tetanus and diphtheria, rubella, rubeola (measles), mumps, varicella (chicken pox), and hepatitis. All students must have had a PPD tuberculin skin test within the last three months. Students may be required to complete a physical examination (see program-specific requirements). All students must show proof of health insurance before beginning the professional program.

International Students

Foreign nationals enrolled in the school have the same rights and responsibilities as all other students. International students should consult the IUPUI Office of International Affairs.

Orientation

School of Health and Rehabilitation Sciences programs may require students to attend orientation programs before the beginning of the professional courses. Students are responsible for attending these sessions and for the program-specific policies and standards distributed and discussed at the sessions.

Professional Conduct

Students are responsible for exhibiting conduct appropriate to their professional training and education. Each program distributes standards and policies of appropriate professional conduct at the time of program orientation.

Registration and Record Changes

It is the students responsibility to enroll in each required academic session and satisfactorily complete all courses required for the degree. Faculty are available to provide academic advising.

Students are responsible for filing the necessary Student Record Change form with the School of Health and Rehabilitation Sciences Office of Academic and Student

Affairs in Coleman Hall 120 as soon as possible following a change of name or permanent address. Additional information regarding degree requirements and academic standards may be found elsewhere in this bulletin.

Credentials/Licensure

Students completing any of the professional programs are qualified to sit for the appropriate licensure and/or credentialing examinations. Contact the program director for further information.

School of Health and Rehabilitation Sciences Alumni Association

The School of Health and Rehabilitation Sciences Alumni Association is an officially recognized constituent member of the Indiana University Alumni Association. Active membership is open to all graduates of School of Health and Rehabilitation Sciences programs.

For more information, contact:

School of Health and Rehabilitation Sciences Alumni Association

University Place Conference Center, 241 850 W. Michigan Street Indianapolis, IN 46202-6044
(317) 274-8828

Requirements

Probationary Admission

Transfer Students

Student Learning Outcomes

Doctoral Programs

- Doctor of Philosophy in Health and Rehabilitation Sciences (Ph.D.)
- Doctor of Physical Therapy (D.P.T.)

Master's Programs

- Master of Science in Health Sciences (M.S.)
- Master of Science in Nutrition and Dietetics (M.S.N.D.)
- Master of Science in Occupational Therapy (M.S.O.T.)

Certificate Programs

- E-Learning Graduate Certificate Program - Leadership in Clinical Pediatric Nutrition
- MCH Leadership in Education Excellence in Pediatric Nutrition Certificate

Internships

- Dietetic Internship

Doctor of Philosophy in Health and Rehabilitation Sciences (Ph.D.)

Students accepted into the Ph.D. program will have a disciplinary expertise beyond the baccalaureate level. Examples of this include, but are not limited to, dietetics, occupational therapy, and physical therapy.

Program graduates will be educated so as to be able to use their disciplinary expertise to subsequently engage in substantive contributions in the field of rehabilitation in the areas of research, education and health services.

Graduates of the program will be able to:

1. Articulate the theoretical frameworks of rehabilitation with particular focus on its relevance to their discipline.
2. Describe theories of health promotion and disease prevention.
3. Demonstrate enhancement of their knowledge base of health and rehabilitation sciences from an interdisciplinary perspective.
4. Analyze health services methodological approaches to rehabilitation.
5. Critically evaluate research in rehabilitation.
6. Access systematic reviews and meta-analysis databases so as to deepen their knowledge of best practices in rehabilitation.
7. Engage in substantive research in rehabilitation as it relates to their discipline. This encompasses identifying a line of inquiry and developing hypotheses; choosing appropriate methodology such as research design, instrumentation, and statistical analysis; collecting and analyzing data; and disseminating results.
8. Demonstrate an ethical approach to research activities.
9. Submit a research grant to an external agency.
10. Submit a manuscript to a peer reviewed publication.
11. Demonstrate the use of evidence based practice concepts to include the importance of considering patient/client values and preferences in their approach to rehabilitation.
12. Teach others about rehabilitation as it relates to their discipline.

Doctor of Physical Therapy (D.P.T.)

A major mission of the Department of Physical Therapy is to prepare autonomous Doctors of Physical Therapy who by their commitment to advance the health and quality of life for all humanity are recognized as leaders among health professionals and the community. Graduates of this educational program will enter the profession as practitioners who are prepared to:

1. Practice as autonomous point-of-entry provides of physical therapy services in adherence to ethical, professional, and legal standards within a variety of clinical and community settings.
2. Communicate verbally and in writing with patient/clients and their caregivers, colleagues, legislators, third-party payors, and other constituents.
3. Demonstrate proficiency in providing culturally competent care across the lifespan.
4. Demonstrate decision-making skills including clinical reasoning, clinical judgment, and reflective practice.
5. Screen patients/clients to determine the need for further examination or consultation by a PT or referral to another health care professional.
6. Demonstrate competence in examination and re-examination of a patient/client using evidence based tests and measures.
7. Evaluate all available data (including examination, medical, and psychosocial) to establish and

communicate a physical therapy diagnosis and to determine patient/client prognosis.
8. Establish a collaborative physical therapy plan of care that is safe, effective, patient/client-centered, and evidence-based.
9. Demonstrate accountability for the efficient, coordinated management of care (primary, secondary, or tertiary) based on the patient's/client's goals and expected functional outcomes.
10. Implement safe and effective physical therapy intervention plans within a variety of care delivery settings including reflective practice leading to optimal outcomes.
11. Provide effective education for patient/clients, caregivers, colleagues and the general public.
12. Contribute to the advancement of physical therapy practice through critical evaluation and informed application of the findings of professional and scientific literature.
13. Complete accurate and concise documentation in a timely manner that supports the problem solving process and follows guidelines and specific documentation formats required by the practice setting.
14. Participate in the administration of PT services including delegation and supervision of support personnel, management planning, marketing, budgeting, reimbursement activities and clinical education of students.
15. Provide consultation services to individuals and groups including by providing wellness and health promotion program appropriate to physical therapy.
16. Formulate and implement a plan for personal and professional development and life-long learning based on self-assessment, reflection and feedback from others.
17. Demonstrate social and professional responsibility through mentoring and participation in professional and community organizations and activities.

Master of Science in Nutrition and Dietetics (M.S.N.D.)

Graduate students earning the Master of Science in Nutrition and Dietetics degree will demonstrate the following abilities:

1. Demonstrate the knowledge and skills necessary to conduct original research, or complete a translational project within the discipline of nutrition and dietetics as evidenced by their master's thesis or project.
2. Communicate nutrition information effectively as evidenced by the defense of their thesis or project.
3. Think critically and creatively to evaluate the literature in the field of nutrition and dietetics as evidenced by their master's thesis or project.
4. Apply ethics within the field of nutrition & dietetics as evidenced by preparation of the master thesis or project.

E-Learning Graduate Certificate Program - Leadership in Clinical Pediatric Nutrition

At the end of the e-learning certificate program, students will be able to provide advanced level, specialty nutritional care for infants, children and adolescents including those with special health needs. All the students who successfully complete the program will demonstrate the use of the following competencies and learning outcomes:

1. Apply normative and authoritative guidelines to the evaluation of the nutrition and feeding of infants, children, and adolescents including those with special health needs.
2. Assess/evaluate growth and nutrient intakes (parenteral and enteral) relative to age and medical condition of infants, children and adolescents including those with special health needs using appropriate normative data.
3. Create appropriate nutrition care plans for infants, children, and adolescents including those with special health needs.
4. Create appropriate roles for the dietitian caring for infants, children, and adolescents including those with special health needs.
5. Create appropriate strategies for improving health/ nutrition care services and systems, using the five practices of exemplary leadership (Kouzes and Posner 2003).

Dietetic Internship

Scientific and Evidence Base of Practice: integration of scientific information and research into practice

1. DI 1.1 Select appropriate indicators and measure achievement of clinical, programmatic, quality, productivity, economic, or other outcomes.
2. DI 1.2 Apply evidence-based guidelines, systematic reviews, and scientific literature (such as the ADA Evidence Analysis Library, Cochran Database of Systematic Reviews, and the US Department Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites) in the nutrition care process and model and other areas of dietetic practice.
3. DI 1.3 Justify programs, products, services, and care using appropriate evidence or data.
4. DI 1.4 Evaluate emerging research for application in dietetics practice.
5. DI 1.5 Conduct research projects using appropriate research methods, ethical procedures, and statistical analysis.

Professional Practice Expectations: beliefs, values, attitudes and behaviors for the professional dietitian level of practice

1. DI 2.1 Practice in compliance with current federal regulations and state statues and rules, as applicable and in accordance with accreditation standards and the ADA Scope of Dietetics Practice Framework, Standards of Professional Performance and Code of Ethics for the Profession of Dietetics.
2. DI 2.2 Demonstrate professional writing skills in preparing professional communications (e.g. research manuscripts, project proposals, education materials, policies and procedures.
3. DI 2.3 Design, implement, and evaluate presentations considering life experiences, cultural diversity and educational background of the target audience.

4. DI 2.4 Use effective education and counseling skills to facilitate behavior change.
5. DI 2.5 Demonstrate active participation, teamwork and contributions in group settings.
6. DI 2.6 Assign appropriate patient care activities to DTR's and/or support personnel considering the needs of the patient/client or situation, the ability of support personnel, jurisdictional law, practice guidelines and policies within the facility.
7. DI 2.7 Refer clients and patients to other professionals and services when needs are beyond individual scope of practice.
8. DI 2.8 Demonstrate initiative by proactively developing solutions to problems.
9. DI 2.9 Apply leadership principles effectively to achieve desired outcomes.
10. DI 2.10 Serve in professional and community organizations.
11. DI 2.11 Establish collaborative relationships with internal and external stakeholders, inkling patients, clients, care givers, physicians, nurses and other health professionals, administrative and support personnel to facilitate individual and organizational goals.
12. DI 2.12 Demonstrate professional attributes such as advocacy, customer focus, risk taking, critical thinking, flexibility, time management, work prioritization. and work ethic within various organizational cultures.
13. DI 2.13 Perform self-assessment, develop goals and objectives and prepare a draft portfolio for professional development as defined by the Commission on Dietetic Registration.
14. DI 2.14 Demonstrate assertiveness and negotiation skills while respecting life experiences, cultural diversity and educational background.

Clinical and Customer Services: development and delivery of information, products and services to individuals, groups and populations

1. DI 3.1 Perform the Nutrition Care Process (a through d below) and use standardized nutrition language for individuals, groups and populations of differing ages and health status in a variety of settings.
2. DI 3.1.a. Assess the nutritional status of individuals, groups and populations in a variety of settings where nutrition care is or can be delivered
3. DI 3.1.b. Diagnose nutrition problems and create problem, etiology, signs and symptoms (PES) statements.
4. DI 3.1.c. Plan and implement nutrition interventions to include prioritizing the nutrition diagnosis, formulating a nutrition prescription, establishing goals and selecting and managing intervention.
5. DI 3.1.d Monitor and evaluate problems, etiologies, signs, symptoms and the impact of interventions on the nutrition diagnosis.
6. DI 3.2 Develop and demonstrate effective communication skills using oral, print, visual, electronic and mass media methods for maximizing client education, employee training and marketing.
7. DI 3.3 Demonstrate and promote responsible use of resources including employees, money, time, water, energy, food and disposable goods.
8. DI 3.4 Develop and deliver products, programs or services that promote consumer health, wellness and lifestyle management merging consumer desire for taste, convenience and economy with nutrition, food safety and health messages and interventions.
9. DI 3.5 Deliver respectful, science-based answers to consumer questions concerning emerging trends.
10. DI 3.6 Coordinate procurement, production, distribution and service of goods and services.
11. DI 3.7 Develop and evaluate recipes, formulas and menus for acceptability and affordability that accommodate the culturaldiversity and health needs of various populations, groups and individuals.

Practice Management and Use of Resources: strategic application of principles of management and systems in the provision of services to individuals and organizations

1. DI 4.1 Use organizational processes and tools to manage human resources.
2. DI 4.2 Perform management functions related to safety, security and sanitation that affect employees, customers, patients, facilities and food.
3. DI 4.3 Apply systems theory and process approach to make decisions and maximize outcomes.
4. DI 4.4 Participate in public policy activities, including both legislative and regulatory initiatives.
5. DI 4.5 Conduct clinical and customer service quality management activities.
6. DI 4.6 Use current informatics technology to develop, store, retrieve and disseminate information and data.
7. DI 4.7 Prepare and analyze quality, financial or productivity data and develops a plan for intervention.
8. DI 4.8 Conduct feasibility studies for products, programs or services with consideration of costs and benefits.
9. DI 4.9 Obtain and analyze financial data to assess budget controls and maximize fiscal outcomes.
10. DI 4.10 Develop a business plan for a product, program or service including development of a budget, staffing needs, facility requirements and supplies.
11. DI 4.11 Complete documentation that follows professional guidelines, guidelines required by health care systems and guidelines required by the practice setting.
12. DI 4.12 Participate in coding and billing of dietetics/ nutrition services to obtain reimbursement for services from public or private insurers.

MCH Leadership in Education Excellence in Pediatric Nutrition Certificate

At the end of the MCH certificate program, students will be able to provide advanced level, specialty nutritional care for infants, children, and adolescents including those with special health needs.

All the students who successfully complete the program will demonstrate the use of the following competencies and learning outcomes.

1. Apply normative and authoritative guidelines to the evaluation of the nutrition and feeding of infants,

children, and adolescents including those with special health needs.
2. Assess/evaluate growth and nutrient intakes (parenteral and enteral) relative to age and medical condition of infants, children and adolescents including those with special health needs using appropriate normative data.
3. Create appropriate nutrition care plans for infants, children, and adolescents including those with special health needs.
4. Create appropriate roles for the dietitian caring for infants, children, and adolescents, including those with special health needs.
5. Create appropriate strategies for improving health/ nutrition care services and systems, using the five practices of exemplary leadership (Kouzes and Posner 2003).

Master of Science in Health Sciences (M.S.)

The M.S. in Health Sciences degree is an interdisciplinary graduate degree program designed for health and rehabilitation professionals and educators. Students accepted into the M.S. in Health Sciences program will acquire advanced knowledge in, and an understanding of current trends and issues in health sciences.

They will be guided in developing the problem solving skills to prepare themselves to assume leadership roles in practice and educational settings. Graduates of the program will be able to:

1. Articulate the current trends and issues associated with the health sciences.
2. Describe theories of health promotion and disease prevention.
3. Compare and contrast health and rehabilitation systems across the world.
4. Critically evaluate research in rehabilitation.
5. Access systematic reviews and meta-analysis databases.
6. Engage in substantive research in health and rehabilitation.
7. Demonstrate an ethical approach with regard to rehabilitation services.
8. Demonstrate the use of evidence based practice concepts.
9. Articulate the ways in which diversity impacts health and rehabilitation.
10. Be employed upon graduation, or accepted into post graduate educational programs.

Master of Science in Occupational Therapy (M.S.O.T.)

A major objective of the Department of Occupational Therapy is to prepare competent and contemporary occupational therapists with a Master of Science. These practitioners, by their commitment to advance the health, wellness, and quality of life for the clients they serve are recognized as leaders among health and rehabilitation professionals.

Graduates of this educational program will enter the profession as practitioners who are prepared to:

1. Be mindful, reflective, ethical, and critical thinking (reasoning) practitioners.
2. Anticipate, analyze, and address occupational needs using occupation-based interventions.
3. Advocate, communicate, and contribute to our discipline and profession in existing and emerging practice areas.
4. Value and demonstrate civic engagement, professional engagement and community participation.
5. Become role models, partners, and collaborators attentive to minority and underserved populations.
6. Discern entry-level positions that reflect their skills, interests, and abilities in a variety of practice settings.
7. Value life-long learning through continuing professional development, specialty certification, and/or doctoral education.
8. Analyze and synthesize program outcomes.
9. Adhere to safety regulations with patient/client care.
10. Adhere to ethical practices.
11. Use judgement in safety for self and others.
12. Demonstrate ability to collaborate through practice and/or discussion.
13. Produce clear documentation of client services.
14. Communicate effectively; verbally and non-verbally.
15. Demonstrate professional behaviors.

Academic Programs

Doctoral Programs

- Doctor of Philosophy in Health and Rehabilitation Sciences
- Doctor of Physical Therapy

Master's Programs

- Master of Science in Health Sciences
- Master of Science in Nutrition and Dietetics
- Master of Science in Occupational Therapy

Other Programs

- Dietetic Internship
- e-Learning Graduate Certificate Program in Leadership in Clinical Pediatric Nutrition
- Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program

Other Programs

- Dietetic Internship
- e-Learning Graduate Certificate Program in Leadership in Clinical Pediatric Nutrition
- Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program

Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program

The Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program is located at the Indiana University Medical Center and in James Whitcomb Riley Hospital for Children in Indianapolis. The Department of Nutrition and Dietetics and the Department of Pediatrics within the Indiana University School of Medicine jointly sponsor this program, which has been

supported by the Bureau of Maternal and Child Health and Resources Development (Health and Human Services) since 1978.

The Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program for dietitians/ nutritionists is four to six months in length. The fellowship consists of didactic (10 hours per week) and clinical experiences to provide or enhance the pediatric nutrition knowledge, clinical expertise, and leadership skills of the dietitian/nutritionist. The four-month fellowship provides a core of pediatric nutrition competencies related to infants, children, and adolescents with special health needs. During the last two months of the six-month fellowship, fellows may specialize in one of three areas:

- care of newborns in intensive care units and following discharge
- nutritional care of children with special health needs
- nutritional care of adolescents, including those with diabetes

Core training occurs at Riley Hospital, community public health clinics, and the Indiana State Board of Health central office in Indianapolis. The fellowship program accepts four to six dietitians/nutritionists annually. Although helpful, a masters degree is not required for fellowship eligibility. The Pediatric Nutrition Fellowship Program begins in January.

Admission Requirements

The clinical pediatric nutrition student must be a registered dietitian (Commission on Dietetic Registration) and have a minimum of 12 months of clinical experience, or approval by the Program Director. A master's degree in nutrition or enrollment in a master's degree program in nutrition is highly desirable.

For further information, contact:

Professor Karyl Rickard, Ph.D., R.D.
IUPUI Department of Nutrition and Dietetics
224 Coleman Hall
1140 W. Michigan Street
Indianapolis, IN 46202

Phone: (317) 278-0933
Fax: (317) 278-3940
E-mail: krickard@iupui.edu

Dietetic Internship Program

The Dietetic Internship Program, founded in 1918, is accredited by the Commission on Accreditation of Dietetic Education and meets 2008 accreditation standards. The program is 10 months long, with a concentration in clinical and customer service. The Dietetic Internship Program includes 8 credits of graduate course work (the equivalent of one full-time semester) and a minimum of 1,232 supervised clinical practice hours. The program begins in mid August and concludes in late June. The Dietetic Internship Program accepts 16 interns annually. Internships may be combined with the M.S. in Nutrition and Dietetics.

Admission requirements

- a bachelors degree from an accredited college or university
- minimum cumulative grade point average of 3.0 (on a 4.0 scale)
- GRE scores
- completion of current academic requirements of the Commission on Accreditation of Dietetic Education (must be verified by approved undergraduate dietetic program)
- work experience
- must participate in American Dietetic Association Computer Match Process

Dawn Lipker, Student Enrollment Services Coordinator
IUPUI School of Health and Rehabilitation Sciences
Coleman Hall 120
1140 W. Michigan Street
Indianapolis, IN 46202
dlipker@iupui.edu

e-Learning Clinical Pediatric Nutrition Program

The e-Learning Graduate Certificate Program in Leadership in Clinical Pediatric Nutrition provides the didactic course work offered by the Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program. This four course (12 credit hours) e-learning certificate is designed to provide registered dietitians with specialized pediatric nutrition knowledge, clinical and leadership skills in pediatric health care. The e-learning certificate courses transfer to the Master of Science in Nutrition and Dietetics.

The e-learning Graduate Certificate Program in Leadership in Clinical Pediatric Nutrition includes the following courses:

SHRS N 570	Pediatric Nutrition	3cr.
SHRS N 572	Advanced Pediatric Nutrition	3cr.
SHRS N 576	Leadership Development in Clinical Pediatric Nutrition	3cr.
SHRS N574 **OR**	Nutrition Management of the High Risk Infant in the Newborn Intensive Care Unit	3cr.
SHRS N 596	Clinical Dietetics	3cr.

Admission Requirements

The clinical pediatric nutrition student must be a registered dietitian (Commission on Dietetic Registration) and have a minimum of 12 months of clinical experience, or approval by the Program Director. A master's degree in nutrition or enrollment in a master's degree program in nutrition is highly desirable.

Admissions

- Ph.D. in Health and Rehabilitation Sciences
- Master of Science in Health Sciences
- Master of Physician Assistant Studies
- Master of Science in Nutrition and Dietetics
- Master of Science in Occupational Therapy
- Master of Science in Physical Therapy

Physical Therapy

The Doctorate of Physical Therapy (D.P.T.) Program participates in the PTCAS program and accepts applications from July 5, 2011 through October 3, 2011 to begin the program the following fall. Students who have met all admission requirements and rank in the top 80-100 based on academic criteria (cumulative GPA, Math/ Science prerequisite GPA, GRE scores) will be invited to an on campus interview. Interviews will be scheduled from 8:00 AM - 2:00 PM, date TBD. The interview is mandatory for both in and out of state invited applicants, so please be prepared to make travel arrangements to the IUPUI campus when requested.

International Students

International students should visit iapply.iupui.edu/graduate on the International Affairs website.

Prerequisites

Prior to entering the D.P.T. degree program, students must have completed a baccalaureate degree from a regionally accredited institution and the following prerequisite courses. See the next section, Academic Requirements, for details.

- Humanities/Social Sciences (2 semesters)
- Introductory Statistics (1 semester)
- Human Anatomy (1 semester with lab)*
- Human Physiology (1 semester with lab)*
- Chemistry (2 semesters with labs)*
- Physics (2 semesters with labs)*
- Introductory Psychology (1 semester)
- Human Lifespan Development (1 semester)

Applicants will also need Medical Terminology demonstrated with formal coursework, online instruction with certificate of completion, or self-study with departmental examination.

*Courses must be at a level for science majors

NOTE: Please consult with an undergraduate academic advisor for appropriate courses and semester sequence.

Academic Requirements

The following criteria must be met by the application deadline (October 3, 2011).

1. Enrollment in the final year or completion of a baccalaureate degree from a regionally accredited institution.
2. Completion of all prerequisites or no more than two prerequisites remaining for completion.
3. A cumulative grade point average (GPA) of 3.2.
4. A math/science GPA of 3.2.
    - Includes grades earned in chemistry, physics, human anatomy, human physiology, and statistics.
5. Official Graduate Record Examination (GRE).
    - Visit the GRE website at www.ets.org/gre
    - You must select PTCAS Institution Code 7692 to receive your test results and share with the program.
6. Completion of Personal Essay included in the PTCAS online application for admission.
7. Completion of 40 clinical observation hours or work experience recorded on the Clinical Observation Experience Form
    - Must be from both inpatient and outpatient settings.
    - A minimum of 20 hours is required in each setting.
    - Additional hours are encouraged.

Application Information

The D.P.T. program at IUPUI will participate in the Physical Therapist Centralized Application Service, known as PTCAS beginning in 2011. Students applying to the entry-level professional physical therapy program for the 2012 entering class will apply online using the PTCAS application. To learn more about the PTCAS application process, please visit the PTCAS web site at www.ptcas.org.

Submit application and supplemental materials July 5, 2011 through October 3, 2011 to be considered.

Applicants are evaluated for admission based upon:

- cumulative GPA
- math/science GPA
- prerequisite grades
- GRE scores
- observational hours
- personal statement
- admission interview

Significance is given to overal GPA and verbal GRE scores.

Alternate List

Applicants not admitted to the class may be placed upon an "alternate list" and will be considered should a place in the program become available. Applicants placed on the alternate list that are not accommodated in the class will be considered for admission to the following year's class on competitive admission with that year's application cohort and will need to reapply during the following year's cycle.

Policies

1. Applicants with no more than two (2) course prerequisites in progress may also apply for

contingent admission to begin classes in fall semester.
2. Applicant's baccalaureate degree must be completed by June 15. No waivers or exceptions will be granted by the physical therapy program.
3. All prerequisites must be completed with a grade of "C" or better (2.00 on a 4.00 scale).
4. All applicants must have taken the GRE no more than 5 years prior to application.
5. Applicants will be allowed to apply one AP credit course toward the completion of their prerequisite requirements. If the AP course is a math/science prerequisite, GPA calculations will be obtained by omitting that specific course.
6. For applicants for non-native English speakers, a minimum TOEFL score of 628P, 267C, or 113i is required at the time of application. This policy is waived if the applicant has received an undergraduate degree from an accredited school in the United States by time of entrance into the program.

Observational Experience

In addition to prerequisite course work, students must complete observational, volunteer or other work experiences in both inpatient (hospital based) and outpatient physical therapy settings (minimum of 20 hours in each). This allows the applicant to appreciate the differences in physical therapists' responsibilities in each setting. Each experience must be of sufficient length of time to enable the supervising physical therapist to adequately verify your experiences.

Applicants will enter all paid or volunteer PT observation hours on the PTCAS application. Verification is required of observation hours reported, this can be completed via electronic PT signatures or paper PT signatures as part of the PTCAS application process, details below:

Electronic PT Signatures (strongly preferred)

1. Select the "ELECTRONIC" verification type.
2. Enter the e-mail address for PT.
3. After entering the experience, click the "SEND FOR VERIFICATION" button for that entry from your list of experiences.
4. Alert the P.T. to watch for an automated e-mail with the subject "PTCAS Observation Hour Verification Request".
5. If PTCAS e-mail is not received, instruct the P.T. to check spam/junk e-mail folders as some e-mail servers filter out messages from PTCAS.

Paper PT Signatures

Use this option if the physical therapist does not have Internet access or previously verified your PT hours on a different form (e.g., the IU D.P.T. Clinical Observation Experience form).

1. Select the "PAPER" verification type.
2. Print the PTCAS observation hours verification form (PDF) for that particular experience.
3. Each bar-coded form is unique to both you and the physical therapist.
4. Deliver the form to the physical therapist.
5. Arrange for the signed form to be mailed to PTCAS.

If the physical therapist previously signed a different (IU D.P.T.Clinical Observation Experience) form to verify your hours, attach it to the PTCAS verification form and send both forms to PTCAS in a single envelope.Send only one signed form per experience, regardless of the number of programs you designate.

Send only one signed form per experience, regardless of the number of programs you designate.

Additional instructions are on the PTCAS website.

Medical Requirements

Basic immunizations as determined by Student Health Center must be completed by the first day of classes. Students must demonstrate proof of health insurance prior to entry into the Program and must maintain health insurance throughout their enrollment. List of basic immunizations include:

- Hepatitis B+ (3 vaccines)
- Measles-Mumps-Rubella (MMR)
- Tetanus/Diphtheria/Pertussis (Tdap required)
- TB Skin Test (completed within 3 months of beginning fall courses)
- Varicella (adequate titer, 2 vaccines, laboratory proof, letter from the diagnosing physician, or medical record history of having chickenpox)
- Polio

Expenses

Credit hour rate for 2011-12 is $460.30 for in-state residents and $920.50 for out-of-state residents. Total tuition-only cost for in-state residents is $47,410.90 and for out-of-state residents $94,811.50. A non-refundable deposit of $250 is required at the time the student accepts admission into the program. This deposit will be credited to the student's first semester tuition if the student matriculates into the program. The deposit will not be refunded if the student chooses not to attend the program after accepting the offer of admission.

Detailed Cost Estimate Worksheet

Application Materials

Application and supplemental materials may be submitted beginning July 5, 2011, and all application materials must be postmarked by October 3, 2011.

Please read the directions below carefully and thoroughly. The majority of application materials will be submitted to PTCAS; however, there are two supplemental materials that are to be submitted directly to the IU D.P.T. Program.

Materials to be submitted to PTCAS

- PTCAS application and fee.
- Official transcripts from all institutions attended.
- Official GRE scores (less than 5 years old) to PTCAS Institutional Code: 7692
- Reporting of observation hours (see the section Observational Experience)
- Personal Essay.
- IU D.P.T. program custom questions (3 total).
- NO references required.

Arrange for your PTCAS materials to be sent to the address below no later than October 3, 2011:

Physical Therapist Centralized Application Service

PO Box 9112 Watertown, MA 02471

Materials submitted directly to the IU D.P.T. program

- Prerequisite Course Completion Form
- IUPUI Graduate Online Application* (include $60 as the non-refundable application fee)

Please use the information below for successful IUPUI application submission:

- Under "Intended Program and Plan" select the following:
  - What type of degree do you intend to pursue: Doctoral/Ph.D.
  - Academic Program: Health and Rehabilitation Professional
  - Academic Plan: Physical Therapy D.P.T.
  - Are you applying to a dual degree program: No
  - Term: please select Fall 2012
  - Recommendation, skip this section, the observation verifications replace letters on PTCAS.
  - Personal Statement, skip this section, included in PTCAS.

Submission

Arrange for your IU D.P.T. materials to be sent to the address below no later than October 3, 2011.

IU School of Health and Rehabilitation Sciences

ATTN: Dawn Lipker 1140 West Michigan Street, CF 120 Indianapolis, IN 46202
*If you have any difficulty completing the IU Graduate Application, please contact:

Dawn Lipker, Director of Student Enrollment Services (317) 274-7238, or dlipker@iupui.edu

Admission to the professional program is competitive and completion of the application process, as well as invitation to the admission interview, does not guarantee admission to the program. Students accepted into the D.P.T. must complete all specific admission requirements.

Occupational Therapy

Admission to the professional Master of Science in Occupational Therapy program is competitive. Applications are accepted beginning August 1st, and are due no later than January 20th of each year for enrollment the following summer.

Students accepted into the M.S.O.T. program must complete the admission criteria listed below.

Prerequisites

- Abnormal Psychology/Psychopathology
- Human Growth and Development/Lifespan Development
- Medical Terminology
- Statistics*
- Human Anatomy (with a lab)*
- Human Physiology (with a lab)*

*These courses need to be completed within the past seven years prior to application.

Students with concerns about whether the class they are taking will meet the prerequisite requirement should provide a course description to the director of student enrollment services, who will discuss with the admissions coordinator for the Department of Occupational Therapy.

Dawn Lipker, Director of Student Enrollment Services

dlipker@iupui.edu

Application Information

By application deadline Students must meet the following criteria:

- A baccalaureate degree from a regionally accredited institution prior to matriculation into the program
- Minimum cumulative grade point average (GPA) of 3.0 on a 4.0 scale
- Completed five of the six prerequisites (listed below) by the application deadline
- Minimum prerequisite grade point average (GPA) of 3.0 on a 4.0 scale with no lower than a "C" in any one prerequisite
- Completed a minimum of 12 hours of observation and/or volunteer work in at least three different Occupational Therapy practice settings (such as acute care hospital, outpatient clinic, community mental health center, school system, and so forth) with either an Occupational Therapist or an Occupational Therapy assistant. A form validating this observation is required and is available at the link below
- For applicants for whom English is not the native language, a minimum TOEFEL score of 560P
- A completed application

Application Materials

Applications are accepted August 1 - January 20 annually. All application materials must be postmarked by the application deadline. You must apply using the online application forms; paper applications are not available. If you have any difficulty completing the online application, please contact:

Dawn Lipker, Director of Student Enrollment Services
dlipker@iupui.edu

1. IUPUI Online Graduate Application for Admission* and $60 non-refundable application fee.
2. Official transcripts from all institutions attended.
3. Required Observational Hours Form
4. Prerequisite Course Completion Plan Form

*Please use the information below for successful submission of the IUPUI Online Graduate Application for Admission.

- Under Intended Program and Plan select the following:
  - What type of degree do you intend to pursue Master's
  - Academic Program: Health and Rehabilitation Graduate Professional
  - Academic Plan: Occupational Therapy M.S.
  - Are you applying to a dual degree program: No
  - Term: Summer 2012

Recommendations

Skip this section, the observation forms replace letters.

Personal Statement
Skip this section, not required.

Criteria for Selection
Overall cumulative grade point average (GPA) of 3.0 or above makes up 40% of the admissions formula for each candidate. Prerequisite coursework GPA makes up 60% of the formula. The total scores are then ranked.

Technical Standards
Students are required to meet technical standards established by the School of Health & Rehabilitation Sciences. These standards are available upon request.

Expenses
Credit hour rate for 2009-10 is $417.48 for in-state residents and $834.96 for out-of-state residents. A non-refundable deposit of $200 is required at the time the student accepts admission into the program. This deposit will be credited to the student's first semester tuition if the student matriculates into the program.

Nutrition and Dietetics
The Master of Science in Nutrition and Dietetics is designed for the health care professional interested in strengthening his/her knowledge and practice of nutrition across the continuum of patient care.

Admission Requirements
- Baccalaureate degree from an accredited college or university.
- Undergraduate GPA of 3.0 (4 point scale).
- Be a registered dietitian through the Commission on Dietetic Registration.
- Graduate Record Examination (GRE) scores, IUPUI school code 1325.
  Math 500, 500 Verbal, 4.0 Writing Analytical.
- Three (3) letters of recommendation describing the applicants potential as a graduate student and professional practitioner.

Application Deadline
Students are admitted to either the Spring (January) semester, or the Fall (August) semester. The deadline for admission is 10 days prior to the start of the term.

How to Apply
You must apply using the online application form (paper applications are not available) and submit a $60 non-refundable application fee. If you have any difficulty completing the online application, please contact Dawn Lipker at (317) 278-7238.

Please use the information below for successful application submission.

- Under Intended Program and Plans select the following:
  - What type of degree do you intend to pursue: Master's
  - Academic Program: Graduate School Health and Rehabilitation
  - Academic Plan: Nutrition and Dietetics M.S.
  - Are you applying to a dual degree program: No

Recommendations
Enter a minimum of three (3) recommenders with a valid email and they will be notified to submit a recommendation.

International Applicants
International students should visit the Office of International Affairs.

Health Sciences
The Master of Science in Health Sciences is an interdisciplinary graduate degree designed for health and rehabilitation professionals and educators interested in pursuing advanced education at the master's level. Graduates of the program will acquire advanced knowledge and understanding of current trends and issues, and the problem-solving skills to prepare them to assume leadership roles in practice and educational settings.

Application Deadlines
- Fall (August) semester: January 1 - May 15
- Spring (January) semester: August 1 - December 1
- **SUMMER ADMISSION IS NOT OFFERED**

All application materials must be submitted directly to the School of Health and Rehabilitation Sciences no later than 10 days prior to the deadline stated above. All admission decisions will be finalized two weeks after the deadline.

Admission Requirements
All applicants must be accepted into IUPUI, the School of Health and Rehabilitation Services, and the M.S. in Health Science program. Below the minimum requirements for admission are listed.

1. A baccalaureate degree from an accredited institution (applicant must submit an official copy of all undergraduate transcripts)
2. Cumulative undergraduate grade point average of 3.0 on a 4.0 scale
3. At least one undergraduate statistics or research methods course completed with a grade of "B" or better
4. Three letters of recommendation from those familiar with the applicant's academic and professional performance
5. 300 to 500 word personal statement of academic and professional goals, must include experience as a health and rehabilitation professional or educator
6. If applicable, a TOEFL score of at least 550P or 213C or 79-80i
7. Admission interview

NOTE: No student will be permitted to work toward a degree without first being admitted to the Master of Science program.

Application Directions
Please fill out the Graduate Online Application and submit a $60 non-refundable application fee. Also use the information below to complete the application.

- Under Intended Program and Plan select the following:
  - What type of degree do you intend to pursue: Master's

- Academic Program: Graduate School Health and Rehabilitation
- Academic Plan: Health Sciences M.S.
- Are you applying to a dual degree program: No

Recommendations
Enter minimum of 3 recommenders with a valid email and they will be notified to submit a recommendation.

Submission
An applicant must submit complete application materials to the Office of Academic and Student Affairs, at the address below. Transcripts from all universities attended must be included. However, if the applicant is a graduate of Indiana University, the school will obtain those transcripts directly. Non-Indiana University graduates must submit at least one official transcript from each university attended. A non-refundable application fee is required from all applicants who have never attended Indiana University.

IU School of Health and Rehabilitation Sciences

Dawn Lipker, Enrollment Coordinator

Coleman Hall 120

1140 West Michigan Street
Indianapolis, IN 46202-5119

Coursework Applied Toward Degree Requirements
A maximum of 6 graduate credit hours earned at Indiana University before admission may be applied toward a degree. Upon the recommendation of the Health Sciences program director and with the approval of the School of Health and Rehabilitation Sciences Academic Studies and Research Development Committee, up to 8 credit hours of graduate work at other institutions may be transferred in partial fulfillment of degree requirements. No course may be transferred from another institution unless the course was completed with a grade of "B" or higher within five years before matriculation in the Master of Science degree program.

Health and Rehabilitation Sciences
Students accepted into Health Sciences Department programs must complete the University, School, and Department admission requirements. The following admission requirements apply to the Doctor of Philosophy in Health and Rehabilitation Sciences.

General Requirements
- Completion of a post baccalaureate degree in health and rehabilitation sciences or in a related health care discipline, or completion of a baccalaureate degree with professional experience.
- IUPUI Graduate Online Application, and a $60 non-refundable application fee.
- Resume or curriculum vitae
- A 300-500 word personal statement of learning objectives, research interest, and leadership potential.
- Three letters of recommendation.
- Cumulative GPA of 3.0 or higher on a 4.0 scale in any prior degree completion program.
- Competitive scores (minimum of 500 recommended) on the verbal and quantitative sections and a score of 3.5 or better on the analytical writing section of the GRE, completed within 5 years before matriculation into the Ph.D. program. Successful completion of a post graduate degree will waive the matriculation time period.
- A TOEFL score of 550P, or 213C (or equivalent on the iBT version) is required for applicants who did not graduate from an accredited United States college or university, or whose native language is not English.
- The ASRD Committee will be the body that will review applications and make acceptances.
- Admission interview

NOTE: Students must identify a research mentor within the first year of the program.

Application Directions
Use the information presented below to complete the IUPUI Graduate Online Application.

- Under Intended Program and Plan select the following:
  - What type of degree do you intend to pursue: Doctoral/Ph.D.
  - Academic Program: Graduate School Health and Rehabilitation
  - Academic Plan: Health and Rehab Science Ph.D.
  - Are you applying to a dual degree program: No

Recommendations
Enter minimum of 3 recommenders with a valid email and they will be notified to submit a recommendation.

Personal Statement
Required, upload into the application.

Submission
Submit all application materials to the Director of Student Enrollment Services:

Dawn Lipker
Director of Student Enrollment Services

dlipker@iupui.edu
(317) 274-7238

Priority Admission
Priority will be given to students who indicate that they plan to attend full time, and to those who have secured sources of funding to support full time status.

Transfer Credit
A maximum of 30 semester credits may be transferred from the student's post baccalaureate course work, as approved by the ASRD Committee and the University Graduate School. No course may be transferred from another institution unless the course was completed with a grade of "B" or higher.

Exceptions
Any exceptions to the admissions policies must be requested in writing to the ASRD Committee. The request must be accompanied by a letter recommending either support or denial from the director of the Ph.D. program.

Physician Assistant Studies
The Master of Physician Assistant Studies program is intended for individuals with prior experience (paid

or volunteer) in a health related field, and with a commitment to provide health care in underserved and rural communities. The program consists of seven (7) consecutive semesters over 27 months and includes 75 credit hours of didactic courses and 36 credit hours of clinical rotations for a total of 111 credits. Proposed start term is May 2012.

Prerequisite Courses

All courses must be completed with a "C" or higher from a regionally accredited institution. All science courses must be at a level for science majors and include a lab. The courses below do NOT include specific course prerequisites that may be required by your institution or program. Please contact your specific institution for course prerequisite requirements.

- Biological Sciences with lab, must include general biology (2 semesters), human anatomy (1 semester), human physiology (1 semester), and microbiology (1 semester)
- Chemistry with lab, must include general chemistry (2 semesters), and organic chemistry (1 semester)
- Statistics or biostatistics (3 credit hours) 200 level or higher
- Psychology or sociology (3 credit hours)
- Medical terminology (minimum 2 credit hours)
-
- Nutrition/Health Promotion/Wellness or equivalent (3 credit hours)*
- English to include composition, and communication or speech (6 credit hours)

*Nutrition course preferred. There are a number of courses that may meet this requirement. To confirm, please contact Dawn Lipker, dlipker@iupui.edu.

NOTE: Additional recommended courses are Organic Chemistry II and Biochemistry.

Admission Requirements

- Bachelor's degree, in any major, from a regionally accredited institution completed prior to the date of enrollment
- Completion of all or no more than one (1) prerequisite course in progress by the application deadline, must be completed with a "C" or higher
- Minimum 3.0 cumulative grade point average (GPA) on a 4.0 scale
- Three (3) letters of reference, one of which must come from a Health Care Professional
- 500 word personal statement
- GRE or MCAT scores taken within the past 5 years (test early and submit scores to school code 1325)
- Application for admission and non-refundable application fee using the CASPA system
- IUPUI online graduate application for admission and $60 non-refundable application fee
- On campus interview
- 500 hours (paid or volunteer) of direct patient experience in at least two different health care settings within the past 5 years
- International applicants must meet additional requirements as determined by the IUPUI Office of International Affairs. For additional information, please see: http://iapply.iupui.edu/.

Graduate Record Examination Revisions

The GRE is being revised beginning August 1, 2011. The change will be beneficial to students and admission committees since the scores will differ by 1 point rather than the old scale of 10 points allowing for student comparisons to be based upon smaller score increments. The revision will also include improvements in the test questions to more closely align with the skill sets needed for graduate/professional study. For additional information, please see:

http://www.ets.org/gre/revised_general/know

We will accept current GRE scores or the revised scores, as long as they meet the 5 year rule, the choice is yours. The ETS Company will provide institutions with equivalency charts so scores can be compared for equal consideration. We suggest you view the link above to determine if you prefer to take the current test or the revised test.

For additional information see: http://shrs.iupui.edu/health_sciences/degrees/mpas-faq.php.

Master's Programs

Master of Science in Health Sciences (program currently under revision)

Master of Science in Nutrition and Dietetics

Master of Science in Occupational Therapy

M.S. in Health Sciences

Location of the Program

This program is housed on the Indiana University Purdue University at Indianapolis. However, a majority of the courses are offered online.

Description of purpose of the program

The Master of Science in Health Sciences is an interdisciplinary graduate degree offered through the Indiana University Graduate School. It is designed for health and rehabilitation professionals and educators interested in pursuing advanced education at the master's level. Graduates of the program will acquire advanced knowledge and understanding of current trends and issues, and the problem-solving skills to prepare them to assume leadership roles in practice and educational settings.

The program consists of a minimum of 36 credit hours of course work, including a required 6 hour project or thesis. The program curriculum consists of three components: (1) health science core courses to include preparation for project/thesis (21 credit hours); elective courses (9); and project/thesis (6). Most of the courses taken to satisfy the requirements of the master's degree can be used to fulfill course requirements for the Ph.D. in Health and Rehabilitation Sciences.

Admission Requirements

Due to the number of courses offered online only, students on a F1 or J1 student visa are not eligible for admission to this program.

Students accepted into the program must complete university, school, and program admission requirements. The minimum admission requirements are as follows:

1. A baccalaureate degree from an accredited institution (applicant must submit an official copy of all undergraduate transcripts).
2. Minimum cumulative undergraduate grade point average of 3.0 on a 4.0 scale.
3. At least one undergraduate statistics or research methods course completed with a grade of "B" or better.
4. Three letters of recommendation from those familiar with the applicant's academic and professional performance
5. 300 to 500 word personal statement of academic and professional goals; must include experience as a health and rehabilitation professional or educator.
6. If applicable, a TOEFL score of at least 550P or 213C or 79-80i.
7. Admission interview

Prior Course Work Applied Toward Degree Requirements

A maximum of 6 graduate credit hours earned at Indiana University before admission may be applied toward a degree. Upon the recommendation of the Health Sciences program director and with the approval of the School of Health and Rehabilitation Sciences Academic Studies and Research Development Committee, up to 8 credit hours of graduate work at other institutions may be transferred in partial fulfillment of degree requirements. No course may be transferred from another institution unless the course was completed with a grade of "B" or higher within five years before matriculation in the Master of Science degree program.

Curriculum

A total of 36 credit hours is required to complete the degree, allocated as follows:

Core/Required Courses (21 credit hours):

SHRS W150	Trends and issues in Health Sciences (Mushi-Brunt) *online course*	3
SHRS W520	Evidence Based Critical Inquiry in the Health Sciences (Mac Kinnon) *online course*	3
SHRS W550	Health and Rehabiliation Systems Across the World (Agho) *online course*	3
SHRS W625	Diversity Issues in Health and Rehabilitation Services (Buckner-Brown) *online course*	3
SHRS W661	Theories of Health Promotion/ Disease Prevention (Mushi-Brunt)	3
SHRS W667	Ethical Issues in Rehabilitation Services (Agho) (or equivalent) *online course*	3
NURS R505	Research Methods (or equivalent)	3

Electives (9 credit hours) to be determined in consultation with the program director

Examples:

SHRS W540	Patient Centered Outcomes Research (Mac Kinnon) *online course*	3
SHRS W562	Psychological Aspects of Disabilities (Voci)	3
SHRS W594	Administration of Health Sciences Education (Agho)	3
SHRS W640	Medical Aspects of Disabilities (Gupta)	3
SHRS W650	Global Perspectives in Nutrition, Health, Diseases, Disability (Ernst)	3
SHRS W660	Rehabilitation Theories and Application (Crabtree)	3
SHRS W662	Rehab Services in Health Care Systems and Delivery (Weaver) *online course*	3

Project or Thesis (6 credit hours)

SHRS W599	Thesis (Arranged)	6
	OR	
SHRS W600	Project in Health Sciences

E-mail: dlipker@iupui.edu

M.S. in Nutrition and Dietetics

Location of the Program

The program is located at the Indiana University-Purdue University at Indianapolis.

Description and Purpose of the Program

This graduate program, offered through the Indiana University Graduate School, is designed for registered dietitians. The objective of this program is to provide

an opportunity for registered dietitians to deepen their knowledge base, improve critical thinking skills, and develop research skills in nutrition and dietetics.

The curriculum is designed for the dietitian with a special interest in nutritional requirements and provision of medical nutrition therapy in acute and chronic conditions such as diabetes, or in the care of special populations such as children and preterm infants. Program affiliations throughout central Indiana provide the opportunity for the student to work with patient populations in both outpatient and inpatient settings as well as with the general public.

Course Requirements

Students are required to take graduate-level courses in biochemistry, statistics or biostatistics, and physiology. Other courses and clinical study (open only to students who are registered dietitians) may be selected from the graduate-level offerings of the Nutrition and Dietetics Department and from other schools and departments on the Indiana University-Purdue University Indianapolis campus.

Minimum Requirements for the Degree

To earn the M.S. degree, a minimum of 36 credit hours at the graduate level are required. Candidates for this degree may petition to apply up to 8 credit hours of graduate work from other institutions or programs to this degree. There are both thesis and non-thesis options.

Curriculum

A total of 36 credit hours is required to complete the degree. Candidates for this degree may petition to apply up to eight credit hours of graduate work from other institutions or programs to this degree. The M.S. in Nutrition and Dietetics with the thesis option requires 30 credits hours of course work and six credits of research. The M.S. in Nutrition and Dietetics without the theses requires 33 credit hours of course work and a three credit non-thesis problem. Students may choose between two areas of interest: either adult nutrition or pediatric nutrition.

The hours are allocated as follows:

Nutrition and Dietetics Core (15-16 credits)

Science Requirement (6 or 7 credits)

BIOC B500	Biochemistry	3 cr.
	and	
PHSL F503	Human Physiology	4 cr.
	OR	
BIOL 556	Physiology I	3 cr.
	and	
BIOL 557	Physiology II	3 cr.

Statistics and Research Methods (6 credits)

NURS R505	Measurement and Data Analysis	3 cr.
	OR	
GRAD G651	Introduction to Biostatics I	3 cr.
SHRS N563	Research Methods in Nutrition and Dietetics	3 cr.
	OR	
SHRS W520	Evidence Based Critical Inquiry in the Health Sciences	3 cr.
	OR	
GRAD G610	Topics in Translational and Implementation Research	3 cr.
SHRS N550	Human Nutritional Pathophysiology I	3 cr.

Choose one of the following areas of interest:

Pediatrics Nutrition (15-18 credits)

SHRS N570	Pediatric Nutrition	3 cr.
SHRS N572	Advanced Pediatric Nutrition	3 cr.
SHRS N576	Leadership Development in Pediatric Nutrition	3 cr.
	Electives	6-9 cr.

Adult Nutrition (15-18 credits)

SHRS N552	Human Nutritional Pathophysiology II	3 cr.
	Electives	12-15 cr.

Non-Thesis Problem or Thesis (3-6 credits)

SHRS N598	Research	3 cr.
	OR	
SHRS N598	Research	6 cr.

Admission

The School of Health and Rehabilitation Sciences offers the M.S. in Nutrition and Dietetics through the Indiana University Graduate School. Students accepted into the program must meet all the requirements of both the University Graduate School and the School of Health and Rehabilitation Sciences.

The minimum admission requirements are:

- a bachelor's degree from an accredited institution
- proof of dietetic registration
- a cumulative undergraduate GPA of at least 3.0 on a 4.0 scale
- an appropriate level of achievement on the Graduate Record Examination (GRE)
- for international students, a suitable level of achievement on the Test of English as a Foreign Language (TOEFL)

Applicants must submit the following:

- official undergraduate transcripts
- a 300- to 500-word personal statement of academic and professional goals
- three letters of recommendation from those familiar with the applicant's academic and professional performance
- official scores of the GRE and the GRE Writing Assessment Exam, taken within the last five years
- proof of dietetic registration

- for international students, official TOEFL scores

Grade Requirement

A minimum of a 3.0 (B) grade point average in graduate work is required for continuance in graduate study. If the grade point average of a student falls below 3.0 or the student is not making sufficient progress toward completion of the degree, the Health and Rehabilitation Sciences Academic Studies and Research Development Committee will review the student's record and recommend to the dean that the student be placed on probation.

Unless the student achieves a 3.0 grade point average or begins making satisfactory progress in the next semester of enrollment, the student ordinarily will not be allowed to continue in the graduate program. For more information about academic regulations, contact the program director.

For further information, contact:

Dawn Lipker, Student Enrollment Services Coordinator

dlipker@iupui.edu

M.S. in Occupational Therapy

- *Department Chair:* Associate Professor Thomas Fisher
- *Associate Professors:* Jeffrey Crabtree, Patricia Scott
- *Associate Professors*: Emeriti Cel Hamant, Nancy Lamport, T. Kay Carl, Carol Nathan, Erna Simek
- *Assistant Professors:* Arlene Schmid, Michael Justiss, CJ Liu
- *Clinical Assistant Professor of Occupational Therapy:* Fengyi Kuo
- *Lecturers:* Sharon Pape
- *Adjunct Faculty:* Sandra Morzorati, Elaine Ewing Fess, Maureen Hwys, Corie Chaplin, Robin Janson

Educational Program

This program is designed for students who do not have a degree or certificate in occupational therapy, but who have a baccalaureate degree in any major and are ready to apply for the entry-level graduate program in occupational therapy. The best undergraduate major is one in an area in which the student would enjoy working after receiving the undergraduate degree and should be selected based on the student's interests. The Master of Science in Occupational Therapy Program does not have a preference as to the major for the bachelor's degree as long as the prerequisite courses are completed.

Length of the Program

Two years, including summers.

Structure of the Professional Program

The academic and fieldwork level II portions of the curriculum are designed as full-time experiences.

Design of the Professional Curriculum

Students entering the Master of Science in Occupational Therapy Program will attend seven academic semesters. The curriculum content includes basic knowledge of occupational performance, disruption in occupational performance, technical skills, occupational therapy theory and practice, interpersonal communication, creative problem solving, research, understanding human occupation as it relates to health and wellness, and beginning professional practice (Fieldwork Level I). There are also Fieldwork II requirements and must be completed within 24 months of completing all academic course work. The curriculum content contains all of the subject matter required in an accredited occupational therapy program.

Additional Cost

In addition to regular university fees, students should expect to spend approximately $1,400 on textbooks while in the program. Students should be prepared to assume living and travel expenses associated with fieldwork experiences. Fieldwork II assignments may be out of state. The department will work closely with students with regard to fieldwork placements.

Opportunity for Students to Work

The class schedule for full-time occupational therapy students is rigorous, although part-time employment during the evening or weekend hours is possible for some students.

Program Facilities

The Occupational Therapy Program offices are located on the third floor of Coleman Hall. Classrooms are located on the second and ground floors of Coleman Hall and in other buildings on the IUPUI campus.

Location of Fieldwork Sites

Fieldwork Level I occurs in a variety of settings, including hospitals, rehabilitation centers, nursing homes, school systems, community sites, and other health and wellness facilities in Indiana. Fieldwork Level II is directed toward age ranges (children, young adults, or older adults) and may be located throughout the United States, depending on the student's individual assignment. Before starting fieldwork experience, students may be required to undergo drug testing, and/or a criminal background check.

Accreditation

The Occupational Therapy Program is fully accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA), located at:

4720 Montgomery Lane
P.O. Box 31220
Bethesda, MD 20824-1220
(301) 652-AOTA.

Applicants should be advised that as of January 1, 2007, occupational therapy educational programs will be accredited only at the post-baccalaureate degree level.

Admission

Students accepted into the program must complete the program admission requirements listed below before the first day of classes. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class

Cumulative GPA, prerequisite GPA, baccalaureate degree, and completion of required observation hours.

Class Size
Up to 36 students are admitted for each summer II semester.

Application Deadline
January 20 of the year before desired entry into the program.

Prerequisite Course Requirements
In order to be eligible to enter the program, the candidate must have a baccalaureate degree and must have completed all prerequisite courses while maintaining at least a 3.0 cumulative GPA.

Prerequisite Courses: Minimum Credits
Behavioral Science Courses

Abnormal Psychology/ Psychopathology	3 cr.
Human Growth (birth through death) and Development/Lifespan Development	3 cr.
Intro to Sociology or Anthropology	3 cr.
Intro to Psychology	3 cr.

Biological Science Courses (with a lab)

Human Anatomy (course description required)	5 cr. *
Human Physiology (course description required)	5 cr.*

Other Courses

Medical Terminology	1-2 cr.
Statistics	3 cr. *

*Human Anatomy, Human Physiology, and Statistics must be completed no more than seven years before date of entry.

Minimum Cumulative GPA Requirement
A 3.0 on a 4.0 scale is required at the time of program application and must be maintained throughout the admissions process. For purposes of admission only, the grades for all courses from any university (whether transferred into the IU system or not) will be used in the calculation of the admission GPA.

The IU grading system will be used to figure admission GPA (e.g., A = 4.0, A = 3.7, etc.). Courses that are transferred into IU from another university without the grade listed on the IU transcript will have the grade from the originating university used to figure the GPA. Credits from a university using the quarter system will be converted to count as semester credits.

Minimum Grade Requirement in a Stated Prerequisite Course
C (2.0 on a 4.0 scale)

Minimum Grade Requirement in Repeated Courses
Applicants whose cumulative GPA is at least 2.0 on a 4.0 scale and who have repeated courses may petition to have their admission grade point average recalculated. The recalculation will use the most recent grade of the repeated course. This repeat option includes the use of the Indiana University FX option and is applied with the following restrictions: it can be used for a total of no more than 15 credits; the grade will be deleted not more than twice for a given course; and each attempt will count toward the 15 credit hours. If more than 15 credit hours are repeated, the applicant will determine which of the repeated courses are to be deleted. The petition must be attached to the application.

Forgiveness Policy
Applicants whose GPA is at least 2.0 on a 4.0 scale may petition the program for up to one year (fall, spring, and summer) of academic bankruptcy based on compelling nonacademic reasons. The bankrupted semesters must be consecutive.

Academic bankruptcy is for admission purposes only and in no way affects the university's official GPA. Course work completed in a semester that has been bankrupted for admission purposes cannot be used for the fulfillment of program prerequisites or counted as credit hours toward the degree. The petition must be attached to the application.

Clinical Observation Hours
All applicants must complete a minimum of 12 observation hours in clinical occupational therapy. Three different facilities (e.g., nursing home, hospital, school system, long-term care facility) need to be visited. Forms for clinical observation experiences can be found at the Department of Occupational Therapy.

International Student Applicants
There are special application procedures for those who are not citizens of the United States or who have had their previous schooling outside of the United States. International student applicants interested in the Master of Science in Occupational Therapy Program should obtain an international application packet from the IUPUI Office of International Affairs or from the Web at www.international.iupui.edu. Because of the extra procedures required to evaluate foreign credentials, there is an additional application fee for international students.

International student applicants (except those whose native language is English) are expected to submit results of the Test of English as a Foreign Language (TOEFL). The TOEFL is given worldwide throughout the year. IUPUI's school code for the TOEFL application is 1325. The Occupational Therapy Program faculty has established a minimum TOEFL test score of 550 (paper-based) or 200 (computer-based) for program eligibility.

All newly admitted international students are also required to take the IUPUI English (EAP) examination administered by the IUPUI EAP Program and Office of International Affairs before registration for classes. Students are required to take any EAP courses that are determined necessary as a result of this testing until they have fulfilled university and program requirements for English proficiency.

Curriculum

Semester 1, Year 1, Summer Session

T560	Introduction to Occupational Science and Occupational Therapy	3 cr.
T571	Kinesiology for the Occupational Therapist	3 cr.
		6 cr.

Semester 2, Year 1, Fall Semester

T542	Occupations of Infants and Children	5 cr.
T557	Group Process in Occupational Therapy	2 cr.
T561	Theoretical Foundations of Occupational Therapy	3 cr.
T567	Research and Occupational Therapy	3 cr.
T575	Applied Neuroscience for the Occupational Therapist	4 cr.
		17 cr.

Semester 3, Year 1, Spring Semester

T525	Reflective Seminar I	1 cr.
T552	Occupations of Adolescents and Young Adults	5 cr.
T558	OT Management in Today's Health and Community Systems	3 cr.
T568	Evidence-Based Research in Occupational Therapy	3 cr.
T572	Pathophysiology: Impact of Conditions on Occupations	3 cr.
		15 cr.

Semester 4, Year 2, Summer

Session I (May and June)		
Fieldwork Level II A (8 weeks)		
T695 **OR** T696	Infants and Children **OR** Adolescents and Young Adults	5 cr. each
Session II (July and August)		
Fieldwork Level II B (8 weeks)		
T696 **OR** T695	Adolescents and Young Adults **OR** Infants and Children	5 cr. each
		5 cr.

Semester 5, Year 2, Fall Semester

T625	Reflective Seminar II	1 cr
T662	Occupations of Adults and Older Adults	5 cr.
T657	Psychosocial Dimensions of Therapeutic Relationships and Occupations	2 cr.
T580	OT Elective **AND**	3 cr.
T667	Non-thesis OT Project	3 cr.
T701	**OR** OT Thesis	6 cr.
		16 cr.

Semester 6, Year 2, Spring Semester

T655	Technologies in OT (4 weeks-January)	3 cr.
T695 T696 T697	Fieldwork Level II A, B, **OR** C Infants and Children **OR** Adolescents and Young Adults **OR** Adults and Older Adults (8 weeks—February and March)	5 cr. each
T658	Professional Trends and Issues in OT	2 cr.
T580	OT Elective	3 cr. (optional)
T 668	Non-Thesis OT Project Completion **OR**	2 cr.
T 702	OT Thesis Completion	2 cr.
		12 cr.

Semester 7, Year 2, Summer I Semester

T695 T697	Fieldwork Level II A, B, **OR** C Adolescents and Young Adults Adults and Older Adults	5 cr. each
		5 cr.

*Expected graduation: June or August, depending on when the student completes the thesis, project, or fieldwork.

Additional Information

- For each additional semester necessary for completion of thesis or project, the student will enroll in 1 credit
- Non-thesis option requires the student to take one 3 credit elective and participate in a scholarly project
- Thesis option does not require an elective
- Fieldwork I and Orthotics are integrated into the occupations courses
- Areas of occupations (ADL, IADL, Education, Work, Leisure, Play, Sleep/Rest, and Social Participation) are addressed in all three occupations courses
- Students may elect to take a specialty Fieldwork Level II a fourth rotation (8 weeks)

Prior to entering the Occupational Therapy Program, admitted students are required to have:

- CPR certification (successful completion of a health care provider CPR course for infants, children, and adults that includes a written examination and skills assessment)
- Current immunizations
- TB test
- Criminal background check
- Personal health insurance

If a documented physical problem makes a person incapable of performing CPR, the person must be able to pass the required writted examinations.

Fellowships

In addition to financial assistance obtained through the IUPUI Office of Student Financial Aid, fellowship opportunities are available through the Department of Occupational Therapy. Following admission into the Master of Science in Occupational Therapy Program, students may seek information from the chair of the Department Fellowship/Scholarship Committee regarding fellowship opportunities specific to occupational therapy.

For further information, contact:

Professor Thomas Fisher, Chair
IUPUI Department of Occupational Therapy
Coleman Hall 311
1140 W. Michigan Street
Indianapolis, IN 46202-5119

Phone: (317) 274-8006

Master of Physician Assistant Studies

This graduate program, offered through the University Graduate School, is currently seeking accreditation. For further information, contact:

Professor Joyce Mac Kinnon, Ed.D.
(317) 274-1029
jmackinn@iupui.edu

Doctor of Physical Therapy

- *Department Co-Chairs:* Joyce Mac Kinnon, Peter Altenburger
- *Professor Emerita:* Ruth Ladue
- *Professor:* Joyce MacKinnon, Lisa Riolo
- *Associate Professor:* Tracy Dierks, Rebecca Porter, Stuart Warden
- *Associate Clinical Professor of Physical Therapy:* Mary T. Loghmani
- *Assistant Professors:* Tracy Dierks, Robyn Fuchs, Stuart Warden, Peter Altenburger
- *Assistant Clinical Professors of Physical Therapy:* Amy Bayliss, Valerie Strunk
- *Director of Clinical Education:* Valerie Strunk

Educational Program

Length of the Program

The course of study is 35 months (103 graduate credit hours) of graduate professional course work.

Structure of the Program

The program is presented in a full-time, day format only.

Design of the Professional Curriculum

The physical therapy curriculum is organized so that the lecture and laboratory course work is integrated with patient care experiences. Full-time clinical education experiences of varying length occur throughout the course of study. The Physical Therapy Program course of study develops an understanding of normal and abnormal physical structure and function. The curriculum focuses on the management of patient problems rather than procedures. The graduate of the Physical Therapy Program demonstrates competencies in evidence-based physical therapy practice parameters and the basic skills of critical inquiry, administration, and patient education. Additionally, the graduate shows the ability and interest to continue professional development.

Opportunity for Students to Work

Because of the intense nature of the program, students are not encouraged to seek outside employment during their enrollment.

Additional Cost

In addition to Physical Therapy Program tuition and university fees, students should expect to pay program-related expenses. Contact the program office in Coleman Hall for a current cost sheet.

Facilities

Physical Therapy Program offices are located in Coleman Hall. Lecture and laboratory classes are located in Coleman Hall, Long Hall, and other locations on the IUPUI campus.

Accreditation
Indiana University has received continuing accreditation for the postbaccalaureate professional education program from the Commission on Accreditation in Physical Therapy Education (CAPTE).

Admission

Students accepted into the program must complete the school's admission requirements and the following Physical Therapy Program-specific admission requirements before the first day of classes. Admission to the professional program is competitive and selective; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria Used for Selection of Class
Admission into the Indiana University Doctor of Physical Therapy Program is based on the applicant's overall GPA, the applicant's GPA in mathematics and science prerequisite courses, the applicant's GRE scores, the applicant's suitability for the physical therapy profession as reported by volunteer experience supervisor evaluation of generic abilities, and a statement of personal values and purpose for attending Indiana University's Doctor of Physical Therapy Program.

Class Size
38 students each fall semester.

Specific Requirements
The following admission policies apply to the Indiana University Doctor of Physical Therapy Program.

Total Number of Prerequisite Credit Hours
Applicants may have no more than two Doctor of Physical Therapy Program prerequisite courses unfinished at the time of program application (see below). No waivers for degree completion or course prerequisites will be granted by the Physical Therapy Program.

Minimum Cumulative GPA
3.2 on a 4.0 scale. The minimum cumulative GPA must be met at the time of application and maintained until admission.

Minimum Specific GPA
3.2 on a 4.0 scale in all credit hours attempted in prerequisite courses. The minimum GPA must be met at the time of application and maintained until admission.

Minimum Grade Requirement in a Stated Prerequisite Course
C (2.0 on a 4.0 scale).

Technical Standards
Students are required to meet technical standards established by the School of Health & Rehabilitation Sciences. These standards are available upon request.

Medical Requirements
Basic immunizations as determined by Student Health Services must be completed by the first day of classes. Students must demonstrate proof of health insurance before entry into the program and must maintain health insurance throughout their enrollment.

Volunteer Experience
In addition to prerequisite course work, students must complete observational, volunteer, or other work experiences in both hospital inpatient and outpatient physical therapy settings (minimum of 20 hours in each setting for a combined total of 40) in order to appreciate the differences in physical therapists' responsibilities in each setting. Each experience must be of a sufficient length of time to enable the supervising physical therapist to adequately complete the IU D.P.T Program's Generic Abilities Assessment form included as part of the application portfolio.

Additional Requirements
Accepted applicants, conditionally accepted applicants, and applicants placed on the alternate list must complete all requirements for their baccalaureate degree before enrolling in the Doctor of Physical Therapy Program and maintain the following:

- a 3.0 grade point average in each semester following notification of their status
- a minimum cumulative GPA of 3.2 on a 4.0 scale in all attempted credit hours
- a minimum GPA of 3.2 on a 4.0 scale in all credit hours attempted in prerequisite courses

International Student Applicants
There are special application procedures for those who are not citizens of the United States or who have had previous schooling outside of the United States. International student applicants interested in the Doctor of Physical Therapy Program should obtain an international application packet from the IUPUI campus Office of International Affairs or from the Web at www.international.iupui.edu. Because of the extra procedures required to evaluate foreign credentials, there is an additional application fee for international students.

International student applicants (except those whose native language is English) are expected to submit results of the Test of English as a Foreign Language (TOEFL). The TOEFL is given worldwide throughout the year. IUPUI's school code number for the TOEFL application is 1325. The Physical Therapy Program faculty has established a minimum TOEFL test score of 628P or 327C or 113I is required. This policy is waived if the applicant has received an undergraduate degree from an accredited school in the United States by the time of entrance into the program. All newly admitted international students are also required to take the IUPUI English (ESL) examination administered by the IUPUI ESL Program and Office of International Affairs before registration for classes. Students are required to take any ESL courses that are determined necessary as a result of this testing until they have fulfilled university and program requirements for English proficiency.

Curriculum

Prerequisites
Before entering the D.P.T. program, students must have completed requirements for their baccalaureate degree, in any major, and the following undergraduate prerequisite courses. Students should consult with their academic advisors for appropriate courses and semester sequence

in order to complete prerequisites. Listed below are prerequisite minimums.

Introductory Statistics	1 semester
Human Anatomy	1 semester with lab
Human Physiology	1 semester with lab
Chemistry	2 semesters with labs
Physics	2 semesters with labs
Introductory Psychology	1 semester
Human Lifespan Development	1 semester
(Note: Level of the anatomy, physiology, chemistry, and physics courses must be appropriate for science majors.)	

Students must demonstrate proficiency in medical terminology before entering the professional program. Proficiency can be demonstrated through formal course work, online instruction with certificate of completion, or self study with departmental examination. Students must also be competent writers and demonstrate computer literacy, including knowledge of e-mail, the Internet, database searches, and spreadsheet and word processing capabilities.

Semester 1, Year 1, Fall Semester

P510	Clinical Integration	1 cr.
P511	Framework for Clinical Decision Making & Professionalism	2 cr.
P513	Functional Anatomy & Clinical Biomechanics	4 cr.
P515	Introduction to Physical Therapy Examination & Interventions I	3 cr.
D850	Gross Anatomy	8 cr.
	Total:	18 cr.

Semester 2, Year 1, Spring Semester

P520	Clinical Integration II	1 cr.
P526	Introduction to Physical Therapy Examination & Interventions II	5 cr.
P531	Clinical Pathophysiology I	4 cr.
P534	Introduction to Motor Sciences	2 cr.
P570	Pharmacology for Physical Therapists	3 cr.
P646	Therapeutic Interventions	4 cr.
	Total:	19 cr.

Semester 3, Year 1, Summer Session 1 (6 weeks)

P599	Clinical Education I	3 cr.
	Total:	3 cr.

Semester 4, Year 1, Summer Session 2 (4 weeks)

P514	Evidence-Based Critical Inquiry I	2 cr.
	Total:	2 cr.

Semester 5, Year 2, Fall Semester

P533	Lifespan Motor Development & Motor Control	2 cr.
P535	Clinical Pathophysiology II	4 cr.
P643	Psychosocial Dimensions of Physical Therapy Practice	2 cr.
P645	Evidence Based Critical Inquiry II	2 cr.
D852	Neuroscience and Clinical Neurology	5 cr.
	Total:	15 cr.

Semester 6, Year 2, Spring Semester

P524	Cardiopulmonary Practice Patterns	3 cr.
P541	Musculoskeletal Practice Patterns I	4 cr.
P641	Neurorehabilitation I	4 cr.
P650	Integumentary Practice Patterns	2 cr.
P680	Health Promotion and Community Outreach	2 cr.
	Total:	15 cr.

Semester 7, Year 2, Summer Session 2 (6 weeks)

P532	Legal & Ethical Issues in Physical Therapy	2 cr.
P695	Clinical Education II	3 cr.
	Total:	5 cr.

Semester 8, Year 3, Fall Semester

P622	Musculoskeletal Practice Patterns II	4 cr.
P642	Neurorehabilitation II	4 cr.
P660	Selected Topics in Physical Therapy	3 cr.

P661	Prosthetic & Orthotic Interventions	2 cr.
P664	Administration & Management ofPhysical Therapy Services	3 cr.
	Total:	16 cr.

Semester 9, Year 3, Spring Semester

P696	Clinical Education III (10 weeks)	5 cr.
P697	Clinical Education IV (8 weeks)	4 cr.
P675	Capstone Seminar	1 cr.
	Total:	10 cr.

Total Credits: 103

Optional Course

Electives:

- P685 Topics in Sports Rehabilitation 1 cr.
- P685 Instrumented Assisted Soft Tissue Mobilization (GRASTON) 1 cr.
- P699 Clinical Specialty Experience 1 cr.

Students must successfully complete and maintain current health care professional level CPR certification before beginning clinical education experiences.

Fellowships

The Constance Brown Memorial Fellowship, established in memory of a deceased classmate, is awarded to an outstanding first-year physical therapy student, as are the Patricia Rae Evans and the Stephen O. Jones Fellowships. The Katherine Belzer Fellowships are awarded to outstanding first-year and second-year students. The Frances C. Ekstam Fellowship, in honor of the Physical Therapy Program's first director, is awarded to an outstanding third-year physical therapy student. The Zachary H. Gregory Emerging Leadership Scholarship, established in memory of Zachary Gregory, DPT Class of 2010, is awarded to a third-year student who demonstrates emerging traits of both academic and professional leadership.

Awards

The program recommends to the university superior academic students for degrees awarded with distinction. The William D. Porter Award is presented to a D.P.T. graduate selected by faculty as having demonstrated excellence in both the study and clinical application of neurological rehabilitation techniques. The award is in recognition of Mr. William D. Porter, who contributed to the education of innumerable Indiana University physical therapy students through his textbook photographs and classroom audiovisual materials.

Graduation Requirements

Satisfactory completion of 103 graduate credit hours, including clinical education. All course work must be completed in compliance with the program and school's academic and professional policies.

For further information, contact:

Dr. Peter Altenburger, Co-Chair, Department of Physical Therapy
Coleman Hall 120
Indianapolis, IN 46202-5119
(317) 278-1875

Doctoral Programs

Doctor of Philosophy in Health and Rehabilitation Sciences

Doctor of Physical Therapy

Ph.D. in Health and Rehabilitation Sciences

Degree Objective

To develop scholars who, through their leadership and original research, will contribute to the knowledge base of health and rehabilitation sciences. Graduates will be able to be employed in universities, health care facilities and industries that focus on teaching others and advancing knowledge in health and rehabilitation.

Admissions Policy

Requirements, in addition to those of the Graduate School, include:

- Completion of a post baccalaureate degree in health and rehabilitation sciences or in a related health care discipline, or completion of a baccalaureate degree with professional experience
- Resume or curriculum vitae
- A 300-500 word personal statement of learning objectives, research interest, and leadership potential
- Competitive scores (minimum of 500 recommended) on the verbal and quantitative sections, and a score of 3.5 or better on the analytical writing section of the GRE completed within 5 years before matriculation into the Ph.D. program. Successful completion of a post graduate degree will waive the matriculation time period
- Interview

A maximum of 30 semester credits may be transferred from the student's post baccalaureate course work as approved by the student's Advisory Committee and the University Graduate School. No course may be transferred from another institution unless the course was completed with a grade of "B" or higher.

Any exceptions to the admissions policies must be requested in writing to the Ph.D. Admissions Committee.

Curriculum Requirements

The minimum requirements for the Ph.D. are 90 credit hours of advanced study, of which 30 semester credits may be transferred from the student's post-baccalaureate degree of study, as approved by the student's Advisory Committee and the University Graduate School.

The credits for the Ph.D. are distributed in the following categories:

Health and Rehabilitation Sciences Core Curriculum (12 credits in required courses)

W660	Rehabilitation Theories and Applications	3 cr.
W661	Theories of Health Promotion and Disease Prevention	3 cr.
W662	Rehabilitation Services in Healthcare Systems and Delivery	3 cr.
W672	Teaching Practicum within area of specialization	3 cr.

Health and Rehabilitation Sciences Concentration (30 credits)

Students will select one of the three areas of concentration identified by the Institute of Medicine.

Students must declare an area of concentration and identify appropriate coursework within the SHRS and across campus in consultation with their Advisory Committee. Areas of concentration include:

- Pathophysiology and Impairment Research
- Functional Limitations/Functional Participation Research
- Health Services Research

Research Core (42 credits)

GRAD-G505	The Responsible Code of Research	1 cr.
GRAD-N802	Techniques of Effective Grant Writing	3 cr.
NURS-W540	Writing for Publication	3 cr.
SHRS-W670	Research Practicum within concentration	6 cr.
	Statistics and Research Design courses (courses must be approved by the student's Advisory Committee as part of the student's plan of study)	9 cr.
	Dissertation	20 cr.

Electives (6 credits)

Minor

Because of the interdisciplinary nature of the Ph.D. curriculum, each student will complete 6-12 credits in an external area, and thus satisfy the minor requirement for the Ph.D. Specialized minors may be constructed on a case-by-case basis, if needed for a particular student's program.

Comprehensive Examination

Near, and usually in, the last semester of course work, students will be required to take a comprehensive written qualification examination in health and rehabilitation sciences, prepared by the student's Advisory Committee. Only students who pass the exam may continue in the program. Students may be able to retake the examination one time if they fail to pass the first time. The retake must occur within six months of the original examination.

Degree Programs

Doctoral Programs

- Doctor of Philosophy in Health and Rehabilitation Sciences
- Doctor of Physical Therapy

Master's Programs

- Master of Physician Assistant Studies (currently seeking accreditation)
- Master of Science in Health Sciences
- Master of Science in Nutrition and Dietetics
- Master of Science in Occupational Therapy

Bachelor's Programs

- Bachelor of Science in Health Sciences

Other Programs

- Dietetic Internship
- e-Learning Graduate Certificate Program in Leadership in Clinical Pediatric Nutrition
- Leadership in MCH Nutrition (Pediatric Focus) Fellowship and Certificate Program

Departments

Department of Health Sciences

Department of Nutrition and Dietetics

Department of Occupational Therapy

Department of Physical Therapy

Department of Health Sciences

We offer a range of degree programs from the baccalaureate through the doctorate.

Our bachelor's degree in Health Sciences program incorporates the courses already offered through our three undergraduate certificate programs:

- Gerontology
- Global Health and Rehabilitation Studies
- Rehabilitation and Disabilities Studies

For more information on the undergraduate programs please contact:

Dawn Lipker, Student Enrollment Services Coordinator

Phone: (317) 274-7238
Email: dlipker@iupui.edu

Department of Nutrition and Dietetics

The Department of Nutrition and Dietetics offers four post baccalaureate programs and three certificate programs- the Dietetic Internship Program, the e-Learning Graduate Certificate Program in Leadership in Clinical Pediatric Nutrition, and the Leadership in MCH Nutrition (Pediatric Focus) Fellowship Program, and the Master of Science in Nutrition and Dietetics.

The Dietetic Internship program may be completed as part of the Master of Science program. However, the Dietetic Internship program may not be completed concurrently with either of the pediatric nutrition certificate programs. The pediatric nutrition certificate programs may be completed as part of the Master of Science in Nutrition and Dietetics. In addition to graduate course work, the Department of Nutrition and Dietetics also offers one undergraduate nutrition class.

- *Chair:* Professor of Clinical Nutrition Jacquelynn O'Palka
- *Professors Emeriti:* Sue Brady, Bernice Hopp, Ada Marie Van Ness
- *Professors:* Karyl Rickard
- *Associate Professor:* Judith Ann Ernst
- *Associate Professor in Clinical Nutrition and Dietetics:* Sara Blackburn
- *Administrative Specialist/Coordinator of Maternal Child Health Nutrition Program:* Deborah Abel

Department of Occupational Therapy

An educational program in occupational therapy is located on the Indiana University-Purdue University Indianapolis campus.

Description of the Profession

Occupational therapy is the art and science of assisting people to do those activities/occupations that are important to them despite impairment, disability, or handicap. In this context, "occupation" refers to all of the everyday activities that occupy people's time and give meaning to their lives, primarily activities of daily living, education, work, play, and leisure (AOTA, 2002). Occupational therapists can work in mental health, pediatrics, geriatrics, physical disabilities, community wellness programs, work programs, or other specialty areas.

Graduates of the Program

The postbaccalaureate professional degree program in occupational therapy is designed to prepare the graduate to meet professional standards for occupational therapy practice. Upon completion of the program, a graduate will be expected to demonstrate entry-level competence in basic knowledge and application of physical, behavioral, and basic sciences to the practice of occupational therapy.

Graduates of the program will be eligible to sit for the National Certification Examination for the Cccupational Therapist administered by the National Board for Certification in Occupational Therapy (NBCOT). After successful passage of this exam, the individual will be an Occupational Therapist, Registered (O.T.R.).

Credential Required to Practice

- O.T.R. (Initial Occupational Therapist Registered)

Licensure Requirements to Practice

All states have laws requiring practice. Graduates must take the responsibility to ascertain and conform to the specific requirements of the state in which they plan to practice.

Department of Physical Therapy

An educational program in physical therapy is located on the Indiana University-Purdue University Indianapolis campus.

Description of the Profession

As members of the health care team, physical therapists help restore clients to normal function of the musculoskeletal, neuromuscular, integumentary, cardiovascular, and pulmonary systems through interventions including therapeutic exercise, physical agents, and assistive devices. The client's physical therapy needs are determined through evaluation and examination of muscle strength and tone, joint status, posture, sensory status, functional mobility, exercise tolerance as it relates to cardiorespiratory status, skin condition, pain, and other medical conditions that impair physical function.

Physical therapists are concerned with health promotion and disease prevention, as well as restoration of function following disease, injury, or loss of a body part. In addition to patient care, the physical therapist participates in administrative, teaching, and research activities and provides consultative services. Physical therapists work in hospitals, outpatient facilities, industrial clinics, governmental and voluntary health agencies, educational settings, extended care facilities, and private practice settings.

Graduates of the Program

The educational experiences of the Physical Therapy Program curriculum are designed to graduate a physical therapist with skills as a generalist. Graduates of the program are eligible to apply for licensure in the state in which they will practice.

Credential Required to Practice

- P.T. (Physical Therapist)

Licensure Requirements to Practice

All states require that an individual graduate from an accredited physical therapy program and successfully complete the National Physical Therapy Licensure Examination in order to practice as a physical therapist.

Academic Policies & Procedures

Withdrawal and Readmission

A student may be readmitted to the school after withdrawal as follows:

Temporary Withdrawal

Students in good standing who voluntarily and temporarily withdraw from a program assume temporary inactive status with the School of Health and Rehabilitation Sciences. At the time of departure, it is the student's responsibility to arrange, in writing, a continuation agreement with the individual program director. The student is allowed to reenroll as specified in the

continuation agreement. The student must meet any specific academic/clinical requirements associated with reenrollment under the continuation agreement. Students failing to reenroll as specified in the continuation agreement are subject to dismissal from the School of Health and Rehabilitation Sciences.

Other Withdrawal

A student who withdraws without arranging in writing for a continuation agreement with the program director or fails to enroll in any semester will not be allowed further enrollments in the school and will be considered as not making satisfactory progress toward a degree. Such students who want to reenroll must file an application for admission and will be considered new applicants. New prerequisites and standards must be met. These students may be considered for advanced standing in the program provided the completed work meets the current standards of the program.

Student Rights and Responsibilities

Application to and enrollment in the university constitute the student's commitment to honor and abide by the practices and policies stated in the university's official announcements, bulletins, handbooks, and other published materials and to behave in a manner that is mature and compatible with the university's function as an institution of higher learning. The Indiana University Code of Student Rights, Responsibilities, and Conduct is available in electronic format. Students are expected to read this document and, by their enrollment, agree to its contents and to additional School of Health and Rehabilitation Sciences statements that appear below.

Academic Advising

The School of Health and Rehabilitation Sciences student enrollment services director is available to assist students who are working on the prerequisites for a professional program. Once admitted to a professional program, students are advised by faculty within the program. It is the student's responsibility to seek counseling and guidance. The student is responsible for planning a program to meet degree requirements.

Appeals

The School of Health and Rehabilitation Sciences abides by the appeals procedures discussed in the Indiana University Code of Student Rights, Responsibilities, and Conduct. Students may obtain a copy of the school's Appeals Policy and Procedure from any of the school's administrative offices.

Attendance

Students are responsible for complying with all attendance requirements that may be established by the program faculty.

Clinical Affiliations

Clinical affiliations (fieldwork experiences) are required in most School of Health and Rehabilitation Sciences programs. The program faculty are responsible for the selection, approval, and assignment of clinical experiences. Although individual student needs and desires will be recognized, final placement decisions are made by the program faculty. Students are responsible for transportation, fees, and selfsupport, and for following the rules and regulations of the center(s) to which they are assigned. In addition, student conduct must be consistent with the standards of the university and the profession.

Degree Applications

Each fall students preparing to graduate during the following calendar year must file an Intent to Graduate form in the office of the program in which they are enrolled. Program faculty then certify the student's satisfactory completion of degree requirements. If changes in the anticipated date of degree completion occur, students must consult their faculty advisor and file an updated Intent to Graduate form.

Financial Aid

A student may seek financial assistance through the IUPUI Financial Aid Office. In addition, assistance may be available through professional associations and other external groups and agencies.

Costs

Students are responsible for the following costs:

- **Fees and Tuition:** Fees and tuition are established annually by the Trustees of Indiana University.
- **Books and Supplies:** Books and supplies are determined by the program.
- **Uniforms:** During clinical/fieldwork experiences, students must adhere to the dress code requirements of the program and training site. Students are responsible for providing their own uniforms.
- **Transportation:** Students are responsible for travel and lodging costs associated with clinical/fieldwork experiences.

Contact the program of interest for a current cost sheet.

Liability Insurance

All students participating in required fieldwork experience are covered by the university's medical malpractice insurance. When requested, students may be required to purchase and show proof of general liability insurance before being certified to begin the clinical experience.

Health

Before the beginning of the professional program, students are required to demonstrate proof of immunization for tetanus and diphtheria, rubella, rubeola (measles), mumps, varicella (chicken pox), and hepatitis. All students must have had a PPD tuberculin skin test within the last three months. Students may be required to complete a physical examination (see program-specific requirements). All students must show proof of health insurance before beginning the professional program.

International Students

Foreign nationals enrolled in the school have the same rights and responsibilities as all other students. International students should consult the IUPUI Office of International Affairs.

Orientation

School of Health and Rehabilitation Sciences programs may require students to attend orientation programs before the beginning of the professional courses. Students are responsible for attending these sessions and for the program-specific policies and standards distributed and discussed at the sessions.

Professional Conduct

Students are responsible for exhibiting conduct appropriate to their professional training and education. Each program distributes standards and policies of appropriate professional conduct at the time of program orientation.

Registration and Record Changes

It is the student's responsibility to enroll in each required academic session and satisfactorily complete all courses required for the degree. Faculty are available to provide academic advising.
Students are responsible for filing the necessary Student Record Change form with the School of Health and Rehabilitation Sciences Office of Academic and Student Affairs in Coleman Hall 120 as soon as possible following a change of name or permanent address. Additional information regarding degree requirements and academic standards may be found elsewhere in this bulletin.

Credentials/Licensure

Students completing any of the professional programs are qualified to sit for the appropriate licensure and/or credentialing examinations. Contact the program director for further information.

Student Organizations & Services

School of Health and Rehabilitation Sciences Alumni Association

The School of Health and Rehabilitation Sciences Alumni Association is an officially recognized constituent member of the Indiana University Alumni Association. Active membership is open to all graduates of School of Health and Rehabilitation Sciences programs.

Departmental Chairpersons

- Health Sciences, Joyce Mac Kinnon, Ed.D.
- Nutrition and Dietetics, Jacquelynn O'Palka, Ph.D.
- Occupational Therapy, Thomas Fisher, Ph.D.
- Physical Therapy, Peter Altenburger, Ph.D., Joyce Mac Kinnon, Ed.D.

Faculty Emeriti

- Brady, (Mary) Sue, D.M.Sc. (Indiana University, 1987), R.D. (1968), Professor Emerita of Nutrition and Dietetics
- Carl, T. Kay, B.S. (Indiana University, 1967), O.T.R. (1967), Assistant Professor Emerita of Occupational Therapy
- Hamant, Celestine, M.S. (Butler University, 1971), O.T.R. (1964), Associate Professor Emerita of Occupational Therapy
- Hopp, Bernice, M.S. (Indiana University, 1962), Professor Emerita of Nutrition and Dietetics
- Irwin, Louise, B.S. (Purdue University, 1939), Professor Emerita of Nutrition and Dietetics
- Ladue, Ruth A., M.A. (Stanford University, 1967), P.T. (1945), Assistant Professor Emerita of Physical Therapy
- Lamport, Nancy, M.S. (Butler University, 1984), O.T.R. (1953), Associate Professor Emerita of Occupational Therapy
- Nathan, Carol D., Ed.D. (Indiana University, 1988), O.T.R. (1958), F.A.O.T.A. (1979), Associate Dean of the Faculties and Associate Professor Emerita of Occupational Therapy
- Simek, Erna, M.H.A. (Washington University, 1954), O.T.R. (1944), Associate Professor Emerita of Occupational Therapy
- Van Ness, Ada Marie, M.S. (Ohio State University, 1962), Assistant Professor Emerita of Nutrition and Dietetics

Faculty

- Abel, Deborah, R.D., Administrative Specialist/ Coordinator of the Maternal Child Health Nutrition Program, B.S. Indiana University (PA) 1978, M.S. Indiana University (PA) 1990, Pediatric Certificate Program, Indiana University at Indianapolis, 2003
- Agho, Augustine; Professor; B.A., Alaska Pacific University, 1983; M.H.A., Govenors State University, 1985; Ph.D., University of Iowa, 1989.
- Altenburger, Peter, Ph.D., P.T., Clinical Assistant Professor of Physical Therapy (Tenure Track); B.S., University of California, Los Angeles, 1990; M.P.T., University of Miami, 1993; Ph.D., University of Nevada, Las Vegas, 2007
- Bayliss, Amy, D.P.T., P.T., Clinical Assistant Professor of Physical Therapy; B.S., Otago University (New Zealand), 1992; D.P.T., Rocky Mountain University of the Health Professions, 2003
- Blackburn, Sara A., R.D., Associate Professor of Clinical Nutrition and Dietetics; B.S., Purdue University, 1972; M.S., Purdue University, 1973; D.Sc., Boston University, 1980
- Crabtree, Jeffrey, O.T.R., F.A.O.T.A., Associate Professor of Occupational Therapy; B.S., University of Washington, 1975; M.S., San Francisco State University, 1992; O.T.D., Creighton University, 1999

- Dierks, Tracy, Ph.D., Associate Professor, Department of Physical Therapy; B.S., University of Nebraska, 1999; M.S., University of Nebraska, 2001; Ph.D., University of Delaware, 2005
- Ernst, Judith Ann, R.D., Associate Professor of Nutrition and Dietetics; B.S., University of Illinois, 1975; R.D. Dietetic Traineeship (Jefferson City, Missouri), 1977; M.S., Purdue University, 1977; D.M.Sc., Indiana University, 1988
- Fisher, Thomas F., O.T.R., F.A.O.T.A., Associate Professor and Chair, Department of Occupational Therapy; B.S., Indiana University, 1977; M.S., Purdue University, 1982; Ed.S., University of Kentucky, 1995; Ph.D., University of Kentucky, 2000
- Fuchs, Robyn, Ph.D., Assistant Professor, Department of Physical Therapy; B.S., Oregon State University, 1996; Ph.D., Oregon State University, 2002
- Janson, J. Robin, O.T.R., Lecturer, Department of Occupational Therapy; B.S., Indiana University, 1989; M.S., Indiana University, 2004
- Justiss, Michael D., O.T.R., Assistant Professor, Department of Occupational Therapy; B.S., University of Pittsburgh, 1993, 1995; M.O.T., Duquesne University, 2000; Ph.D., University of Florida, 2005
- Kelton, Gaylen, M.D., Clinical Professor, Program Director, Master of Physician Assistant Studies; M.D., University of Ottawa, 1980
- Loghmani, Mary T., Ph.D., P.T., Clinical Associate Professor of Physical Therapy; B.S., Indiana University, 1983; M.S., University of Indianapolis, 1983
- Liu, Chuing-ju, Ph.D., O.T.R., Assistant Professor, Department of Occupational Therapy; B.S. National Taiwan University, 1997; M.S., University of Kansas Medical Center, 2001; Ph.D., University of Kansas, 2006
- Mac Kinnon, Joyce L., Ed.D., P.T., Professor and Interim Dean; B.A., Ohio Wesleyan University, 1972; M.P.T., Baylor University, 1974; Ed.D., North Carolina State University, 1987
- Marable, Jennifer, M.S., PA-C, Clinical Assistant Professor, Master of Physician Assistant Studies; B.S., Colorado State University, 2003; M.S., University of Colorado Health Sciences, 2006
- Mushi-Brunt, Christina, Ph.D., Assistant Research Professor; B.A., Creighton University; M.P.H., St. Louis University, 2000; Ph.D., St. Louis University, 2007
- O'Palka, Jacquelynn, R.D., Professor of Clinical Nutrition and Chair, Department of Nutrition and Dietetics; B.S., California State University at Northridge, 1968; M.S., Pennsylvania State University, 1970; Ph.D., Pennsylvania State University, 1973
- Pape, Sharon, M.S., O.T.R., Academic Fieldwork Coordinator and Lecturer, Department of Occupational Therapy; B.S., University of Wisconsin Milwaukee, 1987; M.S., Indiana University, 2006
- Porter, Rebecca, Ph.D., P.T., Associate Professor of Physical Therapy, Executive Director of Enrollment Services, and Associate Vice Chancellor for Student Services, B.S., Indiana University, 1972; Ph.D., Indiana University, 1991
- Rickard, Karyl, R.D., F.A.D.A., Professor of Nutrition and Dietetics; B.S., University of Wyoming, 1966; Dietetic Internship, V.A. Medical Center (Houston), 1967; M.S., University of Wisconsin- Madison, 1970; Pediatric Nutrition Fellowship, University of Washington Child Development Center (Seattle), 1970; Ph.D., Purdue University, 1978
- Schmid, Arlene, O.T.R., Assistant Professor, Department of Occupational Therapy; B.S., M.S., D'Youville College, 1997; Ph.D., University of Florida, 2005
- Strunk, Valerie, M.S.P.T., Director of Clinical Education, Department of Physical Therapy; M.S., University of Indianapolis, 1998
- Scott, Patricia, Ph.D., O.T.R., Assistant Professor, Department of Occupational Therapy; B.S., University of New Hampshire, 1975; M.P.H., University of Oklahoma, 1983; Ph.D., Florida International University, 1997
- Visovatti - Weaver, Kathleen, R.N., M.P.A., J.D., Clinical Senior Lecturer and Program Director, Undergraduate Health Sciences Program; BSN, Indiana University, 1968; MPA, Indiana University, 1989; JD, Indiana University, 2001.
- Warden, Stuart, Ph.D., P.T., F.A.C.S.M., Associate Professor, Department of Physical Therapy; B.S., University of Melbourne (Australia), 1997; Ph.D., University of Melbourne (Australia), 2001
- Zedaker, Jim, M.P.A.S., PA-C, Clinical Assistant Professor, Master of Physician Assistant Studies; B.S., Park University, 2002; M.P.A.S., University of Nebraska, 2005

Credential Abbreviations

C.S. - Certified Specialist in Pediatric Nutrition
F.A.D.A. - Fellow, American Dietetic Association
F.A.C.S.M. - Fellow, American College of Sports Medicine
F.A.O.T.A. - Fellow, American Occupational Therapy Association
N.C.S. - Neurologic Clinical Specialist
O.T.R. - Registered Occupational Therapist
PA-C - Certified Physician Assistant
P.T. - Physical Therapist
R.D. - Registered Dietitian

Courses

BS in Health Sciences

SHRS-W 100 Learning Community Seminar (2 cr.) In this course, as a new student to the IUPUI Campus, you will have the opportunity to discuss and explore a number of resources available to you on the IUPUI Campus. Special emphasis will be placed on use of the library and library resources. The course will incorporate the first three components of the Personal Development Plan (PDP). You will also have the responsibility to research a particular health care profession of your choosing (from a list provided), write a paper about that profession, and orally present with a student partner your researched information to your fellow students.

SHRS-W 210 Introduction to Rehabilitation (3 cr.) Understanding the historical, philosophical, and

organizational context of the rehabilitation profession within the context of the health care delivery system. Based on the premise that understanding of and respect for health professionals is critical for effective functioning as a member of a health care team. Emphasizes expectations of students as beginning health professionals.

SHRS-W 211 Orientation to Health and Rehabilitation Professions (2 cr.) The major purpose of this course is to provide students with information to assist them in becoming acquainted with selected undergraduate and graduate health and rehabilitation science disciplines. Students will obtain information to develop realistic educational and career goals. NOT OPEN TO STUDENTS WHO ENROLLED IN A HEALTH CAREERS LEARNING SEMINAR.

SHRS-W 361 Health Promotion and Disease Prevention (3 cr.) Understanding the personal, cultural, and environmental factors affecting participation in health promotion and disease prevention activities; examining the application and relevance of the concepts of health, wellness, health promotion, and health education and a wide range of content specific topics in health promotion and disease prevention.

SHRS-W 362 Legal and Regulatory Aspects in Rehabilitation (3 cr.) Assisting students in the understanding of legal and regulatory challenges faced by rehabilitation professionals, covering legal issues in counseling and case management, and significant rehabilitation-related legislation in the United States from 1917 to the present.

SHRS-W 363 Ethical Issues in Rehabilitation Services (3 cr.) Examining contemporary ethical/moral considerations in the organization and management of rehabilitation agencies and the delivery of rehabilitation services. Practical applications of ethical principles to the delivery of rehabilitation service and client-provider relationships will be covered. The course will be a combination of lectures, case studies, debates, and guest speakers.

SHRS-W 364 Disability and Society (3 cr.) Focusing on the psychological, social, political, and economic circumstances of individuals with disabilities in American society and to broaden students' perspectives on disability issues through exposure to the personal accounts and writing of persons with disabilities, examination of professional practices, discussion of public policies, and completion of class projects.

SHRS-W 365 Diversity Issues in Health and Rehabilitation Services (3 cr.) Designed to prepare students to appreciate diversity and understand the interrelationship of race, gender, culture, and ethnicity and how they affect access and use of health and rehabilitation services.

SHRS-W 441 Administration and Supervision of Rehabilitation Organizations (3 cr.) Designed to provide an overview of rehabilitation organizations and teach students the foundations of administration, supervision, and coordination of rehabilitation agencies. Discussions will cover the major theories of leadership, management, and organizational communication.

SHRS-W 442 Research in Health and Rehabilitation Sciences (3 cr.) An introduction to the application of research methods in health and rehabilitation sciences, providing students with an overview of research methods used to collect, analyze, and interpret data, emphasizing the understanding of the application of statistical and research techniques to address problems related to rehabilitation services research.

SHRS-W 445 Program Evaluation Methods in Rehabilitation (3 cr.) This course will provide a broad overview of the application program evaluation methods in rehabilitation and the strategies used in program evaluation, focusing on scientific principles that may be instrumental in informing policies and programs aimed at improving the health on individuals and communities.

SHRS-W 480 Independent Study in Health and Rehabilitation (3 cr.) The purpose of this course is to give students the opportunity to do independent study and research in their area of interest. No formal lecture. Permission of Department Chair and instructor supervising the work will be required.

Gerontology Certificate

SHRS-N 265 Nutrition and Exercise (3 cr.) This course will allow the student to apply the principles of physiology, chemistry, and biology to describe the role of nutrition and exercise in the human body and to explore the interrelated and protective role of nutrition and exercise in wellness, health promotion, and disease prevention.

SHRS-W 310 Aging and the Older Person (3 cr.) An introduction to the interdisciplinary study of gerontology as a social, behavioral, and biological science. Other issues to be covered will include participation of older persons in therapeutic recreation and leisure activities and current health issues and patterns of health in the aging process.

SHRS-W 350 Survey of Programs for Older Adults (3 cr.) An overview of the long-term care industry and the continuum of care, examining various long term care service providers such as nursing facilities, assisted living/ retirement centers, adult foster care, and adult day care; critical issues and current trends related to long-term care, quality of life, and life satisfaction in adulthood.

SHRS-W 370 Psychosocial Aspects of Aging (3 cr.) Provides a broad overview of adult development and aging with an emphasis on the changes that occur across physical, cognitive, emotional, perceptual, and social domains of functioning. Analysis of the effects of and theoretical approaches of these changes on the occupational, social, and personality adjustment of the aging adult.

SHRS-W 410 Service-Learning in Geriatrics (3 cr.) Designed to give the student direct work experience in various aging agencies and long-term care institutions. This experiential component allows the student an opportunity to apply his/her newly acquired normative and cognitive skills and knowledge in an actual work setting.

SHRS-W 450 Seminar in Gerontology (3 cr.) This course provides an interdisciplinary investigation of selected facets of gerontology drawn from biological, behavioral, and social science. Topics covered will include mental health, housing, economics, transportation, preventive health and rehabilitation programs, long-term

care insurance, retirement, work/leisure activities, and adult women and health.

Global Health and Rehabilitation Studies Certificate

SHRS-N 265 Nutrition and Exercise (3 cr.) This course will allow the student to apply the principles of physiology, chemistry, and biology to describe the role of nutrition and exercise in the human body and to explore the interrelated and protective role of nutrition and exercise in wellness, health promotion, and disease prevention.

SHRS-W 250 Health and Rehabilitation Systems Across the World (3 cr.) This course presents issues in global health and rehabilitation delivery systems from the viewpoint of many different disciplines with an emphasis on economically less developed countries.

SHRS-W 270 Seminar in Global Rehabilitation and Health (3 cr.) This course is designed to cover current topics in international management and organization of health and rehabilitation services, governance, ethics, impact of donor organizations, and emerging global primary and public health care issues.

SHRS-W 380 Health and Rehabilitation Professionals in Developing Countries (3 cr.) The primary purpose of this course is to help students understand the roles and expectations and the scope of training and educational preparation of health and rehabilitation professionals across the world with emphasis on economically less developed countries.

SHRS-W 460 Global Perspectives in Nutrition, Health, Disease, and Disability (3 cr.) Major emphasis on global perspectives with specific focus on economically less developed countries, examining existing and emerging issues in international nutrition that influence the health, well-being, and disability and the efficacy and effectiveness of nutritional interventions in the prevention of disease and disability among people living in developing countries.

SHRS-W 470 International Service-Learning in Rehabilitation (3 cr.) Designed to give students direct experience in the organization and financing of rehabilitation services in other parts of the world, this experiential component allows students to apply their newly acquired normative and cognitive skills and knowledge in an international rehabilitation institution. Students will travel abroad under the supervision of faculty.

Health Sciences

SHRS-W 510 Trends and Issues in the Health Sciences (3 cr.) A seminar course to review pertinent literature and other sources of information as a basis for discussing trends and issues affecting the therapeutic professions and the health care delivery system.

SHRS-W 520 Evidence-Based Critical Inquiry in the Health Sciences (3 cr.) Fundamentals of research methodology, design, techniques, and procedures applicable to research problems in the allied health disciplines. Introduction to computer data analysis.

SHRS-W 540 Patient-Reported Outcomes and Economic Evaluation (3 cr.) Explorations of selected patient-centered outcomes assessment methodology and its use in economic evaluation.

SHRS-W 550 Health and Rehabilitation Systems Across the World (3 cr.) This course presents issues in global health and rehabilitation delivery systems form the viewpoint of many different disciplines with an emphasis on economically less developed countries.

SHRS-W 570 Research Communication in the Health Sciences (3 cr.) Focuses on the conceptualization and writing of the thesis or practicum proposal.

SHRS-W 594 Administration of Health Sciences Education (3 cr.) Principles of effective organization, supervision and administration of educational programs in the health sciences.

SHRS-W 599 Thesis in Health Sciences (3 cr.) Thesis in Health Sciences. Can be repeated. Focuses on the data collection, analysis and writing of the thesis.

SHRS-W 600 Project in Health Sciences (3 cr.) Individual investigation in the form of an organized scientific contribution or a comprehensive analysis in a specified area related to the health sciences.

SHRS-W 625 Diversity Issues in Health and Rehabilitation Services (3 cr.) This course is designed to prepare students to formulate strategies to address the interrelationship of race, gender, culture, and ethnicity and how they affect access and use of health and rehabilitation services.

SHRS-W 640 Medical Aspects of Disability (3 cr.) The primary emphasis of this survey course is on medically determined aspects of disabling impairments and disabilities. Students will learn the functional limitations associated with major disabling conditions particularly as they relate to the delivery of rehabilitation services.

SHRS-W 660 Rehabilitation Theories and Applications (3 cr.) This course explores the theories common to all rehabilitation therapies and forms a foundation for rehabilitation sciences. Included are theories specific to rehabilitation and adaptation to disease, disability and injury; attachment, adaptation and resiliency; cognition; motor learning; empowerment; loss and grief; psych-immunology; and the societal response to stigmatized groups. These theories are applied to rehabilitation practice and research design across the life span to include habilitation to congenital disorders.

SHRS-W 661 Theories of Health Promotion and Disease Prevention (3 cr.) This course focuses on the role of health behaviors such as eating nutritious foods, exercising, and avoiding unhealthy habits (i.e.: smoking) in health promotion and disease prevention. A principle concentration will be on health promotion within disabling conditions.

SHRS-W 662 Health and Rehabilitation Systems Delivery (3 cr.) This course analyses emerging trends in health care systems and delivery associated with rehabilitation. Areas to be covered include organizational infrastructures, finance, public policy, and implications for disparate patient populations.

SHRS-W 667 Ethical Issues in Health and Rehabilitation Services (3 cr.) This course is designed to explore contemporary ethical issues and concerns related to the delivery, organization, and management of rehabilitation services. It is structured to present

theories of ethical practice related to rehabilitation care delivery and to address the practical applications of ethical principles to the delivery of rehabilitation services and client-provider relationships. It will be provided in a distance format.

SHRS-W 670 Research Practicum in Health and Rehabilitation Sciences (3 cr.) Instructional orientation to research arranged by student and approved by student's Advisory or Research Committee. This course may be taken more than once.

SHRS-W 672 Teaching Practicum in Health and Rehabilitation Sciences (3 cr.) Instruction in teaching theories and methodologies to include teaching a unit of instruction in the student's concentration area. This course may be taken more than once. NOTE: Any student who has a major interest in teaching is advised to incorporate other instructional teaching methodology courses into his/her plan of study

SHRS-W 680 Independent Study in Health and Rehabilitation Sciences (3 cr.) A course for students interested in specific interdisciplinary topics in health and rehabilitation sciences.

SHRS-W 690 Dissertation Proposal in Health and Rehabilitation Sciences (3 cr.) The student will submit a written proposal for original scholarly work that makes a significant contribution to research in the field of health and rehabilitation sciences. The proposal will include a comprehensive introduction to the topic, relevant literature review and an indication of the methodology to be used for the student's dissertation. The proposal must be formally presented and approved by the student's Research Committee before the student can enroll in SHRS W692. This course can be taken more than once.

SHRS-W 692 Dissertation in Health and Rehabilitation Sciences (3 cr.) An original scholarly manuscript that makes a significant contribution to research in the field of health and rehabilitation sciences. Topic will be selected by the student and his/her Research Committee. The student must present the dissertation at a formal meeting with his Advisory Committee.

SHRS-W 799 Master's Thesis Continuation (1 cr.) Used as continuation credits for completing the master's thesis in a format acceptable to the student's advisory committee, leading to successful defense of the final product. May be repeated for credit.

Nutrition and Dietetics

SHRS-N 265 Nutrition and Exercise (3 cr.) This course will allow the student to apply the principles of physiology, chemistry, and biology to describe the role of nutrition and exercise in the human body and to explore the interrelated and protective role of nutrition and exercise in wellness, health promotion, and disease prevention.

SHRS-N 420 Human Nutrition Through the Lifespan (3 cr.) The study of nutritional needs during different stages of the human life cycle from pregnancy and lactation through infancy, childhood, adolescence and adulthood to later maturity, including an introduction to cultural food patterns, principles of nutrition assessment and agencies offering nutrition services.

SHRS-N 500 Nutrition I (3 cr.) P: Graduate standing, undergraduate course in biological sciences or consent of instructor. This course applies the principles of physiology, chemistry, and biology to describe the role of nutrition and exercise in wellness, health promotion and disease prevention. This class is taught online.

SHRS-N 544 Medical Nutrition Therapy (3 cr.) P: dietetic internship. Study of physiological and biochemical alterations that occur during disease states and their effect on nutritional requirements and methods of providing nutrients.

SHRS-N 546 Medical Lectures (arr. cr.) Lectures by professional staff and invited guests in the health care field.

SHRS-N 550 Human Nutritional Pathophysiology I (3 cr.) P: B500, F503 or BIOL 557, or consent of instructor. An integrated study of the biochemical and physiological aspects of human macronutrient metabolism, with special reference to fundamental nutrition issues including determination of nutrient quality, nutrient interrelationships, and energy balance in the normal human adult and in common clinical problems.

SHRS-N 552 Human Nutritional Pathophysiology II (3 cr.) P: N550 or consent of instructor. A continuation of N550. An integrated study of the biochemical and physiological aspects of human fluid and micronutrient metabolism with special reference to nutritional pathophysiology involving fluid and micronutrient metabolism.

SHRS-N 560 Review of Nutrition Standards (3 cr.) Review of various nutrition standards, including those of the United States, the United Kingdom, Canada, and the World Health Organization. Course includes a review of all cited literature for one of the nutrients listed in the Recommended Dietary Allowances.

SHRS-N 563 Research Methods in Nutrition and Dietetics (3 cr.) P: dietetic internship. Study of research methodology utilized in dietetics. Course includes critique of literature and preparation of research proposal.

SHRS-N 567 Management Issues in Dietetics (1 cr.) P: dietetic internship. Advanced study in institutional and hospital dietetic management, including personnel, financial, operational, and regulatory issues.

SHRS-N 570 Pediatric Nutrition I (3 cr.) P: B500, BIOL 557, undergraduate metabolic nutrition course, or consent of instructor. An application of principles of physiology, biochemistry, and nutrition to the specialized nutrient needs and nutritional care of healthy infants, children, and adolescents and those with the most common pediatric conditions, illnesses, or disorders of broad nutritional significance.

SHRS-N 572 Advanced Pediatric Nutrition (3 cr.) P: N550, N570, or consent of instructor. An application of principles of physiology, biochemistry, and nutrition to the specialized nutrient needs and nutritional care of infants, both preterm and term, and patients with complex pediatric conditions/illnesses that have a significant nutritional component.

SHRS-N 574 Nutrition Management of High Risk Neonates and Infants (3 cr.) P: N550, N572, or consent of instructor. An application of physiology, biochemistry, and nutrition to the specialized nutrient needs and

nutritional care of neonates, both preterm and term, who require intensive care. Discussions will include nutrition management issues related to the infant during hospitalization, at discharge and in the home environment.

SHRS-N 576 Leadership Development in Pediatric Nutrition (3 cr.) P: consent of instructor. This course is an entry-level leadership development series of experiential learning activities, including a leadership development project for post-graduate health care professionals and fellows.

SHRS-N 590 Dietetic Internship (4-10 cr.) P: dietetic internship. Supervised clinical experience in clinical and community nutrition and food service systems management. Course meets the requirements of the American Dietetic Association for the postbaccalaureate experience needed for dietetic registration. Previous admission into dietetic internship required. May be taken for a maximum of 22 credit hours. Not applicable to a graduate degree program.

SHRS-N 591 Seminar in Nutrition and Dietetics (1 cr.) P: consent of instructor. Exploration of various topics and issues in nutrition. May be repeated for a maximum of 4 credits.

SHRS-N 593 Topics in Nutrition (1-3 cr.) P: consent of instructor. Exploration of a selected topic in nutrition at an advanced level. May be repeated once for credit if topics differ.

SHRS-N 595 Readings in Nutrition (1-3 cr.) P: consent of instructor. Individualized readings on topics not covered in regular course offerings.

SHRS-N 596 Clinical Dietetics (arr. cr.) Clinical study in specialized areas of dietetics. May be taken more than once with the consent of the department for a maximum of 15 credit hours.

SHRS-N 598 Research in Dietetics (arr. cr.) Original research as approved by the department.

Occupational Therapy

SHRS-T 525 Reflective Seminar I (1 cr.) Course will facilitate the synthesis of research, reflect the curriculum themes and outcomes, and support the plan of scholarly contribution.

SHRS-T 542 Occupations of Infants and Children (5 cr.) Course will focus on the development, support, and disruption of performance in areas of occupation of infants and children utilizing the occupational therapy process to evaluate and intervene. Laboratory and fieldwork components will emphasize individual engagement in occupations within various social and cultural contexts.

SHRS-T 552 Occupations of Adolescents and Young Adults (5 cr.) Course will focus on the development, wellness, and disruption of performance in areas of occupation of adolescents and young adults utilizing the occupational therapy process to evaluate and intervene. Laboratory and fieldwork components will emphasize individual engagement in occupations within various social and cultural contexts.

SHRS-T 553 Topics in Occupational Therapy (1-5 cr.)

SHRS-T 557 Group Process in Occupational Therapy (2 cr.) Principles and concepts of group process related to occupational therapy practice.

SHRS-T 558 Occupational Therapy Management in Today's Health and Community Systems (3 cr.) A study of the occupational therapist's role in the management of service delivery in both health and community systems. Managed care, managerial functions, professionalism, ethics, and various laws are emphasized.

SHRS-T 560 Introduction to Occupational Science and Occupational Therapy (3 cr.) Examination of the use of occupation as a therapeutic tool through the study of occupation, occupational science, activity analysis, and therapeutic use of self.

SHRS-T 561 Theoretical Foundations of Occupational Therapy (3 cr.) Conceptualization and synthesis of existing models, frames of reference, paradigms, and theories of occupational therapy for practice.

SHRS-T 567 Research and Occupational Therapy (3 cr.) Course is designed to prepare the student to participate in research, emphasizing the use of technology.

SHRS-T 568 Evidence-Based Research in Occupational Therapy (3 cr.) Prepares the student to evaluate occupational therapy practice and assure that it is increasingly evidence-based by examining the design and implementation of beginning-level research studies, developing the basic skills necessary for the publication and presentation of research projects, and developing a basic understanding of the process of securing grants.

SHRS-T 571 Kinesiology for the Occupational Therapist (3 cr.) Course introduces the occupational therapy graduate student to the principles of human movement including biomechanical analysis, joint structure and function, muscle physiology, and musculoskeletal function for occupational performance.

SHRS-T 572 Pathophysiology: Impact of Conditions on Occupations (3 cr.) Identification and study of major medical and psychiatric conditions including clinical description, etiology and pathology, medical/surgical treatment, rehabilitation, and prognosis. Treatment team approach and legal issues will be presented. Labs will emphasize occupational impact of medical/psychiatric conditions.

SHRS-T 575 Applied Neuroscience for the Occupational Therapist (4 cr.) Course will build upon the student's understanding of anatomy. Using the resources of the course, students will master the vocabulary, comprehend foundational concepts, and apply this information through case studies.

SHRS-T 580 Graduate Electives (3 cr.) One graduate elective is required. OT students who choose to do a thesis are not required to take an elective. Students will be encouraged to take an elective that complements their area of interest. During the second semester of their second year, an additional elective could be taken, after planning with their faculty advisor.

SHRS-T 625 Reflective Seminar II (1 cr.) Course will facilitate the synthesis of research, reflect the curriculum

themes and outcomes, and continue to support the plan of scholarly contribution.

SHRS-T 643 Occupations of Adults and Older Adults (5 cr.) Course will focus on the disruption of performance in areas of occupation of adults and older adults utilizing the occupational therapy process to evaluate and intervene. Laboratory and fieldwork components will emphasize individual engagement in occupations within various social and cultural contexts.

SHRS-T 655 Technologies in Occupational Therapy (3 cr.) This lecture and laboratory course introduces the concepts of positioning, environmental adaptations, orthotics, prosthetics, computer uses and technologies, assistive devices, and adaptive equipment. Low technology will be the focus; some expansion to high technology will also be discussed.

SHRS-T 657 Psychosocial Dimensions of Therapeutic Relationships and Occupations (2 cr.) Understanding and application of therapeutic use of selfin establishing and maintaining client therapist in using a helping model and therapeutic dialogue.

SHRS-T 658 Professional Trends and Issues in Occupational Therapy (2 cr.) P: W510. Course involves student research, discussion and demon-stration of knowledge, emphasizing reimbursement, system delivery, service models, clinical education, credentialing, and other current issues in OT. Several class topics will be students' choice.

SHRS-T 662 Occupations of Adults and Older Adults (5 cr.) This course will focus on the disruption of performance in areas of occupation of adults and older adults utilizing the occupational therapy process to evaluate and intervene. Laboratory and fieldwork components will emphasize individual engagement in occupations within various social and cultural contexts.

SHRS-T 667 Nonthesis OT Project (3 cr.) Course prepares the student to design and implement a beginning research study.

SHRS-T 668 Nonthesis OT Project Completion (2 cr.) Course is designed to allow the student to complete the research study project.

SHRS-T 695 Fieldwork Level II-A: Infants & Children (5 cr.) P: successful completion of Semesters I and II professional courses. An eight-week fieldwork experience in an infant and child area of practice with pediatric occupational therapy services.

SHRS-T 696 Fieldwork Level II-B: Adolescents & Young Adults (5 cr.) P: successful completion of Semesters I and II professional courses. An eight-week fieldwork experience in an adolescent and young adult area of practice with occupational therapy services.

SHRS-T 697 Fieldwork Level II-C: Adults & Older Adults (5 cr.) P: successful completion of Semesters I, II, III, and IV professional courses. An eight-week fieldwork experience in an adult and older adult area of practice with occupational therapy services.

SHRS-T 698 Fieldwork Level II-D: Specialty (optional) (3-5 cr.) P: successful completion of T695, T696, and T697. Four- to eight-week optional experience providing OT students an opportunity to select a specialized practice area.

SHRS-T 701 OT Thesis (6 cr.) Proposal development leading to thesis as directed by the chair of the thesis committee.

SHRS-T 702 OT Thesis Completion (2 cr.) Research leading to thesis as directed by the chair of the thesis committee.

Physical Therapy

SHRS-P 510 Integrated Clinical Education I (1 cr.) The initial part-time weekly clinical laboratory experience which provides student exposure to clinical physical therapy practice in various patient care settings.

SHRS-P 511 Framework for Clinical Decision Making and Professionalism (2 cr.) An overview of the profession of physical therapy and the professional education process. Includes the role of physical therapy in contemporary health care delivery, the disablement model, and an introduction to the APTA Guide to Practice as components of the clinical reasoning process.

SHRS-P 513 Functional Anatomy and Clinical Biomechanics (4 cr.) Integration of foundational knowledge of gross anatomy with structure and function of the neuromusculoskeletal system and human motion. Includes the study of the concepts of biomechanics, and joint structure and function as they apply to physical therapy interventions.

SHRS-P 514 Evidence-Based Critical Inquiry I (2 cr.) Introduction to clinical research methodology and critical interpretation of the professional literature.

SHRS-P 515 Physical Therapy Examination & Interventions I (6 cr.) First of two courses covering examination, evaluation, and intervention aspects of physical therapy practice. Emphasis is on history taking, systems review, functional examination and intervention, and documentation.

SHRS-P 520 Clinical Integration II (1 cr.) The second part-time weekly clinical laboratory experience which provides student exposure to clinical physical therapy practice in various patient care settings.

SHRS-P 524 Cardiopulmonary Practice Patterns (3 cr.) Provides the essential knowledge base for development of exercise prescriptions for well populations and for physical therapy interventions for patients with cardiopulmonary pathologies or dysfunctions.

SHRS-P 526 Physical Therapy Examination & Interventions II (5 cr.) The second of two courses covering examination, evaluation, and interventional aspects of physical therapy practice. Regional application is emphasized along with corresponding documentation.

SHRS-P 531 Clinical Pathophysiology I (4 cr.) This two part course is designed to provide students with knowledge in normal and abnormal physiology, including an understanding of how cells, tissue, organs and organ systems work together. The first semester includes modules on how cell physiology, metabolism, muscle, cardiovascular, respiratory, and endocrine systems.

SHRS-P 532 Legal and Ethical Issues in Physical Therapy (2 cr.) Includes essential information related to

ethical, legal, and professional practice regulations and standards of care. Interpersonal communication skills for the healthcare environment are also presented.

SHRS-P 533 Lifespan Motor Control and Motor Development (2 cr.) Overview of human neuromusculoskeletal development across the lifespan.

SHRS-P 534 Introduction to Motor Sciences (2 cr.) Principles and concepts of motor learning and motor control for the development of physical therapy interventions.

SHRS-P 535 Clinical Pathophysiology II (4 cr.) This course is a continuation of Clinical Pathophysiology I. Course content will focus on normal and abnormal physiology pertaining to information on the following modules: renal, gastrophysiology, oncology, hematology, endocrine and metabolic bone diseases.

SHRS-P 541 Musculoskeletal Practice Patterns I (4 cr.) Physical therapy management of patients with impaired posture, joint mobility, motor function, and muscle performance. Integrates previous course work involving evaluation and interventions.

SHRS-P 570 Pharmacology for Physical Therapists (3 cr.) Survey of contemporary pharmacology including pharmacokinetic principles with special emphasis on the relation of drug therapy to therapeutic interventions provided by physical therapists.

SHRS-P 599 Clinical Education I (3 cr.) Initial full-time clinical experience lasting six weeks. This course will serve as the introduction to clinical integration of physical therapy knowledge and skills. Students will be assigned to specific sites.

SHRS-P 622 Musculoskeletal Practice Patterns II (4 cr.) Physical therapy management of patients with impaired joint mobility, motor function, and muscle performance associated with spinal dysfunction, connective tissue disorders, trauma, and surgical procedures.

SHRS-P 641 Neurorehabilitation I (4 cr.) Physical therapy management of stroke, spinal cord, and brain injury.

SHRS-P 642 Neurorehabilitation II (4 cr.) Physical therapy management of individuals with movement disorders, balance/vestibular problems, cerebral palsy, and genetic disorders.

SHRS-P 643 Psychosocial Dimensions of Physical Therapy Practice (2 cr.) Social, psychological, and behavioral components of patient-therapist interactions are illustrated, including grief, loss, motivation, social support, and cultural influences among diverse patient populations.

SHRS-P 645 Evidence-Based Critical Inquiry II (2 cr.) Development, approval, and generation of the proposal for the review of the literature related to a specific topic in patient outcomes assessment or other approved area.

SHRS-P 646 Introduction into Therapeutic Interventions (4 cr.) This course provides an introduction to the theory and application of therapeutic interventions utilized in physical therapist practice. Interventions include: (1) therapeutic exercise testing and prescritption; (2) thermal, acoustic, mechanical, and electrotherapeutic physical agents; and (3) basic concepts of soft tissue massage.

SHRS-P 650 Integumentary Practice Patterns (2 cr.) The physical therapy management of the integumentary system with special emphasis on physical therapy interventions for burns and various types of wounds.

SHRS-P 660 Selected Topics in Physical Therapy Practice (3 cr.) Introduction to emerging physical therapy practice patterns in such areas as women's health, occupational health, chronic metabolic and immunologic diseases, and cognitive and emotional disorders.

SHRS-P 661 Prosthetic and Orthotic Interventions (2 cr.) Includes both theory and application of orthotic and prosthetic devices and equipment utilized in physical therapy interventions.

SHRS-P 664 Administration and Management of Physical Therapy Services (3 cr.) The administration and management of physical therapy services in the context of multiple types of healthcare systems.

SHRS-P 675 Capstone Seminar (1 cr.) Capstone seminar experience integrating classroom and clinical learning. Presentations mentored by clinical and academic faculty will be required.

SHRS-P 680 Health Promotion and Community Outreach (2 cr.) Essential concepts related to the roles of physical therapists in prevention and in the promotion of health, wellness, and fitness. Course includes application of concepts through service component in selected community agencies.

SHRS-P 685 Independent Study (1-3 cr.) This course offers students an opportunity to learn from faculty activities by participating in research or teaching labs in an area of interest. The educational objectives and assignments are customized by faculty according to the intent of the learning activity.

SHRS-P 689 Clincal Elective (1-3 cr.) Clinical education experience in a student-requested content area which provides students the opportunity to apply theory and skills in physical therapy examination and intervention with patients in a specialized physical therapy clinical practice area.

SHRS-P 695 Clinical Education II (3 cr.) Full-time clinical experience of 6 weeks duration, which provides students the opportunity to apply theory and skills in physical therapy interventions with specific patient populations.

SHRS-P 696 Clinical Education III (5 cr.) Full-time clinical experience of 12 weeks duration, which provides students the opportunity to apply theory and skills in physical therapy interventions with specific patient populations.

SHRS-P 697 Clinical Education IV (4 cr.) Full-time clinical experience of 6 weeks duration, which provides students the opportunity to apply theory and skills in physical therapy interventions with specific patient populations.

Rehabilitation and Disabilities Studies Certificate

HIA-M 330 Medical Terminology (or equivalent) (2 cr.) Understanding and use of the language of medicine

including build, analyze, define, pronounce, and spell diagnostic terms that relate to the structure of the body systems. [vocabulary standards]

SHRS-W 320 Survey of Adaptive Rehabilitation Technology (3 cr.) Assisting students in the knowledge/ awareness of available high-tech/low-tech equipment, or product systems that are used in rehabilitation settings to increase, maintain, or improve functional capabilities of individuals with disabilities, emphasizing the application of clinically-based strategies for determining an individual's need for and acceptance of adaptive technology to improve functional outcomes.

SHRS-W 330 Approaches to Rehabilitation Case Management (3 cr.) Exploring the historical perspective, technological and humanitarian advances, and major issues in the rehabilitation administrative environment; discussing and analyzing the legislative mandates relative to their effects on shaping the administrative environment in rehabilitation; acquiring knowledge of the process and significance of administrative competency in delivering services to rehabilitation consumers.

SHRS-W 340 Psychological Aspects of Disability (3 cr.) P: Medical Terminology Course or equivalent. Students will review medical terminology and gain an understanding of major disabling conditions, the psychological and vocational aspect of adjustment to disability and chronic long term illness, and examine psychological and social theories related to disability and chronic illness and Code of Ethics.

SHRS-W 420 Proposal Writing for Community-Based Rehabilitation Programs (3 cr.) An interactive educational opportunity to develop skills related to fund development in a community rehabilitation setting, providing an overview of the grant development process. Students will research local and national funding sources and learn about traditional and non-traditional sources to develop and maintain community-based rehabilitation programs. Includes guest speakers.

SHRS-W 430 Practicum in Rehabilitation and Disability (3 cr.) Designed to give students direct work experience in various private and public sector rehabilitation agencies, this experiential component allows the student an opportunity to apply his/her newly acquired normative and cognitive skills and knowledge in an actual work setting.

SHRS-W 440 Medical Aspects of Disabilities (3 cr.) The primary emphasis of this survey course is on medically determined aspects of disabling impairments and disabilities. Students will learn the functional limitations associated with major disabling conditions particularly as they relate to the delivery of rehabilitation services. Current trends and methodologies involved in rehabilitation processes will be covered.

Welcome to the Honors College

The IUPUI Honors College represents our shared vision for academic excellence. We expect our Honors Scholars to seek every opportunity to engage in the following learning activities that we know will prepare them to make an impact:

- engage in cutting edge and translational research
- explore their world as a global citizen
- offer their time and energy in service to others, and
- seek out real world work experiences in their field

We provide scholarships, an Honors curriculum and advising, international activities, research opportunities, and the experience of belonging to a community of scholars.

Overview

The IUPUI Honors College is a beacon of academic excellence, inspiring an enduring spirit of inquiry and discovery.

Our promise is a transformative Honors College experience that is challenging, engaging, meaningful, relevant, and one that builds a strong foundation for a lifetime of learning and engagement.

Our dynamic and unique academic endeavors are guided by the IUPUI Principles of Undergraduate Learning-essential ingredients of the undergraduate educational experience at IUPUI. These principles form a vibrant conceptual framework for all Honors Scholars' education.

The principles permeate the curriculum in the major field of study and the IUPUI Honors College. Specific expectations for IUPUI's graduates are determined by the faculty in a student's major field of study in the areas of Core Communication and Quantitative Skills, Critical Thinking, Integration and Application of Knowledge, Intellectual Depth, Breadth, and Adaptiveness, Understanding Society and Culture, and Values and Ethics.

Together, these expectations speak to what Honors Scholars will know as graduates of IUPUI, and what they will be able to do upon completion of their degree.

Facilities

Honors House

Honors House is located in the Campus Apartments on the Riverwalk and is open to honors-eligible students only. Each Honors House resident has a private bedroom within a two-bedroom apartment. A full-time resident assistant serves as a mentor, guide, and resource person for residents. Resident assistants live on site and assist in program development and implementation, as well as meeting the individual needs of each of our residents.

Honors College Location

The new Honors College space in the lower level of University Library is designed to accommodate Honors staff as well as Honors Scholars. Interactive technology provides collaborative study space as well as individual study space while sustainable design features promote energy conservation and recycling.

Admission and Academic Policies

The IUPUI Honors College is open to specific scholarship cohorts of incoming freshmen in every major offered at IUPUI. Entering freshmen who apply by February 1 with a minimum combined math and verbal (critical reading) SAT score of 1250, or an ACT of 28 and a high school GPA of at least 3.75 are directly admitted to the Honors College.

This includes all Bepko Scholars and Fellows, Adam W. Herbert Presidential Scholars, Plater International Scholars, and Chancellor's Scholars.

The IUPUI Honors College offers high-ability incoming freshmen the opportunity to apply for our named scholarships, which include the Bepko Scholars and Fellows Program, the Adam W. Herbert Presidential Scholarship, and the Plater International Scholars Program. For details on these awards and information on the application process, visit http://honorscollege.iupui.edu/scholarships/. The application deadline for these scholarships is November 15.

All Honors College Scholars are required to complete one Honors course or experience every semester. Students may take no more than 6 credit hours of Honors work each semester. Students admitted to the Honors College prior to Fall 2010 are required to complete 18 Honors credits with a minimum 3.3 grade point average in order to graduate from IUPUI with Honors. Students admitted Fall 2010 and thereafter are required to complete 24 Honors credits with a minimum 3.3 grade point average in order to graduate with Honors.

Students have the following options for earning Honors credit: complete an Honors course, complete an Honors Contract, engage in research, study abroad, or take a graduate course as an undergraduate student. Students must complete and submit applicable paperwork to the Honors College office in order to earn Honors credit for all options other than an Honors course. All students must contact an Honors College staff member in order to obtain authorization to register for an Honors course with the exception of chemistry courses and Organizational Leadership and Supervision (OLS) courses. Students should contact those departments to request authorization.

Current IUPUI students who are not in the Honors College, but have at least a 3.5 GPA may be allowed to complete an Honors course or experience with permission from the Honors College. Interested students should discuss this with their academic advisor and then contact an Honors advisor for authorization prior to registration.

Student Organizations & Services

Student Organizations & Services

Honors College Student Council

Honors College Student Council is the student voice for all Honors Scholars. It connects and supports the development of IUPUI Honors College student organizations in an effort to develop a collaborative community of students in the IUPUI Honors College. Executive Officer positions, class representatives, and Honors Student Organization representatives comprise the general assembly and working body of the Student Council.

Honors House Council

Honors House Council for students living in the Honors section of the Campus Apartments on the Riverwalk are a member of this residential-based organization. Honors House Council does community building and educational events for students living in Honors House. Leadership positions are available for students.

Alpha Lambda Delta/Phi Eta Sigma (ALD/PES)

These two first-year honor societies are active with community service, scholarship, and leadership. Full-time, first-year students with a 3.5 GPA or higher are invited to join these organizations. Scholarship opportunities are available through both national organizations for members. Monthly meetings, service events, and social events are held, and officers attend national leadership workshops. The ALD/PES chapter at IUPUI has been recognized as one of the top five chapters in the country every year since 2004. You'll find more information on the Honors College website at http://www.honorscollege.iupui.edu/impact/societies/.

Honors Adventure Club

The Honors Adventure Club plans regular outdoor and adventurous activities. Events like caving, camping, canoeing, poly-holiday party, skiing, and laser tag are just some examples of how students are engaged outside of the classroom. Leadership positions are available to students, including first-year students.

Honors Arts & Culture Society

The Honors Arts & Culture Society coordinates scholars to explore the diverse cultural experiences Indianapolis has to offer. Museum visits, international cuisine, symphony performances, and cultural festivals are just some of the great places the Society takes students. This group is open to all students to lead or join on trips throughout the city.

Honors Community in Housing

The Honors Community is located in the Campus River Walk Apartments and is open to Honors-eligible students. Two full-time resident assistants serve as mentors, guides, and resources for residents. They live on site and assist in program development and implementation, as well as meeting the individual needs of each resident. For more information about housing, please visit the Honors College website at http://www.honorscollege.iupui.edu/honorshouse/.

Honors College Courses

Honors-Designated and Honors-Approved Courses are regularly offered as traditional-style courses with limited enrollment designed specifically for honors students with Honors appearing in the course title. Course enrollment is generally limited to facilitate more substantive interaction between students and the course faculty member. Course offerings vary from semester to semester.

Honors Contracts may be completed by an Honors Scholar and his/her professor to create a special Honors section for a course. The Honors Contract, the most common method for earning Honors credit, enables qualified students to engage in Honors work in courses not specifically designed as Honors courses by working with the faculty member to create a special Honors project. The student who enters into an Honors Contract with a faculty member will engage in work beyond what is required for a regular undergraduate course; the course will appear as Honors credit on the student's transcript. Honors Contract

forms must be submitted to the Honors College office no later than the end of the third week of classes during fall and spring semesters and by the end of the first week of classes during summer sessions.

For more information about Honors courses and Honors Contracts and to see a list of Honors courses offered for the current semester, please visit the Honors College website at http://www.honorscollege.iupui.edu/curriculum/courses/.

American Studies

AMST-A 303 ORGANIZING FOR SOCIAL ACTION (1-3 cr.)

Business

BIOL-K 102 HONORS CONCEPTS OF BIOLOGY I (5 cr.) An introductory course emphasizing the principles of cellular biology; molecular biology; genetics; and plant anatomy, diversity, development, and physiology. Faculty-supervised research projects and approved independent projects provide greater depth for honors students. This course carries honors credit.

BIOL-K 104 HONORS CONCEPTS OF BIOLOGY II (5 cr.) An introductory biology course emphasizing phylogeny, structure, physiology, development, diversity, evolution, and behavior in animals. This course will expose honors students to a unique series of laboratory investigations.

BIOL-K 323 GENETICS & MOLEC BIOLOGY LAB (2 cr.)

BIOL-K 325 CELL BIOLOGY LABORATORY (2 cr.)

BIOL-K 357 MICROBIOLOGY LABORATORY (2 cr.)

Business

BUS-A 204 Introduction to Financial Accounting: Honors (3 cr.) P: A100; sophomore standing. The course covers the concepts and issues associated with corporate financial reporting. Particular emphasis is placed on understanding the role of financial accounting in the economy and how different accounting methods affect the financial statement.

BUS-F 304 Honors Financial Management (3 cr.) Conceptual framework of the firm's investment, financing, and dividend decision; includes working capital management, capital budgeting, and capital structure strategies.

BUS-J 402 Administrative Policy: Honors (3 cr.)

BUS-K 204 The Computer in Business: Honors (3 cr.) Introduction to the role of computers in business, with emphasis on microcomputer applications. Experimental exercises include learning about Windows-based spreadsheets, database applications, electronic mail, and Internet navigation tools. The lectures focus on the use and application of technology (hardware, software, networks, databases) and integrates current management topics (business applications, systems development, data management, computer ethics).

BUS-L 204 Commercial Law I: Honors (3 cr.)

BUS-M 304 Honors Marketing Management (3 cr.)

BUS-P 304 Honors Operations Management (3 cr.) P: Students must meet the Option II admission criteria to take the Integrative Core courses, including course, GPA, and grade requirements. R: Business student of junior or senior standing. Section authorization required. A survey course concerned with the production and distribution of goods and services. Part of the Integrative Core, along with F304 and M304. Examines how a firm produces and delivers its goods and services, with consistent and acceptable levels of quality, in a cost-effective manner. The discussion covers a wide range of interrelated issues including quality and process improvement, forecasting, planning, resource management, customer service, scheduling, and layout and process design. A semester-long, team project is the primary activity used to integrate the three core courses.

BUS-W 494 Herman B Wells Seminar in Leadership (3 cr.)

BUS-X 105 Business Administration Introduction: Honors (3 cr.)

BUS-X 293 Honors Seminar in Business (1-3 cr.)

BUS-X 293 DIVERSITY SCHOLARS RESEARCH (1-3 cr.)

BUS-X 393 HONORS WRITING EXPERIENCE (1 cr.)

BUS-X 493 Honors Seminar in Business (1-3 cr.)

BUS-X 496 Supervised Independent Honors Research in Business (1-5 cr.) P: senior standing. For students in Kelley School of Business Honors Program.

BUS-Z 174 LEADERSHIP IN ORGANIZATIONS (1-3 cr.) This course will give students an overview of leadership. It will do this by examining the changing nature of leadership and the leadership process. Topics to be covered include the difference between leadership and management, what makes an effective leader, and how leaders developed their leadership perspective, principles and model.

BUS-Z 304 MNGNG & BEHAV IN ORG: HONORS (3 cr.) Integration of behavior and organizational theories. Application of concepts and theories toward improving individual, group, and organizational performance. Builds from behavioral foundation toward an understanding of managerial processes.

Chemistry

CHEM 199 Honors Seminar (2 cr.)

CHEM-C 105 Principles of Chemistry I (3-5 cr.) Basic principles, stoichiometry, thermochemistry, atomic and molecular structure, gases, solution, and topics in descriptive chemistry.

CHEM-C 105 Principles of Chemistry II (3 cr.) Chemical equilibria with emphasis on acids, bases, solubility, electrochemistry, elementary thermodynamics, chemical kinetics, and selected topics in descriptive chemistry.

CHEM-C 496 SPECIAL TOPICS IN CHEMISTRY (0-3 cr.)

CHEM-C 496 METHODS IN TEACHING CHEM. (1 cr.)

CHEM-S 125 EXP CHEMISTRY I HONORS (2 cr.)

CHEM-S 126 EXP CHEMISTRY II HONORS (2 cr.)

Economics

ECON-S 201 INTRO TO MICROECONOMICS: HON (3 cr.)

Education

EDUC-F 400 Honors Seminar (1 cr.)

English

The School of Liberal Arts requires English W131 or W140, and W132, W150, or W231 for graduation for both the A.A. and the B.A. degrees. Contact the Writing Program at (317) 274-3824 or see the Web site (writing.iupui.edu) for questions about placement.

ENG-W 140 ELEMENTARY COMPOSITION-HONORS (3 cr.)

ENG-W 150 RES IN THE DISCIPLINES-HONORS (3 cr.)

HER-H 101 HISTORY OF ART 1 (3 cr.)

HER-H 101 HISTORY OF ART 2 (3 cr.)

History

HIST-H 105 American History I (3 cr.) I. Colonial period, Revolution, Confederation and Constitution, national period to 1865. II. 1865 to present. Political history forms framework, with economic, social, cultural, and intellectual history interwoven. Introduction to historical literature, source material, and criticism.

HIST-H 113 HISTORY OF WESTERN CIVILIZ 1 (3 cr.)

HIST-H 114 HISTORY OF WESTERN CIVILIZ 2 (3 cr.)

Honors

HON-H 100 Freshman Honors Seminar (3 cr.)

HON-H 110 Honors First Year Seminar I (3 cr.)

HON-H 111 Honors First Year Seminar II (3 cr.)

HON-H 198 Honors Topics (3 cr.)

HON-H 298 Honors Topics (3 cr.)

HON-H 299 Honors Tutorial (3 cr.)

HON-H 310 Creation of Modernity in West (3 cr.) A new junior-level integrator course for honors students only. Course examines rise of modernity in the West as an integrated social economic, scientific, and artistic phenomenon.

HON-H 398 Honors Topics (3 cr.)

HON-H 399 Honors Colloquium (3 cr.)

HON-H 497 Honors Colloquium (3 cr.)

HON-H 498 ETHICS OF THE HLTH PROFESSNAL (3 cr.)

HON-H 498 DO THE HOMELESS COUNT? (3 cr.)

HON-H 499 Honors Senior Thesis (1-6 cr.)

Journalism

JOUR-J 499 HONORS RESEARCH IN JOURNALISM (3 cr.)

Math

MATH 26100 Multivariate Calculus (4 cr.) P: 164. Equiv. IU MATH M311. Fall, spring, summer. Spatial analytic geometry, vectors, curvilinear motion, curvature, partial differentiation, multiple integration, line integrals, and Green's theorem. An honors option for this course is available. Note: Effective Fall 2009, this course is offered under an updated course description, as below.

MATH-S 165 HONORS ANALYTIC GEOMETRY AND CALCULUS I (4 cr.) This course is the same topics as MATH 165. However, it is intended for students having a strong background in mathematics who wish to study the concepts of calculus in more depth and who are seeking mathematical challenge.

MATH-S 166 HONORS ANALYTIC GEOMETRY AND CALCULUS II (4 cr.)

Medical Humanities and Health Studies

MHHS-M 391 PERSPECTVS HLTH/DISEASE/HEALNG (3 cr.)

MHHS-M 492 Topics in Medical Humanities and Health Studies (1-3 cr.) Intensive study and analysis of selected issues and problems in Medical Humanities and Health Studies. Topics will ordinarily cut across fields and disciplines. May be repeated once for credit on a different topic. Fall 2010: Culture of Mental Illness.

Nursing

NURS-H 370 SENIOR RESEARCH INTERNSHIP I (3 cr.)

NURS-H 470 SENIOR RESEARCH INTERNSHIP II (1-5 cr.)

NURS-H 498 NURSING HONORS COLLOQUIUM (1-5 cr.)

NURS-Z 480 BSN PORT REV CRSE SUBSTITUTION (1-6 cr.)

Organizational Leadership and Supervision

OLS 25200 Human Behavior in Organizations (3 cr.)

OLS 32700 LEADERSHIP: GLOBAL WORK FORCE (3 cr.)

OLS 39000 LEADERSHIP:THEORIES/PROCESSES (3 cr.)

OLS 42300 GO GREEN - For Honors Credit (3 cr.) This course is interdisciplinary - emphasizing sustainability, engineering, manufacturing, technology, and leadership processes for the purpose of being environmentally responsible, cost effective, and socially responsible including guest lectures, group discussions, and tours of businesses, locally or in other countries.

Philosophy

PHIL-S 110 Introduction to Philosophy—Honors (3 cr.) This course is an introduction to key philosophical concepts and issues as well as major thinkers and historical periods.

PHIL-S 120 Ethics—Honors (3 cr.) A study of ethical values in relation to such problems as personal and societal decision making, selection and justification of lifestyle, goal orientation, conflict resolution, freedom and creativity, commitment and responsibility.

PHIL-S 314 Philosophy and Modern Times—Honors (3 cr.) A study of one or more philosophical concepts, themes, or developments characteristic of the modern period.

Political Science

POLS-Y 498 READINGS FOR HONORS (1-6 cr.)

Psychology

PSY-B 104 Psychology as a Social Science (3 cr.) B104 Psychology as a Social Science (3 cr.) Equiv. to IU PSY P102 and PU PSY 120. Fall, Spring, Summer. Introduction to scientific method, individual differences, personality, developmental, abnormal, social, and industrial psychology.

PSY-B 499 CAPSTONE HONORS RESEARCH (1-6 cr.)

Science

SCI-I 120 WINDOWS ON SCIENCE (1 cr.)

SOC-R 490 SURVEY RESEARCH METHODS (3 cr.)

SPEA

SPEA-V 391 HONORS RDGS IN PUB & ENVIR AFF (1-3 cr.)

SPEA-V 490 Directed Research in Public and Environmental Affairs (0-3 cr.) To be arranged with the individual instructor and approved by the chairperson of the undergraduate program. May be repeated for credit.

SPEA-V 491 HONORS RES PUB & ENVIR AFFAIRS (1-3 cr.)

SPEA-V 499 HONORS THESIS (3 cr.)

School of Information Science

Welcome to the IU School of Informatics!

Moore's Law says that computing power doubles every 18 months. Regardless of whether that law is literally correct, it illustrates the rapid changes in information technology that will continue for the foreseeable future. The School of Informatics prepares students to meet the continuing demand for information technology professionals who know how to grow and adapt to this environment of rapid technological change.

Informatics is focused on the best applications of technologies and emphasizes the social and psychological aspects of information technology. Some have called informatics "technology with a human face." Informatics prepares professionals to use information technology to solve problems in a variety of settings. The degrees emphasize the development of new uses for technologies, always keeping in mind the needs of people and the best and most appropriate uses for technology.

Informatics students have:

- a technical understanding of how computing systems and programs operate
- an ability to adapt/assess and apply new trends in information technology (IT)
- well-developed problem-solving skills
- experience working on a team, such as those formed for the senior capstone experience
- well-developed communications skills to clearly convey solutions and observations to others
- an understanding of social and ethical principles as they relate to IT issues
- the ability to create 3-D animations to help explain surgery to patients
- accelerated drug discovery through information technology
- developed computer applications to manage disaster relief
- explored human interactions with computers, mobile devices, and robots

Informatics is all of this - and so much more. Harnessing the power and possibility of technology, Informatics turns data and information into knowledge that people can use every day. In the world of information and technology, it's the bridge to all things useful. Informatics is the future.

Degrees from the School of Informatics are unique because they involve students in learning how information technology relates to a traditional discipline in the sciences, liberal arts, or professions. Students of Informatics learn to solve real problems that directly impact our lives and the lives of those around us. They use their technology and problem solving skills to make a difference in the world. For students interested in a career with infinite potential, Informatics stands out as a strong, flexible and dynamic field of study.

The undergraduate curriculum looks at information technology from a balanced perspective. It includes a technical core in the areas of mathematical foundations, distributed information, human-computer interaction, social/organization informatics, and new media. In addition to knowledge of core informatics and of informatics in the context of a traditional discipline, students must take a set of general-education courses to ensure that they can communicate clearly in both written and spoken English, read effectively, and reason quantitatively. They must be able to raise and rationally debate ethical concerns suggested by information technologies and their interactions with other people. Students also must have some knowledge of the world and its peoples, and their cultural, artistic, and scientific achievements. To this end, the general-education requirement exposes students to the arts and humanities, social and historical studies, and the natural sciences.

The school offers a Bachelor of Science in Informatics degree, specialized professional master's degrees, a variety of undergraduate and graduate programs in New Media, a Bachelor of Science in Health Information Administration, and a certificate in Medical Coding. Informatics research is conducted at the Informatics Research Institute, which provides expanded educational opportunities for both undergraduate and graduate students.

Informatics Research Institute

Research and theory in informatics move rapidly to application and development. The faculty teaching in the School of Informatics participate in research activities and new applications of technology. As a result, faculty can transmit state-of-the-art knowledge to their students. Indiana University is capitalizing on this great research strength in informatics with the formation of the Informatics Research Institute (IRI). IRI conducts research in areas of emphases shared with the School of Informatics, including: fundamental research in human-computer interaction; fundamental research in capturing, managing, analyzing, and explaining information and making it available for its myriad uses; and expanding research into policy and socioeconomic issues arising from information technology.

Undergraduate Programs

The School of Informatics offers a Bachelor of Science degree in Informatics, a Bachelor of Science degree in Media Arts and Science, and a Bachelor of Science degree in Health Information Administration.

The very nature of these degrees, with the changing technologies and applications, requires that the content of each degree be continuously assessed and revised. Therefore, the faculty of the School of Informatics will periodically review and revise the curricula to ensure that students are prepared to meet contemporary workplace and intellectual demands. Please contact the School of Informatics office, or refer to our Web site at www.informatics.iupui.edu, to confirm current program requirements.

Probationary Admission

Individuals who do not qualify for a direct admission or whose college grade point average is lower than 2.0 on a 4.0 scale (C) may petition the school for probationary admission. Special consideration is given to adult learners and students returning after five or more years. Petitions

are available from the Informatics Student Services Office, phone (317) 278-4636.

Deadline to petition for the fall semester: **July 15**
Deadline to petition for spring semester: **November 15**
Deadline to petition for summer session: **April 15**

At the discretion of the dean, the School of Informatics may admit on a probationary basis those students who do not meet the minimum requirements for direct admission. To be considered for probationary admission, students must be in the upper two-thirds of their high school graduating class and have combined SAT I math and verbal (critical reading) scores of at least 650. Such students are counseled through the Informatics Student Services Office and remain on probation until they have successfully raised their cumulative grade point average to 2.0 (C) and satisfied any other limitations set. Students admitted on probationary status become eligible for dismissal if they fail to achieve a minimum GPA of 2.3 during each semester until they have reached a minimum cumulative GPA of 2.0 (C). Students who do not achieve a cumulative grade point average of 2.0 (C) after two semesters, or 24 credit hours, will be dismissed.

Academic Regulations

Absences

From Final Examinations Students are required to adhere to the policies regarding final examinations as published in the *Schedule of Classes*.

From Scheduled Classes Illness or equivalent distress is the only acceptable excuse for absence from class. Other absences must be explained to the satisfaction of the instructor, who will decide whether omitted work may be made up.

Credit for Correspondence Courses

With prior approval, the School of Informatics will accept a maximum of two courses (6 credit hours total) by correspondence study to count toward the degree requirements. Only general elective courses may be taken by correspondence. Distance learning courses and courses conducted online are not considered correspondence courses and, therefore, do not have a credit hour limit associated with them.

Degree Application

Candidates for graduation must file an application with the school by March 1 for December graduation and October 1 for May, June, or August graduation. Credits for all course work, except that of the current semester, must be recorded on the candidate's Indiana University transcript at least one month prior to the date of graduation.

Statute of Limitations

Candidates for the bachelor's degree in informatics have the right to complete the degree requirements specified by the bulletin in effect at the time they entered Indiana University, provided that the required courses are available and that no more than eight calendar years have elapsed since the date of entry.

Grading Policies

The School of Informatics follows the official grading system of Indiana University described in the front of this Bulletin.

Pass/Fail

During an undergraduate program, students in the School of Informatics in good standing (not on probation) may enroll in up to a maximum of eight university elective courses to be taken with a grade of P (pass) or F (fail). Students may take up to two Pass/Fail courses during an academic year. The procedure for declaring this option may be found in the Schedule of Classes. A grade of P is not counted in the grade point average; a grade of F is included. Grades of P cannot be changed to any other letter grade.

Probation/Dismissal/Readmission at School of Informatics

Academic Warning

A student whose semester (fall or spring) grade point average (GPA) falls below a 2.0, but whose cumulative GPA is a 2.0 or higher will be placed on academic warning. An advising hold will be placed on the student's record and the student will be required to meet with their academic advisor prior to registration.

Academic Probation

A student whose cumulative grade point average (GPA) falls below a 2.0 will be placed on probation for the subsequent semester. A probation hold will be placed on the student's record and the student will be required to meet with their academic advisor prior to registration. Once the cumulative GPA is 2.0 or higher, the student will be removed from probationary status.

Dismissal

A student on probation who has completed a minimum of 12 IU GPA hours is subject to dismissal if they fail to attain a GPA of at least 2.0 in any two consecutive semesters (fall and spring) and their cumulative IU GPA is below 2.0.

Readmission

Students who are dismissed for the first time must sit out for a minimum of one regular fall or spring semester (not summer) and petition by the established deadlines to be eligible for readmission. Students dismissed two or more times must remain outof school for two regular (fall and spring) semesters and petition by the established deadlines to be eligible for readmission. Readmitted students may only begin in either the fall or spring semester.

Grade Replacement

The Grade Replacement Policy is available only to undergraduate students. It may be exercised for a maximum of 15 credit hours, no more than two times for a given course, with each attempted replacement counting toward the 15 credit hour limit. Any grade may be replaced with the last grade earned for the course, as long as the most recent grade is equal to or higher than the grade being replaced. The replaced grade will then be excluded from the cumulative grade point average. However, the course listing and the replaced grade will remain on the student's academic record with an "X" notation indicating that the grade is excluded from the cumulative grade point average.

The policy became effective beginning with the fall 1996 semester, and any courses being used to replace an earlier grade must have been taken in the fall of 1996 or later. Grades previously granted FX will be honored and

will count toward the 15 credit hour limit. Once invoked, a student may not subsequently request reversal of the grade replacement granted for a given course. Also, this policy is not available for graduate students or students seeking any second undergraduate degree. Please see your academic advisor to discuss grade replacement and obtain a form. For more information about the policy, visit http://registrar.iupui.edu/replace.html

Informatics Degree Programs

Prior to each semester's enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation. Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

Overview

Facilities

Informatics Research Institute

Research and theory in informatics move rapidly to application and development. The faculty teaching in the School of Informatics participate in research activities and new applications of technology. As a result, faculty can transmit state-of-the-art knowledge to their students. Indiana University is capitalizing on this great research strength in informatics with the formation of an Informatics Research Institute (IRI). IRI will conduct research in areas of emphases shared with the School of Informatics including: fundamental research in human-computer interaction; fundamental research in capturing, managing, analyzing, and explaining information and making it available for its myriad uses; and expanding research into policy and socioeconomic issues arising from information technology.

Requirements

Admission

Probationary Admission

Individuals who do not qualify for a direct admission or whose college grade point average is lower than 2.0 (C) on a 4.0 scale may petition the school for probationary admission. Special consideration is given to adult learners and students returning after five or more years. Petitions are available from the Informatics Student Services Office, (317)278-4636.

Deadline to enroll for the fall semester: **July 15**
Deadline to enroll for spring semester: **November 15**
Deadline to enroll for summer session: **April 15**

At the discretion of the dean, the School of Informatics may admit on a probationary basis those students who do not meet the minimum requirements for direct admission. To be considered for probationary admission, students must be in the upper two-thirds of their high school graduating class and have combined SAT I math and verbal (critical reading) scores of at least 650.

Such students are counseled through the Informatics Student Services Office and remain on probation until they have successfully raised their cumulative grade point average to 2.0 (C) and satisfied any other limitations set. Students admitted on probationary status become eligible for dismissal if they fail to achieve a minimum GPA of 2.3 during each semester until they have reached a minimum cumulative GPA of 2.0 (C). Students who do not achieve a cumulative grade point average of 2.0 (C) after two semesters, or 24 credit hours, will be dismissed.

Transfer Students

Human-Computer Interaction

The undergraduate certificate in Human-Computer Interaction (HCI) is a 15-credit-hour program allowing students majoring in another subject to become certified in the fundamental theory and application of human-computer interaction.

Courses (15 cr.)

- INFO I270 - Introduction to HCI Principles & Practices
- INFO I275 - Introduction to HCI Theory
- INFO I300 - Human-Computer Interaction
- INFO I480 - Experience Design and Evaluation of Ubiquitous Computing
- NEWM N450 - Usability Principles for New Media Interfaces

Informatics

The undergraduate certificate allows a student majoring in another subject to get appropriate training in informatics and obtain certification as someone who knows how to apply informatics tools to that subject area.

1. Minimum grade of 2.0 (C) in all courses taken for the certificate.
2. Students are required to complete 27 credit hours from the following list:
   - INFO I101 Introduction to Informatics (4 cr.)
   - INFO I202 Social Informatics (3 cr.)
   - INFO I210 Information Infrastructure I (4 cr.)
   - INFO I211 Information Infrastructure II (4 cr.)
   - INFO I300 Human-Computer Interaction (3 cr.)
   - INFO I303 Organizational Informatics (3 cr.)
   - INFO I308 Information Representation (3 cr.)

In addition, students must take an additional course (3 credit hours) from the informatics curriculum. These additional courses can be chosen from the listed electives for informatics and can therefore be taken in another department, if the other department is not the student's major department.

Certificate Programs

Prior to each semester's enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics. Although academic counseling is intended to provide effective

guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation.

Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

The School of Informatics offers the following undergraduate certificates:

- Informatics
- Medical Coding (2005)
- Human-Computer Interation (2009)

Medical Coding

Certificate

The Medical Coding Certificate is designed for people interested in the medical coding as well as students pursuing a bachelor's degree in another field of study who may wish to enhance their primary degree program.

Upon completion of the Medical Coding Certificate, students are prepared to find employment in a hospital or physician's office. They will be eligible to sit for the Certified Coding Associate (CCA) exam offered by the American Health Information Management Association (AHIMA).

College credit earned for the medical coding certificate can be applied toward the Health Information Administration bachelor's degree.

Medical Coding Certificate Requirements

The student must be admitted to the IUPUI campus and have knowledge of anatomy, physiology, and information technology tools. The Health Information Administration Program Admissions Committee will determine whether the applicant demonstrates adequate knowledge to enroll in the certificate program.

Students are required to receive a minimum grade of C in each course and maintain a minimum cumulative GPA of 2.5.

The School of Informatics reserves the right to amend program requirements. Those interested in the program are strongly encouraged to consult with an academic advisor from the School of Informatics for the latest information available.

Bachelor of Science in Health Information Administration

Health Information Administration

This profession incorporates the disciplines of medicine, management, finance, information technology, and law as they pertain to the complexities of patient care, medical research, information privacy and security, data quality assurance, reimbursement procedures and compliance issues.

Description of the Profession

Health information administrators collect, interpret, and protect health data and determine how data are used. They are managers and information specialists who frequently interact with other members of the medical, financial, and administrative staffs. It is their responsibility to ensure that the information system is protected and driven by accurate, up-to-the-minute information.

Some examples of the responsibilities of department managers follow:

• Determine health information policies.

• Design health information collection, storage, and reporting systems.

• Collaborate in the selection, implementation, use and maintenance of electronic health record systems for processing and storing clinical data.

• Serve on interdisciplinary healthcare committees governing quality standards, improvement, and utilization review.

• Advise on the privacy and security of healthcare information.

• Determine departmental budget and resource needs.

• Assure that the healthcare documentation requirements of various accrediting and governmental agencies are met.

Graduates of the Program

While many health information administrators are employed in hospitals, others work for insurance companies, long-term care and psychiatric facilities, software companies, physician group practices, pharmaceutical companies, and government agencies. They also coordinate quality management programs for health care facilities, teach in colleges and universities, and perform consulting activities.

The program graduate is eligible to seek registration as a Registered Health Information Administrator (RHIA) by successfully passing a national qualifying examination offered by the American Health Information Management Association (AHIMA). RHIA registration is an important credential when seeking employment as a health information administrator.

Bachelor of Science in Health Information Administration

Educational Program

Length of the Program

A four years course of study includes 55 credit hours of prerequisite course work plus 61 credit hours of professional course work. Students apply in spring semester for he fall admission to the professional component of the program, which is offered in the junior and senior years of a Bachelor of Science undergraduate degree. Students apply in the fall for the professional program.

Structure of the Program

The prerequisites and the professional program may be taken on a part-time or full-time basis. Pursing a full time course of study puts the student in the strongest position to pass the national registry exam. Design of the Professional Curriculum The professional courses focus on the management of health information systems and utilization of computerized clinical data. The professional component of the curriculum integrates lecture and laboratory courses with technical and professional practice

experiences in hospitals and other health care facilities and related settings.

Additional Cost

In addition to regular university tuition and fees, students should expect to pay lab fees, dues and conference fees related to student membership in AHIMA.

Program Facilities

The Health Information Administration Program is offered in the School of Informatics. Professional practice experiences occur in health care facilities and settings.

Accreditation

The Health Information Administration Program is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM).

Admission

General Information

Students accepted into the program must complete the School's admission process and the program admission requirements described below. Admission to the professional program is competitive; therefore, completion of the prerequisites does not guarantee admission to the program.

Criteria used for Selection of Class

Completion of prerequisite courses, required grade point average and completed application process.

Specific Requirements

In addition to the School of Informatics admission policies and procedures found at the beginning of this section of the bulletin, the following admission policies apply to the Health Information Administration Program.

Application Deadline

January 30th for expected fall admission.

Total Number of Prerequisite Credit Hours 55

Limitations of Course Work

Remedial course work will not count toward the 55 required prerequisite credit hours.

Minimum Cumulative Grade Point Average

2.5 on a 4.0 scale. This requirement is applied at the time of program application and must be maintained. Minimum grade requirement of C (2.0 on a 4.0 scale) or above is required in all prerequisite courses

Curriculum

Prerequisites

Prior to entering the program, students must complete at least 55 credit hours of prerequisites. The current prerequisite plan of study is maintained on the School of Informatics web site. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete prerequisites. Prerequisites may be taken at any accredited college or university.

Professional Program

Courses in the professional program are sequential and, therefore, must be taken in the order specified by the program faculty. The current professional plan of study is maintained on the School of Informatics web site. Students should consult with their academic advisors for appropriate courses and semester sequence in order to complete the program. A minimum grade of C (2.0) is required in each professional course. While many of the course offerings Whill many courses are available via distance education technology, applicants should be aware that the program is not an entirely online program. Face to face professional practice experiences are required by CAHIIM, the program's accrediting agency.

The School of Informatics reserves the right to amend program requirements. Those interested in the program are strongly encouraged to consult with an academic advisor from the School of Informatics for the latest information available.

Graduation Requirements

Satisfactory completion of 121 credit hours, including 55 credit hours of prerequisite and general-education courses and 61 credit hours of professional courses. All course work must be completed in compliance with the program's and School's academic and professional policies.

Bachelor of Science in Informatics

Prior to each semester's enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation. Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

General Requirements

Students must successfully complete a minimum of 122 credit hours for the Bachelor of Science degree. The campus at which a student is admitted will award the degree. Students may transfer no more than 60 credit hours toward a Bachelor of Science degree. Students must complete the specific degree requirements of the School of Informatics as listed below.

1. Students must complete a minimum of 50 credit hours in courses at the 300-400 (junior-senior) level.
2. Students must have a minimum cumulative grade point average of 2.0 (C). Any course taken to satisfy the requirements of the major must be completed with a minimum grade of C– unless otherwise specified.
3. Students are expected to complete the requirements for their undergraduate degree within eight years of admission to the School of Informatics. Students are allowed to continue beyond this time period only at the discretion of the dean. If a student has not taken classes for three years or more, that student must satisfy program requirements of the School of Informatics in effect at the time of reactivation. Requests for deviation from requirements listed in the bulletin must be approved in writing by the dean, whose decision is final.

4. Courses that fulfill the requirements for an area of specialization also may meet the general education distribution requirements.
5. Area of specialization courses cannot count as informatics core courses or informatics elective courses.
6. If area of specialization courses are equivalent to informatics core courses, students should substitute additional informatics elective courses in place of informatics core courses to meet the 15-21 credit hour requirement.
7. Courses that fulfill the requirements for a bachelor's degree in informatics also may apply to a minor outside of the School of Informatics.
8. Students must file a degree application with the School of Informatics office by March 1 for December graduation and October 1 for May, June, or August graduation. Failure to file by the deadline may delay the official date of graduation.

Course Requirements

The course work required for the Bachelor of Science in Informatics consists of six parts:

- Required Core A (50 credit hours) (including INFO-I100 First Year Experience)
- Required Core B (6 credit hours)
- Area of Specialization
- General Education Requirements
- General Electives (15-19 credit hours)

Required Core A [50 credit hours]

- INFO I100 First Year Experience (1 cr.)
- INFO I101 Introduction to Informatics (4 cr.)
- INFO I201 Mathematical Foundations of Informatics (4 cr.)
- INFO I202 Social Informatics (3 cr.)
- NEWM N221 Media Applications I (3 cr.)
- INFO I210 Information Infrastructure I (4 cr.)
- INFO I211 Information Infrastructure II (4 cr.)
- NEWM N222 Media Applications II (3 cr.)
- INFO I270 Introduction to Human Computer Interaction (3 cr.)
- INFO I308 Information Representation (3 cr.)
- INFO I399 Research Inquiry (3 cr.)
- INFO I402 Project Management (3 cr.)
- INFO I453 Computer and Information Ethics (3 cr.)
- INFO Y195 Directed Study (1 cr.)
- INFO Y295 Directed Study (1 cr.)
- INFO Y395 Career Development for Informatics Majors (1 cr.)
- INFO I421 Applications of Data Mining and Management (3 cr.)
- INFO I453 Computer and Information Ethics (3 cr.)

Required Core B [6 credit hours]

- Select two Informatics courses at the 300 level or above.

Note: The above courses are subject to the successful completion of prerequisites or approval of the instructor. Students also may count other courses with informatics content as informatics electives upon approval of the dean.

Required Capstone [6 credit hours]

- INFO I494/I495 Design and Development of Information Systems (3/3 cr.)

(senior standing; capstone project), two semester course

- INFO I492/I493 Senior Thesis (3/3 cr.)

(senior standing; capstone experience)

- INFO I491 Capstone Project Internship (3/3 cr.)

(senior standing; capstone experience)

Recommended Courses The following course is recommended for students who lack a strong computing background. This course is considered a general elective course.

- INFO I112 Basic Tools of Informatics—Programming and Database Concepts (3 cr.)

Area of Specialization Courses (15-21 cr.)

Departments offering areas of specialiation courses are listed on the informatics Web site (www.informatics.iupui.edu). Students should, in consultation with their academic advisors, choose an area of specialization before their sophomore year. Students must receive a grade of C– or higher in each course, and a cumulative GPA of 2.0 or higher. Students may also be able to receive a minor or certificate.

General Education Requirements

Written Communication (3 cr.)

- ENG W131 Elementary Composition I (or equivalent)

Students must check the listings for courses in the Schedule of Classes each semester to make

certain the course section they have chosen fulfills the requirement.

Oral Communication (3 cr.)

- COMM R110 Fundamentals of Speech Communication

Quantitative & Analytical Skills (6 cr.)

- Three (3) hours from any of the following MATH courses:

M118; 119; 151; 153; 154; 163; 164

- Three (3) hours from any of the following STAT courses:

301 or 350 Was the issue of which mathematics course students should take ever resolved?

Natural, Mathematical or Computer Science (9 credit hours)

- Arts & Humanities [3 credit hours]
- AFRO A150 Survey of the Culture of Black Americans (3 cr.)
- AMST A103 Topics in American Studies (3 cr.)
- CLAS C205 Classical Mythology (3 cr.)

- CMLT C190 FILM C292 Introduction to Film (3 cr.)
- COMM T130 Introduction to Theatre (3 cr.)
- ENG L105 Appreciation of Literature (3 cr.)
- ENG L115 Literature for Today (3 cr.)
- FLAC F200 World Cultures Through Literature (3 cr.)
- FOLK F101 Introduction to Folklore (3 cr.)
- HER H100 Art Appreciation (3 cr.)
- HER H101 History of Art I (3 cr.)
- HER H102 History of Art II (3 cr.)
- HIST H105 American History I (3 cr.)
- HIST H106 American History II (3 cr.)
- HIST H108 Perspectives on the World to 1800 (3 cr.)
- HIST H113 History of Western Civilization I (3 cr.)
- HIST H217 The Nature of History (3 cr.)
- PHIL P110 Introduction to Philosophy (3 cr.)
- PHIL P120 Ethics (3 cr.)
- REL R133 Introduction to Religion (3 cr.)
- REL R173 American Religion (3 cr.)
- REL R180 Introduction to Christianity (3 cr.)
- REL R212 Comparative Religions (3 cr.)
- MUS M174 Music for the Listener (3 cr.)
- WOST W105 Introduction to Women's Studies (3 cr.)

Social Sciences [3 credit hours]

- AFRO A150 Survey of the Culture of Black Americans (3 cr.)
- ANTH A104 Culture and Society (3 cr.)
- COMM C180 Interpersonal Communication (3 cr.)
- ECON E201 Introduction to Microeconomics (3 cr.) or ECON E202 Introduction to Macroeconomics (3 cr.)
- ENG G104 Language Awareness (3 cr.)
- FOLK F101 Introduction to Folklore (3 cr.)
- GEOG G110 Introduction to Human Geography (3 cr.)
- GEOG G130 World Geography (3 cr.)
- HIST H117 Introduction to Historical Analysis (3 cr.)
- POLS Y101 Principles of Political Science (3 cr.)
- POLS Y103 Introduction to American Politics (3 cr.)
- POLS Y213 Introduction to Public Policy (3 cr.)
- POLS Y219 International Relations (3 cr.)
- PSY B104 Psychology as a Social Science (3 cr.)
- PSY B310 Life Span Development (3 cr.)
- SOC R100 Introduction to Sociology (3 cr.)
- SOC R121 Social Problems (3 cr.)
- WOST W105 Introduction to Women's Studies (3 cr.)

Comparative World Cultures [3 credit hours]

- ANTH A104 Culture and Society (3 cr.)
- CLAS C205 Classical Mythology (3 cr.)
- FLAC F200 World Cultures through Literature (3 cr.)
- GEOG G110 Introduction to Human Geography (3 cr.)
- HIST H108 Perspectives on the World to 1800 (3 cr.)
- POLS Y217 Introduction to Comparative Politics (3 cr.)
- REL R133 Introduction to Religion (3 cr.)
- REL R212 Comparative Religions (3 cr.)

General Electives [15-19 credit hours]

Dual Baccalaureate Degree

In certain circumstances students may be permitted to pursue a Bachelor of Science in Informatics and complete an undergraduate degree in another degree-granting school of the university. Check with an academic advisor for more details.

Second Baccalaureate Degree

In certain cases the dean may admit bachelor's degree holders to candidacy for a second bachelor's degree. When such admission is granted, the candidate must earn at least 60 additional credit hours and meet the requirements of the School of Informatics. Students seeking second degree candidacy should review the guidelines available from the informatics office. Students with a bachelor's degree who wish to further their education should also consider becoming qualified for admission to a graduate program.

Minor and Certificate in Informatics

The undergraduate minor or certificate allows a student majoring in another subject to get appropriate training in informatics and obtain certification as someone who knows how to apply informatics tools to that subject area.

Certificate in Informatics

1. Minimum grade of 2.0 (C) in all courses taken for the certificate.

2. Students are required to complete 27 credit hours from the following list:
   - INFO I101 Introduction to Informatics (4 cr.)
   - INFO I202 Social Informatics (3 cr.)
   - INFO I210 Information Infrastructure I (4 cr.)
   - INFO I211 Information Infrastructure II (4 cr.)
   - INFO I300 Human-Computer Interaction (3 cr.)
   - INFO I303 Organizational Informatics (3 cr.)
   - INFO I308 Information Representation (3 cr.)

In addition, students must take an additional course (3 credit hours) from the informatics curriculum. These additional courses can be chosen from the listed electives for informatics and can therefore be taken in another department, if the other department is not the student's major department.

Minor in Informatics (16–18 cr.)

1. Minimum grade of 2.0 (C) in all courses taken for the minor.

2. Students are required to take three courses from the following list:

   - INFO I101 Introduction to Informatics (4 cr.)
   - INFO I202 Social Informatics (3 cr.)
   - INFO I210 Information Infrastructure I (4 cr.)
   - INFO I211 Information Infrastructure II (4 cr.)
   - INFO I308 Information Representation (3 cr.)

3. Students are required to take the following upper level courses:

   - INFO I300 Human-Computer Interaction (3 cr.)
   - INFO I303 Organizational Informatics (3 cr.)

One course from the list of approved informatics elective courses. The course cannot be in the student's major department.

Minor in Business

IUPUI students pursuing a bachelor's degree in the School of Informatics may obtain a minor in business by successfully fulfilling the following requirements:

Section A: Required Business Courses (9 cr.)

- BUS A200 Foundations of Accounting
- BUS K201 The Computer in Business
- BUS L203 Commercial Law I

Prerequisite for each course: Sophomore standing

Section B: Required Business Courses (9 cr.) Prerequisites for all three courses below: BUS A200,

K201, L203, ENG W131, Math 110 or above. These courses do not have to be taken at the same time and may be taken in any sequence.

- BUS F300 Introduction to Financial Management
- BUS M300 Introduction to Marketing
- BUS P300 Introduction to Operations Management

Section C Business Electives (3 cr.) Choose one of the following:

- BUS D301 International Business Environment (P: ECON E201 and E202)
- BUS Z302 Managing and Behavior in Organizations (P: Junior Standing)
- BUS Z311 Ethics and Leadership (1.5 cr.) AND
- BUS Z312 Human Resources and Negotiations (1.5 cr.) (P: Junior Standing)

Requirements to receive a business minor:

- 21 credit hours in business
- Minimum GPA in the seven courses of 2.0 or above
- Four of the seven courses must be taken on the IUPUI campus
- Submit an application for the Kelley School of Business Minor at the beginning of their your final semester at IUPUI

NOTE: Kelley School of Business may adjust requirements. Be sure to check with your advisor.

Bachelor of Science in Media Arts and Science

The Media Arts and Science (MAS) program explores the theory and practice of using digital media to communicate, educate, engage, or entertain. Courses in the program are hands-on and project-based, allowing students to become fluent in the use of contemporary tools for content creation, management, deployment, and assessment. The program also fosters the skills and qualities prized by employers in the 21st century workplace – skills for communication, teamwork, and productivity.

General Requirements

A minimum of 122 credit hours is required for the MAS degree. Students may transfer no more than 60 credit hours from another institution. Students must complete the specific Course Requirements listed below.

Additionally:

- Students must have a minimum cumulative grade point average of 2.0 (C).
- Any course taken to satisfy the requirements of the degree must be completed with a minimum grade of C (a grade of C- does not count).
- Remedial courses are not counted towards the degree.
- A maximum of 12 credit hours may be taken using the Pass/Fail option and applied to University Electives only.
- Once a course has been applied toward one requirement, it cannot be used to satisfy a second requirement, except where explicitly stated otherwise. No course will be counted more than once toward graduation with the exception of special topics courses, seminars,independent study, internships, and other special courses.
- Students must file a degree application form with the School by March 1 for December graduation and October 1 for May, June, or August graduation. Failure to file by the deadline may delay the official date of graduation.

Course Requirements

The course work required for the Bachelor of Science in Media Arts and Science consists of five parts:

1. Media Arts & Science Core Courses
2. Computing Foundations
3. Course of Study
4. General Education Requirements
5. University Electives

1. Media Arts & Science Core Courses (18 cr.)

- NEWM N100 Foundations of New Media (3 cr.)
- NEWM N101 Multimedia Authoring Tools (3 cr.)
- NEWM N102 Digital Media Imagery (3 cr.)
- NEWM N202 Digital Storytelling (3 cr.)
- NEWM N199 Directed Study I (1 cr.)
- NEWM N299 Directed Study II (1 cr.)
- NEWM N399 Directed Study III (1 cr.)
- NEWM N499 Capstone Experience (3 cr.)

2. Computing Foundations (3 cr.)

- CSCI N301 Fundamental Computer Science Concepts (3 cr.)

3. Course of Study (57 cr.)

The student's Course of Study must include at least 45 credit hours from NEWM courses, with at least 12 hours at the 300-level and 12 hours at the 400 level. Up to 12 hours in the Course of Study may be chosen from the list of Electives, shown here.

Electives

- INFO Any undergraduate course

4. General Education Requirements (22 cr.) Learning Community, INFO I100 (1 cr.)

Communication Skills (9 cr.)

- ENG W131 English Composition I (3 cr.)
- COMM R110 Fundamentals of Speech Communication (3 cr.)

and one of the following:

- JOUR J200 Reporting, Writing, and Editing I (3 cr.) or
- ENG W132 English Composition II (3 cr.), or
- TCM 220 Technical Report Writing (3 cr.)

Analytical Skills (6 cr.)

- MATH M118 Finite Mathematics (3 cr.)
- MATH M153 Algebra and Trigonometry I (3 cr.)
- PHIL P162 Practical Logic (3 cr.)
- PHIL P265 Elementary Symbolic Logic (3 cr.)
- STAT 30100 Elementary Statistical Methods (3 cr.)
- STAT 35000 Data Analysis (3 cr.)

Arts and Humanities (3 cr.)

- CLAS C205 Classical Mythology (3 cr.)
- COMM T130 Introduction to Theatre (3 cr.)
- ENG L105 Appreciation of Literature (3 cr.)
- FILM C292 Introduction to Film (3 cr.)
- FOLK F101 Folklore (3 cr.)
- HER H100 Art Appreciation (3 cr.)
- HER H101 History of Art (3 cr.)
- MUS M174 Music for the Listener (3 cr.)
- PHIL P110 Introduction to Philosophy (3 cr.)
- PHIL P120 Ethics (3 cr.)

Social Sciences and Comparative World Cultures (3 cr.)

- AFRO A150 Afro-American Studies (3 cr.)
- AMST A103 Topics in American Studies (3 cr.)
- ANTH A104 Culture and Society (3 cr.)
- COMM C180 Interpersonal Communication (3 cr.)
- GEOG G110 Intro to Human Geography (3 cr.)
- HIST H105 American History I (3 cr.)
- HIST H108 Perspectives on the World to 1800 (3 cr.)
- HIST H113 History of Western Civilization I (3 cr.)
- HIST H217 The Nature of History (3 cr.)
- POLS Y101 Principles of Political Science (3 cr.)
- POLS Y217 Intro to Comparative Politics (3 cr.)
- POLS Y213 Intro to Public Policy (3 cr.)
- PSY B104 Psychology as a Social Science (3 cr.)
- PSY B310 Life Span Development (3 cr.)
- SOC R100 Sociology (3 cr.)
- SOC R121 Social Problems (3 cr.)
- REL R133 Introduction to Religion (3 cr.)
- REL R173 American Religion (3 cr.)
- REL R212 Comparative Religions (3 cr.)
- WOST W105 Intro to Women's Studies (3 cr.)

5. University Electives (up to 22 cr.) Courses for the remaining credits will be decided by the individual student, in consultation with an advisor, to fulfill additional career and/or personal interests.

Students may take a maximum of 4 credit hours of HPER elective physical education courses numbered Exxx.

Degree Programs

Prior to each semester's enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation.

Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

The School of Informatics offers the following undergraduate degrees:

- Health Information Administration
- Informatics
- Media Arts and Science

Undergraduate Programs

The School of Informatics offers a Bachelor of Science degree in Informatics, a Bachelor of Science degree in Media Arts and Science, and a Bachelor of Science degree in Health Information Administration.

The very nature of these degrees, with the changing technologies and applications, requires that the content of each degree be continuously assessed and revised. Therefore, the faculty of the School of Informatics will periodically review and revise the curricula to ensure that students are prepared to meet contemporary workplace and intellectual demands.

Please contact the School of Informatics office, or refer to our Web site at http://informatics.iupui.edu/ to confirm current program requirements.

Informatics

The undergraduate minor or certificate allows a student majoring in another subject to get appropriate training in informatics and obtain certification as someone who knows how to apply informatics tools to that subject area.

1. Minimum grade of 2.0 (C) in all courses taken for the minor.
2. Students are required to take three courses from the following list:
   - INFO I101 Introduction to Informatics (4 cr.)
   - INFO I202 Social Informatics (3 cr.)
   - INFO I210 Information Infrastructure I (4 cr.)
   - INFO I211 Information Infrastructure II (4 cr.)
   - INFO I308 Information Representation (3 cr.)
3. Students are required to take the following upper level courses:
   - INFO I300 Human-Computer Interaction (3 cr.)
   - INFO I303 Organizational Informatics (3 cr.)

One course from the list of approved informatics elective courses. The course cannot be in the student's major department.

Business

IUPUI students pursuing a bachelor's degree in the School of Informatics may obtain a minor in business by successfully fulfilling the following requirements:

Section A: Required Business Courses (9 cr.)

- BUS A200: Foundations of Accounting
- BUS K201: The Computer in Business
- BUS L203: Commercial Law I

Section B: Required Business Courses (9 cr.)

Prerequisites for all three courses below: BUS A200, K201, L203, ENG W131, Math 110 or above. These courses do not have to be taken at the same time and may be taken in any sequence.

- BUS F300: Introduction to Financial Management
- BUS M300: Introduction to Marketing
- BUS P300: Introduction to Operations Management

Section C Business Electives (3 cr.)

Choose one of the following:

- BUS D301: International Business Environment (P: ECON E201 and E202)
- BUS Z302: Managing and Behavior in Organizations (P: Junior Standing)
- BUS Z311: Ethics and Leadership (1.5 cr.) AND
- BUS Z312: Human Resources and Negotiations (1.5 cr.) (P: Junior Standing)

Requirements to receive a business minor:

- 21 credit hours in business
- Minimum GPA in the seven courses of 2.0 or above
- Four of the seven courses must be taken on the IUPUI campus
- Fill out an application for the Kelley School of Business Minor at the beginning of their final semester at IUPUI

NOTE: Kelley School of Business may adjust requirements. Be sure to check with your advisor.

Minors

Prior to each semester's enrollment, a faculty member or an academic advisor provides academic counseling for each student in the School of Informatics. Although academic counseling is intended to provide effective guidance, students are responsible for planning their own programs and for meeting the following degree requirements for graduation.

Students are advised to read bulletin descriptions of all courses selected, paying careful attention to conditions concerning awarding of credit.

The School of Informatics offers the following undergraduate minors:

- Business
- Informatics

Student Learning Outcomes

Informatics is an applied, professional computing discipline. It responds to society's need to solve increasingly complex problems in all fields of human endeavor by acquiring, managing and interpreting data. Informatics studies the ways in which people, information and digital technologies interact.

Nearly all fields benefit from the rapidly evolving fields of computing and information science. Informatics graduates solve problems through the application of computing or computation in the sciences, business, the humanities and the arts.

Computing and information technology are evolving rapidly. The student learning outcomes articulated here are central to educating Informatics graduates who possess both the technological and human-centered design skills necessary to develop and deploy useful digital tools that acquire and manage data for informed decision-making. They incorporate intellectual and ethical standards that every School of Informatics graduate should attain.

Bachelor of Science

- Health Information Administration
- Informatics
- Media Arts and Science

Undergraduate Certificate

- Human-Computer Interaction
- Informatics
- Medical Coding

Bachelor of Science in Media Arts and Science

Students in the Media Arts and Science program will acquire competencies in several domains. They will:

1. Understand digital media and its effective use as a form of communication.
2. Communicate ideas effectively in written and oral form to a range of audiences.
3. Work effectively as a member of a team to achieve a common goal.
4. Analyze a problem, identify and evaluate alternatives, plan an appropriate solution.
5. Appreciate the history, theory, and traditions of digital media. Evaluate media from multiple perspectives using the theories, concepts, and language of digital media.
6. Demonstrate mastery of the concepts, techniques, and tools in one or more digital media specialties.

7. Apply knowledge and skills to develop professional quality digital media productions in a timely manner and utilizing best practices and standards.
8. Explain the impact of digital media on individuals, organizations, and society.
9. Acknowledge diverse opinions regarding professional, ethical, legal, and social issues with a global perspective.
10. Appreciate the need for lifelong learning and have a plan for continuing professional development.

Bachelor of Science in Informatics

The Informatics undergraduate student will acquire competencies in the technical dimensions of informatics and information technology (IT). Students will:

1. Demonstrate knowledge and skills in the mathematical and logical foundations of informatics.
2. Define terms and explain basic principles essential to the design and development of IT and computing systems.
3. Acquire fundamental concepts and skills in software architectures and the development of information systems.
4. Demonstrate knowledge and skills in data representation, models, structures, and informatics-centric management.

The Informatics undergraduate will acquire competencies in the social dimensions of informatics and information technology. Students will:

1. Articulate and acquire strategies for staying abreast of major societal trends, such as access, privacy, intellectual property, security and others, affecting the development and deployment of modern day IT.
2. Critically analyze the intended and unintended consequences of IT on individuals, groups, formal and informal organizations at local and global levels.
3. Apply a user-centered approach to interaction design and product usability, including techniques for quantitative and qualitative testing of interface and interaction design.
4. Utilize digital tools to communicate with a range of audiences.
5. Analyze the social, cultural, and organizational settings in which IT solutions will be deployed to increase the chances of successful implementation.

Students will develop critical thinking and problem solving skills that can be applied to at least one other domain of endeavor, such as business, science, the arts, or humanities. They will:

1. Define terms and explain basic principles, concepts and theories from another domain or discipline in which the students' IT skills will be applied.
2. Demonstrate the ability to deploy IT resources in the context of another domain and/or discipline.
3. Synthesize, analyze, and conceptualize information and ideas from multiple sources and perspectives.
4. Evaluate data, arrive at reasoned conclusions and solve challenging problems.
5. Execute a "real world" senior informatics capstone that demonstrates the skills they have acquired throughout their undergraduate education.

Students will develop collaborative skills and the ability to work in teams. They will:

1. Select and effectively utilize oral, written, visual and quantitative communication skills within the context of an interdisciplinary team.
2. Identify and demonstrate the skills, behaviors and attitudes necessary to function as an effective team member, including working cooperatively with diverse group members.
3. Acquire the skills to initiate, manage and execute an IT project.
4. Articulate legal and ethical issues when using the creative work of others; respect the intellectual property of others.

Students will acquire the behaviors of an autonomous, socially responsible professional capable of conducting professional informatics best practice. They will:

1. Create a personal code of ethics; articulate principles for resolving ethical conflicts.
2. Commit to a regular program of continuing education and lifelong learning that is independent of employer sponsorship.
3. Participate in professional organizations that promote responsible computing and service to society.

Bachelor of Science in Health Information Administration

Students in the Health Information Administration program will acquire competencies in several domains. They will:

Domain I - Health Data Management

1. **Health Data Structure, Content and Standards**
   - Manage health data (such as data elements, data sets, and databases).
   - Ensure that documentation in the health record supports the diagnosis and reflects the patient's progress, clinical findings, and discharge status.
   - Maintain processes, policies, and procedures to ensure the accuracy of coded data.
   - Monitor use of clinical vocabularies and terminologies used in the organizations' health information system.
2. **Healthcare Information Requirements and Standards**
   - Develop organization-wide health record documentation guidelines.
   - Maintain organizational compliance with regulations.
   - Ensure organizational survey readiness for accreditation, licensing and/or certification processes.
3. **Clinical Classification Systems**
   - Select electronic applications for clinical classification and coding.

- Implement and manage applications and processes for clinical classification and coding.

4. **Reimbursement Methodologies**
   - Manage the use of clinical data required in prospective payment systems (PPS) in healthcare delivery.
   - Manage the use of clinical data required in other reimbursement systems in healthcare delivery.
   - Participate in selection and development of applications and processes for chargemaster and claims management.
   - Implement and manage processes for compliance and reporting such as the National Correct Coding Initiative.

Domain II- Health Statistics, Biomedical Research and Quality Management

1. **Healthcare Statistics and Research**
   - Manage clinical indices/databases/registries.
   - Analyze and present data for quality management, utilization management, risk management, and other related studies.
   - Utilize statistical software.
   - Ensure adherence to institutional Review Board (IRB) processes and policies.

2. **Quality Management and Performance Improvement**
   - Organize and coordinate facility-wide quality management and performance improvement programs.
   - Analyze clinical data to identify trends.
   - Analyze and present data for healthcare decision-making (such as demonstrating quality, safety, and effectiveness of healthcare).

Domain III - Health Services Organization and Delivery

1. **Healthcare Delivery Systems**
   - Monitor the impact of national health information initiatives on the healthcare delivery system for application to information system policies and procedures.
   - Interpret, communicate, and apply current laws accreditation, licensure and certification standards related to health information initiatives at the national, state, local, and facility levels.
   - Analyze and respond to the information needs of internal and external customers throughout the continuum of healthcare services.
   - Revise policies and procedures to comply with changing health information regulations.
   - Translate and interpret health information for consumers and advocates.

2. **Healthcare Privacy, Confidentiality, Legal and Ethical Issues**
   - Coordinate the implementation of legal and regulatory requirements related to the health information infrastructure.
   - Manage access and disclosure of personal health information.
   - Develop and implement organization-wide confidentiality policies and procedures.
   - Develop and implement privacy training programs.
   - Resolve privacy issues/problems.
   - Apply and promote ethical standards of practices.

Domain IV: Information Technology & Systems

1. **Information and Communication Technologies**
   - Implement and manage use of technology, including hardware and software, to ensure data collection, storage, analysis and reporting of information.
   - Contribute to the development of networks, including intranet and internet applications to facilitate the electronic health record (EHR), personal health record (PHR), public health, and other administrative applications.
   - Interpret the derivation and use of standards to achieve interoperability of healthcare information systems.

2. **Data, Information, and File Structures**
   - Apply knowledge of data base architecture and design (such as data dictionary, data modeling, data warehousing, and so on) to meet organizational needs.

3. **Data Storage and Retrieval**
   - Apply appropriate electronic or imaging technology for data/record storage.
   - Apply knowledge of database querying and data mining techniques to facilitate information retrieval.
   - Implement and manage knowledge-based applications to meet end-user information requirements.
   - Design and generate administrative reports using appropriate software.

4. **Data Security**
   - Enforce confidentiality and security measures to protect electronic health information.
   - Protect data integrity and validity using software or hardware technology.
   - Implement and monitor department and organizational data and information system security policies.
   - Recommend elements that must be included in the design of audit trail and data quality monitoring programs.
   - Recommend elements that should be included in the design and implementation of risk assessment, contingency planning, and data recovery procedures.

5. **Healthcare Information Systems**
   - Compare and contrast the various clinical, administrative, and specialty service applications used in healthcare organizations.
   - Apply appropriate systems life cycle concepts, including systems analysis, design, implementation, evaluation, and maintenance to the selection of healthcare information systems.

- Facilitate project management by integrating work efforts, as well as planning and executing project tasks and activities.
- Formulate planning, design, selection, implementation, integration, testing evaluation, and support for organization-wide information systems.
- Apply ergonomic and human factors in interface design.

Domain V: Organization and Management

1. **Human Resources Management**
   - Manage human resources to facilitate staff recruitment, retention, and supervision.
   - Ensure compliance with employment laws.
   - Develop and implement staff orientation and training programs.
   - Develop and implement continuing education programs.
   - Develop productivity standards for health information functions.
   - Monitor staffing levels and productivity, and provide feedback to staff regarding performance.
   - Benchmark staff performance data.
   - Develop, motivate, and support work teams.
2. **Financial and Resource Management**
   - Demonstrate knowledge of financial management and accounting principles.
   - Prepare and monitor budgets and contracts.
   - Demonstrate and apply knowledge of cost-benefit analysis techniques to justify resource needs.
   - Manage organization-wide coding and revenue cycle processes.
3. **Strategic Planning and Organizational Development**
   - Develop strategic and operational plans for facility-wide information systems.
   - Assess organization-wide information needs.
   - Facilitate retrieval, interpretation, and presentation of data/information appropriate to user needs.
   - Demonstrate and apply principles of organization behavior to facilitate team building, negotiation, and change management.
4. **Project and Operations Management**
   - Apply general principles of management in the administration of health information services.
   - Assign projects and tasks to appropriate staff.
   - Implement process engineering and project management techniques to ensure efficient workflow and appropriate outcomes.

Human Computer Interaction (HCI) Certificate

Students will understand and apply at a basic level HCI domain knowledge:

1. HCI and usability terms, concepts, principles, and practices.
2. Problem space definition and conceptual models of interactive products.
3. User-centered approaches to interaction design as applied to software and the Web.
4. User profiling and user needs and requirements.
5. Interface design principles and processes; including related areas of visual design.
6. Cognitive and information processing.
7. Processes and life-cycles of interactive product design.
8. Interactive product evaluation and testing methods, both qualitative and quantitative.

Students will understand and demonstrate at a basic level the design and evaluation of interactive products up to the high fidelity prototype stage:

1. Interactive product interface design and prototyping based on user/needs assessments.
2. HCI principles and a user-centered approach to interaction design as applied to software and the Web.
3. Apply evaluation and usability testing methods to interactive products to validate design decisions.

Informatics Certificate

The Informatics certificate student will acquire competencies in the dimensions of information technology. Students will:

1. Define terms and explain basic principles important to the operation of computing systems as well as fundamental programming concepts.
2. Demonstrate knowledge and skills in data representation, models, structures, and management.

The Informatics graduate will attain competencies in the dimensions of information technology. Students will:

1. Acquire strategies for staying abreast of major societal trends, such as access, privacy, intellectual property, security and others, affecting the development and deployment of modern day information technologies.
2. Critically analyze the intended and unintended consequences of an information technology on individuals, groups, formal and informal organizations at local and global levels.
3. Analyze the social, cultural, and organizational settings in which technology solutions will be deployed to increase the chances of successful implementation.

Students will examine the role of information technology in an of their choice (examples: business, computer science, biology, media arts, etc.). They will:

1. Define terms and explain basic principles, concepts and theories from informatics as they impact their area of specialization.
2. Demonstrate the ability to access evolving trends in information technology and information technology research as they impact their base discipline.

3. Synthesize and analyze information and ideas from multiple sources and perspectives.
4. Evaluate data, arrive at reasoned conclusions, and solve challenging problems that involve information technology in their area of specialization.

Students will develop collaborative skills and the ability to work in . They will:

1. Select and effectively utilize oral, written, visual and quantitative communication skills within the context of an interdisciplinary team.
2. Identify and demonstrate the skills, behaviors and attitudes necessary to function as an effective team member, including working cooperatively with diverse group members.
3. Articulate legal and ethical issues when using the creative work of others; respect the intellectual property of others.

Students will adopt the skills, attitudes and behaviors of autonomous, so that they may further the goals of their home discipline. They will:

1. Participate in the development of a personal code of ethics that considers information ethics.
2. Articulate principles for resolving ethical conflicts.

Medical Coding Certificate

Students completing the Medical Coding Certificate will aquire competencies in several domains.

Domain I - Life Sciences

1. **Anatomy and Physiology**
   - Identify the structures and functions of the human body
   - Locate anatomical online lookups (Adam, etc.)
2. **Medical Terminology**
   - Demonstrate their ability to spell, define, and pronounce medical terms of major disease processes, diagnostic procedures, laboratory tests, abbreviations, drugs, and treatment modalities
   - Demonstrate knowledge of root/suffix/prefix word build concepts and common medical terms
3. **Pathophysiology**
   - Identify specific disease processes by human body system
   - Identify cause, diagnosis, and treatment for each disease process
4. **Pharmacotherapy & Laboratory Findings**
   - Recognize the action of drugs such as: absorption, distribution, metabolism and excretion by the body.
   - Differentiate between drug classifications
   - Identify the most commonly prescribed drugs
   - Describe a formulary
   - Match drugs to common conditions
   - Match drugs to lab findings

Domain II - Information Technology

1. **Introduction to Desktop Applications**
   - Demonstrate keyboard and web access skills
   - Identify concepts related to hardware and software
   - Demonstrate knowledge of Microsoft Office Suite applications
2. **Computer Software Applications in Healthcare**
   - Recognize commonly used software in healthcare
   - Compile public reporting for disease and disease trends
   - Describe how acute care organizations store and retrieve electronic health records
   - Analyze different types of encoder software
   - Analyze online coding tools (coding reference tools)
   - Evaluate Computer Assisted Coding (CAC) software
   - Identify the issues involving the migration from a paper-based Health Information Management department to an electronic Health Information Management department
   - Summarize acute care environment vendors and their system strengths.
   - Evaluate an Electronic Health Record (EHR)
   - Evaluate a Personal Health Record (PHR)
   - Evaluate Heath Information Exchanges (HIE)

Domain III - Health Information Management

1. **Introduction to Health Information Management**
   - Recognize the content & structure of healthcare data
   - List the content of medical records
   - State the documentation requirements for medical records
   - Identify legal/ethics issues in Health Information Management such as privacy, security, and the Health Insurance Portability & Accountability Act
   - Recognize release of Information issues
   - Identify the Code of Ethics for Health Information Management
2. **Healthcare Delivery Systems**
   - Identify types of healthcare organizations
   - Identify types of healthcare workers
   - Identify healthcare settings that employ coders
   - Understand the types and levels of Healthcare Delivery Systems in the U.S., and of the governing bodies that regulate the Health Information Management processes, and an understanding how eHIM will change this environment
   - Recognize the organization of healthcare delivery
   - Interpret accreditation standards
   - Discuss licensure/regulatory agencies

Domain IV - Clinical Classification Systems

1. **Basic Diagnosis Coding Systems**
   - Demonstrate knowledge of the International Classification of Diseases ICD-9-CM
   - Recognize diagnostic based prospective payment groups such as DRG, APR-DRG, & RUGS.

- Recognize the International Classification of Diseases ICD-10-CM
- Recognize the Systematized Nomenclature of Medicine (SNOMED)
- Demonstrate knowledge of Current Procedural Terminology (CPT)
- Recognize procedure based payment systems such as Resource Based Relative Value (RBRV), Evaluation &Management and Ambulatory Payment Classification (APC)
- Identify the impact that coding and sequencing has on reimbursement

2. **Reimbursement Methodologies**
   - Identify Ambulatory Surgery Center reimbursement
   - Identify third party payers
   - Describe billing and insurance procedures
   - Discuss an explanation of benefits
   - Recognize Quality Improvement Organizations (QIO) and their role in the payment process
   - Identify charge master description and maintenance
   - Describe managed care/capitation
   - Recognize compliance issues
   - Audit and monitor the coding process for regulatory compliance

Admissions

Applications for all graduate certificate and M.S. programs must be received by **January 15 for fall and summer admission** and **September 15 for spring admission**. Applicants to the Ph.D. program are only eligible for fall admission and must apply by January 15.

The Graduate Admissions Committee will not review applications until the application fee and all required materials are completed and received by the deadlines indicated.

If applying to one of our health information technology certificates, please review the application procedures unique to those programs.

Application Procedures for All Students

1. Complete and submit the IUPUI Graduate Online Application form. Paper applications are not accepted.
   - **Masters Applicants:** Choose "M.S. Informatics" and your intended program (either Bioinformatics, Health Informatics, Human-Computer Interaction or Media Arts and Science) in the "Academic Interest" section.
   - **Ph.D. Applicants:** Choose "Ph.D. Informatics" and "Informatics" in the "Academic Interest" section.
2. Submit a resume listing your education, work, research, honors/awards and computer programming experience. This may be attached to your online application or sent separately.
3. Submit a personal statement (visit the IU Writing Center for instructions on how to write such a statement). Your personal statement should indicate the following:
   - Why you're applying to the program.
   - Your post-graduation career plans
   - **Ph.D. Applicants ONLY:** Note on your statement your intended area of specialization (Bioinformatics, Health Informatics or Human-Computer Interaction).
4. Submit all official transcripts from previous colleges and universities. A helpful transcript request form is available for your use. **NOTE:** we do not require transcripts from Indiana University campuses.
5. Submit three letters of recommendation from academic instructors and/or employers. At least two of the letters should be from faculty with full-time academic standing from the institute of your most recent degree.
6. Complete the Graduate Record Examination (GRE) and ensure that IUPUI receives your score report from the GRE exam board (when applying for financial support). The Informatics school code for the GRE is 1325 – enter this code on the exam's answer sheets.
   - **Masters Applicants:** You do not need to take or submit a GRE score unless seeking direct financial assistance such as a university fellowship. A GRE score is not required to submit your FAFSA (Free Application for Federal Student Aid) or to seek other federal or private financial assistance opportunities.
   - **Ph.D. Applicants:** You MUST submit an official GRE score from within the past five years.
7. Submit English language proficiency exam score (International and non-native English speaking students only – see instructions below).
8. Pay the $60 application fee.

Special Instructions for International Students and Non-native English Speakers

If your native language is not English, submit with your application one of the following official test scores from within the past two years:

- Test of English as a Foreign Language (TOEFL)
  - **Minimum required scores:** 250 for the computer-based test, 600 for the paper test and 79 for the Internet-based test.
- International English Language Testing System (IELTS)
  - **Minimum required score:** 6

Use IUPUI School Code 1325 to ensure correct routing of your score to IUPUI.

A TOEFL or IELTS may be waived if a B.S. or M.S. degree has been earned in the United States or another native English-speaking country. Alternatives to the TOEFL or IELTS are available.

Bioinformatics Requirements

To receive a Master of Science degree in Bioinformatics, the applicant must be admitted as a graduate student and complete 36 credit hours including: 18 credit hours in bioinformatics core courses, 3 credit hours in seminar courses, and 9 – 15 credit hours of electives. The students

have the options of taking (1) six credit hours towards a thesis, or (2) three credit hours towards a project, or (3) a non thesis/project option without thesis/project credit hours.

- INFO-I 501 Introduction to Informatics
- INFO-I 519 Introduction to Bioinformatics
- INFO-I 556 Biological Database Management
- CSCI 59000 Algorithm in Bioinformatics
- INFO-I 575 Informatics Research Design

INFO-I 529 Machine Learning in Bioinformatics(3 cr.) GRAD 652 Biostatistics II (3 cr.) or NURS-N 607 Advanced Statistics (3 cr.) INFO-I 619 Structural Bioinformatics (3 cr.) INFO-I 646 Computational Systems Biology (3 cr.) INFO-I 656 Translational Bioinformatics Applications (3 cr.)

INFO-I 532 Seminar in Bioinformatics

You may take other INFO graduate courses such as next generation sequencing (I590) and independent study (INFO-I 552), as electives. You may also take up to six credits outside the School of Informatics, in addition to CSCI 59000, GRAD-G 652 and NURS-N 607.

INFO-I 692 Bioinformatics Project (3 cr.) INFO-I 692 Bioinformatics Thesis (6 cr.)

Students may perform an independent research project and produce a report or thesis for public defense. The project might consist of a research paper, a designed artifact, or other appropriate deliverable format.

Certificate Programs

Graduate Certificate in Clinical Informatics

Electronic medical records, digital imaging and sophisticated diagnostic systems are changing how we provide patient-centered care. Healthcare professionals who can effectively utilize these emerging technologies are invaluable. The Graduate Certificate in Clinical Informatics is designed to provide practicing healthcare professionals the education and training necessary to excel in the 21^{S} century.

Certificate Program Requirements

Applications must be credentialed as a physician, a nurse, or other healthcare professional and hold a minimum of a bachelor's degree from an accredited four-year collegiate institution. Students must complete a minimum of 18 credit hours within three years. Fifteen credit hours may be taken through distance education. The curriculum includes two core courses, three specialization courses and a practicum. Courses include:

Core courses (6 cr.)

- INFO I535: Clinical Information Systems
- INFO I581: Health Informatics Standards and Terminology

Specialization courses (9 cr. - select three of the following)

- INFO I505: Informatics Project Management
- INFO I512: Scientific and Clinical Data Management
- INFO I530: Foundations of Health Informatics
- INFO I578: Data Analysis
- NURS I635: Consumer Health Informatics
- INFO I641: Business of Health Informatics
- INFO I643: Natural Language Processing
- INFO I667: Seminar in Health Informatics

Clinical Informatics Practicum - Required (3 cr.)

A maximum of three credits for equivalent courses from other programs may transfer.

Degree Requirements

To receive the Master of Science in Health Informatics, students must complete 36 credit hours of prescribed courses. In addition to core courses, students choose, in consultation with advisors, a set of concentration electives. Examples of concentration areas include 1) knowledge-based health care information, 2) health services informatics, and 3) clinical databases.

Knowledge-based health care information focuses on the storage, organization, evaluation, and dissemination of health and medical knowledge (e.g., textbooks, journals, other media, and information) to support evidence-based practice and patient education. End-users of knowledge-based health care information include clinicians, patients, health educators, and health planners.

Health services informatics focuses on information management in health care systems and addresses such diverse needs as patient flow, resource allocation, billing, and compiling and reporting of data. This involves developing information systems for processing and storing clinical data, complying with medical documentation requirements of accrediting and governmental agencies, and setting health information policies.

Clinical databases focuses on the storage of medical data and linkage of electronic systems. Study in this concentration is based on an electronic medical record system, which includes existing standards and coding, links between health-related databases, and data extraction for clinical care and management. Research is oriented to using such databases to learn more about disease and health maintenance (e.g., clinical epidemiology, pharmacoepidemiology, public health informatics, and nursing informatics).

Prerequisites

All students applying for the M.S. in Health Informatics should have prerequisite courses or equivalencies in the following areas:

Anatomy, Biology, or Physiology (200 level or higher); Computer Science; Medical Terminology; Statistics

NOTE: Remediated courses are available through the School of Informatics:

Clinical Care for Health Informaticians

Web Database Concepts

To receive a Master of Science degree in Health Informatics, the applicant must be admitted as a graduate student and complete 36 credit hours including: 18 credit hours in informatics core courses, 3 credit hours in seminar courses and 9- 12 credit hours of electives. The students have the option of taking 6 credit hours towards

a thesis project or 3 credit hours towards a Capstone Project.

Informatics Core Courses (18 credit hours)

- INFO I501: Introduction to Informatics
- INFO I511: Laboratory Information Management Systems
- INFO I530: Foundations of Health Informatics
- INFO I535: Clinical Information Systems
- INFO I575: Informatics Research Design*
- INFO I581: Health Informatics Standards and Terminology
- GRAD G651: Introduction to Biostatistics

Required Seminar Courses (3 credit hours)

- INFO I530: Seminar in Health Informatics I

Sample Electives (9 - 12 credit hours)

- INFO I503: Social Aspects of Information Technology
- INFO I505: Informatics Project Management
- INFO I512: Scientific Data Management
- INFO I578: Data Analysis for Clinical and Administrative Decision Making
- NURS I635: Consumer Health Informatics
- INFO I643: Natural Language Processing
- INFO I642: Clinical Decision Systems
- INFO I641: Business of Health Informatics

Thesis/Capstone Project (3 - 6 credit hours)

- INFO I691: Health Informatics Project (3 cr.)
- INFO I691: Thesis (6 cr.)

NOTE: *Students planning to take INFO 691 project option must take INFO 505 instead of INFO 575

Project/Thesis (6 cr.)

As a capstone experience, students will complete either a project, planned in conjunction with their advisor, or a researched-based thesis, supervised by a research advisor and a thesis committee. Core and support faculty from the participating schools will have a wide range of research interests that will provide graduate students with choices relevant to their concentration areas.

GRADUATE PROGRAMS IN HUMAN COMPUTER-INTERACTION

Graduate Certificate in Human Computer-Interaction (15 cr.)

The Informatics Graduate Certificate Program in Human-Computer Interaction (HCI) is a 15 credit hour program that focuses on the core theory and best practice of the discipline. Admission requirements and procedures are the same as those established for the Human-Computer Interaction Program master's degree. Specifically, students will be required to submit an application through the graduate school and receive a full review by the Informatics Graduate Admissions Committee, i.e., the review will take place for both master's and certificate seeking applicants. Moreover, certificate seeking applicants will need to submit the same documentation and meet the same criteria as master's seeking students, e.g., undergraduate GPA scores and references letters. GREs are not required for either, unless a student is seeking financial assistance from the school or university. See the description of the field of HCI below under the section titled: Master of Science in Human-Computer Interaction.

HCI Core Courses (6 cr.)

- INFO-I 557 HCI Design 1 (Old #: I541)
- INFO-I 558 HCI Design 2 (Old #: I561)

Specialization Requirements (9 cr.)

- INFO-I 563 Psychology of HCI
- INFO-I 555 Usability and Evaluative Methods in Interactive Design (Old #: I543)
- INFO-I 564 Prototyping for Interactive Systems

Master of Science in Human-Computer Interaction (36 cr.)

Human-Computer Interaction (HCI) is a branch of informatics that studies and supports the design, development, and implementation of humanly usable and socially acceptable information technologies. The goal of the field is to shape interactive tools that support human use, augment human learning, enhance communication, and lead to more acceptable technological developments at the individual and social levels. Research in HCI draws extensively on mainstream informatics concerns with cognition, communication, representation, and computation. HCI professionals seek to identify the nature and parameters of human information processing, design and test forms of representation that support human interpretation and use of information (reliably and validly assess new technologies for usability and acceptability), and determine how information technologies change working practices and social activities. [Regular job postings for HCI personnel express a desire for professionals with suitable training in design and evaluation of interactive systems, as well as applied social scientists with technological skills.]

Prerequisites

Students may be asked to complete prerequisite course work by a graduate advisor to ensure progress through the program.

Degree Requirements

To receive the master of science degree, the applicant must be admitted as a graduate student and complete 36 credits of graduate study in HCI according to the following schedule:

Core Courses (21 cr.)

- INFO I501 Introduction to Informatics
- INFO I557 Human Computer Interaction Design 1
- INFO I558 Human Computer Interaction Design 2
- INFO I555 Usability and Evaluative Methods
- INFO I563 Psychology of HCI
- INFO I564 Prototyping for Interactive Systems

Recommended Electives (9 cr.)

Although students are free to select those elective courses most relevant to their particular academic and professional interests, they are also encouraged to seek consultation from their graduate advisor. Prior approval for selection of elective is (in most cases) not required from the graduate

advisor. The following courses have been approved for use as electives.

Informatics

- I624 HCI Advanced Seminar I
- I503 Social Impact of Information Tech
- I505 Informatics Project Management
- I510 Data Acquisition and Lab Automation
- I512 Scientific Data Management
- I535 Clinical Information Systems
- I540 Data Mining for Security
- I554 Independent Study in HCI (1-3 cr)
- I590 Structured Conceptual Design
- I605 Social Foundations of Informatics

Media Arts and Science

- N500 Principles of Digital Arts Production
- N502 Digital Media Motion & Sim. Meth
- N503 Digital Media Appl Design Proc
- N504 Advanced Interactive Design Appl
- N506 Media Arts and Technology Project
- N510 Web Database Concepts
- N501 Foundations of Digital Prod

Psychology and Sociology

- PSY570 Industrial Psychology - Fall, odd yr
- PSY572 Organizational Psych – Spg, even yr
- PSY615 Physiological Psych - Fall, even yr
- PSY640 Social Psychology I - Fall, odd yr
- PSY655 Cog Development - Fall, even yr
- SOC–R 556 Advanced Sociological Theory I
- SOC–R 557 Advanced Sociological Theory II
- SOC–R 559 Intermediate Sociological Statistics
- SOC–R 593 Applied Fieldwork for Sociologists
- SOC–S 530 Introduction to Social Psychology

Computer Science

- CSCI 503 Operating Systems
- CSCI 504 Concepts in Computer Organ
- CSCI 507 Object-Oriented Design & Prog
- CSCI 536 Data Comm. & Computer Netw
- CSCI 537 Intro to Distributed Computing
- CSCI 541 Database Systems
- CSCI 550 Computer Graphics
- CSCI 552 Advanced Graphics and Visualization
- CSCI 565 Programming Language

Design

- HER–V501 Design Thinking (1.5 cr.)
- HER–V502 Human Factors in Design (1.5 cr.)
- HER–R511 Visual Research (3 CR)

Communication

- COMM-C 500 Advanced Comm Theory
- COMM–C 531 Media Theory and Criticism
- COMM–C 592 Advanced Health Communication
- COMM–C 620 Computer-Mediated Communication

Geography and Others

- GEOG–G 536 Advanced Remote Sensing
- GEOG–G 537 Computer Cartography and Graphics
- GEOG–G 538 Intro to Geographic Information Systems
- GEOG–G 539 Advanced Geographic Information Systems
- ANTH 501 Fundamentals of Applied Anthropology
- ED 531 Computers in Education
- SLIS-S 532 INFO Architecture for the Web

Research Methods Courses

- ANTH-E404 Field Meth in Ethnography
- COM 501 Qualitative Research
- COM 502 Applied Qualitative Research Methods
- EDU 520 Strategies for Educational Inquiry
- EDU 611 Qualitative Inquiry in Education
- NURS-L 650 Data Ana for Clinical & Admin Decis-Making
- NURS-R 612 Interpretive Data Analysis (2 Cr.), Summer I-II
- PSY 600 Statistical Inference (Fall Even Yr)
- PSY 601 Experimental Design (Spg Even Yr)
- PSY 608 Measurement Theory and Interpret Data
- PSY 640 Survey of Social Psychology I
- PSY 655 Cognitive Development (Fall Even Yr)
- PSY-I 643 Field Methods & Exper
- SOC-R 551 Quantitative Methods – Sociology
- SOC-R 551 Quantitative Methods Sociology
- SOC-R 559 Intermediate Soc Statistics
- STAT 511 Statistical Methods 1
- STAT 512 Applied Regression Analysis
- STAT 516 Basic Probability Appl
- STAT 519 Intro to Probability
- STAT 521 Statistical Computing
- STAT-522 Sampling and Survey Techniques
- STAT 524 Applied Multivariate Analysis
- STAT 525 Intermediate Stat Methodology
- STAT 529 Applied Dec Theory and Bayesian Stat
- STAT 619 Probability Theory
-

HCI Final Project (6 cr.)

Required Course Titles

- I680 HCI Professional Practice 1 (offered only in the fall semester) (6 cr.)
- I681 HCI Professional Practice 2 (offered only in the spring semester) (6 cr.)

Requirement for all HCI Students

All MS HCI students must complete the final project, with includes two courses: I680 HCI Professional Practice 1 (fall) and I681HCI Professional Practice 2 (spring). Students will register for each course, which includes a formally scheduled class time. Students will work on one final project that extends throughout the two courses, i.e., both fall and spring semesters. Students will receive an official grade at the conclusion of each course, i.e., both fall and spring. Students are encouraged to take on a project that can be realistically finished by the time they complete both courses. Incompletes are NOT be permitted. Students taking the final project option are not required to take I575 (Informatics Research Design),

which is reserved primarily for HCI Master's Thesis students and Ph.D. students. However, project students may take I575 as an Elective.

HCI Final Project (6 cr.) (Optional)

Required Course Titles

- I694 HCI Thesis (6 cr.) (Work should be divided between two semester of 3 cr. hrs. each.)

The Thesis option is reserved ONLY for students who clearly plan to pursue a Ph.D. at a later time, along with a strong interest and demonstrated ability to carry out empirical research, as determined by one of the HCI faculty. Students taking the Thesis option must also take I575, Informatics Research Design.

Contact Information

School of Informatics
Informatics and Communications Complex (IT)

Indianapolis, IN 46202
(317) 278-4113

informatics.iupui.edu

Graduate Programs

The School of Informatics offers **Master of Science** degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

The School of Informatics also offers a **Doctoral (Ph.D.)** program with specializations in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction

Degree Programs

The School of Informatics offers **Master of Science** degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

The School of Informatics also offers a **Doctoral (Ph.D.)** program with specializations in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction

All Ph.D. candidates must meet with their academic and/or research advisor for course selection and plan of study.

Academic Regulations

Academic Regulations

Applicability of Degree Requirements

Students may choose to complete either the specific degree requirements published in the appropriate bulletin at the time of entry into the university or those in the bulletin current at the time of graduation.

Residency Requirements

The campus at which a student is admitted will certify and award the degree.

Intercampus Transfer

Students enrolled in the School of Informatics at any campus of Indiana University may transfer to the School of Informatics on another campus, provided they are in good standing. However, international students may need to pay a processing fee.

Transfer of Credit

A maximum of 8 credit hours of graduate course work with grades of B (3.0) or higher may be transferred from other accredited colleges and universities and applied to the School of Informatics degree programs. The transfer must be approved by the dean, and is not an automatic occurrence.

Revalidation

Normally, a course may not be counted toward degree requirements if it has been completed more than five years prior to the awarding of the degree for master's students. The advisor may recommend to the dean that course work taken prior to the deadline be revalidated if it can be demonstrated that the knowledge contained in the course(s) remains current. Currency of knowledge may be demonstrated by: (a) passing an examination specifically on the material covered by the course; (b) passing a more advanced course in the same subject area; (c) passing a comprehensive examination in which the student demonstrates substantial knowledge of the content of the course; or (d) publishing scholarly research demonstrating knowledge of the content of the course. Courses taken while an undergraduate and counted toward the requirements of a baccalaureate degree may not also be counted toward a graduate degree.

Grading System

The official grading system is as follows:

A	= 4.0	D+	= 1.3
A–	= 3.7	D	= 1.0
B+	= 3.3	D–	= 0.7
B	= 3.0	F	= Failed
B–	= 2.7	I	= Incomplete
C+	= 2.3	W	= Withdrawn
C	= 2.0	R	= Deferred
C–	= 1.7	NR	= No grade reported

A minimum of a B (3.0) average in graduate work is required for continuance in graduate study. Courses completed with grades below C (2.0) are not counted toward degree requirements, but such grades will be counted in calculating a student's grade point average. Note that no work may be transferred from another institution unless the grade is B (3.0) or higher.

Incomplete

A grade of Incomplete may be given only if the completed portion of a student's work is of passing quality. It is the responsibility of the student to satisfy the requirements of that course within one calendar year from the date on which the Incomplete is recorded. The student is expected to finish all necessary work in time for the instructor to assign a regular grade before the expiration of this time period. If the student is unable to do so, it is the student's responsibility to notify the instructor of the course and the graduate advisor within the year to request an extension of time. Every overdue Incomplete will be changed to a grade of F after one calendar year.

Withdrawals

Because deadlines for withdrawal from courses may vary by campus and/or school, students should check with the current campus Schedule of Classes to verify deadlines and procedures.

Course Waivers

Requests for waivers of specific courses or requirements on the basis of previous course work are to be submitted in writing to the dean.

Credit Earned in Nondegree Status

Not more than 9 hours of graduate credit completed as a nondegree student may be credited toward a School of Informatics graduate degree. Deficiency courses do not apply to the 9 credit hours.

Academic Standing

Students are considered to be in good standing during any semester in which their academic grade point average is at least 3.0 (B) for both their last semester's course work and for the cumulative average of all course work completed. Only courses with grades of C (2.0) or above may be counted toward degree requirements. However, grades below C are used in computing the cumulative grade point average, even if a course is repeated and a higher grade is earned.

Academic Probation

Students are placed on probation following a semester in which their graduate cumulative or semester grade point average falls below 3.0. Students on probation are required to attain an average of at least 3.0 for all graduate course work completed by the end of the next semester of full-time enrollment or its equivalent (9 credit hours). Failure to do so is cause for dismissal.

Academic Integrity

Academic integrity requires that students take credit only for their own ideas and efforts. Misconduct, including cheating, fabrication, plagiarism, interference, or facilitating academic dishonesty, is prohibited because it undermines the bonds of trust and cooperation among members of this community and between us and those who may depend on our knowledge and integrity. Complete details are contained in the Indiana University Code of Student Rights, Responsibilities and Conduct.

Thesis

Depending on particular degree requirements, students will complete either a capstone project or a thesis under the guidance of an advisor. More details are given in the appropriate section for each program.

Degree Conferral

For all students seeking a master's degree, an application for the degree must be filed with the School of Informatics at least 60 days before the date anticipated for degree conferral. All degree requirements must be completed at least 30 days prior to the date of expected degree conferral, including submission of the bound copies of the master's thesis (if required for degree).

Time Requirements

All requirements for M.S. degrees must be met within five consecutive calendar years from the date of completion of the first credited (i.e., nondeficiency) course.

Admissions

Admission to the Master's Programs

Successful applicants for admission to the master's programs must demonstrate skills and knowledge in an academic field relevant to the particular master's program (e.g., biology for bioinformatics). Promising applicants who have deficiencies may, with faculty help, select courses that will provide instruction to overcome deficiencies and meet admissions requirements. However, the courses will not count toward the total number of credits required for the advanced degree.

- Degree requirement: bachelor's degree with demonstrated technical skills from an accredited college or university.
- Minimum overall grade point average of 3.0 on a 4.0 point scale.
- Three letters of recommendation from individuals in positions to evaluate the applicant's professional promise. Indiana University reserves the right to validate the source of the letters received.
- Scores from the general Graduate Record Examination (GRE), taken within the last five years. Subject tests are recommended if appropriate to the degree.
- Personal statement or sample of creative work.

Each application for admission is carefully evaluated by the admissions committee for the appropriate degree. Applicants to all degree programs must do the following:

1. Submit an application to the School of Informatics, or, if necessary, to the Office of International Affairs.
2. Pay a nonrefundable graduate application fee to Indiana University.
3. Submit three Application Reference Forms completed by individuals familiar with the applicant's activities and potential to succeed in graduate work.
4. Arrange for official transcripts to be sent from all colleges and universities attended by the applicant. Transcripts indicating "issued to student" are not considered official. An official transcript bears the original signature of the registrar and/or original seal of the issuing institution. Transcripts should be mailed directly by a registrar, or given to the applicant by the registrar in a sealed and signed envelope. International applicants should refer to

the guidelines outlined in the International Graduate Application for Admission form. If the student has not completed all undergraduate course work at the time of application, the admission decision will be based on information available at the time of application. However, a final transcript showing graduationmust be submitted before enrollment. Students who have taken course work on any Indiana University campus do not need to submit an Indiana University transcript.

5. Submit scores from the Graduate Record Examination (GRE). Only the General Exam is required; however, an appropriate subject exam may be helpful in determining the applicant's potential.
6. The school does not specify minimum scores, preferring instead to use the full information available in the applicant's dossier. The Media Arts and Science program does not require GRE scores. Information concerning these examinations may be obtained from Graduate Record Examinations, Educational Testing Service, CN 6000, Princeton, NJ 08541-6000 (www.gre.org).
7. Students whose native language is not English must submit results of the Test of English as a Foreign Language (TOEFL). The TOEFL is required of all nonnative English speakers. The TOEFL may be waived if a B.S. or M.S. degree has been earned in the United States. Registration information can be requested from TOEFL/TSE Publications, P.O. Box 6154, Princeton, NJ 08541-6154 (www.toefl.org).
8. Submit a personal statement (300-500 words) describing educational background and reasons for pursuing graduate study. In addition, some programs may require a sample of creative work or professional accomplishment, which may include written work, a computer program, multimedia presentation, portfolio, etc. Submitted materials should support the applicant's career intentions and plans. Contact the Office of Student Services for further information.

Application Procedures

Graduate Program

The Master of Science Degrees

Given the rapid and apparently unlimited growth of this new field at all levels of competence, each of the master's degree programs serves students who need education in the use of information technologies to enhance their job performance or employment prospects.

The School of Informatics offers master's degrees in:

- Master of Science in Bioinformatics
- Master of Science in Health Informatics
- Master of Science in Human-Computer Interaction
- Master of Science in Media Arts and Science (see the "Media Arts and Science" section in this bulletin for policies, regulations, and requirements)

All degrees require 36 credits, including the completion of common graduate core courses.

Application Procedures

Students holding a bachelor's degree from an accredited four-year collegiate institution are eligible to apply for admission. Admission is selective. The admission committee evaluates applicants' abilities to succeed academically and their potential to contribute to the program.

The master's degree is designed for students who seek additional professional education in informatics to complement knowledge in such diverse disciplines as computer science and technology, graphics, visualization, electronic networking and media communication, library and information science, telecommunications, psychology, cognitive science, journalism, medicine, health and nursing, biology, and chemistry. Most graduates of the School of Informatics will emerge as highly sought-after employees in a burgeoning information industry.

The master's degrees are focused on developing specialized skills and knowledge in information and information technology, with particular application to a specific field of study or practice. Each degree is an interdisciplinary endeavor that combines course work and field experiences from a traditional subject area or discipline with intensive study of information and technology. Because these specialized skills are developed and applied differently in these different fields, specific requirements are established for each degree, and have a content-specific rationale.

Application Procedures for U.S. Citizens

Requests for domestic applications should be directed to the School of Informatics.

Completed applications should be sent to:

Graduate Admissions Committee
School of Informatics
IUPUI
535 West Michigan Street
Indianapolis, IN 46202
E-mail: info@informatics.iupui.edu
Web: www.informatics.iupui.edu

Application Procedures for International Students

Requests for international applications should be directed to:

Office of International Affairs
IUPUI
920 West New York Street Room 2126
Indianapolis, IN 46202-5197
Phone: (317) 278-1290
E-mail: oia@iupui.edu
Web: http://international.iupui.edu

Application Deadlines

Applications will not be acted upon until all required documents have been received (including transcripts, letters of recommendation, application fee, GRE scores, and TOEFL scores for all nonnative English speakers). In order to allow time for processing and making financial aid decisions, applicants must meet the following deadlines:

Admission Periods

Fall March 1
Spring October 1

If applying for financial assistance from the school, applications must be received by January 15.

Bioinformatics

Master of Science in Bioinformatics (36 cr.)

Bioinformatics is a pure and applied science dealing with the collection, management, analysis and dissemination of biological data and knowledge, especially with respect to genetics and molecular biology. A Master of Science in Bioinformatics addresses needs for education in this rapidly growing field. This is an interdisciplinary program involving faculty from multiple schools including IU School of Medicine and industrial scientists from Eli Lilly and DowAgroSciences.

The end of the twentieth century saw an explosion of data discovered from living organisms, especially in areas of molecular biology and genetics by next generation sequencing techniques. The goal of bioinformatics is to deal with this flood of data, organize it as comprehensible information, and turn it into useful knowledge. For example, the flow of information from the Human Genome Project will revolutionize medical practice and biological research in this century and enable an understanding of most inherited diseases. Study of the genomic code, coupled with new understanding of its organization, regulation and function in cells, and in development of organisms, is forming the basis for designing new treatments for many diseases and for understanding and modulating health problems associated with aging. Genome information is quickly becoming the basis for designing new drugs. It is also central to the improvement of genomes of economically important crops and animals.

Experienced bioinformaticians are limited in number, while the need for them in industry, academe, and government has grown rapidly. Full understanding and application of this new data requires a large body of intelligent, creative, and experienced scientists with a firm understanding of both computation and biology. There is a current and projected shortage of such people and a pressing need for educational institutions to teach bioinformatics. New directions following the unraveling of the genomic code also point to greatly increased information flow and an increasing scale in the application of computing methods to biosciences.

The School of Informatics collaborates closely with the Center for Computational Biology and Bioinformatics and the Department of Biochemistry in the School of Medicine, the Department of Computer and Information Science in the School of Science, and the Department of Electrical and Computer Engineering in the School of Engineering and Technology. Research and learning opportunities for students abound.

Degree Requirements

The bioinformatics curriculum includes a set of core and elective courses covering concepts and training in bioinformatics, biostatistics, and computer sciences. A primary goal of this curriculum is to provide scientists with a strong foundation in the areas of computation/ informatics and biology, though their primary focus may be in one or the other area. The integration of knowledge from biology, computing, mathematics, and related areas will receive particular emphasis.

Students with different levels of background in biology, computing, and informatics sciences are encouraged to apply. Students with academic deficiencies will address these through individually planned programs of suggested course work. Students will gain experience in the applications of computing methods to biology information by completing course work and nonclassroom original research projects as well as optional thesis.

Prerequisites

Students holding a bachelor's degree in computer science or a related field from an accredited four-year collegiate institution must have completed all or part of the prerequisites courses listed below:

- Genetics and Molecular Biology and Cell Biology or Molecular Biology

Students holding a bachelor's degree in life sciences or a related field from an accredited four-year collegiate institution must have completed all or part of the prerequisites courses listed below:

- Programming in C, C++, or Java
- Programming/Database
- Statistics

To receive a Master of Science degree in Bioinformatics, the applicant must be admitted as a graduate student and complete 36 credit hours including: 18 credit hours in bioinformatics core courses, 3 credit hours in seminar courses, and 9 – 15 credit hours of electives. The students have the options of taking (1) six credit hours towards a thesis, or (2) three credit hours towards a project, or (3) a non thesis/project option without thesis/project credit hours.

- INFO-I 501 Introduction to Informatics
- INFO-I 519 Introduction to Bioinformatics
- INFO-I 556 Biological Database Management
- CSCI 59000 Algorithm in Bioinformatics
- INFO-I 575 Informatics Research Design

Advanced Core Courses (12 credit hours, select four)

- INFO-I 529 Machine Learning in Bioinformatics(3 cr.)
- GRAD 652 Biostatistics II (3 cr.) or NURS-N 607 Advanced Statistics (3 cr.)
- INFO-I 619 Structural Bioinformatics (3 cr.)
- INFO-I 646 Computational Systems Biology (3 cr.)
- INFO-I 656 Translational Bioinformatics Applications (3 cr.)

Required Seminar Courses (3 credit hours)

- INFO-I 532 Seminar in Bioinformatics

Electives

You may take other INFO graduate courses such as next generation sequencing (I590) and independent study (INFO-I 552), as electives. You may also take up to six credits outside the School of Informatics, in addition to CSCI 59000, GRAD-G 652 and NURS-N 607.

Project/Thesis (6 cr.)

- INFO-I 692 Bioinformatics Project (3 cr.)
- INFO-I 692 Bioinformatics Thesis (6 cr.)

Students may perform an independent research project and produce a report or thesis for public defense. The project might consist of a research paper, a designed artifact, or other appropriate deliverable format.

Financial Assistance

Graduate Assistantships

Students may compete for a limited number of graduate assistantship appointments. Assistantships are awarded solely on the basis of merit. These appointments constitute the most common type of financial assistance offered through the School of Informatics. Graduate assistantships include a stipend and a fee scholarship. Students will be assigned to work in areas supporting the mission of the School of Informatics. Students applying for admission to the program should complete the financial aid form if they wish to be considered for a graduate assistantship. GRE scores are required if applying for financial support from the school.

Fellowships and Scholarships

Although the majority of financial aid is in the form of assistantships, a limited number of fellowships and scholarships are also available. Those receiving fellowships and scholarships are not required to perform any duties in return for the stipend the first year. The second year of support will require research or teaching. These awards are also made solely on a merit basis. Students applying for admission to the program are considered for fellowships and scholarships; there is no additional application to complete. Awards are normally granted for an academic year.

Grants

The GradGrants Center (GGC) is a free service available to all enrolled graduate students on all campuses of Indiana University. The GGC provides information and training to assist graduate students in their search for funding to further graduate study at Indiana University. The IUPUI center is located in the Union Building, room 207; (317) 274-4023.

Loans

Domestic students who need financial assistance not provided by any of the awards already mentioned are eligible to apply for need-based financial aid. For graduate students, most need-based aid is in the form of student loans. For further information, contact the Office of Student Financial Assistance, (317) 274-4162.

Health Informatics

The School of Informatics offers a Master of Science in Health Informatics to address needs arising from the rapidly changing health care environment. Research and educational programs in medical, nursing, and health informatics are growing at a rapid rate nationally. This can be attributed in large part to the increasing complexity and importance of health care reimbursement, which has created a need for improved classification, storage, and analysis of medical information to establish the best clinical practice and cost efficiency.

Users of health informatics include clinicians, researchers, health care educators, health organization administrators, health policy analysts, health information administrators, quality improvement directors, and chief information officers. Those who are professionally involved in health informatics work in a variety of settings, including acute care hospitals, managed care organizations, consulting firms, claims and reimbursement organizations, accounting firms, home health care agencies, long-term care facilities, corrections facilities, pharmaceutical companies, behavioral health organizations, insurance companies, state and federal health care agencies, and health computing industries.

Informatics is uniquely suited to conduct graduate education in health informatics through its health schools, research centers, and affiliated academic units. The School of Medicine has a long history of fellowship training and research in medical informatics. The School of Nursing, which is the largest in the country, is in the forefront in the development of nursing informatics, with a particular emphasis on consumer health informatics. The School of Library and Information Science offers master's and doctoral degrees in information science, which are distinguished by their sociotechnical orientation.

The school also has a broad research thrust exploring the interconnection of social, behavioral, and technological issues associated with the use of information and communication technologies. Faculty in the department is externally funded to conduct research in medical informatics and bioinformatics. Other academic programs in public health, applied health sciences, and hospital administration offer important supporting course work.

Degree Requirements

To receive the Master of Science in Health Informatics, students must complete 36 credit hours of prescribed courses. In addition to core courses, students choose, in consultation with advisors, a set of concentration electives. Examples of concentration areas include 1) knowledge-based health care information, 2) health services informatics, and 3) clinical databases.

Knowledge-based health care information focuses on the storage, organization, evaluation, and dissemination of health and medical knowledge (e.g., textbooks, journals, other media, and information) to support evidence-based practice and patient education. End-users of knowledge-based health care information include clinicians, patients, health educators, and health planners.

Health services informatics focuses on information management in health care systems and addresses such diverse needs as patient flow, resource allocation, billing, and compiling and reporting of data. This involves developing information systems for processing and storing clinical data, complying with medical documentation requirements of accrediting and governmental agencies, and setting health information policies.

Clinical databases focuses on the storage of medical data and linkage of electronic systems. Study in this concentration is based on an electronic medical record system, which includes existing standards and coding, links between health-related databases, and data extraction for clinical care and management. Research is oriented to using such databases to learn more about disease and health maintenance (e.g., clinical

epidemiology, pharmacoepidemiology, public health informatics, and nursing informatics).

Prerequisites

All students applying for the M.S. in Health Informatics should have prerequisite courses or equivalencies in the following areas:

Anatomy, biology, or physiology (200 level or higher); Computer Science; Medical Terminology; Statistics

NOTE: Remediated courses are available through the School of Informatics:

Clinical Care for Health Informaticians

Web Database Concepts

To receive a Master of Science degree in Health Informatics, the applicant must be admitted as a graduate student and complete 36 credit hours including: 18 credit hours in informatics core courses, 3 credit hours in seminar courses and 9- 12 credit hours of electives. The students have the option of taking 6 credit hours towards a thesis project or 3 credit hours towards a Capstone Project.

Informatics Core Courses (18 credit hours)

- INFO I501: Introduction to Informatics
- INFO I511: Laboratory Information Management Systems
- INFO I530: Foundations of Health Informatics
- INFO I535: Clinical Information Systems
- INFO I575: Informatics Research Design*
- INFO I581: Health Informatics Standards and Terminology
- GRAD G651: Introduction to Biostatistics

Required Seminar Courses (3 credit hours)

- INFO I530: Seminar in Health Informatics I

Sample Electives (9 - 12 credit hours)

- INFO I503: Social Aspects of Information Technology
- INFO I505: Informatics Project Management
- INFO I512: Scientific Data Management
- INFO I578: Data Analysis for Clinical and Administrative Decision Making
- NURS I635: Consumer Health Informatics
- INFO I643: Natural Language Processing
- INFO I642: Clinical Decision Systems
- INFO I641: Business of Health Informatics

Thesis/Capstone Project (3 - 6 credit hours)

- INFO I691: Health Informatics Project (3 cr.)
- INFO I691: Thesis (6 cr.)

NOTE: *Students planning to take INFO 691 project option must take INFO 505 instead of INFO 575

Project/Thesis (6 cr.)

As a capstone experience, students will complete either a project, planned in conjunction with their advisor, or a researched-based thesis, supervised by a research advisor and a thesis committee. Core and support faculty from the participating schools will have a wide range of research interests that will provide graduate students with choices relevant to their concentration areas.

Human-Computer Interaction

Human-Computer Interaction (HCI) is the branch of informatics that studies and supports the design, development, and implementation of humanly usable and socially acceptable information technologies. The goal of the field is to shape new media and tools that will support human use, augment human learning, enhance communication, and lead to more acceptable technological developments at the individual and social levels.

Research in HCI draws extensively on mainstream informatics concerns with cognition, communication, representation, and computation. HCI professionals seek to identify the nature and parameters of human information processing at the interface, design forms of representation that support human interpretation and use of information; reliably and validly test new technologies for usability and acceptability, and determine how information technologies change working practices and social activities.

Regular job postings for HCI personnel express a desire for professionals with suitable training in design and evaluation, and increasingly, applied social scientists with technological skills are finding employment in industry as HCI professionals.

Prerequisites

Students may be asked to complete prerequisite course work by a graduate advisor to ensure progress through the program.

Degree Requirements

To receive the master of science degree, the applicant must be admitted as a graduate student and complete 36 credits of graduate study in HCI according to the following schedule:

Core Courses (21 cr.)

- INFO I501:Introduction to Informatics
- INFO I541: Human Computer Interaction Design I
- INFO I561: Human Computer Interaction Design II
- INFO I543: Usability and Evaluative Methods
- INFO I563: Psychology of HCI
- INFO I564: Prototyping for Interactive Systems
- INFO I575: Informatics Research Design

Recommended Electives (9 cr.)

Electives are to be chosen, with prior approval of a graduate advisor, from a list of departments specific to each degree program. The following courses have been approved. Additional courses may be added to the student's program with advisor's consent.

- INFO I503: Social Impact of Information Technologies
- INFO I505: Informatics Project Management
- INFO I534: Seminar in Human-Computer Interaction
- INFO I550: Legal and Business Issues in Informatics

- INFO I554: Independent Study in Human-Computer Interaction
- INFO I590: Topics in Informatics
- NEWM N500: Principles of Digital Arts Production
- NEWM N503: Digital Media Application Design Processes
- NEWM N510: Web Database Concepts

OR, from the Herron School of Art and Design, School of Library and Information Science, or from the Department of Computer Science. Visit the informatics website for specific suggestions.

Project/Thesis (6 cr.)

Students will perform an independent research project, and produce a report or thesis, a designed artifact, or other appropriate deliverable format for public defense.

Media Arts and Science

Master of Science in Media Arts and Science

The M.S. in Media Arts and Science is an applied program emphasizing integrated digital media communication skills and expertise. In addition to a set of Core media classes, the program can be customized with study in other fields, including media production, design thinking and usability analysis, psychology, communication theory, information management, and computing. A year-long, six-credit project or thesis is required.

Completion of 36 credit hours is required, with 9 hours of Core classes, 6 hours of project or thesis work, and 21 hours of electives. All courses are at the 500-level and above. Students are expected to take the Core classes as early as possible in their course of study.

Full-time students can complete the program in two years. Part-time study is possible. The program accommodates working professionals with many evening courses and a flexible timetable for degree completion.

Admission

Applications for admission are submitted directly to the School. An applicant to the graduate program must have a four-year bachelor's degree, with a GPA of at least 3.0 on a 4.0 scale.

In the general case, applicants to the MAS program are expected to have at least some prior experience in creating digital media. A portfolio documenting prior work and/or expertise is required as part of the application. The portfolio can be supplied on a CD/DVD or through a link to a Web site.

Applicants without a portfolio in digital media are also welcome to apply. In this case, other evidence of accomplishment -- such as an essay, short story, or research paper -- may be submitted as the portfolio. Applications without such evidence of accomplishment will be considered incomplete and will not be reviewed.

Please see the School's web site (informatics.iupui.edu) for full details on the applications process, deadlines, and a link to the on-line application.

Degree Requirements

Completion of 36 credit hours is required, with 9 hours of Core classes, 6 hours of project or thesis work, and 21 hours of electives.

Core (9 cr.)

- NEWM N500 Principles of Multimedia Technology (3 cr., Fall semester)
- NEWM N501 Foundations of Digital Production (3 cr., Spring semester)
- NEWM N503 Digital Media Application Design Processes (3 cr., Spring semester)

Project or Thesis (6 cr.)

- NEWM N506 Project/Thesis (3 cr.) Taken twice, in your last two semesters.

Electives (21 cr.)

- School of Informatics, Media Arts and Science Program
- NEWM N502 Digital Media Motion and Simulation Methods
- NEWM N504 Advanced Interactive Design Applications
- NEWM N505 Internship in Media Arts
- NEWM N510 Web Database Concepts
- NEWM N553 Independent Study (1-3 cr.), can be repeated

School of Informatics, Human-Computer Interaction

Note: completion of this set of courses earns the

- INFO I541 Interaction Design Practice
- INFO I561 Meaning and Form in HCI
- INFO I543 Usability and Evaluative Methods
- INFO I563 Psychology of HCI
- INFO I564 Prototyping for Interactive Systems

School of Informatics, Informatics

- INFO I501 Introduction to Informatics
- INFO I505 Informatics Project Management
- INFO I503 Social Impact of Information Technologies
- INFO I512 Scientific and Clinical Data Management
- INFO I550 Legal and Business Issues in Informatics
- INFO I575 Informatics Research Design
- INFO I590 Topics in Informatics, can be repeated
- INFO I600 Professionalism and Pedagogy in Informatics
- INFO I605 Social Foundations of Informatics

Herron School of Art, Dept of Visual Communication

- HER V501 Intro to Design Thinking
- HER V502 Intro to Human Factors in Design
- HER V511 People-Centered Design Research
- HER V521 Design Analysis
- HER V531 Design Synthesis
- HER V541 Design Evaluation
- HER H560 Visual Culture: A Visual sudies Approach

School of Liberal Arts, Dept of Communication Studies, Applied Communication Program

- COMM C500 Advanced Communication Theory

- COMM C510 Health Provider-Consumer Communication
- COMM C526 Effective Media Strategies
- COMM C531 Media Theory and Criticism
- COMM C582 Advanced Intercultural Communication
- COMM C620 Computer-Mediated Communication

School of Library & Information Science

- SLIS S503 Organization and Representation of Knowledge & Information
- SLIS S532 Information Architecture for the Web

Degree Programs

Given the rapid and apparently unlimited growth of this new field at all levels of competence, each of the master's degree programs serves students who need education in the use of information technologies to enhance their job performance or employment prospects.

The School of Informatics offers **Master of Science** degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

To learn more about the M.S. degree programs review the following information:

- Academic Regulations
- Admission to the M.S. Program
- Application Procedures
- Financial Assistance

PhD Degree Programs

The Indiana University School of Informatics, the first of its kind in the country, was created as a place where innovative multidisciplinary programs could thrive, a program where students can apply the skills of technology to a range of other fields. For current information and specific requirements, go to the website at http://www.informatics.iupui.edu

All Ph.D. candidates must meet with their academic and/or research advisor for course selection and plan of study.

This program is administered with the approval of Indiana University, Bloomington.

The School of Informatics offers a **Doctoral (Ph.D.)** program with specializations in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction

Bioinformatics

The Indiana University School of Informatics, the first of its kind in the country, was created as a place where innovative multidisciplinary programs could thrive, a program where students can apply the skills of technology to a range of other fields. For current information and specific requirements, go to the website. All Ph.D. candidates must meet with their academic and/or research advisor for course selection and plan of study. This program is administered with the approval of Indiana University, Bloomington.

Program of Study

Students in the doctoral program will explore the connections among technology, theory, social analysis, and application domains in a diverse and multidisciplinary curriculum. This curriculum will include core courses and seminars in informatics, an information subdiscipline [current subdisciplines are bioinformatics, health informatics, and human-computer interaction; courses in methodology and theory; electives in related disciplines inside and outside of the School leading to a Ph.D. minor; and a dissertation]. In addition, students will be encouraged to pursue internships as part of the elective courses or independent studies of their program.

Ph.D. in Bioinformatics

The Ph.D. in Bioinformatics is a 90 credit hour program that includes:

Description	Credit Hours
Core A courses	15
Core B courses	12
Seminar courses	6
Elective Courses	6
Rotation	6
Minor	15
Dissertation	30

Areas of Specialization: Faculty research projects often involve representatives from several different research areas working together to develop innovative and even revolutionary new solutions. While students can expect to concentrate in particular areas, they will also be expected to explore the broader significance of their work as well as ways that their expertise can be leveraged to solve problems outside of their own domains.

Areas of research: Sequence pattern recognition, comparative genomics, structural genomics, fragment assembly in DNA sequencing, systems biology, models of evolution, molecular modeling, drug design, biological database integration, data mining, structural bioinformatics, and biomedical text mining.

Qualifying Examination - Written (Required)

1. The oral examination will take place after the student successfully passes the written exam. Students must pass both the written and the oral exam before passing on to candidacy. Only two attempts to pass the oral examination will be allowed.
2. The oral exam will be based on the student's response to the written exam and any material from the core courses.

All students will take a written qualifying examination that covers the core courses (CORE A and B). The examination will be set by a group of faculty who are familiar with the content of the core courses. Examinations will be offered in August. Examinations must be completed by the beginning of the student's fifth semester in the program but can be completed before that time when the core courses are completed. Students who do not

successfully complete the examination can retake the examination a second time in January.

Qualifying Examination - Oral (Required)

Dissertation Proposal (Required)

This is an oral review that covers in-depth knowledge of the student's primary research area and dissertation proposal. The research proposal for dissertation must be approved by the student's research committee. That committee may have the same membership as the program committee or the students may choose different members. The advisor for the dissertation will be a faculty member in the School of Informatics and a member of the Graduate Faculty. At least one of the three members of the committee will be based outside of the school. The student will defend the thesis proposal at a public colloquium in the school. The review should be completed within one-year after passing the Qualifying Examinations.

Dissertation (Required)

A written elaboration of significant original research must be successfully presented to the research committee in a public defense as described in the Graduate School Bulletin.

Health Informatics

The Indiana University School of Informatics, the first of its kind in the country, was created as a place where innovative multidisciplinary programs could thrive, a program where students can apply the skills of technology to a range of other fields. For current information and specific requirements, go to the website. All Ph.D. candidates must meet with their academic and/or research advisor for course selection and plan of study. This program is administered with the approval of Indiana University, Bloomington.

Program of Study

Students in the doctoral program will explore the connections among technology, theory, social analysis, and application domains in a diverse and multidisciplinary curriculum. This curriculum will include core courses and seminars in informatics, an information subdiscipline [current subdisciplines are bioinformatics, health informatics, and human-computer interaction; courses in methodology and theory; electives in related disciplines inside and outside of the School leading to a Ph.D. minor; and a dissertation]. In addition, students will be encouraged to pursue internships as part of the elective courses or independent studies of their program.

The PhD in with specialization in Health Informatics is a 90 credit hour program that includes:

Description	Credit Hours
Core A courses	12
Core B courses	15
Seminar Courses	6
Elective Courses	9
Research Methods	9
Rotation	6
Minor	15
Dissertation	21-30

Areas of Specialization: Faculty research projects often involve representatives from several different research areas working together to develop innovative and even revolutionary new solutions. While students can expect to concentrate in particular areas, they will also be expected to explore the broader significance of their work as well as ways that their expertise can be leveraged to solve problems outside of their own domains.

Areas of research: electronic medical records, health data exchange, standards and terminology for health data, clinical decision support, consumer health informatics, technology to enhance patient safety, tele-health application development and implementation, cost reimbursement and integrated health information systems. The Health Informatics program has close ties and joint projects with the Veteran Administration Medical Center, Regenstrief Institute, Clarian Health, Methodist Hospital, St. Vincent Hospital, Community Health Network, St. Francis Hospitals, IU School of Medicine, and other local health care systems.

Qualifying Examination - Written (Required)

All students will take a written qualifying examination that covers the core courses (CORE A and B). The examination will be set by a group of faculty who are familiar with the content of the core courses. Examinations will be offered in August. Examinations must be completed by the beginning of the student's fifth semester in the program but can be completed before that time when the core courses are completed. Students who do not successfully complete the examination can retake the examination a second time in January.

Qualifying Examination - Oral (Required)

1. The oral examination will take place after the student successfully passes the written exam. Students must pass both the written and the oral exam before passing on to candidacy. Only two attempts to pass the oral examination will be allowed.
2. The oral exam will be based on the student's response to the written exam and any material from the core courses.

Dissertation Proposal (Required)

This is an oral review that covers in-depth knowledge of the student's primary research area and dissertation proposal. The research proposal for dissertation must be approved by the student's research committee. That committee may have the same membership as the program committee or the students may choose different members. The advisor for the dissertation will be a faculty member in the School of Informatics and a member of the Graduate Faculty. At least one of the three members of the committee will be based outside of the school. The student will defend the thesis proposal at a public colloquium in the school. The review should be completed within one-year after passing the Qualifying Examinations.

Dissertation (Required)

A written elaboration of significant original research must be successfully presented to the research committee in a public defense as described in the Graduate School Bulletin.

Human-Computer Interaction

The Ph.D. in Human-Computer Interaction is a 90 credit hour program that includes:

Description	Credit Hours
Core A courses	18
Core B courses	6
Research Rotations	6
Elective Courses	9-18
Research Methods	9
Seminar 1 and 2	6
Minor	9
Dissertation	1-30

Areas of Specialization: Faculty research projects often involve representatives from several different research areas working together to develop innovative and even revolutionary new solutions. While students can expect to concentrate in particular areas, they will also be expected to explore the broader significance of their work as well as ways that their expertise can be leveraged to solve problems outside of their own domains.

Areas of research: Because HCI is a multidisciplinary discipline, students are encourage to expand the scope of their research to cross-traditional disciplinary boundaries into such areas as: user-centered design, cross-cultural theory and application, related areas within new media such as gaming and virtual reality, computer-mediated communication, usability engineering, health informatics, information visualization, biomedical informatics, android science, social robotics, sensorimotor representation, symbol grounding and symbol emergence, and computational neuroscience, etc.

Minor: All students will be required to have an appropriate minor outside or partially inside the school. Minors will be selected with the advisor's recommendation. The selected minor should be appropriate to the student's choice of sub discipline within Informatics. Some appropriate minors would include: Biology, Chemistry, Cognitive Psychology, Computer Science, Media Arts, History and Philosophy of Science, information Science, or Sociology.

In all cases the number of hours to be included in the minor will be consistent with the requirements of the unit granting the minor. Some of the courses included in the minor may also count toward the student's methodology or other requirements.

HCI PH.D. CORE

Core A - Foundations in HCI (18 credit hours)

- I557 HCI Design 1
- I558 HCI Design 2
- I555 Usability and Eval. Methods in Interactive Design
- I563 Psychology of HCI
- I575 Informatics Research Design
- I624 Advanced Seminar I in HCI

Core B - Foundations of Informatics (18 credit hours)

- I501 Introduction to Informatics
- I600 Professionalism and Pedagogy in Informatics
- I564 Prototyping for Interactive Systems
- I790 Research Rotations (3 credits)
- I790 Research Rotations (3 credits)
- I634 Advanced Seminar II in HCI

Qualifying Examination - Written (Required)

All students will take a written qualifying examination that covers the core courses (CORE A and B). The examination will be set by a group of faculty who are familiar with the content of the core courses. Examinations will be offered in August.Examinations must be taken at the conclusion of the second year, usually in August. Students who do not successfully complete the examination can retake the examination a second time in the following December of the same year.

Qualifying Examination – Oral (Required)

The oral examination will take place after the student successfully passes the written exam. Students must pass both the written and the oral exam before passing on to candidacy. Only two attempts to pass the oral examination will be allowed. The oral exam will be based on the student's response to the written exam and any material from the core courses.

Dissertation Proposal (Required)

This is an oral review that covers in-depth knowledge of the student's primary research area and dissertation proposal. The research proposal for dissertation must be approved by the student's research committee. That committee may have the same membership as the program committee or the students

may choose different members. The advisor for the dissertation will be a faculty member in the School of Informatics and a member of the Graduate Faculty. At least one of the three members of the committee will be based outside of the school. The student will defend the thesis proposal at a public colloquium in the school. The review should be completed within one-year after passing the Qualifying Examinations. The time requirement can change with approval from the student primary advisor.

Dissertation (Required)

A written elaboration of significant original research must be successfully presented to the research committee in a public defense as described in the Graduate School Bulletin.

It is recommended that I790 be divided up into different semesters and under the supervision of different faculty members to support a broader and richer learning experience for the student.

Degree Programs

The School of Informatics offers **Master of Science** degrees in:

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

All Master of Science degrees require 36 credits, including the completion of common graduate core courses.

The School of Informatics also offers a **Doctoral (Ph.D.)** program with specializations in:

- Bioinformatics

- Health Informatics
- Human-Computer Interaction

All PhD candidates must meet with their academic and/or research advisor for course selection and plan of study.

Master of Science in Media Arts and Science

Upon completion of the MS program, Media Arts and Science students are able to:

1. Design and create digital media products that are targeted to a specific purpose and that meet professional standards for quality.
2. Plan a coordinated collection of multi-media or trans-media communications and/or experiences, using each medium to good advantage.
3. Assess media communications and/or experiences, discriminating among features that influence effectiveness.
4. Recommend strategies, practices, and/or tools appropriate to a problem.
5. Predict future trends and developments in digital media, based on examination of the history, tradition, and current drivers in the field.
6. Communicate in written and oral form to a range of audiences.

Master of Science in Bioinformatics

Upon completion of the MS program, Bioinformatics students are able to:

1. Extract information from different types of bioinformatics data (gene, protein, disease, etc.) including their biological characteristics and relationships.
2. Employ different data representation models and formats used for bioinformatics data representation including markup languages, such as SBML and CellML, and ontologies, such as GO ontology.
3. Apply the different approaches used for data integration and data management, including data warehouse and wrapper approaches.
4. Master computational techniques and diversified bioinformatics tools for processing data including statistical, machine learning and data mining techniques.
5. Analyze processed data in particular with the support of analytical and visualization tools.
6. Carry out bioinformatics research under advisement including systems biology, structural bioinformatics and proteomics.
7. Interact with non-bioinformatics professionals, such as biologists and biomedical researchers in order to better understand their bioinformatics needs for better support and service delivery.
8. Design and develop bioinformatics solutions by adapting existing tools, designing new ones, or a combination of both.

Master of Science in Health Informatics

Students will master health informatics knowledge and skills, as well as acquiring practical experience, in three domains:

1. Understanding technology and methodologies for processing data, information and knowledge in Health Care
   - Explain concepts of information and communication technologies.
   - Elaborate basic informatics terminology like data, information, knowledge, hardware, software, networks, information systems, information systems management, databases.
   - Execute queries on large databases using data mining and testing hypothesis approaches.
   - Integrate data from disparate systems found in hospitals and clinics.
   - Implement standards and terminologies for documenting health events and exchanging protected health information.

2. Information Literacy for Health Care
   - Determine the nature and extent of the information needed.
   - Access needed information effectively and efficiently.
   - Evaluate information and its sources critically and incorporates selected information into his or her knowledge base and value system.
   - Individually or as a member of a group, use information effectively to accomplish a specific health care purpose.
   - Propose/justify Decision Support Systems algorithm to support care delivery.
   - Integrate Natural Language Processing (NLP) with standards and terminologies used in health care
   - Evaluate outcomes of the use of information in clinical practice.

3. Information Management
   - Verbalize the importance of Health Information Systems to clinical practice.
   - Have knowledge of various types of Health Information Systems and their clinical and administrative uses.
   - Assure confidentiality of protected patient health information when using Health Information Systems.
   - Assure access control in the use of Health Information Systems.
   - Assure the security of Health Information Systems.
   - Estimate the Return of Investment (ROI) of health information technology applications for health care.
   - Possess the skills as outlined in direct care component of the HL7 EHRS model, which such as navigation, Decision Support, output reports and more.
   - Understand the principles upon which organizational and professional Health Information System for providers and consumers are based.

Master of Science in Human-Computer Interaction

Students completing an HCI master's degree will define, explain and apply with considerable depth:

1. HCI theory and usability terms, principles, and practices
    - Problem space definition and conceptual models
    - Social mechanisms used in communication
    - User-centered approaches to interaction design
    - User profiling and user needs and requirements
    - Interface design principles and processes
    - Cognitive and information processing
    - Product assessments related to a market analysis
    - Processes and life-cycles of interaction design
    - Interface design and related areas of visual design and aesthetics
    - Product evaluation and testing methods, both qualitative and quantitative
2. Related to the design and evaluation of interactive products up to the prototype stage, students will develop and apply HCI principles and practices in the areas of product development and usability testing, including the following acquisition of abilities:
    - Produce interface designs and prototypes based on user and needs assessments.
    - Apply HCI theory, principles, and a user-centered approach to interaction design.
    - Design interactive products up to the prototype.
    - Apply evaluation and usability testing methods to interactive products to validate design decisions.

Doctor of Philosophy in Informatics - General

Upon completion of all PhD programs, students will be able to:

1. Identify, discuss, and apply the fundamental concepts, theory and practices in informatics such as information representation and architecture, retrieval, structured query language, information extraction and integration from disparate data sources, information visualization and security, and data mining including the relevant tools and methodologies.
2. Identify and practice the knowledge of beginning statistics, including sampling and correlations, research paradigms such as constructivism and pragmatism, distinctions and limitations of qualitative, quantitative, and mixed method research designs, understanding validity and reliability.
3. Apply research proposals, conduct peer reviews, create an annotated bibliography, create and present a high-level presentation pertaining to research, and use SPSS.
4. Acquire and apply the ability to read and critique scientific articles by analyzing the problem presented, solutions proposed, and critically looking at the solutions and the results, as well as learn how organize and write a scientific article through critical thinking and discussion.
5. Write research proposals by examining NSF and NIH case studies, including style and grant specific requirements.
6. Develop and deliver class-room lectures, including processes for critically evaluating class-room lectures and how to prepare effective teaching materials to teach selected topics of interest.
7. Apply research methods and acquire more advanced knowledge in different areas of research through apprenticeship work with the faculty member and other students in that group.

Concentrations will have the above general outcomes plus additional ones.

Certificate in Clinical Informatics

Individuals graduating from this program will be able to lead the successful deployment and use of health IT to achieve transformational improvement in the quality, safety, outcomes, and thus the value, of health services in clinical areas.

1. Understanding technology and methodologies for processing data, information and knowledge in Health Care
    - Explain concepts of information and communication technologies.
    - Integrate data from disparate systems found in hospitals and clinics.
    - Implement standards and terminologies for documenting health events and exchanging protected health information.
2. Information Literacy for Health Care
    - Determine the nature and extent of the information needed.
    - Access needed information effectively and efficiently.
    - Evaluate outcomes of the use of information in clinical practice.
3. Information Management
    - Verbalize the importance of Health Information Systems to clinical practice.
    - Have knowledge of various types of Health Information Systems and their clinical and administrative uses.
    - Assure confidentiality of protected patient health information when using Health Information Systems.
    - Assure access control in the use of Health Information Systems
    - Assure the security of Health Information Systems

Student Learning Outcomes

Master of Science

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- Media Arts and Science

Doctor of Philosophy

- Bioinformatics
- Health Informatics
- Human-Computer Interaction
- General PhD Learning Outcomes

Graduate Certificate

- Clinical Informatics
- Human-Computer Interaction
- Informatics in Health Information Management and Exchange
- Informatics in Health Information Security
- Informatics in Health Information Systems Architecture
- Informatics for Public Health Professionals

Certificate in Informatics for Public Health Professionals

Individuals graduating from this program will be able to lead the successful deployment and use of health IT to achieve transformational improvement in the quality, safety, outcomes, and thus in the value of public health services.

1. Understanding Technology and Methodologies for processing data, information and knowledge in Health Care
   - Explain concepts of information and communication technologies.
   - Integrate data from disparate systems such as clinical data, surveillance data, etc. for public health decision making.
   - Implement standards and terminologies for documenting public health events and exchanging protected health information for improved surveillance.
2. Information Literacy for Health Care
   - Determine the nature and extent of the information needed for public health decisions.
   - Access needed information effectively and efficiently.
   - Evaluate outcomes of the use of information in public health.
3. Information Management
   - Verbalize the importance of Health Information Systems to public health surveillance.
   - Have knowledge of various types of Health Information Systems and their potential use in public health surveillance.
   - Evaluate when confidentiality of protected patient health information is superseded by public health needs.
   - Assure access control in the use of Health Information Systems for public health needs.
   - Assure the security of Health Information Systems.

Certificate in Informatics in Health Information Systems Architecture

Individuals graduating from this program will be the architects and developers of advanced health IT solutions. These individuals will be cross-trained in IT and health domains, thereby possessing a high level of familiarity with health domains to complement their technical skills in computer and information science.

1. Understanding Technology and Methodologies for processing data, information and knowledge in Health Care
   - Explain health informatics and health information systems and being able to prepare health information system design and development.
   - Recommend usability and usefulness measures to evaluate health information systems.
   - Discern principles of informatics that govern communication systems, health decisions, information retrieval, telemedicine, bioinformatics and evidence-based medicine as well as ways in which information science and computer technology can enhance evidence based practice in healthcare.
2. Information Literacy for Health Care
   - Inspect solutions for management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery, which include knowledge discovery techniques and databases, extraction of data/ metadata stored in data warehouses using Storage Area Networks and dealing with issues of handling this data.
   - Design approaches to access needed information effectively and efficiently.
   - Analyze the principles and methodologies underlying most standards for health care data interchange and practical issues of reading and understanding specifications, implementing, and translating between standards.
3. Information Management
   - Analyze theoretical and practical models for the delivery of consumer health information and implement them in the design and development of consumer health information resources.

Certificate Informatics in Health Information Security

Individuals graduating from this program would be qualified to serve as institutional/organizational information privacy or security officers. Knowledge on how to maintain trust by ensuring the privacy and security of health information is an essential component of this program.

1. Understanding Technology and Methodologies for processing data, information and knowledge in Health Care
   - Explain concepts of information and communication technologies.
   - Analyze network service management (i.e. DNS/DHCP, web, email, spam filtering, resource sharing, database, directory services and authentication), network communication and security (i.e. network devices, firewalls, intrusion detection systems, and incident response/forensics), and administration

(i.e. shell scripting, documentation/request management, policy and procedure management, data center considerations, and virtualization).
- Implement standards and terminologies for maintaining privacy and security of protected health information.

2. Information Literacy for Health Care
   - Determine the nature and extent of the privacy and security needed to protect health information.
   - Propose infrastructure needed to safeguard protected health information effectively and efficiently.
   - Evaluate administrative safeguards critically.
   - Evaluate technical safeguards critically.
   - Evaluate physical safeguards critically.
   - Access privacy and security regulations for health care information transactions including policy, procedures, guidelines, security architectures, risk assessments, disaster recovery, and business continuity; particular attention given to the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act.

3. Information Management
   - Verbalize the importance of health information exchange to health care outcomes.
   - Have knowledge of various types of health information exchange services.
   - Assure confidentiality of protected patient health information when using health information exchange.
   - Assure access control in the use of health information exchange.
   - Assure the security of health information exchange.
   - Possess the skills as outlined in supportive functions component of the HL7 model applicable to health information exchange.
   - Understand the principles upon which organizational and professional Health Information System for providers and consumers are based.

Certificate in Informatics in Health Information Management and Exchange

Individuals graduating from this program will support the collection, management, retrieval, exchange, and/or analysis of information in electronic form, in healthcare and public health organizations.

1. Understanding Technology and Methodologies for processing data, information and knowledge in Health Care
   - Explain concepts of information and communication technologies.
   - Elaborate basic informatics terminology like data, information, knowledge, hardware, software, networks, information systems, information systems management, databases.
   - Implement standards and terminologies for documenting health events and exchanging protected health information.

2. Information Literacy for Health Care
   - Determine the nature and extent of the information needed to build effective health information exchange services.
   - Propose infrastructure needed for health information exchange effectively and efficiently.
   - Evaluate information and its sources critically and incorporates selected information into health information exchange services.
   - Evaluate outcomes of health information exchange services on health care outcomes.

3. Information Management
   - Verbalize the importance of health information exchange to health care outcomes.
   - Have knowledge of various types of health information exchange services.
   - Assure confidentiality of protected patient health information when using health information exchange.
   - Assure access control in the use of health information exchange.
   - Assure the security of health information exchange.
   - Possess the skills as outlined in supportive functions component of the HL7 model applicable to health information exchange.
   - Understand the principles upon which organizational and professional Health Information System for providers and consumers are based.

Certificate in Human-Computer Interaction

Students will recognize, explain, and apply with considerable depth human-computer interaction (HCI) knowledge in:

1. Basic HCI theory, terms, principles, and conceptual models
2. User-centered design theory and practices related to interaction design
3. HCI design and development processes and life-cycle
4. User profiling to interaction design (needs and requirements)
5. System requirements and product assessments
6. Interface design principles and processes
7. Product usability evaluations and testing methods
8. The purpose of the graphic user interface
9. Usability theory, terms, and the applied techniques
10. Principles of the interface design and prototyping processes
11. Interface grids and typographical devices
12. Information architecture and content management
13. Classic user testing theory and tools
14. Advanced user requirements and profiling
15. Interface design standards / guidelines for cross cultural and disabled users

16. Interaction design styles and choosing interaction devices and elements
17. Develop an evaluative strategy; planning who, what, when, and where
18. Decide how to collect data and prepare for the final evaluation
19. Analysis and interpretation of the evaluation data
20. Inspect a user interface, including a range of evaluative processes
21. Prototype design basics: theory and practice; including basic terms
22. Psychological and behavioral science of HCI
23. Cognitive architecture, memory, problem-solving, mental models, perception, and action related to HCI
24. Impact the design and testing of interactive technologies

Related to applying HCI theory and principles to product development, students will:

1. Apply HCI principles and a user-centered approach to interaction design
2. Analyze user needs and requirements
3. Design and develop prototypes based on user assessments (needs and requirements), while applying HCI principles and models.
4. Apply evaluation and usability testing methods to interactive products to validate design decisions
5. Develop pre-design and post-design usability testing techniques on the developed Web site
6. Assess user needs and requirements
7. Categorize, design, and develop information in proper architectural structures
8. Create interface design prototypes based on a range of design principles and user data, and user assessments
9. Apply prototype principles and a user-centered approach to interaction design
10. Apply evaluation and usability testing methods to prototypes to validate design decisions and to the Web product to validate design decisions using: a) Classic user testing, and b) Heuristic inspection
11. Analyze test data and write a comprehensive report on the product development process of their redesigned Web site, i.e. of the stages of pre-design, design, and post-design, testing, and data analysis
12. Implement a HCI research proposal, including research questions, collecting the relevant literature and methodology
13. Develop a general framework, with a hierarchy of concepts and topics, including a refinement of the research question
14. Understand and apply the various research methods regarding qualitative and quantitative data

Doctor of Philosophy in Informatics - Bioinformatics

Upon completion of the Bioinformatics PhD program, students will be able to:

1. Analyze different types of bioinformatics data (gene, protein, disease, etc.) including their biological characteristics and relationships.
2. Formulate steps involved in transforming the data to knowledge, as well as introducing different techniques used at each step
3. Impact informatics on other disciplines such as biology from several perspectives including the social and economic aspects.
4. Establish different data representation models and formats used for bioinformatics data representation including markup languages, such as SBML and CellML, and ontologies, such as GO ontology.
5. Master different approaches used for data integration and data management, including data warehouse and wrapper approaches.
6. Develop computational techniques and employ diversified bioinformatics tools for data processing including statistical, machine learning and data mining techniques.
7. Analyze processed data in particular with the support of analytical and visualization tools.
8. Perform bioinformatics research in area of interest.
9. Interact with non-bioinformatics professionals, such as biologists and biomedical researchers in order to better understand their bioinformatics needs for better support and service delivery.
10. Develop the ability to design and develop bioinformatics solutions by adapting existing tools, designing new ones, or a combination of both.

Doctor of Philosophy in Informatics - Health Informatics

Upon completion of the Health Informatics PhD program, students will be able to:

1. Skilled in the analysis, design, and implementation of information systems that support and expand the delivery of health care.
2. Function as translators between clinicians and information technology personnel.
3. Insure that information systems capture and present critical health information.
4. Interact with non-health care professionals, such as computer science, information science, cognitive science, and other researchers in order to better understand how their knowledge advances health informatics science.
5. Demonstrate in-depth knowledge on health informatics research approaches.
6. Propose innovative approaches to the development of health informatics knowledge.

Doctor of Philosophy in Informatics - Human Computer Interaction

Upon completion of the HCI PhD program, students will be able to:

1. Identify and explain HCI domain knowledge in the areas of both basic and applied research with considerable depth, including:
    - HCI theory and usability terms, principles, and practices,
    - Problem space definition and conceptual models,
    - Social mechanisms used in communication,
    - User-centered approaches to interaction design,

- User profiling and user needs and requirements,
- Interface design principles and processes, as well as related areas of visual design and aesthetics,
- Cognitive and information processing,
- Product assessments related to a market analysis, as well as processes and life-cycles of interaction design, and
- Product evaluation and testing methods, both qualitative and quantitative

2. Identify and apply HCI principles and practices during product design and evaluate (development and usability testing) of interactive products, including the producing of interface designs and prototypes based on user and needs assessments and a user-centered approach to interaction design and the final analysis, evaluation, and usability testing methods to interactive products to validate design decisions.
3. Identify and explain the broader HCI connections and associations among technology, theory, social analysis, and application domains to arrive at a set of questions in preparation for final research and dissertation, as well as the broader significance of their work within the context of past and current HCI research.

Academic Policies & Procedures

Absences

From Final Examinations Students are required to adhere to the policies regarding final examinations as published in the *Schedule of Classes*.

From Scheduled Classes Illness or equivalent distress is the only acceptable excuse for absence from class. Other absences must be explained to the satisfaction of the instructor, who will decide whether omitted work may be made up.

Credit for Correspondence Courses

With prior approval, the School of Informatics will accept a maximum of two courses (6 credit hours total) by correspondence study to count toward the degree requirements. Only general elective courses may be taken by correspondence. Distance learning courses and courses conducted online are not considered correspondence courses and, therefore, do not have a credit hour limit associated with them.

Degree Application

Candidates for graduation must file an application with the school by March 1 for December graduation and October 1 for May, June, or August graduation. Credits for all course work, except that of the current semester, must be recorded on the candidate's Indiana University transcript at least one month prior to the date of graduation.

Statute of Limitations

Candidates for the bachelor's degree in informatics have the right to complete the degree requirements specified by the bulletin in effect at the time they entered Indiana University, provided that the required courses are available and that no more than eight calendar years have elapsed since the date of entry.

Grading Policies

The School of Informatics follows the official grading system of Indiana University described in the front of this bulletin.

Pass/Fail

During an undergraduate program, students in the School of Informatics in good standing (not on probation) may enroll in up to a maximum of eight university elective courses to be taken with a grade of P (pass) or F (fail). Students may take up to two Pass/Fail courses during an academic year. The procedure for declaring this option may be found in the Schedule of Classes. A grade of P is not counted in the grade point average; a grade of F is included. Grades of P cannot be changed to any other letter grade.

Probation/Dismissal/Readmission at School of Informatics

Academic Warning

A student whose semester (fall or spring) grade point average (GPA) falls below a 2.0, but whose cumulative GPA is a 2.0 or higher will be placed on academic warning. An advising hold will be placed on the student's record and the student will be required to meet with their academic advisor prior to registration.

Academic Probation

A student whose cumulative grade point average (GPA) falls below a 2.0 will be placed on probation for the subsequent semester. A probation hold will be placed on the student's record and the student will be required to meet with their academic advisor prior to registration. Once the cumulative GPA is 2.0 or higher, the student will be removed from probationary status.

Dismissal

A student on probation who has completed a minimum of 12 IU GPA hours is subject to dismissal if they fail to attain a GPA of at least 2.0 in any two consecutive semesters (fall and spring) and their cumulative IU GPA is below 2.0.

Readmission

Students who are dismissed for the first time must sit out for a minimum of one regular fall or spring semester (not summer) and petition by the established deadlines to be eligible for readmission. Students dismissed two or more times must remain outof school for two regular (fall and spring) semesters and petition by the established deadlines to be eligible for readmission. Readmitted students may only begin in either the fall or spring semester.

Grade Replacement

The Grade Replacement Policy is available only to undergraduate students. It may be exercised for a maximum of 15 credit hours, no more than two times for a given course, with each attempted replacement counting toward the 15 credit hour limit. Any grade may be replaced with the last grade earned for the course, as long as the most recent grade is equal to or higher than the grade being replaced. The replaced grade will then be excluded from the cumulative grade point average. However, the course listing and the replaced grade will remain on the student's academic record with an "X"

notation indicating that the grade is excluded from the cumulative grade point average.

The policy became effective beginning with the fall 1996 semester, and any courses being used to replace an earlier grade must have been taken in the fall of 1996 or later. Grades previously granted FX will be honored and will count toward the 15 credit hour limit. Once invoked, a student may not subsequently request reversal of the grade replacement granted for a given course. Also, this policy is not available for graduate students or students seeking any second undergraduate degree. Please see your academic advisor to discuss grade replacement and obtain a form. For more information about the policy, visit http://registrar.iupui.edu/replace.html

Scholarships & Awards

Scholarships

The School of Informatics offers several scholarships in all degree programs. Most scholarships are available only to undergraduate students. Financial assistance for master's students is generally given to a select number of students in the form of a graduate assistantship.

Available to all School of Informatics Students:

The John R. Gibbs Scholarship/Fellowship for Innovation is available to both undergraduate and graduate students in the School of Informatics at IUPUI who have demonstrated or show interest in innovation and entrepreneurship.

Freshman Scholarships:

School of Informatics Freshman Scholarships are awarded to incoming freshmen students who graduated in the top 25% of their class and have received a minimum SAT score of 1070 or ACT of 23. Students must plan to enroll in the Informatics or Media Arts and Science program. The scholarship is renewable for up to four years with a GPA of 3.2 and continuous full-time enrollment.

The Aspirations in Computing Freshman Scholarship is available to incoming female freshmen for their computing-related achievements and interests. Awardees are selected for their computing and IT aptitude, leadership ability, academic history, and plans for post-secondary education. The scholarship is awarded to the student(s) who won the NCWIT Aspirations in Computing competition and is admitted directly to the School of Informatics at IUPUI. The scholarship is renewable for up to four years with a GPA of 3.5 and continuous full-time enrollment.

Scholarships available to Juniors or Seniors:

The Health Information Technology Scholarship is available to a junior or senior with an interest in health information technology. The scholarship may be given to a student with a strong affinity for working in a health field whether through study of informatics and the health sciences, health information administration, bioinformatics, or media arts and science. Preference will be given to a student demonstrating strong leadership qualities and a desire to pursue further education beyond the undergraduate degree. Recipients are selected in the spring of their sophomore or junior year.

Scholarships available to Seniors:

The David M. Ratts Scholarship is available to senior students in the School who have a record of academic excellence and a minimum GPA of 3.5. Recipients are selected in the spring of their junior year.

The Tyler R. Stull Memorial Scholarship is available to senior students in the School majoring in Media Arts and Science who demonstrate significant talent and future career potential in the area of graphic or sound design, and who have a minimum GPA of 3.0. Preference is given to students who are residents of Indiana and demonstrate financial need. Recipients are selected in the spring of their junior year.

The Dean's Advisory Council Senior Scholarship is available to senior students in the School who have a record of innovation, community service or academic excellence. Recipients are selected in the spring of their junior year.

Scholarships available to Juniors or Seniors in the Health Information Administration (HIA)

Scholarships program:

Gertrude L. Gunn Memorial Fund Scholarship, established in memory of the founder of the program, are awarded to students in HIA. They are based on scholarship and demonstrated financial need.

The Mary L. McKenzie Scholarship is awarded to a student in Health Information Administration (HIA). It is based on scholarship and demonstrated financial need.

The Elton T. Ridley Minority Scholarship is awarded to a student in HIA. It is based on scholarship and demonstrated financial need. The scholarship is awarded to a student who is a member of a classification of individuals who are traditionally underrepresented in the HIA program.

Awards

Based on superior performance and policies, the program faculty will recommend that qualified students be awarded degrees with distinction.

Administration, Faculty and Staff

School of Informatics Administration, Faculty, and Staff

Administration

Faiola, Anthony, Ph.D. Purdue University, 2005; M.A., Ohio State University, 1984; M.F.A.,Ohio State University, 1979; M.A., State University New York, 1977; B.F.A., State University New York, 1975; *Executive Associate Dean, Associate Professor, Director of Human Computer Interaction Graduate Program*

Palakal, Mathew J., Ph.D. Computer Science,1987; M.S. Computer Science, 1983; B.S., Computer Science, Concordia University [Canada], 1979, *Associate Dean*

for Research and Graduate Studies, Director, Informatics Research Institute, and Professor of Informatics

Hayes, Barbara, M.S., Indiana University, 2001; M.S.W., Indiana University, 1981; B.A., Indiana University, 1976, *Associate Dean for Administration and Planning, Clinical Assistant Professor*

Faculty

Baker, M. Pauline, Ph.D., University of Illinois, 1990; M.S., Western Illinois University, 1981; M.S., Syracuse University, 1977; B.A., Cornell University, 1974, *Associate Professor, Director, Director of the Media Arts and Science Program*

Bolchini, Davide, Ph.D., University of Lugano, 2003; B.A., M.S. University of Lugano 2000, *Assistant Professor*

Chen, Yue (Jake), Ph.D., 2001; M.S., 1997; B.S., University of Minnesota, 1995, *Associate Professor*

Comer, Robert Skipworth, M.S., Indiana University, 2001; B.S., Vanderbilt University, 1978, *Research Associate*

Defazio, Joseph, Ph.D., Indiana University, 2008; M.S., Indiana State University, 1993; B.S., B.A., Indiana State University, 1994, *Associate Professor*

Dunker, A. Keith, Ph.D., 1969, Post-doctorate, Yale University; M.S., University of Wisconsin at Madison, 1967; B.S., University of California, Berkeley, 1965; *Professor and Director, Center for Computational Biology and Informatics*

Hook, Sara A., J.D., 1994; M.B.A., Indiana University, 1988; M.L.S., 1980; B.A., University of Michigan, 1978, *Professor of Informatics*

Huang, Edgar, Ph.D., Indiana University, 1999; M.F.A., University of California, 1995; M.L., People's University of China, 1988; B.A., Institute of International Relations, 1984, *Associate Professor*

Jones, Josette W., Ph.D., University of Wisconsin, 2002; Licentiate Nursing, Brussels, Belgium, 1990; Licentiate Medical Social Sciences, Katholieke Universiteit Leuven, Louvain, Belgium, 1981; Graduate Hospital Nursing, Mater Salvatoris, Hasselt, Belgium, 1973, *Associate Professor, Health Informatics, Associate Professor, Nursing*

Kharrazi, Hadi, Ph.D. Dalhousie University, 2008; M.D., Iran University of Medical Sciences and Health Services, 2003; M.S., Dalhousie University, *Assistant Professor*

Koch, Clinton, M.S., Indiana University, 2000; B.A., Indiana University, 1997, *Lecturer*

MacDorman, Karl, B.A., Ph.D. Unviersity of Cambridge, UK, 1996; University of California, 1988, *Associate Professor*

Mannheimer, Steve, M.F.A., Washington University, 1975; B.F.A., Drake University, 1973; B.A., Grinnell College, 1972, *Professor*

McDaniel, Anna M., D.N.S., 1991; M.A., 1981; B.S.N., Ball State University, 1974, *Professor of Nursing and Health Informatics*

Merchant, Mahesh, Ph.D., University of Utah, 1980; M.S.E.E., California State University, 1976; B.S.E.E., University of Poona, 1973, *Lecturer*

Pfaff, Mark, Ph.D. The Pennsylvania State University, 2008; M.S., Duquesne University, 2001; B. A., Pennsylvania State University, 1995, *Assistant Professor*

Powers, Mathew, M.F.A. Indiana University 2006; B.F.A., Indiana University, 2002, *Lecturer*

Stewart, Jennifer, Media Arts and Science, Master of Science, Indiana University, 2009; B.G.S., Indiana University, 1993, *Lecturer*

Tennant, Felisa, M.I.S., Indiana University, 2001; B.S., Indiana University, 1997, *Clinical Assistant Professor, and Health Information Administration Interim Program Director*

Tennant, Susan, M.S., Indiana University–Purdue University Indianapolis, 2000; B.F.A.,State University New York, 1974; B.A., State University New York, 1973, *Clinical Associate Professor, Assistant Director, Media Arts and Science*

William, Albert, M.S., Indiana University, 2002; B.S., Bowling Green State University, 1984, *Research Associate*

Wu, Huanmei, Ph.D. Northeastern University, 2005; M.S., Northeastern University, 2003; B.S., Tsinghua Universitym 1996, *Assistant Professor*

Zhou, Yaoqi, Post-doctorate, North Carolina State University [1994-95] and Harvard University [1995-2000]; Ph.D. State University of New York, 1990; B.S., University of Science and Technology of China, 1984, *Director of Informatics, Professor of Informatics*

Staff

Ward, Caitlin, *4th floor Receptionist*

Courses

Graduate Course Descriptions

Informatics

INFO-G 599 Thesis Research (0 cr.)

INFO-I 500 Fundamental Computer Concepts in Informatics (3 cr.) An introduction to fundamental principles of computer concepts for informatics students, including an overview of computer architecture, computer algorithms, fundamentals of operating systems, data structures, file organization and database concepts. This course is expected to impart the required level of competency in computer science. It may be waived in lieu of six undergraduate credit hours of computer science or informatics coursework, covering areas of programming, discrete structures, and data structures.

INFO-I 501 Introduction to Informatics (3 cr.) Basic information representation and processing; searching and organization; evaluation and analysis of information. Internet-based information access tools; ethics and economics of information sharing.

INFO-I 502 Information Management (3 cr.) Survey of information organization in medical, health, chemical, and biology-related areas; basic techniques of the physical database structures and models, data access strategies, management, and indexing of massively large files; analysis and representation of structured and semi-structured medical/clinical/chemical/ biological data sets.

INFO-I 503 Social Impact of Information Technologies (3 cr.) An overview of important social, legal, and ethical issues raised by information technology.

INFO-I 504 Social Dimensions of Science Informatics (3 cr.) Course will examine ethical, legal, and social issues surrounding contemporary research and practice in science informatics. Topics include the nature of science and technology, the ramifications of recent advances in science informatics, and relevant science policy and research ethics. General knowledge of science informatics is assumed.

INFO-I 505 Informatics Project Management (3 cr.) This is a professional introduction to informatics project management and organizational implementation of integrated information solutions. The target audience is informatics project team members likely to pursue informatics project manager roles as well as all members not likely to do so. Through reading, lecture, discussion, practice, and targeted projects, students gain historical perspectives, current awareness, and proficiency with informatics project management terminology, techniques, and technologies.

INFO-I 506 Globalization and Information (3 cr.) Explores the processes that promote and impede movement of human action and informational activities to the most general levels, e.g., the level of the world as a whole. Surveys diverse theories of globalization to identify the best approaches for professional informatics career planning and making information globally accessible.

INFO-I 510 Data Acquisition and Laboratory Automation (3 cr.) This course covers the entire process by which signals from laboratory instruments are turned into useful data: (1) fundamentals of signal conditioning and sampling; (2) interfacing, communications, and data transfer; (3) markup languages and capability systems datasets; (4) general lab automation; (5) robotics. A significant portion of this course is devoted to practical learning using LabVIEW.

INFO-I 511 Laboratory Information Management Systems for Health and Life Sciences (3 cr.) This course involves a comprehensive study of Laboratory Information/Laboratory Information Management Systems in the Healthcare and Life Sciences. It consists of the history, applications, case studies, functional requirements, databases, data flow, workflows, system and network architecture, laboratory roles, establishment of these systems including selection, installation, customization, integration, and validation.

INFO-I 512 Scientific and Clinical Data Management (3 cr.) Management and mining of data generated in scientific laboratories and clinical trials for data mining and knowledge discovery requires robust solutions that include knowledge discovery techniques and databases, extraction of data/metadata stored in data warehouses that use Storage Use Networks and dealing with security issues of handling this data.

INFO-I 519 Introduction to Bioinformatics (3 cr.) P: One semester programming course or equivalent. Sequence alignment and assembly; RNA structure, protein and molecular modeling; genomics and proteomics; gene prediction; phylogenetic analysis; information and machine learning; visual and graphical analysis bioinformatics; worldwide biologic databases; experimental design and data collection techniques; scientific and statistical data analysis; database and data mining methods; and network and internet methods.

INFO-I 525 Organizational Informatics and Economics Security (3 cr.) Organizational process embed implicit and explicit decisions and information control. Security technologies and implementations make explicit organizational choices that determine individual autonomy within an organization. Security implementations allocate risk, determine authority over processes, make explicit relationships in overlapping hierarchies, and determine trust extended to organizational participants.

INFO-I 529 Machine Learning for Bioinformatics (3 cr.) P: INFO I519, or equivalent knowledge. The course covers advanced topics in bioinformatics with a focus on machine learning. The course will review existing techniques such as hidden Markov models, artificial neural network, decision trees, stochastic grammars, and kernel methods. Examine application of these techniques to current bioinformatics problems including: genome annotation and comparison, gene finding, RNA secondary structure prediction, protein structure prediction, gene expression analysis, proteomics, and integrative functional genomics.

INFO-I 530 Foundations of Health Informatics (3 cr.) This course will introduce the foundation of health informatics. It will review how information sciences and computer technology can be applied to enhance research and practice in healthcare. The basic principles of informatics that govern communication systems, clinical decisions, information retrieval, telemedicine, bioinformatics and evidence based medicine will be explored.

INFO-I 532 Seminar in Bioinformatics (1-3 cr.) Presentation and discussion of new topics in bioinformatics. Concentration on a particular area each semester to be announced before registration. Total credit for seminars and independent study courses may not exceed 9 credit hours.

INFO-I 533 Seminar in Chemical Informatics (1-3 cr.) Presentation and discussion of new topics in chemical informatics. Concentration on a particular area each semester to be announced before registration. Total credit for seminars and independent study courses may not exceed nine 9 hours.

INFO-I 534 Seminar in Human-Computer Interaction (1-3 cr.) Topics vary yearly and include the following: information visualization, immersive technologies, designing hypermedia for educational applications, user-centered design techniques and tools, formal methods and cognitive modeling in HCI. Total credit for seminars and independent study courses may not exceed nine 9 hours.

INFO-I 535 Clinical Information Systems (3 cr.) Clinical Information Systems includes: human computer interface and systems design; healthcare decision support and clinical guidelines; system selection; organizational issues in system integration; project management for information technology change; system evaluation; regulatory policies; impact of the Internet; economic impacts of e-health; distributed healthcare information technologies and future trends.

INFO-I 536 Foundational Mathematics of Cybersecurity (3 cr.) Students will learn mathematical tools necessary to understand modern cybersecurity. The course will cover introductory mathematical material from a number of disparate fields including probability theory, computational theory, complexity theory, group theory, and information theory.

INFO-I 537 Legal and Social Informatics of Security (3 cr.) This is a case-based course on privacy and security in social contexts. Privacy and security technologies can diverge from their designers' intent. Privacy-enhancing technologies have been used to defeat data protection legislation, and cryptographic technologies of freedom can be used by corrupt regimes to protect their records from external view.

INFO-I 538 Introduction to Cryptography (3 cr.) Introduction to the foundational primitives of cryptography and implementations. A primary goal of this course will be to understand the security definitions for each primitive and how they are used in cryptographic protocols. The ethics of insecure or on-the-fly protocol design will be discussed.

INFO-I 539 Cryptographic Protocols (3 cr.) The class teaches a basic understanding of computer security by looking at how things go wrong, and how people abuse the system. The focus of the class is on how computer systems are attacked, and once this is understood it is possible to propose ways to make the system secure.

INFO-I 540 Data Mining for Security (3 cr.) The objective of this course is to provide an understanding of the impact of data mining in security with a particular focus on intrusion detection. There will be an introduction to data mining where data mining techniques including association rules, clustering and classification are described. Security basics will be presented, focusing on topics such as authentication and access control that are relevant to data mining. This seminar course will explore recent research work in this area and intrusion detection.

INFO-I 545 Music Information Representation, Search and Retrieval (3 cr.) A comprehensive, comparative study of computer-based representation schemes for music, including those oriented toward music notation, music performance, and music analysis. Overview of musical metadata. Techniques and tools for search and retrieval of music information. Credit not given for both INFO I545 and MUS N564.

INFO-I 546 Music Information Processing: Symbolic (3 cr.) This course deals with both methodology and specific applications that attempt to algorithmically annotate, understand, recognize, and categorize music in symbolic (score-like) form. Particular applications will include key finding, harmonic analysis, note spelling, rhythm recognition, meter induction, piano fingering, and various classification problems such as genre or composer identification. The methodology we will employ will be probabilistic and will include ideas from Maching Learning such as optimal classifiers, hidden Markov models, and Bayesian networks. Students will have computing assignments, present papers, and be expected to implement solutions to problems using a high-level language such as R or Matlab.

INFO-I 547 Music Information Processing: Audio (3 cr.) This course deals with various music analysis nad processing problems that use sampled audio as the primary data representation. We discuss digital signal processing, including filtering and its relationship to Fourier techniques. Topics include synthesis, effects processing, score following, blind music recognition, and accompaniment systems.

INFO-I 548 Introduction to Music Informatics (3 cr.) History, issues, and applications in music information technology. Survey of various types of musical information. Introduction to digital musical media, including data standards and processing; database structure and organization standards and processing; database structure and organization of audio-, score-, and text file objects; and discussion of copyright issues.

INFO-I 550 Legal and Business Issues in Informatics (3 cr.) Provides students with a solid foundation on legal and business matters that impact informatics and new media, including intellectual property, privacy, confidentiality and security, corporate structure, project planning, tax implications, marketing, obtraining capital, drafting business plans and working with professionals such as attorneys, accountants, and insurance agents.

INFO-I 551 Independent Study in Health Informatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed 9 hours.

INFO-I 552 Independent Study in Bioinformatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed 9 hours.

INFO-I 553 Independent Study in Chemical Informatics (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed nine 9 hours.

INFO-I 554 Independent Study in Human-Computer Interaction (1-3 cr.) Independent study under the direction of a faculty member, culminating in a written report. May be repeated for credit. Total credit for seminars and independent study courses may not exceed nine 9 hours.

INFO-I 555 Usability and Evaluative Methods (3 cr.) Web usability principles (theory) and practices are covered with a semester-long project that draws upon relationships between Web and software design and usability engineering. Students also learn a collection of user requirement and testing processes and techniques for the development of more usable interactive systems.

INFO-I 556 Biological Database Management (3 cr.) Study about database management and its application to bioinformatics. Topics include data modeling, data indexing and query optimization with a bioinformatics perspective, and database issues in complex nature of bioinformatics data. The course also involves study of current challenges related to bioinformatics data management, data integration and semantic Web.

INFO-I 557 Human Computer Interaction Design I (3 cr.) This course covers human computer interaction theory and application from an integrated approach of knowledge domains, i.e., the cognitive, behavioral, and social aspects of users and user context, relevant to the design and usability testing of interactive systems.

INFO-I 558 Human Computer Interaction Design II (3 cr.) As a continuation of HCI 1, this course introduces students to advanced HCI theories and practices. Areas of study include: product design research methods and issues underlying design thinking, advanced usability practices, and other human-system interaction models. Thesis research planning, methods, and data analysis will also be covered.

INFO-I 563 Psychology of Human Computer Interaction (3 cr.) Covers the psychological and behavioral science of human computer interaction, including cognitive architecture, memory, problem-solving, mental models, perception, action, and language. Emphasis is placed on developing an understanding of the interaction between human and machine systems and how these processes impact the design and testing of interactive technologies.

INFO-I 564 Prototyping for Interactive Systems (3 cr.) The course covers methodologies for designing and prototyping graphic user interfaces, including rapid (paper) and dynamic (interactive) prototypes. Principles of design research and visual communication are discussed in the context of interaction design, cognition and user behavior, as well as usability testing techniques for concept validation.

INFO-I 571 Chemical Information Technology (3 cr.) P: Consent of Instructor. Overview of chemical informatics techniques, including chemical structure coding, chemical data representation, chemical database and search systems, molecular visualization and modeling techniques, and the development of chemical informatics software.

INFO-I 572 Computational Chemistry and Molecular Modeling (3 cr.) P: INFO-I 571. Computer models of molecules and their behavior in gas and condensed phases; implicit and explicit solvation models; quantum and molecular mechanics; search strategies for conformational analysis; geometry optimization methods; information content from Monte Carlo and molecular dynamics simulations; QSAR; CoMFO; docking.

INFO-I 573 Programming for Science Informatics (3 cr.) Students will receive a thorough understanding of software development for chem- and bioinformatics, and broaden experience of working in a scientific computing group. Topics include programming for the web, depiction of chemical and biological structures in 2D and 3D, science informatics tool kits, software APIS, AI and machine-learning algorithm development, high-performance computing, database management, managing a small software development group, and design and usability of science informatics software.

INFO-I 575 Informatics Research Design (3 cr.) P: Undergraduate or graduate course in general statistics. Introduction and overview to the spectrum of research in informatics. Qualitative and quantitative research paradigms, deterministic experimental designs to a posteriori discovery. Issues in informatics research; conceptual, design, empirical, analytical, and disseminative phases of research.

INFO-I 576 Structural Approaches to Systems Biology (3 cr.) Computational approaches to characterizing and predicting tertiary protein configuration, based on known data of atomic, intramolecular and intermolecular interactions. The course presents a balanced and integrative outlook at the various molecular components that determine biological function, sub-cellular organization, dysfunction and even disease examined at the nanoscale.

INFO-I 578 Data Analysis for Clinical Administrative Decision Making (3 cr.) Focuses on understanding, manipulating, and analyzing quantitative data in nursing and healthcare. Includes use of computer-based systems for data management and statistical analysis. Application and interpretation of multivariate statistical models for decision making.

INFO-I 581 Health Informatics Standards and Terminologies (3 cr.) Health information standards specify representation of health information for the purpose of communication between information systems. Standards not only standardize data formats, but also the conceptualizations underlying the data structures. The design process of data standards, domain analysis,

conceptualization, modeling, and the methods and tools commonly used are explored.

INFO-I 582 Health Information Exchange (3 cr.) This course describes the drivers and challenges, the data and services of electronic health information exchange (HIE). The five focus areas of HIE are reviewed relative to strategies and actions: Aligning Incentives; Engaging Consumers; Improving Population Health; Managing Privacy, Security and Confidentiality; and, Transforming Care Delivery.

INFO-I 583 Security and Privacy Policies and Regulations for Health Care (3 cr.) This course discusses privacy and security regulations for health care information transactions including policy, procedures, guidelines, security architectures, risk assessments, disaster recovery, and business continuity. Particular attention is given to the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act.

INFO-I 584 Practicum in Health Information Technology (3 cr.) This course provides an opportunity for the learner to synthesize all previous coursework and to demonstrate beginning competency in Health Information Technology (HIT) applications. The course employs an application focus in which the learner demonstrates comprehension, critical thinking, and problem-solving abilities within the context of a real-world environment.

INFO-I 590 Topics in Informatics (1-3 cr.) Variable topic. Emphasis is on new developments and research in informatics. Can be repeated with different topics, subject to approval of the Dean.

INFO-I 600 Professionalism and Pedagogy in Informatics (3 cr.) Course will introduce students to topics and skills necessary for entering careers in industry or the academy. Topics covered will include career planning, curriculum development, effective teaching, research ethics, scholarly and trade publiching, grantsmanship, and intellectual property consideration.

INFO-I 601 Introduction to Complex Systems (3 cr.) The course will cover fractals, emergent behavior, chaos theory, cooperative phenomena, and complex networks. Students will learn how to think differently about complexities, finding ways to understand their complexity and addressing the problems they pose.

INFO-I 604 Human Computer Interaction Design Theory (3 cr.) The course will explore, analyze, and criticize underlying assumptions and the rational rationale behind some of the most influential theoretical attempts in HC and related fields. The purpose of the course is to make students aware of how theories can influence practice and to develop critical thinking around the role, purpose, and function of theories.

INFO-I 605 Social Foundations of Informatics (3 cr.) Topics include the economics of information businesses and information societies, legal and regulatory factors that shape information and information technology use, the relationship between organization cultures and their use of information and information technology, and ownership of intellectual property.

INFO-I 611 Mathematical and Logical Foundations of Informatics (3 cr.) An introduction to mathematical methods for information modeling, analysis, and manipulation. The topics include proof methods in mathematics, models or computation, counting techniques and discrete probability, optimization, statistical inference and core advanced topics that include, but are not limited to, Markov chains and random walks, random graphs, and Fourier analysis.

INFO-I 617 Informatics in Life Science and Chemistry (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces the fundamental notions in genome and proteome informatics and chemical informatics focus. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of bioinformatics. Students will explore relevant and influential research, results, and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will focus on research approaches in bioinformatics, emerging technologies in biology and chemistry, and basic computational techniques, using the design and organizing issues in information systems used in those areas. The course is designed for students with no biology or chemistry background, but some knowledge in informatics, who want to learn basic topics in bioinformatics and chemical informatics.

INFO-I 619 Structural Bioinformatics (3 cr.) Course covers informatics approaches based on the sequence and 3D structure of biological macromolecules (DNA, RNA, Protein) whose objective is to improve our understanding of the function of these molecules. Topics will include molecular visualization; structure determination, alignment, and databases; and prediction of protein structure, interactions, and function.

INFO-I 621 Computational Techniques in Comparative Genomics (3 cr.) Course will summarize computational techniques for comparing genomes on the DNA and protein sequence levels. Topics include state-of-the-art computational techniques and their applications: understanding of hereditary diseases and cancer, genetic mobile elements, genome rearrangements, genome evolution, and the identification of potential drug targets in microbial genomes.

INFO-I 624 Advanced Seminar I–Human-Computer Interaction (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of human-computer interaction. Students will explore relevant and influential research, results, and application. Students will design an independent research program in relation to their individual research fields and personal interests.

INFO-I 627 Advanced Seminar I–Bioinformatics (3 cr.) P: Advanced graduate or consent of instructor. Introduce students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of bioinformatics. Student will explore relevant and influential research, results, and applications. Students will develop an understanding of

leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will focus on research approaches in bioinformatics, and emerging technologies in biology and chemistry, and basic computational techniques.

INFO-I 628 Advanced Seminar in Complex Systems (3 cr.) Introduces students to major historical contemporary and emerging theories, methods, and techniques in the filed of complex systems. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms and will design an independent research program in relation to their individual research fields and personal interests. The course will focus on the theory of complex systems, systems science and artificial life.

INFO-I 634 Advanced Seminar II – Human Computer Interaction (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical, contemporary, and emerging theories, methods, techniques, technologies, and applications in the field of human-computer interaction. Students will explore relevant and influential research, results, and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests.

INFO-I 637 Advanced Seminar II – Bioinformatics (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical contemporary and emerging theories, methods, and techniques in the field of Bioinformatics. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design and independent research program in relation to their individual research fields and personal interests. The course will focus on research approaches in bioinformatics, emerging technologies in biology and chemistry, and basic computational techniques.

INFO-I 638 Advanced Seminar in Complex Systems (3 cr.) P: Advanced graduate standing or consent of instructor. Introduces students to major historical contemporary and emerging theories, methods, and techniques in the filed of complex systems. Students will examine and explore relevant and influential research, results and applications. Students will develop an understanding of leading research approaches and paradigms, and will design an independent research program in relation to their individual research fields and personal interests. The course will be an exposition of the science at the edge; and the forefront of research in complex systems.

INFO-I 641 Business of Health Informatics (3 cr.) This class focuses on the economic importance of healthcare information technology adoption for value realization, as a strategic asset, as an investment, and transformation toward integrated decision making. Topics covered include but are not limited to implementation of Decision Support System, barcode tracking, Electronic Health Records, pay-for-performance incentives for e-prescribing.

INFO-I 642 Clinical Decision Support Systems (3 cr.) This course provides an overview of the background and state-of-the-art Clinical Decision Support Systems (CDSS). Topics include: the design principles behind clinical decision support systems, mathematical foundations of the knowledge-based systems and pattern recognition systems, clinical vocabularies, legal and ethical issues, patient centered clinical decision support systems, and the applications of clinical decision support systems in clinical practice.

INFO-I 643 Natural Language Processing and Text Mining for Biomedical Records and Reports (3 cr.) This course familiarizes students with applications of Natural Language Processing and text mining in health care. While the course provides a short introduction to commonly used algorithms, techniques and software, the focus is on existing health care applications including clinical records and narratives, biomedical literature and claims processing.

INFO-I 646 Computational Systems Biology (3 cr.) Introduction of how Omics data are generated, managed, analyzed from large-scale computational perspectives, exploring computational resources, especially biological pathways for integrative mining and computational analysis representing and modeling multiscale biological networks, relating static/dynamic properties to the understanding phenotypic functions at the molecular systems level.

INFO-I 651 The Ethnography of Informatics (3 cr.) Introduces ethnography as a social science methodology and way of knowing with which to study information and its social contexts. Places ethnography in relation to other research methodologies relevant to the production of the informatics knowledge base. Trains students in the use of a broad range of ethnographic techniques relevant to the study of automated information technology in use. Designed to be open to students from other programs with sufficient methodological and substantive background.

INFO-I 656 Translational Bioinformatics Applications (3 cr.) This course entails a cohesive approach to the theory and practice of bioinformatics applications in translational medicine (TM). It includes topics related to the complexities of low, medium and high-throughput applications in TM and powerful solutions to TM data management problems by employing various informatics frameworks.

INFO-I 657 Advanced Seminar II – Chemical Informatics (3 cr.) P: Advanced graduate standing or consent of instructor. Topics vary yearly and include: Representation of chemical compounds: representation of chemical reactions; chemical data, databases and data sources; searching chemical structures; calculation of physical and chemical data (molecular mechanics and quantum mechanics); calculations of structure descriptors; methods for chemical data analysis; integration of chemoinformatics and bioinformatics.

INFO-I 667 Advanced Seminar II—Health Informatics (3 cr.) Advanced graduate seminar in health informatics, designed to complement INFO- I530. Seinartin Health Informatics Applications. This seminar is intended for graduate students enrolled in the Informatics Doctoral Program, taking the Health Informatics Track.

INFO-I 668 Seminar in Health Informatics II (3 cr.) Seminar course covers a variety of research areas in the discipline of health informatics. The seminars provide the students with an opportunity to enrich their academic experience by improving communication and presentational skills, improving interaction with other professionals, extending knowledge in related disciplines, and keeping updated with current issues.

INFO-I 680 Human-Computer Interaction Professional Practice I (3 cr.) This course represents Part One of a two-part course series, which fulfills the final HCI MS project requirement. Part One should showcase the accumulative knowledge of the student in the areas of product design and development. Students will explore relevant and applied research concepts, while considering various HCI design approaches. Final outcomes will include the completion of the first half of the final project, i.e., the completion of a final product.

INFO-I 584 Human Computer Interaction Professional Practice II (3 cr.) Part Two of a two-part course. Part Two showcases the student's accumulative knowledge in areas of product assessment and documentation. Final outcomes include the completion of the second half of the final project, i.e. product testing and analysis and writing of the paper.

INFO-I 690 Topics in Informatics (1-3 cr.) Variable topic. Emphasis on new developments and research in informatics. Can be repeated with different topics, subject to approval of the dean. Course is intended for Ph.D. students in the School of Informatics.

INFO-I 691 Thesis/Project in Health Informatics (1-3 cr.) The student prepares and presents a thesis or project in an area of health informatics. The product is a substantial, typically multi-chapter paper or carefully designed and evaluated application, based on well-planned research of scholarly project. Details are worked out between the student and the sponsoring faculty member. May be repeated for credit until a total of 3 credits is reached.

INFO-I 692 Thesis/Project in Bioinformatics (1-6 cr.) The student prepares and presents thesis or project in an area of bioinformatics. The product is substantial, typically a multi-chapter paper or carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between student and sponsoring faculty member. May be repeated for credit.

INFO-I 693 Thesis/Project in Chemical Informatics (1-6 cr.) The student prepares and presents a thesis or project in an area of chemical informatics. The product is a substantial, typically multi-chapter paper, or a carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member. May be repeated for credit.

INFO-I 694 Thesis/Project in Human-Computer Interaction (1-6 cr.) The student prepares and presents a thesis or project in an area of human-computer interaction. The product is substantial, typically multi-chapter paper, or a carefully designed and evaluated application, based on well-planned research or scholarly project. Details are worked out between the student and sponsoring faculty member. May be repeated for credit.

INFO-I 698 Research in Informatics (1-12 cr.) Research under the direction of a member of the graduate faculty that is not dissertation related. Can be repeated for credit for a total of 30 credit hours.

INFO-I 699 Independent Study in Informatics (1-3 cr.) Independent readings and research for Ph.D. students under the direction of a faculty member, culminating in a written report. May be repeated for a maximum of 12 credit hours.

INFO-I 790 Informatics Research Rotation (3 cr.) Work with faculty, investigate research opportunities. Can be repeated for a total of 6 credit hours.

INFO-I 798 Professional Practice/Internship (non-credit cr.) Provides for participation in graduate-level professional training and internship experience.

INFO-I 890 Thesis Readings and Research (1-12 cr.) Research under the direction of a member of the graduate faculty leading to a Ph.D. dissertation. Can be repeated for credit for a total of 30 credit hours.

New Media

NEWM-N 500 Principles of Multimedia Technology (3 cr.) This course examines issues related to digital media communication in the context of e-commerce and the information industry, especially its impact on the cultural, economic, social, and ethical dimensions of local and global communities. Topics also include: usability, intellectual property, and a diversity of user markets for new media products.

NEWM-N 501 Foundations of Digital Arts Production (3 cr.) This course examines the production process and management of digital multimedia. Students investigate and produce projects by researching foundations in the use of digital video with special emphasis on production process of storytelling. Skills learned will include: project development and video production. Students will develop presentation skills through research papers.

NEWM-N 502 Digital Media Motion and Simulation Methods (3 cr.) Applications in animation/ simulation design and creation using computer desktop tools. Examines the fundamentals of three-dimensional animation through storyboards and planning, modeling, texturing, lighting, rendering, and composite techniques. Topics will include nurbs design development, texture mapping for realism and stylistic output, keyframe and path animation, and cinematography lighting techniques. Skills will be developed through design and modeling of individual or team multidisciplinary projects.

NEWM-N 503 Digital Media Application Design Processes (3 cr.) Presents the principles and fundamentals of design techniques using authoring tools on PC, Macintosh, and emerging computer platforms. Included are storyboarding, planning and organization of scripts, use of current technology, computers, video and digital arts equipment; computer-assisted design and project planner software tools and management of design team concepts.

NEWM-N 504 Advanced Interactive Design Applications (3 cr.) Incorporates extensive analysis and

use of computer and multimedia authoring tools intended for character simulation design. The course will study the concepts of physics-based bipedal movement in relation to gravity, balance, anticipation, potential energy, personality constructs, and locomotion. Assessment modeling for character depiction and animation will be planned and storyboarded. Other topics include more advanced facets of computer animation including paint tube modeling, layered texture mapping, and track and block animation for cyclical actions.

NEWM-N 505 Internship in Media Arts and Technology (3 cr.) An internship program for students to work with and learn from experts in media (digital arts) technology fields who are developing and using new applications in commercial and educational settings. Requirements for interns include the development of a technology project proposal; interview, resume, and project presentation; on-site intern residency; project report; oral and media presentation of project outcomes.

NEWM-N 506 Media Arts and Technology Project (1-6 cr.) Students create and orally present a multimedia teaching/training project combining elements of digital media technology including CD-ROM, videodisc, digital audio and video, MIDI, and Internet applications. Requirements include technology project proposal development; oral presentation of proposal, research and development of project, project final report, and the presentation of project. Final project to be submitted in digital form for permanent archive.

NEWM-N 510 Web-Database Concepts (3 cr.) Addresses diverse issues arising when designing World Wide Web interface. Basic database concepts will be presented but the course will focus on discussion of interface issues specific to Web databases, technologies for linking databases to Web servers for delivery, discussion of various Web-database applications, case studies, and industry trends.

NEWM-N 553 Independent Study (1-3 cr.) This course provides graduate students in the New Media Program an opportunity to work on a project that is beyond any other existing new media courses. The course focuses on developing graduate students with evaluation, synthesis and analysis abilities through a project to obtain an in-depth knowledge of new media within a context of their choice. A graduate student could be engaged in a research project or a production project.

Health Information Administration

HIA-M 110 Computer Concepts for Health Information (3 cr.) Course provides an overview of applications for the health and medical professionals. Topics include: audit trails, generating, quantifying and analyzing medical reports, word processing, computer hardware, medical software, copyright and fair usage. Students retrieve and present medical data.

HIA-M 210 Data Organization and Presentation in the Healthcare Environment (3 cr.) Students will study and apply problem solving, decision analysis and data presentation techniques used in healthcare data representation for both internal and external users. ICD and CPT classification systems will be modeled and analyzed utilizing spreadsheets.

HIA-M 220 Healthcare Decision Support (3 cr.) This course provides an overview of essential information technology tools necessary for quantitative and qualitative decision making in a healthcare environment. Students will learn effective methods to analyze patient data including ICD and CPT classification systems as they relate to decision processes in a healthcare environment.

HIA-M 270 Foundations and Principles of Health Information Management (3 cr.) Course focuses on the administration of foundational principles of management within a health information department. Students will gain an understanding of the language of quantitative methods as well as the processes that are required for health information managers to function in a healthcare environment which demands competency in the areas of profit margins, management of financial resources and complex reimbursement processes.

HIA-M 275 Effective Communication for the Healthcare Environment (3 cr.) Course is designed to develop effective interaction among internal and external customers in a healthcare environment. Emphasis is placed on professional communications with superiors, peers and subordinates in all areas of healthcare. Topics include: policy creation, HIM job descriptions, information technology proposal requests, e-mail etiquette and presentation skills.

HIA-M 300 Database Design for Health Information Administration (3 cr.) Introduction to database design with an emphasis on managing data in the health information environment. Topics and concepts include creating data table relationships and normalization. Utilizing Microsoft Access to create user forms and reports. Students will be required to create a large group project.

HIA-M 315 Quantitative Methods and Research (2 cr.) This course will outline the procedures associated with vital statistics in health care (birth/death certificates). The student will learn about the statistics associated with health care. The research portion will focus on data search and access techniques, national research policy making, biomedical and health research investigation, and research protocol data management.

HIA-M 322 Hospital Organization and Management (3 cr.) Orientation to hospital departments hospital organization; inter- and intra-relationships of hospital and community agencies.

HIA-M 325 Health Care Information Requirements and Standards I (3 cr.) This course will outline accreditation standards and regulatory requirements for all aspects of health care including the hospital setting, psychiatric records, and other alternate forms of delivery. It will focus on the content of the health record and documentation requirements, including an orientation to the health information management profession.

HIA-M 326 Laboratory Enrichment for Healthcare Information Requirements and Standards I (1 cr.) This course consists of exercises that reinforce the lectures in HIA-M 325. Students explore up-to-date Web resources used in the healthcare field as well as perform database searches. Students engage in laboratory exercises that

consist of evaluating health records for completeness, regulatory compliance and documentation.

HIA-M 327 Healthcare Information Requirements and Standards II (3 cr.) P: M325 This course is a continuation of HIA-M 325 and includes the ongoing review of health record documentation, in particular secondary data bases such as cancer registry, long term care and other healthcare settings. Healthcare information resources, both in print and on the World Wide Web are researched and examined extensively.

HIA-M 328 Laboratory Enrichment for Healthcare Information Requirements and Standards II (1 cr.) P: M325 This course consists of exercises that reinforce the lectures in HIA-M 327. Students explore Web resources used in the healthcare field and perform extensive database searches.

HIA-M 330 Medical Terminology (3 cr.) Understanding and use of the language of medicine including build, analyze, define, pronounce, and spell diagnostic terms that relate to the structure of the body systems. [vocabulary standards]

HIA-M 340 Cancer Registry Fundamentals (3 cr.) This course will outline the organization of cancer registry programs and the operational requirements. Students will learn how to prepare annual reports and how to interpret health information data and translate it into ICD-03 codes.

HIA-M 350 Medical Science for Health Information I (3 cr.) This course will cover pathophysiology and pharmacology associated with the body systems.

HIA-M 356 Laboratory Enrichment for ICD-9-CM Coding (1 cr.) This course is a laboratory for HIA-M 355 that provides hands-on experience in assigning ICD-9-CM codes. Actual patient records are used for coding practice which focuses on correct code assignment and sequencing of codes to follow ethical coding guidelines. Students will also gain hands-on experience with electronic health records and coding software used in the HIM industry.

HIA-M 375 Health information Technology (3 cr.) Introduction to health information standards that have been developed for the electronic health record and information interoperability and standards in development. Emphasis on understanding healthcare organization networks, intranets, the role of the Internet in patient data access, differences between clinical and administrative information systems used in healthcare organizations and the management and maintenance of those systems.

HIA-M 380 Seminar in Health Information Administration (1-3 cr.) Allows the student to refine their skills in planning health care seminars for the profession, hospitals, and within the classroom setting. Written summaries and oral presentations required.

HIA-M 400 Health Information Storage and Retrieval (3 cr.) This course will focus on the creation of forms design, including the retrieval, filing, and storage of health care information according to the guidelines established by federal and state regulations. Registries will be discussed with specific focus on the cancer registry and master patient index (MPI).

HIA-M 420 Health Care Planning and Information Systems (3 cr.) Understanding the design of systems, research various vendors, present information so that a selection of information system can be recommended. This course will also address systems planning; systems selection process; clinical and business applications of computing in healthcare; resolving organization information issues.

HIA-M 441 Transitional Professional Practicum in Health Information Management I (1-8 cr.) Designed for students who have completed an Associate Degree in HIM from a CAHIIM accredited program. Professional practice experience in a clinical site under direction of an HIA faculty member and an onsite clinical instructor. Practicum experience in the classroom. Emphasis on health information management, business administration and information systems.

HIA-M 442 Transitional Professional Practicum in Health Information Management II (1-8 cr.) P: M441 This course is a continuation of HIA-M 441 and includes professionally supervised experience in an approved clinical site as well as practicum experience in the classroom.

HIA-M 443 Professional Practicum in Health Information Management I (8 cr.) This course is designed to provide professional practice experience in an approved clinical site under the direction of an HIA faculty member and an onsite clinical instructor. Students also receive didactic and practicum experience in the classroom. Emphasis on clinical science, health information management, business administration and information systems.

HIA-M 444 Professional Practicum in Health Information Management II (8 cr.) P: M443 This course is a continuation of HIA-M 443 and includes professionally supervised experience in an approved clinical site as well as practicum experience in the classroom.

HIA-M 445 Medicine and the Law (1 cr.) Presentation of concepts of law in medical and/or health areas as applied to the physician, hospital, health institutions, health information, and individual health workers.

HIA-M 450 Medical Science for Health Information II (3 cr.) P: M350. This course is a continuation of M350. Course will cover pathophysiology and pharmacology associated with the body systems.

HIA-M 455 CPT Coding (3 cr.) P: M355. Focus on Current Procedural Terminology coding. Sequence of procedures as they relate to correct coding guidelines. Study of Health Care Common Procedure Coding System (HCPCS) will also be included.

HIA-M 456 Clinical in Health Information Administration (1 cr.) P: M355 This course is a laboratory for HIA-M 455 that provides hands-on experience in assigning CPT codes. Actual patient records are used for coding practice which focuses on correct code assignment and sequencing of codes to follow ethical coding guidelines. Students will also gain hands-on experience with electronic health records and coding software used in the HIM industry.

HIA-M 457 Practicum in Medical Coding (4 cr.) Course is designed for students completing the Certificate in

Medical Coding. Students will participate in a supervised laboratory practicum focusing on the coding of complex medical records using both the ICD and CPT coding systems. Onsite observations related to coding function in approved clinical settings are included in the course content.

HIA-M 459 Clinical in Health Information Administration (6 cr.) Professionally supervised internship in an approved clinical site for management experiences in health information services.

HIA-A 460 Long-Term Care (1 cr.) Discuss the scope of work and the role of long term care. Understand the purpose of the Resident Assessment Instrument (RAI), Minimum Data Set (MDS), and Resident Assessment Protocols (RAPS). Long-term care reimbursement issues addressed.

HIA-M 461 Release of Health Care Information (1 cr.) This course will outline the requirements associated with confidentiality and privacy of health information. This course will focus on Health Insurance Portability and Accountability Act (HIPAA) code sets and transactions privacy.

HIA-M 462 Health Care Quality Improvement (2 cr.) This course will identify quality/performance improvement methods and techniques for health care professionals. Interpretation of data appropriate to user needs and presentation of information will also be covered.

HIA-M 470 Health Care Reimbursement Systems (3 cr.) P: M355,M455 This course will present data elements that apply to prospective payment systems. It will allow the student to gain the knowledge of correct reimbursement systems and to identify issues and patient types in meeting medical necessity guidelines.

HIA-M 480 Seminar in Health Information Administration (1-3 cr.) Allows the student to refine their skills in planning health care seminars for the profession, hospitals, and within the classroom setting. Written executive summaries and oral presentations required. Spring semester only.

HIA-M 485 Health Information Administration Enrichment (1-6 cr.) Current trends, problems, best practices, and developments are discussed that affect the health care profession. Students pursue special interest and share information and experiences with the group. This course is an in-depth exploration of topics and issues in the forefront of health care. Format includes research papers, class discussions, and presentations.

HIA-M 490 Directed Study (1 cr.) This course will reinforce the concepts taught throughout the semester in an independent study approach in order to review for the certification examination.

HIA-M 499 Capstone Experience (3 cr.) This final project will allow the student to synthesize all of the information learned throughout the professional program. Written research projects and oral presentations will test the student's integrated knowledge and abilities across the field.

Undergraduate Course Descriptions

Informatics

INFO-I 100 First Year Experience (1 cr.) This course introduces specific survival skills for success in college and beyond, while reconciling personal learning skills with instructor-based teaching styles. Master the art of inquiry and elevate your sense of integrity while sharpening your personal edge by exploring critical thinking, project management, and current/future job market trends.

INFO-I 101 Introduction to Informatics (4 cr.) Problem solving with information technology; introductions to information representation, relational databases, system design, propositional logic, cutting-edge technologies: CPU, operation systems, networks, laboratory emphasizing information technology including web page design, word processing, databases, using tools available on campus.

INFO-I 112 Basic Tools of Informatics—Programming and Database Concepts (3 cr.) Introduction to programming and database design concepts. Emphasis on problem-solving and information-gathering techniques. The lecture will discuss general concepts and syntax. The lab will focus on the use of software, a programming language, modifying and accessing data using visual tools, and building database applications using forms and development tools. Lecture and laboratory.

INFO-I 130 Introduction to Cybersecurity (1 cr.) P: I101. C: I101. This course introduces students to Cybersecurity. The course will primarily focus on introduction to three core areas (technical aspects of security, organizational aspects of security and legal aspects of security). Through examples of security problems in real life, this course will illuminate fundamental ideas and concepts of information security. Half semester.

INFO-I 201 Mathematical Foundations of Informatics (4 cr.) P: INFO I101 and MATH M118. An introduction to methods of analytical, abstract and critical thinking, deductive reasoning, and logical and mathematical tools used in information sciences. The topics include propositional and predicate logic, natural deduction proof system, sets, function and relationsrelation, proof methods in mathematics, mathematical induction, and graph theory.

INFO-I 202 Social Informatics (3 cr.) P: INFO I101 Introduction to key social research perspectives and literatures on the use of information and communication technologies. Discusses current topics such as information ethics, relevant legal frameworks, popular and controversial uses of technology (e.g. peer-to-peer file sharing), digital divides, etc. Outlines research methodologies for social informatics.

INFO-I 210 Information Infrastructure I (4 cr.) P: INFO I101 C: INFO I101 This course introduces students to software architecture of information systems andthe basic concepts and procedures of systems and applications development. Itcovers the fundamentals of procedural programming and the syntax of modenprogramming languages. It also covers the principles of developing dynamic, data-driven, applications for theWorld Wide Web.

INFO-I 211 Information Infrastructure II (4 cr.) P: INFO I210 This course explors topics in systems architecture of computer applications in greater depth, with emphasis on

practices of developing well-designed, reusable software. Designing with reusability is the major information that needs to be delivered. Basic and advanced object-oriented programming skills and applications are introduced. The well-known software architectural pattern Model/View/Controller (MVC) is used.

INFO-I 230 Analytical Foundations of Security (3 cr.) P: INFO-I130. This course will allow students to re-evaluate and conceptualize material learned in discrete courses to consider the topics from their perspective of security. For example, computer system basics such that create vulnerabilities. Vulnerabilies that combine standard hardware and software configurations will be examined, as these illuminate both security and computer networks. Operating systems and file systems are examined from the perspective of access control, permissions, and availability of system services.

INFO-I 231 Introduction to the Mathematics of Cybersecurity (3 cr.) P or C: INFO-I 130. Introduces the basic mathematical tools used in modern cybersecutiry. Covers introductory mathematical material from a number of disparate fields including probability theory, analysis of algorithms, complexity theory, number theory, and group theory.

INFO-I 270 Introduction to Human-Computer Interaction Principles and Practices (3 cr.) Students learn the fundamental principles and practices of human-computer interaction (HCI) and evaluation. Specific focus is given to the introductory knowledge of HCI methods, tools, and techniques for designing and evaluating user interfaces through the use of low and high fidelity prototypes for the Web and software.

INFO-I 275 Introduction to Human-Computer Interaction Theory (3 cr.) Students will learn the fundamental theories of human-computer interaction (HCI) and user-centered design. This course is both a survey of HCI research and an introduction to the psychological, behavioral, and other social science knowledge and techniques relevant to the design of interactive and ubiquitous computing systems.

INFO-I 300 Human-Computer Interaction (3 cr.) An intermediate course that teaches students how to assess the usability of software through quantitative and qualitative methods, including conducting task analyses, usability studies, heuristic inspections, interviews, surveys, and focus groups. The course also introduces students to the tools and techniques for designing and testing user interfaces based on a human-centered methodology.

INFO-I 303 Organizational Informatics (3 cr.) P: INFO I101. Examines the various needs, uses, and consequences of information in organizational contexts. Topics include organizational types and characteristics, functional areas and business processes, information-based products and services, the use of and redefined role of information technology, the changing character of work, life and organizational practices, sociotechnical structures, and the rise and transformation of information-based industries.

INFO-I 308 Information Representation (3 cr.) P: INFO I201 and INFO I210. The basic structure of information representation in digital information systems. Begins with low-level computer representations such as common character and numeric encodings. Introduces formal design and query languages through Entity Relationship modeling, the Relational Model, XML, and XHTML. Laboratory topics include SQL and XPATH querying.

INFO-I 310 Multimedia Arts and Technology (3 cr.) P: INFO I308. The study of the evolution of media arts and underlying principles of communication. Application development paradigms in current practice.

INFO-I 320 Distributed Systems and Collaborative Computing (3 cr.) P: INFO I211. An introductory treatment of distributed systems and programming. Topics range from the distributed and object models of computation to advanced concepts, such as remote method invocations, object brokers, object services, open systems, and future trends for distributed information systems.

INFO-I 330 Legal and Social Informatics of Security (3 cr.) P: INFO I230, or consent of instructor. This course will examine that set of ethical and legal problems most tightly bound to the issues of information control. The interaction and technology changes, but the core issues have remained: privacy; intellectual property; Internet law; concepts of jurisdiction; speech anonymity versus accountability; and ethical decision-making in the network environment.

INFO-I 350 Foundations in Legal Informatics (3 cr.) This course examines the basic concepts of the design, evaluation and use of technology in the study and practice of law. The course provides an overview of the application of a variety of emerging informatics and new media technologies to the field of law. Will cover technology for law office management, legal research, litigation support, document management, imaging and animations, case management, and electronic court filing.

INFO-I 356 Globalization, Where We Fit In (3 cr.) Globalization increasingly enabled by information technology, changes how we work, what we buy and who we know. New digital technology touches people working eighty-hour weeks in China and others receiving free state-of-the-art drugs in Africa. Learn about the past, present, and future of globalization from an information technology perspective, and what it means for you, your career, and your community.

INFO-I 371 Chemical Informatics I (1 cr.) Basic concepts of information representation, storage, and retrieval as they pertain to chemistry. An overview of the techniques that make modern chemical informatics systems work including the coding techniques that form the basis for chemical information retrieval by structures, nomenclature, and molecular formulas. Various methods of coding for algorithms and techniques used in the modern pharmaceutical industry to enhance research efforts.

INFO-I 372 Molecular Modeling (2 cr.) P: CHEM C341. Molecular modeling and computational chemistry; application of quantum mechanics and molecular mechanics to drive structural and energetic information about molecules; conformational analysis; quantitative structure activity relationships (QSAR) and related methods for drug design.

INFO-I 391 Internship in Informatics Professional Practice (1-3 cr.) P: Approval of the dean and completion

of 100- and 200-level requirements in informatics. Students gain professional work experience in an industry or research organization setting, using skills and knowledge acquired in informatics course work. Maximum of six 6 credit hours given for any combination of I391 and I491.

INFO-I 399 Current Topics in Informatics (1-3 cr.) Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice with different topic.

INFO-I 400 Topics in Informatics (1-3 cr.) P: at least junior standing, or permission of instructor. Variable topic. Emphasis is on new developments and research in informatics. Can be repeated twice for credit when topics vary, subject to approval of the dean.

INFO-I 410 Electronic Discovery (3 cr.) This course will cover the legal, ethical, financial, logistical, procedural and technological considerations of electronic discovery and its implications for lawyers and their clients. It will highlight recently revised federal and state rules, new state and federal legislation and recent court cases that impact electronic discovery policies and processes.

INFO-I 420 Internship in Informatics Professional Practice (3-6 cr.) P: approval of dean and completion of 100- and 200-level requirements in informatics. Students gain professional work experience in an industry or research organization setting, using skills and knowledge acquired in informatics course work.

INFO-I 421 Applications of Data Mining (3 cr.) P: INFO-I 308. This course explores the use of data mining techniques in different settings, including business and scientific domains. The emphasis will be on using techniques, instead of developing new techniques or algorithms. Students will select, prepare, visualize, analyze, and present data that leads to the discovery of novel and usable information.

INFO-I 427 Search Informatics (3 cr.) Techniques and tools to automatically crawl, parse, index, store, and search web information, organizing knowledge that can help meet the needs of organizations, communities and individual users, social and business impact of search engines technology. As a project, students will build a real search engine and compare it with Google.

INFO-I 430 Security for Networked Systems (3 cr.) P: I230 or permission of instructor. An extensive survey of network security. Covers threats to information confidentiality, integrity, and availability in different layers. Also provides a necessary foundation on network security, such as cryptographic primitives/ protocols, authentication, authorization, and access control teechnologies. Hands-on experience through programming assignments and course projects.

INFO-I 433 Protocol Design and Analysis (3 cr.) Covers the fundamentals of computer security by looking at how things can go wrong, how people can abuse the system, and ways to make the system secure. Students will gain a basic overview of existing security problems and be introduced to methods for addressing such problems. Should be taken by anyone designing, selecting, or using applications in which security or privacy plays a role.

INFO-I 441 Human Computer Interaction Design I (3 cr.) Human computer interaction design (HCID) describes the way a person or group accomplishes tasks with a computer: what the individual or group does and how the computer responds; what the computer does and how the individual or groups responds. This course will be organized around a collection of readings and three design projects concerned with applying human computer interaction principles to the design, selection, and evaluation of interactive systems.

INFO-I 453 Computer and Information Ethics (3 cr.) Ethical and professionalization issues that arise in the context of designing and using networked information technologies and information resources. Examines frameworks for making ethical decisions, emergent technologies and their ethical implications, information/ computer professionalism. Topics include privacy, intellectual property, cybercrime, games, social justice, and codes of professional ethics.

INFO-I 465 Informatics for Social Change (3 cr.) This course focuses on the theory and practice of service learning at IUPUI. Students will apply the knowledge of their expertise area in a service project for the local or global community. Projects will be completed through students' current and developing new media production, information technology, and client-based research skills.

INFO-I 470 Litigation Support Systems and Courtroom Presentations (3 cr.) Provide students with an opportunity to use specialized software that is available for organizing, managing, retrieving, and presenting documents and evidence in a legal matter. Students will gain hands-on experience with software tools and learn what is effective and allowable from a technical, legal and ethical standpoint.

INFO-I 475 Informatics in Sports (3 cr.) Technology applications are changing the sports world in biomechanics, sports advancement and injury prevention, equipment, entertainment, gaming, and journalism. The approach of this course is to delineate what digital technologies will progress the sporting field most and changing the way we view athletics. Technologies that once were applied for special effects in cinema are now helping to build better athletes and increasing career longevity.

INFO-I 480 Experience Design and Evaluation of Ubiquitous Computing (3 cr.) The course focuses on ubiquitous computing and related interface/system design, and user-experience issues. Applications include interactive systems which support natural/gesture/touch-based interactions on devices such as mobile, extra-small-and-large displays, and other non-traditional pervasive technologies. Projects include interaction and evaluative techniques: field observation, contextual inquiry, ethnography, survey/interviews, and cognitive walkthrough.

INFO-I 490 Professional Practicum/Internship for Undergraduates (0 cr.) P: approval of the dean. Provides for participation in professional training and internship experience.

INFO-I 491 Capstone Project Internship (3-6 cr.) P: Approval of dean and completion of all required core informatics courses. Students put their informatics

education to practice through the development of a substantial project while working in a professional information technology environment. Maximum of 6 credit hours given for any combination of I391 and I491.

INFO-I 492 Senior Thesis (3 cr.) P: senior standing and approval of the dean. The senior student prepares and presents a thesis: a substantial, typically multi-chapter, paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

INFO-I 493 Senior Thesis (3 cr.) P: senior standing and approval of the dean. The senior student prepares and presents a thesis: a substantial, typically multi-chapter, paper based on a well-planned research or scholarly project, as determined by the student and a sponsoring faculty member.

INFO-I 494 Design and Development of an Information System (3 cr.) P: senior standing and approval of the dean. System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

INFO-I 495 Design and Development of an Information System (3 cr.) P: senior standing and approval of the dean. System design and development present both technical and managerial problems with which students will be familiar from their undergraduate course work. This course puts these lessons into practice as students work in teams to develop an information system. Examples of course projects include design and development of a database for a business or academic application, preparation and presentation of an interactive media performance or exhibit, or design and implementation of a simulated environment (virtual reality).

INFO-I 499 Readings and Research in Informatics (1-3 cr.) P: consent of instructor and completion of 100- and 200-level requirements in informatics. Independent readings and research related to a topic of special interest to the student. Written report required. Can be repeated for a maximum of 6 credit hours.

INFO-T 100 Topics in Informatics Technology (1-3 cr.) Variable topic. The course serves an an introduction to a specific information technology in a hands-on setting. Emphasis is on problem solving techniques using technology. Credit hours may not be applied toward satisfying major requirements in the School of Informatics.

INFO-Y 195 Directed Study I (1 cr.) Introduces informatics students to the current job market as they begin their journey to understand this new and ever-expanding discipline. Students will explore various informatics careers in business, education, science, and other related fields. Research, resume writing, identifying and analyzing marketable skills, and preparation for the interview.

INFO-Y 295 Directed Study II (1 cr.) Expands on techniques learned in Y195, including information interviews, job shadowing, mock interviewing, role-playing, alumni mentoring and discussions, and in-depth research into the various career fields.

INFO-Y 395 Career Development for Informatics Majors (1 cr.) Develops skills and knowledge that enable the student to successfully pursue the career search both at the time of graduation and later as the student progresses through their career. The course covers techniques and strategies which make the job search more efficient and effective.

New Media

NEWM-N 101 Multimedia Authoring Tools (3 cr.) A hands-on introduction to some of the fundamental tools used in industry to produce interactive media-rich Web pages. Case studies of sites that incorporate text, sounds, graphics, animations, and interactivity. Other topics include the design, development, and deployment of a personal Web site.

NEWM-N 102 Digital Media Imagery (3 cr.) A hands-on introduction to the basic tools used in industry for the creation, editing, manipulation, and uses of 2D raster and vector graphics. Other topics include the integration of imagery into a personal Web site.

NEWM-N 175 Digital Media I: Vector Imaging (3 cr.) P: N101. Vector graphics are produced using traditional visualization (sketches) and computer methods. Color theory, geometric construction, perspective, and rendering techniques are utilized in vector-based graphic creation for use in new media applications.

NEWM-N 180 Digital Media II: Raster Imaging (3 cr.) P: N101. Raster graphics are produced using traditional visualization (sketches) and computer methods. Topics will include image composition, realistic representation, digital imaging for new media, color mode and pallet usage, material, and value representation.

NEWM-N 190 Topics in Interactive Media (1-3 cr.) Special topics in interactive media, with a focus on exploring concepts at the forefront of media arts.

NEWM-N 199 Directed Study I (1 cr.) This course introduces the new media student to the current job market and will provide instruction on the development of job promotional material. Students will explore various new media careers in business, education, entertainment, science, and other related fields.

NEWM-N 200 Desktop Tools for Digital Media (3 cr.) A hands-on survey of the wide variety of tools used in creating multimedia animation, video, sound, and digital effects.

NEWM-N 201 Design Issues in Digital Media (3 cr.) Exploration of the traditional principles of visual design, as expressed in digital design tools and applied to digital media. Topics include visual literacy, fundamental design elements and design principles, and their expression in various tools for digital design. Hands-on practice with applying design principles in several projects.

NEWM-N 202 Digital Storytelling (3 cr.) P: N100 Examination of the principles of storytelling across a range of digital media formats, with attention to techniques for

creating story-rich projects. Explores the role of agency, interactivity, story structure, and narrative, as well as the opportunities and challenges raised by emerging interactive and transmedia approaches to story-rich projects.

NEWM-N 204 Introduction to Interactive Media (3 cr.) The creation of interactive multimedia products for multi-platform delivery. Topics include the multimedia production process, audience analysis, hardware and software requirements, authoring tools, scripting, content development, interface design, distribution, and development strategies. Concentration will be on real-world applications for interactive multimedia.
