INDIANA TRAFFIC SAFETY FACTS

August 2007

COUNTY PROFILES 2006

Designing and implementing effective traffic safety policies requires data-driven analysis of traffic accidents. To help in the policy-making process, the Indiana University Center for Urban Policy and the Environment is collaborating with the Indiana Criminal Justice Institute to analyze data from the Vehicle Crash Records System database, maintained by the Indiana State Police. Research findings will be summarized in a series of Fact Sheets on various aspects of traffic accidents, including alcohol-related crashes, light trucks, large trucks, speeding, children, motorcycles, occupant protection, and young drivers. Additional briefs will provide information on county and municipality data. Portions of the content in these reports are based on guidelines provided by the U.S. National Highway Traffic Safety Administration (NHTSA). These Fact Sheets, combined with an annual Indiana Crash Fact Book, serve as the analytical foundation of traffic safety program planning and design in Indiana.

Nearly 300,000 (5.6 percent) of the approximately 5 million licensed Indiana drivers in 2006 were involved in traffic collisions. Statewide there were a total of 817 fatal collisions resulting in 899 persons killed. In addition, there were 3,194 collisions resulting in 3,402 incapacitating injuries. This fact sheet provides information on traffic collisions by county in Indiana in 2006. Information is provided on vehicle registrations, licensed drivers, fatal collisions and fatalities, restraint usage, driver alcohol level, intersection collisions, and crashes that occur within municipalities within each county. Also on each county profile page is a county map depicting the location of each collision involving a fatal injury and each collision involving an incapacitating injury. Not all collisions were able to be mapped for varying reasons. The legend for each map indicates the number mapped and the actual number of collisions for each injury type.

The number of reported collisions varies greatly by county. Marion County had a total of 26,398 reported traffic collisions for 2006. Lake County reported just under 17,000 (16,945) and Allen County had 11,662 collisions. There were five counties reporting less than 200 total collisions: Benton (118), Pike (197), Sullivan (121), Switzerland (182), and Union (184). Blackford and Ohio counties reported no fatal collisions.

Source for county population is US Census Bureau.

Source for Vehicle Registrations and Licensed Drivers is the Indiana Bureau of Motor Vehicles.

Source for traffic collision data is the Indiana State Police Vehicle Crash Records System, extract dated June 5, 2007.

INDIANA CRIMINAL JUSTICE INSTITUTE

CENTER FOR URBAN POLICY AND THE ENVIRONMENT

NOTES:

Below are notes to help explain the information provided in the tables on the following profile pages.

Incap = Incapacitating injuries
Non-incap = Non-incapacitating injuries

1. 2006 Traffic Collisions

a) Collisions were categorized by the most severe injury in the collision. Some collisions will have multiple persons with more than one type injury, but each collision is only counted once.

b) Property Damage collisions include collisions involving persons with no injuries and estimated property damage equal to or greater than $1000.

c) The sum of the fatal, incapacitating, non-incapacitating and property damage collisions will not equal the county total as the county total includes collisions with property damage less than $1000.

d) The 'non-incapacitating' category includes non-incapacitating and possible injuries.

2. Driver Alcohol Level

a) This information is for only drivers who had a fatal or incapacitating injury.

b) Counts include only those drivers for whom a valid Blood Alcohol Content (BAC) level were reported.

3. Collisions in Municipalities

a) Some municipalities will not be listed, if there were no collisions with injuries for the year.

b) Municipalities listed are C1 and C3 incorporated places according to the US Board on Geographic Names FIPS 55-3 Class Code Definitions. C1 identifies an active incorporated place that is not also recognized as an Alaska Native Village statistical area, and does not also serve as a primary county division. C3 identifies a consolidated city; that is, an incorporated place that has consolidated its governmental functions with a county or MCD, but continues to include other incorporated places that are legally part of the consolidated government. Indianapolis is the only city in Indiana designated as a C3.

c) The number of collisions per municipality was derived based upon the census city code, a geographical distinction. Collisions near a city but not necessarily inside the corporate limits were counted as part of that municipality if the city code indicated such. These numbers do NOT indicate agency jurisdiction responses. For example, Terre Haute City Police Department may not have been the responder to all collisions that are counted under Terre Haute.

d) Crashes are determined to be Alcohol-related if one of the following is indicated: 1) primary factor is "alcoholic beverage' or 2) contributing circumstance is 'alcoholic beverage' or 3) BAC test result is greater than zero for driver or non-motorist (pedestrian, pedalcyclist) or 4) apparent physical condition is "had been drinking" for driver or non-motorist or 5) an OWI (operating a vehicle while intoxicated) citation was issued to the driver.

4. Population and Licensed Drivers

a) For the 0-17 age group, one cannot compare the population to the licensed drivers, as licenses are not available for people under age 15.

5. Top 5% Intersections with Most Injury Collisions

a) Collisions with a missing value for either intersection road were excluded.

b) Data represents only collisions involving an injury. Property Damage collisions are not included.

c) Due to many roads having multiple names (e.g. a State Road name and a local name), data may not be inclusive of all injury collisions at each location.

6. Restraint Use – Age, Alcohol, Speeding

a) Total fatalities and incapacitating injuries is the sum of people with those types of injuries in collisions.

b) Percent restrained only includes people with fatal and incapacitating injuries.

7. County Map

a) Some points may not be distinguishable due to the size of the map and the possibility of some collisions occurring at the same point.

b) Not all collisions were able to be mapped for varying reasons. The legend for each map indicates the number mapped and the actual number of collisions for each injury type.

INDIANA TRAFFIC SAFETY FACTS 2007

This publication was prepared on behalf of the Indiana Criminal Justice Institute by the Indiana University Center for Urban Policy and the Environment. Please direct any questions concerning data in this document to ICJI at 317-232-1233.

This publication is one of a series of Fact Sheets that, along with the annual Indiana Crash Fact Book, form the analytical foundation of traffic safety program planning and design in the state of Indiana. Funding for these publications is provided by the Indiana Criminal Justice Institute and the National Highway Traffic Safety Administration.

An electronic copy of this document can be accessed via the Center website (www.urbancenter.iupui.edu/trafficsafety), the ICJI traffic safety website (www.in.gov/cji/traffic/), or you may contact the Center for Urban Policy and the Environment at 317-261-3000.

The Indiana Criminal Justice Institute (ICJI)

Guided by a Board of Trustees representing all components of Indiana's criminal and juvenile justice systems, the Indiana Criminal Justice Institute serves as the state's planning agency for criminal justice, juvenile justice, traffic safety, and victim services. ICJI develops long-range strategies for the effective administration of Indiana's criminal and juvenile justice systems and administers federal and state funds to carry out these strategies.

The Governor's Council on Impaired & Dangerous Driving

The Governor's Council on Impaired & Dangerous Driving, a division of the Indiana Criminal Justice Institute, serves as the public opinion catalyst and the implementing body for statewide action to reduce death and injury on Indiana roadways. The Council provides grant funding, training, coordination and ongoing support to state and local traffic safety advocates.

The Center for Urban Policy and the Environment

The Indiana University Center for Urban Policy and the Environment is devoted to supporting economic success for Indiana and a high quality of life for all Hoosiers. An applied research organization, the Center was created by the Indiana University School of Public and Environmental Affairs in 1992. The Center works in partnership with community leaders, business and civic organizations, nonprofits, and government. The Center's work is focused on urban and community development, health policy, and criminal justice research essential to developing strategies to strengthen Indiana's economy and quality of life.

The National Highway Traffic Safety Administration (NHTSA)

NHTSA provides leadership to the motor vehicle and highway safety community through the development of innovative approaches to reducing motor vehicle crashes and injuries. The mission of NHTSA is to save lives, prevent injuries and reduce economic costs due to road traffic crashes, through education, research, safety standards and enforcement activity.
